Function: Details about the 5 by 5 RGB Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputBias
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Bias
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.76.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the 5 by 5 RGB Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.76.9 AttributeinputWeights as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the 5 by 5 RGB Convolution attribute.
Notes:

This attribute should have this content:

Name:	inputWeights
Class:	CIVectorMBS
DisplayName:	Weights
DefaultVector:	[0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0]
IdentityVector:	[0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0]

(Read only property)

58.76.10 inputBias as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bias
Notes:

Name:	inputBias
Class:	double (NSNumber)
DisplayName English:	Bias
DisplayName German:	Bias
DisplayName French:	Bias
DisplayName Italian:	Bias
DisplayName Spanish:	Bias
Type:	CIAttributeTypeScalar

See AttributeinputBias for more details.
(Read and Write property)

58.76.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.76.12 inputWeights as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Weights
Notes:

See AttributeinputWeights for more details.
(Read and Write property)

Name:	inputWeights
Class:	CIVectorMBS (CIVector)
DisplayName English:	Weights
DisplayName German:	Weights
DisplayName French:	Weights
DisplayName Italian:	Weights
DisplayName Spanish:	Weights

58.77 class CIFilterConvolutionRGB7X7MBS

58.77.1 class CIFilterConvolutionRGB7X7MBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage 7 by 7 RGB Convolution filter.
Notes:

Details for this filter:

FilterName:	CIConvolutionRGB7X7
DisplayName English:	7 by 7 RGB Convolution
DisplayName German:	7 x 7-RGB-Faltung
DisplayName French:	Convolution¬†RVB 7 par¬†7
DisplayName Italian:	Convoluzione RGB 7 per 7
DisplayName Spanish:	Convoluci√n RGB de 7x7

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

Output:

- outputImage

Subclass of the CIFilterMBS class.

Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Head Index
DisplayName German:	HitzeIndex
DisplayName French:	Index des t√™tes
DisplayName Italian:	Indice di testa
DisplayName Spanish:	√çndice de cabeza
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	10
MinNumber:	0

(Read only property)

58.81.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the CoreML Model Filter attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.81.9 AttributeinputModel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the CoreML Model Filter attribute.
Notes:

This attribute should have this content:

Name:	inputModel
Class:	
DisplayName English:	Model
DisplayName German:	Modell
DisplayName French:	Mod√®le
DisplayName Italian:	Modello
DisplayName Spanish:	Modelo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.81.10 AttributeinputSoftmaxNormalization as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the CoreML Model Filter attribute.
Notes:

This attribute should have this content:

Name:	inputSoftmaxNormalization
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Softmax Normalization
DisplayName German:	Softmax-Normalisierung
DisplayName French:	Normalisation Softmax
DisplayName Italian:	Normalizzazione softmax
DisplayName Spanish:	Normalizaci√n softmax
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

(Read only property)

58.81.11 inputHeadIndex as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Head Index
Notes:

Name:	inputHeadIndex
Class:	double (NSNumber)
DisplayName English:	Head Index
DisplayName German:	HitzeIndex
DisplayName French:	Index des t√™tes
DisplayName Italian:	Indice di testa
DisplayName Spanish:	√çndice de cabeza
Type:	CIAttributeTypeInteger

See AttributeinputHeadIndex for more details.
(Read and Write property)

58.81.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.81.13 inputModel as Variant

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Model
Notes:

Name:	inputModel
Class:	(MLModel)
DisplayName English:	Model
DisplayName German:	Modell
DisplayName French:	Mod√®le
DisplayName Italian:	Modello
DisplayName Spanish:	Modelo

See AttributeinputModel for more details.
(Read and Write property)

58.81.14 inputSoftmaxNormalization as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Softmax Normalization
Notes:

Name:	inputSoftmaxNormalization
Class:	double (NSNumber)
DisplayName English:	Softmax Normalization
DisplayName German:	Softmax-Normalisierung
DisplayName French:	Normalisation Softmax
DisplayName Italian:	Normalizzazione softmax
DisplayName Spanish:	Normalizaci√n softmax
Type:	CIAttributeTypeBoolean

See AttributeinputSoftmaxNormalization for more details.
(Read and Write property)

58.82 class CIFilterCropMBS

58.82.1 class CIFilterCropMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Crop filter.
Notes:

Details for this filter:

FilterName:	CICrop
DisplayName English:	Crop
DisplayName German:	Freistellen
DisplayName French:	Recadrer
DisplayName Italian:	Ritaglia
DisplayName Spanish:	Recortar

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRectangle: Rectangle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.82.2 Methods

58.82.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.82.4 Properties

58.82.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crop attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.82.6 AttributeinputRectangle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crop attribute.
Notes:

This attribute should have this content:

Name:	inputRectangle
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Rectangle
DisplayName German:	Rechteck
DisplayName French:	Rectangle
DisplayName Italian:	Rettangolo
DisplayName Spanish:	Rect√°ngulo
DefaultVector:	[-8.98847e+307 -8.98847e+307 1.79769e+308 1.79769e+308]
IdentityVector:	[-8.98847e+307 -8.98847e+307 1.79769e+308 1.79769e+308]

(Read only property)

58.82.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.82.8 inputRectangle as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rectangle
Notes:

See AttributeinputRectangle for more details.
(Read and Write property)

Name:	inputRectangle
Class:	CIVectorMBS (CIVector)
DisplayName English:	Rectangle
DisplayName German:	Rechteck
DisplayName French:	Rectangle
DisplayName Italian:	Rettangolo
DisplayName Spanish:	Rect√°ngulo
Type:	CIAttributeTypeRectangle

58.83 class CIFilterCrystallizeMBS

58.83.1 class CIFilterCrystallizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Crystallize filter.
Notes:

Details for this filter:

FilterName:	CICrystallize
DisplayName English:	Crystallize
DisplayName German:	Kristallisieren
DisplayName French:	Cristalliser
DisplayName Italian:	Cristallizzazione
DisplayName Spanish:	Cristalizaci√n

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputCenter: Center

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.83.2 Methods

58.83.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.83.4 Properties

58.83.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.83.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.83.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Crystallize attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	20
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

58.83.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.83.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.83.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.84 class CIFilterDarkenBlendModeMBS

58.84.1 class CIFilterDarkenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Darken Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDarkenBlendMode
DisplayName English:	Darken Blend Mode
DisplayName German:	Mischmethode ,ÄûAbdunkeln,Äú
DisplayName French:	Mode de fusion Assombrir
DisplayName Italian:	Modalit√† sfumatura scura
DisplayName Spanish:	Oscurecer modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.84.2 Methods

58.84.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.84.4 Properties

58.84.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.84.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Darken Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.84.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.84.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.85 class CIFilterDepthBlurEffectMBS

58.85.1 class CIFilterDepthBlurEffectMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth Blur Effect filter.
Notes:

Details for this filter:

FilterName:	CIDepthBlurEffect
DisplayName English:	Depth Blur Effect
DisplayName German:	Tiefenweichzeichneneffekt
DisplayName French:	Effet de flou de profondeur
DisplayName Italian:	Effetto sfocatura profondit√†
DisplayName Spanish:	Efecto de profundidad desenfocado

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputDisparityImage: Disparity Image
- inputMatteImage: Matte Image
- inputHairImage: Hair Image
- inputGlassesImage: Glasses Image
- inputGainMap: Gain Map
- inputAperture: Aperture
- inputLeftEyePositions: Left Eye Positions

- inputRightEyePositions: Right Eye Positions
- inputChinPositions: Chin Positions
- inputNosePositions: Nose Positions
- inputFocusRect: Focus Rectangle
- inputLumaNoiseScale: Luma Noise Scale
- inputScaleFactor: Scale Factor
- inputCalibrationData: Calibration Data
- inputAuxDataMetadata: Aux Data Metadata
- inputShape: Shape

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.85.2 Methods

58.85.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.85.4 Properties

58.85.5 AttributeinputAperture as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputAperture
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Aperture
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	22
MinNumber:	0
SliderMaxNumber:	22
SliderMinNumber:	1

58.85.6 AttributeinputAuxDataMetadata as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputAuxDataMetadata
Class:	CGImageMetadataMBS
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten ,Äì Metadaten
DisplayName French:	M√©tadonn√©es des donn√©es auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.7 AttributeinputCalibrationData as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCalibrationData
Class:	Variant
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Donn√©es d,Äô√©talonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibraci√n

58.85.8 AttributeinputChinPositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputChinPositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

58.85.9 AttributeinputDisparityImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputDisparityImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Disparity Image
DisplayName German:	Abweichungsbild
DisplayName French:	Image de disparit√©
DisplayName Italian:	Immagine di disparit√†
DisplayName Spanish:	Imagen de disparidad
DefaultNumber:	0
IdentityNumber:	0

58.85.10 AttributeinputFocusRect as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputFocusRect
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Focus Rectangle
DisplayName German:	Fokusrechteck
DisplayName French:	Rectangle de mise au point
DisplayName Italian:	Rettangolo di messa a fuoco
DisplayName Spanish:	Rect√°ngulo focal
DefaultVector:	n/a
IdentityVector:	[-8.98847e+307 -8.98847e+307 1.79769e+308 1.79769e+308]

(Read only property)

58.85.11 AttributeinputGainMap as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputGainMap
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Gain Map
DisplayName German:	St√§rkeverteilung
DisplayName French:	Carte des gains
DisplayName Italian:	Mappa guadagno
DisplayName Spanish:	Mapa de ganancia
DefaultNumber:	0
IdentityNumber:	0

58.85.12 AttributeinputGlassesImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputGlassesImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Glasses Image
DisplayName German:	Bild einer Brille
DisplayName French:	Image de lunettes
DisplayName Italian:	Immagine degli occhiali
DisplayName Spanish:	Imagen de las gafas
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.13 AttributeinputHairImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputHairImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Hair Image
DisplayName German:	Haareffekt
DisplayName French:	Image de cheveu
DisplayName Italian:	Immagine capelli
DisplayName Spanish:	Imagen del cabello
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.14 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.15 AttributeinputLeftEyePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputLeftEyePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Left Eye Positions
DisplayName German:	Positionen der linken Augen
DisplayName French:	Positions de l,Äôìil gauche
DisplayName Italian:	Posizioni occhio sinistro
DisplayName Spanish:	Posiciones de ojo izquierdo
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

58.85.16 AttributeinputLumaNoiseScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputLumaNoiseScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Luma Noise Scale
DisplayName German:	Luma-Rauschen-Skalierung
DisplayName French:	√âchelle de bruit de luminance
DisplayName Italian:	Scala rumore di luminanza
DisplayName Spanish:	Escala de ruido de luminancia
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	0.1
MinNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	0

(Read only property)

58.85.17 AttributeinputMatteImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputMatteImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Matte Image
DisplayName German:	Bild mit Maske
DisplayName French:	Image de cache
DisplayName Italian:	Immagine opaca
DisplayName Spanish:	Imagen mate
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.18 AttributeinputNosePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputNosePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Nose Positions
DisplayName German:	Nasenpositionen
DisplayName French:	Positions du nez
DisplayName Italian:	Posizioni naso
DisplayName Spanish:	Posiciones de nariz
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

58.85.19 AttributeinputRightEyePositions as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputRightEyePositions
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Right Eye Positions
DisplayName German:	Positionen der rechten Augen
DisplayName French:	Positions de l,Äôìil droit
DisplayName Italian:	Posizioni occhio destro
DisplayName Spanish:	Posiciones de ojo derecho
DefaultVector:	[-1 -1]
IdentityVector:	n/a

(Read only property)

58.85.20 AttributeinputScaleFactor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputScaleFactor
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.85.21 AttributeinputShape as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth Blur Effect attribute.
Notes:

This attribute should have this content:

Name:	inputShape
Class:	String
DisplayName:	Shape
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.85.22 inputAperture as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aperture
Notes:

Name:	inputAperture
Class:	double (NSNumber)
DisplayName English:	Aperture
DisplayName German:	Aperture
DisplayName French:	Aperture
DisplayName Italian:	Aperture
DisplayName Spanish:	Aperture
Type:	CIAttributeTypeScalar

See AttributeinputAperture for more details.
(Read and Write property)

58.85.23 inputAuxDataMetadata as CGImageMetadataMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Aux Data Metadata
Notes:

Name:	inputAuxDataMetadata
Class:	CGImageMetadataMBS (CGImageMetadataRef)
DisplayName English:	Aux Data Metadata
DisplayName German:	Hilfsdaten ,Äì Metadaten
DisplayName French:	M√©tadonn√©es des donn√©es auxiliaires
DisplayName Italian:	Metadati dati canale
DisplayName Spanish:	Metadatos auxiliares

See AttributeinputAuxDataMetadata for more details.
(Read and Write property)

58.85.24 inputCalibrationData as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Calibration Data
Notes:

Name:	inputCalibrationData
Class:	Variant (AVCameraCalibrationData)
DisplayName English:	Calibration Data
DisplayName German:	Kalibrierungsdaten
DisplayName French:	Donn√©es d,Äô√©talonnage
DisplayName Italian:	Dati di calibrazione
DisplayName Spanish:	Datos de calibraci√n

See AttributeinputCalibrationData for more details.
(Read and Write property)

58.85.25 inputChinPositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Chin Positions
Notes:

Name:	inputChinPositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Chin Positions
DisplayName German:	Kinnpositionen
DisplayName French:	Positions du menton
DisplayName Italian:	Posizioni mento
DisplayName Spanish:	Posiciones de barbilla
Type:	CIAttributeTypePosition

See AttributeinputChinPositions for more details.
(Read and Write property)

58.85.26 inputDisparityImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Disparity Image
Notes:

Name:	inputDisparityImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Disparity Image
DisplayName German:	Abweichungsbild
DisplayName French:	Image de disparit√©
DisplayName Italian:	Immagine di disparit√†
DisplayName Spanish:	Imagen de disparidad
Type:	CIAttributeTypeImage

See AttributeinputDisparityImage for more details.
(Read and Write property)

58.85.27 inputFocusRect as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Focus Rectangle
Notes:

See AttributeinputFocusRect for more details.
(Read and Write property)

Name:	inputFocusRect
Class:	CIVectorMBS (CIVector)
DisplayName English:	Focus Rectangle
DisplayName German:	Fokusrechteck
DisplayName French:	Rectangle de mise au point
DisplayName Italian:	Rettangolo di messa a fuoco
DisplayName Spanish:	Rect√°ngulo focal
Type:	CIAttributeTypeRectangle

58.85.28 inputGainMap as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Gain Map
Notes:

Name:	inputGainMap
Class:	CIImageMBS (CIImage)
DisplayName English:	Gain Map
DisplayName German:	St√§rkeverteilung
DisplayName French:	Carte des gains
DisplayName Italian:	Mappa guadagno
DisplayName Spanish:	Mapa de ganancia
Type:	CIAttributeTypeImage

See AttributeinputGainMap for more details.
(Read and Write property)

58.85.29 inputGlassesImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Glasses Image
Notes:

Name:	inputGlassesImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Glasses Image
DisplayName German:	Bild einer Brille
DisplayName French:	Image de lunettes
DisplayName Italian:	Immagine degli occhiali
DisplayName Spanish:	Imagen de las gafas
Type:	CIAttributeTypeImage

See AttributeinputGlassesImage for more details.
(Read and Write property)

58.85.30 inputHairImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Hair Image
Notes:

Name:	inputHairImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Hair Image
DisplayName German:	Haareffekt
DisplayName French:	Image de cheveu
DisplayName Italian:	Immagine capelli
DisplayName Spanish:	Imagen del cabello
Type:	CIAttributeTypeImage

See AttributeinputHairImage for more details.
(Read and Write property)

58.85.31 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.85.32 inputLeftEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Left Eye Positions
Notes:

Name:	inputLeftEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Left Eye Positions
DisplayName German:	Positionen der linken Augen
DisplayName French:	Positions de l,Äôìil gauche
DisplayName Italian:	Posizioni occhio sinistro
DisplayName Spanish:	Posiciones de ojo izquierdo
Type:	CIAttributeTypePosition

See AttributeinputLeftEyePositions for more details.
(Read and Write property)

58.85.33 inputLumaNoiseScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Luma Noise Scale
Notes:

Name:	inputLumaNoiseScale
Class:	double (NSNumber)
DisplayName English:	Luma Noise Scale
DisplayName German:	Luma-Rauschen-Skalierung
DisplayName French:	√âchelle de bruit de luminance
DisplayName Italian:	Scala rumore di luminanza
DisplayName Spanish:	Escala de ruido de luminancia
Type:	CIAttributeTypeScalar

See AttributeinputLumaNoiseScale for more details.
(Read and Write property)

58.85.34 inputMatteImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Matte Image
Notes:

Name:	inputMatteImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Matte Image
DisplayName German:	Bild mit Maske
DisplayName French:	Image de cache
DisplayName Italian:	Immagine opaca
DisplayName Spanish:	Imagen mate
Type:	CIAttributeTypeImage

See AttributeinputMatteImage for more details.
(Read and Write property)

58.85.35 inputNosePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Nose Positions
Notes:

Name:	inputNosePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Nose Positions
DisplayName German:	Nasenpositionen
DisplayName French:	Positions du nez
DisplayName Italian:	Posizioni naso
DisplayName Spanish:	Posiciones de nariz
Type:	CIAttributeTypePosition

See AttributeinputNosePositions for more details.
(Read and Write property)

58.85.36 inputRightEyePositions as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Right Eye Positions
Notes:

See AttributeinputRightEyePositions for more details.
(Read and Write property)

Name:	inputRightEyePositions
Class:	CIVectorMBS (CIVector)
DisplayName English:	Right Eye Positions
DisplayName German:	Positionen der rechten Augen
DisplayName French:	Positions de l,Äôìil droit
DisplayName Italian:	Posizioni occhio destro
DisplayName Spanish:	Posiciones de ojo derecho
Type:	CIAttributeTypePosition

58.85.37 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

58.85.38 inputShape as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shape
Notes:

Name:	inputShape
Class:	String (NSString)
DisplayName English:	Shape
DisplayName German:	Shape
DisplayName French:	Shape
DisplayName Italian:	Shape
DisplayName Spanish:	Shape

See AttributeinputShape for more details.
(Read and Write property)

58.86 class CIFilterDepthOfFieldMBS

58.86.1 class CIFilterDepthOfFieldMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth of Field filter.
Notes:

Details for this filter:

FilterName:	CIDepthOfField
DisplayName English:	Depth of Field
DisplayName German:	Sch√§rfentiefe
DisplayName French:	Profondeur de champ
DisplayName Italian:	Profondit√† di campo
DisplayName Spanish:	Profundidad de campo

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputSaturation: Saturation
- inputUnsharpMaskRadius: Unsharp Mask Radius
- inputUnsharpMaskIntensity: Unsharp Mask Intensity
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.86.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.86.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.86.4 Methods

58.86.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.86.6 Properties

58.86.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

58.86.8 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 300]
IdentityVector:	n/a

(Read only property)

58.86.9 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

58.86.10 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[300 300]
IdentityVector:	n/a

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	6
IdentityNumber:	0
SliderMaxNumber:	30
SliderMinNumber:	0

(Read only property)

58.86.11 AttributeinputSaturation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputSaturation
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
DefaultNumber:	1.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

58.86.12 AttributeinputUnsharpMaskIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputUnsharpMaskIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensit√§t von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Intensit√© du masque flou
DisplayName Italian:	Intensit√† maschera di contrasto
DisplayName Spanish:	Intensidad de la m√°scara de desenfoque
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.86.13 AttributeinputUnsharpMaskRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth of Field attribute.
Notes:

This attribute should have this content:

Name:	inputUnsharpMaskRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von ,ÄûUnscharf maskieren,Äú
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la m√°scara de desenfoque
DefaultNumber:	2.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.86.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.86.15 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

58.86.16 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

58.86.17 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

58.86.18 inputSaturation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Saturation
Notes:

Name:	inputSaturation
Class:	double (NSNumber)
DisplayName English:	Saturation
DisplayName German:	S√§ttigung
DisplayName French:	Saturation
DisplayName Italian:	Saturazione
DisplayName Spanish:	Saturaci√n
Type:	CIAttributeTypeScalar

See AttributeinputSaturation for more details.
(Read and Write property)

58.86.19 inputUnsharpMaskIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Intensity
Notes:

Name:	inputUnsharpMaskIntensity
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Intensity
DisplayName German:	Intensit√§t von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Intensit√© du masque flou
DisplayName Italian:	Intensit√† maschera di contrasto
DisplayName Spanish:	Intensidad de la m√°scara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskIntensity for more details.
(Read and Write property)

58.86.20 inputUnsharpMaskRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Unsharp Mask Radius
Notes:

Name:	inputUnsharpMaskRadius
Class:	double (NSNumber)
DisplayName English:	Unsharp Mask Radius
DisplayName German:	Radius von ‚ÄûUnscharf maskieren‚Äú
DisplayName French:	Rayon du masque flou
DisplayName Italian:	Raggio maschera di contrasto
DisplayName Spanish:	Radio de la m√°scara de desenfoque
Type:	CIAttributeTypeScalar

See AttributeinputUnsharpMaskRadius for more details.
(Read and Write property)

58.87 class CIFilterDepthToDisparityMBS

58.87.1 class CIFilterDepthToDisparityMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Depth To Disparity filter.
Notes:

Details for this filter:

FilterName:	CIDepthToDisparity
DisplayName English:	Depth To Disparity
DisplayName German:	Tiefe zu Abweichung
DisplayName French:	Profondeur en disparit√©
DisplayName Italian:	Da profondit√† a disparit√†
DisplayName Spanish:	De profundidad a disparidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.87.2 Methods

58.87.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.87.4 Properties

58.87.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Depth To Disparity attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.87.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.88 class CIFilterDifferenceBlendModeMBS

58.88.1 class CIFilterDifferenceBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Difference Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDifferenceBlendMode
DisplayName English:	Difference Blend Mode
DisplayName German:	Mischmethode ,ÄûDifferenz,Äú
DisplayName French:	Mode de fusion Diff√©rence
DisplayName Italian:	Modalit√† sfumatura differenza
DisplayName Spanish:	Diferenciar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.88.2 Methods

58.88.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.88.4 Properties

58.88.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.88.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Difference Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.88.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.88.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.89 class CIFilterDiscBlurMBS

58.89.1 class CIFilterDiscBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disc Blur filter.
Notes:

Details for this filter:

FilterName:	CIDiscBlur
DisplayName English:	Disc Blur
DisplayName German:	Kreisf√rmige Unsch√§rfe
DisplayName French:	Flou (Disc Blur)
DisplayName Italian:	Effetto disco
DisplayName Spanish:	Disco difuminado

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.89.2 Methods

58.89.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.89.4 Properties

58.89.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.89.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disc Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

58.89.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.89.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.90 class CIFilterDisintegrateWithMaskTransitionMBS

58.90.1 class CIFilterDisintegrateWithMaskTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disintegrate With Mask filter.
Notes:

Details for this filter:

FilterName:	CIDisintegrateWithMaskTransition
DisplayName English:	Disintegrate With Mask
DisplayName German:	√úbergang mit Maske
DisplayName French:	D√©sint√©grer avec masque
DisplayName Italian:	Disintegra con maschera
DisplayName Spanish:	Desintegrar con m√°scara

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputMaskImage: Mask Image
- inputTime: Time
- inputShadowRadius: Shadow Radius
- inputShadowDensity: Shadow Density
- inputShadowOffset: Shadow Offset

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.90.2 Methods

58.90.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.90.4 Properties

58.90.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine

IdentityNumber:	0

(Read only property)

58.90.6 AttributeinputMaskImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputMaskImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.90.7 AttributeinputShadowDensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowDensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densit√© de l,Äôombre
DisplayName Italian:	Densit√† ombra
DisplayName Spanish:	Densidad del sombreado
DefaultNumber:	0.65
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.90.8 AttributeinputShadowOffset as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowOffset
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	D√©calage de l,Äôombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyecci√n del sombreado
DefaultVector:	[0 -10]
IdentityVector:	[0 0]

(Read only property)

58.90.9 AttributeinputShadowRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputShadowRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l,Äôombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
DefaultNumber:	8
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

58.90.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.90.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disintegrate With Mask attribute.
Notes:

This attribute should have this content:

(Read only property)

58.90.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.90.13 inputMaskImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask Image
Notes:

Name:	inputMaskImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask Image
DisplayName German:	Maske
DisplayName French:	Image du masque
DisplayName Italian:	Immagine maschera
DisplayName Spanish:	Imagen de m√°scara
Type:	CIAttributeTypeImage

See AttributeinputMaskImage for more details.
(Read and Write property)

58.90.14 inputShadowDensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Density
Notes:

Name:	inputShadowDensity
Class:	double (NSNumber)
DisplayName English:	Shadow Density
DisplayName German:	Schattendichte
DisplayName French:	Densit√© de l,Äôombre
DisplayName Italian:	Densit√† ombra
DisplayName Spanish:	Densidad del sombreado
Type:	CIAttributeTypeScalar

See AttributeinputShadowDensity for more details.
(Read and Write property)

58.90.15 inputShadowOffset as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Offset
Notes:

Name:	inputShadowOffset
Class:	CIVectorMBS (CIVector)
DisplayName English:	Shadow Offset
DisplayName German:	Schattenabstand
DisplayName French:	D√©calage de l,Äôombre
DisplayName Italian:	Offset ombra
DisplayName Spanish:	Proyecci√n del sombreado
Type:	CIAttributeTypeOffset

See AttributeinputShadowOffset for more details.
(Read and Write property)

58.90.16 inputShadowRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Radius
Notes:

Name:	inputShadowRadius
Class:	double (NSNumber)
DisplayName English:	Shadow Radius
DisplayName German:	Schattenradius
DisplayName French:	Rayon de l,Äôombre
DisplayName Italian:	Raggio dell'ombra
DisplayName Spanish:	Radio del sombreado
Type:	CIAttributeTypeDistance

See AttributeinputShadowRadius for more details.
(Read and Write property)

58.90.17 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.90.18 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.91 class CIFilterDisparityToDepthMBS

58.91.1 class CIFilterDisparityToDepthMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Disparity To Depth filter.
Notes:

Details for this filter:

FilterName:	CIDisparityToDepth
DisplayName English:	Disparity To Depth
DisplayName German:	Abweichung zu Tiefe
DisplayName French:	Disparit√© en profondeur
DisplayName Italian:	Da disparit√† a profondit√†
DisplayName Spanish:	De disparidad a profundidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.91.2 Methods

58.91.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.91.4 Properties

58.91.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Disparity To Depth attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.91.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.92 class CIFilterDisplacementDistortionMBS

58.92.1 class CIFilterDisplacementDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Displacement Distortion filter.
Notes:

Details for this filter:

FilterName:	CIDisplacementDistortion
DisplayName English:	Displacement Distortion
DisplayName German:	Verzerrung ,ÄûVerdr√§ngung,Äú
DisplayName French:	D√©formation D√©placement
DisplayName Italian:	Distorsione spostamento
DisplayName Spanish:	Distorsi√n de desplazamiento

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputDisplacementImage: Displacement Image
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.92.2 Methods

58.92.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.92.4 Properties

58.92.5 AttributeinputDisplacementImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputDisplacementImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du d√©placement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.92.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.92.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Displacement Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	50
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0

(Read only property)

58.92.8 inputDisplacementImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Displacement Image
Notes:

Name:	inputDisplacementImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Displacement Image
DisplayName German:	Bildverschiebung
DisplayName French:	Image du d√©placement
DisplayName Italian:	Immagine spostamento
DisplayName Spanish:	Imagen de desplazamiento
Type:	CIAttributeTypeImage

See AttributeinputDisplacementImage for more details.
(Read and Write property)

58.92.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.92.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

58.93 class CIFilterDissolveTransitionMBS

58.93.1 class CIFilterDissolveTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dissolve filter.
Notes:

Details for this filter:

FilterName:	CIDissolveTransition
DisplayName English:	Dissolve
DisplayName German:	√überblenden
DisplayName French:	Dissoudre
DisplayName Italian:	Dissolvenza
DisplayName Spanish:	Disoluci√n

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.93.2 Methods

58.93.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.93.4 Properties

58.93.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.93.6 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.93.7 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dissolve attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.93.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.93.9 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.93.10 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.94 class CIFilterDitherMBS

58.94.1 class CIFilterDitherMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dither filter.
Notes:

Details for this filter:

FilterName:	CIDither
DisplayName English:	Dither
DisplayName German:	Dither
DisplayName French:	Tramage
DisplayName Italian:	Dithering
DisplayName Spanish:	Tramar

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.94.2 Methods

58.94.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.94.4 Properties

58.94.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.94.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dither attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.1
IdentityNumber:	0
MaxNumber:	5
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.94.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.94.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

58.95 class CIFilterDivideBlendModeMBS

58.95.1 class CIFilterDivideBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Divide Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIDivideBlendMode
DisplayName English:	Divide Blend Mode
DisplayName German:	Mischmethode ,ÄûTeilen,Äú
DisplayName French:	Mode de fusion Diviser
DisplayName Italian:	Modalit√† sfumatura dissolvenza
DisplayName Spanish:	Dividir modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.95.2 Methods

58.95.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.95.4 Properties

58.95.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.95.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Divide Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.95.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.95.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.96 class CIFilterDocumentEnhancerMBS

58.96.1 class CIFilterDocumentEnhancerMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Document Enhancer filter.
Notes:

Details for this filter:

FilterName:	CIDocumentEnhancer
DisplayName English:	Document Enhancer
DisplayName German:	Dokumentverbesserung
DisplayName French:	Am√©lioration du document
DisplayName Italian:	Migliora documento
DisplayName Spanish:	Mejorar documentos

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAmount: Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.96.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.96.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.96.4 Methods

58.96.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.96.6 Properties

58.96.7 AttributeinputAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Document Enhancer attribute.
Notes:

This attribute should have this content:

Name:	inputAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Amount
DisplayName German:	St√§rke

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.97 class CIFilterDotScreenMBS

58.97.1 class CIFilterDotScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Dot Screen filter.
Notes:

Details for this filter:

FilterName:	CIDotScreen
DisplayName English:	Dot Screen
DisplayName German:	Punktf√rmiges Halbtonraster
DisplayName French:	√âcran en pointill√©
DisplayName Italian:	Schermo a punti
DisplayName Spanish:	Pantalla punteada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.97.2 Methods

58.97.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.97.4 Properties

58.97.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.97.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.97.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.97.8 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.7
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.97.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Dot Screen attribute.
Notes:

This attribute should have this content:

(Read only property)

58.97.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	50
SliderMinNumber:	2

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

58.97.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.97.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.97.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

58.97.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.98 class CIFilterDrosteMBS

58.98.1 class CIFilterDrosteMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Droste filter.
Notes:

Details for this filter:

FilterName:	CIDroste
DisplayName English:	Droste
DisplayName German:	Droste
DisplayName French:	Droste
DisplayName Italian:	Droste
DisplayName Spanish:	Droste

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputInsetPoint0: Inset Point 0
- inputInsetPoint1: Inset Point 1
- inputStrands: Strands
- inputPeriodicity: Periodicity
- inputRotation: Rotation
- inputZoom: Zoom

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.98.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.98.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.98.4 Methods

58.98.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.98.6 Properties

58.98.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

58.98.8 AttributeinputInsetPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputInsetPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d,Äôinsertion¬†0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Punto de inserci√n 0
DefaultVector:	[200 200]
IdentityVector:	n/a

(Read only property)

58.98.9 AttributeinputInsetPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

58.98.10 AttributeinputPeriodicity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputInsetPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d,Äôinsertion¬†1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Punto de inserci√n 1
DefaultVector:	[400 400]
IdentityVector:	n/a

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

Name:	inputPeriodicity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Periodicity
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	1

(Read only property)

58.98.11 AttributeinputRotation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputRotation
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Rotation
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

58.98.12 AttributeinputStrands as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

Name:	inputStrands
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Strands
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	10
MinNumber:	-10
SliderMaxNumber:	2
SliderMinNumber:	-2

(Read only property)

58.98.13 AttributeinputZoom as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Droste attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputZoom
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Zoom
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	0
MinNumber:	0.01
SliderMaxNumber:	5
SliderMinNumber:	0.01

58.98.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.98.15 inputInsetPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 0
Notes:

See AttributeinputInsetPoint0 for more details.
(Read and Write property)

Name:	inputInsetPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 0
DisplayName German:	Abstandspunkt 0
DisplayName French:	Point d,Äôinsertion¬†0
DisplayName Italian:	Punto di inserimento 0
DisplayName Spanish:	Punto de inserci√n 0
Type:	CIAttributeTypePosition

58.98.16 inputInsetPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Inset Point 1
Notes:

Name:	inputInsetPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Inset Point 1
DisplayName German:	Abstandspunkt 1
DisplayName French:	Point d,Äôinsertion¬†1
DisplayName Italian:	Punto di inserimento 1
DisplayName Spanish:	Punto de inserci√n 1
Type:	CIAttributeTypePosition

See AttributeinputInsetPoint1 for more details.
(Read and Write property)

58.98.17 inputPeriodicity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Periodicity
Notes:

Name:	inputPeriodicity
Class:	double (NSNumber)
DisplayName English:	Periodicity
DisplayName German:	Periodicity
DisplayName French:	Periodicity
DisplayName Italian:	Periodicity
DisplayName Spanish:	Periodicity
Type:	CIAttributeTypeScalar

See AttributeinputPeriodicity for more details.
(Read and Write property)

58.98.18 inputRotation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rotation
Notes:

Name:	inputRotation
Class:	double (NSNumber)
DisplayName English:	Rotation
DisplayName German:	Rotation
DisplayName French:	Rotation
DisplayName Italian:	Rotation
DisplayName Spanish:	Rotation
Type:	CIAttributeTypeAngle

See AttributeinputRotation for more details.
(Read and Write property)

58.98.19 inputStrands as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Strands
Notes:

Name:	inputStrands
Class:	double (NSNumber)
DisplayName English:	Strands
DisplayName German:	Strands
DisplayName French:	Strands
DisplayName Italian:	Strands
DisplayName Spanish:	Strands
Type:	CIAttributeTypeScalar

See AttributeinputStrands for more details.
(Read and Write property)

58.98.20 inputZoom as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Zoom
Notes:

Name:	inputZoom
Class:	double (NSNumber)
DisplayName English:	Zoom
DisplayName German:	Zoom
DisplayName French:	Zoom
DisplayName Italian:	Zoom
DisplayName Spanish:	Zoom
Type:	CIAttributeTypeScalar

See AttributeinputZoom for more details.
(Read and Write property)

58.99 class CIFilterEdgePreserveUpsampleFilterMBS

58.99.1 class CIFilterEdgePreserveUpsampleFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edge Preserve Upsample Filter filter.
Notes:

Details for this filter:

FilterName:	CIEdgePreserveUpsampleFilter
DisplayName English:	Edge Preserve Upsample Filter
DisplayName German:	Kantenerhaltender Upsample-Filter
DisplayName French:	Filtre de sur√©chantillonnage pour la pr√©servation des contours
DisplayName Italian:	Filtro di ricampionamento per la conservazione dei bordi
DisplayName Spanish:	Filtro de interpolaci√n con preservaci√n de bordes

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputSmallImage: Small Image
- inputSpatialSigma: Spatial Sigma
- inputLumaSigma: Luma Sigma

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.99.2 Methods

58.99.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.99.4 Properties

58.99.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.99.6 AttributeinputLumaSigma as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputLumaSigma
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Luma Sigma
DisplayName German:	Luma-Sigma
DisplayName French:	Sigma de la luminance
DisplayName Italian:	Sigma luminanza
DisplayName Spanish:	Desviaci√n est√°ndar sigma de luminancia
DefaultNumber:	0.15
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

(Read only property)

58.99.7 AttributeinputSmallImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputSmallImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Small Image
DisplayName German:	Kleines Bild
DisplayName French:	Petite image
DisplayName Italian:	Immagine di dimensioni ridotte
DisplayName Spanish:	Imagen peque√±a
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.99.8 AttributeinputSpatialSigma as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Preserve Upsample Filter attribute.
Notes:

This attribute should have this content:

Name:	inputSpatialSigma
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Spatial Sigma
DisplayName German:	R√§umliches Sigma
DisplayName French:	Sigma spatial
DisplayName Italian:	Sigma spaziale
DisplayName Spanish:	Desviaci√n est√°ndar sigma espacial
DefaultNumber:	3
IdentityNumber:	0
MaxNumber:	5
MinNumber:	0

(Read only property)

58.99.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.99.10 inputLumaSigma as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Luma Sigma
Notes:

Name:	inputLumaSigma
Class:	double (NSNumber)
DisplayName English:	Luma Sigma
DisplayName German:	Luma-Sigma
DisplayName French:	Sigma de la luminance
DisplayName Italian:	Sigma luminanza
DisplayName Spanish:	Desviaci√n est√°ndar sigma de luminancia
Type:	CIAttributeTypeScalar

See AttributeinputLumaSigma for more details.
(Read and Write property)

58.99.11 inputSmallImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Small Image
Notes:

Name:	inputSmallImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Small Image
DisplayName German:	Kleines Bild
DisplayName French:	Petite image
DisplayName Italian:	Immagine di dimensioni ridotte
DisplayName Spanish:	Imagen peque√±a
Type:	CIAttributeTypeImage

See AttributeinputSmallImage for more details.
(Read and Write property)

58.99.12 inputSpatialSigma as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Spatial Sigma
Notes:

Name:	inputSpatialSigma
Class:	double (NSNumber)
DisplayName English:	Spatial Sigma
DisplayName German:	R√§umliches Sigma
DisplayName French:	Sigma spatial
DisplayName Italian:	Sigma spaziale
DisplayName Spanish:	Desviaci√n est√°ndar sigma espacial
Type:	CIAttributeTypeScalar

See AttributeinputSpatialSigma for more details.
(Read and Write property)

58.100 class CIFilterEdgesMBS

58.100.1 class CIFilterEdgesMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edges filter.
Notes:

Details for this filter:

FilterName:	CIEdges
DisplayName English:	Edges
DisplayName German:	Kanten
DisplayName French:	Contours
DisplayName Italian:	Estremit√†
DisplayName Spanish:	Bordes

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.100.2 Methods

58.100.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.100.4 Properties

58.100.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edges attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.100.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edges attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.100.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.100.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

See AttributeinputIntensity for more details.

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

(Read and Write property)

58.101 class CIFilterEdgeWorkMBS

58.101.1 class CIFilterEdgeWorkMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Edge Work filter.
Notes:

Details for this filter:

FilterName:	CIEdgeWork
DisplayName English:	Edge Work
DisplayName German:	Kontur finden
DisplayName French:	Contourage
DisplayName Italian:	Lavoro sull'estremit√†
DisplayName Spanish:	Trabajo en bordes

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.101.2 Methods

58.101.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.101.4 Properties

58.101.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Work attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.101.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Edge Work attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	3
IdentityNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

(Read only property)

58.101.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.101.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.102 class CIFilterEightfoldReflectedTileMBS

58.102.1 class CIFilterEightfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Eightfold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIEightfoldReflectedTile
DisplayName English:	Eightfold Reflected Tile
DisplayName German:	8-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 8 fois
DisplayName Italian:	Mosaico riflesso in otto direzioni
DisplayName Spanish:	Mosaico reflejado ocho veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.102.2 Methods

58.102.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.102.4 Properties

58.102.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.102.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.102.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.102.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Eightfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.102.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.102.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.102.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.102.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.103 class CIFilterExclusionBlendModeMBS

58.103.1 class CIFilterExclusionBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exclusion Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIExclusionBlendMode
DisplayName English:	Exclusion Blend Mode
DisplayName German:	Mischmethode ,ÄûAusschluss,Äú
DisplayName French:	Mode de fusion Exclusion
DisplayName Italian:	Modalit√† sfumatura esclusione
DisplayName Spanish:	Modo de mezcla por exclusi√n

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.103.2 Methods

58.103.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.103.4 Properties

58.103.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.103.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exclusion Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.103.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.103.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.104 class CIFilterExposureAdjustMBS

58.104.1 class CIFilterExposureAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Exposure Adjust filter.
Notes:

Details for this filter:

FilterName:	CIExposureAdjust
DisplayName English:	Exposure Adjust
DisplayName German:	Belichtung anpassen
DisplayName French:	Ajustement d,Äôexposition
DisplayName Italian:	Regolazione esposizione
DisplayName Spanish:	Ajuste de exposici√n

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image
- inputEV: EV

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.104.2 Methods

58.104.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.104.4 Properties

58.104.5 AttributeinputEV as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputEV
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	EV
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	-10

(Read only property)

58.104.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Exposure Adjust attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.104.7 inputEV as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute EV
Notes:

Name:	inputEV
Class:	double (NSNumber)
DisplayName English:	EV
DisplayName German:	EV
DisplayName French:	EV
DisplayName Italian:	EV
DisplayName Spanish:	EV
Type:	CIAttributeTypeScalar

See AttributeinputEV for more details.
(Read and Write property)

58.104.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.105 class CIFilterFalseColorMBS

58.105.1 class CIFilterFalseColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage False Color filter.
Notes:

Details for this filter:

FilterName:	CIFalseColor
DisplayName English:	False Color
DisplayName German:	Falschfarbendarstellung
DisplayName French:	Fausse couleur
DisplayName Italian:	Colore falso
DisplayName Spanish:	Color falso

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.105.2 Methods

58.105.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.105.4 Properties

58.105.5 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 0.3, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

58.105.6 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 1, Green = 0.9, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

58.105.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the False Color attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.105.8 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.105.9 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.105.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.106 class CIFilterFlashTransitionMBS

58.106.1 class CIFilterFlashTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Flash filter.
Notes:

Details for this filter:

FilterName:	CIFlashTransition
DisplayName English:	Flash
DisplayName German:	Blinken
DisplayName French:	Flash
DisplayName Italian:	Flash
DisplayName Spanish:	Flash

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputCenter: Center
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputMaxStriationRadius: Maximum Striation Radius
- inputStriationStrength: Striation Strength

- inputStriationContrast: Striation Contrast
- inputFadeThreshold: Fade Threshold

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.106.2 Methods

58.106.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.106.4 Properties

58.106.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.106.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0.8, Blue = 0.6, Alpha = 1
IdentityNumber:	0

(Read only property)

58.106.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

(Read only property)

58.106.8 AttributeinputFadeThreshold as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

This attribute should have this content:

Name:	inputFadeThreshold
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert f√ºr √úberblenden
DisplayName French:	Seuil de d√©coloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
DefaultNumber:	0.85
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.106.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.106.10 AttributeinputMaxStriationRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputMaxStriationRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√°r Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
DefaultNumber:	2.58
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.106.11 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
DefaultNumber:	1.375
IdentityNumber:	0
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

58.106.12 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

(Read only property)

58.106.13 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.106.14 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Flash attribute.
Notes:

This attribute should have this content:

(Read only property)

58.106.15 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

See AttributeinputCenter for more details.
(Read and Write property)

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

58.106.16 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

58.106.17 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

58.106.18 inputFadeThreshold as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Fade Threshold
Notes:

Name:	inputFadeThreshold
Class:	double (NSNumber)
DisplayName English:	Fade Threshold
DisplayName German:	Schwellenwert f√ºr √úberblenden
DisplayName French:	Seuil de d√©coloration
DisplayName Italian:	Soglia dissolvenza
DisplayName Spanish:	Umbral de desvanecimiento
Type:	CIAttributeTypeScalar

See AttributeinputFadeThreshold for more details.
(Read and Write property)

58.106.19 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.106.20 inputMaxStriationRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Maximum Striation Radius
Notes:

Name:	inputMaxStriationRadius
Class:	double (NSNumber)
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√ºr Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
Type:	CIAttributeTypeScalar

See AttributeinputMaxStriationRadius for more details.
(Read and Write property)

58.106.21 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

See AttributeinputStriationContrast for more details.
(Read and Write property)

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
Type:	CIAttributeTypeScalar

58.106.22 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

58.106.23 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.106.24 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.107 class CIFilterFourfoldReflectedTileMBS

58.107.1 class CIFilterFourfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldReflectedTile
DisplayName English:	Fourfold Reflected Tile
DisplayName German:	4-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 4 fois
DisplayName Italian:	Mosaico riflesso in quattro direzioni
DisplayName Spanish:	Mosaico reflejado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.107.2 Methods

58.107.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.107.4 Properties

58.107.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
DefaultNumber:	1.570796
IdentityNumber:	1.570796
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.107.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.107.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.107.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.107.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.107.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

58.107.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.107.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.107.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.107.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.108 class CIFilterFourfoldRotatedTileMBS

58.108.1 class CIFilterFourfoldRotatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Rotated Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldRotatedTile
DisplayName English:	Fourfold Rotated Tile
DisplayName German:	4-fach gedrehte Kachel
DisplayName French:	Mosa√Øque pivot√©e 4 fois
DisplayName Italian:	Mosaico ruotato in quattro direzioni
DisplayName Spanish:	Mosaico rotado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.108.2 Methods

58.108.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.108.4 Properties

58.108.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.108.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.108.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.108.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.108.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.108.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.108.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.108.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.109 class CIFilterFourfoldTranslatedTileMBS

58.109.1 class CIFilterFourfoldTranslatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Fourfold Translated Tile filter.
Notes:

Details for this filter:

FilterName:	CIFourfoldTranslatedTile
DisplayName English:	Fourfold Translated Tile
DisplayName German:	4-fach √ºbersetzte Kachel
DisplayName French:	Mosa√Øque d√©plac√©e 4 fois
DisplayName Italian:	Mosaico traslato in quattro direzioni
DisplayName Spanish:	Mosaico desplazado cuatro veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.109.2 Methods

58.109.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.109.4 Properties

58.109.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Fourfold Translated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo

SliderMinNumber:	1

(Read only property)

58.109.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

58.109.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.109.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.109.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.109.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.110 class CIFilterGaborGradientsMBS

58.110.1 class CIFilterGaborGradientsMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gabor Gradients filter.
Notes:

Details for this filter:

FilterName:	CIGaborGradients
DisplayName English:	Gabor Gradients
DisplayName German:	Gabor-Verl√§ufe
DisplayName French:	D√©grad√©s Gabor
DisplayName Italian:	Gradienti di Gabor
DisplayName Spanish:	Gradientes de Gabor

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.110.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.110.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.110.4 Methods

58.110.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.110.6 Properties

58.110.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Gabor Gradients attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine

DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.111 class CIFilterGammaAdjustMBS

58.111.1 class CIFilterGammaAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gamma Adjust filter.
Notes:

Details for this filter:

FilterName:	CIGammaAdjust
DisplayName English:	Gamma Adjust
DisplayName German:	Gamma anpassen
DisplayName French:	Ajustement gamma
DisplayName Italian:	Regolazione gamma
DisplayName Spanish:	Ajuste de gama

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPower: Power

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.111.2 Methods

58.111.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.111.4 Properties

58.111.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gamma Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image

58.111.8 inputPower as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Power
Notes:

See AttributeinputPower for more details.

Name:	inputPower
Class:	double (NSNumber)
DisplayName English:	Power
DisplayName German:	St√§rke
DisplayName French:	Puissance
DisplayName Italian:	Energia
DisplayName Spanish:	Alimentaci√n
Type:	CIAttributeTypeScalar

(Read and Write property)

58.112 class CIFilterGaussianBlurMBS

58.112.1 class CIFilterGaussianBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Blur filter.
Example:

```
dim CIFilter as new CIFilterGaussianBlurMBS
dim ROIpic as Picture = LogoMBS(500)
dim CGImage as CGImageMBS = CGCreateImageMBS(ROIpic)
dim ciimage as CIImageMBS = NewCIImagewithCGImageMBS(CGImage)

CIFilter.inputImage = CIImage
cifilter.inputRadius = 10 //the property which holds the blur radius

dim result as CIImageMBS = cifilter.outputImage

dim r as Picture = result.RenderPicture

window1.Backdrop = r
```

Notes:

Details for this filter:

FilterName:	CIGaussianBlur
DisplayName English:	Gaussian Blur
DisplayName German:	Gau√ü,Äôsche Unsch√§rfe
DisplayName French:	Flou gaussien
DisplayName Italian:	Sfumatura gaussiana
DisplayName Spanish:	Difuminado gaussiano

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Warning: Due to the blur, the output image may be bigger, so you need to crop space on the border to get back to old size.
Subclass of the CIFilterMBS class.

58.112.2 Methods

58.112.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.112.4 Properties

58.112.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Blur attribute.
Notes:

This attribute should have this content:

(Read only property)

58.112.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

Function: Details about the Gaussian Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

58.112.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.112.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

58.113 class CIFilterGaussianGradientMBS

58.113.1 class CIFilterGaussianGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gaussian Gradient filter.
Notes:

Details for this filter:

FilterName:	CIGaussianGradient
DisplayName English:	Gaussian Gradient
DisplayName German:	Gau√ü,Äôscher Verlauf
DisplayName French:	D√©grad√© gaussien
DisplayName Italian:	Gradiente gaussiano
DisplayName Spanish:	Degradado gaussiano

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.113.2 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.113.4 Methods

58.113.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.113.6 Properties

58.113.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.113.8 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.113.9 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 0
IdentityNumber:	0

(Read only property)

58.113.10 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gaussian Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

58.113.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.113.12 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.113.13 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.113.14 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.114 class CIFilterGeneratorMBS

58.114.1 class CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: An object that creates and configures chains of individual image filters.
Notes:

The CIFilterGenerator class provides methods for creating a CIFilter object by chaining together existing CIFilter objects to create complex effects. (A filter chain refers to the CIFilter objects that are connected in the CIFilterGenerator object.) The complex effect can be encapsulated as a CIFilterGenerator object and saved as a file so that it can be used again. The filter generator file contains an archived instance of all the CIFilter objects that are chained together.

Any filter generator files that you copy to /Library/Graphics/Image Units/ are loaded when any of the loading methods provided by the CIPlugIn class are invoked. A CIFilterGenerator object is registered by its filename or, if present, by a class attribute that you supply in its description.

You can create a CIFilterGenerator object programmatically, using the methods provided by the CIFilterGenerator class, or by using the editor view provided by Core Image (see CIFilter Image Kit Additions).

58.114.4 Methods

58.114.5 connectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds an object to the filter chain.
Notes:

sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. For example, if the source is the output image of a

filter, pass the outputImage key. Pass nil if the source object is used directly.
targetObject: The object that to link the source object to.
targetKey: The key that specifies the target for the source. For example, if you are connecting the source to the input image of a CIFilterMBS object, you would pass the inputImage key.

58.114.6 Constructor

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.
See also:

- 58.114.7 Constructor(File as folderItem) 11430
- 58.114.8 Constructor(Handle as Integer) 11430
- 58.114.9 Constructor(URL as string) 11431

58.114.7 Constructor(File as folderItem)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 58.114.6 Constructor 11430
- 58.114.8 Constructor(Handle as Integer) 11430
- 58.114.9 Constructor(URL as string) 11431

58.114.8 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes Xojo object with given handle to CIFilterGenerator object.
See also:

- 58.114.6 Constructor 11430
- 58.114.7 Constructor(File as folderItem) 11430
- 58.114.9 Constructor(URL as string) 11431

58.114.9 Constructor(URL as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Raises exception on failure.
See also:

- 58.114.6 Constructor 11430
- 58.114.7 Constructor(File as folderItem) 11430
- 58.114.8 Constructor(Handle as Integer) 11430

58.114.10 copy as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the object.

58.114.11 disconnectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the connection between two objects in the filter chain.
Notes:

sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
sourceKey: The key that specifies the source object. Pass nil if the source object is used directly.
targetObject: The object that you want to disconnect the source object from.
targetKey: The key that specifies the target that the source object is currently connected to.

58.114.12 exportKey(key as string, targetObject as Variant, exportedKeyName as String)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Exports an input or output key of an object in the filter chain.
Notes:

key: The key to export from the target object (for example, inputImage).
targetObject: The object associated with the key (for example, the filter).

exportedKeyName: A unique name to use for the exported key. Pass "" to use the original key name.

When you create a CIFilterMBS object from a CIFilterGeneratorMBS object, you might want the filter client to be able to set some of the parameters associated with the filter chain. You can make a parameter settable by exporting the key associated with the parameter. If the exported key represents an input parameter of the filter, the key is exported as an input key. If the key represents an output parameter, it is exported as an output key.

58.114.13 filterGenerator as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an empty filter generator object.
Notes: You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.

58.114.14 filterGeneratorWithContentsOfFile(File as folderItem) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can,Äôt be read.

58.114.15 filterGeneratorWithContentsOfURL(URL as string) as CIFilterGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns a filter generator object and initializes it with the contents of a filter generator file.
Notes: Returns a CIFilterGeneratorMBS object; returns nil if the file can,Äôt be read.

58.114.16 filterWithName(name as String) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries filter based on it's name.
Notes: Returns nil in case of error.

58.114.17 kCIFilterGeneratorExportedKey as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

58.114.18 kCIFilterGeneratorExportedKeyName as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

58.114.19 kCIFilterGeneratorExportedKeyTargetObject as String

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the dictionary keys describing exports.
Notes: The target object (CIFilterGeneratorExportedKeyTargetObject) for the exported key. The associated value is the name of the object, such as CIMotionBlur.

58.114.20 registerFilterName(name as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Registers the name associated with a filter chain.
Notes:

name: A unique name for the filter chain you want to register.

This method allows you to register the filter chain as a named filter in the Core Image filter repository. You can then create a CIFilterMBS object from it using the the filterWithName method of the CIFilterMBS class.

58.114.21 removeExportedKey(exportedKeyName as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a key that was previously exported.

58.114.22 setAttributes(attributes as dictionary, ExportedKey as string)

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a dictionary of attributes for an exported key.
Notes:

attributes: A dictionary that describes the attributes associated with the specified key.
key: The exported key whose attributes you want to set.

By default, the exported key inherits the attributes from its original key and target object. You can use this method to change one or more of the existing attributes for the key, such as the default value or maximum value. For more information on attributes, see CIFilterMBS and Core Image Programming Guide.

58.114.23 writeToFile(File as FolderItem, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes:

File: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

58.114.24 writeToURL(URL as String, atomically as Boolean = true) as Boolean

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Archives a filter generator object to a filter generator file.
Notes:

URL: A location for the file generator file.

atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

58.114.25 Properties

58.114.26 classAttributes as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class attributes associated with the filter.
Notes:

For more information about class attributes for a filter, see Core Image Programming Guide and the filter attributes key constants defined in CIFilterMBS.
(Read and Write property)

58.114.27 exportedKeys as Dictionary

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the exported keys.
Notes:

An array of dictionaries that describe the exported key and target object. See kCIFilterGeneratorExportedKey, kCIFilterGeneratorExportedKeyTargetObject, and kCIFilterGeneratorExportedKey for keys used in the dictionary.

This method returns the keys that you exported using the exportKey method or that were exported before being written to the file from which you read the filter chain.
(Read only property)

58.114.28 filter as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a filter object based on the filter chain.
Notes:

The topology of the filter chain is immutable, meaning that any changes you make to the filter chain are not reflected in the filter. The returned filer has the input an output keys that are exported.

(Read only property)

58.114.29 Handle as Integer

MBS MacCI Plugin, Plugin Version: 17.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the object.
Notes: (Read only property)

58.115 class CIFilterGlassDistortionMBS

58.115.1 class CIFilterGlassDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Distortion filter.
Notes:

Details for this filter:

FilterName:	CIGlassDistortion
DisplayName English:	Glass Distortion
DisplayName German:	Verzerrung ,ÄûGlas,Äú
DisplayName French:	D√©formation Verre
DisplayName Italian:	Distorsione vetro
DisplayName Spanish:	Distorsi√n vidriosa

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTexture: Texture
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.115.2 Methods

58.115.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.115.4 Properties

58.115.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.115.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.115.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	200
IdentityNumber:	0
SliderMaxNumber:	500
SliderMinNumber:	0.01

(Read only property)

58.115.8 AttributeinputTexture as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputTexture
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Texture
DisplayName German:	Struktur
DisplayName French:	Texture
DisplayName Italian:	Trama
DisplayName Spanish:	Textura
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.115.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.115.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.115.11 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

58.115.12 inputTexture as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Texture
Notes:

See AttributeinputTexture for more details.
(Read and Write property)

Name:	inputTexture
Class:	CIImageMBS (CIImage)
DisplayName English:	Texture
DisplayName German:	Struktur
DisplayName French:	Texture
DisplayName Italian:	Trama
DisplayName Spanish:	Textura
Type:	CIAttributeTypeImage

58.116 class CIFilterGlassLozengeMBS

58.116.1 class CIFilterGlassLozengeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glass Lozenge filter.
Notes:

Details for this filter:

FilterName:	CIGlassLozenge
DisplayName English:	Glass Lozenge
DisplayName German:	Glasrhombus
DisplayName French:	Losange de verre
DisplayName Italian:	Losanga vetro
DisplayName Spanish:	Romboedro vidrioso

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputRadius: Radius
- inputRefraction: Refraction

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.116.2 Methods

58.116.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.116.4 Properties

58.116.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.116.6 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.116.7 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[350 150]
IdentityVector:	n/a

(Read only property)

58.116.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

58.116.9 AttributeinputRefraction as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glass Lozenge attribute.
Notes:

This attribute should have this content:

Name:	inputRefraction
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
DefaultNumber:	1.7
IdentityNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

58.116.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.116.11 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

58.116.12 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

58.116.13 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.116.14 inputRefraction as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Refraction
Notes:

See AttributeinputRefraction for more details.
(Read and Write property)

Name:	inputRefraction
Class:	double (NSNumber)
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
Type:	CIAttributeTypeScalar

58.117 class CIFilterGlideReflectedTileMBS

58.117.1 class CIFilterGlideReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Glide Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CIGlideReflectedTile
DisplayName English:	Glide Reflected Tile
DisplayName German:	Gleitende reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie ¬´¬†Glide¬†¬ª
DisplayName Italian:	Mosaico riflesso di scivolamento
DisplayName Spanish:	Mosaico de deslizamiento reflejado

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.117.2 Methods

58.117.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.117.4 Properties

58.117.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.117.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.117.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.117.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Glide Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.117.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.117.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.117.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.117.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.118 class CIFilterGloomMBS

58.118.1 class CIFilterGloomMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Gloom filter.
Notes:

Details for this filter:

FilterName:	CIGloom
DisplayName English:	Gloom
DisplayName German:	D√ºster
DisplayName French:	T√©n√®bres
DisplayName Italian:	Oscurit√†
DisplayName Spanish:	Oscurecer

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.118.2 Methods

58.118.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.118.4 Properties

58.118.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.118.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.118.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Gloom attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

58.118.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.118.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

58.118.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.119 class CIFilterGuidedFilterMBS

58.119.1 class CIFilterGuidedFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Guided Filter filter.
Notes:

Details for this filter:

FilterName:	CIGuidedFilter
DisplayName English:	Guided Filter
DisplayName German:	Gef√ºhrter Filter
DisplayName French:	Filtre guid√©
DisplayName Italian:	Filtro guidato
DisplayName Spanish:	Filtro guiado

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputGuideImage: A larger image to use as a guide.
- inputRadius: Radius
- inputEpsilon: Epsilon

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.119.2 Methods

58.119.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.119.4 Properties

58.119.5 AttributeinputEpsilon as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputEpsilon
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
DefaultNumber:	0.0001
IdentityNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	1.000000e-9

(Read only property)

58.119.6 AttributeinputGuideImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputGuideImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Gr√√üeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande √† utiliser comme guide.
DisplayName Italian:	Immagine pi√ grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor que se usar√° como gu√a.
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.119.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.119.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Guided Filter attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	1

(Read only property)

58.119.9 inputEpsilon as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Epsilon
Notes:

Name:	inputEpsilon
Class:	double (NSNumber)
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
Type:	CIAttributeTypeScalar

See AttributeinputEpsilon for more details.
(Read and Write property)

58.119.10 inputGuideImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute A larger image to use as a guide.
Notes:

Name:	inputGuideImage
Class:	CIImageMBS (CIImage)
DisplayName English:	A larger image to use as a guide.
DisplayName German:	Gr√√üeres Bild, das als Richtwert verwendet wird.
DisplayName French:	Une image plus grande √† utiliser comme guide.
DisplayName Italian:	Immagine pi√ grande da utilizzare come guida.
DisplayName Spanish:	Una imagen mayor que se usar√° como gu√a.
Type:	CIAttributeTypeImage

See AttributeinputGuideImage for more details.
(Read and Write property)

58.119.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.119.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

58.120 class CIFilterHardLightBlendModeMBS

58.120.1 class CIFilterHardLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hard Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIHardLightBlendMode
DisplayName English:	Hard Light Blend Mode
DisplayName German:	Mischmethode ‚ÄûHartes Licht‚Äú
DisplayName French:	Mode de fusion Lumi√®re crue
DisplayName Italian:	Modalit√† sfumatura luce intensa
DisplayName Spanish:	Modo de mezcla por luz directa

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.120.2 Methods

58.120.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.120.4 Properties

58.120.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.120.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hard Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.120.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.120.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.121 class CIFilterHatchedScreenMBS

58.121.1 class CIFilterHatchedScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hatched Screen filter.
Notes:

Details for this filter:

FilterName:	CIHatchedScreen
DisplayName English:	Hatched Screen
DisplayName German:	Schraffierter Bereich
DisplayName French:	√âcran √† traits parall√®les
DisplayName Italian:	Schermo ombreggiato
DisplayName Spanish:	Pantalla tramada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.121.2 Methods

58.121.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.121.4 Properties

58.121.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.121.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.121.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hatched Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image

Type:	CIAttributeTypeAngle

58.121.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.121.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.121.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

58.121.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.122 class CIFilterHeightFieldFromMaskMBS

58.122.1 class CIFilterHeightFieldFromMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Height Field From Mask filter.
Notes:

Details for this filter:

FilterName:	CIHeightFieldFromMask
DisplayName English:	Height Field From Mask
DisplayName German:	H√henwerte von Maske
DisplayName French:	Champ de hauteur du masque
DisplayName Italian:	Altezza campo dalla maschera
DisplayName Spanish:	Campo de altura a partir de m√°scara

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.122.2 Methods

58.122.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.122.4 Properties

58.122.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.122.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Height Field From Mask attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10
IdentityNumber:	10
SliderMaxNumber:	300
SliderMinNumber:	0

(Read only property)

58.122.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.122.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.123 class CIFilterHexagonalPixellateMBS

58.123.1 class CIFilterHexagonalPixellateMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hexagonal Pixelate filter.
Notes:

Details for this filter:

FilterName:	CIHexagonalPixellate
DisplayName English:	Hexagonal Pixelate
DisplayName German:	Hexagonales Verpixeln
DisplayName French:	Pixellisation hexagonale
DisplayName Italian:	Effetto pixel esagonale
DisplayName Spanish:	Pixelado hexagonal

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.123.2 Methods

58.123.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.123.4 Properties

58.123.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.123.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.123.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hexagonal Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	8
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

58.123.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.123.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.123.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

58.124 class CIFilterHighlightShadowAdjustMBS

58.124.1 class CIFilterHighlightShadowAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Highlight and Shadow Adjust filter.
Notes:

Details for this filter:

FilterName:	CIHighlightShadowAdjust
DisplayName English:	Highlight and Shadow Adjust
DisplayName German:	Helle und dunkle Bereiche anpassen
DisplayName French:	Ajuster les lumi√®res et les ombres
DisplayName Italian:	Regolazione luce e ombre
DisplayName Spanish:	Ajuste de resaltados y sombras

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputShadowAmount: Shadow Amount
- inputHighlightAmount: Highlight Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

- MBS Real Studio Plugins, version 13.1pr5

58.124.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.124.4 Methods

58.124.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.124.6 Properties

58.124.7 AttributeinputHighlightAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Highlight and Shadow Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputHighlightAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Highlight Amount
DisplayName German:	St√§rke der Hervorhebung
DisplayName French:	Quantit√© de surbrillance
DisplayName Italian:	Quantit√† luci
DisplayName Spanish:	Cantidad de resaltados
DefaultNumber:	1
IdentityNumber:	1
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0.3

(Read only property)

58.124.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Highlight and Shadow Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen

See AttributeinputRadius for more details.
(Read and Write property)

58.124.14 inputShadowAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shadow Amount
Notes:

Name:	inputShadowAmount
Class:	double (NSNumber)
DisplayName English:	Shadow Amount
DisplayName German:	Schattenumfang
DisplayName French:	Quantit√© d,Äôombre
DisplayName Italian:	Quantit√† ombreggiatura
DisplayName Spanish:	Cantidad de sombreado
Type:	CIAttributeTypeScalar

See AttributeinputShadowAmount for more details.
(Read and Write property)

58.125 class CIFilterHistogramDisplayFilterMBS

58.125.1 class CIFilterHistogramDisplayFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Histogram Display filter.
Notes:

Details for this filter:

FilterName:	CIHistogramDisplayFilter
DisplayName English:	Histogram Display
DisplayName German:	Histogrammanzeige
DisplayName French:	Affichage de l,Äôhistogramme
DisplayName Italian:	Visualizzazione istogramma
DisplayName Spanish:	Visualizaci√n de histograma

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputHeight: Height
- inputHighLimit: High Limit
- inputLowLimit: Low Limit

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.126 class CIFilterHoleDistortionMBS

58.126.1 class CIFilterHoleDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hole Distortion filter.
Notes:

Details for this filter:

FilterName:	CIHoleDistortion
DisplayName English:	Hole Distortion
DisplayName German:	Verzerrung ,ÄûLoch,Äú
DisplayName French:	D√©formation Orifice
DisplayName Italian:	Distorsione foro
DisplayName Spanish:	Distorsi√n de orificios

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.126.2 Methods

58.126.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.126.4 Properties

58.126.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hole Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.126.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hole Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.126.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.127 class CIFilterHueAdjustMBS

58.127.1 class CIFilterHueAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue Adjust filter.
Notes:

Details for this filter:

FilterName:	CIHueAdjust
DisplayName English:	Hue Adjust
DisplayName German:	Farbton anpassen
DisplayName French:	Ajustement de tonalit√©
DisplayName Italian:	Regolazione tonalit√†
DisplayName Spanish:	Ajuste de matiz

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.127.2 Methods

58.127.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.127.4 Properties

58.127.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0

58.127.7 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.127.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

(Read and Write property)

58.128 class CIFilterHueBlendModeMBS

58.128.1 class CIFilterHueBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIHueBlendMode
DisplayName English:	Hue Blend Mode
DisplayName German:	Mischmethode ,ÄûFarbton,Äú
DisplayName French:	Mode de fusion Tonalit√©
DisplayName Italian:	Modalit√† sfumatura tonalit√†
DisplayName Spanish:	Modo de mezcla de matiz

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.128.2 Methods

58.128.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.128.4 Properties

58.128.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.128.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.128.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.128.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.129 class CIFilterHueSaturationValueGradientMBS

58.129.1 class CIFilterHueSaturationValueGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Hue/Saturation/Value Gradient filter.
Notes:

Details for this filter:

FilterName:	CIHueSaturationValueGradient
DisplayName English:	Hue/Saturation/Value Gradient
DisplayName German:	Farbton/S√§ttigung/Wertverlauf
DisplayName French:	D√©grad√© de teinte/saturation/valeur
DisplayName Italian:	Tonalit√†/saturazione/valore gradiente
DisplayName Spanish:	Degradado de matiz/saturaci√n/valor

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputValue: Value
- inputRadius: Radius
- inputSoftness: Softness
- inputDither: Dither
- inputColorSpace: Color Space

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.129.2 Methods

58.129.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.129.4 Properties

58.129.5 AttributeinputColorSpace as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColorSpace
Class:	CGColorSpaceMBS
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.129.6 AttributeinputDither as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputDither
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Dither
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

58.129.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

58.129.8 AttributeinputSoftness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputSoftness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Softness
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

58.129.9 AttributeinputValue as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Hue/Saturation/Value Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputValue
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Value
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.129.10 inputColorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color Space
Notes:

See AttributeinputColorSpace for more details.
(Read and Write property)

Name:	inputColorSpace
Class:	CGColorSpaceMBS (NSObject)
DisplayName English:	Color Space
DisplayName German:	Farbraum
DisplayName French:	Espace colorim√©trique
DisplayName Italian:	Spazio colore
DisplayName Spanish:	Espacio de color

58.129.11 inputDither as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Dither
Notes:

Name:	inputDither
Class:	double (NSNumber)
DisplayName English:	Dither
DisplayName German:	Dither
DisplayName French:	Dither
DisplayName Italian:	Dither
DisplayName Spanish:	Dither
Type:	CIAttributeTypeScalar

See AttributeinputDither for more details.
(Read and Write property)

58.129.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.129.13 inputSoftness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Softness
Notes:

Name:	inputSoftness
Class:	double (NSNumber)
DisplayName English:	Softness
DisplayName German:	Softness
DisplayName French:	Softness
DisplayName Italian:	Softness
DisplayName Spanish:	Softness
Type:	CIAttributeTypeScalar

See AttributeinputSoftness for more details.
(Read and Write property)

58.129.14 inputValue as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Value
Notes:

Name:	inputValue
Class:	double (NSNumber)
DisplayName English:	Value
DisplayName German:	Value
DisplayName French:	Value
DisplayName Italian:	Value
DisplayName Spanish:	Value
Type:	CIAttributeTypeScalar

See AttributeinputValue for more details.
(Read and Write property)

58.130 class CIFilterKaleidoscopeMBS

58.130.1 class CIFilterKaleidoscopeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Kaleidoscope filter.
Notes:

Details for this filter:

FilterName:	CIKaleidoscope
DisplayName English:	Kaleidoscope
DisplayName German:	Kaleidoskop
DisplayName French:	Kal√©idoscope
DisplayName Italian:	Caleidoscopio
DisplayName Spanish:	Caleidoscopio

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCount: Count
- inputCenter: Center
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.130.2 Methods

58.130.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.130.4 Properties

58.130.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.130.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.130.7 AttributeinputCount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputCount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
DefaultNumber:	6
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	64
SliderMinNumber:	1

(Read only property)

58.130.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.130.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.130.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.130.11 inputCount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Count
Notes:

Name:	inputCount
Class:	double (NSNumber)
DisplayName English:	Count
DisplayName German:	Anzahl
DisplayName French:	Compte
DisplayName Italian:	Conteggio
DisplayName Spanish:	Recuento
Type:	CIAttributeTypeScalar

See AttributeinputCount for more details.
(Read and Write property)

58.130.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.131 class CIFilterKeystoneCorrectionCombinedMBS

58.131.1 class CIFilterKeystoneCorrectionCombinedMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Combined Keystone Correction filter.
Notes:

Details for this filter:

FilterName:	CIKeystoneCorrectionCombined
DisplayName English:	Combined Keystone Correction
DisplayName German:	Kombinierte Trapezkorrektur
DisplayName French:	Correction de trap√®ze combin√©e
DisplayName Italian:	Correzione trapezio combinata
DisplayName Spanish:	Correcci√n trapezoidal combinada

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

58.132 class CIFilterKeystoneCorrectionHorizontalMBS

58.132.1 class CIFilterKeystoneCorrectionHorizontalMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Horizontal Keystone Correction filter.
Notes:

Details for this filter:

FilterName:	CIKeystoneCorrectionHorizontal
DisplayName English:	Horizontal Keystone Correction
DisplayName German:	Horizontale Trapezkorrektur
DisplayName French:	Correction de trap√®ze horizontale
DisplayName Italian:	Correzione trapezio orizzontale
DisplayName Spanish:	Correcci√n trapezoidal horizontal

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.132.11 AttributeinputTopLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputTopLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
DefaultVector:	n/a
IdentityVector:	n/a

58.132.12 AttributeinputTopRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Horizontal Keystone Correction attribute.
Notes:

This attribute should have this content:

Name:	inputTopRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
DefaultVector:	n/a
IdentityVector:	n/a

(Read only property)

58.132.13 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

See AttributeinputBottomLeft for more details.

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

(Read and Write property)

58.132.14 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

58.132.15 inputFocalLength as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Focal Length
Notes:

See AttributeinputFocalLength for more details.
(Read and Write property)

Name:	inputFocalLength
Class:	double (NSNumber)
DisplayName English:	Focal Length
DisplayName German:	Brennweite
DisplayName French:	Longueur focale
DisplayName Italian:	Lunghezza focale
DisplayName Spanish:	Longitud focal
Type:	CIAttributeTypeScalar

58.132.16 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.132.17 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

58.132.18 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

58.133 class CIFilterKeystoneCorrectionVerticalMBS

58.133.1 class CIFilterKeystoneCorrectionVerticalMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vertical Keystone Correction filter.
Notes:

Details for this filter:

FilterName:	CIKeystoneCorrectionVertical
DisplayName English:	Vertical Keystone Correction
DisplayName German:	Vertikale Trapezkorrektur
DisplayName French:	Correction de trap√®ze verticale
DisplayName Italian:	Correzione trapezio verticale
DisplayName Spanish:	Correcci√n trapezoidal vertical

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputFocalLength: Focal Length
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage
- outputTransform
- outputRotationFilter

Subclass of the CIFilterMBS class.

58.134 class CIFilterKMeansMBS

58.134.1 class CIFilterKMeansMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage KMeans filter.
Notes:

Details for this filter:

FilterName:	CIKMeans
DisplayName English:	KMeans
DisplayName German:	KMeans
DisplayName French:	K-moyennes
DisplayName Italian:	KMeans
DisplayName Spanish:	KMeans

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent
- inputMeans: Means
- inputCount: Count
- inputPasses: Passes
- inputPerceptual: Perceptual

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.137 class CIFilterLenticularHaloGeneratorMBS

58.137.1 class CIFilterLenticularHaloGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lenticular Halo filter.
Notes:

Details for this filter:

FilterName:	CILenticularHaloGenerator
DisplayName English:	Lenticular Halo
DisplayName German:	Linsenf√rmiges Halo
DisplayName French:	Halo lenticulaire
DisplayName Italian:	Alone lenticolare
DisplayName Spanish:	Halo lenticular

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor: Color
- inputHaloRadius: Halo Radius
- inputHaloWidth: Halo Width
- inputHaloOverlap: Halo Overlap
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.137.2 Methods

58.137.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.137.4 Properties

58.137.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.137.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0.9, Blue = 0.8, Alpha = 1
IdentityNumber:	0

(Read only property)

58.137.7 AttributeinputHaloOverlap as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputHaloOverlap
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Halo Overlap
DisplayName German:	Halo √ºberlappen
DisplayName French:	Superposition de halo
DisplayName Italian:	Sovrapposizione alone
DisplayName Spanish:	Superposici√n del halo
DefaultNumber:	0.77
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.137.8 AttributeinputHaloRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputHaloRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Halo Radius
DisplayName German:	Radius des Halo
DisplayName French:	Rayon du halo
DisplayName Italian:	Raggio alone
DisplayName Spanish:	Radio del halo
DefaultNumber:	70
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

58.137.9 AttributeinputHaloWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

(Read only property)

58.137.10 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputHaloWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Halo Width
DisplayName German:	Breite des Halo
DisplayName French:	Largeur du halo
DisplayName Italian:	Larghezza alone
DisplayName Spanish:	Anchura del halo
DefaultNumber:	87
IdentityNumber:	0
SliderMaxNumber:	300
SliderMinNumber:	0

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

58.137.11 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	3
SliderMinNumber:	0

58.137.12 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lenticular Halo attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.137.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.137.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

58.137.15 inputHaloOverlap as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Overlap
Notes:

Name:	inputHaloOverlap
Class:	double (NSNumber)
DisplayName English:	Halo Overlap
DisplayName German:	Halo √ºberlappen
DisplayName French:	Superposition de halo
DisplayName Italian:	Sovrapposizione alone
DisplayName Spanish:	Superposici√n del halo
Type:	CIAttributeTypeScalar

See AttributeinputHaloOverlap for more details.
(Read and Write property)

58.137.16 inputHaloRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Radius
Notes:

Name:	inputHaloRadius
Class:	double (NSNumber)
DisplayName English:	Halo Radius
DisplayName German:	Radius des Halo
DisplayName French:	Rayon du halo
DisplayName Italian:	Raggio alone
DisplayName Spanish:	Radio del halo
Type:	CIAttributeTypeDistance

See AttributeinputHaloRadius for more details.
(Read and Write property)

58.137.17 inputHaloWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Halo Width
Notes:

See AttributeinputHaloWidth for more details.
(Read and Write property)

Name:	inputHaloWidth
Class:	double (NSNumber)
DisplayName English:	Halo Width
DisplayName German:	Breite des Halo
DisplayName French:	Largeur du halo
DisplayName Italian:	Larghezza alone
DisplayName Spanish:	Anchura del halo
Type:	CIAttributeTypeDistance

58.137.18 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationContrast for more details.
(Read and Write property)

58.137.19 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

58.137.20 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeScalar

See AttributeinputTime for more details.
(Read and Write property)

58.138 class CIFilterLightenBlendModeMBS

58.138.1 class CIFilterLightenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Lighten Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CILightenBlendMode
DisplayName English:	Lighten Blend Mode
DisplayName German:	Mischmethode ,ÄûAufhellen,Äú
DisplayName French:	Mode de fusion √âclaircir
DisplayName Italian:	Modalit√† sfumatura chiara
DisplayName Spanish:	Aclarar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.138.2 Methods

58.138.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.138.4 Properties

58.138.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lighten Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.138.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Lighten Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.138.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.138.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.139 class CIFilterLightTunnelMBS

58.139.1 class CIFilterLightTunnelMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Light Tunnel Distortion filter.
Notes:

Details for this filter:

FilterName:	CILightTunnel
DisplayName English:	Light Tunnel Distortion
DisplayName German:	Lichttunnelverzerrung
DisplayName French:	D√©formation du tunnel lumineux
DisplayName Italian:	Distorsione tunnel di luce
DisplayName Spanish:	Distorsi√n del t√nel de luz

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRotation: Rotation
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.139.2 Methods

58.139.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.139.4 Properties

58.139.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.139.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.139.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	100
IdentityNumber:	0
SliderMaxNumber:	500
SliderMinNumber:	1

(Read only property)

58.139.8 AttributeinputRotation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Light Tunnel Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRotation
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Rotation
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	1.570796
SliderMinNumber:	0

(Read only property)

58.139.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.139.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.139.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.139.12 inputRotation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rotation
Notes:

See AttributeinputRotation for more details.
(Read and Write property)

Name:	inputRotation
Class:	double (NSNumber)
DisplayName English:	Rotation
DisplayName German:	Rotation
DisplayName French:	Rotation
DisplayName Italian:	Rotation
DisplayName Spanish:	Rotation
Type:	CIAttributeTypeAngle

58.140 class CIFilterLinearBurnBlendModeMBS

58.140.1 class CIFilterLinearBurnBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Burn Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CILinearBurnBlendMode
DisplayName English:	Linear Burn Blend Mode
DisplayName German:	Mischmethode ,ÄûLinear nachbelichten,Äú
DisplayName French:	Mode de fusion √âclaircissement lin√©aire
DisplayName Italian:	Modalit√† sfumatura bruciata lineare
DisplayName Spanish:	Modo de mezcla por sobreexposici√n lineal

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.140.2 Methods

58.140.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.140.4 Properties

58.140.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Burn Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.140.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Burn Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.140.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.140.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.141 class CIFilterLinearDodgeBlendModeMBS

58.141.1 class CIFilterLinearDodgeBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Dodge Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CILinearDodgeBlendMode
DisplayName English:	Linear Dodge Blend Mode
DisplayName German:	Mischmethode ,ÄûLinear abwedeln,Äú
DisplayName French:	Mode de fusion Assombrissement lin√©aire
DisplayName Italian:	Modalit√† sfumatura schermata lineare
DisplayName Spanish:	Modo de mezcla por evasi√n lineal

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.141.2 Methods

58.141.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.141.4 Properties

58.141.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Dodge Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.141.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Dodge Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.141.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.141.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.142 class CIFilterLinearGradientMBS

58.142.1 class CIFilterLinearGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Gradient filter.
Example:

```
// create gradient
dim vektor1 as CIVectorMBS = CIVectorMBS.vectorWithXY(800,600)
dim vektor2 as CIVectorMBS = CIVectorMBS.vectorWithXY(0,0)

dim CiGradiantFilter as new CIFilterLinearGradientMBS
CiGradiantFilter.SetDefaults
CiGradiantFilter.inputPoint0 = vektor1
CiGradiantFilter.inputPoint1 = vektor2
CiGradiantFilter.inputColor0 = CIColorMBS.colorWithRGB(1,1,1)
CiGradiantFilter.inputColor1 = CIColorMBS.colorWithRGB(1,0.5,0.3)

dim r as CIImageMBS = CiGradiantFilter.outputImage

Backdrop = r.RenderPicture(800, 600)
```

Notes:

Details for this filter:

FilterName:	CILinearGradient
DisplayName English:	Linear Gradient
DisplayName German:	Linearer Verlauf
DisplayName French:	D√©grad√© lin√©aire
DisplayName Italian:	Gradiente lineare
DisplayName Spanish:	Degradado lineal

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range

- CICategoryBuiltIn: Built-In

Input:

- inputPoint0: Point 0
- inputPoint1: Point 1
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.142.2 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.142.3 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.142.4 Methods

58.142.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.142.6 Properties

58.142.7 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.142.8 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

58.142.9 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 0]
IdentityVector:	n/a

(Read only property)

58.142.10 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[200 200]
IdentityVector:	n/a

(Read only property)

58.142.11 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.142.12 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.142.13 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

58.142.14 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

58.143 class CIFilterLinearLightBlendModeMBS

58.143.1 class CIFilterLinearLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CILinearLightBlendMode
DisplayName English:	Linear Light Blend Mode
DisplayName German:	Mischmethode ,ÄûLineares Licht,Äú
DisplayName French:	Mode de fusion Lumi√®re lin√©aire
DisplayName Italian:	Modalit√† sfumatura luce lineare
DisplayName Spanish:	Modo de mezcla por luz lineal

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.143.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.143.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.143.4 Methods

58.143.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.143.6 Properties

58.143.7 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Linear Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.143.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Linear Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.143.9 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.143.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.144 class CIFilterLinearToSRGBToneCurveMBS

58.144.1 class CIFilterLinearToSRGBToneCurveMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Linear to sRGB Tone Curve filter.
Notes:

Details for this filter:

FilterName:	CILinearToSRGBToneCurve
DisplayName English:	Linear to sRGB Tone Curve
DisplayName German:	Lineare Farbtonkurve in eine sRGB-Farbtonkurve
DisplayName French:	Lin√©aire vers courbe tonale sRGB
DisplayName Italian:	Da lineare a curva tonale sRGB
DisplayName Spanish:	Curva tonal de lineal a sRGB

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.144.2 Methods

58.144.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.144.4 Properties

58.144.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Linear to sRGB Tone Curve attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.144.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.145 class CIFilterLineOverlayMBS

58.145.1 class CIFilterLineOverlayMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Line Overlay filter.
Notes:

Details for this filter:

FilterName:	CILineOverlay
DisplayName English:	Line Overlay
DisplayName German:	Linien√ºberlagerung
DisplayName French:	Incrustation de lignes
DisplayName Italian:	Sovrapposizione linea
DisplayName Spanish:	L√nea superpuesta

Categories:

- CICategoryBuiltIn: Built-In
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryStylize: Stylize

Input:

- inputImage: Image
- inputNRNoiseLevel: NR Noise Level
- inputNRSharpness: NR Sharpness
- inputEdgeIntensity: Edge Intensity
- inputThreshold: Threshold
- inputContrast: Contrast

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.145.2 Methods

58.145.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.145.4 Properties

58.145.5 AttributeinputContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

Name:	inputContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
DefaultNumber:	50
IdentityNumber:	1
MaxNumber:	0
MinNumber:	0.25
SliderMaxNumber:	200
SliderMinNumber:	0.25

(Read only property)

58.145.6 AttributeinputEdgeIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

Name:	inputEdgeIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Edge Intensity
DisplayName German:	Edge Intensity
DisplayName French:	Intensit√© des contours
DisplayName Italian:	Intensit√† margini
DisplayName Spanish:	Intensidad del borde
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0

(Read only property)

58.145.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.145.8 AttributeinputNRNoiseLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

Name:	inputNRNoiseLevel
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	NR Noise Level
DisplayName German:	NR Rauschpegel
DisplayName French:	Niveau de bruit NR
DisplayName Italian:	Livello disturbo NS
DisplayName Spanish:	Nivel de ruido NR
DefaultNumber:	0.07
IdentityNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	0

(Read only property)

58.145.9 AttributeinputNRSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

(Read only property)

58.145.10 AttributeinputThreshold as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Overlay attribute.
Notes:

This attribute should have this content:

Name:	inputNRSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	NR Sharpness
DisplayName German:	NR Sch√§rfe
DisplayName French:	Nettet√© NR
DisplayName Italian:	Nitidezza NR
DisplayName Spanish:	Nitidez NR
DefaultNumber:	0.71
IdentityNumber:	0
SliderMaxNumber:	2
SliderMinNumber:	0

Name:	inputThreshold
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Threshold
DisplayName German:	Schwellenwert
DisplayName French:	Seuil
DisplayName Italian:	Soglia
DisplayName Spanish:	Umbral
DefaultNumber:	0.1

SliderMinNumber:	0

(Read only property)

58.145.11 inputContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast
Notes:

See AttributeinputContrast for more details.
(Read and Write property)

58.145.12 inputEdgeIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputContrast
Class:	double (NSNumber)
DisplayName English:	Contrast
DisplayName German:	Kontrast
DisplayName French:	Contraste
DisplayName Italian:	Contrasto
DisplayName Spanish:	Contraste
Type:	CIAttributeTypeScalar

Function: The attribute Edge Intensity
Notes:

Name:	inputEdgeIntensity
Class:	double (NSNumber)
DisplayName English:	Edge Intensity
DisplayName German:	Edge Intensity
DisplayName French:	Intensit√© des contours
DisplayName Italian:	Intensit√† margini
DisplayName Spanish:	Intensidad del borde
Type:	CIAttributeTypeScalar

See AttributeinputEdgeIntensity for more details.
(Read and Write property)

58.145.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.145.14 inputNRNoiseLevel as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute NR Noise Level
Notes:

Name:	inputNRNoiseLevel
Class:	double (NSNumber)
DisplayName English:	NR Noise Level
DisplayName German:	NR Rauschpegel
DisplayName French:	Niveau de bruit NR
DisplayName Italian:	Livello disturbo NS
DisplayName Spanish:	Nivel de ruido NR
Type:	CIAttributeTypeScalar

See AttributeinputNRNoiseLevel for more details.
(Read and Write property)

58.145.15 inputNRSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute NR Sharpness
Notes:

Name:	inputNRSharpness
Class:	double (NSNumber)
DisplayName English:	NR Sharpness
DisplayName German:	NR Sch√§rfe
DisplayName French:	Nettet√© NR
DisplayName Italian:	Nitidezza NR
DisplayName Spanish:	Nitidez NR
Type:	CIAttributeTypeScalar

See AttributeinputNRSharpness for more details.
(Read and Write property)

58.145.16 inputThreshold as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Threshold
Notes:

Name:	inputThreshold
Class:	double (NSNumber)
DisplayName English:	Threshold
DisplayName German:	Schwellenwert
DisplayName French:	Seuil
DisplayName Italian:	Soglia
DisplayName Spanish:	Umbral
Type:	CIAttributeTypeScalar

See AttributeinputThreshold for more details.
(Read and Write property)

58.146 class CIFilterLineScreenMBS

58.146.1 class CIFilterLineScreenMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Line Screen filter.
Notes:

Details for this filter:

FilterName:	CILineScreen
DisplayName English:	Line Screen
DisplayName German:	Liniertes Halbtonraster
DisplayName French:	√âcran √† traits
DisplayName Italian:	Schermo lineare
DisplayName Spanish:	Pantalla de l√neas

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.146.2 Methods

58.146.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.146.4 Properties

58.146.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.146.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.146.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Line Screen attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.147.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.147.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.148 class CIFilterMaskedVariableBlurMBS

58.148.1 class CIFilterMaskedVariableBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Masked Variable Blur filter.
Notes:

Details for this filter:

FilterName:	CIMaskedVariableBlur
DisplayName English:	Masked Variable Blur
DisplayName German:	Maskierte variable Weichzeichnung
DisplayName French:	Flou variable masqu√©
DisplayName Italian:	Sfocatura variabile mascherata
DisplayName Spanish:	Desenfoque variable con m√°scara

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputMask: Mask
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.148.2 Methods

58.148.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.148.4 Properties

58.148.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.148.6 AttributeinputMask as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes:

This attribute should have this content:

Name:	inputMask
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName:	Mask
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.148.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Masked Variable Blur attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.148.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

(Read and Write property)

58.148.9 inputMask as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mask
Notes:

Name:	inputMask
Class:	CIImageMBS (CIImage)
DisplayName English:	Mask
DisplayName German:	Mask
DisplayName French:	Mask
DisplayName Italian:	Mask
DisplayName Spanish:	Mask
Type:	CIAttributeTypeImage

See AttributeinputMask for more details.
(Read and Write property)

58.148.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

58.149 class CIFilterMaskToAlphaMBS

58.149.1 class CIFilterMaskToAlphaMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Mask to Alpha filter.
Notes:

Details for this filter:

FilterName:	CIMaskToAlpha
DisplayName English:	Mask to Alpha
DisplayName German:	Mit Alpha-Kanal maskieren
DisplayName French:	Masque vers alpha
DisplayName Italian:	Maschera ad alfa
DisplayName Spanish:	M√°scara a alfa

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.149.2 Methods

58.149.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.149.4 Properties

58.149.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mask to Alpha attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.149.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.150 class CIFilterMaximumComponentMBS

58.150.1 class CIFilterMaximumComponentMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Maximum Component filter.
Notes:

Details for this filter:

FilterName:	CIMaximumComponent
DisplayName English:	Maximum Component
DisplayName German:	Maximaler Kanal
DisplayName French:	Composante maximum
DisplayName Italian:	Componente massimo
DisplayName Spanish:	Componente m√°ximo

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.150.2 Methods

58.150.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.150.4 Properties

58.150.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Maximum Component attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.150.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.151 class CIFilterMaximumCompositingMBS

58.151.1 class CIFilterMaximumCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Maximum filter.
Notes:

Details for this filter:

FilterName:	CIMaximumCompositing
DisplayName English:	Maximum
DisplayName German:	Maximum
DisplayName French:	Maximum
DisplayName Italian:	Massima
DisplayName Spanish:	M√°ximo

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.151.2 Methods

58.151.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.151.4 Properties

58.151.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.151.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.151.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.151.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.152 class CIFilterMBS

58.152.1 class CIFilterMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: CIFilter are filter objects for CoreImage that encapsulate the filter with its attributes.
Notes: Mac OS X 10.4 only.

58.152.6 Methods

58.152.7 attributesDictionary as dictionary

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a dictionary of key-value pairs that describe the filter.
Example:

```
dim d as new CIFilterComicEffectMBS
dim a as Dictionary = d.attributesDictionary

break // see values in debugger
```

Notes: Returns a dictionary that contains a key for each input and output parameter for the filter. Each key is a dictionary that contains all the attributes of an input or output parameter.

58.152.8 AttributesItem(index as Integer) as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the attribute with the given index.
Notes:

Index is zero based.
Nil on any error.
See also:

- 58.152.9 AttributesItem(name as string) as CIAttributeMBS 11641

58.152.9 AttributesItem(name as string) as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the attribute with the given name.
Notes: nil on error.
See also:

- 58.152.8 AttributesItem(index as Integer) as CIAttributeMBS 11641

58.152.10 AttributesName(index as Integer) as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The name of the attribute with the given index.

58.152.11 Categories as string()

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Array of filter category names.
Notes: nil on any error.

58.152.12 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIFilter* and the object is retained.
Raises UnsupportedOperationException if object is not a CIFilter.

58.152.13 copy as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy of the filter.

58.152.14 filterArrayFromSerializedXMP(xmpData as MemoryBlock, extent as CGRectMBS, byref NSError as Variant) as CIFilterMBS()

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns an array of filter objects de-serialized from XMP data.
Notes:

xmpData: The XMP data created previously by calling serializedXMPFromFilters.
extent: The extent of the image from which the XMP data was extracted.
e: The address of an variant for receiving errors, otherwise nil. This is a NSErrorMBS.

Available in OS X v10.9 and later.

58.152.15 FilterNamesInCategories(categories() as String) as string()

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns an array containing all published filter names that belong to all listed categories.
Notes:

categories: string array with the constants kCICategory*.
Returns nil on any error.

58.152.16 FilterNamesInCategory(category as String) as string()

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns an array containing all published filter names in a category.
Example:

```
// load list of filters into Listbox

dim a() as string
dim cf as CIFilterMBS

// get all image categories
a=ciFilterMBS.FilterNamesInCategory(CIFilterMBS.kCICategoryStillImage)

StaticText1.text=str(UBound(a))+" filters."

for each s as string in a

// add to listbox
Listbox1.AddRow s

// load this filter
cf=CIFilterMBS.FilterWithName(s)

// And look into the attributes for the Displayname
if cf<>nil then
Listbox1.cell(Listbox1.LastIndex,1)=cf.DisplayName
end if
next
```

Notes: nil on any error.

58.152.17 FilterWithHandle(handle as Integer) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Creates a new filter object based on the given handle.
Example:

```
// some filter
dim x as new CIFilterCropMBS

// create a copy
dim f as CIFilterMBS = CIFilterMBS.FilterWithHandle(x.Handle)

// and show name
MsgBox f.FilterName
```

Notes:

The object is retained.
Returns nil on error.

58.152.18 filterWithImageData(Data as MemoryBlock, options as Dictionary) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".
Notes: Note that when using this initializer, you should pass in a source type identifier hint (kCGImageSourceTypeIdentifierHint) key/value pair in order to help the decoder determine the file type, as otherwise confusion and incorrect results are possible.

58.152.19 filterWithImageFile(File as FolderItem, options as Dictionary) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".

58.152.20 filterWithImageURL(URL as String, options as Dictionary) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".

58.152.21 FilterWithName(name as String) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new filter of type 'name'. All input values will be undefined.
Example:

```
dim cf as CIFilterMBS
// load this filter
cf=CIFilterMBS.FilterWithName("CIAffineTile")
```

Notes: Returns filter object for the name if found.
See also:

- 58.152.22 FilterWithName(name as String, options as Dictionary) as CIFilterMBS 11645

58.152.22 FilterWithName(name as String, options as Dictionary) as CIFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a new filter of type 'name'.
Notes:

The filter's input parameters are set from the dictionary of key-value pairs.
On OSX, any of the filter input parameters not specified in the dictionary will be undefined.
On iOS, any of the filter input parameters not specified in the dictionary will be set to default values.
Available in macOS 10.10 or newer.
See also:

- 58.152.21 FilterWithName(name as String) as CIFilterMBS 11645

58.152.23 InputKeys as string()

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns an array containing the names of all inputs in the filter.

58.152.24 kCIActiveKeys as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Read-only array containing a list of keys that affect the output image.
Depending on the RAW decoder version (kCIInputDecoderVersionKey) and the input image type, some input keys might have no effect.

58.152.25 kCIApplyOptionColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the apply options.
Notes:

If used, the value of the kCIApplyOptionColorSpace key be must be an RGB CGColorSpaceMBS.
Using this option specifies that the output of the kernel is in this color space.
If not specified, the output of the kernel is in the working color space of the rendering CIContextMBS.

58.152.26 kCIApplyOptionDefinition as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the apply options.

58.152.27 kCIApplyOptionExtent as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the apply options.

58.152.28 kCIApplyOptionUserInfo as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the apply options.

58.152.29 kCIAttributeClass as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Class name of the filter.
Notes: The class name of the filter.

58.152.30 kCIAttributeDefault as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Default value for the slider.
Notes: The default value, specified as a floating-point value, for a filter parameter.

58.152.31 kCIAttributeDescription as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the filter attributes.
Notes: The localized description of the filter. This description should inform the end user what the filter does and be short enough to display in the user interface for the filter. It is not intended to be technically detailed.

58.152.32 kCIAttributeDisplayName as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Display name of this attribute (localized).
Notes: The localized version of the filter name that is displayed in the user interface.

58.152.33 kCIAttributeFilterAvailable_iOS as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the filter attributes.
Notes: The iOS version in which the filter first became available, specified as a string.

58.152.34 kCIAttributeFilterAvailable_Mac as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the filter attributes.
Notes: The OS X version in which the filter first became available, specified as a string.

58.152.35 kCIAttributeFilterCategories as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Array of filter category names (see below)
Notes: An array of filter category keys that specifies all the categories in which the filter is a member.

58.152.36 kCIAttributeFilterDisplayName as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Name of the filter intended for UI display (eg. localized).
Notes: The localized display name of the attribute.

58.152.37 kCIAttributeFilterName as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The constant for the name of the filter.

58.152.38 kCIAttributeIdentity as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The identity value for this attribute.
Notes: If supplied as a value for a parameter, the parameter has no effect on the input image.

58.152.39 kCIAttributeMax as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Maximum value for the attribute.
Notes: The maximum value for a filter parameter, specified as a floating-point value.

58.152.40 kCIAttributeMin as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the attribute.
Notes: The minimum value for a filter parameter, specified as a floating-point value.

58.152.41 kCIAttributeName as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the filter attributes.
Notes: The name of the attribute.

58.152.42 kCIAttributeReferenceDocumentation as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the filter attributes.
Notes: The localized reference documentation for the filter. The reference should provide developers with technical details.

58.152.43 kCIAttributeSliderMax as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Default value for the slider.
Notes: The maximum value, specified as a floating-point value, to use for a slider that controls input values for a filter parameter.

58.152.44 kCIAttributeSliderMin as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Minimum value for the slider.
Notes: The minimum value, specified as a floating-point value, to use for a slider that controls input values for a filter parameter.

58.152.45 kCIAttributeType as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Type of the attribute.
Notes:

An attribute may have a type which defines what kind this attribute type is.
e.g. a number attribute may be a time or a distance.

58.152.46 kCIAttributeTypeAngle as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for numbers.
Notes: An angle.

58.152.47 kCIAttributeTypeBoolean as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for numbers.
Notes: A Boolean value.

58.152.48 kCIAttributeTypeColor as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: A Core Image color (CIColor object) that specifies red, green, and blue component values.

58.152.49 kCIAttributeTypeCount as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: A positive integer value.

58.152.50 kCIAttributeTypeDistance as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for numbers.
Notes: A distance.

58.152.51 kCIAttributeTypeGradient as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for colors.
Notes: An n-by-1 gradient image used to describe a color ramp.

58.152.52 kCIAttributeTypeImage as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: A CIImage object.

58.152.53 kCIAttributeTypeInteger as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: An integer value.

58.152.54 kCIAttributeTypeOffset as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for 2-element vectors.
Notes: An offset. (A 2-element vector type.)

58.152.55 kCIAttributeTypeOpaqueColor as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for colors.
Notes: A Core Image color (CIColor object) that specifies red, green, and blue component values. Use this key for colors with no alpha component. If the key is not present, Core Image assumes color with alpha.

58.152.56 kCIAttributeTypePosition as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for 2-element vectors.
Notes: A two-dimensional location in the working coordinate space. (A 2-element vector type.)

58.152.57 kCIAttributeTypePosition3 as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for 3-element vectors.
Notes: A three-dimensional location in the working coordinate space. (A 3-element vector type.)

58.152.58 kCIAttributeTypeRectangle as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for 4-element vectors.
Notes: A Core Image vector that specifies the x and y values of the rectangle origin, and the width (w) and height (h) of the rectangle. The vector takes the form [x, y, w, h] . (A 4-element vector type.)

58.152.59 kCIAttributeTypeScalar as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the types for numbers.
Notes: A scalar value.

58.152.60 kCIAttributeTypeTime as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: A parametric time for transitions, specified as a floating-point value in the range of 0.0 to 1.0.

58.152.61 kCIAttributeTypeTransform as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the attribute data types.
Notes: An CGAffineTransform is associated with attribute.

58.152.62 kCICategoryBlur as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that softens images, decreasing the contrast between the edges in an image. Examples of blur filters are Gaussian blur and zoom blur.

58.152.63 kCICategoryBuiltIn as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter provided by Core Image. This distinguishes built-in filters from plug-in filters.

58.152.64 kCICategoryColorAdjustment as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that changes color values. Color adjustment filters are used to eliminate color casts, adjust hue, and correct brightness and contrast. Color adjustment filters do not perform color management; ColorSync performs color management. You can use Quartz 2D to specify the color space associated with an image.

58.152.65 kCICategoryColorEffect as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that modifies the color of an image to achieve an artistic effect. Examples of color effect filters include filters that change a color image to a sepia image or a monochrome image or that produces such effects as posterizing.

58.152.66 kCICategoryCompositeOperation as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter operates on two image sources, using the color values of one image to operate on the other. Composite filters perform computations such as computing maximum values, minimum values, and multiplying values between input images. You can use compositing filters to add effects to an image, crop an image, and achieve a variety of other effects.

58.152.67 kCICategoryDistortionEffect as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that reshapes an image by altering its geometry to create a 3D effect. Using distortion filters, you can displace portions of an image, apply lens effects, make a bulge in an image, and perform other operation to achieve an artistic effect.

58.152.68 kCICategoryFilterGenerator as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter created by chaining several filters together and then packaged as a CIFilterGenerator object.

58.152.69 kCICategoryGenerator as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that generates a pattern, such as a solid color, a checkerboard, or a star shine. The generated output is typically used as input to another filter.

58.152.70 kCICategoryGeometryAdjustment as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that changes the geometry of an image. Some of these filters are used to warp an image to achieve an artistic effects, but these filters can also be used to correct problems in the source image. For

example, you can apply an affine transform to straighten an image that is rotated with respect to the horizon.

58.152.71 kCICategoryGradient as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that generates a fill whose color varies smoothly. Exactly how color varies depends on the type of gradient,Äîlinear, radial, or Gaussian.

58.152.72 kCICategoryHalftoneEffect as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that simulates a variety of halftone screens, to mimic the halftone process used in print media. The output of these filters has the familiar ,Äúnewspaper,Äù look of the various dot patterns. Filters are typically named after the pattern created by the virtual halftone screen, such as circular screen or hatched screen.

58.152.73 kCICategoryHighDynamicRange as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that works on high dynamic range pixels.

58.152.74 kCICategoryInterlaced as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that works on interlaced images.

58.152.75 kCICategoryNonSquarePixels as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that works on non-square pixels.

58.152.76 kCICategoryReduction as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that reduces image data. These filters are used to solve image analysis problems.

58.152.77 kCICategorySharpen as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that sharpens images, increasing the contrast between the edges in an image. Examples of sharpen filters are unsharp mask and sharpen luminance.

58.152.78 kCICategoryStillImage as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that works on still images.

58.152.79 kCICategoryStylize as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that makes a photographic image look as if it was painted or sketched. These filters are typically used alone or in combination with other filters to achieve artistic effects.

58.152.80 kCICategoryTileEffect as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that typically applies an effect to an image and then create smaller versions of the image (tiles), which are then laid out to create a pattern that,Äôs infinite in extent.

58.152.81 kCICategoryTransition as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that provides a bridge between two or more images by applying a motion effect that defines how the pixels of a source image yield to that of the destination image.

58.152.82 kCICategoryVideo as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: One of the categories.
Notes: A filter that works on video images.

58.152.83 kCIInputAllowDraftModeKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Boolean: Setting Draft Mode to true can improve image decoding speed without minimal loss of quality. The default value is false.

58.152.84 kCIInputAngleKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.85 kCIInputAspectRatioKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.86 kCIInputBackgroundImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.87 kCIInputBaselineExposureKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Float: A value controlling the amount of baseline exposure applied to the image.
A value of 0 indicates no baseline exposure, i.e. linear response. Default varies from with camera settings.
Available on macOS 10.12 or newer.

58.152.88 kCIInputBiasKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.89 kCIInputBoostKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Float: A value in the range of 0...1, controlling the amount of boost applied to the image.
A value of 0 indicates no boost, i.e. linear response. Default is 1, full boost.

58.152.90 kCIInputBoostShadowAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Float: The amount to boost the shadow areas of the image. Can be used to lighten details in shadows.
Has no effect if the image used for initialization was not RAW.

58.152.91 kCIInputBrightnessKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.92 kCIInputCenterKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.93 kCIInputColorKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.94 kCIInputColorNoiseReductionAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of color noise reduction applied. Range is 0 to 1.

58.152.95 kCIInputContrastKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.96 kCIInputDecoderVersionKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Version string representing the decoder version to be used. A newly initialized object defaults to the newest available decoder version for the given image type. User can request an alternative, older version in order to maintain compatibility with older releases. Must be one of kCISupportedDecoderVersions (below),

otherwise a nil output image will be generated.

58.152.97 kCIInputDepthImageKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the common filter parameter keys.
Notes: Available on macOS 10.13 or newer.

58.152.98 kCIInputDisableGamutMapKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Boolean: Setting DisableGamutMap to true disables gamut mapping.
The default value is false.

58.152.99 kCIInputDisparityImageKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the common filter parameter keys.
Notes: Available on macOS 10.13 or newer.

58.152.100 kCIInputEnableChromaticNoiseTrackingKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Boolean: Determines if progressive chromatic noise tracking (based on ISO and exposure time) should be used. default = true. Has no effect if the image used for initialization was not RAW.

58.152.101 kCIInputEnableSharpeningKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Boolean: Determines if the default sharpening should be on. default = true. Has no effect if the

image used for initialization was not RAW.

58.152.102 kCIInputEnableVendorLensCorrectionKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Boolean: Determines if the default vendor lens correction be on. default = true if raw image used for initialization contains lens distortion parameters.

58.152.103 kCIInputEVKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.104 kCIInputExtentKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.105 kCIInputGradientImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.106 kCIInputIgnoreImageOrientationKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Boolean: Normally, an image is loaded in its proper orientation, given the associated metadata gives an indication about the orientation. For special purposes it may be useful to load the image in its physical orientation. The exact meaning of this is dependent on the image in question. The default value is false.

58.152.107 kCIInputImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.108 kCIInputImageOrientationKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Integer: Overriding this value allows the user to change the orientation of the image. The valid values are in range 1...8 and follow the EXIF specification. Changing this value makes for instance rotation in 90-degree increments easy. The value is disregarded when the kCIInputIgnoreImageOrientationKey flag is set.

58.152.109 kCIInputIntensityKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.110 kCIInputLinearSpaceFilter as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: CIFilterMBS: CIFilter to be applied to the RAW image while it is in linear space.

58.152.111 kCIInputLuminanceNoiseReductionAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of luminance noise reduction applied. Range is 0 to 1.

58.152.112 kCIInputMaskImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.113 kCIInputMoireAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

Double: The amount of moire reduction applied. Range is 0 to 1.
Available on macOS 10.13

58.152.114 kCIInputNeutralChromaticityXKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Float: The X value of the chromaticity. You can always query this value and you'll get the current X value for neutral X,Y.

58.152.115 kCIInputNeutralChromaticityYKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Float: The Y value of the chromaticity. You can always query this value and you'll get the current Y value for neutral X,Y.

58.152.116 kCIInputNeutralLocationKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

CIVector: (x, y) location in geometric coordinates of the unrotated output image that should be used as neutral.
You can't query this value - it's undefined for reading.

58.152.117 kCIInputNeutralTemperatureKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Float: The color temperature to be considered neutral. You can always query this value and you'll get the current value for temperature.

58.152.118 kCIInputNeutralTintKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Float: The tint to be considered neutral. You can always query this value and you'll get the current value for tint.

58.152.119 kCIInputNoiseReductionAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of noise reduction applied. Range is 0 to 1.

58.152.120 kCIInputNoiseReductionContrastAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of noise reduction contrast applied. Range is 0 to 1.

58.152.121 kCIInputNoiseReductionDetailAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of noise reduction detail applied. Range is 0 to 1.

58.152.122 kCIInputNoiseReductionSharpnessAmountKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Double: The amount of noise reduction sharpness applied. Range is 0 to 1.

58.152.123 kCIInputRadiusKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.124 kCIInputRefractionKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.125 kCIInputSaturationKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.126 kCIInputScaleFactorKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Float: The desired scale factor at which the image will be eventually drawn. Setting this value can greatly improve the drawing performance. A value of 1 would mean identity, values smaller than 1 will result in a smaller output image. Changing the Scale Factor with enabled Draft Mode may also improve performance.

58.152.127 kCIInputScaleKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.128 kCIInputShadingImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.129 kCIInputSharpnessKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.130 kCIInputTargetImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.131 kCIInputTimeKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.132 kCIInputTransformKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.133 kCIInputVersionKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.134 kCIInputWeightsKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the common filter parameter keys.

58.152.135 kCIInputWidthKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the input keys.

58.152.136 kCIOutputImageKey as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The key for the output image.

58.152.137 kCIOutputNativeSizeKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes:

CIVector containing the full native size of the unscaled image. The vector's X value is the width, Y is the height.
This is not affected by changing either kCIInputIgnoreImageOrientationKey or kCIInputImageOrientation-Key.

58.152.138 kCISupportedDecoderVersionsKey as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the options for image filter initialization.
Notes: Array of dictionary: Array of all supported decoder versions for the given image type, sorted in increasingly newer order. Each entry is a NSDictionary with a number of key/value pairs. All entries would represent a valid version identifier to be passed in for kCIInputDecoderVersion. This value can be only read; setting this value will raise an exception. Currently, the only defined key is @"version" which has as a value an String uniquely describing a given decoder version. This string may not be suitable for user interface display.

58.152.139 kCIUIParameterSet as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Sets of controls for various user scenarios.
Notes: The set of input parameters to use. The associated value can be kCIUISetBasic, kCIUISetIntermediate, kCIUISetAdvanced, or kCIUISetDevelopment.

58.152.140 kCIUISetAdvanced as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the UI Set constants.
Notes: Controls that are appropriate for an advanced user scenario.

58.152.141 kCIUISetBasic as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the UI Set constants.
Notes: Controls that are appropriate for a basic user scenario, that is, the minimum of settings to control the filter.

58.152.142 kCIUISetDevelopment as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the UI Set constants.
Notes: Controls that should be visible only for development purposes.

58.152.143 kCIUISetIntermediate as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the UI Set constants.
Notes: Controls that are appropriate for an intermediate user scenario.

58.152.144 localizedDescriptionForFilterName(filterName as String) as String

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the localized description of a filter for display in the user interface.
Example:

MsgBox CIFilterMBS.localizedDescriptionForFilterName("CIComicEffect")

Notes:

filterName: The filter name.
Returns the localized description of the filter.

Available in OS X v10.5 and later.

58.152.145 LocalizedNameForCategory(name as String) as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The localized name of a category.

58.152.146 LocalizedNameForFilterName(name as String) as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the localized name of a filter.

58.152.147 localizedReferenceDocumentationForFilterName(filterName as String) as String

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns the location of the localized reference documentation that describes the filter.
Example:

MsgBox CIFilterMBS.localizedReferenceDocumentationForFilterName("CIComicEffect")

Notes:

filterName: The filter name.

Returns an URL that specifies the location of the localized documentation, or "" if the filter does not provide localized reference documentation.

The URL can be a local file or a remote document on a web server. Because filters created prior to OS X v10.5 could return nil, you should be make sure that your code handles this case gracefully.

Available in OS X v10.5 and later.

58.152.148 OutputKeys as string()

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns an array containing the names of all outputs in the filter.

58.152.149 serializedXMPFromFilters(filters() as CIFilterMBS, extent as CGRectMBS) as Memoryblock

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Serializes filter parameters into XMP form that is suitable for embedding in an image.
Notes:

filters: The array of filters to serialize. See Discussion for the filters that can be serialized.
extent: The extent of the input image to the filter.

At this time the only filters classes that can be serialized using this method are, CIAffineTransform, CICrop, and the filters returned by the CIImage methods autoAdjustmentFilters and autoAdjustmentFiltersWithOptions. The parameters of other filter classes will not be serialized.

Available in OS X v10.9 and later.

58.152.150 SetDefaults

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Sets all inputs to their default values (where default values are defined, other inputs are left as-is).

58.152.151 Properties

58.152.152 AttributesCount as Integer

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Number of attributes.
Notes: (Read only property)

58.152.153 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this filter.
Notes: (Read only property)

58.152.154 DisplayName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Name of the filter intended for UI display (eg. localized)
Example:

```
dim cf as new CIFilterLuminosityBlendModeMBS
MsgBox cf.DisplayName // shows: "Luminosity Blend Mode"
```

Notes: (Read only property)

58.152.155 Enabled as Boolean

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Whether filter is enabled for animation.
Notes:

The 'enabled' property is used only by CoreAnimation and is animatable.
In Core Animation, a CIFilter only applied to its input when this property is set to true.
(Read and Write property)

58.152.156 FilterName as string

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Name of the filter.
Notes: (Read only property)

58.152.157 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the internal used CIFilter reference.
Notes: (Read only property)

58.152.158 Name as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The filter name.
Notes:

On OSX this property is read-write. This can be useful when using CIFilters with CALayers to construct unique keypaths.
For example, to set an attribute of a filter attached to a layer, a path such as "filters.myExposureFilter.inputEV" could be used.
CALayer animations may also access filter attributes via key-paths.
(Read and Write property)

58.152.159 outputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The output image.
Notes:

Available directly on OS X 10.10 or newer, but our plugin implements it also for older versions by using valueForKey internally.
(Read only property)

58.152.160 ValueAsAffineTransform(key as string) as NSAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as an affine transform.
Notes:

On if attributes classname is NSAffineTransform.
(Read and Write computed property)

58.152.161 ValueAsCIColor(key as string) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as a color.
Notes:

On if attributes classname is CIColor.
(Read and Write computed property)

58.152.162 ValueAsCIImage(key as string) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as an image.
Notes:

On if attributes classname is NSImage.
(Read and Write computed property)

58.152.163 ValueAsCIVector(key as string) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as a vector.
Notes:

On if attributes classname is CIVector.
(Read and Write computed property)

58.152.164 ValueAsData(key as string) as memoryblock

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as a memoryblock.
Notes:

On if attributes classname is memoryblock.
(Read and Write computed property)

58.152.165 ValueAsNumber(key as string) as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Get or set a value as a double.
Notes:

On if attributes classname is number.
(Read and Write computed property)

58.152.166 ValueAsString(key as string) as String

MBS MacCI Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Get or set a value as a string.
Notes:

On if attributes classname is NSString.
(Read and Write computed property)

58.153 class CIFilterMedianFilterMBS

58.153.1 class CIFilterMedianFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Median filter.
Notes:

Details for this filter:

FilterName:	CIMedianFilter
DisplayName English:	Median
DisplayName German:	Median
DisplayName French:	M√©dian
DisplayName Italian:	Mediana
DisplayName Spanish:	Mediano

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.153.2 Methods

58.153.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.153.4 Properties

58.153.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Median attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.153.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.154 class CIFilterMeshGeneratorMBS

58.154.1 class CIFilterMeshGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Mesh Generator filter.
Notes:

Details for this filter:

FilterName:	CIMeshGenerator
DisplayName English:	Mesh Generator
DisplayName German:	Gittergenerator
DisplayName French:	G√©n√©rateur de maillage
DisplayName Italian:	Generatore di mesh
DisplayName Spanish:	Generador de mallas

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputWidth: Width
- inputColor: Color
- inputMesh: Mesh

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.154.2 Methods

58.154.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.154.4 Properties

58.154.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mesh Generator attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.154.6 AttributeinputMesh as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mesh Generator attribute.
Notes:

This attribute should have this content:

Name:	inputMesh
Class:	Variant
DisplayName:	Mesh
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.154.7 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mesh Generator attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	1.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	1

(Read only property)

58.154.8 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

See AttributeinputColor for more details.
(Read and Write property)

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

58.154.9 inputMesh as Variant

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Mesh
Notes:

Name:	inputMesh
Class:	Variant (NSArray)
DisplayName English:	Mesh
DisplayName German:	Mesh
DisplayName French:	Mesh
DisplayName Italian:	Mesh
DisplayName Spanish:	Mesh

See AttributeinputMesh for more details.
(Read and Write property)

58.154.10 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.155 class CIFilterMinimumComponentMBS

58.155.1 class CIFilterMinimumComponentMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Minimum Component filter.
Notes:

Details for this filter:

FilterName:	CIMinimumComponent
DisplayName English:	Minimum Component
DisplayName German:	Minimaler Kanal
DisplayName French:	Composante minimum
DisplayName Italian:	Componente minimo
DisplayName Spanish:	Componente m√nimo

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.155.2 Methods

58.155.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.155.4 Properties

58.155.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Minimum Component attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.155.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.156 class CIFilterMinimumCompositingMBS

58.156.1 class CIFilterMinimumCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Minimum filter.
Notes:

Details for this filter:

FilterName:	CIMinimumCompositing
DisplayName English:	Minimum
DisplayName German:	Minimum
DisplayName French:	Minimum
DisplayName Italian:	Minima
DisplayName Spanish:	M√nimo

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.156.2 Methods

58.156.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.156.4 Properties

58.156.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.156.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.156.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.156.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.157 class CIFilterMixMBS

58.157.1 class CIFilterMixMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Mix filter.
Notes:

Details for this filter:

FilterName:	CIMix
DisplayName English:	Mix
DisplayName German:	Mix
DisplayName French:	M√©lange
DisplayName Italian:	Mix
DisplayName Spanish:	Mezcla

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image
- inputAmount: Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.157.2 Methods

58.157.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.157.4 Properties

58.157.5 AttributeinputAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mix attribute.
Notes:

This attribute should have this content:

Name:	inputAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
DefaultNumber:	1
IdentityNumber:	1
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.157.6 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mix attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.157.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mix attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.157.8 inputAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Amount
Notes:

Name:	inputAmount
Class:	double (NSNumber)
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
Type:	CIAttributeTypeScalar

See AttributeinputAmount for more details.
(Read and Write property)

58.157.9 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.157.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.158 class CIFilterModTransitionMBS

58.158.1 class CIFilterModTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Mod filter.
Notes:

Details for this filter:

FilterName:	CIModTransition
DisplayName English:	Mod
DisplayName German:	Mod
DisplayName French:	Mod
DisplayName Italian:	Mod
DisplayName Spanish:	Mod

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputCenter: Center
- inputTime: Time
- inputAngle: Angle
- inputRadius: Radius
- inputCompression: Compression

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.158.2 Methods

58.158.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.158.4 Properties

58.158.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	2
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	-6.283185

(Read only property)

58.158.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.158.7 AttributeinputCompression as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

(Read only property)

58.158.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

Name:	inputCompression
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Compression
DisplayName German:	Komprimierung
DisplayName French:	Compression
DisplayName Italian:	Compressione
DisplayName Spanish:	Compresi√n
DefaultNumber:	300
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	800
SliderMinNumber:	100

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.158.9 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	150
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	200
SliderMinNumber:	1

58.158.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.158.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Mod attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.158.12 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.158.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.158.14 inputCompression as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Compression
Notes:

Name:	inputCompression
Class:	double (NSNumber)
DisplayName English:	Compression
DisplayName German:	Komprimierung
DisplayName French:	Compression
DisplayName Italian:	Compressione
DisplayName Spanish:	Compresi√n
Type:	CIAttributeTypeDistance

See AttributeinputCompression for more details.
(Read and Write property)

58.158.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.158.16 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.158.17 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.158.18 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.159 class CIFilterMorphologyGradientMBS

58.159.1 class CIFilterMorphologyGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Morphology Gradient filter.
Notes:

Details for this filter:

FilterName:	CIMorphologyGradient
DisplayName English:	Morphology Gradient
DisplayName German:	Morphologischer Verlauf
DisplayName French:	Gradient morphologique
DisplayName Italian:	Gradiente morfologico
DisplayName Spanish:	Gradiente morfol√gico

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.159.2 Methods

58.159.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.159.4 Properties

58.159.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.159.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	5
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

58.159.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.159.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.160 class CIFilterMorphologyMaximumMBS

58.160.1 class CIFilterMorphologyMaximumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Morphology Maximum filter.
Notes:

Details for this filter:

FilterName:	CIMorphologyMaximum
DisplayName English:	Morphology Maximum
DisplayName German:	Morphologisches Maximum
DisplayName French:	Maximum morphologique
DisplayName Italian:	Massimo morfologico
DisplayName Spanish:	M√°ximo morfol√gico

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.160.2 Methods

58.160.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.160.4 Properties

58.160.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.160.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

58.160.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.160.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.161 class CIFilterMorphologyMinimumMBS

58.161.1 class CIFilterMorphologyMinimumMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Morphology Minimum filter.
Notes:

Details for this filter:

FilterName:	CIMorphologyMinimum
DisplayName English:	Morphology Minimum
DisplayName German:	Morphologisches Minimum
DisplayName French:	Minimum morphologique
DisplayName Italian:	Minimo morfologico
DisplayName Spanish:	M√nimo morfol√gico

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.161.2 Methods

58.161.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.161.4 Properties

58.161.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.161.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Morphology Minimum attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

58.161.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.161.8 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

(Read and Write property)

58.162 class CIFilterMorphologyRectangleMaximumMBS

58.162.1 class CIFilterMorphologyRectangleMaximumMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Morphology Rectangle Maximum filter.
Notes:

Details for this filter:

FilterName:	CIMorphologyRectangleMaximum
DisplayName English:	Morphology Rectangle Maximum
DisplayName German:	Maximum des Morphologierechtecks
DisplayName French:	Maximum morphologique (rectangulaire)
DisplayName Italian:	Massimo morfologico rettangolare
DisplayName Spanish:	M√°ximo morfol√gico rectangular

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputWidth: Width
- inputHeight: Height

Output:

- outputImage

Subclass of the CIFilterMBS class.

- MBS Xojo Plugins, version 23.0pr5

58.162.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.162.4 Methods

58.162.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.162.6 Properties

58.162.7 AttributeinputHeight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Morphology Rectangle Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputHeight
Class:	double
Type:	CIAttributeTypeInteger
DisplayName:	Height
DefaultNumber:	5
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	49
SliderMinNumber:	1

(Read only property)

58.162.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Morphology Rectangle Maximum attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.162.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Morphology Rectangle Maximum attribute.
Notes:

This attribute should have this content:

(Read only property)

58.162.10 inputHeight as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Height
Notes:

See AttributeinputHeight for more details.
(Read and Write property)

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur

58.164 class CIFilterMotionBlurMBS

58.164.1 class CIFilterMotionBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Motion Blur filter.
Notes:

Details for this filter:

FilterName:	CIMotionBlur
DisplayName English:	Motion Blur
DisplayName German:	Bewegungsunsch√§rfe
DisplayName French:	Flou mouvement
DisplayName Italian:	Sfumatura movimento
DisplayName Spanish:	Difuminado de movimiento

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.164.2 Methods

58.164.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.164.4 Properties

58.164.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Motion Blur attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.164.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Motion Blur attribute.

SliderMinNumber:	0

(Read only property)

58.164.8 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.164.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.164.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.165 class CIFilterMultiplyBlendModeMBS

58.165.1 class CIFilterMultiplyBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Multiply Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIMultiplyBlendMode
DisplayName English:	Multiply Blend Mode
DisplayName German:	Mischmethode ,ÄûMultiplizieren,Äú
DisplayName French:	Mode de fusion Multiplication
DisplayName Italian:	Modalit√† sfumatura moltiplicata
DisplayName Spanish:	Multiplicar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.165.2 Methods

58.165.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.165.4 Properties

58.165.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Multiply Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.165.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Multiply Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.165.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.165.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.166 class CIFilterMultiplyCompositingMBS

58.166.1 class CIFilterMultiplyCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Multiply filter.
Notes:

Details for this filter:

FilterName:	CIMultiplyCompositing
DisplayName English:	Multiply
DisplayName German:	Multiplizieren
DisplayName French:	Multiplier
DisplayName Italian:	Moltiplica
DisplayName Spanish:	Multiplicar

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.166.2 Methods

58.166.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.166.4 Properties

58.166.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Multiply attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.166.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Multiply attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.166.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.166.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.167 class CIFilterNinePartStretchedMBS

58.167.1 class CIFilterNinePartStretchedMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Nine Part Stretched filter.
Notes:

Details for this filter:

FilterName:	CINinePartStretched
DisplayName English:	Nine Part Stretched
DisplayName German:	Neun Teile gedehnt
DisplayName French:	√âtir√© en neuf parties
DisplayName Italian:	Con allungamento in nove parti
DisplayName Spanish:	Estirado en nueve partes

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputBreakpoint0: Breakpoint0
- inputBreakpoint1: Breakpoint1
- inputGrowAmount: Grow Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.167.2 Methods

58.167.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.167.4 Properties

58.167.5 AttributeinputBreakpoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Stretched attribute.
Notes:

This attribute should have this content:

Name:	inputBreakpoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName:	Breakpoint0
DefaultVector:	[50 50]
IdentityVector:	n/a

(Read only property)

58.167.6 AttributeinputBreakpoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Stretched attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputBreakpoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName:	Breakpoint1
DefaultVector:	[150 150]
IdentityVector:	n/a

58.167.7 AttributeinputGrowAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Stretched attribute.
Notes:

This attribute should have this content:

Name:	inputGrowAmount
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Grow Amount
DisplayName German:	Wachstum
DisplayName French:	Degr√© d‚Äôagrandissement
DisplayName Italian:	Quantit√† di sviluppo
DisplayName Spanish:	Cantidad de crecimiento
DefaultVector:	[100 100]
IdentityVector:	n/a

(Read only property)

58.167.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Stretched attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.167.9 inputBreakpoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Breakpoint0
Notes:

Name:	inputBreakpoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Breakpoint0
DisplayName German:	Breakpoint0
DisplayName French:	Breakpoint0
DisplayName Italian:	Breakpoint0
DisplayName Spanish:	Breakpoint0
Type:	CIAttributeTypePosition

See AttributeinputBreakpoint0 for more details.
(Read and Write property)

58.167.10 inputBreakpoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Breakpoint1
Notes:

See AttributeinputBreakpoint1 for more details.
(Read and Write property)

Name:	inputBreakpoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Breakpoint1
DisplayName German:	Breakpoint1
DisplayName French:	Breakpoint1
DisplayName Italian:	Breakpoint1
DisplayName Spanish:	Breakpoint1
Type:	CIAttributeTypePosition

58.167.11 inputGrowAmount as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Grow Amount
Notes:

Name:	inputGrowAmount
Class:	CIVectorMBS (CIVector)
DisplayName English:	Grow Amount
DisplayName German:	Wachstum
DisplayName French:	Degr√© d,Äôagrandissement
DisplayName Italian:	Quantit√† di sviluppo
DisplayName Spanish:	Cantidad de crecimiento
Type:	CIAttributeTypeOffset

See AttributeinputGrowAmount for more details.
(Read and Write property)

58.167.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.168 class CIFilterNinePartTiledMBS

58.168.1 class CIFilterNinePartTiledMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Nine Part Tiled filter.
Notes:

Details for this filter:

FilterName:	CINinePartTiled
DisplayName English:	Nine Part Tiled
DisplayName German:	Neun Teile gekachelt
DisplayName French:	Mosa√Øque en neuf parties
DisplayName Italian:	Con schema a mosaico in nove parti
DisplayName Spanish:	Mosaico en nueve partes

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputBreakpoint0: Breakpoint0
- inputBreakpoint1: Breakpoint1
- inputGrowAmount: Grow Amount
- inputFlipYTiles: Flip Y Tiles

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.168.2 Methods

58.168.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.168.4 Properties

58.168.5 AttributeinputBreakpoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Tiled attribute.
Notes:

This attribute should have this content:

Name:	inputBreakpoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName:	Breakpoint0
DefaultVector:	[50 50]
IdentityVector:	n/a

(Read only property)

58.168.6 AttributeinputBreakpoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Tiled attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputBreakpoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName:	Breakpoint1
DefaultVector:	[150 150]
IdentityVector:	n/a

58.168.7 AttributeinputFlipYTiles as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Tiled attribute.
Notes:

This attribute should have this content:

Name:	inputFlipYTiles
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Flip Y Tiles
DisplayName German:	Y-Kacheln spiegeln
DisplayName French:	Retourner les mosa√Øques¬†Y
DisplayName Italian:	Capovolge caselle Y
DisplayName Spanish:	Voltear teselas en Y
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

(Read only property)

58.168.8 AttributeinputGrowAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Tiled attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputGrowAmount
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Grow Amount
DisplayName German:	Wachstum
DisplayName French:	Degr√© d,Äôagrandissement
DisplayName Italian:	Quantit√† di sviluppo
DisplayName Spanish:	Cantidad de crecimiento
DefaultVector:	[100 100]
IdentityVector:	n/a

58.168.9 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Nine Part Tiled attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.168.10 inputBreakpoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Breakpoint0
Notes:

See AttributeinputBreakpoint0 for more details.
(Read and Write property)

Name:	inputBreakpoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Breakpoint0
DisplayName German:	Breakpoint0
DisplayName French:	Breakpoint0
DisplayName Italian:	Breakpoint0
DisplayName Spanish:	Breakpoint0
Type:	CIAttributeTypePosition

58.168.11 inputBreakpoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Breakpoint1
Notes:

Name:	inputBreakpoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Breakpoint1
DisplayName German:	Breakpoint1
DisplayName French:	Breakpoint1
DisplayName Italian:	Breakpoint1
DisplayName Spanish:	Breakpoint1
Type:	CIAttributeTypePosition

See AttributeinputBreakpoint1 for more details.
(Read and Write property)

58.168.12 inputFlipYTiles as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Flip Y Tiles
Notes:

Name:	inputFlipYTiles
Class:	double (NSNumber)
DisplayName English:	Flip Y Tiles
DisplayName German:	Y-Kacheln spiegeln
DisplayName French:	Retourner les mosa√Øques¬†Y
DisplayName Italian:	Capovolge caselle Y
DisplayName Spanish:	Voltear teselas en Y
Type:	CIAttributeTypeBoolean

See AttributeinputFlipYTiles for more details.
(Read and Write property)

58.168.13 inputGrowAmount as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Grow Amount
Notes:

Name:	inputGrowAmount
Class:	CIVectorMBS (CIVector)
DisplayName English:	Grow Amount
DisplayName German:	Wachstum
DisplayName French:	Degr√© d,Äôagrandissement
DisplayName Italian:	Quantit√† di sviluppo
DisplayName Spanish:	Cantidad de crecimiento
Type:	CIAttributeTypeOffset

See AttributeinputGrowAmount for more details.
(Read and Write property)

58.168.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.169 class CIFilterNoiseReductionMBS

58.169.1 class CIFilterNoiseReductionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Noise Reduction filter.
Notes:

Details for this filter:

FilterName:	CINoiseReduction
DisplayName English:	Noise Reduction
DisplayName German:	Rauschunterdr√ºckung
DisplayName French:	R√©duction du bruit
DisplayName Italian:	Riduzione disturbo
DisplayName Spanish:	Reducci√n de ruido

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputNoiseLevel: Noise Level
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.169.2 Methods

58.169.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.169.4 Properties

58.169.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Noise Reduction attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.169.6 AttributeinputNoiseLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Noise Reduction attribute.
Notes:

This attribute should have this content:

Name:	inputNoiseLevel
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Noise Level
DisplayName German:	Rauschpegel
DisplayName French:	Niveau de bruit
DisplayName Italian:	Livello disturbo
DisplayName Spanish:	Nivel de ruido
DefaultNumber:	0.02
IdentityNumber:	0
SliderMaxNumber:	0.1
SliderMinNumber:	0

(Read only property)

58.169.7 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Noise Reduction attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.4
IdentityNumber:	0
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

58.169.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.169.9 inputNoiseLevel as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Noise Level
Notes:

Name:	inputNoiseLevel
Class:	double (NSNumber)
DisplayName English:	Noise Level
DisplayName German:	Rauschpegel
DisplayName French:	Niveau de bruit
DisplayName Italian:	Livello disturbo
DisplayName Spanish:	Nivel de ruido
Type:	CIAttributeTypeScalar

See AttributeinputNoiseLevel for more details.
(Read and Write property)

58.169.10 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

58.170 class CIFilterOpTileMBS

58.170.1 class CIFilterOpTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Op Tile filter.
Notes:

Details for this filter:

FilterName:	CIOpTile
DisplayName English:	Op Tile
DisplayName German:	Op kacheln
DisplayName French:	Mosa√Øque op√©rationnelle
DisplayName Italian:	Mosaico ottico
DisplayName Spanish:	Mosaico √ptico

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputScale: Scale
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.170.2 Methods

58.170.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.170.4 Properties

58.170.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Op Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.170.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Op Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.170.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Op Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.170.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Op Tile attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	2.8
IdentityNumber:	1
SliderMaxNumber:	10
SliderMinNumber:	0.1

(Read only property)

58.170.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Op Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	65
IdentityNumber:	65
SliderMaxNumber:	1000
SliderMinNumber:	1

(Read only property)

58.170.10 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.170.11 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.170.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.170.13 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

58.170.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.171 class CIFilterOverlayBlendModeMBS

58.171.1 class CIFilterOverlayBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Overlay Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIOverlayBlendMode
DisplayName English:	Overlay Blend Mode
DisplayName German:	Mischmethode ,Äû√überlagerung,Äú
DisplayName French:	Mode de fusion Superposition
DisplayName Italian:	Modalit√† sfumatura sovrapposizione
DisplayName Spanish:	Superponer modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.171.2 Methods

58.171.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.171.4 Properties

58.171.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Overlay Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.171.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Overlay Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.171.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.171.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.172 class CIFilterPageCurlTransitionMBS

58.172.1 class CIFilterPageCurlTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Page Curl filter.
Notes:

Details for this filter:

FilterName:	CIPageCurlTransition
DisplayName English:	Page Curl
DisplayName German:	Umbl√§ttern
DisplayName French:	Repli de page
DisplayName Italian:	Ricciolo pagina
DisplayName Spanish:	Ondulaci√n de p√°gina

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputBacksideImage: Backside Image
- inputShadingImage: Shading Image
- inputExtent: Extent
- inputTime: Time
- inputAngle: Angle
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.172.2 Methods

58.172.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.172.4 Properties

58.172.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.172.6 AttributeinputBacksideImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputBacksideImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Backside Image
DisplayName German:	Bild auf der Hinterseite
DisplayName French:	Image arri√®re
DisplayName Italian:	Immagine posteriore
DisplayName Spanish:	Imagen de reverso
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.172.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

58.172.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.172.9 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

(Read only property)

58.172.10 AttributeinputShadingImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	100
IdentityNumber:	0
MaxNumber:	0
MinNumber:	0.01
SliderMaxNumber:	400
SliderMinNumber:	0.01

Name:	inputShadingImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,Äôombrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.172.11 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

58.172.12 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Page Curl attribute.
Notes:

This attribute should have this content:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.172.13 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.172.14 inputBacksideImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Backside Image
Notes:

Name:	inputBacksideImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Backside Image
DisplayName German:	Bild auf der Hinterseite
DisplayName French:	Image arri√®re
DisplayName Italian:	Immagine posteriore
DisplayName Spanish:	Imagen de reverso
Type:	CIAttributeTypeImage

See AttributeinputBacksideImage for more details.
(Read and Write property)

58.172.15 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

See AttributeinputExtent for more details.
(Read and Write property)

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

58.172.16 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.172.17 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.172.18 inputShadingImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shading Image
Notes:

Name:	inputShadingImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,Äôombrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
Type:	CIAttributeTypeImage

See AttributeinputShadingImage for more details.
(Read and Write property)

58.172.19 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.172.20 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.173 class CIFilterPageCurlWithShadowTransitionMBS

58.173.1 class CIFilterPageCurlWithShadowTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Page Curl With Shadow filter.
Notes:

Details for this filter:

FilterName:	CIPageCurlWithShadowTransition
DisplayName English:	Page Curl With Shadow
DisplayName German:	Umbl√§ttern mit Schatten
DisplayName French:	Repli de page avec ombre
DisplayName Italian:	Piega pagina con ombra
DisplayName Spanish:	P√°gina con el borde ondulado y sombra

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputBacksideImage: Backside Image
- inputExtent: Extent
- inputTime: Time
- inputAngle: Angle
- inputRadius: Radius
- inputShadowSize: Shadow Size

- inputShadowAmount: Shadow Amount
- inputShadowExtent: Shadow Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.174.12 inputPerceptual as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Perceptual
Notes:

Name:	inputPerceptual
Class:	double (NSNumber)
DisplayName English:	Perceptual
DisplayName German:	Perceptual
DisplayName French:	Perceptual
DisplayName Italian:	Perceptual
DisplayName Spanish:	Perceptual
Type:	CIAttributeTypeBoolean

See AttributeinputPerceptual for more details.
(Read and Write property)

58.175 class CIFilterPalettizeMBS

58.175.1 class CIFilterPalettizeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Palettize filter.
Notes:

Details for this filter:

FilterName:	CIPalettize
DisplayName English:	Palettize
DisplayName German:	Palettieren
DisplayName French:	Indexer
DisplayName Italian:	Converti in palette
DisplayName Spanish:	Paletizar

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPaletteImage: Palette Image
- inputPerceptual: Perceptual

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.175.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.175.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.175.4 Methods

58.175.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.175.6 Properties

58.175.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Palettize attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.175.8 AttributeinputPaletteImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Palettize attribute.
Notes:

This attribute should have this content:

Name:	inputPaletteImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Palette Image
DisplayName German:	Palettenbild
DisplayName French:	Image de la palette
DisplayName Italian:	Immagine tavolozza
DisplayName Spanish:	Imagen de la paleta
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.175.9 AttributeinputPerceptual as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Palettize attribute.
Notes:

This attribute should have this content:

Name:	inputPerceptual
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName:	Perceptual
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0

(Read only property)

58.175.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.175.11 inputPaletteImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Palette Image
Notes:

Name:	inputPaletteImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Palette Image
DisplayName German:	Palettenbild
DisplayName French:	Image de la palette
DisplayName Italian:	Immagine tavolozza
DisplayName Spanish:	Imagen de la paleta
Type:	CIAttributeTypeImage

See AttributeinputPaletteImage for more details.
(Read and Write property)

58.175.12 inputPerceptual as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Perceptual
Notes:

Name:	inputPerceptual
Class:	double (NSNumber)
DisplayName English:	Perceptual
DisplayName German:	Perceptual
DisplayName French:	Perceptual
DisplayName Italian:	Perceptual
DisplayName Spanish:	Perceptual
Type:	CIAttributeTypeBoolean

See AttributeinputPerceptual for more details.
(Read and Write property)

58.176 class CIFilterParallelogramTileMBS

58.176.1 class CIFilterParallelogramTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Parallelogram Tile filter.
Notes:

Details for this filter:

FilterName:	CIParallelogramTile
DisplayName English:	Parallelogram Tile
DisplayName German:	Parallelogramme
DisplayName French:	Mosa√Øque de parall√©logrammes
DisplayName Italian:	Mosaico parallelogramma
DisplayName Spanish:	Mosaico paralelogramo

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputAcuteAngle: Acute Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.176.2 Methods

58.176.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.176.4 Properties

58.176.5 AttributeinputAcuteAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Parallelogram Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAcuteAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
DefaultNumber:	1.570796
IdentityNumber:	1.570796
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.176.6 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Parallelogram Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.176.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Parallelogram Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.176.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Parallelogram Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.176.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Parallelogram Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.176.10 inputAcuteAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Acute Angle
Notes:

Name:	inputAcuteAngle
Class:	double (NSNumber)
DisplayName English:	Acute Angle
DisplayName German:	Spitzer Winkel
DisplayName French:	Angle aigu
DisplayName Italian:	Angolo acuto
DisplayName Spanish:	√Ångulo agudo
Type:	CIAttributeTypeAngle

See AttributeinputAcuteAngle for more details.
(Read and Write property)

58.176.11 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.176.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.176.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.176.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.177 class CIFilterPDF417BarcodeGeneratorMBS

58.177.1 class CIFilterPDF417BarcodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage PDF417 Barcode Generator filter.
Notes:

Details for this filter:

FilterName:	CIPDF417BarcodeGenerator
DisplayName English:	PDF417 Barcode Generator
DisplayName German:	PDF417 Barcode-Generator
DisplayName French:	G√©n√©rateur de code-barres PDF417
DisplayName Italian:	Generatore codice a barre PDF417
DisplayName Spanish:	Generador de c√digos de barras PDF417

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputMinWidth: Min Width
- inputMaxWidth: Max Width
- inputMinHeight: Min Height
- inputMaxHeight: Max Height
- inputDataColumns: Data Columns
- inputRows: Rows
- inputPreferredAspectRatio: Preferred Aspect Ratio
- inputCompactionMode: Compaction Mode

- inputCompactStyle: Compact Style
- inputCorrectionLevel: Correction Level
- inputAlwaysSpecifyCompaction: Always Specify Compaction

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

58.177.2 Videos

- Presentation from Munich conference about MBS Plugins.

58.177.3 Videos

- Presentation from Munich conference about MBS Plugins.

58.177.4 Methods

58.177.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.177.6 Properties

58.177.7 AttributeinputAlwaysSpecifyCompaction as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the PDF417 Barcode Generator attribute.
Notes:

This attribute should have this content:

Name:	inputAlwaysSpecifyCompaction
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName English:	Always Specify Compaction
DisplayName German:	Komprimierung immer angeben
DisplayName French:	Toujours indiquer le compactage
DisplayName Italian:	Specifica sempre la compressione
DisplayName Spanish:	Especificar compactaci√n siempre
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.177.8 AttributeinputCompactionMode as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the PDF417 Barcode Generator attribute.
Notes:

This attribute should have this content:

Name:	inputCompactionMode
Class:	double
Type:	CIAttributeTypeInteger
DisplayName English:	Compaction Mode
DisplayName German:	Komprimierungsmodus
DisplayName French:	Mode de compactage
DisplayName Italian:	Modalit√† di compressione

See AttributeinputCorrectionLevel for more details.
(Read and Write property)

58.177.23 inputDataColumns as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Data Columns
Notes:

Name:	inputDataColumns
Class:	double (NSNumber)
DisplayName English:	Data Columns
DisplayName German:	Datenspalten
DisplayName French:	Colonnes de donn√©es
DisplayName Italian:	Colonne dati
DisplayName Spanish:	Columnas de datos
Type:	CIAttributeTypeInteger

See AttributeinputDataColumns for more details.
(Read and Write property)

58.177.24 inputMaxHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Max Height
Notes:

Name:	inputMaxHeight
Class:	double (NSNumber)
DisplayName English:	Max Height
DisplayName German:	Max. H√he
DisplayName French:	Hauteur max.
DisplayName Italian:	Altezza massima
DisplayName Spanish:	Altura m√°x.
Type:	CIAttributeTypeInteger

See AttributeinputMaxHeight for more details.
(Read and Write property)

58.177.25 inputMaxWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Max Width
Notes:

Name:	inputMaxWidth
Class:	double (NSNumber)
DisplayName English:	Max Width
DisplayName German:	Max. Breite
DisplayName French:	Largeur max.
DisplayName Italian:	Larghezza massima
DisplayName Spanish:	Anchura m√°x.
Type:	CIAttributeTypeInteger

See AttributeinputMaxWidth for more details.
(Read and Write property)

58.177.26 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje

See AttributeinputMessage for more details.
(Read and Write property)

58.177.27 inputMinHeight as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Min Height
Notes:

Name:	inputMinHeight
Class:	double (NSNumber)
DisplayName English:	Min Height
DisplayName German:	Min. H√he
DisplayName French:	Hauteur min.
DisplayName Italian:	Altezza minima
DisplayName Spanish:	Altura m√n.
Type:	CIAttributeTypeInteger

See AttributeinputMinHeight for more details.
(Read and Write property)

58.177.28 inputMinWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Min Width
Notes:

Name:	inputMinWidth
Class:	double (NSNumber)
DisplayName English:	Min Width
DisplayName German:	Min. Breite
DisplayName French:	Largeur min.
DisplayName Italian:	Larghezza minima
DisplayName Spanish:	Anchura m√n.
Type:	CIAttributeTypeInteger

See AttributeinputMinWidth for more details.
(Read and Write property)

58.177.29 inputPreferredAspectRatio as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Preferred Aspect Ratio
Notes:

Name:	inputPreferredAspectRatio
Class:	double (NSNumber)
DisplayName English:	Preferred Aspect Ratio
DisplayName German:	Bevorzugtes Seitenverh√§ltnis
DisplayName French:	Proportions pr√©f√©r√©es
DisplayName Italian:	Proporzioni preferite
DisplayName Spanish:	Proporciones preferidas

See AttributeinputPreferredAspectRatio for more details.
(Read and Write property)

58.177.30 inputRows as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rows
Notes:

See AttributeinputRows for more details.
(Read and Write property)

Name:	inputRows
Class:	double (NSNumber)
DisplayName English:	Rows

58.178 class CIFilterPersonSegmentationMBS

58.178.1 class CIFilterPersonSegmentationMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Person Segmentation filter.
Notes:

Details for this filter:

FilterName:	CIPersonSegmentation
DisplayName English:	Person Segmentation
DisplayName German:	Personensegmentierung
DisplayName French:	Segmentation des personnes
DisplayName Italian:	Segmentazione persone
DisplayName Spanish:	Segmentaci√n de personas

Categories:

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryStylize: Stylize

Input:

- inputImage: Image
- inputQualityLevel: Quality Level

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.178.4 Methods

58.178.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.178.6 Properties

58.178.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Person Segmentation attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.178.8 AttributeinputQualityLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Person Segmentation attribute.
Notes:

This attribute should have this content:

Name:	inputQualityLevel
Class:	double
DisplayName English:	Quality Level
DisplayName German:	Qualit√§tsstufe
DisplayName French:	Niveau de qualit√©
DisplayName Italian:	Livello qualit√†
DisplayName Spanish:	Nivel de calidad
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.178.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.178.10 inputQualityLevel as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Quality Level
Notes:

Name:	inputQualityLevel
Class:	double (NSNumber)
DisplayName English:	Quality Level
DisplayName German:	Qualit√§tsstufe
DisplayName French:	Niveau de qualit√©
DisplayName Italian:	Livello qualit√†
DisplayName Spanish:	Nivel de calidad

See AttributeinputQualityLevel for more details.
(Read and Write property)

58.179 class CIFilterPerspectiveCorrectionMBS

58.179.1 class CIFilterPerspectiveCorrectionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Perspective Correction filter.
Notes:

Details for this filter:

FilterName:	CIPerspectiveCorrection
DisplayName English:	Perspective Correction
DisplayName German:	Perspektivenkorrektur
DisplayName French:	Correction de la perspective
DisplayName Italian:	Correzione prospettiva
DisplayName Spanish:	Correcci√n de la perspectiva

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left
- inputCrop: Crop

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.179.2 Methods

58.179.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.179.4 Properties

58.179.5 AttributeinputBottomLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputBottomLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
DefaultVector:	[155 153]
IdentityVector:	n/a

(Read only property)

58.179.6 AttributeinputBottomRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputBottomRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
DefaultVector:	[548 140]
IdentityVector:	n/a

(Read only property)

58.179.7 AttributeinputCrop as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputCrop
Class:	double
Type:	CIAttributeTypeBoolean
DisplayName:	Crop
DefaultNumber:	1
IdentityNumber:	0

(Read only property)

58.179.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.179.9 AttributeinputTopLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputTopLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
DefaultVector:	[118 484]
IdentityVector:	n/a

(Read only property)

58.179.10 AttributeinputTopRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Correction attribute.
Notes:

This attribute should have this content:

Name:	inputTopRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
DefaultVector:	[646 507]
IdentityVector:	n/a

(Read only property)

58.179.11 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

See AttributeinputBottomLeft for more details.
(Read and Write property)

58.179.12 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

58.179.13 inputCrop as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Crop
Notes:

Name:	inputCrop
Class:	double (NSNumber)
DisplayName English:	Crop
DisplayName German:	Crop
DisplayName French:	Crop
DisplayName Italian:	Crop
DisplayName Spanish:	Crop
Type:	CIAttributeTypeBoolean

See AttributeinputCrop for more details.
(Read and Write property)

58.179.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.179.15 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

58.179.16 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

58.180 class CIFilterPerspectiveRotateMBS

58.180.1 class CIFilterPerspectiveRotateMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Perspective Rotate filter.
Notes:

Details for this filter:

FilterName:	CIPerspectiveRotate
DisplayName English:	Perspective Rotate
DisplayName German:	Perspektivisch drehen
DisplayName French:	Rotation en perspective
DisplayName Italian:	Rotazione prospettica
DisplayName Spanish:	Rotaci√n de perspectiva

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputFocalLength: Focal Length
- inputPitch: Pitch
- inputYaw: Yaw
- inputRoll: Roll

Output:

- outputImage

- outputTransform

Subclass of the CIFilterMBS class.

58.180.9 AttributeinputPitch as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Perspective Rotate attribute.
Notes:

This attribute should have this content:

(Read only property)

58.180.10 AttributeinputRoll as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Name:	inputPitch
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Pitch
DefaultNumber:	0
IdentityNumber:	0

Function: Details about the Perspective Rotate attribute.
Notes:

This attribute should have this content:

Name:	inputRoll
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Roll
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.180.11 AttributeinputYaw as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Perspective Rotate attribute.
Notes:

This attribute should have this content:

Name:	inputYaw
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Yaw
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.180.12 inputFocalLength as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Focal Length
Notes:

Name:	inputFocalLength
Class:	double (NSNumber)
DisplayName English:	Focal Length
DisplayName German:	Brennweite
DisplayName French:	Longueur focale
DisplayName Italian:	Lunghezza focale
DisplayName Spanish:	Longitud focal
Type:	CIAttributeTypeScalar

See AttributeinputFocalLength for more details.
(Read and Write property)

58.180.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Function: The attribute Yaw
Notes:

See AttributeinputYaw for more details.
(Read and Write property)

Name:	inputYaw
Class:	double (NSNumber)
DisplayName English:	Yaw
DisplayName German:	Yaw
DisplayName French:	Yaw
DisplayName Italian:	Yaw
DisplayName Spanish:	Yaw
Type:	CIAttributeTypeAngle

58.181 class CIFilterPerspectiveTileMBS

58.181.1 class CIFilterPerspectiveTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Perspective Tile filter.
Notes:

Details for this filter:

FilterName:	CIPerspectiveTile
DisplayName English:	Perspective Tile
DisplayName German:	Perspektivisch kacheln
DisplayName French:	Mosa√Øque en perspective
DisplayName Italian:	Mosaico prospettiva
DisplayName Spanish:	Mosaico en perspectiva

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.181.2 Methods

58.181.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.181.4 Properties

58.181.5 AttributeinputBottomLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Tile attribute.
Notes:

This attribute should have this content:

Name:	inputBottomLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Left
DisplayName German:	Unten links

IdentityVector:	n/a

(Read only property)

58.181.10 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

See AttributeinputBottomLeft for more details.
(Read and Write property)

58.181.11 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

58.181.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.181.13 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

58.181.14 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

58.182 class CIFilterPerspectiveTransformMBS

58.182.1 class CIFilterPerspectiveTransformMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Perspective Transform filter.
Notes:

Details for this filter:

FilterName:	CIPerspectiveTransform
DisplayName English:	Perspective Transform
DisplayName German:	Perspektivisch transformieren
DisplayName French:	Transformation en perspective
DisplayName Italian:	Trasformazione prospettiva
DisplayName Spanish:	Transformaci√n en perspectiva

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.182.2 Methods

58.182.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.182.4 Properties

58.182.5 AttributeinputBottomLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform attribute.
Notes:

This attribute should have this content:

Name:	inputBottomLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Left
DisplayName German:	Unten links

DisplayName Spanish:	Arriba derecha
DefaultVector:	[646 507]
IdentityVector:	n/a

(Read only property)

58.182.10 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

See AttributeinputBottomLeft for more details.
(Read and Write property)

58.182.11 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

58.182.12 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.182.13 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

58.182.14 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)

58.183 class CIFilterPerspectiveTransformWithExtentMBS

58.183.1 class CIFilterPerspectiveTransformWithExtentMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Perspective Transform with Extent filter.
Notes:

Details for this filter:

FilterName:	CIPerspectiveTransformWithExtent
DisplayName English:	Perspective Transform with Extent
DisplayName German:	Perspektivische Transformation mit Ausbreitung
DisplayName French:	Transformation de perspective avec Extent
DisplayName Italian:	Trasformazione prospettiva con ampiezza
DisplayName Spanish:	Transformaci√n en perspectiva con amplitud

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputExtent: Extent
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.183.2 Methods

58.183.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.183.4 Properties

58.183.5 AttributeinputBottomLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputBottomLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
DefaultVector:	[155 153]
IdentityVector:	n/a

(Read only property)

58.183.6 AttributeinputBottomRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputBottomRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
DefaultVector:	[548 140]
IdentityVector:	n/a

(Read only property)

58.183.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

58.183.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.183.9 AttributeinputTopLeft as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputTopLeft
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
DefaultVector:	[118 484]
IdentityVector:	n/a

(Read only property)

58.183.10 AttributeinputTopRight as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Perspective Transform with Extent attribute.
Notes:

This attribute should have this content:

Name:	inputTopRight
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
DefaultVector:	[646 507]
IdentityVector:	n/a

(Read only property)

58.183.11 inputBottomLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Left
Notes:

Name:	inputBottomLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Left
DisplayName German:	Unten links
DisplayName French:	En bas √† gauche
DisplayName Italian:	In basso a sinistra
DisplayName Spanish:	Abajo izquierda
Type:	CIAttributeTypePosition

See AttributeinputBottomLeft for more details.
(Read and Write property)

58.183.12 inputBottomRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Bottom Right
Notes:

Name:	inputBottomRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Bottom Right
DisplayName German:	Unten rechts
DisplayName French:	En bas √† droite
DisplayName Italian:	In basso a destra
DisplayName Spanish:	Abajo derecha
Type:	CIAttributeTypePosition

See AttributeinputBottomRight for more details.
(Read and Write property)

58.183.13 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

58.183.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.183.15 inputTopLeft as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Left
Notes:

Name:	inputTopLeft
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Left
DisplayName German:	Oben links
DisplayName French:	En haut √† gauche
DisplayName Italian:	In alto a sinistra
DisplayName Spanish:	Arriba izquierda
Type:	CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

58.183.16 inputTopRight as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Top Right
Notes:

See AttributeinputTopRight for more details.
(Read and Write property)

Name:	inputTopRight
Class:	CIVectorMBS (CIVector)
DisplayName English:	Top Right
DisplayName German:	Oben rechts
DisplayName French:	En haut √† droite
DisplayName Italian:	In alto a destra
DisplayName Spanish:	Arriba derecha
Type:	CIAttributeTypePosition

58.184 class CIFilterPhotoEffectChromeMBS

58.184.1 class CIFilterPhotoEffectChromeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Photo Effect Chrome filter.
Notes:

Details for this filter:

FilterName:	CIPhotoEffectChrome
DisplayName English:	Photo Effect Chrome
DisplayName German:	Fotoeffekt ,ÄûChrom,Äú
DisplayName French:	Effet de photo Chrom√©
DisplayName Italian:	Effetto foto Chrome
DisplayName Spanish:	Efecto fotogr√°fico Chrome

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.184.2 Methods

58.184.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.184.4 Properties

58.184.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Photo Effect Chrome attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.184.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.185 class CIFilterPhotoEffectFadeMBS

58.185.1 class CIFilterPhotoEffectFadeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Photo Effect Fade filter.
Notes:

Details for this filter:

FilterName:	CIPhotoEffectFade
DisplayName English:	Photo Effect Fade
DisplayName German:	Fotoeffekt ,ÄûAlt,Äú
DisplayName French:	Effet de photo Fondu
DisplayName Italian:	Effetto foto Dissolvenza
DisplayName Spanish:	Efecto fotogr√°fico Fundido

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.185.2 Methods

58.185.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.185.4 Properties

58.185.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Photo Effect Fade attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.185.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.186 class CIFilterPhotoEffectInstantMBS

58.186.1 class CIFilterPhotoEffectInstantMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Photo Effect Instant filter.
Notes:

Details for this filter:

FilterName:	CIPhotoEffectInstant
DisplayName English:	Photo Effect Instant
DisplayName German:	Fotoeffekt ,ÄûSofortbild,Äú
DisplayName French:	Effet de photo Instantan√©
DisplayName Italian:	Effetto foto Instant
DisplayName Spanish:	Efecto fotogr√°fico Instant

Categories:

- CICategoryColorEffect: Color Effect

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.191.2 Methods

58.191.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.191.4 Properties

58.191.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Photo Effect Transfer attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.191.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.192 class CIFilterPinchDistortionMBS

58.192.1 class CIFilterPinchDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Pinch Distortion filter.
Notes:

Details for this filter:

FilterName:	CIPinchDistortion
DisplayName English:	Pinch Distortion
DisplayName German:	Verzerrung ,ÄûDr√ºcken,Äú
DisplayName French:	D√©formation Pincement
DisplayName Italian:	Distorsione minima
DisplayName Spanish:	Distorsi√n por contracci√n

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.192.2 Methods

58.192.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.192.4 Properties

58.192.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pinch Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.192.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pinch Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.192.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pinch Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

58.192.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pinch Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

58.192.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.192.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.192.11 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.192.12 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

58.193 class CIFilterPinLightBlendModeMBS

58.193.1 class CIFilterPinLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Pin Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIPinLightBlendMode
DisplayName English:	Pin Light Blend Mode
DisplayName German:	Mischmethode ,ÄûPunktuelles Licht,Äú
DisplayName French:	√âpingler le mode de fusion Lumi√®re
DisplayName Italian:	Modalit√† sfumatura luce puntiforme
DisplayName Spanish:	Modo de mezcla por luz focal

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.193.2 Methods

58.193.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.193.4 Properties

58.193.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pin Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.193.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pin Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.193.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.193.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.194 class CIFilterPixellateMBS

58.194.1 class CIFilterPixellateMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Pixelate filter.
Notes:

Details for this filter:

FilterName:	CIPixellate
DisplayName English:	Pixelate
DisplayName German:	Pixeln
DisplayName French:	Pix√©liser
DisplayName Italian:	Suddividi in pixel
DisplayName Spanish:	Pixelar

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.194.2 Methods

58.194.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.194.4 Properties

58.194.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.194.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.194.7 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pixelate attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	8
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

58.194.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.194.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.194.10 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

58.195 class CIFilterPointillizeMBS

58.195.1 class CIFilterPointillizeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Pointillize filter.
Notes:

Details for this filter:

FilterName:	CIPointillize
DisplayName English:	Pointillize
DisplayName German:	Punktieren
DisplayName French:	Pointilliste
DisplayName Italian:	Divisione in punti
DisplayName Spanish:	Puntillear

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius
- inputCenter: Center

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.195.2 Methods

58.195.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.195.4 Properties

58.195.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pointillize attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.195.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pointillize attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.195.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Pointillize attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	20
IdentityNumber:	1
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	100
SliderMinNumber:	1

(Read only property)

58.195.8 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.195.9 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.195.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.196 class CIFilterQRCodeGeneratorMBS

58.196.1 class CIFilterQRCodeGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage QR Code Generator filter.
Notes:

Details for this filter:

FilterName:	CIQRCodeGenerator
DisplayName English:	QR Code Generator
DisplayName German:	QR-Code-Generator
DisplayName French:	G√©n√©rateur de code¬†QR
DisplayName Italian:	Generatore codice QR
DisplayName Spanish:	Generador de c√digos QR

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputMessage: Message
- inputCorrectionLevel: Correction Level

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

58.196.2 Blog Entries

- MBS Xojo plug-ins in version 16.0

58.196.3 Videos

- Presentation from Munich conference about MBS Plugins.

58.196.4 Blog Entries

- MBS Xojo plug-ins in version 16.0

58.196.5 Videos

58.196.6 Methods

58.196.7 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.196.8 Properties

58.196.9 AttributeinputCorrectionLevel as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the QR Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputCorrectionLevel
Class:	String
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de correcci√n
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.196.10 AttributeinputMessage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the QR Code Generator attribute.
Notes:

This attribute should have this content:

Name:	inputMessage
Class:	Memoryblock
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.196.11 inputCorrectionLevel as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Correction Level
Notes:

Name:	inputCorrectionLevel
Class:	String (NSString)
DisplayName English:	Correction Level
DisplayName German:	Korrekturstufe
DisplayName French:	Niveau de correction
DisplayName Italian:	Livello di correzione
DisplayName Spanish:	Nivel de correcci√n

See AttributeinputCorrectionLevel for more details.
(Read and Write property)

58.196.12 inputMessage as Memoryblock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Message
Notes:

Name:	inputMessage
Class:	Memoryblock (NSData)
DisplayName English:	Message
DisplayName German:	Nachricht
DisplayName French:	Message
DisplayName Italian:	Messaggio
DisplayName Spanish:	Mensaje

See AttributeinputMessage for more details.
(Read and Write property)

58.197 class CIFilterRadialGradientMBS

58.197.1 class CIFilterRadialGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Radial Gradient filter.
Notes:

Details for this filter:

FilterName:	CIRadialGradient
DisplayName English:	Radial Gradient
DisplayName German:	Radialer Verlauf
DisplayName French:	D√©grad√© radial
DisplayName Italian:	Gradiente radiale
DisplayName Spanish:	Degradado radial

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputRadius0: Radius 1
- inputRadius1: Radius 2
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

- Tip of day: Gradients with CoreImage Filter

58.197.3 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.197.4 Methods

58.197.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.197.6 Properties

58.197.7 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Radial Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.197.8 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Radial Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.197.9 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Radial Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

58.197.10 AttributeinputRadius0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Radial Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputRadius0
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius 1
DisplayName German:	Radius 1
DisplayName French:	Rayon 1
DisplayName Italian:	Raggio 1
DisplayName Spanish:	Radio 1
DefaultNumber:	5
IdentityNumber:	0

DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

58.197.13 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.197.14 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.197.15 inputRadius0 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius 1
Notes:

Name:	inputRadius0
Class:	double (NSNumber)
DisplayName English:	Radius 1
DisplayName German:	Radius 1
DisplayName French:	Rayon 1
DisplayName Italian:	Raggio 1
DisplayName Spanish:	Radio 1
Type:	CIAttributeTypeDistance

See AttributeinputRadius0 for more details.
(Read and Write property)

58.197.16 inputRadius1 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius 2
Notes:

Name:	inputRadius1
Class:	double (NSNumber)
DisplayName English:	Radius 2
DisplayName German:	Radius 2
DisplayName French:	Rayon 2
DisplayName Italian:	Raggio 2
DisplayName Spanish:	Radio 2
Type:	CIAttributeTypeDistance

See AttributeinputRadius1 for more details.
(Read and Write property)

58.198 class CIFilterRandomGeneratorMBS

58.198.1 class CIFilterRandomGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Random Generator filter.
Notes:

Details for this filter:

FilterName:	CIRandomGenerator
DisplayName English:	Random Generator
DisplayName German:	Zufallsmuster
DisplayName French:	G√©n√©rateur al√©atoire
DisplayName Italian:	Generatore casuale
DisplayName Spanish:	Generador aleatorio

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.198.2 Methods

58.198.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.199 class CIFilterRippleTransitionMBS

58.199.1 class CIFilterRippleTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Ripple filter.
Notes:

Details for this filter:

FilterName:	CIRippleTransition
DisplayName English:	Ripple
DisplayName German:	Wellen
DisplayName French:	Ondulation
DisplayName Italian:	Increspatura
DisplayName Spanish:	Ondas

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputShadingImage: Shading Image
- inputCenter: Center
- inputExtent: Extent
- inputTime: Time
- inputWidth: Width
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.199.2 Methods

58.199.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.199.4 Properties

58.199.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.199.6 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

58.199.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.199.8 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	50
IdentityNumber:	0
MaxNumber:	0
MinNumber:	-50
SliderMaxNumber:	50
SliderMinNumber:	-50

(Read only property)

58.199.9 AttributeinputShadingImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

(Read only property)

58.199.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

Name:	inputShadingImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,Äôombrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.199.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

(Read only property)

58.199.12 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

Function: Details about the Ripple attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	0
MaxNumber:	0
MinNumber:	1
SliderMaxNumber:	300
SliderMinNumber:	10

(Read only property)

58.199.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.199.14 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

58.199.15 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.199.16 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeScalar

See AttributeinputScale for more details.
(Read and Write property)

58.199.17 inputShadingImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shading Image
Notes:

Name:	inputShadingImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,ÄôOmbrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
Type:	CIAttributeTypeImage

See AttributeinputShadingImage for more details.
(Read and Write property)

58.199.18 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.199.19 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.199.20 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.200 class CIFilterRoundedRectangleGeneratorMBS

58.200.1 class CIFilterRoundedRectangleGeneratorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Rounded Rectangle Generator filter.
Notes:

Details for this filter:

FilterName:	CIRoundedRectangleGenerator
DisplayName English:	Rounded Rectangle Generator
DisplayName German:	Abgerundetes Rechteck-Generator
DisplayName French:	G√©n√©rateur de rectangle aux angles arrondis
DisplayName Italian:	Generatore rettangolo arrotondato
DisplayName Spanish:	Generador de rect√°ngulos redondeados

Categories:

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputExtent: Extent
- inputRadius: Radius
- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.

- MBS Xojo Plugins, version 23.0pr5

58.200.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.200.4 Methods

58.200.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.200.6 Properties

58.200.7 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Rounded Rectangle Generator attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.200.8 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Rounded Rectangle Generator attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 100 100]
IdentityVector:	n/a

(Read only property)

58.200.9 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Rounded Rectangle Generator attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	10

SliderMinNumber:	0

(Read only property)

58.200.10 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

58.200.11 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

See AttributeinputExtent for more details.
(Read and Write property)

58.200.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.201 class CIFilterRowAverageMBS

58.201.1 class CIFilterRowAverageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Row Average filter.
Notes:

Details for this filter:

FilterName:	CIRowAverage
DisplayName English:	Row Average
DisplayName German:	Zeilendurchschnitt
DisplayName French:	Moyenne de rang√©es
DisplayName Italian:	Media riga
DisplayName Spanish:	Media de la fila

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.201.2 Methods

58.201.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.201.4 Properties

58.201.5 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Row Average attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud

58.205 class CIFilterScreenBlendModeMBS

58.205.1 class CIFilterScreenBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Screen Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIScreenBlendMode
DisplayName English:	Screen Blend Mode
DisplayName German:	Mischmethode ,ÄûBlende,Äú
DisplayName French:	Mode de fusion √âcran
DisplayName Italian:	Modalit√† sfumatura schermo
DisplayName Spanish:	Modo de mezcla de pantalla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.205.2 Methods

58.205.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.205.4 Properties

58.205.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Screen Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.205.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Screen Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.205.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.205.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.206 class CIFilterSepiaToneMBS

58.206.1 class CIFilterSepiaToneMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Sepia Tone filter.
Notes:

Details for this filter:

FilterName:	CISepiaTone
DisplayName English:	Sepia Tone
DisplayName German:	Sepia-Farbt√ne
DisplayName French:	Ton s√©pia
DisplayName Italian:	Tonalit√† seppia
DisplayName Spanish:	Tono sepia

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

Input:

- inputImage: Image
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.206.2 Methods

58.206.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.206.4 Properties

58.206.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sepia Tone attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.206.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sepia Tone attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.206.7 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.206.8 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

See AttributeinputIntensity for more details.

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

(Read and Write property)

58.207 class CIFilterShadedMaterialMBS

58.207.1 class CIFilterShadedMaterialMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Shaded Material filter.
Notes:

Details for this filter:

FilterName:	CIShadedMaterial
DisplayName English:	Shaded Material
DisplayName German:	Schattiertes Material
DisplayName French:	Mat√©riau ombr√©
DisplayName Italian:	Materiale ombreggiato
DisplayName Spanish:	Material sombreado

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputShadingImage: Shading Image
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.207.2 Methods

58.207.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.207.4 Properties

58.207.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Shaded Material attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.207.6 AttributeinputScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Shaded Material attribute.
Notes:

This attribute should have this content:

Name:	inputScale
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
DefaultNumber:	10
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0.5

(Read only property)

58.207.7 AttributeinputShadingImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Shaded Material attribute.
Notes:

This attribute should have this content:

Name:	inputShadingImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,ÄôombrageÄôombrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.207.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.207.9 inputScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale
Notes:

Name:	inputScale
Class:	double (NSNumber)
DisplayName English:	Scale
DisplayName German:	Skalierung
DisplayName French:	√âchelle
DisplayName Italian:	Scala
DisplayName Spanish:	Escala
Type:	CIAttributeTypeDistance

See AttributeinputScale for more details.
(Read and Write property)

58.207.10 inputShadingImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Shading Image
Notes:

See AttributeinputShadingImage for more details.
(Read and Write property)

Name:	inputShadingImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Shading Image
DisplayName German:	Bild schattieren
DisplayName French:	Image d,Äôombrage
DisplayName Italian:	Immagine ombreggiatura
DisplayName Spanish:	Imagen de sombra
Type:	CIAttributeTypeImage

58.208 class CIFilterShapeMBS

58.208.1 class CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class to represent a filer shape in Xojo.

58.208.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr5

58.208.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr5

58.208.4 Methods

58.208.5 Constructor(cgrect as CGRectMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the smallest integral rect containing 'cgrect'.
See also:

- 58.208.6 Constructor(Handle as Integer) 11961

58.208.6 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIFilterShape* and the object is retained.
Raises UnsupportedOperationException if object is not a CIFilterShape.
See also:

- 58.208.5 Constructor(cgrect as CGRectMBS) 11961

58.208.7 copy as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a copy of the filter shape object.

58.208.8 InsetByX(x as Integer, y as Integer) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the shape inset by 'delta'.

58.208.9 IntersectWith(s as CIFilterShapeMBS) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the intersection of the shape and 's'.

58.208.10 IntersectWithRect(cgrect as CGRectMBS) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the intersection of the shape and the smallest integral rect containing 'cgrect'.

58.208.11 shapeWithRect(r as CGRectMBS) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a filter shape object and initializes it with a rectangle.
Notes: R: A rectangle. The filter shape object will contain the smallest integral rectangle specified by this argument.

58.208.12 TransformBy(CGAffineTransform as NSAffineTransformMBS, flag as boolean) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape from the result of transforming the shape by CGAffineTransform.
Notes:

If flag is false the new shape will contain all pixels in the transformed shape (and possibly some outside the transformed shape).
If flag is false the new shape will contain a subset of the pixels in the transformed shape (but none of those

outside the transformed shape).

58.208.13 UnionWith(s as CIFilterShapeMBS) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the union of the shape and 's'.

58.208.14 UnionWithRect(cgrect as CGRectMBS) as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a shape representing the union of the shape and the smallest integral rect containing 'cgrect'.

58.208.15 Properties

58.208.16 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this filter shape.
Notes: (Read only property)

58.208.17 extent as CGRectMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The extent of the filter shape.
Notes:

Extent is a rectangle that describes the filter shape in the working coordinate space with a fixed area.
Available in OS X v10.11 and later.
(Read only property)

58.208.18 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the internal used CIFilterShape reference.
Notes: (Read only property)

58.209 class CIFilterSharpenLuminanceMBS

58.209.1 class CIFilterSharpenLuminanceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Sharpen Luminance filter.
Notes:

Details for this filter:

FilterName:	CISharpenLuminance
DisplayName English:	Sharpen Luminance
DisplayName German:	Luminanz scharfzeichnen
DisplayName French:	Renforcer la luminance
DisplayName Italian:	Luminosit√† nitidezza
DisplayName Spanish:	Agudizar luminancia

Categories:

- CICategorySharpen: Sharpen
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputSharpness: Sharpness
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.209.2 Methods

58.209.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.209.4 Properties

58.209.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sharpen Luminance attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.209.6 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sharpen Luminance attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	1.69
IdentityNumber:	0
SliderMaxNumber:	20
SliderMinNumber:	0

(Read only property)

58.209.7 AttributeinputSharpness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sharpen Luminance attribute.
Notes:

This attribute should have this content:

Name:	inputSharpness
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
DefaultNumber:	0.4
IdentityNumber:	0
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

58.209.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.209.9 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

58.209.10 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Nettet√©
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

58.210 class CIFilterSixfoldReflectedTileMBS

58.210.1 class CIFilterSixfoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Sixfold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CISixfoldReflectedTile
DisplayName English:	Sixfold Reflected Tile
DisplayName German:	6-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 6 fois
DisplayName Italian:	Mosaico riflesso in sei direzioni
DisplayName Spanish:	Mosaico reflejado seis veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.210.2 Methods

58.210.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.210.4 Properties

58.210.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.210.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.210.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.210.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.210.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.210.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.210.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.210.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.211 class CIFilterSixfoldRotatedTileMBS

58.211.1 class CIFilterSixfoldRotatedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Sixfold Rotated Tile filter.
Notes:

Details for this filter:

FilterName:	CISixfoldRotatedTile
DisplayName English:	Sixfold Rotated Tile
DisplayName German:	6-fach gedrehte Kachel
DisplayName French:	Mosa√Øque pivot√©e 6 fois
DisplayName Italian:	Mosaico ruotato in sei direzioni
DisplayName Spanish:	Mosaico rotado seis veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.211.2 Methods

58.211.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.211.4 Properties

58.211.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.211.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.211.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen

IdentityNumber:	0

(Read only property)

58.211.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sixfold Rotated Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.211.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.211.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.211.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.211.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.212 class CIFilterSmoothLinearGradientMBS

58.212.1 class CIFilterSmoothLinearGradientMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Smooth Linear Gradient filter.
Notes:

Details for this filter:

FilterName:	CISmoothLinearGradient
DisplayName English:	Smooth Linear Gradient
DisplayName German:	Glatter linearer Verlauf
DisplayName French:	D√©grad√© lin√©aire lisse
DisplayName Italian:	Gradiente lineare graduale
DisplayName Spanish:	Suavizar el degradado lineal

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputPoint0: Point 0
- inputPoint1: Point 1
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.212.2 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.212.3 Blog Entries

- Tip of day: Gradients with CoreImage Filter

58.212.4 Methods

58.212.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.212.6 Properties

58.212.7 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Smooth Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.212.8 AttributeinputColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Smooth Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputColor1
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
DefaultColor:	Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

58.212.9 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Smooth Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 0]
IdentityVector:	n/a

(Read only property)

58.212.10 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Smooth Linear Gradient attribute.
Notes:

This attribute should have this content:

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[200 200]
IdentityVector:	n/a

(Read only property)

58.212.11 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.212.12 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.212.13 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

58.212.14 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypePosition

See AttributeinputPoint1 for more details.
(Read and Write property)

58.213 class CIFilterSoftLightBlendModeMBS

58.213.1 class CIFilterSoftLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Soft Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CISoftLightBlendMode
DisplayName English:	Soft Light Blend Mode
DisplayName German:	Mischmethode ,ÄûWeiches Licht,Äú
DisplayName French:	Mode de fusion Lumi√®re tamis√©e
DisplayName Italian:	Modalit√† sfumatura luce soffusa
DisplayName Spanish:	Modo de mezcla por luz indirecta

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.213.2 Methods

58.213.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.213.4 Properties

58.213.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Soft Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.213.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Soft Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.213.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.213.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.214 class CIFilterSourceAtopCompositingMBS

58.214.1 class CIFilterSourceAtopCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Source Atop filter.
Notes:

Details for this filter:

FilterName:	CISourceAtopCompositing
DisplayName English:	Source Atop
DisplayName German:	Quelle obenauf
DisplayName French:	Source dessus
DisplayName Italian:	Sorgente sopra
DisplayName Spanish:	Sobre la fuente

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.214.2 Methods

58.214.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.214.4 Properties

58.214.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Source Atop attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.214.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Source Atop attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.214.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.214.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.215 class CIFilterSourceInCompositingMBS

58.215.1 class CIFilterSourceInCompositingMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Source In filter.
Notes:

Details for this filter:

FilterName:	CISourceInCompositing
DisplayName English:	Source In
DisplayName German:	Quelle innen
DisplayName French:	Source √† l,Äôint√©rieur
DisplayName Italian:	Sorgente ingresso
DisplayName Spanish:	Desde dentro de la fuente

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.215.2 Methods

58.215.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.215.4 Properties

58.215.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Source In attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.215.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Source In attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.215.7 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo

58.218 class CIFilterSpotColorMBS

58.218.1 class CIFilterSpotColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Spot Color filter.
Notes:

Details for this filter:

FilterName:	CISpotColor
DisplayName English:	Spot Color
DisplayName German:	Spot-Farbe
DisplayName French:	Couleur de la tache
DisplayName Italian:	Colore tinta piatta
DisplayName Spanish:	Color del punto

Categories:

- CICategoryBuiltIn: Built-In
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryStylize: Stylize

Input:

- inputImage: Image
- inputCenterColor1: Center Color 1
- inputReplacementColor1: Replacement Color 1
- inputCloseness1: Closeness 1
- inputContrast1: Contrast 1
- inputCenterColor2: Center Color 2
- inputReplacementColor2: Replacement Color 2
- inputCloseness2: Closeness 2

- inputContrast2: Contrast 2
- inputCenterColor3: Center Color 3
- inputReplacementColor3: Replacement Color 3
- inputCloseness3: Closeness 3
- inputContrast3: Contrast 3

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.218.2 Methods

58.218.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.218.4 Properties

58.218.5 AttributeinputCenterColor1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Color attribute.
Notes:

This attribute should have this content:

(Read only property)

58.218.6 AttributeinputCenterColor2 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

DisplayName French:	Couleur centrale 3
DisplayName Italian:	Colore centrale 3
DisplayName Spanish:	Color del centro 3
Type:	CIAttributeTypeColor

58.218.21 inputCloseness1 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Closeness 1
Notes:

Name:	inputCloseness1
Class:	double (NSNumber)
DisplayName English:	Closeness 1
DisplayName German:	N√§he 1
DisplayName French:	Rapprochement 1
DisplayName Italian:	Distanza 1
DisplayName Spanish:	Acercamiento 1
Type:	CIAttributeTypeScalar

See AttributeinputCloseness1 for more details.
(Read and Write property)

58.218.22 inputCloseness2 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Closeness 2
Notes:

Name:	inputCloseness2
Class:	double (NSNumber)
DisplayName English:	Closeness 2
DisplayName German:	N√§he 2
DisplayName French:	Rapprochement 2
DisplayName Italian:	Distanza 2
DisplayName Spanish:	Acercamiento 2
Type:	CIAttributeTypeScalar

See AttributeinputCloseness2 for more details.
(Read and Write property)

58.218.23 inputCloseness3 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Closeness 3
Notes:

Name:	inputCloseness3
Class:	double (NSNumber)
DisplayName English:	Closeness 3
DisplayName German:	N√§he 3
DisplayName French:	Rapprochement 3
DisplayName Italian:	Distanza 3
DisplayName Spanish:	Acercamiento 3
Type:	CIAttributeTypeScalar

See AttributeinputCloseness3 for more details.
(Read and Write property)

58.218.24 inputContrast1 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast 1
Notes:

Name:	inputContrast1
Class:	double (NSNumber)
DisplayName English:	Contrast 1
DisplayName German:	Kontrast 1
DisplayName French:	Contraste 1
DisplayName Italian:	Contrasto 1
DisplayName Spanish:	Contraste 1
Type:	CIAttributeTypeScalar

See AttributeinputContrast1 for more details.
(Read and Write property)

58.218.25 inputContrast2 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast 2
Notes:

Name:	inputContrast2
Class:	double (NSNumber)
DisplayName English:	Contrast 2
DisplayName German:	Kontrast 2
DisplayName French:	Contraste 2
DisplayName Italian:	Contrasto 2
DisplayName Spanish:	Contraste 2
Type:	CIAttributeTypeScalar

See AttributeinputContrast2 for more details.
(Read and Write property)

58.218.26 inputContrast3 as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Contrast 3
Notes:

Name:	inputContrast3
Class:	double (NSNumber)
DisplayName English:	Contrast 3
DisplayName German:	Kontrast 3
DisplayName French:	Contraste 3
DisplayName Italian:	Contrasto 3
DisplayName Spanish:	Contraste 3
Type:	CIAttributeTypeScalar

See AttributeinputContrast3 for more details.
(Read and Write property)

58.218.27 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.218.28 inputReplacementColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Replacement Color 1
Notes:

Name:	inputReplacementColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Replacement Color 1
DisplayName German:	Ersetzungsfarbe 1
DisplayName French:	Couleur de remplacement 1
DisplayName Italian:	Colore di sostituzione 1
DisplayName Spanish:	Color de reemplazo 1
Type:	CIAttributeTypeColor

See AttributeinputReplacementColor1 for more details.
(Read and Write property)

58.218.29 inputReplacementColor2 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Replacement Color 2
Notes:

See AttributeinputReplacementColor2 for more details.
(Read and Write property)

Name:	inputReplacementColor2
Class:	CIColorMBS (CIColor)
DisplayName English:	Replacement Color 2
DisplayName German:	Ersetzungsfarbe 2
DisplayName French:	Couleur de remplacement 2
DisplayName Italian:	Colore di sostituzione 2
DisplayName Spanish:	Color de reemplazo 2
Type:	CIAttributeTypeColor

58.218.30 inputReplacementColor3 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Replacement Color 3
Notes:

Name:	inputReplacementColor3
Class:	CIColorMBS (CIColor)
DisplayName English:	Replacement Color 3
DisplayName German:	Ersetzungsfarbe 3
DisplayName French:	Couleur de remplacement 3
DisplayName Italian:	Colore di sostituzione 3
DisplayName Spanish:	Color de reemplazo 3
Type:	CIAttributeTypeColor

See AttributeinputReplacementColor3 for more details.
(Read and Write property)

58.219 class CIFilterSpotLightMBS

58.219.1 class CIFilterSpotLightMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Spot Light filter.
Notes:

Details for this filter:

FilterName:	CISpotLight
DisplayName English:	Spot Light
DisplayName German:	Rampenlicht
DisplayName French:	Phare
DisplayName Italian:	Luminosit√† tinta piatta
DisplayName Spanish:	Luz concentrada

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputLightPosition: Light Position
- inputLightPointsAt: Light Points At
- inputBrightness: Brightness
- inputConcentration: Concentration
- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.219.2 Methods

58.219.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.219.4 Properties

58.219.5 AttributeinputBrightness as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

Name:	inputBrightness
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosit√©
DisplayName Italian:	Luminosit√†
DisplayName Spanish:	Brillo
DefaultNumber:	3
IdentityNumber:	1
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.219.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.219.7 AttributeinputConcentration as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

(Read only property)

58.219.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

Name:	inputConcentration
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Concentration
DisplayName German:	Konzentration
DisplayName French:	Concentration
DisplayName Italian:	Concentrazione
DisplayName Spanish:	Concentraci√n
DefaultNumber:	0.1
IdentityNumber:	20
MaxNumber:	0
MinNumber:	0.001
SliderMaxNumber:	1.5
SliderMinNumber:	0.001

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.219.9 AttributeinputLightPointsAt as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputLightPointsAt
Class:	CIVectorMBS
Type:	CIAttributeTypePosition3
DisplayName English:	Light Points At
DisplayName German:	Lichtpunkte bei
DisplayName French:	Points lumineux √†
DisplayName Italian:	Punti luce a
DisplayName Spanish:	El foco apunta a
DefaultVector:	[200 200 0]
IdentityVector:	n/a

58.219.10 AttributeinputLightPosition as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Spot Light attribute.
Notes:

This attribute should have this content:

Name:	inputLightPosition
Class:	CIVectorMBS
Type:	CIAttributeTypePosition3
DisplayName English:	Light Position
DisplayName German:	Lichtposition
DisplayName French:	Position de la lumi√®re
DisplayName Italian:	Posizione luce
DisplayName Spanish:	Posici√n de la luz
DefaultVector:	[400 600 150]
IdentityVector:	n/a

(Read only property)

58.219.11 inputBrightness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Brightness
Notes:

See AttributeinputBrightness for more details.
(Read and Write property)

Name:	inputBrightness
Class:	double (NSNumber)
DisplayName English:	Brightness
DisplayName German:	Helligkeit
DisplayName French:	Luminosit√©
DisplayName Italian:	Luminosit√†
DisplayName Spanish:	Brillo
Type:	CIAttributeTypeDistance

58.219.12 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

58.219.13 inputConcentration as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Concentration
Notes:

Name:	inputConcentration
Class:	double (NSNumber)
DisplayName English:	Concentration
DisplayName German:	Konzentration
DisplayName French:	Concentration
DisplayName Italian:	Concentrazione
DisplayName Spanish:	Concentraci√n
Type:	CIAttributeTypeScalar

See AttributeinputConcentration for more details.
(Read and Write property)

58.219.14 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.219.15 inputLightPointsAt as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Light Points At
Notes:

Name:	inputLightPointsAt
Class:	CIVectorMBS (CIVector)
DisplayName English:	Light Points At
DisplayName German:	Lichtpunkte bei
DisplayName French:	Points lumineux √†
DisplayName Italian:	Punti luce a
DisplayName Spanish:	El foco apunta a
Type:	CIAttributeTypePosition3

See AttributeinputLightPointsAt for more details.
(Read and Write property)

58.219.16 inputLightPosition as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Light Position
Notes:

Name:	inputLightPosition
Class:	CIVectorMBS (CIVector)
DisplayName English:	Light Position
DisplayName German:	Lichtposition
DisplayName French:	Position de la lumi√®re
DisplayName Italian:	Posizione luce
DisplayName Spanish:	Posici√n de la luz
Type:	CIAttributeTypePosition3

See AttributeinputLightPosition for more details.
(Read and Write property)

58.220 class CIFilterSRGBToneCurveToLinearMBS

58.220.1 class CIFilterSRGBToneCurveToLinearMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage sRGB Tone Curve to Linear filter.
Notes:

Details for this filter:

FilterName:	CISRGBToneCurveToLinear
DisplayName English:	sRGB Tone Curve to Linear
DisplayName German:	sRGB-Farbtonkurve in eine lineare Farbtonkurve
DisplayName French:	Courbe tonale sRGB vers lin√©aire
DisplayName Italian:	Da curva tonale sRGB a lineare
DisplayName Spanish:	Curva tonal de sRGB a lineal

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.220.2 Methods

58.220.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.220.4 Properties

58.220.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the sRGB Tone Curve to Linear attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.220.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.221 class CIFilterStarShineGeneratorMBS

58.221.1 class CIFilterStarShineGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Star Shine filter.
Notes:

Details for this filter:

FilterName:	CIStarShineGenerator
DisplayName English:	Star Shine
DisplayName German:	Sternenlicht
DisplayName French:	Brillance d,Äô√©toile
DisplayName Italian:	Stella luminosa
DisplayName Spanish:	Brillo estrellado

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor: Color
- inputRadius: Radius
- inputCrossScale: Cross Scale
- inputCrossAngle: Cross Angle
- inputCrossOpacity: Cross Opacity
- inputCrossWidth: Cross Width
- inputEpsilon: Epsilon

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.221.2 Methods

58.221.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.221.4 Properties

58.221.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.221.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore

DefaultColor:	Red = 1, Green = 0.8, Blue = 0.6, Alpha = 1
IdentityNumber:	0

(Read only property)

58.221.7 AttributeinputCrossAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputCrossAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Cross Angle
DisplayName German:	Cross-Winkel
DisplayName French:	Angle crois√©
DisplayName Italian:	Angolo incrociato
DisplayName Spanish:	√Ångulo cruzado
DefaultNumber:	0.6
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.221.8 AttributeinputCrossOpacity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputCrossOpacity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Cross Opacity
DisplayName German:	Cross-Deckkraft
DisplayName French:	Opacit√© crois√©e
DisplayName Italian:	Opacit√† incrociata
DisplayName Spanish:	Opacidad cruzada
DefaultNumber:	-2
IdentityNumber:	-2
MaxNumber:	0
MinNumber:	-8
SliderMaxNumber:	0
SliderMinNumber:	-8

(Read only property)

58.221.9 AttributeinputCrossScale as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputCrossScale
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Cross Scale
DisplayName German:	Cross-Skalierung
DisplayName French:	√âchelle crois√©e
DisplayName Italian:	Scala incrociata
DisplayName Spanish:	Escala cruzada
DefaultNumber:	15
IdentityNumber:	15
SliderMaxNumber:	100
SliderMinNumber:	0

58.221.10 AttributeinputCrossWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputCrossWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Cross Width
DisplayName German:	Cross-Breite
DisplayName French:	Largeur crois√©e
DisplayName Italian:	Larghezza incrociata
DisplayName Spanish:	Anchura cruzada
DefaultNumber:	2.5
IdentityNumber:	0
SliderMaxNumber:	10
SliderMinNumber:	0.5

(Read only property)

58.221.11 AttributeinputEpsilon as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputEpsilon
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
DefaultNumber:	-2
IdentityNumber:	-2
MaxNumber:	0
MinNumber:	-8
SliderMaxNumber:	0
SliderMinNumber:	-8

(Read only property)

58.221.12 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Star Shine attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	50
IdentityNumber:	0
SliderMaxNumber:	300
SliderMinNumber:	0

(Read only property)

58.221.13 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.221.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

58.221.15 inputCrossAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cross Angle
Notes:

Name:	inputCrossAngle
Class:	double (NSNumber)
DisplayName English:	Cross Angle
DisplayName German:	Cross-Winkel
DisplayName French:	Angle crois√©
DisplayName Italian:	Angolo incrociato
DisplayName Spanish:	√Ångulo cruzado
Type:	CIAttributeTypeAngle

See AttributeinputCrossAngle for more details.
(Read and Write property)

58.221.16 inputCrossOpacity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cross Opacity
Notes:

Name:	inputCrossOpacity
Class:	double (NSNumber)
DisplayName English:	Cross Opacity
DisplayName German:	Cross-Deckkraft
DisplayName French:	Opacit√© crois√©e
DisplayName Italian:	Opacit√† incrociata
DisplayName Spanish:	Opacidad cruzada
Type:	CIAttributeTypeScalar

See AttributeinputCrossOpacity for more details.
(Read and Write property)

58.221.17 inputCrossScale as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cross Scale
Notes:

See AttributeinputCrossScale for more details.
(Read and Write property)

Name:	inputCrossScale
Class:	double (NSNumber)
DisplayName English:	Cross Scale
DisplayName German:	Cross-Skalierung
DisplayName French:	√âchelle crois√©e
DisplayName Italian:	Scala incrociata
DisplayName Spanish:	Escala cruzada
Type:	CIAttributeTypeScalar

58.221.18 inputCrossWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Cross Width
Notes:

Name:	inputCrossWidth
Class:	double (NSNumber)
DisplayName English:	Cross Width
DisplayName German:	Cross-Breite
DisplayName French:	Largeur crois√©e
DisplayName Italian:	Larghezza incrociata
DisplayName Spanish:	Anchura cruzada
Type:	CIAttributeTypeDistance

See AttributeinputCrossWidth for more details.
(Read and Write property)

58.221.19 inputEpsilon as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Epsilon
Notes:

Name:	inputEpsilon
Class:	double (NSNumber)
DisplayName English:	Epsilon
DisplayName German:	Epsilon
DisplayName French:	Epsilon
DisplayName Italian:	Ipsilon
DisplayName Spanish:	√âpsilon
Type:	CIAttributeTypeScalar

See AttributeinputEpsilon for more details.
(Read and Write property)

58.221.20 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.222 class CIFilterStraightenFilterMBS

58.222.1 class CIFilterStraightenFilterMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Straighten filter.
Notes:

Details for this filter:

FilterName:	CIStraightenFilter
DisplayName English:	Straighten
DisplayName German:	Begradigen
DisplayName French:	Redresser
DisplayName Italian:	Raddrizza
DisplayName Spanish:	Enderezar

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

(Read only property)

58.222.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Straighten attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.222.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.222.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.223 class CIFilterStretchCropMBS

58.223.1 class CIFilterStretchCropMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Stretch Crop filter.
Notes:

Details for this filter:

FilterName:	CIStretchCrop
DisplayName English:	Stretch Crop
DisplayName German:	Schnitt dehnen
DisplayName French:	√âtirer le recadrage
DisplayName Italian:	Allarga o ritaglia
DisplayName Spanish:	Estirar recorte

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputSize: Size
- inputCropAmount: Crop Amount
- inputCenterStretchAmount: Center Stretch Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.224 class CIFilterStripesGeneratorMBS

58.224.1 class CIFilterStripesGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Stripes filter.
Notes:

Details for this filter:

FilterName:	CIStripesGenerator
DisplayName English:	Stripes
DisplayName German:	Streifen
DisplayName French:	Rayures
DisplayName Italian:	Strisce
DisplayName Spanish:	Franjas

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputWidth: Width
- inputSharpness: Sharpness

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.224.2 Methods

58.224.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.224.4 Properties

58.224.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Stripes attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.224.6 AttributeinputColor0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Stripes attribute.
Notes:

This attribute should have this content:

Name:	inputColor0
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.224.7 AttributeinputColor1 as CIAttributeMBS

Function: Details about the Stripes attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	80
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

58.224.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.224.11 inputColor0 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 1
Notes:

Name:	inputColor0
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 1
DisplayName German:	Farbe 1
DisplayName French:	Couleur 1
DisplayName Italian:	Colore 1
DisplayName Spanish:	Color 1
Type:	CIAttributeTypeColor

See AttributeinputColor0 for more details.
(Read and Write property)

58.224.12 inputColor1 as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color 2
Notes:

Name:	inputColor1
Class:	CIColorMBS (CIColor)
DisplayName English:	Color 2
DisplayName German:	Farbe 2
DisplayName French:	Couleur 2
DisplayName Italian:	Colore 2
DisplayName Spanish:	Color 2
Type:	CIAttributeTypeColor

See AttributeinputColor1 for more details.
(Read and Write property)

58.224.13 inputSharpness as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sharpness
Notes:

Name:	inputSharpness
Class:	double (NSNumber)
DisplayName English:	Sharpness
DisplayName German:	Sch√§rfe
DisplayName French:	Netteté
DisplayName Italian:	Nitidezza
DisplayName Spanish:	Nitidez
Type:	CIAttributeTypeScalar

See AttributeinputSharpness for more details.
(Read and Write property)

58.224.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.225 class CIFilterSubtractBlendModeMBS

58.225.1 class CIFilterSubtractBlendModeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Subtract Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CISubtractBlendMode
DisplayName English:	Subtract Blend Mode
DisplayName German:	Mischmethode ,ÄûSubtrahieren,Äú
DisplayName French:	Mode de fusion Soustraction
DisplayName Italian:	Modalit√† sfumatura sottrazione
DisplayName Spanish:	Restar modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.225.2 Methods

58.225.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.225.4 Properties

58.225.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Subtract Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.225.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Subtract Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0

- inputCenter: Center
- inputColor: Color
- inputSunRadius: Sun Radius
- inputMaxStriationRadius: Maximum Striation Radius
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.226.2 Methods

58.226.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.226.4 Properties

58.226.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.226.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 0.5, Blue = 0, Alpha = 1
IdentityNumber:	0

(Read only property)

58.226.7 AttributeinputMaxStriationRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

Name:	inputMaxStriationRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√ºr Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
DefaultNumber:	2.58
IdentityNumber:	2.58
SliderMaxNumber:	10
SliderMinNumber:	0

(Read only property)

58.226.8 AttributeinputStriationContrast as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

Name:	inputStriationContrast
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
DefaultNumber:	1.375
IdentityNumber:	1.375
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

58.226.9 AttributeinputStriationStrength as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

(Read only property)

58.226.10 AttributeinputSunRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

Name:	inputStriationStrength
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
DefaultNumber:	0.5
IdentityNumber:	0.5
SliderMaxNumber:	3
SliderMinNumber:	0

Name:	inputSunRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Sun Radius
DisplayName German:	Radius der Sonne
DisplayName French:	Rayon du soleil
DisplayName Italian:	Raggio del sole
DisplayName Spanish:	Radio solar
DefaultNumber:	40
IdentityNumber:	40
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

58.226.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Sunbeams attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputTime
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

58.226.12 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.226.13 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

See AttributeinputColor for more details.
(Read and Write property)

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

58.226.14 inputMaxStriationRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Maximum Striation Radius
Notes:

Name:	inputMaxStriationRadius
Class:	double (NSNumber)
DisplayName English:	Maximum Striation Radius
DisplayName German:	Maximaler Radius f√ºr Riffelung
DisplayName French:	Rayon maximum des stries
DisplayName Italian:	Raggio di massima striatura
DisplayName Spanish:	Radio de estriaci√n m√°ximo
Type:	CIAttributeTypeScalar

See AttributeinputMaxStriationRadius for more details.
(Read and Write property)

58.226.15 inputStriationContrast as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Contrast
Notes:

Name:	inputStriationContrast
Class:	double (NSNumber)
DisplayName English:	Striation Contrast
DisplayName German:	Kontrast f√ºr Riffelung
DisplayName French:	Contraste des stries
DisplayName Italian:	Contrasto striatura
DisplayName Spanish:	Contraste de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationContrast for more details.
(Read and Write property)

58.226.16 inputStriationStrength as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Striation Strength
Notes:

Name:	inputStriationStrength
Class:	double (NSNumber)
DisplayName English:	Striation Strength
DisplayName German:	St√§rke der Riffelung
DisplayName French:	Force des stries
DisplayName Italian:	Livello striatura
DisplayName Spanish:	Intensidad de la estriaci√n
Type:	CIAttributeTypeScalar

See AttributeinputStriationStrength for more details.
(Read and Write property)

58.226.17 inputSunRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Sun Radius
Notes:

Name:	inputSunRadius
Class:	double (NSNumber)
DisplayName English:	Sun Radius
DisplayName German:	Radius der Sonne
DisplayName French:	Rayon du soleil
DisplayName Italian:	Raggio del sole
DisplayName Spanish:	Radio solar
Type:	CIAttributeTypeDistance

See AttributeinputSunRadius for more details.
(Read and Write property)

58.226.18 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeScalar

See AttributeinputTime for more details.
(Read and Write property)

58.227 class CIFilterSwipeTransitionMBS

58.227.1 class CIFilterSwipeTransitionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Swipe filter.
Notes:

Details for this filter:

FilterName:	CISwipeTransition
DisplayName English:	Swipe
DisplayName German:	Wischen
DisplayName French:	Balayer
DisplayName Italian:	Colpo
DisplayName Spanish:	Barrido

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputAngle: Angle
- inputWidth: Width
- inputOpacity: Opacity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.227.2 Methods

58.227.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.227.4 Properties

58.227.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.227.6 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeOpaqueColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.227.7 AttributeinputExtent as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputExtent
Class:	CIVectorMBS
Type:	CIAttributeTypeRectangle
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
DefaultVector:	[0 0 300 300]
IdentityVector:	n/a

(Read only property)

58.227.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.227.9 AttributeinputOpacity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputOpacity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacit√©
DisplayName Italian:	Opacit√†
DisplayName Spanish:	Opacidad
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.227.10 AttributeinputTargetImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

Name:	inputTargetImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.227.11 AttributeinputTime as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

This attribute should have this content:

(Read only property)

58.227.12 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Swipe attribute.
Notes:

Name:	inputTime
Class:	double
Type:	CIAttributeTypeTime
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	300
IdentityNumber:	0
MaxNumber:	0
MinNumber:	0.1
SliderMaxNumber:	800
SliderMinNumber:	0.1

(Read only property)

58.227.13 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

See AttributeinputAngle for more details.
(Read and Write property)

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

58.227.14 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

58.227.15 inputExtent as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Extent
Notes:

See AttributeinputExtent for more details.
(Read and Write property)

Name:	inputExtent
Class:	CIVectorMBS (CIVector)
DisplayName English:	Extent
DisplayName German:	Betrag
DisplayName French:	√âtendue
DisplayName Italian:	Ampiezza
DisplayName Spanish:	Amplitud
Type:	CIAttributeTypeRectangle

58.227.16 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.227.17 inputOpacity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Opacity
Notes:

Name:	inputOpacity
Class:	double (NSNumber)
DisplayName English:	Opacity
DisplayName German:	Deckkraft
DisplayName French:	Opacit√©
DisplayName Italian:	Opacit√†
DisplayName Spanish:	Opacidad
Type:	CIAttributeTypeScalar

See AttributeinputOpacity for more details.
(Read and Write property)

58.227.18 inputTargetImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Image
Notes:

Name:	inputTargetImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Target Image
DisplayName German:	Zielbild
DisplayName French:	Image cible
DisplayName Italian:	Immagine target
DisplayName Spanish:	Imagen de destino
Type:	CIAttributeTypeImage

See AttributeinputTargetImage for more details.
(Read and Write property)

58.227.19 inputTime as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Time
Notes:

Name:	inputTime
Class:	double (NSNumber)
DisplayName English:	Time
DisplayName German:	Zeit
DisplayName French:	Dur√©e
DisplayName Italian:	Tempo
DisplayName Spanish:	Tiempo
Type:	CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)

58.227.20 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)

58.228 class CIFilterTemperatureAndTintMBS

58.228.1 class CIFilterTemperatureAndTintMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Temperature and Tint filter.
Notes:

Details for this filter:

FilterName:	CITemperatureAndTint
DisplayName English:	Temperature and Tint
DisplayName German:	Temperatur und F√§rbung
DisplayName French:	Temp√©rature et teinte
DisplayName Italian:	Temperatura e tinta
DisplayName Spanish:	Temperatura y tinte

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputNeutral: Neutral
- inputTargetNeutral: Target Neutral

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.228.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.228.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.228.4 Methods

58.228.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.228.6 Properties

58.228.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Temperature and Tint attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.228.8 AttributeinputNeutral as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Temperature and Tint attribute.
Notes:

This attribute should have this content:

Name:	inputNeutral
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName:	Neutral
DefaultVector:	[6500 0]
IdentityVector:	[6500 0]

(Read only property)

58.228.9 AttributeinputTargetNeutral as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Temperature and Tint attribute.
Notes:

This attribute should have this content:

Name:	inputTargetNeutral
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Target Neutral
DisplayName German:	Zielneutral
DisplayName French:	Couleur neutre cible
DisplayName Italian:	Elemento neutro target
DisplayName Spanish:	Neutro para el destino
DefaultVector:	[6500 0]
IdentityVector:	[6500 0]

(Read only property)

58.228.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.228.11 inputNeutral as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Neutral
Notes:

Name:	inputNeutral
Class:	CIVectorMBS (CIVector)
DisplayName English:	Neutral
DisplayName German:	Neutral
DisplayName French:	Neutral
DisplayName Italian:	Neutral
DisplayName Spanish:	Neutral
Type:	CIAttributeTypeOffset

See AttributeinputNeutral for more details.
(Read and Write property)

58.228.12 inputTargetNeutral as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Target Neutral
Notes:

Name:	inputTargetNeutral
Class:	CIVectorMBS (CIVector)
DisplayName English:	Target Neutral
DisplayName German:	Zielneutral
DisplayName French:	Couleur neutre cible
DisplayName Italian:	Elemento neutro target
DisplayName Spanish:	Neutro para el destino
Type:	CIAttributeTypeOffset

See AttributeinputTargetNeutral for more details.
(Read and Write property)

58.229 class CIFilterTextImageGeneratorMBS

58.229.1 class CIFilterTextImageGeneratorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Text Image Generator filter.
Notes:

Details for this filter:

FilterName:	CITextImageGenerator
DisplayName English:	Text Image Generator
DisplayName German:	Textbildgenerator
DisplayName French:	G√©n√©rateur d,Äôimage de texte
DisplayName Italian:	Generatore immagine di testo
DisplayName Spanish:	Generador de im√°genes con texto

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputText: Text
- inputFontName: Font Name
- inputFontSize: Font Size
- inputScaleFactor: Scale Factor
- inputPadding: Padding

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.229.2 Methods

58.229.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.229.4 Properties

58.229.5 AttributeinputFontName as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputFontName
Class:	String
DisplayName English:	Font Name
DisplayName German:	Schriftname
DisplayName French:	Nom de la police
DisplayName Italian:	Nome font
DisplayName Spanish:	Nombre de tipo de letra
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.229.6 AttributeinputFontSize as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Text Image Generator attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputFontSize
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Font Size
DisplayName German:	Schriftgr√√üe
DisplayName French:	Taille de la police
DisplayName Italian:	Dimensioni font
DisplayName Spanish:	Tama√±o de letra
DefaultNumber:	12
IdentityNumber:	0
SliderMaxNumber:	128
SliderMinNumber:	9

58.229.7 AttributeinputPadding as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputPadding
Class:	double
Type:	CIAttributeTypeInteger
DisplayName:	Padding
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	200
MinNumber:	0
SliderMaxNumber:	50
SliderMinNumber:	0

(Read only property)

58.229.8 AttributeinputScaleFactor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputScaleFactor
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
DefaultNumber:	1
IdentityNumber:	0
SliderMaxNumber:	4
SliderMinNumber:	1

(Read only property)

58.229.9 AttributeinputText as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Text Image Generator attribute.
Notes:

This attribute should have this content:

Name:	inputText
Class:	String
DisplayName:	Text
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.229.10 inputFontName as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Font Name
Notes:

See AttributeinputFontName for more details.

Name:	inputFontName
Class:	String (NSString)
DisplayName English:	Font Name
DisplayName German:	Schriftname
DisplayName French:	Nom de la police
DisplayName Italian:	Nome font
DisplayName Spanish:	Nombre de tipo de letra

(Read and Write property)

58.229.11 inputFontSize as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Font Size
Notes:

Name:	inputFontSize
Class:	double (NSNumber)
DisplayName English:	Font Size
DisplayName German:	Schriftgr√√üe
DisplayName French:	Taille de la police
DisplayName Italian:	Dimensioni font
DisplayName Spanish:	Tama√±o de letra
Type:	CIAttributeTypeScalar

See AttributeinputFontSize for more details.
(Read and Write property)

58.229.12 inputPadding as double

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Padding
Notes:

See AttributeinputPadding for more details.
(Read and Write property)

Name:	inputPadding
Class:	double (NSNumber)
DisplayName English:	Padding
DisplayName German:	Padding
DisplayName French:	Padding
DisplayName Italian:	Padding
DisplayName Spanish:	Padding
Type:	CIAttributeTypeInteger

58.229.13 inputScaleFactor as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Scale Factor
Notes:

Name:	inputScaleFactor
Class:	double (NSNumber)
DisplayName English:	Scale Factor
DisplayName German:	Skalierungsfaktor
DisplayName French:	Facteur d,Äô√©chelle
DisplayName Italian:	Fattore di scala
DisplayName Spanish:	Factor de escala
Type:	CIAttributeTypeScalar

See AttributeinputScaleFactor for more details.
(Read and Write property)

58.229.14 inputText as String

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Text
Notes:

Name:	inputText
Class:	String (NSString)
DisplayName English:	Text
DisplayName German:	Text
DisplayName French:	Text
DisplayName Italian:	Text
DisplayName Spanish:	Text

See AttributeinputText for more details.
(Read and Write property)

58.230 class CIFilterThermalMBS

58.230.1 class CIFilterThermalMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Thermal filter.
Notes:

Details for this filter:

FilterName:	CIThermal
DisplayName English:	Thermal
DisplayName German:	W√§rmebild
DisplayName French:	Thermique
DisplayName Italian:	Termico
DisplayName Spanish:	T√©rmica

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.230.2 Methods

58.230.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.230.4 Properties

58.230.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Thermal attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.230.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.231 class CIFilterToneCurveMBS

58.231.1 class CIFilterToneCurveMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Tone Curve filter.
Notes:

Details for this filter:

FilterName:	CIToneCurve
DisplayName English:	Tone Curve
DisplayName German:	Farbtonkurve
DisplayName French:	Courbe tonale
DisplayName Italian:	Curva tonale
DisplayName Spanish:	Curva tonal

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputPoint2: Point 2
- inputPoint3: Point 3
- inputPoint4: Point 4

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.231.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.231.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.231.4 Methods

58.231.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.231.6 Properties

58.231.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Tone Curve attribute.
Notes:

This attribute should have this content:

(Read only property)

58.231.8 AttributeinputPoint0 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Tone Curve attribute.
Notes:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

This attribute should have this content:

Name:	inputPoint0
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
DefaultVector:	[0 0]
IdentityVector:	[0 0]

(Read only property)

58.231.9 AttributeinputPoint1 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Tone Curve attribute.
Notes:

This attribute should have this content:

(Read only property)

58.231.10 AttributeinputPoint2 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Name:	inputPoint1
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
DefaultVector:	[0.25 0.25]
IdentityVector:	[0.25 0.25]

Function: Details about the Tone Curve attribute.
Notes:

This attribute should have this content:

Name:	inputPoint2
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Point 2
DisplayName German:	Punkt 2
DisplayName French:	Point 2
DisplayName Italian:	Punto 2
DisplayName Spanish:	Punto 2
DefaultVector:	[0.5 0.5]
IdentityVector:	[0.5 0.5]

(Read only property)

58.231.11 AttributeinputPoint3 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Tone Curve attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputPoint3
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Point 3
DisplayName German:	Punkt 3
DisplayName French:	Point¬†3
DisplayName Italian:	Punto 3
DisplayName Spanish:	Punto 3
DefaultVector:	[0.75 0.75]
IdentityVector:	[0.75 0.75]

58.231.12 AttributeinputPoint4 as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Tone Curve attribute.
Notes:

This attribute should have this content:

Name:	inputPoint4
Class:	CIVectorMBS
Type:	CIAttributeTypeOffset
DisplayName English:	Point 4
DisplayName German:	Punkt 4
DisplayName French:	Point¬†4
DisplayName Italian:	Punto 4
DisplayName Spanish:	Punto 4
DefaultVector:	[1 1]
IdentityVector:	[1 1]

(Read only property)

58.231.13 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.231.14 inputPoint0 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 0
Notes:

Name:	inputPoint0
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 0
DisplayName German:	Punkt 0
DisplayName French:	Point¬†0
DisplayName Italian:	Punto 0
DisplayName Spanish:	Punto 0
Type:	CIAttributeTypeOffset

See AttributeinputPoint0 for more details.
(Read and Write property)

58.231.15 inputPoint1 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 1
Notes:

Name:	inputPoint1
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 1
DisplayName German:	Punkt 1
DisplayName French:	Point 1
DisplayName Italian:	Punto 1
DisplayName Spanish:	Punto 1
Type:	CIAttributeTypeOffset

See AttributeinputPoint1 for more details.
(Read and Write property)

58.231.16 inputPoint2 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 2
Notes:

Name:	inputPoint2
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 2
DisplayName German:	Punkt 2
DisplayName French:	Point 2
DisplayName Italian:	Punto 2
DisplayName Spanish:	Punto 2
Type:	CIAttributeTypeOffset

See AttributeinputPoint2 for more details.
(Read and Write property)

58.231.17 inputPoint3 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 3
Notes:

Name:	inputPoint3
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 3
DisplayName German:	Punkt 3
DisplayName French:	Point¬†3
DisplayName Italian:	Punto 3
DisplayName Spanish:	Punto 3
Type:	CIAttributeTypeOffset

See AttributeinputPoint3 for more details.
(Read and Write property)

58.231.18 inputPoint4 as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point 4
Notes:

Name:	inputPoint4
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point 4
DisplayName German:	Punkt 4
DisplayName French:	Point¬†4
DisplayName Italian:	Punto 4
DisplayName Spanish:	Punto 4
Type:	CIAttributeTypeOffset

See AttributeinputPoint4 for more details.
(Read and Write property)

58.232 class CIFilterTorusLensDistortionMBS

58.232.1 class CIFilterTorusLensDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Torus Lens Distortion filter.
Notes:

Details for this filter:

FilterName:	CITorusLensDistortion
DisplayName English:	Torus Lens Distortion
DisplayName German:	Verzerrung ,ÄûTorus-Linse,Äú
DisplayName French:	D√©formation Lentille torique
DisplayName Italian:	Distorsione lenti Torus
DisplayName Spanish:	Distorsi√n por lente toroidal

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputWidth: Width
- inputRefraction: Refraction

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.232.2 Methods

58.232.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.232.4 Properties

58.232.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Torus Lens Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.232.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Torus Lens Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.232.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Torus Lens Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	160
IdentityNumber:	0
SliderMaxNumber:	500
SliderMinNumber:	0

(Read only property)

58.232.8 AttributeinputRefraction as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Torus Lens Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRefraction
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
DefaultNumber:	1.7
IdentityNumber:	1
SliderMaxNumber:	5
SliderMinNumber:	0

(Read only property)

58.232.9 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Torus Lens Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	80
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	0

(Read only property)

58.232.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.232.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.232.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.232.13 inputRefraction as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Refraction
Notes:

Name:	inputRefraction
Class:	double (NSNumber)
DisplayName English:	Refraction
DisplayName German:	Lichtbrechung
DisplayName French:	R√©fraction
DisplayName Italian:	Rifrazione
DisplayName Spanish:	Refracci√n
Type:	CIAttributeTypeScalar

See AttributeinputRefraction for more details.
(Read and Write property)

58.232.14 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.233 class CIFilterTriangleKaleidoscopeMBS

58.233.1 class CIFilterTriangleKaleidoscopeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Triangle Kaleidoscope filter.
Notes:

Details for this filter:

FilterName:	CITriangleKaleidoscope
DisplayName English:	Triangle Kaleidoscope
DisplayName German:	Dreieckskaleidoskop
DisplayName French:	Kal√©idoscope en forme de triangle
DisplayName Italian:	Caleidoscopio triangolare
DisplayName Spanish:	Caleidoscopio triangular

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputPoint: Point
- inputSize: Size
- inputRotation: Rotation
- inputDecay: Decay

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.233.2 Methods

58.233.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.233.4 Properties

58.233.5 AttributeinputDecay as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputDecay
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Decay
DefaultNumber:	0.85
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.233.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Kaleidoscope attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

58.233.7 AttributeinputPoint as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputPoint
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Point
DisplayName German:	Point
DisplayName French:	Point
DisplayName Italian:	Punto
DisplayName Spanish:	Punto
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.233.8 AttributeinputRotation as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Kaleidoscope attribute.
Notes:

This attribute should have this content:

(Read only property)

Name:	inputRotation
Class:	double
Type:	CIAttributeTypeAngle
DisplayName:	Rotation
DefaultNumber:	5.924285
IdentityNumber:	0
SliderMaxNumber:	6.283185
SliderMinNumber:	0

58.233.9 AttributeinputSize as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Kaleidoscope attribute.
Notes:

This attribute should have this content:

Name:	inputSize
Class:	double
Type:	CIAttributeTypeScalar
DisplayName:	Size
DefaultNumber:	700
IdentityNumber:	0
SliderMaxNumber:	1000
SliderMinNumber:	0

(Read only property)

58.233.10 inputDecay as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Decay
Notes:

See AttributeinputDecay for more details.
(Read and Write property)

Name:	inputDecay
Class:	double (NSNumber)
DisplayName English:	Decay
DisplayName German:	Decay
DisplayName French:	Decay
DisplayName Italian:	Decay
DisplayName Spanish:	Decay
Type:	CIAttributeTypeScalar

58.233.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.233.12 inputPoint as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Point
Notes:

Name:	inputPoint
Class:	CIVectorMBS (CIVector)
DisplayName English:	Point
DisplayName German:	Point
DisplayName French:	Point
DisplayName Italian:	Punto
DisplayName Spanish:	Punto
Type:	CIAttributeTypePosition

See AttributeinputPoint for more details.
(Read and Write property)

58.233.13 inputRotation as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Rotation
Notes:

Name:	inputRotation
Class:	double (NSNumber)
DisplayName English:	Rotation
DisplayName German:	Rotation
DisplayName French:	Rotation
DisplayName Italian:	Rotation
DisplayName Spanish:	Rotation
Type:	CIAttributeTypeAngle

See AttributeinputRotation for more details.
(Read and Write property)

58.233.14 inputSize as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Size
Notes:

Name:	inputSize
Class:	double (NSNumber)
DisplayName English:	Size
DisplayName German:	Size
DisplayName French:	Size
DisplayName Italian:	Size
DisplayName Spanish:	Size
Type:	CIAttributeTypeScalar

See AttributeinputSize for more details.
(Read and Write property)

58.234 class CIFilterTriangleTileMBS

58.234.1 class CIFilterTriangleTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Triangle Tile filter.
Notes:

Details for this filter:

FilterName:	CITriangleTile
DisplayName English:	Triangle Tile
DisplayName German:	Dreieckig kacheln
DisplayName French:	Mosa√Øque de triangles
DisplayName Italian:	Mosaico triangolare
DisplayName Spanish:	Mosaico triangular

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.234.2 Methods

58.234.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.234.4 Properties

58.234.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.234.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.234.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.234.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Triangle Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.234.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.234.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.234.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.234.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.235 class CIFilterTwelvefoldReflectedTileMBS

58.235.1 class CIFilterTwelvefoldReflectedTileMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Twelvefold Reflected Tile filter.
Notes:

Details for this filter:

FilterName:	CITwelvefoldReflectedTile
DisplayName English:	Twelvefold Reflected Tile
DisplayName German:	12-fach reflektierte Kachel
DisplayName French:	Mosa√Øque r√©fl√©chie 12 fois
DisplayName Italian:	Mosaico riflesso in dodici direzioni
DisplayName Spanish:	Mosaico reflejado doce veces

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.235.2 Methods

58.235.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.235.4 Properties

58.235.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twelvefold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	0
IdentityNumber:	0
SliderMaxNumber:	3.141593
SliderMinNumber:	-3.141593

(Read only property)

58.235.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twelvefold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.235.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twelvefold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.235.8 AttributeinputWidth as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twelvefold Reflected Tile attribute.
Notes:

This attribute should have this content:

Name:	inputWidth
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
DefaultNumber:	100
IdentityNumber:	100
SliderMaxNumber:	200
SliderMinNumber:	1

(Read only property)

58.235.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.235.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.235.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.235.12 inputWidth as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Width
Notes:

See AttributeinputWidth for more details.
(Read and Write property)

Name:	inputWidth
Class:	double (NSNumber)
DisplayName English:	Width
DisplayName German:	Breite
DisplayName French:	Largeur
DisplayName Italian:	Larghezza
DisplayName Spanish:	Anchura
Type:	CIAttributeTypeDistance

58.236 class CIFilterTwirlDistortionMBS

58.236.1 class CIFilterTwirlDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Twirl Distortion filter.
Notes:

Details for this filter:

FilterName:	CITwirlDistortion
DisplayName English:	Twirl Distortion
DisplayName German:	Verzerrung ,ÄûWirbeln,Äú
DisplayName French:	D√©formation Spirale
DisplayName Italian:	Distorsione spirale
DisplayName Spanish:	Distorsi√n por giro

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.236.2 Methods

58.236.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.236.4 Properties

58.236.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twirl Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	3.141593
IdentityNumber:	0
SliderMaxNumber:	12.56637
SliderMinNumber:	-12.56637

(Read only property)

58.236.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twirl Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.236.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twirl Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.236.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Twirl Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	300
SliderMaxNumber:	500
SliderMinNumber:	0

(Read only property)

58.236.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.236.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.236.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.236.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

58.237 class CIFilterUnsharpMaskMBS

58.237.1 class CIFilterUnsharpMaskMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Unsharp Mask filter.
Notes:

Details for this filter:

FilterName:	CIUnsharpMask
DisplayName English:	Unsharp Mask
DisplayName German:	Unscharf maskieren
DisplayName French:	Rendre le masque flou
DisplayName Italian:	Maschera di contrasto
DisplayName Spanish:	Desenfocar m√°scara

Categories:

- CICategorySharpen: Sharpen
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.237.2 Methods

58.237.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.237.4 Properties

58.237.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Unsharp Mask attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.237.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Unsharp Mask attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0.5
IdentityNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.237.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Unsharp Mask attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	2.5
IdentityNumber:	0
SliderMaxNumber:	100
SliderMinNumber:	0

(Read only property)

58.237.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.237.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

58.237.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.238 class CIFilterVibranceMBS

58.238.1 class CIFilterVibranceMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vibrance filter.
Notes:

Details for this filter:

FilterName:	CIVibrance
DisplayName English:	Vibrance
DisplayName German:	Lebendigkeit
DisplayName French:	Brillance
DisplayName Italian:	Vividezza
DisplayName Spanish:	Vivacidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputAmount: Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.238.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.238.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr5

58.238.4 Methods

58.238.5 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.238.6 Properties

58.238.7 AttributeinputAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vibrance attribute.
Notes:

This attribute should have this content:

Name:	inputAmount
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	-1

(Read only property)

58.238.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vibrance attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.238.9 inputAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Amount
Notes:

Name:	inputAmount
Class:	double (NSNumber)
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
Type:	CIAttributeTypeScalar

See AttributeinputAmount for more details.
(Read and Write property)

58.238.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.239 class CIFilterVignetteEffectMBS

58.239.1 class CIFilterVignetteEffectMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vignette Effect filter.
Notes:

Details for this filter:

FilterName:	CIVignetteEffect
DisplayName English:	Vignette Effect
DisplayName German:	Vignetteneffekt
DisplayName French:	Effet de vignette
DisplayName Italian:	Effetto vignettatura
DisplayName Spanish:	Efecto de degradado

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputIntensity: Intensity
- inputFalloff: Falloff

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.239.2 Methods

58.239.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.239.4 Properties

58.239.5 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette Effect attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.239.6 AttributeinputFalloff as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette Effect attribute.
Notes:

This attribute should have this content:

Name:	inputFalloff
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Falloff
DisplayName German:	Nachlassen
DisplayName French:	Att√©nuation
DisplayName Italian:	Calo
DisplayName Spanish:	Disminuci√n
DefaultNumber:	0.5
IdentityNumber:	0
MaxNumber:	1
MinNumber:	0
SliderMaxNumber:	1
SliderMinNumber:	0

(Read only property)

58.239.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette Effect attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild

See AttributeinputIntensity for more details.
(Read and Write property)

58.239.14 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

See AttributeinputRadius for more details.
(Read and Write property)

58.240 class CIFilterVignetteMBS

58.240.1 class CIFilterVignetteMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vignette filter.
Notes:

Details for this filter:

FilterName:	CIVignette
DisplayName English:	Vignette
DisplayName German:	Vignette
DisplayName French:	Vignette
DisplayName Italian:	Vignettatura
DisplayName Spanish:	Degradado

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryStillImage: Still Image
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputIntensity: Intensity
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.240.2 Methods

58.240.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.240.4 Properties

58.240.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.240.6 AttributeinputIntensity as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette attribute.
Notes:

This attribute should have this content:

Name:	inputIntensity
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
DefaultNumber:	0
IdentityNumber:	0
MaxNumber:	1
MinNumber:	-1
SliderMaxNumber:	1
SliderMinNumber:	-1

(Read only property)

58.240.7 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vignette attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeScalar
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	1
IdentityNumber:	0
MaxNumber:	2
MinNumber:	0
SliderMaxNumber:	2
SliderMinNumber:	0

(Read only property)

58.240.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.240.9 inputIntensity as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Intensity
Notes:

Name:	inputIntensity
Class:	double (NSNumber)
DisplayName English:	Intensity
DisplayName German:	Intensit√§t
DisplayName French:	Intensit√©
DisplayName Italian:	Intensit√†
DisplayName Spanish:	Intensidad
Type:	CIAttributeTypeScalar

See AttributeinputIntensity for more details.
(Read and Write property)

58.240.10 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeScalar

See AttributeinputRadius for more details.
(Read and Write property)

58.241 class CIFilterVividLightBlendModeMBS

58.241.1 class CIFilterVividLightBlendModeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vivid Light Blend Mode filter.
Notes:

Details for this filter:

FilterName:	CIVividLightBlendMode
DisplayName English:	Vivid Light Blend Mode
DisplayName German:	Mischmethode ,ÄûStrahlendes Licht,Äú
DisplayName French:	Mode de fusion Lumi√®re vive
DisplayName Italian:	Modalit√† sfumatura luce vivida
DisplayName Spanish:	Modo de mezcla por luz v√vida

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.241.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.241.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr5

58.241.4 Methods

58.241.5 Constructor

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.241.6 Properties

58.241.7 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Vivid Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputBackgroundImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.241.8 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: Details about the Vivid Light Blend Mode attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.241.9 inputBackgroundImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Background Image
Notes:

Name:	inputBackgroundImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Background Image
DisplayName German:	Hintergrundbild
DisplayName French:	Image d,Äôarri√®re-plan
DisplayName Italian:	Immagine di sfondo
DisplayName Spanish:	Imagen de fondo
Type:	CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.
(Read and Write property)

58.241.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 23.0, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.242 class CIFilterVortexDistortionMBS

58.242.1 class CIFilterVortexDistortionMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Vortex Distortion filter.
Notes:

Details for this filter:

FilterName:	CIVortexDistortion
DisplayName English:	Vortex Distortion
DisplayName German:	Verzerrung ,ÄûVortex,Äú
DisplayName French:	D√©formation Tourbillon
DisplayName Italian:	Distorsione Vortex
DisplayName Spanish:	Distorsi√n por v√rtice

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.242.2 Methods

58.242.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.242.4 Properties

58.242.5 AttributeinputAngle as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vortex Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputAngle
Class:	double
Type:	CIAttributeTypeAngle
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
DefaultNumber:	56.54867
IdentityNumber:	0
SliderMaxNumber:	94.24778
SliderMinNumber:	-94.24778

(Read only property)

58.242.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vortex Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.242.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vortex Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.242.8 AttributeinputRadius as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Vortex Distortion attribute.
Notes:

This attribute should have this content:

Name:	inputRadius
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
DefaultNumber:	300
IdentityNumber:	0
SliderMaxNumber:	800
SliderMinNumber:	0

(Read only property)

58.242.9 inputAngle as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Angle
Notes:

Name:	inputAngle
Class:	double (NSNumber)
DisplayName English:	Angle
DisplayName German:	Winkel
DisplayName French:	Angle
DisplayName Italian:	Angolo
DisplayName Spanish:	√Ångulo
Type:	CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

58.242.10 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.242.11 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

58.242.12 inputRadius as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Radius
Notes:

See AttributeinputRadius for more details.
(Read and Write property)

Name:	inputRadius
Class:	double (NSNumber)
DisplayName English:	Radius
DisplayName German:	Radius
DisplayName French:	Rayon
DisplayName Italian:	Raggio
DisplayName Spanish:	Radio
Type:	CIAttributeTypeDistance

58.243 class CIFilterWhitePointAdjustMBS

58.243.1 class CIFilterWhitePointAdjustMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage White Point Adjust filter.
Notes:

Details for this filter:

FilterName:	CIWhitePointAdjust
DisplayName English:	White Point Adjust
DisplayName German:	Wei√üpunkt anpassen
DisplayName French:	Ajustement du point blanc
DisplayName Italian:	Regolazione punto di bianco
DisplayName Spanish:	Ajuste de punto blanco

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.243.2 Methods

58.243.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.243.4 Properties

58.243.5 AttributeinputColor as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the White Point Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputColor
Class:	CIColorMBS
Type:	CIAttributeTypeColor
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
DefaultColor:	Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber:	0

(Read only property)

58.243.6 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the White Point Adjust attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.243.7 inputColor as CIColorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Color
Notes:

Name:	inputColor
Class:	CIColorMBS (CIColor)
DisplayName English:	Color
DisplayName German:	Farbe
DisplayName French:	Couleur
DisplayName Italian:	Colore
DisplayName Spanish:	Color
Type:	CIAttributeTypeColor

See AttributeinputColor for more details.
(Read and Write property)

58.243.8 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.244 class CIFilterXRayMBS

58.244.1 class CIFilterXRayMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage X-Ray filter.
Notes:

Details for this filter:

FilterName:	CIXRay
DisplayName English:	X-Ray
DisplayName German:	R√ntgen
DisplayName French:	Rayon X
DisplayName Italian:	Raggi X
DisplayName Spanish:	Rayos X

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.244.2 Methods

58.244.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.244.4 Properties

58.244.5 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the X-Ray attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.244.6 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.245 class CIFilterZoomBlurMBS

58.245.1 class CIFilterZoomBlurMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The Xojo class for the CoreImage Zoom Blur filter.
Notes:

Details for this filter:

FilterName:	CIZoomBlur
DisplayName English:	Zoom Blur
DisplayName German:	Zoom weichzeichnen
DisplayName French:	Zoom flou
DisplayName Italian:	Sfumatura zoom
DisplayName Spanish:	Ampliar difuminado

Categories:

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In
- CICategoryHighDynamicRange: High Dynamic Range

Input:

- inputImage: Image
- inputCenter: Center
- inputAmount: Amount

Output:

- outputImage

Subclass of the CIFilterMBS class.

58.245.2 Methods

58.245.3 Constructor

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: On success the handle property is not zero and the filter has the default values set.

58.245.4 Properties

58.245.5 AttributeinputAmount as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Zoom Blur attribute.
Notes:

This attribute should have this content:

Name:	inputAmount
Class:	double
Type:	CIAttributeTypeDistance
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
DefaultNumber:	20
IdentityNumber:	0
SliderMaxNumber:	200
SliderMinNumber:	-200

(Read only property)

58.245.6 AttributeinputCenter as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Zoom Blur attribute.
Notes:

This attribute should have this content:

Name:	inputCenter
Class:	CIVectorMBS
Type:	CIAttributeTypePosition
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
DefaultVector:	[150 150]
IdentityVector:	n/a

(Read only property)

58.245.7 AttributeinputImage as CIAttributeMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Details about the Zoom Blur attribute.
Notes:

This attribute should have this content:

Name:	inputImage
Class:	CIImageMBS
Type:	CIAttributeTypeImage
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
DefaultNumber:	0
IdentityNumber:	0

(Read only property)

58.245.8 inputAmount as double

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Amount
Notes:

Name:	inputAmount
Class:	double (NSNumber)
DisplayName English:	Amount
DisplayName German:	St√§rke
DisplayName French:	Montant
DisplayName Italian:	Quantit√†
DisplayName Spanish:	Cantidad
Type:	CIAttributeTypeDistance

See AttributeinputAmount for more details.
(Read and Write property)

58.245.9 inputCenter as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Center
Notes:

Name:	inputCenter
Class:	CIVectorMBS (CIVector)
DisplayName English:	Center
DisplayName German:	Mitte
DisplayName French:	Centre
DisplayName Italian:	Centro
DisplayName Spanish:	Centro
Type:	CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

58.245.10 inputImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The attribute Image
Notes:

See AttributeinputImage for more details.
(Read and Write property)

Name:	inputImage
Class:	CIImageMBS (CIImage)
DisplayName English:	Image
DisplayName German:	Bild
DisplayName French:	Image
DisplayName Italian:	Immagine
DisplayName Spanish:	Imagen
Type:	CIAttributeTypeImage

58.246 class CIImageMBS

58.246.1 class CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The class for a CoreImage Image object.
Example:

```
// take a picture and scale it
Dim pic As Picture = LogoMBS(500)
Dim image As CIImageMBS = CIImageMBS.imageWithPicture(pic)

Dim filter As New CIFilterLanczosScaleTransformMBS

Const targetWidth = 600.0
Const targetHeight = 400.0

Dim scale As Double = targetHeight / image.Extent.Height
Dim aspect As Double = targetWidth / (image.Extent.Width * scale)

filter.inputImage = image
filter.inputScale = scale
filter.inputAspectRatio = aspect

Dim result As Picture = filter.outputImage.RenderPicture

Backdrop = result
```

58.246.6 Methods

58.246.7 AsNSImageMBS as Variant

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a NSImageMBS which references the given CIImage.
Example:

```
// make a dummy CIImage
dim Logo as Picture = LogoMBS(500)
dim jpeg as string = PictureToJPEGStringMBS(logo, 80)
dim ci as CIImageMBS = CIImageMBS.imageWithData(jpeg)

// convert to NSImage
dim ni as NSImageMBS = ci.AsNSImageMBS

// and display
Backdrop = ni.CopyPictureWithMask
```

Notes:

Returns nil on error.
Result declared as Variant to avoid plugin dependencies.

58.246.8 autoAdjustmentFilters as CIFilterMBS()

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns all filters that perform auto adjustment.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFile(f)

dim filters() as CIFilterMBS = image.autoAdjustmentFilters

dim beginImage as CIImageMBS = image
for each filter as CIFilterMBS in filters
filter.ValueAsCIImage("inputImage") = beginImage
beginImage = filter.ValueAsCIImage("outputImage")
next

Backdrop = beginImage.RenderPicture
```

Notes: An array of auto adjustment filters to apply to the image. The filters are preset with values for correcting deficiencies in the supplied image.

58.246.9 autoAdjustmentFiltersWithOptions(options as dictionary) as CIFilterMBS()

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a subset of the filters that perform auto adjustment.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFile(f)

dim options as new Dictionary
options.Value(CIImageMBS.kCIImageAutoAdjustEnhance) = true
```

```
options.Value(CIImageMBS.kCIImageAutoAdjustRedEye) = true

dim filters() as CIFilterMBS = image.autoAdjustmentFiltersWithOptions(options)

dim beginImage as CIImageMBS = image
for each filter as CIFilterMBS in filters
filter.ValueAsCIImage("inputImage") = beginImage
beginImage = filter.ValueAsCIImage("outputImage")
next

Backdrop = beginImage.RenderPicture
```

Notes:

options: You can control which filters are returned by supplying one or more of the keys described in "Auto Adjustment Keys."
The options dictionary can also contain a CIDetectorImageOrientation key. This key is a number with the same value as defined by the TIFF and EXIF specifications; values can range from 1 through 8. The value specifies where the origin (0,0) of the image is located. If not present, the default value is 1, which means the origin of the image is top, left. For details on the image origin specified by each value, see kCGImage-PropertyOrientation.

Returns an array of auto adjustment filters, filtered by the supplied options, to apply to the image. The filters are preset with values for correcting deficiencies in the supplied image.

58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes:

cgcolorspace: Use this colorspace when opening the image.
On success, the handle is not zero.

- 58.246.19 Constructor(Handle as Integer) 12190

58.246.11 Constructor(cgimage as CGImageMBS, options as Dictionary = nil)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes: On success, the handle is not zero.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184

- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189
- 58.246.19 Constructor(Handle as Integer) 12190

58.246.12 Constructor(CGLayer as CGLayerMBS, options as Dictionary = nil)

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an image object from the contents supplied by a CGLayer object, using the specified options.
Notes:

layer: A CGLayer object. For more information see Quartz 2D Programming Guide and CGLayer Reference.
options: A dictionary specifying image options.

Returns an image object initialized with the contents of the layer object and set up with the specified options.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184

- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189
- 58.246.19 Constructor(Handle as Integer) 12190

58.246.13 Constructor(data as memoryblock)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Example:

```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
c.inputImage = i

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

Notes: On success, the handle is not zero.

- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189
- 58.246.19 Constructor(Handle as Integer) 12190

58.246.14 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes:

Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.

On success, the handle is not zero.

- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189
- 58.246.19 Constructor(Handle as Integer) 12190

58.246.15 Constructor(data as memoryblock, cgcolorspace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Notes:

cgcolorspace: Use this colorspace when opening the image.

On success, the handle is not zero.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184

- 58.246.13 Constructor(data as memoryblock) 12186
- 58.246.14 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 12187
- 58.246.16 Constructor(data as Memoryblock, Length as Integer, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 12188
- 58.246.17 Constructor(file as FolderItem) 12189
- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189
- 58.246.19 Constructor(Handle as Integer) 12190

58.246.16 Constructor(data as Memoryblock, Length as Integer, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes:

Data points directly to the row data.
Length is the size of the memoryblock in bytes.
BytesPerRow is the size of a row in bytes.
Width and height are the dimensions of the image.
Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.
Colorspace is the CoreGraphics Colorspace object to be used.

On success, the handle is not zero.

- 58.246.19 Constructor(Handle as Integer) 12190

58.246.17 Constructor(file as FolderItem)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes: On success, the handle is not zero.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184

- 58.246.19 Constructor(Handle as Integer) 12190

58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes:

cgcolorspace: Use this colorspace when opening the image.

On success, the handle is not zero.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184

- 58.246.19 Constructor(Handle as Integer) 12190

58.246.19 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIImage* and the object is retained.
Raises UnsupportedOperationException if object is not a CIImage.
See also:

- 58.246.10 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 12184
- 58.246.11 Constructor(cgimage as CGImageMBS, options as Dictionary = nil) 12185

- 58.246.18 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 12189

58.246.20 copy as CIImageMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy of the image.

58.246.21 CreateCGImage(r as CGRectMBS = nil) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Example:

```
dim logo as Picture = LogoMBS(500)
dim ci as CIImageMBS = CIImageMBS.imageWithPicture(logo)
dim cg as CGImageMBS = ci.CreateCGImage
Backdrop = cg.Picture
```

Notes:

Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 58.246.22 CreateCGImage(r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS 12191

58.246.22 CreateCGImage(r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates a new image with the content of the CIImage.
Notes:

Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 58.246.21 CreateCGImage(r as CGRectMBS = nil) as CGImageMBS 12191

58.246.23 emptyImage as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an empty image object.
Example:

```
dim image as CIImageMBS = CIImageMBS.emptyImage
MsgBox str(image.Width) // shows zero
```

Notes: Available in OS X v10.5 and later.

58.246.24 imageByApplyingOrientation(orientation as Integer) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Returns a new image representing the original image with a transform appied to it based on an orientation value.
Example:

```
// use CIImage to rotate to always be top left orientation
Dim ciImage As CIImageMBS = New CIImageMBS(file)

Dim orientation As Integer = ciImage.properties.Lookup("Orientation", 0)
if orientation <>0 then
ciImage = ciImage.imageByApplyingOrientation(orientation)
end if

Dim cgPic As CGImageMBS = ciImage.CreateCGImage
Dim pic As Picture = cgPic.Picture
ImageViewer1.Image = pic
```

Notes:

Orientation values from 1 to 8 as defined in the TIFF spec are supported.
Returns original image if the image is of infinite extent.

Possible orientation values:

58.246.25 ImageByApplyingTransform(transform as NSAffineTransformMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop, Console & Web.

Value	orientation	details
1	top left	row 0 top, col 0 lhs
2	top right	row 0 top, col 0 rhs
3	bottom right	row 0 bottom, col 0 rhs
4	bottom left	row 0 bottom, col 0 lhs
5	left top	row 0 lhs, col 0 top
6	right top	row 0 rhs, col 0 top
7	right bottom	row 0 rhs, col 0 bottom
8	left bottom	row 0 lhs, col 0 bottom

Function: Returns a new image representing the original image with the transform 'matrix' appended to it.

58.246.26 imageByClampingToExtent as CIImageMBS

MBS MacCI Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Return a new infinte image by replicating the pixels of the receiver image's extent.

58.246.27 imageByCompositingOverImage(dest as CIImageMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Returns a new image created by compositing the original image over the specified destination image.
Notes:

dest: An image to serve as the destination of the compositing operation.

Returns an image object representing the result of the compositing operation.

Calling this method is equivalent to using the CISourceOverCompositing filter. To use other compositing operations and blending modes, create a CIFilter object using one of the built-in filters from the CICategoryCompositeOperation category. For details, see Core Image Filter Reference.

Available in OS X v10.4 and later.

58.246.28 imageByCroppingToRect(r as CGRectMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns a new image that represents the original image after cropping to a rectangle.
Notes: Available in OS X v10.5 and later.

58.246.29 imageWithCGImage(CGImage as CGImageMBS, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from a Quartz 2D image using the specified color space.
Notes: Returns nil on any error.
See also:

- 58.246.30 imageWithCGImage(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS 12194

58.246.30 imageWithCGImage(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from a Quartz 2D image.
Notes: Returns nil on any error.
See also:

- 58.246.29 imageWithCGImage(CGImage as CGImageMBS, colorspace as CGColorSpaceMBS) as CIImageMBS 12194

58.246.31 imageWithCGLayer(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an image object from the contents supplied by a CGLayer object, using the specified options.
Notes:

layer: A CGLayer object. For more information see Quartz 2D Programming Guide and CGLayer Reference.
options: A dictionary specifying image options.

An image object initialized with the contents of the layer object and set up with the specified options.

58.246.32 imageWithColor(color as CIColorMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image of infinite extent that is initialized the specified color.
Notes:

Returns the image object initialized with the color represented by the CIColorMBS object.
Available in OS X v10.5 and later.

58.246.33 imageWithContentsOfFile(file as folderitem) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("mbs.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFile(file)
Backdrop = image.RenderPicture
```

Notes: Returns nil on any error.
See also:

- 58.246.34 imageWithContentsOfFile(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS 12195

58.246.34 imageWithContentsOfFile(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Notes: Returns nil on any error.
See also:

- 58.246.33 imageWithContentsOfFile(file as folderitem) as CIImageMBS 12195

58.246.35 imageWithContentsOfFileMT(file as folderitem) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("mbs.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFileMT(file)
Backdrop = image.RenderPicture
```

Notes:

Returns nil on any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
See also:

- 58.246.36 imageWithContentsOfFileMT(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS 12196

58.246.36 imageWithContentsOfFileMT(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("mbs.jpg")
dim cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFileMT(file, cs)
Backdrop = image.RenderPicture
```

Notes:

Returns nil on any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
See also:

- 58.246.35 imageWithContentsOfFileMT(file as folderitem) as CIImageMBS 12195

58.246.37 imageWithContentsOfPath(Path as string, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Example:

```
// load image
dim inputimage as CIImageMBS = CIImageMBS.imageWithContentsOfPath("/Library/Desktop Pictures/Rice
Paddy.jpg", nil)

// rotate 90¬∞
dim ScaleXFilter as new CIFilterAffineTransformMBS
ScaleXFilter.inputImage = inputimage
dim af as new NSAffineTransformMBS
af.translate(inputimage.height,0)
af.rotateByDegrees(90)
ScaleXFilter.inputTransform=af

// produce output
dim outputimage as CIImageMBS = ScaleXFilter.outputImage
dim e as CGRectMBS = outputimage.Extent
Backdrop = outputimage.RenderPicture
Title = Str(Backdrop.Width)+" x "+str(Backdrop.Height)

// write to PNG file
dim n as NSImageMBS = outputimage.AsNSImageMBS
dim data as string = n.PNGRepresentation

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write data
b.Close
```

Notes: Returns nil on any error.

58.246.38 imageWithContentsOfURL(url as String) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Notes: Returns nil on any error.
See also:

- 58.246.39 imageWithContentsOfURL(URL as string, colorspace as CGColorSpaceMBS) as CIImageMBS 12198

58.246.39 imageWithContentsOfURL(URL as string, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object from the contents of a file.
Notes: Returns nil on any error.
See also:

- 58.246.38 imageWithContentsOfURL(url as String) as CIImageMBS 12197

58.246.40 imageWithData(data as memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Creates and returns an image object initialized with the supplied image data.
Example:

```
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 75)
dim image as CIImageMBS = CIImageMBS.imageWithData(jpegData)
Backdrop = image.RenderPicture
```

Notes:

data: The data object that holds the contents of an image file (such as TIFF, GIF, JPG, or whatever else the system supports). The image data must be premultiplied.

Returns an image object initialized with the supplied data, or nil if the method cannot create an image representation from the contents of the supplied data object.

58.246.41 imageWithDataMT(data as memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an image object initialized with the supplied image data.
Example:

```
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 75)
dim image as CIImageMBS = CIImageMBS.imageWithDataMT(jpegData)
Backdrop = image.RenderPicture
```

Notes:

data: The data object that holds the contents of an image file (such as TIFF, GIF, JPG, or whatever else the system supports). The image data must be premultiplied.

Returns an image object initialized with the supplied data, or nil if the method cannot create an image representation from the contents of the supplied data object.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

58.246.42 imageWithPicture(Pic as Picture) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Creates and returns an image object from a Xojo Picture.
Example:

```
dim logo as Picture = LogoMBS(500)
dim ci as CIImageMBS = CIImageMBS.imageWithPicture(logo)
dim cg as CGImageMBS = ci.CreateCGImage
Backdrop = cg.Picture
```

Notes: Returns nil on any error.

58.246.43 kCIImageAutoAdjustCrop as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key used to specify whether to return a filter that crops the image to focus on detected features.
Notes:

The value associated with this key is a Boolean value. If true, the returned filters include an operation that

crops the image around the features specified with the kCIImageAutoAdjustFeatures option (or any features detected in the image, if that option is not present). Supply false to indicate not to return a crop filter. If you don,Äôt specify this option, Core Image assumes its value is false.

Available in OS X v10.10 and later.

58.246.44 kCIImageAutoAdjustEnhance as string

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the Keys used in the options dictionary to control which filters Core Image returns.
Notes:

A key used to specify whether to return enhancement filters.
The value associated with this key is a CFBoolean value. Supply false to indicate not to return enhancement filters. If you don't specify this option, Core Image assumes its value is true.

58.246.45 kCIImageAutoAdjustFeatures as string

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the Keys used in the options dictionary to control which filters Core Image returns.
Notes:

A key used to specify an array of features to which to apply enhancement and red eye filter.
The associated value is an array of CIFeatureMBS objects. If you don't supply an array, the receiver will search for features using the CIDetectorMBS class.

58.246.46 kCIImageAutoAdjustLevel as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A key used to specify whether to return a filter that rotates the image to keep a level perspective.
Notes:

The value associated with this key is a Boolean value. If true, Core Image analyzes the image to determine whether it would benefit from rotation,Äîfor example, a landscape photo in which the horizon is not horizontal,Äîand returns a filter to perform that rotation. Supply false to indicate not to return a rotation filter. If you don,Äôt specify this option, Core Image assumes its value is false.

Available in OS X v10.10 and later.

58.246.47 kCIImageAutoAdjustRedEye as string

MBS MacCI Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the Keys used in the options dictionary to control which filters Core Image returns.
Notes:

A key used to specify whether to return a red eye filter.
The value associated with this key is a Boolean value. Supply false to indicate not to return a red eye filter. If you don't specify this option, Core Image assumes its value is true.

58.246.48 kCIImageTextureFormat as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the keys in the options dictionary when initializing an image.
Notes:

The key for an OpenGL texture format. The value for this key must be an NSNumber object containing a Core Image pixel format constant. (See "Pixel Formats.") You may only use this key when initializing an image using the initWithTexture method.
Available in OS X v10.9 and later.

58.246.49 kCIImageTextureTarget as string

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: One of the keys in the options dictionary when initializing an image.
Notes:

The key for an OpenGL texture target. The value for this key must be an NSNumber object containing a supported OpenGL texture target constant, either GL_TEXTURE_2D or GL_TEXTURE_RECTANGLE_ARB. You may only use this key when initializing an image using the initWithTexture method.
Available in OS X v10.9 and later.

58.246.50 properties as Dictionary

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the metadata properties of an image.
Notes: If the image is the output of one or more CIFilters, then the metadata of the root inputImage will be returned.

58.246.51 releaseHandle

MBS MacCI Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Decrements the retain count of a CIImage reference.
Notes:

Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

58.246.52 RenderNSImage(UseSoftwareRenderer as boolean = false) as Variant

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a picture based of the CIImage content.
Example:

```
dim f as CIFilterEdgesMBS

f=new CIFilterEdgesMBS
f.inputImage=NewCIImagewithFileMBS(SpecialFolder.Desktop.Child("Paris.jpg"))
f.inputIntensity=5

dim n as NSImageMBS
n=f.outputImage.RenderNSImage(false)
```

Notes:

Creates a new NSImage, creates a CGContext for it, draws the image into the buffer and returns it as a Xojo object.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

58.246.53 RenderPicture(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop only.

Function: Creates a picture based of the CIImage content.

Example:

```
dim f as CIFilterEdgesMBS

f=new CIFilterEdgesMBS
f.inputImage=NewCIImagewithFileMBS(SpecialFolder.Desktop.Child("Paris.jpg"))
f.inputIntensity=5
Backdrop=f.outputImage.RenderPicture
```

Notes:

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a picture with mask. If you need picture with alpha channel, please use RenderPictureWithAlpha function.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

58.246.54 RenderPictureWithAlpha(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCI Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Creates a picture based of the CIImage content.
Example:

```
dim f as CIFilterEdgesMBS

f=new CIFilterEdgesMBS
f.inputImage=NewCIImagewithFileMBS(SpecialFolder.Desktop.Child("Paris.jpg"))
f.inputIntensity=5
Backdrop= f.outputImage.RenderPictureWithAlphaMT
```

Notes:

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a Xojo picture with alpha channel.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

58.246.55 RenderPictureWithAlphaMT(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCI Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Creates a picture based of the CIImage content.
Notes:

Same as the other RenderPictureWithAlpha function, but threaded.

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a Xojo picture with alpha channel.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

58.246.56 retainHandle

MBS MacCI Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Increments the retain count of a CIImage reference.
Notes:

Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

58.246.57 scaleTo(width as Integer, height as Integer) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 21.2, Platform: macOS, Targets: All.

Function: Scales picture to target size.
Example:

```
Dim pic As Picture = LogoMBS(500)
Dim image As CIImageMBS = CIImageMBS.imageWithPicture(pic)

Const targetWidth = 600.0
Const targetHeight = 400.0

# If mbs.VersionNumber <21.2 Then

Dim filter As New CIFilterLanczosScaleTransformMBS

Dim scale As Double = targetHeight / image.Extent.Height
Dim aspect As Double = targetWidth / (image.Extent.Width * scale)

filter.inputImage = image
filter.inputScale = scale
filter.inputAspectRatio = aspect

Dim outputImage As CIImageMBS = filter.outputImage

# Else

Dim outputImage As CIImageMBS = image.scaleTo(targetWidth, targetHeight)

# EndIf

Dim result As Picture = outputImage.RenderPicture
Backdrop = result
```

Notes: We use CILanczosScaleTransform filter internally like in the example code for older plugin versions.

58.246.58 Properties

58.246.59 colorSpace as CGColorSpaceMBS

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns if possible the color space of the image it was defined in.
Notes:

This method will return nil, if the color space cannot be determined.
(Read only property)

58.246.60 Definition as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Return the Domain of Definition of the image.
Notes:

Nil on any error.
(Read only property)

58.246.61 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this image.
Example:

```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)
MsgBox i.description
```

Notes: (Read only property)

58.246.62 Extent as CGRectMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The extent of the image in world coordinates.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

dim i as new CIImageMBS(f)
dim r as CGRectMBS = i.Extent

MsgBox str(r.Width)+" x "+str(r.Height)
```

Notes:

Can be undefined. In that case x/y are -Infinity and width/height are Infinity (3.402823466 * 10^38).
(Read only property)

58.246.63 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIImage object used internally.
Notes: (Read only property)

58.246.64 Height as Double

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The height of the image in pixel.
Notes: (Read only property)

58.246.65 RetainCount as Integer

MBS MacCI Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the retain count of the CIImage reference.
Notes:

This is useful for debugging.
The retain count is for the CIImage reference, not the CIImageMBS object.
(Read only property)

58.246.66 url as string

MBS MacCI Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: Returns the URL of a file based image.
Notes:

Returns the URL of the image when the image was created using the imageWithContentsOfURL APIs.
This method will return nil, if the URL cannot be determined.
(Read only property)

58.246.67 Width as Double

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: The width of the image in pixel.
Notes: (Read only property)

58.246.68 Constants

58.246.69 kCIFormatARGB8 = 23

MBS MacCI Plugin, Plugin Version: 7.3.

Function: One of the pixel formats: 32bpp, fixed point.

58.246.70 kCIFormatRGBA16 = 27

MBS MacCI Plugin, Plugin Version: 7.3.

Function: One of the pixel formats: 64bpp, fixed point.

58.246.71 kCIFormatRGBAf = 34

MBS MacCI Plugin, Plugin Version: 7.3.

Function: One of the pixel formats: 128bpp, floating point.

58.247 class CIPDF417CodeDescriptorMBS

58.247.1 class CIPDF417CodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIPDF417CodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of a PDF417 code symbol.
Notes:

Refer to the ISO/IEC 15438:2006(E) for the PDF417 symbol specification.
Subclass of the CIBarcodeDescriptorMBS class.

58.247.2 Methods

58.247.3 Constructor(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, rowCount as Integer, columnCount as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator

58.247.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, rowCount as Integer, columnCount as Integer) as CIPDF417CodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator

58.247.5 Properties

58.247.6 columnCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Indicates the number of columns in the rectangular matrix, excluding the columns used to indicate the symbol structure.
Notes:

columnCount values range from 1 to 30.
(Read only property)

58.247.7 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error-corrected codewords which comprise the PDF417 symbol. The first codeword indicates the number of data codewords in the errorCorrectedPayload.
Notes:

PDF417 codes are comprised of a start character on the left and a stop character on the right. Each row begins and ends with special characters indicating the current row as well as information about the dimensions of the PDF417 symbol. The errorCorrectedPayload represents the sequence of PDF417 codewords that make up the body of the message. The first codeword indicates the number of codewords in the message. This count includes the "count" codeword and any padding codewords, but does not include the error correction codewords. Each codeword is a 16-bit value in the range of 0...928. The sequence is to be interpreted as described in the PDF417 bar code symbology specification – ISO/IEC 15438:2006(E).
(Read only property)

58.247.8 isCompact as Boolean

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A boolean indicating whether the symbol is compact.
Notes:

Compact PDF417 symbols have abbreviated right-side guard bars.
(Read only property)

58.247.9 rowCount as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Indicates the number of rows in the rectangular matrix.
Notes:

rowCount values range from 3 to 90.
(Read only property)

58.248 class CIQRCodeDescriptorMBS

58.248.1 class CIQRCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: CIQRCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of a QR code symbol.
Notes: Subclass of the CIBarcodeDescriptorMBS class.

58.248.2 Methods

58.248.3 Constructor(errorCorrectedPayload as MemoryBlock, symbolVersion as Integer, maskPattern as Integer, errorCorrectionLevel as Integer)

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

58.248.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, symbolVersion as Integer, maskPattern as Integer, errorCorrectionLevel as Integer) as CIQRCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

58.248.5 Properties

58.248.6 errorCorrectedPayload as MemoryBlock

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error-corrected codewords that comprise the QR code symbol.
Notes:

QR Codes are formally specified in ISO/IEC 18004:2006(E). Section 6.4.10 "Bitstream to codeword conversion" specifies the set of 8-bit codewords in the symbol immediately prior to splitting the message into blocks and applying error correction.

During decode, error correction is applied and if successful, the message is re-ordered to the state immedi-

ately following "Bitstream to codeword coversion." The errorCorrectedPayload corresponds to this sequence of 8-bit codewords.
(Read only property)

58.248.7 errorCorrectionLevel as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error correction level of the QR code.
Notes:

QR Codes support four levels of Reed-Solomon error correction, in increasing error correction capability: L, M, Q, and H.
(Read only property)

58.248.8 maskPattern as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The data mask pattern for the QR code symbol.
Notes:

QR Codes support eight data mask patterns, which are used to avoid large black or large white areas inside the symbol body. Valid values range from 0 to 7.
(Read only property)

58.248.9 symbolVersion as Integer

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The version property corresponds to the size of the QR Code.
Notes:

QR Codes are square. ISO/IEC 18004 defines versions from 1 to 40, where a higher symbol version indicates a larger data carrying capacity. This field is required in order to properly interpret the error corrected payload.
(Read only property)

58.248.10 Constants

58.248.11 ErrorCorrectionLevelH = 72

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the percentage of the symbol that is dedicated to error correction.
Notes: Indicates that approximately 65% of the symbol data is dedicated to error correction.

58.248.12 ErrorCorrectionLevelL = 76

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the percentage of the symbol that is dedicated to error correction.
Notes: Indicates that approximately 20% of the symbol data is dedicated to error correction.

58.248.13 ErrorCorrectionLevelM = 77

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the percentage of the symbol that is dedicated to error correction.
Notes: Indicates that approximately 37% of the symbol data is dedicated to error correction.

58.248.14 ErrorCorrectionLevelQ = 81

MBS MacCI Plugin, Plugin Version: 17.4.

Function: One of the constants indicating the percentage of the symbol that is dedicated to error correction.
Notes: Indicates that approximately 55% of the symbol data is dedicated to error correction.

58.249 class CIQRCodeFeatureMBS

58.249.1 class CIQRCodeFeatureMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The feature for a detected QRCode.
Notes:

A CIQRCodeFeature describes a Quick Response code (a two-dimensional barcode using the ISO/IEC 18004:2006 standard) detected in a video or still image. The properties of a QR code feature identify the corners of the barcode as it appears in perspective in the image and provide the message decoded from the barcode.

To detect QR codes in an image or video, choose the CIDetectorTypeQRCode type when initializing a CIDetector object.
Subclass of the CIFeatureMBS class.

58.249.2 Methods

58.249.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Initializes an object using the given handle.

58.249.4 Properties

58.249.5 bottomLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower left corner of the detected barcode, in image coordinates.
Notes: (Read only property)

58.249.6 bottomRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower right corner of the detected barcode, in image coordinates.
Notes: (Read only property)

58.249.7 messageString as string

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The string decoded from the detected barcode.
Notes: (Read only property)

58.249.8 symbolDescriptor as CIQRCodeDescriptorMBS

MBS MacCI Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The QRCode symbol descriptor.
Notes:

Available on macOS 10.13 or newer.
(Read only property)

58.249.9 topLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper left corner of the detected barcode, in image coordinates.
Notes: (Read only property)

58.249.10 topRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper right corner of the detected barcode, in image coordinates.
Notes: (Read only property)

58.250 class CIRectangleFeatureMBS

58.250.1 class CIRectangleFeatureMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: A CIRectangleFeature object describes a quadrilateral region detected in a video or still image.
Notes:

A detected rectangle feature is not necessarily rectangular in the plane of the image; rather, the feature identifies a shape that may be rectangular in space but which appears in perspective in the image,Äîfor example, a paper or book on a desk. The properties of a rectangle feature identify its corners in image coordinates.

For example, you can use rectangle feature detection together with the CIPerspectiveCorrection filter to detect rectangular objects in an image or video and transform them to their original orientation.

To detect rectangles in an image or video, choose the CIDetectorTypeRectangle type when initializing a CIDetector object, and use the CIDetectorAspectRatio option to specify the approximate shape of rectangular features to search for.
Subclass of the CIFeatureMBS class.

58.250.2 Methods

58.250.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new object from a handle.

58.250.4 Properties

58.250.5 bottomLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower left corner of the detected rectangle, in image coordinates.
Notes: (Read only property)

58.250.6 bottomRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower right corner of the detected rectangle, in image coordinates.
Notes: (Read only property)

58.250.7 topLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper left corner of the detected rectangle, in image coordinates.
Notes: (Read only property)

58.250.8 topRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper right corner of the detected rectangle, in image coordinates.
Notes: (Read only property)

58.251 class CISamplerMBS

58.251.1 class CISamplerMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The Xojo class to wrap a CoreImage sampler.

58.251.2 Methods

58.251.3 Constructor(ciImage as CIImageMBS)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes: On success handle will not be 0.
See also:

- 58.251.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) 12218
- 58.251.5 Constructor(Handle as Integer) 12219

58.251.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes:

matrix:	An affine transformation [a b c d tx ty] defining the transformation to be applied to the sampler.
wrapmode:	A string defining how pixels outside the sampler's extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).
FilterMode:	A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

On success handle will not be 0.
See also:

- 58.251.3 Constructor(ciImage as CIImageMBS) 12218
- 58.251.5 Constructor(Handle as Integer) 12219

58.251.5 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CISampler* and the object is retained.
Raises UnsupportedOperationException if object is not a CISampler.
See also:

- 58.251.3 Constructor(ciImage as CIImageMBS) 12218
- 58.251.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) 12218

58.251.6 copy as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a copy of the sampler.

58.251.7 kCISamplerAffineMatrix as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys for creating a sampler.
Notes:

The key for an affine matrix. The associated value is an NSArray object ([a b c d tx ty]) that defines the transformation to apply to the sampler.

Available in OS X v10.4 and later.

58.251.8 kCISamplerColorSpace as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys for creating a sampler.
Notes:

The key for the color space to use when sampling the image. The associated value must be an RGB CGColorSpaceRef object. Using this option specifies that samples should be converted to this color space before being passed to a kernel. If not specified, samples will be passed to the kernel in the working color space of the Core Image context used to render the image.

Available in OS X v10.4 and later.

58.251.9 kCISamplerFilterLinear as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the values for filter modes.
Notes: Bilinear interpolation.

58.251.10 kCISamplerFilterMode as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys for creating a sampler.
Notes:

The key for the filtering to use when sampling the image. Possible values are kCISamplerFilterNearest and kCISamplerFilterLinear.

Available in OS X v10.4 and later.

58.251.11 kCISamplerFilterNearest as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the values for filter modes.
Notes: Nearest neighbor sampling.

58.251.12 kCISamplerWrapBlack as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the values for wrap modes.
Notes: Pixels are transparent black.

58.251.13 kCISamplerWrapClamp as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the values for wrap modes.
Notes: Coordinates are clamped to the extent.

58.251.14 kCISamplerWrapMode as String

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: One of the option keys for creating a sampler.
Notes:

The key for the sampler wrap mode. The wrap mode specifies how Core Image produces pixels that are outside the extent of the sample. Possible values are kCISamplerWrapBlack and kCISamplerWrapClamp.

Available in OS X v10.4 and later.

58.251.15 samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates and returns a sampler that references an image.
Notes: A sampler object that references the image specified by the ciImage argument.
See also:

- 58.251.16 samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS 12221
- 58.251.17 samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS 12222

58.251.16 samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes:

On success handle will not be nil.
See also:

matrix: An affine transformation [a b c d tx ty] defining the transformation to be applied to the sampler.

wrapmode: A string defining how pixels outside the sampler's extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).

FilterMode: A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

- 58.251.15 samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS 12221
- 58.251.17 samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS 12222

58.251.17 samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates and returns a sampler that references an image using options specified in a dictionary.
Notes: See kCISampler* shared methods for constants.
See also:

- 58.251.15 samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS 12221
- 58.251.16 samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS 12221

58.251.18 Properties

58.251.19 Definiton as CIFilterShapeMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the shape containing the Domain Of Definition (DOD) of the sampler.
Notes:

The DOD is defined such that it contains all non-transparent pixels produced by referencing the sampler.
(Read only property)

58.251.20 description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this sampler.
Notes: (Read only property)

58.251.21 Extent as CGRectMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the extent of the sampler.
Notes:

Sampling outside the extent will bring the sampler's wrap mode into action.

Returns nil on any error.
(Read only property)

58.251.22 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the internal used CISampler reference.
Notes: (Read only property)

58.252 class CITextFeatureMBS

58.252.1 class CITextFeatureMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The class for a text feature.
Notes:

A CITextFeature object describes a quadrilateral region likely to contain upright text detected in a video or still image. The properties of a text feature identify its corners in image coordinates.

Use this class to locate areas of text within an image,Äîfor example, to extract and perspective-correct those portions of the image before performing your own optical character recognition or other processing tasks.

To detect rectangles in an image or video, choose the CIDetectorTypeText type when initializing a CIDetector object, and use the CIDetectorImageOrientation option to specify the desired orientation for finding upright text.
Subclass of the CIFeatureMBS class.

58.252.2 Methods

58.252.3 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The constructor to create an object from a handle.

58.252.4 subFeatures as CIFeatureMBS()

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: An array containing additional features detected within the feature.
Notes:

A text detector can identify both a major region that is likely to contain text as well as the areas within that region that likely to contain individual text features. Such features might be single characters, groups of closely-packed characters, or entire words.

Core Image populates this array only if you enable the CIDetectorReturnSubFeatures option when retrieving features.

58.252.5 Properties

58.252.6 bottomLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower left corner of the detected text region, in image coordinates.
Notes: (Read only property)

58.252.7 bottomRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The lower right corner of the detected text region, in image coordinates.
Notes: (Read only property)

58.252.8 topLeft as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper left corner of the detected text region, in image coordinates.
Notes: (Read only property)

58.252.9 topRight as CGPointMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The upper right corner of the detected text region, in image coordinates.
Notes: (Read only property)

58.253 class CIVectorMBS

58.253.1 class CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for a vector in the CoreImage world.
Notes: May contain one to four floating point values.

58.253.2 Blog Entries

- Tip of day: Gradients with CoreImage Filter
- MBS Xojo / Real Studio Plugins, version 16.0pr6
- MBS Real Studio Plugins, version 12.1pr5

58.253.4 Methods

58.253.5 CGAffineTransformValue as CGAffineTransformMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns the values stored in the CIVector object as an affine transform.
Example:

```
dim p as new CGAffineTransformMBS
dim v as new CIVectorMBS(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

Notes:

The first six values in the vector become the values that comprise the affine transform.
Available in OS X v10.9 and later.

58.253.6 CGPointValue as CGPointMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns the values stored in the CIVector object as a point.
Example:

```
dim p as new CGPointMBS(10, 20)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGPoint(p)

dim x as CGPointMBS = v.CGPointValue
MsgBox str(x.x)+" "+str(x.y)
```

Notes:

The vector's X and Y property values become the CGPoint's X and Y values.
Available in OS X v10.9 and later.

58.253.7 CGRectValue as CGRectMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Returns the values stored in the CIVector object as an rect.
Example:

```
dim p as new CGRectMBS(10, 20, 30, 40)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGRect(p)

dim x as CGRectMBS = v.CGRectValue
MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)
```

Notes:

The vector's X, Y, Z and W property values become the CGRect's X, Y, height and width values.
Available in OS X v10.9 and later.

58.253.8 Constructor(Handle as Integer)

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Initializes object with given object reference.
Notes:

ref should be a CIVector* and the object is retained.

Raises UnsupportedOperationException if object is not a CIVector.
See also:

- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.14 Constructor(values() as single) 12232
- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.9 Constructor(p as CGPointMBS)

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Initializes a vector that is initialized with values provided by a CGPoint.
Example:

```
dim p as new CGPointMBS(10, 20)
dim v as new CIVectorMBS(p)

MsgBox str(v.x)+" "+str(v.y)
```

Notes:

The CGPoint's X and Y values are stored in the vector's X and Y properties.
Available in OS X v10.9 and later.
See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231

- 58.253.14 Constructor(values() as single) 12232

- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.10 Constructor(r as CGRectMBS)

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Initializes a vector that is initialized with values provided by a CGRect.
Example:

```
dim p as new CGRectMBS(10, 20, 30, 40)
dim v as new CIVectorMBS(p)
dim x as CGRectMBS = v.CGRectValue
MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)
```

Notes:

The CGRect structure's X, Y, height and width values are stored in the vector's X, Y, Z and W properties.
Available in OS X v10.9 and later.
See also:

- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.11 Constructor(StringRepresentation as String)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on content of the string.
Example:

```
dim v as CIVectorMBS
v=New CIVectorMBS(" [ 1 2 3 ] ")
```

See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228

- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.14 Constructor(values() as single) 12232
- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.12 Constructor(t as CGAffineTransformMBS)

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Initializes a vector that is initialized with values provided by a CGAffineTransform.
Example:

```
dim p as new CGAffineTransformMBS
dim v as new CIVectorMBS(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

Notes:

The six values that comprise the affine transform fill the first six positions of the resulting CIVector object.
Available in OS X v10.9 and later.
See also:

- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.13 Constructor(values() as Double)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Initializes a new vector with given values.
See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.14 Constructor(values() as single) 12232
- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.14 Constructor(values() as single)

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Initializes a new vector with given values.
See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.15 Constructor(x as Double)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on one value.
Example:

```
dim x as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x)
```

See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231

- 58.253.14 Constructor(values() as single) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.16 Constructor(x as Double, y as Double)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on two values.
Example:

```
dim x,y as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x,y)
```

See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.14 Constructor(values() as single) 12232
- 58.253.15 Constructor(x as Double) 12232
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.17 Constructor(x as Double, y as Double, z as Double)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on three values.
Example:

```
dim x,y,z as Double
dim v as CIVectorMBS
```

```
v=New CIVectorMBS(x,y,z)
```

See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.14 Constructor(values() as single) 12232
- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double) 12234

58.253.18 Constructor(x as Double, y as Double, z as Double, w as Double)

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on 4 values.
Example:

```
dim x,y,z,w as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x,y,z,w)
```

See also:

- 58.253.8 Constructor(Handle as Integer) 12227
- 58.253.9 Constructor(p as CGPointMBS) 12228
- 58.253.10 Constructor(r as CGRectMBS) 12229
- 58.253.11 Constructor(StringRepresentation as String) 12230
- 58.253.12 Constructor(t as CGAffineTransformMBS) 12230
- 58.253.13 Constructor(values() as Double) 12231
- 58.253.14 Constructor(values() as single) 12232

- 58.253.15 Constructor(x as Double) 12232
- 58.253.16 Constructor(x as Double, y as Double) 12233
- 58.253.17 Constructor(x as Double, y as Double, z as Double) 12233

58.253.19 copy as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a copy of the vector object.

58.253.20 Value(index as Integer) as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The value with the given index.
Notes: Index is zero based.

58.253.21 vectorWithCGAffineTransform(t as CGAffineTransformMBS) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Creates and returns a vector that is initialized with values provided by a CGAffineTransform.
Example:

```
dim p as new CGAffineTransformMBS
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGAffineTransform(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

Notes:

t: A transform.
Returns a vector initialized with the specified values.

The six values that comprise the affine transform fill the first six positions of the resulting CIVector object.

58.253.22 vectorWithCGPoint(p as CGPointMBS) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Creates and returns a vector that is initialized with values provided by a CGPoint.
Example:

```
dim p as new CGPointMBS(10, 20)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGPoint(p)

MsgBox str(v.x)+" "+str(v.y)
```

Notes:

p: A point.
A vector initialized with the specified values.

The CGPoint's X and Y values are stored in the vector's X and Y properties.

58.253.23 vectorWithCGRect(r as CGRectMBS) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Creates and returns a vector that is initialized with values provided by a CGRect.
Example:

```
dim p as new CGRectMBS(10, 20, 30, 40)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGRect(p)

dim x as CGRectMBS = v.CGRectValue
MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)
```

Notes:

r: A rect.

Returns a vector initialized with the specified values.
The CGRect's X, Y, height and width values are stored in the vector's X, Y, Z and W properties.

58.253.24 vectorWithString(s as string) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new vector based on content of the string.

58.253.25 vectorWithValues(values() as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new vector based on the given values.
See also:

- 58.253.26 vectorWithValues(values() as single) as CIVectorMBS 12237

58.253.26 vectorWithValues(values() as single) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: Creates a new vector based on the given values.
See also:

- 58.253.25 vectorWithValues(values() as Double) as CIVectorMBS 12237

58.253.27 vectorWithX(x as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new vector based on one value.

58.253.28 vectorWithXY(x as Double, y as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new vector based on two values.

58.253.29 vectorWithXYZ(x as Double, y as Double, z as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new vector based on three values.

58.253.30 vectorWithXYZW(x as Double, y as Double, z as Double, w as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Creates a new vector based on 4 values.

58.253.31 Properties

58.253.32 Count as Integer

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Return the number of values stored in the vector.
Notes: (Read only property)

58.253.33 Description as String

MBS MacCI Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the textual description for this vector.
Notes: (Read only property)

58.253.34 Handle as Integer

MBS MacCI Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The handle to the CIVector reference used.
Notes: (Read only property)

58.253.35 StringRepresentation as String

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Returns the vector as a string
Example:

```
dim v as CIVectorMBS

v=NewCIVectorWithXYZMBS(1,2,3)
```

MsgBox v.StringRepresentation // shows " [1 2 3] "

Notes:

Value is "" on any error.
(Read only property)

58.253.36 W as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The W value.
Notes: (Read only property)

58.253.37 X as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The X value.
Notes: (Read only property)

58.253.38 Y as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The Y value.
Notes: (Read only property)

58.253.39 Z as Double

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The Z value.
Notes: (Read only property)

58.254 class NSAffineTransformMBS

58.254.1 class NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: A class for transformation.
Notes: As being used by CoreImage and by the NS* classes, it is a free plugin class requiring no registration.

58.254.2 Blog Entries

58.254.4 Methods

58.254.5 appendTransform(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Transforms the transformation by applying the given transform on the current one.

58.254.6 CGAffineTransformToNSAffineTransform(CGAffineTransform as Variant) as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Converts NSAffineTransformMBS to CGAffineTransformMBS.
Example:

```
dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
dim c as CGAffineTransformMBS = NSAffineTransformMBS.NSAffineTransformToCGAffineTransform(n)
dim r as NSAffineTransformMBS = NSAffineTransformMBS.CGAffineTransformToNSAffineTransform(c)

Break // check in debugger
```

Notes: To reduce plugin interdependencies, the parameter is declared as Variant and not as CGAffineTransformMBS.

58.254.7 Constructor

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: The constructor to create a new transformation.
Notes: On success the handle property will not be 0.
See also:

- 58.254.8 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, ty as Double) 12241
- 58.254.9 Constructor(transform as NSAffineTransformMBS) 12241

58.254.8 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, ty as Double)

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Creates a new NSAffineTransformMBS based on the given values.
See also:

- 58.254.7 Constructor 12241
- 58.254.9 Constructor(transform as NSAffineTransformMBS) 12241

58.254.9 Constructor(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new transformation based on the values of an existing transformation.
Notes: On success the handle property will not be 0.
See also:

- 58.254.7 Constructor 12241

- 58.254.8 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, ty as Double) 12241

58.254.10 getValues(byref m11 as Double, byref m12 as Double, byref m21 as Double, byref m22 as Double , byref tx as Double, byref tY as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Copies all the values from the internal matrix.

58.254.11 invert

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Inverts the transformation.

58.254.12 NSAffineTransformToCGAffineTransform(NSAffineTransform as NSAffineTransformMBS) as Variant

MBS Main Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Converts NSAffineTransformMBS to CGAffineTransformMBS.
Example:

```
dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
dim c as CGAffineTransformMBS = NSAffineTransformMBS.NSAffineTransformToCGAffineTransform(n)
dim r as NSAffineTransformMBS = NSAffineTransformMBS.CGAffineTransformToNSAffineTransform(c)

Break // check in debugger
```

Notes: To reduce plugin interdependencies, the result is declared as Variant and not as CGAffineTransformMBS.

58.254.13 Operator_Convert as String

MBS Main Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Returns stringValue.

58.254.14 Operator_Multiply(other as NSAffineTransformMBS) as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the left side.

58.254.15 Operator_MultiplyRight(other as NSAffineTransformMBS) as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: Multiplies both matrix where self is on the right side.

58.254.16 prependTransform(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Transforms the transformation by applying the given transform on the current one.

58.254.17 rotateByDegrees(angle as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Rotates transformation by the given angle in degrees.
Example:

```
dim t as new NSAffineTransformMBS
t.rotateByDegrees 90 // roatet by 90 degrees
```

58.254.18 rotateByRadians(angle as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Rotates transformation by the given angle in radians.
Example:

```
const pi=3.14159265
dim t as new NSAffineTransformMBS
t.rotateByDegrees pi // roatet by 180 degrees
```

58.254.19 scale(scale as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Scales the transformation.
Example:

```
dim t as new NSAffineTransformMBS
t.scale 2.0 // double size
```

See also:

- 58.254.20 scale(scaleX as Double, scaleY as Double) 12244

58.254.20 scale(scaleX as Double, scaleY as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Scales transformation.
Example:

```
dim t as new NSAffineTransformMBS
t.scale 1,2
```

See also:

- 58.254.19 scale(scale as Double) 12244

58.254.21 setValues(m11 as Double, m12 as Double, m21 as Double, m22 as Double , tx as Double, tY as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Sets all the values from the internal matrix.

58.254.22 transform as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates and returns a new NSAffineTransform object initialized to the identity matrix.
Example:

```
dim a as NSAffineTransformMBS = NSAffineTransformMBS.transform
MsgBox str(a.m11)+", "+str(a.m12)+", "+str(a.m21)+", "+str(a.m22)+", "+str(a.tx)+", "+str(a.ty)
```

Notes: This matrix transforms any point to the same point.

58.254.23 transformBezierPath(NSBezierPath as Variant) as Variant

MBS Main Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Transforms a bezier path with current transformation.

58.254.24 transformPoint(byref x as Double, byref y as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Transforming the given point.

58.254.25 transformSize(byref width as Double, byref height as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Transforming the given size.

58.254.26 translate(deltaX as Double, deltaY as Double)

MBS Main Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Translates by the given delta.

58.254.27 Properties

58.254.28 Data as MemoryBlock

MBS Main Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: The transform data structure.
Example:

```
dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
dim m as MemoryBlock = n.Data

Break // check in debugger
```

Notes:

Returns a copy of the structure as memoryblock.
Can be set with memoryblock of right size and content.

Due to CoreGraphics using 32bit floats in 32bit app, you need to use SingleValue there in the memoryblock which has a size of 24 bytes.

For 64-bit application, the sizes double and you need to use DoubleValue.
(Read and Write property)

58.254.29 Handle as Integer

MBS Main Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

58.254.30 m11 as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The matrix value at position 1/1.
Notes: (Read only property)

58.254.31 m12 as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The matrix value at position 1/2.
Notes: (Read only property)

58.254.32 m21 as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The matrix value at position 2/1.
Notes: (Read only property)

58.254.33 m22 as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The matrix value at position 2/2.
Notes: (Read only property)

58.254.34 StringValue as String

MBS Main Plugin, Plugin Version: 20.2, Platform: macOS, Targets: All.

Function: The string representation.
Notes: (Read only property)

58.254.35 tx as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The translate X value.
Notes: (Read only property)

58.254.36 ty as Double

MBS Main Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The translate Y value.
Notes: (Read only property)

58.255 Globals

58.255.1 NewCIColorMBS(red as single, green as single, blue as single, alpha as single=1.0) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new color based on the given values.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.2 NewCIColorWithCGColorMBS(CGColor as Variant) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new CIColor based on the given CoreGraphics color.
Notes:

CGColor parameter must be a CGColorMBS object.
Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.3 NewCIColorWithStringMBS(s as String) as CIColorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new CIColor based on the given string.
Example:

```
dim c as CIColorMBS

c=NewCIColorWithStringMBS("1 0.5 0 1")

MsgBox c.stringRepresentation // shows "1 0.5 0 1"
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object without options, all output will be drawn into the CG context.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS 12249

58.255.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Create a new CoreImage context object with options, all output will be drawn into the CG context.
Notes:

OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.
UseSoftwareRenderer: Whether you want software renderer only.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS 12249

58.255.6 NewCIImagewithBitmapDataMBS(data as memoryblock, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes:

Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.7 NewCIImagewithBitmapMemoryMBS(data as memoryblock, DataLength as Integer, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage from a RAW memory buffer.
Notes:

Data points directly to the row data.
Length is the size of the memoryblock in bytes.
BytesPerRow is the size of a row in bytes.
Width and height are the dimensions of the image.
Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.
Colorspace is the CoreGraphics Colorspace object to be used.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.8 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes:

cgcolorspace: Use this colorspace when opening the image.
Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.9 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS

58.255.9 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a CGImage.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.8 NewCIImagewithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 12250

58.255.10 NewCIImagewithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Notes:

cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.11 NewCIImagewithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS 12251

58.255.11 NewCIImagewithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on the image file content stored inside the data string.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.10 NewCIImagewithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 12251

58.255.12 NewCIImagewithFileMBS(file as folderitem) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework.
See also:

- 58.255.13 NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 12252

58.255.13 NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file.
Notes:

cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework.
See also:

- 58.255.12 NewCIImagewithFileMBS(file as folderitem) as CIImageMBS 12252

58.255.14 NewCIImagewithURLMBS(url as String) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file where the URL points to.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.15 NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS 12253

58.255.15 NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a CIImage based on a the content of the file where the URL points to.
Notes:

cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.14 NewCIImagewithURLMBS(url as String) as CIImageMBS 12252

58.255.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 58.255.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS 12253

58.255.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new sampler based on the given image.
Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

matrix: An affine transformation [a b c d tx ty] defining the transformation to be applied to the sampler.

wrapmode: A string defining how pixels outside the sampler's extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).

FilterMode: A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

• 58.255.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS 12253

58.255.18 NewCIVectorWithStringMBS(s as string) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on content of the string.
Example:

```
dim v as CIVectorMBS
v=NewCIVectorWithStringMBS(" [ 1 2 3 ] ")
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.19 NewCIVectorWithXMBS(x as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on one value.
Example:

```
dim x as Double = 1
dim v as CIVectorMBS
v=NewCIVectorWithXMBS(x)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.20 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr1

58.255.21 NewCIVectorWithXYMBS(x as Double, y as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on two values.
Example:

```
dim x as Double = 1
dim y as Double = 2
dim v as CIVectorMBS
v=NewCIVectorWithXYMBS(x,y)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.22 NewCIVectorWithXYZMBS(x as Double, y as Double, z as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on three values.
Example:

```
dim x as Double = 1
dim y as Double = 2
dim z as Double = 3
dim v as CIVectorMBS
v=NewCIVectorWithXYZMBS(x,y,z)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

58.255.23 NewCIVectorWithXYZWMBS(x as Double, y as Double, z as Double, w as Double) as CIVectorMBS

MBS MacCI Plugin, Plugin Version: 7.3, Platform: macOS, Targets: All.

Function: Creates a new vector based on 4 values.
Example:

```
dim x as Double = 1
dim y as Double = 2
dim z as Double = 3
dim w as Double = 4
dim v as CIVectorMBS
v=NewCIVectorWithXYZWMBS(x,y,z,w)
```

Notes:

Returns nil on any error.
Requires Mac OS X 10.4 to work.

Chapter 59

CoreLocation

59.1 class CLGeocodeCompletionHandlerMBS

59.1.1 class CLGeocodeCompletionHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The class to receive the Complete event from a geocoder.

59.1.8 Events

59.1.9 Completed(geocoder as CLGeocoderMBS, placemarks() as CLPlacemarkMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: The event to be called when a geocoding request is complete.
Notes:

Upon completion of a geocoding request, a block of this form is called to give you a chance to process the results. The parameters of this block are as follows:

placemark: Contains an array of CLPlacemark objects. For most geocoding requests, this array should contain only one entry. However, forward-geocoding requests may return multiple placemark objects in situations where the specified address could not be resolved to a single location.
If the request was canceled or there was an error in obtaining the placemark information, this parameter is nil.
error: Contains an error object (if any) indicating why the placemark data was not returned. For a list of possible error codes, see CLLocationManager Class Reference.

Available in OS X v10.8 and later.
Tag parameter added in version 14.2.

59.2 class CLGeocoderMBS

59.2.1 class CLGeocoderMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The CLGeocoder class provides services for converting between a coordinate (specified as a latitude and longitude) and the user-friendly representation of that coordinate.
Notes:

A user-friendly representation of the coordinate typically consists of the street, city, state, and country information corresponding to the given location, but it may also contain a relevant point of interest, landmarks, or other identifying information. A geocoder object is a single-shot object that works with a network-based service to look up placemark information for its specified coordinate value.

To use a geocoder object, create it and call one of its forward- or reverse-geocoding methods to begin the request. Reverse-geocoding requests take a latitude and longitude value and find a user-readable address. Forward-geocoding requests take a user-readable address and find the corresponding latitude and longitude value. Forward-geocoding requests may also return additional information about the specified location, such as a point of interest or building at that location. For both types of request, the results are returned using a CLPlacemark object. In the case of forward-geocoding requests, multiple placemark objects may be returned if the provided information yielded multiple possible locations.

To make smart decisions about what types of information to return, the geocoder server uses all the information provided to it when processing the request. For example, if the user is moving quickly along a highway, it might return the name of the overall region, and not the name of a small park that the user is passing through.

Applications should be conscious of how they use geocoding. Here are some rules of thumb for using this class effectively:

Send at most one geocoding request for any one user action.
If the user performs multiple actions that involve geocoding the same location, reuse the results from the initial geocoding request instead of starting individual requests for each action.
When you want to update the user's current location automatically (such as when the user is moving), issue new geocoding requests only when the user has moved a significant distance and after a reasonable amount of time has passed. For example, in a typical situation, you should not send more than one geocoding request per minute.
Do not start a geocoding request at a time when the user will not see the results immediately. For example, do not start a request if your application is inactive or in the background.
The computer or device must have access to the network in order for the geocoder object to return detailed placemark information. Although, the geocoder stores enough information locally to report the localized country name and ISO country code for many locations. If country information is not available for a specific location, the geocoder may still report an error to your completion block.

59.2.8 Methods

59.2.9 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

59.2.10 cancelGeocode

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Cancels a pending geocoding request.
Notes:

You can use this method to cancel a pending request and free up the resources associated with that request. Canceling a pending request causes the completion handler event to be called.

If the request is not pending, because it has already returned or has not yet begun, this method does nothing. Available in OS X v10.8 and later.

59.2.11 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The constructor.

59.2.12 geocodeAddressDictionary(addressDictionary as Dictionary, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes:

addressDictionary: An Address Book dictionary containing information about the address to look up.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.

Available in OS X v10.8 and later.

59.2.13 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string.
Notes:

addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.
Available in OS X v10.8 and later.
See also:

- 59.2.14 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 12262
- 59.2.15 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 12263

59.2.14 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string and region information.
Notes:

addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
region: A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user's current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user's approximate location. Invoking this method does not trigger a location services authorization request.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.
Available in OS X v10.8 and later.
See also:

- 59.2.13 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 12262

- 59.2.15 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 12263

59.2.15 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Submits a forward-geocoding request using the specified string and region information.
Notes:

addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
region: A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user's current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user's approximate location. Invoking this method does not trigger a location services authorization request.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.

Available in OS X v10.8 and later.
For macOS 10.13 or newer we can optionally pass preferred locale.
See also:

- 59.2.13 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 12262

- 59.2.14 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 12262

59.2.16 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries coordinates for postal address.
Notes:

postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:

- 59.2.17 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 12264

59.2.17 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries coordinates for postal address.
Notes:

postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:

- 59.2.16 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 12264

59.2.18 isGeocoding as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the receiver is in the middle of geocoding its value. (read-only)
Notes:

This property contains the value true if the process is ongoing or false if the process is done or has not yet been initiated.
Available in OS X v10.8 and later.

59.2.19 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Submits a reverse-geocoding request for the specified location.
Notes:

location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
See also:

- 59.2.20 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 12265

59.2.20 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Submits a reverse-geocoding request for the specified location.
Notes:

location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
For macOS 10.13 or newer we can optionally pass preferred locale.
See also:

- 59.2.19 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 12265

59.2.21 Properties

59.2.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

59.3 class CLHeadingMBS

59.3.1 class CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A CLHeading object contains heading data generated by a CLLocationManager object.
Notes:

The heading data consists of computed values for true and magnetic north. It also includes the raw data for the three-dimensional vector used to compute those values.

Typically, you do not create instances of this class yourself, nor do you subclass it. Instead, you receive instances of this class through the delegate assigned to the CLLocationManager object whose startUpdatingHeading method you called.

Note: If you want heading objects to contain valid data for the trueHeading property, your location manager object should also be configured to deliver location updates. You can start the delivery of these updates by calling the location manager object's startUpdatingLocation method.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

59.3.2 Methods

59.3.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

59.3.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The private constructor.

59.3.5 copy as CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a clone of this object.

59.3.6 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The time at which this heading was determined. (read-only)
Notes: Available in OS X v10.7 and later.

59.3.7 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns the heading data in a formatted text string.
Notes:

A string of the form "magneticHeading <magnetic>trueHeading <heading>accuracy <accuracy>x <x>y <y>z <z>@ <date-time>" where <magnetic>, <heading>, <accuracy>, <x>, <y>, and <z>are formatted floating-point numbers and <date-time>is a formatted date string that includes date, time, and time zone information.

Available in OS X v10.7 and later.

59.3.8 headingAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The maximum deviation (measured in degrees) between the reported heading and the true geomagnetic heading. (read-only)
Notes:

A positive value in this property represents the potential error between the value reported by the magneticHeading property and the actual direction of magnetic north. Thus, the lower the value of this property, the more accurate the heading. A negative value means that the reported heading is invalid, which can occur when the device is uncalibrated or there is strong interference from local magnetic fields.

Available in OS X v10.7 and later.

59.3.9 kCLHeadingFilterNone as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Special value for heading filter to define that you don't want to filter.

59.3.10 magneticHeading as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The heading (measured in degrees) relative to magnetic north. (read-only)
Notes:

The value in this property represents the heading relative to the magnetic North Pole, which is different from the geographic North Pole. The value 0 means the device is pointed toward magnetic north, 90 means it is pointed east, 180 means it is pointed south, and so on. The value in this property should always be valid.

If the headingAccuracy property contains a negative value, the value in this property should be considered unreliable.

Available in OS X v10.7 and later.

59.3.11 timestamp as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time at which this heading was determined. (read-only)
Notes: Available in OS X v10.7 and later.

59.3.12 trueHeading as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The heading (measured in degrees) relative to true north. (read-only)
Notes:

The value in this property represents the heading relative to the geographic North Pole. The value 0 means the device is pointed toward true north, 90 means it is pointed due east, 180 means it is pointed due south, and so on. A negative value indicates that the heading could not be determined.

Important This property contains a valid value only if location updates are also enabled for the corresponding location manager object. Because the position of true north is different from the position of magnetic north on the Earth's surface, Core Location needs the current location of the device to compute the value of this property.

Available in OS X v10.7 and later.

59.3.13 x as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the x-axis. (read-only)
Notes:

This value represents the x-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

59.3.14 y as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the y-axis. (read-only)
Notes:

This value represents the y-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

59.3.15 z as Double

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geomagnetic data (measured in microteslas) for the z-axis. (read-only)
Notes:

This value represents the z-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

59.3.16 Properties

59.3.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

59.4 class CLLocationCoordinate2DMBS

59.4.1 class CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The class for a location coordinate.

59.4.8 Methods

59.4.9 Constructor(latitude as Double = 0.0, longitude as Double = 0.0)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: Initializes a coordinate with values.

59.4.10 Properties

59.4.11 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The latitude.
Notes: (Read and Write property)

59.4.12 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: All.

Function: The longitude.
Notes: (Read and Write property)

59.5 class CLLocationManagerMBS

59.5.1 class CLLocationManagerMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The CoreLocation base class.
Example:

```
dim c as new CLLocationManagerMBS

c.startUpdatingLocation
```

Notes:

The CLLocationManagerMBS class defines the interface for configuring the delivery of location- and heading-related events to your application. You use an instance of this class to establish the parameters that determine when location and heading events should be delivered. You can also a location manager object to retrieve the most recent location data.

To use a CLLocationManagerMBS object to deliver location events, create an instance, configure the desired accuracy and distance filter values, and call the startUpdatingLocation method. The location service returns an initial location as quickly as possible, returning cached information when available. After delivery of the initial event notification, the CLLocationManagerMBS object may deliver additional events if the minimum threshold distance (as specified by the distanceFilter property) is exceeded or a more accurate location value is determined.

Important: The user has the option of denying an application's access to the location service data. During its initial uses by an application, the Core Location framework prompts the user to confirm that using the location service is acceptable. If the user denies the request, the CLLocationManagerMBS object reports an appropriate error to its delegate during future requests.

See also documentation from Apple for the CLLocationManager class:
https://developer.apple.com/library/mac/# documentation/CoreLocation/Reference/CLLocationManager_Class/CLLocationManager/CLLocationManager.html

See WindowsLocationManagerMBS class for Windows.

59.5.6 Methods

59.5.7 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns the application's authorization status for using location services.
Notes:

The authorization status of a given application is managed by the system and determined by several factors. Applications must be explicitly authorized to use location services by the user and location services must themselves currently be enabled for the system. This authorization takes place automatically when your application first attempts to use location services.

Available on Mac OS X 10.7 or later.

59.5.8 CheckEvents

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Checks for new events.
Notes:

This is a helper app to make CoreLocation geocoder work in web projects.
Should not be called in desktop apps.
But for a web app, use a Timer (not WebTimer) to run it on main loop every few milliseconds (e.g. 500 ms).

59.5.9 Constructor

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim c as new CLLocationManagerMBS

MsgBox str(c.Handle) // not zero on success
```

59.5.10 deferredLocationUpdatesAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: Returns true if the device supports deferred location updates, otherwise false.
Notes: Requires Mac OS X 10.9.

59.5.11 Destructor

MBS MacFrameworks Plugin, Plugin Version: 13.0, Platform: macOS, Targets: All.

Function: The destructor.

59.5.12 dismissHeadingCalibrationDisplay

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Dismisses the heading calibration view from the screen immediately.
Notes: Core Location uses the heading calibration alert to calibrate the available heading hardware as needed. The display of this view is automatic, assuming your delegate supports displaying the view at all. If the view is displayed, you can use this method to dismiss it after an appropriate amount of time to ensure that your application's user interface is not unduly disrupted.

59.5.13 headingAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the location manager is able to generate heading-related events.
Example:

msgbox "headingAvailable available: "+str(CLLocationManagerMBS.headingAvailable)

Notes:

Returns true if heading data is available or false if it is not.

Heading data may not be available on all iOS-based devices. You should check the value returned by this method before asking the location manager to deliver heading-related events.

Available on Mac OS X 10.7 or later.

59.5.14 kCLErrorDomain as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The domain for Core Location errors. This value is used in the NSError class.

59.5.15 kCLErrorUserInfoAlternateRegionKey as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A key in the user information dictionary of an kCLErrorRegionMonitoringResponseDelayed error whose value is a CLRegionMBS object that the location services can more effectively monitor.

59.5.16 locationServicesAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Whether the CoreLocation framework is available.
Example:

```
if CLLocationManagerMBS.locationServicesAvailable then
if CLLocationManagerMBS.locationServicesEnabled then
MsgBox "available and enabled"
else
MsgBox "available and not enabled"
end if
else
MsgBox "Not available"
end if
```

Notes: Returns true on Mac OS X 10.6 and false on all other systems.

59.5.17 locationServicesEnabled as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether location services are enabled on the device.
Example:

```
if CLLocationManagerMBS.locationServicesAvailable then
if CLLocationManagerMBS.locationServicesEnabled then
MsgBox "available and enabled"
else
MsgBox "available and not enabled"
end if
else
MsgBox "Not available"
end if
```

59.5.18 monitoredRegions as CLRegionMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The array of shared regions monitored by all location manager objects.
Notes:

You cannot add regions to this property directly. Instead, you must register regions by calling the startMonitoringForRegion method. The regions in this property are shared by all instances of the CLLocationManagerMBS class in your application.

The objects in this set may not necessarily be the same objects you specified at registration time. Only the region data itself is maintained by the system. Therefore, the only way to uniquely identify a registered region is using its identifier property.

The location manager persists region data between launches of your application. If your application is terminated and then relaunched, the contents of this property are repopulated with region objects that contain the previously registered data.

Available on Mac OS X 10.7 or later.

59.5.19 regionMonitoringAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether region monitoring is supported on the current device.
Example:

msgbox "regionMonitoringAvailable available: "+str(CLLocationManagerMBS.regionMonitoringAvailable)

Notes:

Available on Mac OS X 10.7 or later.

Returns true if region monitoring is available or false if it is not.

Support for region monitoring may not be available on all devices and models. You should check the value of this property before attempting to set up any regions or initiate region monitoring.

Even if region monitoring support is present on a device, it may still be unavailable because the user disabled it for the current application or for all applications.

59.5.20 regionMonitoringEnabled as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean indicating whether region monitoring is currently enabled.
Notes:

Returns true if region monitoring is available and is currently enabled or false if it is unavailable or not enabled.

The user can enable or disable location services (including region monitoring) altogether from the System Preferences.

You should check the return value of this method before starting region monitoring updates to determine if the user currently allows location services to be used at all. If this method returns false and you start region monitoring updates anyway, the Core Location framework prompts the user with a confirmation panel asking whether location services should be reenabled.

This method does not check to see if region monitoring capabilities are actually supported by the device. Therefore, you should also check the return value of the regionMonitoringAvailable class method before attempting to start region monitoring services.

Available on Mac OS X 10.7 or later.

59.5.21 significantLocationChangeMonitoringAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns true if the device supports significant location change monitoring, otherwise false.
Example:

msgbox "significantLocationChangeMonitoringAvailable available: "+str(CLLocationManagerMBS.significantLocationChangeMonitoringAvailable)

Notes:

Available on Mac OS X 10.7 or later.

This method indicates whether the device is able to report updates based on significant location changes only. (This primarily involves detecting changes in the cell tower currently associated with the device.) This capability provides tremendous power savings for applications that want to track a user's approximate location and do not need highly accurate position information.

59.5.22 startMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Starts monitoring the specified region.
Notes:

region: The region object that defines the boundary to monitor. This parameter must not be nil.

You must call this method separately for each region you want to monitor. If an existing region with the same identifier is already being monitored by the application, the old region is replaced by the new one. The regions you add using this method are shared by all location manager objects in your application and stored in the monitoredRegions property.

Region events are delivered to the didEnterRegion and didExitRegion events. If there is an error, the location manager calls the monitoringDidFailForRegion event instead.

59.5.23 startMonitoringSignificantLocationChanges

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Starts the generation of updates based on significant location changes.
Example:

```
dim c as new CLLocationManagerMBS

c.startMonitoringSignificantLocationChanges
```

Notes:

This method initiates the delivery of location events asynchronously, returning shortly after you call it. Location events are delivered to your delegate's didUpdateToLocation event. The first event to be delivered is usually the most recently cached location event (if any) but may be a newer event in some circumstances. Obtaining a current location fix may take several additional seconds, so be sure to check the timestamps on the location events in your event code.

After returning a current location fix, the receiver generates update events only when a significant change in the user's location is detected. For example, it might generate a new event when the device becomes associated with a different cell tower. It does not rely on the value in the distanceFilter property to generate events. Calling this method several times in succession does not automatically result in new events being generated. Calling stopMonitoringSignificantLocationChanges in between, however, does cause a new initial event to be sent the next time you call this method.

In addition to your subclass implementing the didUpdateToLocation event, it should also implement the didFailWithError event to respond to potential errors.

Available in Mac OS X 10.7 or later.

59.5.24 startUpdatingHeading

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Starts the generation of updates that report the user's current heading.
Notes:

This method returns immediately. Calling this method when the receiver is stopped causes it to obtain an initial heading and notify your delegate. After that, the receiver generates update events when the value in the headingFilter property is exceeded.

Before calling this method, you should always check the headingAvailable property to see whether heading information is supported on the current device. If heading information is not supported, calling this method

has no effect and does not result in the delivery of events to your delegate.

Calling this method several times in succession does not automatically result in new events being generated. Calling stopUpdatingHeading in between, however, does cause a new initial event to be sent the next time you call this method.

If you start this service and your application is suspended, the system stops the delivery of events until your application starts running again (either in the foreground or background). If your application is terminated, the delivery of new heading events stops altogether and must be restarted by your code when the application is relaunched.

Heading events are delivered to the didUpdateHeading event. If there is an error, the location manager calls the
didFailWithError event instead.

59.5.25 startUpdatingLocation

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Starts the generation of updates that report the user's current location.
Example:

```
dim c as new CLLocationManagerMBS

c.startUpdatingLocation
```

Notes:

This method returns immediately. Calling this method when the receiver is stopped causes it to obtain an initial location fix (which may take several seconds) and notify your delegate. After that, the receiver generates update events primarily when the value in the distanceFilter property is exceeded. Updates may be delivered in other situations though. For example, the receiver may send another notification if the hardware gathers a more accurate location reading.

Calling this method several times in succession does not automatically result in new events being generated. Calling stopUpdatingLocation in between, however, does cause a new initial event to be sent the next time you call this method.

59.5.26 stopMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Stops monitoring the specified region.
Notes:

region: The region object currently being monitored. This parameter must not be nil.

If the specified region object is not currently being monitored, this method has no effect.

Available on Mac OS X 10.7 or later.

59.5.27 stopMonitoringSignificantLocationChanges

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Stops the delivery of location events based on significant location changes.
Notes:

Use this method to stop the delivery of location events that was started using the startMonitoringSignificantLocationChanges method.
Available on Mac OS X 10.7 or later.

59.5.28 stopUpdatingHeading

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Stops the generation of heading updates.
Notes: Call this method whenever your code no longer needs to receive heading-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of heading updates by calling the startUpdatingHeading method again.

59.5.29 stopUpdatingLocation

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Stops the generation of location updates.
Example:

```
dim c as new CLLocationManagerMBS

c.startUpdatingLocation
// later
c.stopUpdatingLocation
```

Notes: You should call this method whenever your code no longer needs to receive location-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of location updates by calling the startUpdatingLocation method again.

59.5.30 Properties

59.5.31 desiredAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The desired accuracy of the location data.
Example:

```
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest
```

Notes:

The receiver does its best to achieve the requested accuracy; however, the actual accuracy is not guaranteed.

You should assign a value to this property that is appropriate for your usage scenario. In other words, if you need only the current location within a few kilometers, you should not specify kCLLocationAccuracyBest for the accuracy. Determining a location with greater accuracy requires more time and more power.

When requesting high accuracy location data, the initial event delivered by the location service may not have the accuracy you requested. The location service delivers the initial event as quickly as possible. It then continues to determine the location with the accuracy you requested and delivers additional events, as necessary, when that data is available.

The default value of this property is kCLLocationAccuracyBest.
(Read and Write property)

59.5.32 distanceFilter as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The minimum distance (measured in meters) a device must move laterally before an update

event is generated.
Example:

```
dim c as new CLLocationManagerMBS
c.distanceFilter=CLLocationMBS.kCLDistanceFilterNone
```

Notes:

This distance is measured relative to the previously delivered location. Use the value kCLDistanceFilterNone to be notified of all movements.

The default value of this property is kCLDistanceFilterNone.
(Read and Write property)

59.5.33 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The internal reference to the CLLocationManager object.
Example:

```
dim c as new CLLocationManagerMBS

MsgBox str(c.Handle) // not zero on success
```

Notes: (Read and Write property)

59.5.34 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The most recently retrieved user location.
Example:

```
dim c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox c.description
```

Notes:

The value of this property is nil if no location data has ever been retrieved.

It is a good idea to check the timestamp of the location that is returned. If the receiver is currently gathering location data, but the minimum distance filter is large, the returned location might be relatively old. If it is, you can stop the receiver and start it again to force an update.
(Read only property)

59.5.35 maximumRegionMonitoringDistance as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The largest boundary distance that can be assigned to a region.
Notes:

This property defines the largest boundary distance allowed from a region's center point. Attempting to monitor a region with a distance larger than this value causes the location manager to send a kCLErrorRegionMonitoringFailure error to the delegate.

If region monitoring is unavailable or not supported, the value in this property is -1.

Available on Mac OS X 10.7 or later.
(Read only property)

59.5.36 purpose as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: An application-provided string that describes the reason for using location services.
Notes:

If this property is not "" and the system needs to ask for the user's consent to use location services, it displays the provided string. You can use this string to explain why your application is using location services.

You must set the value of this property prior to starting any location services. Because the string is ultimately displayed to the user, you should always load it from a localized strings file.

Available on Mac OS X 10.7 or later.
(Read and Write property)

59.5.37 Events

59.5.38 didChangeAuthorizationStatus(status as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the delegate that the authorization status for the application changed.
Notes:

status: The new authorization status for the application.

This method is called whenever the application's ability to use location services changes. Changes can occur because the user allowed or denied the use of location services for your application or for the system as a whole.

59.5.39 didEnterRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the delegate that the user entered the specified region.
Notes:

region: An object containing information about the region that was entered.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region's identifier string to determine if your delegate should respond.

59.5.40 didExitRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the delegate that the user left the specified region.
Notes:

manager: The location manager object reporting the event.
region: An object containing information about the region that was exited.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region's identifier string to determine if your delegate should respond.

59.5.41 didFailWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells you that the location manager was unable to retrieve a location value.
Notes:

error: The error object containing the reason why the location could not be retrieved.

If the location service is unable to retrieve a location fix right away, it reports a kCLErrorLocationUnknown error and keeps trying. In such a situation, you can simply ignore the error and wait for a new event.

If the user denies your application's use of the location service, this method reports a kCLErrorDenied error. Upon receiving such an error, you should stop the location service.

59.5.42 didFinishDeferredUpdatesWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Invoked when deferred updates will no longer be delivered.
Notes:

Stopping location, disallowing deferred updates, and meeting a specified criterion are all possible reasons for finishing deferred updates.

An error will be returned if deferred updates end before the specified criteria are met (see CLError). Requires Mac OS X 10.9.

59.5.43 didStartMonitoringForRegion(region as CLRegionMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Tells you that a new region is being monitored.
Notes: region: The region that is being monitored.

59.5.44 didUpdate(newLocation as CLLocationMBS, oldLocation as CLLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells you that a new location value is available.
Notes:

newLocation: The new location data.
oldLocation: The location data from the previous update. If this is the first update event delivered by this location manager, this parameter is nil.

By the time this event is called, the new location data is also available directly from the CLLocationManagerMBS object. The newLocation parameter may contain the data that was cached from a previous usage of the location service. You can use the timestamp property of the location object to determine how recent the location data is.

59.5.45 didUpdateHeading(newHeading as CLHeadingMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Tells you that the location manager received updated heading information.
Notes:

Implementation of this method is optional but expected if you start heading updates using the startUpdatingHeading method.

The location manager object calls this method after you initially start the heading service. Subsequent events are delivered when the previously reported value changes by more than the value specified in the headingFilter property of the location manager object.

59.5.46 didUpdateLocations(locations() as CLLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Invoked when new locations are available.
Notes:

Required for delivery of deferred locations.
If implemented, updates will not be delivered to didUpdate.
Requires Mac OS X 10.9.

59.5.47 monitoringDidFailForRegion(region as CLRegionMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the delegate that a region monitoring error occurred.
Notes:

region: The region for which the error occurred.

error: An error object containing the error code that indicates why region monitoring failed.

If an error occurs while trying to monitor a given region, the location manager sends this message to its delegate. Region monitoring might fail because the region itself cannot be monitored or because there was a more general failure in configuring the region monitoring service.

Although implementation of this event is optional, it is recommended that you implement it if you use region monitoring in your application.

59.5.48 Constants

59.5.49 kCLAuthorizationStatusAuthorized = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the authorization status constants.
Notes: This application is authorized to use location services.

59.5.50 kCLAuthorizationStatusDenied = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the authorization status constants.
Notes: The user explicitly denied the use of location services for this application or location services are currently disabled in Settings.

59.5.51 kCLAuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the authorization status constants.
Notes: The user has not yet made a choice regarding whether this application can use location services.

59.5.52 kCLAuthorizationStatusRestricted = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the authorization status constants.
Notes: This application is not authorized to use location services. The user cannot change this application's

status, possibly due to active restrictions such as parental controls being in place.

59.5.53 kCLDeviceOrientationFaceDown = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is held parallel to the ground with the screen facing downwards.

59.5.54 kCLDeviceOrientationFaceUp = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is held parallel to the ground with the screen facing upwards.

59.5.55 kCLDeviceOrientationLandscapeLeft = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is in landscape mode, with the device held upright and the home button on the right side.

59.5.56 kCLDeviceOrientationLandscapeRight = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is in landscape mode, with the device held upright and the home button on the left side.

59.5.57 kCLDeviceOrientationPortrait = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is in portrait mode, with the device held upright and the home button at the bottom.

59.5.58 kCLDeviceOrientationPortraitUpsideDown = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The device is in portrait mode but upside down, with the device held upright and the home button at the top.

59.5.59 kCLDeviceOrientationUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the orientation constants
Notes: The orientation is currently not known.

59.5.60 kCLErrorDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the error codes reported by the location manager error event.
Notes: Access to the location service was denied by the user.

59.5.61 kCLErrorGeocodeCanceled = 10

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: The geocode request was canceled.

59.5.62 kCLErrorGeocodeFoundNoResult = 8

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: The geocode request yielded no result.

59.5.63 kCLErrorGeocodeFoundPartialResult = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: The geocode request yielded a partial result.

59.5.64 kCLErrorHeadingFailure = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: The heading could not be determined.

59.5.65 kCLErrorLocationUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the error codes reported by the location manager error event.
Notes: The location manager was unable to obtain a location value right now.

59.5.66 kCLErrorNetwork = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: The network was unavailable or a network error occurred.

59.5.67 kCLErrorRegionMonitoringDenied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: Access to the region monitoring service was denied by the user.

59.5.68 kCLErrorRegionMonitoringFailure = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: A registered region cannot be monitored.

59.5.69 kCLErrorRegionMonitoringResponseDelayed = 7

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: Core Location will deliver events but they may be delayed.

59.5.70 kCLErrorRegionMonitoringSetupDelayed = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the CoreLocation error constants.
Notes: Core Location could not initialize the region monitoring feature immediately.

59.6 class CLLocationMBS

59.6.1 class CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A CLLocationMBS object represents the location data generated by a CLLocationManagerMBS object.
Example:

```
dim c as new CLLocationMBS(50,7)

MsgBox c.description

// example output: <+50.00000000, +7.00000000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200
```

Notes:

This object incorporates the geographical coordinates and altitude of the device's location along with values indicating the accuracy of the measurements and when those measurements were made. On some devices, this class also reports information about the speed and heading in which the device is moving.

Typically, you use a CLLocationManagerMBS object to create instances of this class based on the last known location of the user's device. You can create instances yourself, however, if you want to cache custom location data or get the distance between two different coordinate points.

This class is designed to be used as is and should not be subclassed.

Requires Mac OS X 10.6

59.6.8 Methods

59.6.9 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

59.6.10 Constructor(latitude as Double, longitude as Double)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Initializes and returns a location object with the specified latitude and longitude.
Example:

```
dim c as new CLLocationMBS(50,7)

MsgBox c.description

// example output: <+50.00000000, +7.00000000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200
```

Notes:

latitude: The latitude of the coordinate point.
longitude: The longitude of the coordinate point.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application. When using this method, the other properties of the object are initialized to appropriate values. In particular, the altitude and horizontalAccuracy properties are set to 0, the verticalAccuracy property is set to -1 to indicate that the altitude value is invalid, and the timestamp property is set to the time at which the instance was initialized.

Requires Mac OS X 10.6
See also:

- 59.6.11 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 12297
- 59.6.12 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime) 12298
- 59.6.13 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 12298
- 59.6.14 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 12299

59.6.11 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a location object with the specified coordinate and course information.
Notes:

latitude and longitude: A coordinate structure containing the latitude and longitude values.
altitude: The altitude value for the location.
horizontalAccuracy: The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
course: The direction of travel for the location.
speed: The current speed associated with this location.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.

Available on Mac OS X 10.7 or newer.

- 59.6.12 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime) 12298
- 59.6.13 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 12298
- 59.6.14 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 12299

59.6.12 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime)

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Initializes a location object with the specified coordinate and course information.
See also:

- 59.6.10 Constructor(latitude as Double, longitude as Double) 12296
- 59.6.11 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 12297
- 59.6.13 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 12298
- 59.6.14 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 12299

59.6.13 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes and returns a location object with the specified coordinate information.
Example:

```
dim c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox c.description
```

Notes:

coordinate: A coordinate structure containing the latitude and longitude values.
altitude: The altitude value for the location.
horizontalAccuracy: The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.

- 59.6.11 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 12297
- 59.6.12 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime) 12298
- 59.6.14 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime) 12299

59.6.14 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, timestamp as dateTime)

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Initializes and returns a location object with the specified coordinate information.
See also:

- 59.6.10 Constructor(latitude as Double, longitude as Double) 12296
- 59.6.11 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 12297
- 59.6.12 Constructor(latitude as double, longitude as double, altitude as double, horizontalAccuracy as double, verticalAccuracy as double, course as double, speed as double, timestamp as dateTime) 12298
- 59.6.13 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 12298

59.6.15 copy as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Creates a copy of the object.
Example:

```
dim c as new CLLocationMBS(5,6)

dim n as CLLocationMBS = c.copy

MsgBox n.description
```

Notes: Internally a new CLLocation object is created with a copy of the data.

59.6.16 distanceFromLocation(location as CLLocationMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the distance (in meters) between the two locations.
Example:

```
// Nickenich 50¬∞ 24' 48" N, 7¬∞ 19' 47" E
// Andernach 50¬∞ 26' 23" N, 7¬∞ 24' 6" E

dim c1 as new CLLocationMBS(50.439722, 7.40167) // Andernach
dim c2 as new CLLocationMBS(50.413333, 7.32972) // Nickenich

MsgBox str(c1.distanceFromLocation(c2))+" meter"
```

Notes: This method measures the distance between the two locations by tracing a line between them that follows the curvature of the Earth. The resulting arc is a smooth curve and does not take into account specific altitude changes between the two locations.

59.6.17 kCLDistanceFilterNone as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: This constant indicates the minimum distance required before an event is generated.
Notes: All movements are reported.

59.6.18 kCLLocationAccuracyBest as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

```
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest
```

Notes: Use the best possible accuracy.

59.6.19 kCLLocationAccuracyBestForNavigation as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Notes: Available on Mac OS X 10.7 or later.

59.6.20 kCLLocationAccuracyHundredMeters as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

```
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyHundredMeters
```

Notes: Accurate to within one hundred meters.

59.6.21 kCLLocationAccuracyKilometer as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

```
dim c as new CLLocationManagerMBS
```

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyKilometer

Notes: Accurate to the nearest kilometer.

59.6.22 kCLLocationAccuracyNearestTenMeters as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyNearestTenMeters

Notes: Accurate to within ten meters of the desired target.

59.6.23 kCLLocationAccuracyThreeKilometers as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: A constant value you can use to specify the accuracy of a location.
Example:

dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyThreeKilometers

Notes: Accurate to the nearest three kilometers.

59.6.24 Properties

59.6.25 altitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The altitude in meters.
Example:

```
dim c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox str(c.altitude)
```

Notes:

Positive values indicate altitudes above sea level. Negative values indicate altitudes below sea level.
(Read only property)

59.6.26 course as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The direction in which the device is travelling.
Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.course)
end if
```

Notes:

Course values are measured in degrees starting at due north and continuing clockwise around the compass. Thus, north is 0 degrees, east is 90 degrees, south is 180 degrees, and so on. Course values may not be available on all devices. A negative value indicates that the direction is invalid.
(Read only property)

59.6.27 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The time at which this location was determined.
Notes: (Read only property)

59.6.28 description as string

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the location data in a formatted text string.
Example:

```
dim c as new CLLocationMBS(50.439722, 7.40167)

MsgBox C.description
// shows for example:
// <+50.43972200, +7.40167000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-29 14:22:39 +0200
```

Notes:

A string of the form "«latitude>, <longitude»+/- <accuracy>m (speed <speed>kph / heading <heading>) @ <date-time>", where <latitude>, <longitude>, <accuracy>, <speed>, and <heading>are formatted floating point numbers and <date-time>is a formatted date string that includes date, time, and time zone information.

The returned string is intended for display purposes only.
(Read only property)

59.6.29 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The internal reference to the CLLocation object.
Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.handle)
end if
```

Notes: (Read and Write property)

59.6.30 horizontalAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The radius of uncertainty for the location, measured in meters.

Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.horizontalAccuracy)
end if
```

Notes:

The coordinate's latitude and longitude identify the center of the circle and this value indicates the radius of that circle. A negative value indicates that the coordinate's latitude and longitude are invalid.
(Read only property)

59.6.31 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The geographical coordinate information.
Example:

```
dim c as new CLLocationMBS(50.413333, 7.32972)

MsgBox str(C.latitude) // shows 50.413333
```

Notes: (Read only property)

59.6.32 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The geographical coordinate information.
Example:

```
dim c as new CLLocationMBS(50.413333, 7.32972)

MsgBox str(C.longitude) // shows 7.32972
```

Notes: (Read only property)

59.6.33 speed as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The instantaneous speed of the device in meters per second.
Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.speed)
end if
```

Notes:

This value reflects the instantaneous speed of the device in the direction of its current heading. A negative value indicates an invalid speed. Because the actual speed can change many times between the delivery of subsequent location events, you should use this property for informational purposes only.
(Read only property)

59.6.34 timestamp as date

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The time at which this location was determined.
Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox l.timestamp.SQLDateTime
end if
```

Notes: (Read only property)

59.6.35 verticalAccuracy as Double

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The accuracy of the altitude value in meters.
Example:

```
dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
MsgBox str(l.verticalAccuracy)
end if
```

Notes:

The value in the altitude property could be plus or minus the value indicated by this property. A negative value indicates that the altitude value is invalid.
(Read only property)

59.7 class CLPlacemarkMBS

59.7.1 class CLPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A CLPlacemark object stores placemark data for a given latitude and longitude.
Notes: Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. It can also include points of interest and geographically related data. Placemark objects are typically generated by a CLGeocoder object, although you can also create them explicitly yourself.

59.7.8 Methods

59.7.9 areasOfInterest as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The relevant areas of interest associated with the placemark. (read-only)
Notes:

Examples of an area of interest are the name of a military base or large national park or an attraction such as Eiffel Tower, Disneyland, or Golden Gate Park.
Available in OS X v10.8 and later.

59.7.10 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

59.7.11 Constructor(placement as CLPlacemarkMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Initializes and returns a placemark object from another placemark object.
Notes:

You can use this method to transfer information from one placemark object to another placemark object.
Available in OS X v10.8 and later.

59.7.12 copy as CLPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Creates a clone of this object.

59.7.13 Properties

59.7.14 addressDictionary as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: A dictionary containing the Address Book keys and values for the placemark. (read-only)
Notes:

The keys in this dictionary are those defined by the Address Book framework and used to access address information for a person. For a list of the strings that can be in this dictionary, see the Address Property constants in ABPerson Reference.

You can format the contents of this dictionary to get a full address string as opposed to building the address yourself.

Available in OS X v10.8 and later.
(Read only property)

59.7.15 administrativeArea as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The state or province associated with the placemark. (read-only)
Notes:

If the placemark location is Apple's headquarters, for example, the value for this property would be the string "CA" or "California".
Available in OS X v10.8 and later.
(Read only property)

59.7.16 country as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the country associated with the placemark. (read-only)
Notes:

If the placemark location is Apple's headquarters, for example, the value for this property would be the string "United States".
Available in OS X v10.8 and later.
(Read only property)

59.7.17 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The description for debugging.
Notes: (Read only property)

59.7.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

59.7.19 inlandWater as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the inland water body associated with the placemark. (read-only)
Notes:

For coordinates that lie over an inland body of water, this property contains the name of that water body,Äîthe name of a lake, stream, river, or other waterway.
Available in OS X v10.8 and later.
(Read only property)

59.7.20 ISOcountryCode as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The abbreviated country name. (read-only)
Notes:

This string is the standard abbreviation used to refer to the country. For example, if the placemark location is Apple's headquarters, the value for this property would be the string "US".
Available in OS X v10.8 and later.
(Read only property)

59.7.21 locality as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The city associated with the placemark. (read-only)
Notes:

If the placemark location is Apple's headquarters, for example, the value for this property would be the string "Cupertino".
Available in OS X v10.8 and later.
(Read only property)

59.7.22 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The location object containing latitude and longitude information. (read-only)
Notes:

This object is used to initialize the placemark object.
Available in OS X v10.8 and later.
(Read only property)

59.7.23 name as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the placemark. (read-only)
Notes:

Available in OS X v10.8 and later.
(Read only property)

59.7.24 ocean as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The name of the ocean associated with the placemark. (read-only)
Notes:

For coordinates that lie over an ocean, this property contains the name of the ocean.
Available in OS X v10.8 and later.
(Read only property)

59.7.25 postalAddress as variant

MBS MacFrameworks Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The address as CNPostalAddressMBS object.
Notes: (Read only property)

59.7.26 postalCode as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The postal code associated with the placemark. (read-only)
Notes:

If the placemark location is Apple's headquarters, for example, the value for this property would be the string "95014".
Available in OS X v10.8 and later.
(Read only property)

59.7.27 region as CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The geographic region associated with the placemark. (read-only)
Notes:

Available in OS X v10.8 and later.
(Read only property)

59.7.28 subAdministrativeArea as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional administrative area information for the placemark. (read-only)
Notes:

Subadministrative areas typically correspond to counties or other regions that are then organized into a larger administrative area or state. For example, if the placemark location is Apple's headquarters, the value for this property would be the string "Santa Clara", which is the county in California that contains the city of Cupertino.

Available in OS X v10.8 and later.
(Read only property)

59.7.29 subLocality as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional city-level information for the placemark. (read-only)
Notes:

This property contains additional information, such as the name of the neighborhood or landmark associated with the placemark. It might also refer to a common name that is associated with the location.
Available in OS X v10.8 and later.
(Read only property)

59.7.30 subThoroughfare as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Additional street-level information for the placemark. (read-only)
Notes:

Subthroughfares provide information such as the street number for the location. For example, if the placemark location is Apple's headquarters (1 Infinite Loop), the value for this property would be the string "1".

Available in OS X v10.8 and later.
(Read only property)

59.7.31 thoroughfare as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The street address associated with the placemark. (read-only)
Notes:

The street address contains the street name. For example, if the placemark location is Apple's headquarters, the value for this property would be the string "Infinite Loop".

Available in OS X v10.8 and later.
(Read only property)

59.8 class CLRegionMBS

59.8.1 class CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The CLRegion class defines a geographical area that can be tracked.
Example:

```
dim c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")

msgbox c.identifier+" "+str(c.latitude)+"/"+str(c.longitude)+", "+str(c.radius)+"m"
```

Notes:

When an instance of this class is registered with a CLLocationManagerMBS object, the location manager generates an appropriate event whenever the user crosses the boundaries of the defined area.

To use this class, create an instance of it and use the startMonitoringForRegion method of a CLLocationManager object to begin monitoring it.

Please also check the documentation from Apple for the CLRegion class.
Available on Mac OS X 10.7 or later.

59.8.2 Blog Entries

59.8.4 Methods

59.8.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: Returns true if this class is available.

59.8.6 Constructor(latitude as Double, longitude as Double, radius as Double, identifier as string)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Initializes a region object defining a circular area.
Notes:

latitude and longitude: The center point of the region.
radius: The distance (measured in meters) from the center point that marks the boundary of the region.
identifier: A unique identifier to associate with the region object. You use this identifier to differentiate regions within your application. This value must not be "".

identifier is a description for the region that could be displayed to the user, and ideally should be chosen by the user.

On success the handle property is not zero.

59.8.7 containsCoordinate(latitude as Double, longitude as Double) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Returns a Boolean value indicating whether the region contains the specified coordinate.
Notes:

latitude and longitude: The coordinate to test against the region.

Returns true if the coordinate lies within the region's boundaries or false if it does not.

59.8.8 copy as CLRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a copy of the region object.

59.8.9 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The identifier for the region object.
Example:

```
dim c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")
msgbox c.identifier
```

59.8.10 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The position of the center of the region.

59.8.11 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The position of the center of the region.

59.8.12 radius as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The radius (measured in meters) that defines the region's outer boundary.

59.8.13 Properties

59.8.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal CLRegion object reference.
Notes: (Read and Write property)

Chapter 60

CoreML

60.1 class MLArrayBatchProviderMBS

60.1.1 class MLArrayBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A convenience wrapper for batches of feature providers.
Notes:

This batch provider supports an array of feature providers or a dictionary of arrays of feature values.
Available on MacOS 10.14 or newer.
Subclass of the MLBatchProviderMBS class.

60.1.2 Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

60.1.3 Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

60.1.4 Methods

60.1.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

60.1.6 Constructor(value as Dictionary, byref Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a batch provider based on feature names and their associated arrays of data.
Notes: dictionary: A dictionary which maps feature names to an array of values. The error case occurs when all the arrays do not have the same length or the values in an aray are not expressible as an MLFeatureValueMBS.
See also:

- 60.1.7 Constructor(values() as MLFeatureProviderMBS) 12320

60.1.7 Constructor(values() as MLFeatureProviderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates the batch provider based on the array of feature providers.
Notes: array: The array of feature providers for the batch.
See also:

- 60.1.6 Constructor(value as Dictionary, byref Error as NSErrorMBS) 12320

60.1.8 values as MLFeatureProviderMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The array of feature providers.

60.2 class MLBatchProviderMBS

60.2.1 class MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An interface that represents a collection of feature providers.
Notes:

Similar to the MLFeatureProviderMBS, this interface allows you to define your own batch provider. If you collect your data asynchronously or it is memory intensive, implement this protocol on your data structure to optimize performance with batch processing.

Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.2.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.2.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.2.4 Methods

60.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.2.6 featuresAtIndex(index as Integer) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Returns the feature provider at the given index.

60.2.7 Properties

60.2.8 Count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The number of feature providers in this batch.
Notes: (Read only property)

60.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.3 class MLDictionaryConstraintMBS

60.3.1 class MLDictionaryConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint describing expected NSDictionary properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.3.2 Methods

60.3.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.13 or newer.

60.3.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.3.5 Properties

60.3.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.3.7 keyType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required key type.
Notes:

See MLFeatureValueMBS.Type* constants.
(Read only property)

60.4 class MLDictionaryFeatureProviderMBS

60.4.1 class MLDictionaryFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A concrete convenience class conforming to MLFeatureProvider protocol.
Notes: Subclass of the MLFeatureProviderMBS class.

60.4.2 Blog Entries

- Update Machine Learning Model on Device

60.4.3 Blog Entries

- Update Machine Learning Model on Device

60.4.4 Methods

60.4.5 Constructor(content as Dictionary, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create from a generic dictionary by converting all values to MLFeatureValues or from a dictionary with values already stored as MLFeatureValues.
Notes: An error results if the values are not or cannot be represented as MLFeatureValues.

60.4.6 objectForKeyedSubscript(script as string) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Get the value for specified feature.

60.4.7 Properties

60.4.8 Content as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Dictionary holding the feature values.
Notes:

When you query this, you get a copy of the dictionary, so any modification doesn't go back to the feature provider.
(Read only property)

60.5 class MLFeatureDescriptionMBS

60.5.1 class MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of a feature.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.5.2 Methods

60.5.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.5.4 copy as MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy.

60.5.5 isAllowedValue(value as MLFeatureValueMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Check if MLFeatureValue is valid based on this description.

60.5.6 Properties

60.5.7 dictionaryConstraint as MLDictionaryConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for dictionary.
Notes:

Only set when type is dictionary.
(Read only property)

60.5.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.5.9 imageConstraint as MLImageConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for image.
Notes:

Only set when type is image.
(Read only property)

60.5.10 isOptional as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether this feature can take an undefined value or not.
Notes: (Read only property)

60.5.11 multiArrayConstraint as MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint for multi array.
Notes:

Only set when type is array.
(Read only property)

60.5.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Name of feature.
Notes: (Read only property)

60.5.13 sequenceConstraint as MLSequenceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints for a sequence feature.
Notes: (Read only property)

60.5.14 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of data.
Notes: (Read only property)

60.5.15 Constants

60.5.16 TypeDictionary = 6

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Numerically weighted hashable objects (e.g. word counts)

60.5.17 TypeDouble = 2

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Continuous values

60.5.18 TypeImage = 4

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: CVPixelBufferRef or converted by plugin to Xojo picture.

60.5.19 TypeInt64 = 1

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Discrete values, sometimes used to hold numeric encoding of a categorical value

60.5.20 TypeInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Undefined type.

60.5.21 TypeMultiArray = 5

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: An array of values.

60.5.22 TypeSequence = 7

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the type constants.
Notes: The possible types for feature values, input features, and output features.

60.5.23 TypeString = 3

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Text or categorical strings

60.6 class MLFeatureProviderMBS

60.6.1 class MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Protocol for accessing a feature value for a feature name.
Notes:

In Xojo defined as class, but in objective-c just a protocol.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.6.2 Methods

60.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.6.4 featureNames as String()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries list of all feature names available.

60.6.5 featureValueForName(featureName as String) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries value for feature by name.
Notes: Returns nil if the provided featureName is not in the set of featureNames

60.6.6 Properties

60.6.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.7 class MLFeatureValueMBS

60.7.1 class MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An immutable variant holding a data value of a supported MLFeatureType.
Notes:

MLFeatureValue does not support type conversion in its accessor properties.
It can also have a missing or undefined value of a well defined type.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.7.2 Blog Entries

60.7.3 Blog Entries

- MBS Xojo Plugins, version 21.5pr2
- Update Machine Learning Model on Device

60.7.4 Methods

60.7.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.7.6 copy as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates a copy.

60.7.7 featureValueWithCGImage(image as variant, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image,Äôs URL and constraints.
Notes:

Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 60.7.8 featureValueWithCGImage(image as variant, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 12334

60.7.8 featureValueWithCGImage(image as variant, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image, its width, and its height, in pixels.
Notes:

Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 60.7.7 featureValueWithCGImage(image as variant, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 12334

60.7.9 featureValueWithDictionary(value as Dictionary, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Creates new feature based on a dictionary.
Notes:

Copies the dictionary.
For encoding a sparse feature set or for encoding probabilities. Input keys that are not number or string are rejected on construction and return a MLModelErrorFeatureTypeMismatch error. Further validation for

consistency occurs on evaluation.

60.7.10 featureValueWithDouble(value as double) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

60.7.11 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image and its constraints.
Notes:

Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 60.7.12 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 12335

60.7.12 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, pixelsWide as Integer, pixelsHigh as Integer, pixelFormatType as String, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps an image as a value for a feature, given an image,Äôs URL, and its width and height, in pixels.
Notes:

Available on macOS 10.15 or newer.
If orientation is in range 1 to 8, we pass that as orientation. Otherwise orientation will come from EXIF
See also:

- 60.7.11 featureValueWithImageFile(File as FolderItem, orientation as integer = -1, constraint as MLImageConstraintMBS, options as Dictionary = nil, byref error as NSErrorMBS) as MLFeatureValueMBS 12335

60.7.13 featureValueWithInt64(value as Int64) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

60.7.14 featureValueWithMultiArray(value as MLMultiArrayMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

60.7.15 featureValueWithPicture(value as Picture) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

60.7.16 featureValueWithPixelBuffer(Handle as Integer) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps a pixel buffer as a value for a feature.

60.7.17 featureValueWithSequence(sequence as MLSequenceMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Wraps a sequence as a value for a feature.

60.7.18 featureValueWithString(value as string) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Returns feature object for given value.

60.7.19 isEqualToFeatureValue(value as MLFeatureValueMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries whether two feature objects are the same.

60.7.20 MLFeatureValueImageOptionCropAndScale as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The option you use to crop and scale an image when creating an image feature value.

60.7.21 MLFeatureValueImageOptionCropRect as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The option you use to crop an image when creating an image feature value.

60.7.22 undefinedFeatureValueWithType(type as Integer) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Represent an undefined value of a specified type.

60.7.23 Properties

60.7.24 CIImageValue as Variant

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries image as CIImageMBS object.
Notes: (Read only property)

60.7.25 dictionaryValue as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeDictionary.
Notes:

When you query the dictionary, you get a copy.
(Read only property)

60.7.26 doubleValue as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeDouble.
Notes: (Read only property)

60.7.27 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.7.28 imageBufferValue as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The image, or pixelBuffer, wrapped in this feature value.
Notes:

The handle for a CVPixelBufferMBS object.
(Read only property)

60.7.29 int64Value as Int64

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeInt64.
Notes: (Read only property)

60.7.30 multiArrayValue as MLMultiArrayMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeMultiArray.
Notes: (Read only property)

60.7.31 PictureHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The picture height.
Notes:

Populated value if the type is TypeImage.
(Read only property)

60.7.32 PictureValue as Picture

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeImage.
Notes: (Read only property)

60.7.33 PictureWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The picture width.
Notes:

Populated value if the type is TypeImage.
(Read only property)

60.7.34 sequenceValue as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The sequence wrapped in this feature value.
Notes: (Read only property)

60.7.35 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Populated value if the type is TypeString.
Notes: (Read only property)

60.7.36 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of the value for which the corresponding property below is held.
Notes: (Read only property)

60.7.37 Undefined as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: True if the value represents a missing or undefined value.
Notes: (Read only property)

60.7.38 value as Variant

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Queries value as variant.
Notes: (Read only property)

60.7.39 Constants

60.7.40 TypeDictionary = 6

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Numerically weighted hashable objects (e.g. word counts)

60.7.41 TypeDouble = 2

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Continuous values

60.7.42 TypeImage = 4

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: CVPixelBufferRef or converted by plugin to Xojo picture.

60.7.43 TypeInt64 = 1

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Discrete values, sometimes used to hold numeric encoding of a categorical value

60.7.44 TypeInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Undefined type.

60.7.45 TypeMultiArray = 5

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: An array of values.

60.7.46 TypeSequence = 7

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the type constants.
Notes: The possible types for feature values, input features, and output features.

60.7.47 TypeString = 3

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the type constants.
Notes: Text or categorical strings

60.8 class MLImageConstraintMBS

60.8.1 class MLImageConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint on image properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.8.2 Methods

60.8.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.8.4 Properties

60.8.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.8.6 pixelFormatType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The accepted kCVPixelFormatType for the image.
Notes: (Read only property)

60.8.7 pixelsHigh as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The required height of the image.
Notes: (Read only property)

60.8.8 pixelsWide as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The required width of the image.
Notes: (Read only property)

60.8.9 sizeConstraint as MLImageSizeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Additional sizes this image feature supports.
Notes:

Available on MacOS 10.14 or newer.
(Read only property)

60.9 class MLImageSizeConstraintMBS

60.9.1 class MLImageSizeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A list or range of sizes that augment an image constraint's default size.
Notes:

You use an MLImageSizeConstraint to express what image sizes of an image feature a model will accept as input or produce as output.

Use type to determine which properties describe what image sizes the model's image feature expects as input or produces as output.

If type is:

- TypeRange, the image feature accepts any image that has a width in pixelsWideRange and a height in pixelsHighRange.
- TypeEnumerated, the image feature accepts any image size listed in enumeratedImageSizes.
- TypeUnspecified, the MLImageSizeConstraint instance is not configured and should be ignored. Instead, use the image feature's default image size constraint, defined by pixelsWide and pixelsHigh.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.9.4 Methods

60.9.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

60.9.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.9.7 enumeratedImageSizes as MLImageSizeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An array of image sizes a model's image feature accepts as input or produces as output.

60.9.8 Properties

60.9.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.9.10 pixelsHighRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of heights a model's image feature accepts as input or produces as output.
Notes: (Read only property)

60.9.11 pixelsWideRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of widths a model's image feature accepts as input or produces as output.
Notes: (Read only property)

60.9.12 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Indicator of which properties to inspect for this image size constraint.
Notes: (Read only property)

60.9.13 Constants

60.9.14 TypeEnumerated = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the modes that determine how the model defines a feature's image size constraint.
Notes: The image feature accepts image sizes listed in an array.

60.9.15 TypeRange = 3

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the modes that determine how the model defines a feature's image size constraint.
Notes: The image feature accepts image sizes defined by a range of widths and a range of heights.

60.9.16 TypeUnspecified = 0

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the modes that determine how the model defines a feature's image size constraint.
Notes: The image size constraint is not configured and should be ignored.

60.10 class MLImageSizeMBS

60.10.1 class MLImageSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The width and height of an image feature size.
Notes:

Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.10.2 Blog Entries

60.10.4 Methods

60.10.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

60.10.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.10.7 Properties

60.10.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.10.9 pixelsHigh as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The height of an image feature in pixels.
Notes: (Read only property)

60.10.10 pixelsWide as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The width of an image feature in pixels.
Notes: (Read only property)

60.11 class MLKeyMBS

60.11.1 class MLKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An abstract base class for machine learning key types.
Notes:

You don,Äôt create use this class directly. Instead, use a class that inherits from this one, such as MLParameterKey or MLMetricKey.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.11.4 Methods

60.11.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.11.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.11.7 copy as MLKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Copies the object.

60.11.8 Properties

60.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.11.10 Name as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The name of the machine learning key.
Notes: (Read only property)

60.11.11 Scope as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The scope value.
Notes: (Read only property)

60.12 class MLMetricKeyMBS

60.12.1 class MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A key for the metrics dictionary in an update context.
Notes:

Available in MacOS 10.15 or newer.
Subclass of the MLKeyMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.12.4 Methods

60.12.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.12.6 Properties

60.12.7 epochIndex as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the epoch index (an Int64 value).
Notes:

Use this key to fetch the epoch index value in the metrics dictionary.
(Read only property)

60.12.8 lossValue as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the current loss (a float value).
Notes:

Use this key to fetch the loss value in the metrics dictionary.
(Read only property)

60.12.9 miniBatchIndex as MLMetricKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the mini-batch index (an Int64 value) within an epoch.
Notes:

Use this key to fetch the mini-batch index value in the metrics dictionary.
(Read only property)

60.13 class MLModelConfigurationMBS

60.13.1 class MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The settings for creating or updating a machine learning model.
Notes: Available in MacOS 10.14 or newer.

60.13.2 Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

60.13.4 Methods

60.13.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

60.13.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constructor.

60.13.7 copy as MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a copy of the model configuration.

60.13.8 Properties

60.13.9 allowLowPrecisionAccumulationOnGPU as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A Boolean value that determines whether to allow low-precision accumulation on a GPU.
Notes: (Read and Write property)

60.13.10 computeUnits as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The processing unit or units the model uses to make predictions.
Notes: (Read and Write property)

60.13.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.13.12 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Optional dictionary with any requested changes to model or update parameters.
Notes: (Read and Write property)

60.13.13 preferredMetalDevice as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The metal device you prefer this model use to make predictions (inference) and update the model.
Notes:

If preferredMetalDevice is 0, the default value, Core ML chooses a metal device for you.
Until we have a class for MLDevice, you pass the handle here directly.
(Read and Write property)

60.13.14 Constants

60.13.15 ComputeUnitsAll = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the compute units to use to make predictions.
Notes: The option you choose to allow the model to use all compute units available, including the neural engine.

60.13.16 ComputeUnitsCPUAndGPU = 1

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the compute units to use to make predictions.
Notes: The option you choose to allow the model to use both the CPU and GPU, but not the neural engine.

60.13.17 ComputeUnitsCPUOnly = 0

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the compute units to use to make predictions.
Notes: The option you choose to limit the model to only use the CPU.

60.14 class MLModelDescriptionMBS

60.14.1 class MLModelDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A description of a model containing input and output feature descriptions, optionally outputted features with special meaning and metadata.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.14.2 Methods

60.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.14.4 Properties

60.14.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.14.6 inputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of the inputs to the model.
Notes: (Read only property)

60.14.7 isUpdatable as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether you can update the model with additional training.
Notes:

Available on Mac OS 10.15 or newer.
(Read only property)

60.14.8 metadata as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Optional metadata describing the model.
Notes: (Read only property)

60.14.9 outputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Description of the outputs from the model.
Notes: (Read only property)

60.14.10 parameterDescriptionsByKey as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Allows for access of each parameter as parameter description.
Notes: (Read only property)

60.14.11 predictedFeatureName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Name of the primary target / predicted output feature in the output descriptions.
Notes: (Read only property)

60.14.12 predictedProbabilitiesName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Key for all predicted probabilities stored as a MLFeatureTypeDictionary in the output descriptions.

Notes: (Read only property)

60.14.13 trainingInputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Provides access to each training input as a feature description, given the name of the input.
Notes:

Available on MacOS 101.5 or newer.
(Read only property)

60.15 class MLModelMBS

60.15.1 class MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model and evaluate on a specific set of input features.
Notes:

Inputs and outputs are accessed via the MLFeatureProvider protocol.
Returns a model or nil if there is an error.

Available on macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.15.2 Blog Entries

60.15.3 Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- Update Machine Learning Model on Device

60.15.4 Methods

60.15.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Whether CoreML is available.
Notes: Should return true on macOS 10.13 or newer.

60.15.6 compileModelAtURL(URL as string, byref error as NSErrorMBS) as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Compile a .mlmodel for this device.
Notes:

URL: URL file path to .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a URL to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permenant location if you wish to keep it.

60.15.7 compileModelFile(File as folderItem, byref error as NSErrorMBS) as folderItem

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Compile a .mlmodel for this device.
Example:

```
dim SourceFile as FolderItem = SpecialFolder.Desktop.child("resnet50.MLmodel")
dim Error as NSErrorMBS

dim Tempfile as FolderItem = MLModelMBS.compileModelFile(SourceFile, Error)

if Tempfile <>nil then
tempfile.MoveFileTo SpecialFolder.Desktop
MsgBox "OK"
else
MsgBox Error.localizedDescription
end if
```

Notes:

File: FolderItem for .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a folderitem to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permenant location if you wish to keep it.

60.15.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.15.9 MLModelAuthorKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: The author of this model.

60.15.10 MLModelCreatorDefinedKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: Any additional pertinent information specified by the model creator.

60.15.11 MLModelDescriptionKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: A short description of what the model does and/or its purpose

60.15.12 MLModelErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The error domain string for the CoreML errors.

60.15.13 MLModelLicenseKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: License information for the model.

60.15.14 MLModelVersionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: One of the keys for the metadata dictionary.
Notes: A version number encoded as a string.

60.15.15 modelWithContentsOfFile(file as FolderItem, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 60.15.16 modelWithContentsOfFile(file as FolderItem, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 12363

60.15.16 modelWithContentsOfFile(file as FolderItem, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes:

File: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.
See also:

- 60.15.15 modelWithContentsOfFile(file as FolderItem, byref error as NSErrorMBS) as MLModelMBS 12363

60.15.17 modelWithContentsOfPath(Path as string, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 60.15.18 modelWithContentsOfPath(Path as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 12364

60.15.18 modelWithContentsOfPath(Path as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes:

Path: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.

60.15.19 modelWithContentsOfURL(URL as string, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
See also:

- 60.15.20 modelWithContentsOfURL(URL as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS 12364

60.15.20 modelWithContentsOfURL(URL as string, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a Core ML model object from a compiled model file and a custom configuration.
Notes:

URL: The path to a compiled model file (ModelName.mlmodelc), typically with the URL returned from compileModelAtURL:error:.
configuration: The model settings for a new model object.

However, if the wrapper class doesn't meet your app's needs or you need to customize the model's configuration, then use this initializer to create a model object from any compiled model file your app has access to. Typically, you use this initializer after your app has downloaded and compiled a model, which is one technique for saving space in your app.
See also:

- 60.15.19 modelWithContentsOfURL(URL as string, byref error as NSErrorMBS) as MLModelMBS 12364

60.15.21 parameterValueForKey(key as MLParameterKeyMBS, byref error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Provides value for the given parameter.
Notes:

Returns nil on error.
Available on MacOS 10.15 or newer.

60.15.22 predictionFromFeatures(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: All models can predict on a specific set of input features.

60.15.23 predictionFromFeaturesMT(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: All models can predict on a specific set of input features.
Notes:

The work is performed on an extra thread, so this function can yield time to other Xojo threads. And it calles the Working event regularly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

60.15.24 predictionsFromBatch(inputBatch as MLBatchProviderMBS, byref error as NSErrorMBS) as MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Predicts output feature values from the given a batch of input feature values.
Notes:

inputBatch: The batch of feature values the model needs to make its predictions.

Returns a batch provider that represents the model,Äôs predictions for the batch of inputs.
See also:

- 60.15.25 predictionsFromBatch(inputBatch as MLBatchProviderMBS, options as MLPredictionOptionsMBS, byref error as NSErrorMBS) as MLBatchProviderMBS 12366

60.15.25 predictionsFromBatch(inputBatch as MLBatchProviderMBS, options as MLPredictionOptionsMBS, byref error as NSErrorMBS) as MLBatchProviderMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Predicts output feature values from the given a batch of input feature values and prediction options.
Notes:

inputBatch: The batch of feature values the model needs to make its predictions.
options: All the options to be applied to the prediction.

Returns a batch provider that represents the model,Äôs predictions for the batch of inputs.
See also:

- 60.15.24 predictionsFromBatch(inputBatch as MLBatchProviderMBS, byref error as NSErrorMBS) as MLBatchProviderMBS 12366

60.15.26 Properties

60.15.27 configuration as MLModelConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The configuration of the model set during initialization.
Notes: (Read only property)

60.15.28 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.15.29 modelDescription as MLModelDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: A model holds a description of its required inputs and expected outputs.
Notes: (Read only property)

60.15.30 Constants

60.15.31 ErrorCustomLayer = 4

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the error codes.
Notes: An error related to a custom layer in your model.

60.15.32 ErrorCustomModel = 5

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the error codes.
Notes: An error related to your custom model.

60.15.33 ErrorDescriptionMismatch = 2

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the error codes.
Notes: Mismatch error.

60.15.34 ErrorFeatureType = 1

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the error codes.
Notes: Type error.

60.15.35 ErrorGeneric = 0

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the error codes.
Notes: Generic error.

60.15.36 ErrorIO = 3

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One of the error codes.
Notes: I/O file error.

60.15.37 ErrorParameters = 7

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the error codes.
Notes: An error related to missing or invalid model parameters.

60.15.38 ErrorUpdate = 6

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the error codes.
Notes: An error related to updating a model.

60.16 class MLMultiArrayConstraintMBS

60.16.1 class MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Constraint describing expected MLMultiArray properties.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.16.2 Methods

60.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The private constructor.

60.16.4 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required shape of array.
Notes: One value for each dimension.

60.16.5 Properties

60.16.6 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Required dataType.
Notes: (Read only property)

60.16.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.16.8 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(0) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.16.9 shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(1) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.16.10 shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(2) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.16.11 shapeConstraint as MLMultiArrayShapeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraint on the shape of the multiarray.
Notes: (Read only property)

60.17 class MLMultiArrayMBS

60.17.1 class MLMultiArrayMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The class for a Multidimensional Array.

60.17.2 Blog Entries

- MBS Xojo Plugins, version 21.5pr4

60.17.4 Methods

60.17.5 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create by wrapping existing data.
Notes: Please make sure that memory is not deallocated too early, e.g. by subclassing and freeing it in destructor.
See also:

- 60.17.6 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS) 12371

60.17.6 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Create by C-style contiguous array by allocating and managing the necessary memory.
See also:

- 60.17.5 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS) 12371

60.17.7 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An array containing the sizes of each dimension in the multiarray.

60.17.8 strides as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An array containing the stride in memory for each dimension.
Notes: The element referred to by a multidimensional index is located at an offset equal to sum_d index [d] *strides [d] . This offset is in the units of the specified dataType.

60.17.9 Properties

60.17.10 count as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Count of total number of elements.
Notes: (Read only property)

60.17.11 dataPointer as Ptr

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Unsafe pointer to underlying buffer holding the data.
Notes: (Read only property)

60.17.12 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Type of element held.
Notes:

See DataType* constants.
(Read only property)

60.17.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.17.14 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(0) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.15 shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(1) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.16 shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The shape(2) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.17 strides0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(0) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.18 strides1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(1) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.19 strides2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The strides(2) value.
Notes:

Convenience property to see value in debugger.
(Read only property)

60.17.20 doubleValue(index as Integer) as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes:

Pass the index for the value to query.
(Read and Write computed property)
See also:

- 60.17.21 doubleValue(indexes() as Integer) as Double 12374

60.17.21 doubleValue(indexes() as Integer) as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes:

Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 60.17.20 doubleValue(index as Integer) as Double 12374

60.17.22 integerValue(index as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes:

Pass the index for the value to query.
(Read and Write computed property)
See also:

- 60.17.23 integerValue(indexes() as Integer) as Integer 12375

60.17.23 integerValue(indexes() as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes:

Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 60.17.22 integerValue(index as Integer) as Integer 12375

60.17.24 singleValue(index as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for single dimensional array.
Notes:

Pass the index for the value to query.
(Read and Write computed property)
See also:

- 60.17.25 singleValue(indexes() as Integer) as Single 12376

60.17.25 singleValue(indexes() as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Query or set value for multi dimensional array.
Notes:

Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 60.17.24 singleValue(index as Integer) as Single 12375

60.17.26 Constants

60.17.27 DataTypeDouble = & h10040

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One for the data types for arrays.
Notes: Data is double values.

60.17.28 DataTypeFloat16 = & h10010

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One for the data types for arrays.
Notes:

Data is Float16 values.
Sadly Xojo doesn't have a native Float16 data type.

60.17.29 DataTypeFloat32 = & h10020

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One for the data types for arrays.
Notes: Data is single values (32-bit).

60.17.30 DataTypeFloat64 = & h10040

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One for the data types for arrays.
Notes:

Data is Float64 values.
Use double in Xojo.

60.17.31 DataTypeInt32 = & h20020

MBS Mac64bit Plugin, Plugin Version: 17.4.

Function: One for the data types for arrays.
Notes: Data is 32-bit integer values.

60.18 class MLMultiArrayShapeConstraintMBS

60.18.1 class MLMultiArrayShapeConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The lists of shapes or ranges of shapes that constrain a multiarray feature.
Notes:

Available in MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.18.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.18.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.18.4 Methods

60.18.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.18.6 enumeratedShapes as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Array of allowed shapes for a multiarray feature.

60.18.7 sizeRangeForDimension as NSRangeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The allowable range for a dimention of the multiarray.

60.18.8 Properties

60.18.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.18.10 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The type of the shape constraint.
Notes: (Read only property)

60.18.11 Constants

60.18.12 TypeEnumerated = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the possible types of shape constraints.
Notes: The constraint is an array of allowed shapes.

60.18.13 TypeRange = 3

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the possible types of shape constraints.
Notes: The constraint is a set of ranges allowed for the array shape.

60.18.14 TypeUnspecified = 1

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the possible types of shape constraints.
Notes: The constraint type is undefined.

60.19 class MLNumericConstraintMBS

60.19.1 class MLNumericConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The value limitations of a number.
Notes:

Available on MacOS 10.15 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.19.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.19.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.19.4 Methods

60.19.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.19.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.19.7 enumeratedNumbers as Double()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A set of the numbers allowed in this constraint.

60.19.8 Properties

60.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.19.10 maxNumber as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The largest numerical value allowed by this constraint.
Notes: (Read only property)

60.19.11 minNumber as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The smallest numerical value allowed by this constraint.
Notes: (Read only property)

60.20 class MLParameterDescriptionMBS

60.20.1 class MLParameterDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The description of a model parameter that includes a default value and a constraint, if applicable.
Notes:

Available for MacOS 10.15 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.20.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.20.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.20.4 Methods

60.20.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.20.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.20.7 Properties

60.20.8 defaultValue as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The default value for the parameter.
Notes: (Read only property)

60.20.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.20.10 key as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key for this parameter description value.
Notes: (Read only property)

60.20.11 numericConstraint as MLNumericConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints of this paramter description value, if and only if the value is numerical.
Notes: (Read only property)

60.21 class MLParameterKeyMBS

60.21.1 class MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A key for model and update parameter dictionaries.
Notes:

Subclass of the MLKeyMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.21.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.21.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.21.4 Methods

60.21.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.21.6 scopedTo(scope as String) as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Returns a new MLParameterKey instance after adding additional scoping.

60.21.7 Properties

60.21.8 beta1 as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the beta1 parameter for the Adam optimizer (a Double value).
Notes:

Double parameter used to control the beta1 of Adam optimizer. Adjustable at load-time.
(Read only property)

60.21.9 beta2 as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the beta2 parameter for the Adam optimizer (a Double value).
Notes:

Double parameter used to control the beta2 of Adam optimizer. Adjustable at load-time.
(Read only property)

60.21.10 biases as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: MLMultiArrayMBS parameter returned when client requests for biases of a particular layer using a scoped parameter.
Notes: (Read only property)

60.21.11 epochs as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the epochs parameter for the optimizer (an Int64 value).
Notes:

Int64 parameter used to specify the number of epochs used by optimizer. Adjustable at load-time.
(Read only property)

60.21.12 eps as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the eps parameter for the Adam optimizer (a Double value).
Notes:

Double parameter used to control the epsilon of Adam optimizer. Adjustable at load-time.
(Read only property)

60.21.13 learningRate as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the parameter for the optimizer,Äôs learning rate (a Double value).
Notes:

Double parameter used to control the learning rate of an optimizer. Adjustable in progress.
(Read only property)

60.21.14 linkedModelFileName as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the name of the linked model.
Notes: (Read only property)

60.21.15 linkedModelSearchPath as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the search path for the linked model.
Notes: (Read only property)

60.21.16 miniBatchSize as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the mini batch-size parameter for the optimizer (an Int64 value).
Notes:

Int64 parameter used to specify the size of a miniBatch used by optimizer. Adjustable at load-time.
(Read only property)

60.21.17 momentum as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The key you use to access the parameter for the optimizer,Äôs momentum gradient (a Double value).
Notes:

Double parameter used to control the momentum of gradient based optimizers. Adjustable at load-time.
(Read only property)

60.21.18 numberOfNeighbors as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Int64 parameter used to specify the number of neighbors to use for class affinity (applicable to kNN).
Notes:

Not adjustable in progress.
(Read only property)

60.21.19 seed as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Int64 parameter used to specify the seed to be used if shuffling data between epochs.
Notes:

Adjustable at load-time.
(Read only property)

60.21.20 shuffle as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Bool parameter used to specify whether to shuffle the data between epochs.
Notes:

Adjustable at load-time.
(Read only property)

60.21.21 weights as MLParameterKeyMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: MLMultiArrayMBS parameter returned when client requests for weights of a particular layer using a scoped parameter.
Notes: (Read only property)

60.22 class MLPredictionOptionsMBS

60.22.1 class MLPredictionOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: An object to hold options / controls / parameters of how model prediction is performed

60.22.2 Methods

60.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The constructor.

60.22.4 Properties

60.22.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.22.6 usesCPUOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Set to true to force computation to be on the CPU only
Notes: (Read and Write property)

60.23 class MLSequenceConstraintMBS

60.23.1 class MLSequenceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constraints for a sequence feature.
Notes:

Available on MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.23.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.23.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.23.4 Methods

60.23.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.14 or newer.

60.23.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.23.7 Properties

60.23.8 countRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The range of values allowed for the sequence's length.
Notes: (Read only property)

60.23.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.23.10 valueDescription as MLFeatureDescriptionMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The description that all sequence elements must match.
Notes: (Read only property)

60.24 class MLSequenceMBS

60.24.1 class MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A sequence of data used as a feature input or feature output for a model.
Notes:

Data from sensors (a time series) or language (a series of words) are often manipulated as sequences by machine learning models. These sequences can have variable lengths depending on their context. MLSequenceMBS explicitly encodes a sequence of strings or integers to support a series of data points as a single input.

If you need to process a sequence of values individually, one at a time, see Making Predictions with a Sequence of Inputs for details.
https://developer.apple.com/documentation/coreml/core_ml_api/making_predictions_with_a_sequence_of_inputs

Available in MacOS 10.14 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.24.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.24.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.24.4 Methods

60.24.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.24.6 emptySequenceWithType(type as Integer) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an empty sequence of the given type.
Notes: Type: The MLFeatureType for the sequence. Must be either MLFeatureTypeString or MLFeatureTypeInt64.

60.24.7 int64Values as Int64()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The integer elements of the sequence.

60.24.8 sequenceWithInt64Array(int64Values() as Int64) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a sequence from an array of integers.

60.24.9 sequenceWithStringArray(stringValues() as String) as MLSequenceMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates a sequence from an array of strings.

60.24.10 stringValues as String()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The string elements of the sequence.

60.24.11 Properties

60.24.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.24.13 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The type of value held in the sequence.
Notes: (Read only property)

60.25 class MLTaskMBS

60.25.1 class MLTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: An abstract base class for machine learning tasks.
Notes:

You don,Äôt create use this class directly. Instead, use a class that inherits from this one, such as MLUpdateTaskMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

60.25.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.25.3 Blog Entries

- MBS Xojo Plugins, version 19.6pr3

60.25.4 Methods

60.25.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.25.6 cancel

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Cancels a machine learning task before it completes.

60.25.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The private constructor.

60.25.8 resume

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Begins or resumes a machine learning task.
Notes: Use this method to start a task for the first time or resumes a task that has paused. Tasks pause when they notify your app,Äôs progress handlers, such as those you provide to an MLUpdateProgressHandlersMBS instance.

60.25.9 Properties

60.25.10 Error as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The underlying error if the task is in a failed state.
Notes: (Read only property)

60.25.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.25.12 State as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The current state of the machine learning task.
Notes: (Read only property)

60.25.13 TaskIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A unique name of the task to distinguish it from all other tasks at runtime.
Notes: (Read only property)

60.25.14 Constants

60.25.15 StateCancelling = 3

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the states of a machine learning task.
Notes: The state of a machine learning task that,Äôs in mid-termination, before it could finish successfully.

60.25.16 StateCompleted = 4

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the states of a machine learning task.
Notes: The state of a machine learning task that has finished successfully.

60.25.17 StateFailed = 5

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the states of a machine learning task.
Notes: The state of a machine learning task that has terminated due to an error.

60.25.18 StateRunning = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the states of a machine learning task.
Notes: The state of a machine learning task that,Äôs executing.

60.25.19 StateSuspended = 1

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the states of a machine learning task.
Notes: The state of a machine learning task that,Äôs paused.

60.26 class MLUpdateContextMBS

60.26.1 class MLUpdateContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The context an update task provides to your app,Äôs completion and update progress handlers.

60.26.2 Blog Entries

- Update Machine Learning Model on Device
- MBS Xojo Plugins, version 19.6pr3

60.26.3 Blog Entries

60.26.4 Methods

60.26.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.26.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The constructor.

60.26.7 writeToFile(file as FolderItem, byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Exports a machine learning file to the file system.
Notes:

file: The location in the file system where the file should be written.
Error: will return any error message.

Returns true on success or false on failure.
Requires MacOS 10.15 or newer.

60.26.8 Properties

60.26.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.26.10 Metrics as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The training metrics of the model for the update task, contained in a dictionary.
Notes: (Read only property)

60.26.11 Model as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The underlying Core ML model stored in memory.
Notes: (Read only property)

60.26.12 Parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The parameters for the update task.
Notes: (Read only property)

60.26.13 ProgressEvent as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The event type that triggered an update task to notify your app,Äôs completion and update progress handlers.
Notes: (Read only property)

60.26.14 Task as MLUpdateTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The update task that generated the update context.
Notes: (Read only property)

60.26.15 Constants

60.26.16 ProgressEventEpochEnd = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the end of training epoch.

60.26.17 ProgressEventMiniBatchEnd = 4

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the end of a mini-batch within a training epoch.

60.26.18 ProgressEventTrainingBegin = 1

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the start of training.

60.27 class MLUpdateProgressHandlersMBS

60.27.1 class MLUpdateProgressHandlersMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A collection of closures an update task uses to notify your app of its progress.
Notes: Available in MacOS 10.15 or newer.

60.27.2 Blog Entries

- Update Machine Learning Model on Device

60.27.4 Methods

60.27.5 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Checks whether class is available.
Notes: Returns true in MacOS 10.15 or newer.

60.27.6 Constructor(interestedEvents as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates the collection of event handlers for an update task uses to notify your app of its progress.
Notes: interestedEvents: The events for which the update task will call your closures for, contained in an option set.

60.27.7 Properties

60.27.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

60.27.9 Events

60.27.10 completionHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: The event that an update tasks uses to notify you when it is complete.

60.27.11 progressHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: The event an update task uses to notify your app.
Notes: The update task only uses this event for the events you specified in interestedEvents.

60.27.12 Constants

60.27.13 ProgressEventEpochEnd = 2

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the end of training epoch.

60.27.14 ProgressEventMiniBatchEnd = 4

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the end of a mini-batch within a training epoch.

60.27.15 ProgressEventTrainingBegin = 1

MBS Mac64bit Plugin, Plugin Version: 20.0.

Function: One of the progress event types.
Notes: An event that represents the start of training.

60.28 class MLUpdateTaskMBS

60.28.1 class MLUpdateTaskMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: A task that updates a model with additional training data.
Notes:

Use an MLUpdateTaskMBS to update a machine learning model on a user,Äôs device.

Available on MacOS 10.15 or newer.
Subclass of the MLTaskMBS class.

60.28.4 Methods

60.28.5 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an update task for your model, given its file URL, training data, and your completion handler.
Notes:

file: The location in the file system of a model file (ModelName.mlmodelc).
trainingData: The update data for the model, contained in a batch provider.
configuration: The model settings for a updated model object.

Calls later completionHandler event.
See also:

- 60.28.6 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, progressHandlers as MLUpdateProgressHandlersMBS, byref error as NSErrorMBS) 12405

60.28.6 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, progressHandlers as MLUpdateProgressHandlersMBS, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Creates an update task for your model, given its file URL, training data, and your progress handlers.
Notes:

file: The location in the file system of a model file (ModelName.mlmodelc).
trainingData: The update data for the model, contained in a batch provider.
configuration: The model settings for a updated model object.
progressHandlers: The closures the task calls during the update process.
See also:

- 60.28.5 Constructor(file as FolderItem, trainingData as MLArrayBatchProviderMBS, configuration as MLModelConfigurationMBS, byref error as NSErrorMBS) 12404

60.28.7 resumeWithParameters(updateParameters as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: All.

Function: Resumes a model update with updated parameter values.
Notes:

updateParameters: Model training parameter values to replace those currently set in the update task.

Use this method to resume the model update task with newer parameter values. You use this method within the closures you provide in an MLUpdateProgressHandlersMBS instance to resume the MLUpdateTaskMBS.

60.28.8 Events

60.28.9 completionHandler(context as MLUpdateContextMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: The complete event.
Notes: Called only if you use constructor without passing MLUpdateProgressHandlersMBS object, because if you use MLUpdateProgressHandlersMBS, the event is called there.

Chapter 61

CoreText

61.1 class CoreTextMBS

61.1.1 class CoreTextMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The central CoreText class.
Notes: Some global methods, constants and events for CoreText.

61.1.2 Blog Entries

- CoreText Completed

61.1.3 Blog Entries

- CoreText Completed

61.1.4 Methods

61.1.5 AvailableFontFamilyNames as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of visible font family names sorted for user interface display.

61.1.6 AvailableFontURLs as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font URLs.

61.1.7 AvailablePostScriptNames as string()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of unique PostScript font names for the fonts.

61.1.8 CompareFontFamilyNames(name1 as string, name2 as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: A comparator function to compare font family names and sort them according to Apple guidelines.
Notes:

family1: The first localized font family name to compare, as a string.
family2: The second localized font family name to compare, as a string.

Returns a CFComparisonResult value indicating the sort order for the two family names. kCFComparisonResultGreatherThan (1) if family1 is greater than family2, kCFComparisonResultLessThan (-1) if family1 is less than family2, and kCFComparisonResultEqualTo (0) if they are equal.

This CFComparatorFunction function compares font family names and sorts them in the Apple preferred order, accounting for foundry prefix. Family names with recognized prefixes are sorted after the unprefixed names in prefix order.

61.1.9 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The constructor.

61.1.10 CoreTextVersion as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the version of the CoreText framework.
Notes:

This function returns a number indicating the version of the CoreText framework. Note that framework version is not always an accurate indicator of feature availability. The recommended way to use this function is first to check that the function pointer is non nil (plugin will do and raise exceptions), followed by calling it and comparing its result to a defined constant (or constants).
Returns the version number. This value is for comparison with the constants beginning with kCTVersion-Number.

61.1.11 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a font descriptor representing the font in the supplied data.
Notes:

Note: the font descriptor is not available through font descriptor matching.

data: A memoryblock containing font data.

Returns a font descriptor created from the data, or nil on error.
See also:

- 61.1.12 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS 12409

61.1.12 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a font descriptor representing the font in the supplied data.
Notes:

Note: the font descriptor is not available through font descriptor matching.

data: A string containing font data.

Returns a font descriptor created from the data, or nil on error.
See also:

- 61.1.11 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS 12409

61.1.13 CreateFontDescriptorsFromFile(file as folderitem) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font descriptors representing each of the fonts in the specified file.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("Didot.ttc")

dim descriptor() as CTFontDescriptorMBS
dim result() as string

descriptor = CoreTextMBS.CreateFontDescriptorsFromFile(file)

for i as Integer = 0 to descriptor.Ubound
result.append descriptor(i).Displayname
next

MsgBox Join(result, EndOfLine)
```

Notes: file: A folderitem referencing a valid font file.

61.1.14 CreateFontDescriptorsFromURL(URL as string) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font descriptors representing each of the fonts in the specified URL.
Notes: URL: A file system URL referencing a valid font file.

61.1.15 Destructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The destructor.

61.1.16 EnableFontDescriptors(descriptors() as CTFontDescriptorMBS, enable as boolean)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Enables or disables the matching font descriptors for font descriptor matching.
Notes:

descriptors: Array of font descriptors.
enable: Boolean value indicating whether the fonts matching descriptors should be enabled for font descriptor matching.

61.1.17 GetScopeForFile(file as folderitem) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the registration scope of the specified folderitem.
Notes:

The registration scope of the specified file or kCTFontManagerScopeNone if not currently registered.
Available in OS X v10.6 and later.

61.1.18 GetScopeForURL(URL as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the registration scope of the specified URL.
Notes:

The registration scope of the specified URL or kCTFontManagerScopeNone if not currently registered.
Available in OS X v10.6 and later.

61.1.19 IsSupportedFontFile(file as folderitem) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines whether the referenced font data is supported on the current platform.
Notes: Returns true if the folderitem refers to a valid font that can be used on the current platform; false otherwise.

61.1.20 IsSupportedFontURL(URL as string) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines whether the referenced font data (usually by file URL) is supported on the current platform.
Notes: Returns true if the URL refers to a valid font that can be used on the current platform; false oth-

erwise.

61.1.21 kCTBaselineClassAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline class override.
Notes:

Value must be one of the kCTBaselineClass constants. Normally, glyphs on the line will be assigned baseline classes according to the 'bsln' or 'BASE' table in the font. This attribute may be used to change this assignment.

see also: kCTBaselineClassRoman, kCTBaselineClassIdeographicCentered, kCTBaselineClassIdeographicLow, kCTBaselineClassIdeographicHigh, kCTBaselineClassHanging, kCTBaselineClassMath.

61.1.22 kCTBaselineInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline info dictionary.
Notes: Value must be a CFDictionaryRef. Normally, baseline offsets will be assigned based on the 'bsln' or 'BASE' table in the font. This attribute may be used to assign different offsets. Each key in the dictionary is one of the kCTBaselineClass constants and the value is a number of the baseline offset in points. You only need to specify the offsets you wish to change.

61.1.23 kCTBaselineReferenceInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a baseline info dictionary for the reference baseline.
Notes: Value must be a Dictionary. All glyphs in a run are assigned a baseline class and then aligned to the offset for that class in the reference baseline baseline info. See the discussion of kCTBaselineInfoAttributeName for information about the contents of the dictionary. You can also use the kCTBaselineReferenceFont key to specify that the baseline offsets of a particular CTFontMBS should be used as the reference offsets.

61.1.24 kCTCharacterShapeAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Controls glyph selection.

Notes: Value must be a number. Default is value is 0 (disabled). A non-zero value is interpreted as an SFNT kCharacterShapeType selector + 1; see SFNTLayoutTypes.h for selectors. For example, an attribute value of 1 corresponds to kTraditionalCharactersSelector.

61.1.25 kCTFontAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key for the font.
Notes: Value must be a CTFontMBS. Default is Helvetica 12.

61.1.26 kCTFontManagerBundleIdentifier as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: CTFontManage bundle identifier.
Notes: The CTFontManager bundle identifier to be used with get or set global auto-activation settings.

61.1.27 kCTFontManagerErrorDomain as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The error domain for CoreText.
Notes: CFError objects with this domain have error codes corresponding to one of the CTFontManager-Error errors listed in "Font Registration Errors" and "Font Unregistration Errors."

61.1.28 kCTFontManagerErrorFontURLsKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: User info key to be used with CFError references returned from registration functions.
Notes: The value associated with this key in the user info dictionary of a CFError object is a CFArray of font URLs that failed with the given error.

61.1.29 kCTFontManagerRegisteredFontsChangedNotification as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Notification name for font registry changes.
Notes: This is the string to use as the notification name when subscribing to Core Text Font Manager

notifications. This notification is posted when fonts are added to the font registry. The client is responsible for registered with the distributed notification center to receive notifications for changes to the session or user scopes, and with a local notification center for changes to the process scope.

61.1.30 kCTFontSlantTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the slant trait value.
Notes: Use this key to access the normalized slant angle from the font traits dictionary. The value returned is a number representing a float value between -1.0 and 1.0 for normalized slant angle. The value or 0.0 corresponds to 0 degree clockwise rotation from the vertical and 1.0 corresponds to 30 degrees clockwise rotation.

61.1.31 kCTFontSymbolicTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the symbolic traits value.
Notes: Use this key to access the symbolic traits value from the font traits dictionary. The value is returned as a number.

61.1.32 kCTFontWeightTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the weight trait value.
Notes: Use this key to access the normalized weight trait from the font traits dictionary. The value returned is a number representing a float value between -1.0 and 1.0 for normalized weight. The value of 0.0 corresponds to the regular or medium font weight.

61.1.33 kCTFontWidthTrait as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Dictionary key to access the width (condense/expand) trait value.
Notes: Use this key to access the normalized proportion trait from the font traits dictionary. This value corresponds to the relative inter-glyph spacing for a given font. The value returned is a number representing a float between -1.0 and 1.0. The value of 0.0 corresponds to regular glyph spacing while negative values represent condensed glyph spacing.

61.1.34 kCTForegroundColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key for the foreground color..
Notes: Value must be a CGColorMBS. Default value is black.

61.1.35 kCTForegroundColorFromContextAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Never set a foreground color in the CGContext; use what is set as the context's fill color.

Value must be a boolean. Default is false. The reason why this exists is because an NSAttributedString defaults to a black color if no color attribute is set. This forces CoreText to set the color in the context. This will allow developers to sidestep this, making CoreText set nothing but font information in the CGContext. If set, this attribute also determines the color used by kCTUnderlineStyleAttributeName, in which case it overrides the foreground color.

61.1.36 kCTGlyphInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Allows the use of unencoded glyphs.
Value must be a CTGlyphInfoMBS. The glyph specified by this CTGlyphInfo object is assigned to the entire attribute range, provided that its contents match the specified base string and that the specified glyph is available in the font specified by kCTFontAttributeName.

61.1.37 kCTKernAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

A kerning adjustment.
Value must be a float. Default is standard kerning. The kerning attribute indicate how many points the following character should be shifted from its default offset as defined by the current character's font in

points; a positive kern indicates a shift farther along and a negative kern indicates a shift closer to the current character. If this attribute is not present, standard kerning will be used. If this attribute is set to 0.0, no kerning will be done at all.

61.1.38 kCTLanguageAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Specifies text language.

Value must be a String containing a locale identifier. Default is unset. When this attribute is set to a valid identifier, it will be used to select localized glyphs (if supported by the font) and locale-specific line breaking rules.

61.1.39 kCTLigatureAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Controls ligature formation.

Value must be a number. Default is int value 1. The ligature attribute determines what kinds of ligatures should be used when displaying the string. A value of 0 indicates that only ligatures essential for proper rendering of text should be used, 1 indicates that standard ligatures should be used, and 2 indicates that all available ligatures should be used. Which ligatures are standard depends on the script and possibly the font. Arabic text, for example, requires ligatures for many character sequences, but has a rich set of additional ligatures that combine characters. English text has no essential ligatures, and typically has only two standard ligatures, those for "fi" and "fl" – all others being considered more advanced or fancy.

On iOS releases prior to 6.0 essential ligatures are applied if the font contains glyphs for any of U+FB00 through U+FB04 and the font lacks AAT or OpenType shaping tables, but as of 6.0 shaping tables (or the lack thereof) are treated as definitive. This character-based shaping will still be performed if this attribute is explicitly specified with the default value of 1.

61.1.40 kCTParagraphStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

A CTParagraphStyle object which is used to specify things like line alignment, tab rulers, writing direction, etc.
Value must be a CTParagraphStyleMBS. Default is an empty CTParagraphStyle object.

61.1.41 kCTRunDelegateAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Allows customization of certain aspects of a range of text's appearance.

Value must be a CTRunDelegateMBS. The values returned by the embedded object for an attribute range apply to each glyph resulting from the text in that range. Because an embedded object is only a display-time modification, care should be taken to avoid applying this attribute to a range of text with complex behavior, such as a change of writing direction, combining marks, etc. Consequently, it is recommended that this attribute be applied to a range containing the single character U+FFFC.

61.1.42 kCTStrokeColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

The stroke color.
Value must be a CGColorMBS. Default is the foreground color.

61.1.43 kCTStrokeWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

The stroke width.
Value must be a number. Default value is 0.0, or no stroke. This attribute, interpreted as a percentage of font point size, controls the text drawing mode: positive values effect drawing with stroke only; negative values are for stroke and fill. A typical value for outlined text is 3.0.

61.1.44 kCTSuperscriptAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Controls vertical text positioning.
Value must be a number. Default is int value 0. If supported by the specified font, a value of 1 enables superscripting and a value of -1 enables subscripting.

61.1.45 kCTUnderlineColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

The underline color.
Value must be a CGColorMBS. Default is the foreground color.

61.1.46 kCTUnderlineStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Allows the setting of an underline to be applied at render time.

Value must be a number. Default is kCTUnderlineStyleNone. Set a value of something other than kCTUnderlineStyleNone to draw an underline. In addition, the CTUnderlineStyleModifiers can be used to modify the look of the underline. The underline color will be determined by the text's foreground color.

61.1.47 kCTVerticalFormsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Controls glyph orientation.

Value must be a boolean. Default is false. A value of false indicates that horizontal glyph forms are to be used, true indicates that vertical glyph forms are to be used.

61.1.48 kCTWritingDirectionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for font attributes.
Notes:

Specifies a bidirectional override or embedding.

Value must be a CFArray of CFNumberRefs, each of which should have a value of either kCTWritingDirectionLeftToRight or kCTWritingDirectionRightToLeft, plus one of kCTWritingDirectionEmbedding or kCTWritingDirectionOverride. This array represents a sequence of nested bidirectional embeddings or overrides, in order from outermost to innermost, with (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionEmbedding) corresponding to a LRE/PDF pair in plain text or in HTML, (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionEmbedding) corresponding to a RLE/PDF pair in plain text or a in HTML, (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionOverride) corresponding to a LRO/PDF pair in plain text or <bdo dir="ltr">in HTML, and (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionOverride) corresponding to a RLO/PDF pair in plain text or <bdo dir="rtl">in HTML.

61.1.49 MatchFontDescriptorsWithProgressHandler(descriptors() as CTFontDescriptorMBS, mandatoryAttributes() as string, tag as Variant = nil) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Matches font descriptors in background.
Notes:

This function returns immediately, but can potentially take long time to process. The progress is notified via progress evnet.

descriptors: An array of descriptors to process.
mandatoryAttributes: some mandatory attributes.
Returns false if it couldn't start the work.

61.1.50 RegisterFontsForFile(file as folderitem, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes:

fontURL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: a CFError object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.

61.1.51 RegisterFontsForFiles(files() as folderitem, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes:

files: Array of font files.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller. Can be nil.

Returns true if registration of all font URLs was successful, otherwise false.

61.1.52 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes:

fontURL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: a CFError object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.
See also:

- 61.1.53 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean 12421

61.1.53 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.
Notes:

URLs: Array of font URLs.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: Array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller. Can be nil.

Returns true if registration of all font URLs was successful, otherwise false.
See also:

- 61.1.52 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean 12420

61.1.54 RegisterGraphicsFont(font as CGFontMBS, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Registers the specified graphics font with the font manager.
Notes:

font: The graphics font to be registered.
error: Returns by indirection an error object in the case of failed registration.

Returns true if registration of the font was successful, otherwise false.

Registered fonts are discoverable through font descriptor matching. Any attempt to register a font that is either already registered or contains the same Postscript of an already registered font will fail. This behavior is useful for fonts that may be embedded in documents or constructed in memory. A graphics font is obtained by calling CGFontMBS.CreateWithDataProvider. Fonts that are backed by files should be registered using CoreTextMBS.RegisterFontsForURL.

61.1.55 UnregisterFontsForFile(file as folderitem, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes:

URL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

61.1.56 UnregisterFontsForFiles(files() as folderitem, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes:

files: Array of font folderitems.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.

61.1.57 UnregisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes:

URL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

61.1.58 UnregisterFontsForURLs(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.
Notes:

URLs: Array of font URLs.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.

61.1.59 UnregisterGraphicsFont(font as CGFontMBS, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Unregisters the specified graphics font with the font manager.
Notes:

font: The graphics font to be unregistered.

error: Returns by indirection an error object in the case of failed unregistration.

Returns true if unregistration of the font was successful, otherwise false.

Unregistered fonts are no longer discoverable through font descriptor matching. Fonts that are backed by files should be unregistered using CTFontManagerUnregisterFontsForURL.

61.1.60 Properties

61.1.61 AutoActivationSetting(BundleID as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The auto-activation setting for the specified bundle identifier.
Notes:

bundleID: The bundle identifier used to specify a particular application bundle. If "", the current application bundle is used. If kCTFontManagerBundleIdentifier is specified, sets global auto-activation.
(Read and Write computed property)

61.1.62 Events

61.1.63 FontCollectionSortDescriptors(first as CTFontDescriptorMBS, second as CTFontDescriptorMBS, tag as Variant) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: The event to sort font descriptors..
Notes:

This callback can be specified to obtain the matching font descriptors of a collection in sorted order. Return the appropriate comparison result of first descriptor to second descriptor.

Return -1 if smaller, 0 if equal or 1 if bigger.

61.1.64 Progress(state as Integer, progressParameter as Dictionary, tag as Variant) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Progress was made for a call to MatchFontDescriptorsWithProgressHandler.

Notes: Return true to continue, and return false to cancel the process.

61.1.65 Constants

61.1.66 kCTFontClassClarendonSerifs = & H040000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Clarendon Serifs

61.1.67 kCTFontClassFreeformSerifs = & H070000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Freeform Serifs

61.1.68 kCTFontClassMaskShift = 28

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes:

The font class shift.
This is used to shift the font class to the upper most 4 bits of the symbolic traits.

61.1.69 kCTFontClassModernSerifs = & H030000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Modern Serifs

61.1.70 kCTFontClassOldStyleSerifs = & H010000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: OldStyleSerifs

61.1.71 kCTFontClassOrnamentals = & H090000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Ornamentals

61.1.72 kCTFontClassSansSerif = & H080000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Sans Serif

61.1.73 kCTFontClassScripts = & H0A0000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Scripts

61.1.74 kCTFontClassSlabSerifs = & H050000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Slab Serifs

61.1.75 kCTFontClassSymbolic = & H0C0000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Symbolic

61.1.76 kCTFontClassTransitionalSerifs = & H020000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Transitional Serifs

61.1.77 kCTFontClassUnknown = & H000000000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font class constants.
Notes: Unknown

61.1.78 kCTFontManagerAutoActivationDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the auto-activation constants.
Notes: Default auto-activation setting. When specified, the application uses the global setting.

61.1.79 kCTFontManagerAutoActivationDisabled = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the auto-activation constants.
Notes: Disables auto-activation.

61.1.80 kCTFontManagerAutoActivationEnabled = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the auto-activation constants.
Notes: Enables auto-activation.

61.1.81 kCTFontManagerAutoActivationPromptUser = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the auto-activation constants.
Notes: Requires user input for auto-activation. A dialog is presented to the user to confirm auto-activation of the font.

61.1.82 kCTFontManagerErrorAlreadyRegistered = 105

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the activation errors.
Notes: The file has already been registered in the specified scope.

61.1.83 kCTFontManagerErrorFileNotFound = 101

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the activation errors.
Notes: The file does not exist at the specified URL.

61.1.84 kCTFontManagerErrorInsufficientPermissions = 102

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the activation errors.
Notes: Cannot access the file due to insufficient permissions.

61.1.85 kCTFontManagerErrorInUse = 202

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the errors that would prevent unregistration of fonts for a specified font file URL.
Notes: The font file is actively in use and cannot be unregistered.

61.1.86 kCTFontManagerErrorInvalidFontData = 104

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the activation errors.
Notes: The file contains invalid font data that could cause system problems.

61.1.87 kCTFontManagerErrorNotRegistered = 201

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the errors that would prevent unregistration of fonts for a specified font file URL.
Notes: The file is not registered in the specified scope.

61.1.88 kCTFontManagerErrorSystemRequired = 202

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the errors that would prevent unregistration of fonts for a specified font file URL.
Notes: The file is required by the system and cannot be unregistered.

61.1.89 kCTFontManagerErrorUnrecognizedFormat = 103

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the activation errors.
Notes: The file is not a recognized or supported font file format.

61.1.90 kCTFontManagerScopeNone = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for font registration scope.
Notes: No scope is defined.

61.1.91 kCTFontManagerScopeProcess = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for font registration scope.
Notes: The font is available to the current process for the duration of the process unless directly unregistered.

61.1.92 kCTFontManagerScopeSession = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for font registration scope.
Notes: The font is available to the current user session but will not be available in subsequent sessions.

61.1.93 kCTFontManagerScopeUser = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for font registration scope.
Notes: The font is available to all processes for the current user session and will be available in subsequent sessions unless unregistered.

61.1.94 kCTFontTraitBold = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Bold.
Additional detail available via kCTFontWeightTrait

61.1.95 kCTFontTraitClassMask = 4026531840

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes: Mask for the font class

61.1.96 kCTFontTraitColorGlyphs = 8192

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes: Color bitmap glyphs are available.

61.1.97 kCTFontTraitComposite = 16384

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Composite
The font is a CFR (Composite font reference), a cascade list is expected per font.

61.1.98 kCTFontTraitCondensed = 64

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Condensed
Additional detail available via kCTFontWidthTrait

61.1.99 kCTFontTraitExpanded = 32

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Expanded
Expanded and condensed traits are mutually exclusive

61.1.100 kCTFontTraitItalic = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Italic
Additional detail available via kCTFontSlantTrait

61.1.101 kCTFontTraitMonoSpace = 1024

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

MonoSpace
Use fixed-pitch glyphs if available. May have multiple glyph advances (most CJK glyphs may contain two spaces)

61.1.102 kCTFontTraitUIOptimized = 4096

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

UI optimized
Synthesize appropriate attributes for UI rendering such as control titles if necessary

61.1.103 kCTFontTraitVertical = 2048

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants for Symbolic representation of stylistic font attributes.
Notes:

Vertical
Use vertical glyph variants and metrics.

61.1.104 kCTUnderlinePatternDash = & h0200

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline pattern.
Notes: Dash

61.1.105 kCTUnderlinePatternDashDot = & h0300

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline pattern.
Notes: Dash Dot

61.1.106 kCTUnderlinePatternDashDotDot = & h0400

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline pattern.
Notes: Dash Dot Dot

61.1.107 kCTUnderlinePatternDot = & h0100

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline pattern.
Notes: Dot

61.1.108 kCTUnderlinePatternSolid = & h0000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline pattern.
Notes: Solid

61.1.109 kCTUnderlineStyleDouble = 9

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline type specifiers.
Notes: Double underlined.

61.1.110 kCTUnderlineStyleNone = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline type specifiers.
Notes: Not underlined.

61.1.111 kCTUnderlineStyleSingle = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline type specifiers.
Notes: Single underlined.

61.1.112 kCTUnderlineStyleThick = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the underline type specifiers.
Notes: Thick underlined.

61.1.113 kCTVersionNumber10_5 = & h00020000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.5

61.1.114 kCTVersionNumber10_5_2 = & h00020001

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.5.2

61.1.115 kCTVersionNumber10_5_3 = & h00020002

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.5.3

61.1.116 kCTVersionNumber10_5_5 = & h00020003

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.5.5

61.1.117 kCTVersionNumber10_6 = & h00030000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.6

61.1.118 kCTVersionNumber10_7 = & h00040000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.7

61.1.119 kCTVersionNumber10_8 = & h00050000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.8

61.1.120 kCTVersionNumber10_9 = & h00060000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the version constants.
Notes: Mac OS X 10.9

61.1.121 kCTWritingDirectionEmbedding = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values for kCTWritingDirectionAttributeName attribute.

61.1.122 kCTWritingDirectionOverride = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values for kCTWritingDirectionAttributeName attribute.

61.2 class CTFontCollectionMBS

61.2.1 class CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The CTFontCollection opaque type represents a font collection, that is, a group of font descriptors taken together as a single object.
Notes:

Font collections provide the capabilities of font enumeration, access to global and custom font collections, and access to the font descriptors comprising the collection.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.2.2 Blog Entries

- CoreText Completed

61.2.3 Blog Entries

- CoreText Completed

61.2.4 Methods

61.2.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.2.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

61.2.7 CopyWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a copy of the original collection augmented with the given new font descriptors.
Notes:

queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
Available in OS X v10.5 and later.

61.2.8 CreateCopyWithFontDescriptors(original as CTFontCollectionMBS, queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a copy of the original collection augmented with the given new font descriptors.
Notes:

queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
Available in OS X v10.5 and later.

61.2.9 CreateFromAvailableFonts(options as Dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a new font collection containing all available fonts.
Notes:

options: The options dictionary.

Returns a new collection containing all fonts available to the current application.

61.2.10 CreateWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a new collection based on the array of font descriptors.
Notes:

An array of font descriptors to use for matching.

options: The options dictionary. See constant option keys.
Returns this function creates a new collection based on the provided font descriptors. The contents of this collection is defined by matching the provided descriptors against all available font descriptors.

61.2.11 ExclusionDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of descriptors to exclude from the match.

61.2.12 FontAttribute(attributeName as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptor attribute values.
Notes:

attributeName: The attribute to retrieve for each descriptor in the collection.
options: Options to alter the return value.

This function returns a retained reference to an array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.
See also:

- 61.2.13 FontAttribute(attributeNames() as string, options as Integer) as Dictionary() 12440

61.2.13 FontAttribute(attributeNames() as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of dictionaries containing font descriptor attribute values.
Notes: This function returns a retained reference to a array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.
See also:

- 61.2.12 FontAttribute(attributeName as string, options as Integer) as Dictionary() 12439

61.2.14 kCTFontCollectionDisallowAutoActivationOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes:

Option key to avoid auto-activating fonts.
Specify this option key in the options dictionary with a non-zero value to disallow searches for missing fonts (font descriptors returning no results).

61.2.15 kCTFontCollectionIncludeDisabledFontsOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes: Specify this option key in the options dictionary with a non-zero value to enable matching of disabled fonts. You can pass font descriptors specifying disabled fonts to CTFontManagerEnableFontDescriptors, but you cannot use such a font descriptor to query font attributes from the system database or create a CTFontMBS.

61.2.16 kCTFontCollectionRemoveDuplicatesOption as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Collection Matching Options.
Notes: Option key to specify filtering of duplicates.

61.2.17 MatchingFontDescriptors(options as dictionary = nil) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptors matching the collection.

61.2.18 MatchingFontDescriptorsForFamily(familyName as string, options as dictionary = nil) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of font descriptors matching the specified family, one descriptor for each style in the collection.

61.2.19 MatchingFontDescriptorsSorted(tag as Variant) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of matching font descriptors sorted with the callback function.
Notes:

This function returns an array of font descriptors matching the criteria of the collection and sorted by the results of the sorting callback function.

Calls FontCollectionSortDescriptors in CoreTextMBS class.

61.2.20 MutableCopy as CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a mutable copy of the original collection.

61.2.21 QueryDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the array of descriptors to match.

61.2.22 Constants

61.2.23 kCTFontCollectionCopyDefaultOptions = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Bulk attribute access.
Notes:

Passing this option indicates that defaults are to be used.
Available in OS X v10.7 and later.

61.2.24 kCTFontCollectionCopyStandardSort = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Bulk attribute access.
Notes:

Passing this option indicates that the return values should be sorted in standard UI order, suitable for display to the user. This is the same sorting behavior used by NSFontPanel and Font Book.
Available in OS X v10.7 and later.

61.2.25 kCTFontCollectionCopyUnique = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Bulk attribute access.
Notes:

Passing this option indicates that duplicate values should be removed from the results.
Available in OS X v10.7 and later.

61.3 class CTFontDescriptorMBS

61.3.1 class CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFontDescriptor opaque type represents a font descriptor, that is, a dictionary of attributes (such as name, point size, and variation) that can completely specify a font.
Notes:

A font descriptor can be an incomplete specification, in which case the system chooses the most appropriate font to match the given attributes.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.3.2 Blog Entries

- CoreText Completed

61.3.3 Blog Entries

- CoreText Completed

61.3.4 Methods

61.3.5 AttributeValue(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value associated with an arbitrary attribute.
Notes:

key: The requested attribute.

Returns a attribute value, or nil if the requested attribute is not present.

61.3.6 AttributeValues as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attributes dictionary of the font descriptor.
Notes: The font descriptor attributes dictionary. This dictionary contains the minimum number of at-

tributes to specify fully this particular font descriptor.

61.3.7 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.3.8 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.3.9 CopyWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a copy of the original font descriptor with new attributes.
Notes:

attributes: A dictionary containing arbitrary attributes.

Returns a new copy of the original font descriptor with attributes augmented by those specified. If there are conflicts between attributes, the new attributes replace existing ones.

61.3.10 CopyWithFamily(family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor in the specified family based on the traits of the original descriptor.
Notes:

family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.

61.3.11 CopyWithFeature(featureTypeIdentifier as Integer, featureSelectorIdentifier as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a font descriptor with new feature settings.
Notes:

featureTypeIdentifier: The feature type identifier.
featureSelectorIdentifier: The feature selector identifier.

Returns a copy of the original font descriptor modified with the given feature settings.
This is a convenience method to toggle more easily the state of individual features.

61.3.12 CopyWithSymbolicTraits(symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor based on the original descriptor having the specified symbolic traits.
Notes:

symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

61.3.13 CopyWithVariation(variationIdentifier as Integer, variationValue as Double) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a copy of the original font descriptor with a new variation instance.
Notes:

variationIdentifier: The variation axis identifier. This is the four-character code of the variation axis as a number.
variationValue: The value corresponding with the variation instance.

Returns a copy of the original font descriptor with a new variation instance.
This is a convenience method for easily creating new variation font instances.

61.3.14 CreateCopyWithFamily(orignal as CTFontDescriptorMBS, family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor in the specified family based on the traits of the original descriptor.
Notes:

original: The original font descriptor reference.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.

61.3.15 CreateCopyWithSymbolicTraits(orignal as CTFontDescriptorMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font descriptor based on the original descriptor having the specified symbolic traits.
Example:

```
// find PostScript names for a font
const nameOfAFont = "Arial"

dim FontName as string
dim FontFamilyName as string
dim FontPostscriptName as string
dim FontPostscriptNameBold as string
dim FontPostscriptNameItalic as string

dim f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)

if f <>nil then
FontName = f.FullName
FontFamilyName = f.FamilyName
FontPostscriptName = f.PostScriptName

dim d as CTFontDescriptorMBS = f.FontDescriptor
```

```
dim db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitBold, CoreTextMBS.kCTFontTraitBold)
dim di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitItalic, CoreTextMBS.kCTFontTraitItalic)

dim fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
dim fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

FontPostscriptNameBold = fb.PostScriptName
FontPostscriptNameItalic = fi.PostScriptName

end if

Break // read names in debugger
```

Notes:

original: The original font descriptor reference.
symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

Requires Mac OS X 10.9 or newer.

61.3.16 CreateWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font descriptor reference from a dictionary of attributes.
Notes: The provided attribute dictionary can contain arbitrary attributes that are preserved; however, unrecognized attributes are ignored on font creation and and may not be preserved over the round trip from descriptor to font and back to descriptor.

61.3.17 CreateWithNameAndSize(Name as string, Size as Double = 0.0) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font descriptor with the provided PostScript name and size.
Example:

```
dim c as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateWithNameAndSize("Times", 12)
MsgBox c.AttributeValue(c.kCTFontFamilyNameAttribute)
```

Notes:

name: The PostScript name to be used for the font descriptor as a string.
size: The point size. If 0.0, the font size attribute (kCTFontSizeAttribute) is omitted from the returned font descriptor.

Return sa new font descriptor reference with the given PostScript name and point size.

61.3.18 kCTFontBaselineAdjustAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the baseline adjustment for a font reference. This is primarily used when defining font descriptors for a cascade list to keep the baseline of all fonts even. The value associated with this is a float represented as a number.

61.3.19 kCTFontCascadeListAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the cascade list used for a font reference. The cascade list is a array containing CTFontDescriptorMBS elements. If unspecified, the global cascade list is used.

61.3.20 kCTFontCharacterSetAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify or obtain the Unicode character coverage set for a font reference. The value for this

key is a CharacterSetMBS object. If specified, this attribute can be used to restrict the font to a subset of its actual character set. If unspecified, this attribute is ignored and the actual character set is used.

61.3.21 kCTFontDescriptorMatchingCurrentAssetSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A number. Total downloaded byte size. Valid during Downloading state.

61.3.22 kCTFontDescriptorMatchingDescriptors as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes:

Array of descriptors to be queried.
Valid while downloading or when state is kCTFontDescriptorMatchingWillBeginQuerying.

61.3.23 kCTFontDescriptorMatchingError as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A CFErrorMBS; Valid when state kCTFontDescriptorMatchingDidFailWithError.

61.3.24 kCTFontDescriptorMatchingPercentage as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A Number; Download progress in 0 - 100. Valid during Downloading state.

61.3.25 kCTFontDescriptorMatchingResult as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes:

Array of matched font descriptors.
Valid when state is kCTFontDescriptorMatchingDidMatch or CTFontDescriptorMatchingEnd.

61.3.26 kCTFontDescriptorMatchingSourceDescriptor as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes:

A CTFontDescriptorMBS; The current font descriptor.
Valid when state is kCTFontDescriptorMatchingDidMatch.

61.3.27 kCTFontDescriptorMatchingTotalAssetSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes:

A Number; Total byte size to download.
Always valid, but may be Zero when information is not available.

61.3.28 kCTFontDescriptorMatchingTotalDownloadedSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys for progressParameter dictionary.
Notes: A Number; Total downloaded byte size. Valid during Downloading state.

61.3.29 kCTFontDisplayNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the name used to display the font. Most commonly this is the full name. The value associated with this key is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to the global font cascade list.

61.3.30 kCTFontDownloadableAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

The font downloadable state.
The value associated with this key is a Boolean. If it is true, CoreText attempts to download a font if necessary when matching a descriptor.

61.3.31 kCTFontEnabledAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to obtain the font enabled state. The returned value is an integer represented as a number representing a Boolean value. Unregistered font descriptors return nil, which is equivalent to false.
Available in OS X v10.6 and later.

61.3.32 kCTFontFamilyNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the font family name from the font descriptor. The value associated with this key is a string.

61.3.33 kCTFontFeaturesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the font features for a font reference. The value associated with this key is a array containing font feature dictionaries. This feature list contains the feature information from the 'feat' table of the font. For more information, see Features.
Available in OS X v10.5 and later.

61.3.34 kCTFontFeatureSettingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the font features settings for a font reference. The value associated with this key is a CFArrayRef object containing font feature-setting dictionaries. A feature-setting dictionary contains a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting should be turned on. In the case of duplicate or conflicting setting, the last setting in the list takes precedence. It is the caller's responsibility to handle exclusive and nonexclusive settings as necessary.
Available in OS X v10.5 and later.

61.3.35 kCTFontFixedAdvanceAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify a fixed advance to be used for a font reference. If present and specified, this attribute is used to specify a constant advance to override any font values. The value associated with this key is a float represented as a number.
Available in OS X v10.5 and later.

61.3.36 kCTFontFormatAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the recognized format of the font. The value associated with this key is an integer represented as a number containing one of the constants in "Font Format Constants."
Available in OS X v10.6 and later.

61.3.37 kCTFontLanguagesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain a list of covered languages for a font reference. The value for this key is an array containing string elements. If specified, this attribute restricts the search to matching fonts that support the specified languages. The language identifier string should conform to the RFC 3066bis standard. If unspecified, this attribute is ignored.
Available in OS X v10.5 and later.

61.3.38 kCTFontMacintoshEncodingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the Macintosh encodings for a font reference. The value associated with this key is a number containing a bit field of the Macintosh encodings. This attribute is provided for legacy compatibility.
Available in OS X v10.5 and later.

61.3.39 kCTFontMatrixAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify the font transformation matrix when creating a font. If unspecified it defaults to the unit matrix. The value for this key is a Memoryblock object containing a CGAffineTransform.

61.3.40 kCTFontNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the PostScript name from the font descriptor. The value associated with this key is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to the global font cascade list.

61.3.41 kCTFontOrientationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to specify a particular orientation for the glyphs of the font. The value associated with this key is an integer represented as a number containing one of the constants in "Font Orientation Constants." If you want to receive vertical metrics from a font for vertical rendering, specify kCTFontVerticalOrientation.

If unspecified, the font uses its native orientation.

61.3.42 kCTFontPriorityAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the font priority used by font descriptors when resolving duplicates and sorting match results. The value associated with this key is an integer represented as a CFNumberRef object containing one of the values enumerated in "Font Priority Constants." The higher the value, the higher the priority of the font. Only registered fonts have a priority. Unregistered font descriptors return nil.
Available in OS X v10.6 and later.

61.3.43 kCTFontRegistrationScopeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key to specify or obtain the font descriptor's registration scope. The value associated with this key is an integer represented as a number containing one of the CTFontManagerScope enumerated values. A value of nil can be returned for font descriptors that are not registered.
Available in OS X v10.6 and later.

61.3.44 kCTFontSizeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to obtain or specify the font point size. Creating a font with this unspecified will default to a point size of 12.0. The value for this key is represented as a number.

61.3.45 kCTFontStyleNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the style name of the font. This name represents the designer's description of the

font's style. The value associated with this key is a string.

61.3.46 kCTFontTraitsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key for accessing the dictionary of font traits for stylistic information. See "Font Traits" for the list of font traits. The value associated with this key is a dictionary.

61.3.47 kCTFontURLAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes:

Key for accessing the font URL from the font descriptor. The value associated with this key is an URL string.
Available in OS X v10.6 and later.

61.3.48 kCTFontVariationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants keys for accessing font attributes from a font descriptor.
Notes: Key to obtain the font variation dictionary instance as a dictionary object. If specified in a font descriptor, fonts with the specified axes are primary match candidates; if no such fonts exist, this attribute is ignored.

61.3.49 LocalizedAttributeValue(key as string, byref lang as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a localized value for the requested attribute, if available.
Notes:

key: The requested font attribute.
lang: On output, contains a reference to the matched language. The language identifier will conform to the RFC 3066bis standard.

Returns a localized attribute value based on the global language list.

This function passes back the matched language in language. If localization is not possible for the attribute, the behavior matches the value returned from AttributeValue. Generally, localization of attributes is applicable to name attributes of only a normalized font descriptor.

61.3.50 MatchingFontDescriptor(mandatoryAttributes() as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the single preferred matching font descriptor based on the original descriptor and system precedence.
Notes:

mandatoryAttributes: A set of attribute keys which must be identically matched in any returned font descriptors.

Returns a normalized font descriptor matching the attributes present in descriptor.

The original descriptor may be returned in normalized form. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.

61.3.51 MatchingFontDescriptors(mandatoryAttributes() as String) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of normalized font descriptors matching the provided descriptor.
Notes:

mandatoryAttributes: A set of attribute keys that must be identically matched in any returned font descriptors.

Returns an array of normalized font descriptors matching the attributes present in descriptor.

If descriptor itself is normalized, then the array will contain only one item: the original descriptor. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.

61.3.52 Properties

61.3.53 DisplayName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The display name.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.DisplayName
```

Notes: (Read only property)

61.3.54 FamilyName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The family name.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.FamilyName
```

Notes: (Read only property)

61.3.55 File as FolderItem

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font file.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.file.NativePath
```

Notes: (Read only property)

61.3.56 FontSize as Double

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font size.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox str(d.FontSize)
```

Notes:

Can be zero if unknown.
(Read only property)

61.3.57 Name as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The PostScript name.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.Name
```

Notes:

When matching, this is treated more generically: the system first tries to find fonts with this PostScript name. If none is found, the system tries to find fonts with this family name, and, finally, if still nothing, tries to find fonts with this display name.
(Read only property)

61.3.58 StyleName as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The style name.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.StyleName
```

Notes:

This name represents the designer's description of the font's style.
Can be empty if unknown.
(Read only property)

61.3.59 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font URL.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.URL
```

Notes: (Read only property)

61.3.60 Constants

61.3.61 kCTFontDescriptorMatchingDidBegin = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called once at the beginning.

61.3.62 kCTFontDescriptorMatchingDidFailWithError = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called when an error occurred. (may be called multiple times.)

61.3.63 kCTFontDescriptorMatchingDidFinish = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called once at the end.

61.3.64 kCTFontDescriptorMatchingDidFinishDownloading = 6

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: Finished downloading a descriptor.

61.3.65 kCTFontDescriptorMatchingDidMatch = 7

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called when font descriptor is matched.

61.3.66 kCTFontDescriptorMatchingDownloading = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: Downloading a descriptor.

61.3.67 kCTFontDescriptorMatchingStalled = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called when stalled. (e.g. while waiting for server response.)

61.3.68 kCTFontDescriptorMatchingWillBeginDownloading = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes:

Starts downloading a descriptor.
Downloading part may be skipped if all the assets are already downloaded

61.3.69 kCTFontDescriptorMatchingWillBeginQuerying = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font matching states.
Notes: called once before talking to the server. Skipped if not necessary.

61.3.70 kCTFontFormatBitmap = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is a bitmap only format.

61.3.71 kCTFontFormatOpenTypePostScript = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is an OpenType format containing PostScript data

61.3.72 kCTFontFormatOpenTypeTrueType = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is an OpenType format containing TrueType data.

61.3.73 kCTFontFormatPostScript = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is a recognized PostScript format.

61.3.74 kCTFontFormatTrueType = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is a recognized TrueType format.

61.3.75 kCTFontFormatUnrecognized = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font format constants.
Notes: The font is not a recognized format

61.3.76 kCTFontOrientationDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the orientation constants.
Notes: Default

61.3.77 kCTFontOrientationHorizontal = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the orientation constants.
Notes: Horizontal

61.3.78 kCTFontOrientationVertical = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the orientation constants.
Notes: Vertical

61.3.79 kCTFontPriorityComputer = 30000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of computer local fonts (located in /Library/Fonts).

61.3.80 kCTFontPriorityDynamic = 50000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of fonts registered dynamically, not located in a standard location (either kCTFontManagerScopeUser, or kCTFontManagerScopeSession).

61.3.81 kCTFontPriorityNetwork = 20000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of network fonts (located in /Network/Library/Fonts).

61.3.82 kCTFontPriorityProcess = 60000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of fonts registered for the process (kCTFontManagerScopeProcess).

61.3.83 kCTFontPrioritySystem = 10000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of system fonts (located in /System/Library/Fonts).

61.3.84 kCTFontPriorityUser = 40000

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font priorities constants.
Notes: Priority of local fonts (located in user's Library/Fonts).

61.4 class CTFontMBS

61.4.1 class CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFont opaque type represents a Core Text font object.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("times", 10)
MsgBox c.FullName
```

Notes:

Font objects represent fonts to an application, providing access to characteristics of the font, such as point size, transform matrix, and other attributes. Fonts provide assistance in laying out glyphs relative to one another and are used to establish the current font when drawing in a graphics context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.4.4 Methods

61.4.5 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the advances for an array of glyphs and returns the summed advance.
Notes:

font: The font reference.
orientation
The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
advances: An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.
See also:

- 61.4.6 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double 12466

61.4.6 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the advances for an array of glyphs and returns the summed advance.
Notes:

font: The font reference.
orientation
The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
advances: An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.

See also:

- 61.4.5 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double 12466

61.4.7 AttributeValue(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the value associated with an arbitrary attribute of the given font.
Notes:

key: The requested attribute.

Returns attribute value or nil if the requested attribute is not present.
Available in OS X v10.5 and later.

61.4.8 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.4.9 AvailableTables(options as Integer) as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font table tags.
Notes:

options: The font table options.

Returns an array of Font Table Tag Constants values for the given font and the supplied options.
Available in OS X v10.5 and later.

61.4.10 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.

Notes:

font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 61.4.11 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS 12468

61.4.11 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.
Notes:

font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 61.4.10 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS 12467

61.4.12 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.4.13 CreateCopyWithAttributes(size as Double, Matrix as CGAffineTransformMBS, fontAttributes as CTFontDescriptorMBS) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font with additional attributes based on the original font.
Example:

```
// find PostScript names for a font
const nameOfAFont = "Arial"

dim FontName as string
dim FontFamilyName as string
dim FontPostscriptName as string
dim FontPostscriptNameBold as string
dim FontPostscriptNameItalic as string

dim f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)

if f <>nil then
FontName = f.FullName
FontFamilyName = f.FamilyName
FontPostscriptName = f.PostScriptName

dim d as CTFontDescriptorMBS = f.FontDescriptor

dim db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitBold, CoreTextMBS.kCTFontTraitBold)
dim di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCT-
FontTraitItalic, CoreTextMBS.kCTFontTraitItalic)

dim fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
dim fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

FontPostscriptNameBold = fb.PostScriptName
FontPostscriptNameItalic = fi.PostScriptName

end if

Break // read names in debugger
```

Notes:

size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
fontAttributes: A font descriptor containing additional attributes that the new font should contain.

Returns a new font reference converted from the original with the specified attributes.

This function provides a mechanism to change attributes quickly on a given font reference in response to user actions. For instance, the size can be changed in response to a user manipulating a size slider.
Available in OS X v10.5 and later.

61.4.14 CreateForString(text as string, location as Integer, length as Integer) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference that can best map the given string range based on the current font.
Notes:

string: A unicode string containing characters that cannot be encoded by the current font.
location and length: The range of the string that needs to be mapped.

Returns the best substitute font from the cascade list of the current font that can encode the specified string range. If the current font is capable of encoding the string range, then it is retained and returned.

61.4.15 CreatePathForGlyph(glyph as Integer, transform as CGAffineTransformMBS) as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a path for the specified glyph.
Notes:

glyph: The glyph.
transform: An affine transform applied to the path. Can be nil. If nil, CGAffineTransformIdentity is used.

Returns a CGPath object containing the glyph outlines, nil on error. Must be released by caller.

Creates a path from the outlines of the glyph for the specified font. The path reflects the font point size, matrix, and transform parameter, applied in that order. The transform parameter is most commonly be used to provide a translation to the desired glyph origin.

61.4.16 CreateUIFontForLanguage(Type as Integer, size as Double = 0.0, language as string = "") as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the special user-interface font for the given language and user-interface type.
Notes:

Type: A constant specifying the intended user-interface use for the requested font reference. See Enumerations for possible values.
size: The point size for the font reference. If 0.0 is specified, the default size for the requested user-interface type is used.
language: Language specifier string to select a font for a particular localization. If "" is specified, the current system language is used. The format of the language identifier should conform to the RFC 3066bis standard.

Returns the correct font for various user-interface uses.
The only required parameter is the Type selector; the other parameters have default values.

61.4.17 CreateWithFamily(size as Double, Matrix as CGAffineTransformMBS, family as string) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font in the specified family based on the traits of the original font.
Notes:

size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none is found in the system.
Available in OS X v10.5 and later.

61.4.18 CreateWithFontDescriptor(descriptor as CTFontDescriptorMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference that best matches the given font descriptor.
Notes:

descriptor: A font descriptor containing attributes that specify the requested font.

size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontMBS that best matches the attributes provided with the font descriptor.

The size and matrix parameters override any specified in the font descriptor unless they are unspecified (0.0 for size and NULL for matrix). A best match font is always returned, and default values are used for any unspecified parameters.

61.4.19 CreateWithGraphicsFont(graphicsFont as CGFontMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a new font reference from an existing Core Graphics font reference.
Notes:

graphicsFont: A valid Core Graphics font reference.
size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
attributes: Additional attributes that should be matched. Optional.

Returns a new font reference for an existing CGFontRef object with the specified size, matrix, and additional attributes.

61.4.20 CreateWithName(name as string, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font reference for the given name.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FullName
```

Notes:

name: The font name for which you wish to create a new font reference. A valid PostScript name is preferred, although other font name types are matched in a fallback manner.
size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontRef that best matches the name provided with size and matrix attributes.

The name parameter is the only required parameter, and default values are used for unspecified parameters (0.0 for size and nil for matrix). If all parameters cannot be matched identically, a best match is found.

61.4.21 CreateWithPlatformFont(ATSFontHandle as Integer, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new font reference from an ATS font reference.
Notes:

ATSFontHandle: A valid ATSFontRef object.
size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
attributes: A CTFontDescriptorMBS containing additional attributes that should be matched. Optional.

Returns a new font reference for an ATSFontRef with the specified size, matrix, and additional attributes.

61.4.22 CreateWithSymbolicTraits(size as Double, Matrix as CGAffineTransformMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a new font in the same font family as the original with the specified symbolic traits.
Example:

```
dim helveticaBold as CTFontMBS = CTFontMBS.CreateWithName("Helvetica-Bold", 12)
MsgBox helveticaBold.FullName

// now create similar fonts with
```

```
dim Trait as Integer = CoreTextMBS.kCTFontTraitItalic
dim TraitMask as Integer = CoreTextMBS.kCTFontTraitItalic+CoreTextMBS.kCTFontTraitBold

dim helveticaItalic as CTFontMBS = helveticaBold.CreateWithSymbolicTraits(12, nil, Trait, TraitMask)
MsgBox helveticaItalic.FullName
```

Notes:

size: The point size for the font reference. If 0.0 is specified, the original font,Äôs size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font's matrix is preserved.
symTraitValue: The value of the symbolic traits.
symTraitMask: The mask bits of the symbolic traits.

Returns a new font reference in the same family with the given symbolic traits. or nil if none is found in the system.

Available in OS X v10.5 and later.

61.4.23 DefaultCascadeListForLanguages(languagePrefList() as string) as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Return an ordered list of CTFontDescriptorMBS's for font fallback derived from the system default fallback region according to the given language preferences.
Notes:

The style of the given is also matched as well as the weight and width of the font is not one of the system UI font, otherwise the UI font fallback is applied.

languagePrefList: The language preference list - ordered array of CFStringRef's of ISO language codes.

The ordered list of fallback fonts - ordered array of CTFontDescriptors.

61.4.24 Draw(glyphs() as Integer, positions() as CGPointMBS, context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Renders the given glyphs of a font at the specified positions in the supplied graphics context.
Notes:

font: The font with glyphs to render. If the font has a size or matrix attribute, context is set with these values.
glyphs: The glyphs to be rendered. The glyphs should be the result of proper Unicode text layout operations (such as with CTLine). Functions such as CTFontMBS.GetGlyphsForCharacters do not perform any Unicode text layout.
positions: The positions (origins) for each glyph in glyphs. The positions are in user space. The number of positions passed in must match the number of glyphs (in glyphs).
context: The graphics context used to render the glyphs.

This function modifies graphics state including font, text size, and text matrix if these attributes are specified in font. These attributes are not restored.

Available in OS X v10.7 and later.

61.4.25 Features as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font features.
Notes: Returns an array of font feature dictionaries for the font reference.

61.4.26 FeatureSettings as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of font feature-setting tuples.
Notes:

Returns a normalized array of font feature-setting dictionaries. The array contains only the non-default settings that should be applied to the font, or nil if the default settings should be used.

A feature-setting dictionary is a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting is enabled. It is the caller's responsibility to handle exclusive and nonexclusive settings as necessary.

The feature settings are verified against those that the font supports and any that do not apply are removed. Further, feature settings that represent a default setting for the font are also removed.

61.4.27 GlyphsForCharacters(characters() as Integer) as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Provides basic Unicode encoding for the given font, returning by reference an array of CGGlyph values corresponding to a given array of Unicode characters for the given font.
Notes: If a glyph could not be encoded, a value of 0 is passed back at the corresponding index in the glyphs array and the function returns False. It is the responsibility of the caller to handle the Unicode properties of the input characters.

61.4.28 GlyphWithName(name as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the CGGlyph value for the specified glyph name in the given font.
Notes:

Name: The glyph name as a CFString object.

Returns the glyph value for the named glyph as a CGGlyph object, or if the glyph name is not recognized, the .notdef glyph index value.
The returned CGGlyph object can be used with any of the subsequent glyph data accessors or directly with Core Graphics.

61.4.29 GraphicsFont(byref fontAttributes as CTFontDescriptorMBS) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a Core Graphics font reference and attributes.
Notes:

attributes: On output, points to a font descriptor containing additional attributes from the font.

Returns a CGFontMBS object for the given font reference.

61.4.30 kCTBaselineClassHanging as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Hanging baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Hanging baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.31 kCTBaselineClassIdeographicCentered as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic Centered baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic Centered baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.32 kCTBaselineClassIdeographicHigh as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic High baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic High baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.33 kCTBaselineClassIdeographicLow as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Ideographic Low baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Ideographic Low baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.34 kCTBaselineClassMath as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Math baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Math baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.35 kCTBaselineClassRoman as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference the Roman baseline class.
Notes: This key can be used with a baseline info dictionary to offset to the Roman baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

61.4.36 kCTBaselineOriginalFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Use the original font for setting the reference baseline.
Notes: This constant can be used as the value for kCTBaselineReferenceFont to specify that the original font should be used for the reference baseline.

61.4.37 kCTBaselineReferenceFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Key to reference a font for the reference baseline.
Notes: This key can be used to specify a font for the reference baseline. The value is a CTFontMBS or the kCTBaselineOriginalFont constant.

61.4.38 kCTFontCopyrightNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the copyright name.

61.4.39 kCTFontDescriptionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the description name.

61.4.40 kCTFontDesignerNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the designer name.

61.4.41 kCTFontDesignerURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the vendor URL name.

61.4.42 kCTFontFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the family name.

61.4.43 kCTFontFeatureSelectorDefaultKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get the default indicator for the selector. This value is a boolean, which if present and true, indicates that this selector is the default setting for the current feature type.

61.4.44 kCTFontFeatureSelectorIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary corresponding to a feature type to obtain the selector identifier value as a number.

61.4.45 kCTFontFeatureSelectorNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get the localized name string for the selector as a string.

61.4.46 kCTFontFeatureSelectorSettingKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get or specify the current setting for the selector. This

value is a Boolean to indicate whether this selector is on or off. If this key is not present, the default setting is used.

61.4.47 kCTFontFeatureTypeExclusiveKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the font feature exclusive setting of the feature as a Boolean. The value associated with this key indicates whether the feature selectors associated with this type should be mutually exclusive.

61.4.48 kCTFontFeatureTypeIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the font feature type value as a number.

61.4.49 kCTFontFeatureTypeNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the localized font feature type name as a string.

61.4.50 kCTFontFeatureTypeSelectorsKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font feature dictionary values.
Notes: Key to get the the array of font feature selectors as an array. This is an array of selector dictionaries that contain the values for the font feature selector keys listed in this group.

61.4.51 kCTFontFullNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the full name.

61.4.52 kCTFontLicenseNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the license name.

61.4.53 kCTFontLicenseURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the license URL name.

61.4.54 kCTFontManufacturerNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the manufacturer name.

61.4.55 kCTFontPostScriptCIDNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the PostScript character identifier (CID) font name.

61.4.56 kCTFontPostScriptNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the PostScript name.

61.4.57 kCTFontSampleTextNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the sample text name string.

61.4.58 kCTFontStyleNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the style name.

61.4.59 kCTFontSubFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the subfamily name.

61.4.60 kCTFontTrademarkNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the trademark name.

61.4.61 kCTFontUniqueNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the unique name.

61.4.62 kCTFontVariationAxisDefaultValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis default value as a number.

61.4.63 kCTFontVariationAxisIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis identifier value as a number.

61.4.64 kCTFontVariationAxisMaximumValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis maximum value as a number.

61.4.65 kCTFontVariationAxisMinimumValueKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the variation axis minimum value as a number.

61.4.66 kCTFontVariationAxisNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the keys to font variation axis dictionary.
Notes: Key to get the localized variation axis name string.

61.4.67 kCTFontVendorURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the vendor URL name.

61.4.68 kCTFontVersionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the name specifier constants provide access to the different names associated with a font.
Notes: The name specifier for the version name.

61.4.69 LigatureCaretPositions(glyph as Integer) as Double()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns caret positions within a glyph.
Notes:

glyph: A reference to the glyph.

This function is used to obtain caret positions for a specific glyph. The return value is the maximum number of positions possible, and the function will populate the caller's positions buffer with available positions if possible. This function might not be able to produce positions if the font does not have the appropriate data, in which case it will return 0.

61.4.70 Name(nameKey as string) as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to the requested name of the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.name(CTFontMBS.kCTFontFullNameKey)
```

Notes:

nameKey: The name specifier. See Name Specifier Constants for possible values.

Returns The requested name for the font, or "" if the font does not have an entry for the requested name. The Unicode version of the name is preferred, otherwise the first available version is returned.
See also:

- 61.4.71 Name(nameKey as string, byref language as string) as String 12484

61.4.71 Name(nameKey as string, byref language as string) as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to a localized name for the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
dim lang as string
MsgBox c.name(CTFontMBS.kCTFontFullNameKey, lang)+EndOfLine+lang
// shows name and "en" as language.
```

Notes:

nameKey: The name specifier. See Name Specifier Constants for possible values.
language: On output, points to the language string of the returned name string. The format of the language identifier conforms to the RFC 3066bis standard.

Returns a specific localized name from the font reference or "" if the font does not have an entry for the requested name key.

The name is localized based on the user's global language preference precedence. That is, the user,Äôs language preference is a list of languages in order of precedence. So, for example, if the list had Japanese and English, in that order, then a font that did not have Japanese name strings but had English strings would return the English strings.

Available in OS X v10.5 and later.

- 61.4.70 Name(nameKey as string) as String 12484

61.4.72 OpticalBoundsForGlyphs(glyphs() as Integer, boundingRects() as CGRectMBS, options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.
Notes:

Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if present in a font, otherwise it returns typographic bounding rects (composed of the font's ascent and descent and a glyph's advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in

which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 61.4.73 OpticalBoundsForGlyphs(glyphs() as Integer, options as Integer = 0) as CGRectMBS 12486

61.4.73 OpticalBoundsForGlyphs(glyphs() as Integer, options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.
Notes:

Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if present in a font, otherwise it returns typographic bounding rects (composed of the font's ascent and descent and a glyph's advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 61.4.72 OpticalBoundsForGlyphs(glyphs() as Integer, boundingRects() as CGRectMBS, options as Integer = 0) as CGRectMBS 12485

61.4.74 PlatformFont(byref fontAttributes as CTFontDescriptorMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns an ATS font reference and attributes.

61.4.75 SupportedLanguages as String()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of languages supported by the font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox Join(c.SupportedLanguages,EndOfLine)
```

61.4.76 Table(table as string, options as Integer) as Memoryblock

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a reference to the font table data.
Notes:

table: The font table identifier as a Font Table Tag Constants constant. See Font Table Tag Constants for possible values.
options: The font table options.

Returns a retained reference to the font table data as a Memoryblock.

61.4.77 VariationAxes as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of variation axes.
Notes: An array of variation axes dictionaries. Each variation axis dictionary contains the five variation axis keys listed in Font Variation Axis Dictionary Keys.

61.4.78 VerticalTranslationsForGlyphs(glyphs() as Integer) as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the offset from the default (horizontal) origin to the vertical origin for an array of glyphs.
Notes:

glyphs: An array of count number of glyphs.
Returns the computed origin offsets in an array of count number of CGSizeMBS objects.

61.4.79 Properties

61.4.80 Ascent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-ascent metric of the given font.
Notes:

The font-ascent metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.81 BoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled bounding box of the given font.
Notes:

The design bounding box of the font, which is the rectangle defined by xMin, yMin, xMax, and yMax values for the font. Returns CGRectNull on error.
(Read only property)

61.4.82 CapHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the cap-height metric of the given font.
Notes:

The font cap-height metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.83 CharacterSet as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the Unicode character set of the font.
Notes:

Value is a CFCharacterSetMBS object.
The returned character set covers the nominal referenced by the font's Unicode 'cmap,Äô table.
(Read only property)

61.4.84 Descent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-descent metric of the given font.
Notes:

The font-descent metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.85 DisplayName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the display name of the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.DisplayName
```

Notes: (Read only property)

61.4.86 FamilyName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the family name of the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FamilyName
```

Notes: (Read only property)

61.4.87 File as FolderItem

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font file.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.file.NativePath
```

Notes: (Read only property)

61.4.88 FontDescriptor as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the normalized font descriptor for the given font reference.
Notes:

A normalized font descriptor for a font containing enough information to recreate this font at a later time.
(Read only property)

61.4.89 FullName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the full name of the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FullName
```

Notes: (Read only property)

61.4.90 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the number of glyphs of the given font.
Notes: (Read only property)

61.4.91 Leading as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled font-leading metric of the given font.
Notes:

The font-leading metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.92 Matrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the transformation matrix of the given font.
Notes:

The transformation matrix for the given font reference. This is the matrix that was provided when the font was created.
(Read only property)

61.4.93 PostScriptName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the PostScript name of the given font.
Example:

```
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.PostScriptName
```

Notes: (Read only property)

61.4.94 Size as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the point size of the given font.
Notes:

This is the point size provided when the font was created.
(Read only property)

61.4.95 SlantAngle as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the slant angle of the given font.
Notes:

The transformed slant angle of the font. This is equivalent to the italic or caret angle with any skew from the transformation matrix applied.
(Read only property)

61.4.96 StringEncoding as UInt32

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the best string encoding for legacy format support.
Notes:

The best string encoding for the font.
(Read only property)

61.4.97 SymbolicTraits as UInt32

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the symbolic traits of the given font.
Notes:

The symbolic traits of the font. This is equivalent to the kCTFontSymbolicTrait value of the traits dictionary.
(Read only property)

61.4.98 Traits as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the traits dictionary of the given font.
Notes:

A retained reference to the font traits dictionary. Individual traits can be accessed with the trait key constants.
(Read only property)

61.4.99 UnderlinePosition as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled underline position of the given font.
Notes:

The font underline-position metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.100 UnderlineThickness as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the scaled underline-thickness metric of the given font.
Notes:

The font underline-thickness metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.101 UnitsPerEm as UInt64

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the units-per-em metric of the given font.
Notes: (Read only property)

61.4.102 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: The font URL.
Example:

```
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.URL
```

Notes: (Read only property)

61.4.103 Variation as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns a variation dictionary from the font reference.
Notes:

The keys for each variation correspond to the variation identifier obtained via kCTFontVariationAxisIdentifierKey, which represents the four-character axis code as a number.
(Read only property)

61.4.104 XHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the x-height metric of the given font.
Notes:

The font x-height metric scaled according to the point size and matrix of the font reference.
(Read only property)

61.4.105 Constants

61.4.106 kCTFontOptionsDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Option Constants.
Notes:

Default options are used.
Available in OS X v10.6 and later.

61.4.107 kCTFontOptionsPreferSystemFont = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Option Constants.
Notes:

Font matching prefers to match Apple system fonts.
Available in OS X v10.6 and later.

61.4.108 kCTFontOptionsPreventAutoActivation = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Option Constants.
Notes:

Prevents automatic font activation.
Available in OS X v10.6 and later.

61.4.109 kCTFontTableAcnt = "acnt"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for accent attachment.

61.4.110 kCTFontTableAnkr = "ankr"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Anchor points

61.4.111 kCTFontTableAvar = "avar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for axis variation.

61.4.112 kCTFontTableBASE = "BASE"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for the font baseline.

61.4.113 kCTFontTableBdat = "bdat"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for bitmap data.

61.4.114 kCTFontTableBhed = "bhed"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for bitmap font header.

61.4.115 kCTFontTableBloc = "bloc"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for bitmap location.

61.4.116 kCTFontTableBsln = "bsln"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for baseline.

61.4.117 kCTFontTableCFF = "CFF "

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for a PostScript font program.

61.4.118 kCTFontTableCmap = "cmap"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for character-to-glyph mapping.

61.4.119 kCTFontTableCvar = "cvar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for control value variation, or CVT variation.

61.4.120 kCTFontTableCvt = "cvt "

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for control value table.

61.4.121 kCTFontTableDSIG = "DSIG"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for a digital signature.

61.4.122 kCTFontTableEBDT = "EBDT"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for an embedded bitmap.

61.4.123 kCTFontTableEBLC = "EBLC"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for the embedded bitmap location.

61.4.124 kCTFontTableEBSC = "EBSC"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for embedded bitmap scaling.

61.4.125 kCTFontTableFdsc = "fdsc"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font descriptor.

61.4.126 kCTFontTableFeat = "feat"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for layout feature.

61.4.127 kCTFontTableFmtx = "fmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font metrics.

61.4.128 kCTFontTableFpgm = "fpgm"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font program.

61.4.129 kCTFontTableFvar = "fvar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font variation.

61.4.130 kCTFontTableGasp = "gasp"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for grid-fitting/scan-conversion.

61.4.131 kCTFontTableGDEF = "GDEF"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph definition.

61.4.132 kCTFontTableGlyf = "glyf"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph data.

61.4.133 kCTFontTableGPOS = "GPOS"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph positioning.

61.4.134 kCTFontTableGSUB = "GSUB"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph substitution.

61.4.135 kCTFontTableGvar = "gvar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph variation.

61.4.136 kCTFontTableHdmx = "hdmx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal device metrics.

61.4.137 kCTFontTableHead = "head"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for font header.

61.4.138 kCTFontTableHhea = "hhea"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal header.

61.4.139 kCTFontTableHmtx = "hmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal metrics.

61.4.140 kCTFontTableHsty = "hsty"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for horizontal style.

61.4.141 kCTFontTableJSTF = "JSTF"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for justification.

61.4.142 kCTFontTableJust = "just"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for justification.

61.4.143 kCTFontTableKern = "kern"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for kerning.

61.4.144 kCTFontTableKerx = "kerx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for extended kerning.

61.4.145 kCTFontTableLcar = "lcar"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for ligature caret.

61.4.146 kCTFontTableLoca = "loca"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for index to location.

61.4.147 kCTFontTableLtag = "ltag"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Language tags

61.4.148 kCTFontTableLTSH = "LTSH"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for linear threshold.

61.4.149 kCTFontTableMaxp = "maxp"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for maximum profile.

61.4.150 kCTFontTableMort = "mort"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for morph.

61.4.151 kCTFontTableMorx = "morx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for extended morph.

61.4.152 kCTFontTableName = "name"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for naming table.

61.4.153 kCTFontTableOpbd = "opbd"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for optical bounds.

61.4.154 kCTFontTableOptionExcludeSynthetic = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Table Option Constants.
Notes:

The font table excludes synthetic font data.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

61.4.155 kCTFontTableOptionNoOptions = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the Font Table Option Constants.
Notes: No font table options are specified.

61.4.156 kCTFontTableOS2 = "OS/2"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for OS/2 and Windows-specific metrics.

61.4.157 kCTFontTablePCLT = "PCLT"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for PCL 5 data.

61.4.158 kCTFontTablePost = "post"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for PostScript information.

61.4.159 kCTFontTablePrep = "prep"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for control value program, 'prep' table.

61.4.160 kCTFontTableProp = "prop"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for properties.

61.4.161 kCTFontTableSbit = "sbit"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes:

Font table tag for bitmap data.
Available in OS X v10.7 and later.

61.4.162 kCTFontTableSbix = "sbix"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes:

Font table tag for extended bitmap data.
Available in OS X v10.7 and later.

61.4.163 kCTFontTableTrak = "trak"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for tracking.

61.4.164 kCTFontTableVDMX = "VDMX"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical device metrics.

61.4.165 kCTFontTableVhea = "vhea"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical header.

61.4.166 kCTFontTableVmtx = "vmtx"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical metrics.

61.4.167 kCTFontTableVORG = "VORG"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for vertical origin.

61.4.168 kCTFontTableZapf = "Zapf"

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the font table tag constants.
Notes: Font table tag for glyph reference.

61.4.169 kCTFontUIFontAlertHeader = 18

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for alert headers.

61.4.170 kCTFontUIFontApplication = 9

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The default font for text documents.

61.4.171 kCTFontUIFontControlContent = 26

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for contents of user-interface controls.

61.4.172 kCTFontUIFontEmphasizedSystem = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in alerts.

61.4.173 kCTFontUIFontEmphasizedSystemDetail = 20

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in details.

61.4.174 kCTFontUIFontLabel = 10

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for labels and tick marks on full-size sliders.

61.4.175 kCTFontUIFontMenuItem = 12

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu items.

61.4.176 kCTFontUIFontMenuItemCmdKey = 14

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu-item command-key equivalents.

61.4.177 kCTFontUIFontMenuItemMark = 13

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used to draw menu item marks.

61.4.178 kCTFontUIFontMenuTitle = 11

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for menu titles.

61.4.179 kCTFontUIFontMessage = 23

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for standard interface items, such as button labels, menu items, and so on.

61.4.180 kCTFontUIFontMiniEmphasizedSystem = 7

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The small system font used for emphasis.

61.4.181 kCTFontUIFontMiniSystem = 6

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard small system font used for informative text in alerts, column headings in lists, help tags, and small controls.

61.4.182 kCTFontUIFontNone = -1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The user-interface font type is not specified.

61.4.183 kCTFontUIFontPalette = 24

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used in tool palettes.

61.4.184 kCTFontUIFontPushButton = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for a push button (a rounded rectangular button with a text label on it).

61.4.185 kCTFontUIFontSmallEmphasizedSystem = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for emphasis in alerts.

61.4.186 kCTFontUIFontSmallSystem = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard small system font used for informative text in alerts, column headings in lists, help tags, and small controls.

61.4.187 kCTFontUIFontSmallToolbar = 22

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The small font used for labels of toolbar items.

61.4.188 kCTFontUIFontSystem = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The system font used for standard user-interface items such as button labels, menu items, and so on.

61.4.189 kCTFontUIFontSystemDetail = 19

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The standard system font used for details.

61.4.190 kCTFontUIFontToolbar = 21

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for labels of toolbar items.

61.4.191 kCTFontUIFontToolTip = 25

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for tool tips.

61.4.192 kCTFontUIFontUser = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used by default for documents and other text under the user,Äôs control (that is, text whose font the user can normally change).

61.4.193 kCTFontUIFontUserFixedPitch = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes:

The font used by default for documents and other text under the user,Äôs control when that font is fixed-pitch.
Available in OS X v10.5 and later.

61.4.194 kCTFontUIFontUtilityWindowTitle = 17

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for utility window titles.

61.4.195 kCTFontUIFontViews = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The view font used as the default font of text in lists and tables.

61.4.196 kCTFontUIFontWindowTitle = 15

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the User Interface Type Constants
Notes: The font used for utility window titles.

61.5 class CTFrameMBS

61.5.1 class CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFrame opaque type represents a frame containing multiple lines of text.
Example:

```
dim longText as string = "Lorem ipsum dolor sit amet..."

dim ct as new CFStringMBS(longText)
dim s as new CFAttributedStringMBS(ct, nil)

// layout master
dim framesetter as CTFramesetterMBS = CTFramesetterMBS.CreateWithAttributedString(s)

// a column
dim ColumnPath as new CGMutablePathMBS
dim Rect as new CGRectMBS(0, 0, g.Width, g.Height)
ColumnPath.AddRect nil, Rect

// context
# If XojoVersion >= 2019.02 Then
Dim CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# Else
Dim CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# EndIf

CGContext.SaveGState
// reset text matrix
dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

dim Frame as CTFrameMBS = framesetter.CreateFrame(0, 0, ColumnPath, nil)

// draw
Frame.Draw(CGContext)

// cleanup
CGContext.RestoreGState
CGContext.Flush
```

Notes:

The frame object is the output resulting from the text-framing process performed by a framesetter object.

You can draw the entire text frame directly into the current graphic context. The frame object contains an array of line objects that can be retrieved for individual rendering or to get glyph information.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.5.2 Blog Entries

- CoreText Completed

61.5.3 Blog Entries

- CoreText Completed

61.5.4 Methods

61.5.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.5.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.5.7 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws an entire frame into a context.
Notes:

context: The context in which to draw the frame.

If both the frame and the context are valid, the frame is drawn in the context. This call can leave the context in any state and does not flush it after the draw operation.

61.5.8 kCTFrameClippingPathsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies array of paths to clip frame.

The value must be a array containing dictionaries. Each dictionary should have a kCTFramePathClipping-PathAttributeName key-value pair, and can have a kCTFramePathFillRuleAttributeName key-value pair and kCTFramePathFillRuleAttributeName key-value pair as optional parameters.
Available in OS X v10.7 and later.

61.5.9 kCTFramePathClippingPathAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies clipping path. This attribute is valid only in a dictionary contained in an array specified by kCT-FrameClippingPathsAttributeName.

The value must be a CGPathMBS specifying a clipping pat. See kCTFrameClippingPathsAttributeName.
Available in OS X v10.7 and later.

61.5.10 kCTFramePathFillRuleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The key used to specify the fill rule for a frame.
Notes:

he value must be a CFNumberRef object containing a CTFramePathFillRule constant. See CTFramePath-FillRule Constants for more information. The default value is kCTFramePathFillEvenOdd.
Available in OS X v10.7 and later.

61.5.11 kCTFramePathWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

The key used to specify the frame width.
The value must be a number containing a value specifying the frame width. The default width value is zero.
Available in OS X v10.7 and later.

61.5.12 kCTFrameProgressionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the attributes keys.
Notes:

Specifies progression for a frame.
A number containing a CTFrameProgression constant. The default is kCTFrameProgressionTopToBottom.
Available in OS X v10.5 and later.

This value determines the line-stacking behavior for a frame and does not affect the appearance of the glyphs within that frame.

61.5.13 LineOrigins(location as Integer, length as Integer) as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of line origins for a frame.
Notes:

location and length: The range of line origins you wish to copy. If the length of the range is 0, then the copy operation continues from the start index of the range to the last line origin.

Returns array with CGPoints. Empty array in case of errors.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function may function unpredictably if the frame is not rectangular.

61.5.14 Lines as CTLineMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns an array of lines stored in the frame.

61.5.15 Properties

61.5.16 FrameAttributes as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the frame attributes used to create the frame.
Notes:

Returns a reference to a CFDictionary object containing the frame attributes that were used to create the frame, or, if the frame was created without any frame attributes, nil.

You can create a frame with an attributes dictionary to control various aspects of the framing process. These attributes are different from the ones used to create an attributed string.
(Read only property)

61.5.17 Path as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the path used to create the frame.
Notes: (Read only property)

61.5.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

61.5.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters originally requested to fill the frame.
Notes: (Read only property)

61.5.20 VisibleStringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes:

This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

61.5.21 VisibleStringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the range of characters that actually fit in the frame.
Notes:

This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

61.5.22 Constants

61.5.23 kCTFramePathFillEvenOdd = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the fill rule used by a frame.
Notes:

Text is filled in the area that would be painted if the path were given to CGContextMBS.EOFillPath.
Available in OS X v10.7 and later.

61.5.24 kCTFramePathFillWindingNumber = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the fill rule used by a frame.
Notes:

Text is fill in the area that would be painted if the path were given to CGContextMBS.FillPath.
Available in OS X v10.7 and later.

61.5.25 kCTFrameProgressionLeftToRight = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked left to right for vertical text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

61.5.26 kCTFrameProgressionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked right to left for vertical text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

61.5.27 kCTFrameProgressionTopToBottom = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify frame progression types.
Notes:

Lines are stacked top to bottom for horizontal text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

61.6 class CTFramesetterMBS

61.6.1 class CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTFramesetter opaque type is used to generate text frames. That is, CTFramesetter is an object factory for CTFrame objects.
Notes:

The framesetter takes an attributed string object and a shape descriptor object and calls into the typesetter to create line objects that fill that shape. The output is a frame object containing an array of lines. The frame can then draw itself directly into the current graphic context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.6.2 Blog Entries

- CoreText Completed

61.6.3 Blog Entries

- CoreText Completed

61.6.4 Methods

61.6.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.6.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.6.7 CreateFrame(location as Integer, length as Integer, path as CGPathMBS, frameAttributes as dictionary = nil) as CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable frame using a framesetter.
Notes:

location and length: The range, of the attributed string that was used to create the framesetter, that is to be typeset in lines fitted into the frame. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
path: A CGPath object that specifies the shape of the frame. The path may be non-rectangular in versions of OS X v10.7 or later and versions of iOS 4.2 or later.
frameAttributes: Additional attributes that control the frame filling process can be specified here, or nil if there are no such attributes.

Returns a reference to a new CTFrame object if the call was successful; otherwise, nil.

This call creates a frame full of glyphs in the shape of the path provided by the path parameter. The framesetter continues to fill the frame until it either runs out of text or it finds that text no longer fits.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function returns NULL if the CGPath specified by the path parameter is not rectangular.

61.6.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable framesetter object from an attributed string.
Notes:

s: The attributed string with which to construct the framesetter object.

Returns a reference to a CTFramesetter object if the call was successful; otherwise, NULL.
The resultant framesetter object can be used to create and fill text frames with the CreateFrame call.

61.6.9 SuggestFrameSizeWithConstraints(location as Integer, length as Integer, frameAttributes as dictionary, constraints as CGSizeMBS, byref fitRangeLocation as Integer, byref fitRangeLength as Integer) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the frame size needed for a string range.
Notes:

location and length: The string range to which the frame size applies. The string range is a range over the string used to create the framesetter. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
frameAttributes: Additional attributes that control the frame filling process, or NULL if there are no such attributes.
constraints: The width and height to which the frame size is constrained. A value of CGFLOAT_MAX for either dimension indicates that it should be treated as unconstrained.
fitRange: On return, contains the range of the string that actually fit in the constrained size.

Returns the actual dimensions for the given string range and constraints.

This function can be used to determine how much space is needed to display a string, optionally by constraining the space along either dimension.
Available in OS X v10.5 and later.

61.6.10 Properties

61.6.11 TypeSetter as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the typesetter object being used by the framesetter.
Notes:

Return sa reference to a CTTypesetter object if the call was successful; otherwise, nil. The framesetter maintains a reference to the returned object, which should not be released by the caller.

Each framesetter uses a typesetter internally to perform line breaking and other contextual analysis based on the characters in a string; this function returns the typesetter being used by a particular framesetter in case the caller would like to perform other operations on that typesetter.

Available in OS X v10.5 and later.
(Read only property)

61.7 class CTGlyphInfoMBS

61.7.1 class CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTGlyphInfo opaque type enables you to override a font's specified mapping from Unicode to the glyph ID.
Notes:

Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.7.2 Blog Entries

- CoreText Completed

61.7.3 Blog Entries

- CoreText Completed

61.7.4 Methods

61.7.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.7.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.7.7 CreateWithCharacterIdentifier(cid as Integer, collection as Integer, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a character identifier.
Notes:

cid: A character identifier.
collection: A character collection identifier.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object if glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a character identifier and a character collection.
Available in OS X v10.5 and later.

61.7.8 CreateWithGlyph(glyph as Integer, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph index.
Notes:

glyph: The index of the glyph.
font: The font to be associated with the returned CTGlyphInfoMBS object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object, If glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a glyph index using a specified font.
Available in OS X v10.5 and later.

61.7.9 CreateWithGlyphName(glyphName as string, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable glyph info object with a glyph name.
Notes:

glyphName: The name of the glyph.
font: The font to be associated with the returned CTGlyphInfo object.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfo object if glyph info creation was successful; otherwise, nil.
This function creates an immutable glyph info object for a glyph name such as copyright using a specified font.
Available in OS X v10.5 and later.

61.7.10 Properties

61.7.11 CharacterCollection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character collection for a glyph info object.
Notes:

If the glyph info object was created with a glyph name or a glyph index, its character collection is kCTIdentityMappingCharacterCollection.
(Read only property)

61.7.12 CharacterIdentifier as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the character identifier for a glyph info object.
Notes: (Read only property)

61.7.13 GlyphName as String

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph name for a glyph info object if that object exists.
Notes: (Read only property)

61.7.14 Constants

61.7.15 kCTAdobeCNS1CharacterCollection = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-CNS1 mapping.

61.7.16 kCTAdobeGB1CharacterCollection = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-GB1 mapping.

61.7.17 kCTAdobeJapan1CharacterCollection = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan1 mapping.

61.7.18 kCTAdobeJapan2CharacterCollection = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan2 mapping.

61.7.19 kCTAdobeKorea1CharacterCollection = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Korea1 mapping.

61.7.20 kCTCharacterCollectionAdobeCNS1 = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-CNS1 mapping.

61.7.21 kCTCharacterCollectionAdobeGB1 = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-GB1 mapping.

61.7.22 kCTCharacterCollectionAdobeJapan1 = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan1 mapping.

61.7.23 kCTCharacterCollectionAdobeJapan2 = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Japan2 mapping.

61.7.24 kCTCharacterCollectionAdobeKorea1 = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The Adobe-Korea1 mapping.

61.7.25 kCTCharacterCollectionIdentityMapping = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The character identifier is equal to the CGGlyph glyph index.

61.7.26 kCTIdentityMappingCharacterCollection = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify character collections.
Notes: The character identifier is equal to the CGGlyph glyph index.

61.8 class CTLineMBS

61.8.1 class CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTLine opaque type represents a line of text.
Example:

```
Sub Paint(g As Graphics)
// inside paint event of a Canvas

// create a font, quasi systemFontWithSize:24.0
dim sysUIFont as CTFontMBS = CTFontMBS.CreateUIFontForLanguage(CTFontMBS.kCTFontUIFontSystem, 24.0)

// create a naked string
dim text as string = "Some Text."

// blue
dim cgColor as CGColorMBS = CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0)

// single underline
dim underline as Integer = CoreTextMBS.kCTUnderlineStyleSingle

// pack it into attributes dictionary
dim attributesDict as new Dictionary
attributesDict.Value(CoreTextMBS.kCTFontAttributeName) = sysUIFont
attributesDict.Value(CoreTextMBS.kCTForegroundColorAttributeName) = cgColor
attributesDict.Value(CoreTextMBS.kCTUnderlineStyleAttributeName) = underline

// make the attributed string
dim cfDic as new CFDictionaryMBS(attributesDict)
dim cfStr as new CFStringMBS(text)
dim stringToDraw as CFAttributedStringMBS = CFAttributedStringMBS.Create( cfStr, cfDic)

// now for the actual drawing

# If XojoVersion >= 2019.02 Then
Dim CGContextHandle As ptr = g.Handle(Graphics.HandleTypes.CGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# Else
Dim CGContextHandle As Integer = g.Handle(g.HandleTypeCGContextRef)
Dim CGContext As CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
# EndIf

CGContext.SaveGState
```

```
// reset text matrix
dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

// draw
dim line as CTLineMBS = CTLineMBS.CreateWithAttributedString(stringToDraw)

dim x as Integer = 10
dim y as Integer = 10

// plus text height
y = y + 24

// swap y
y = g.Height - y

CGContext.TextPosition = new CGPointMBS(x, y)
line.Draw(CGContext)

CGContext.RestoreGState
CGContext.Flush
End Sub
```

Notes:

A CTLine object contains an array of glyph runs. Line objects are created by the typesetter during a frame-setting operation and can draw themselves directly into a graphics context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.8.4 Methods

61.8.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.8.6 Bounds(options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Queries bounds.

61.8.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.8.8 CreateJustifiedLine(justificationFactor as Double, justificationWidth as Double) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a justified line from an existing line.
Notes:

line: The line from which to create a justified line.
justificationFactor: Full or partial justification. When set to 1.0 or greater, full justification is performed. If this parameter is set to less than 1.0, varying degrees of partial justification are performed. If it is set to 0 or less, no justification is performed.
justificationWidth: The width to which the resultant line is justified. If justificationWidth is less than the actual width of the line, then negative justification is performed (that is, glyphs are squeezed together).

Returns a reference to a justified CTLine object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

61.8.9 CreateTruncatedLine(width as Double, truncationType as Integer, truncationToken as CTLineMBS = nil) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a truncated line from an existing line.
Notes:

line: The line from which to create a truncated line.
width: The width at which truncation begins. The line is truncated if its width is greater than the width passed in this parameter.
truncationType: The type of truncation to perform if needed. See constants for possible values.
truncationToken: This token is added at the point where truncation took place, to indicate that the line was truncated. Usually, the truncation token is the ellipsis character (U+2026). If this parameter is set to nil, then no truncation token is used and the line is simply cut off.

Returns a reference to a truncated CTLine object if the call was successful; otherwise, NULL.

The line specified in truncationToken should have a width less than the width specified by the width parameter. If the width of the line specified in truncationToken is greater than width and truncation is needed, the function returns nil.

Available in OS X v10.5 and later.

61.8.10 CreateWithAttributedString(s as CFAttributedStringMBS) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates a single immutable line object directly from an attributed string.
Notes:

s: The string from which the line is created.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.

This function allows clients who need very simple line generation to create a line without creating a typesetter object. The typesetting is done under the hood. Without a typesetter object, the line cannot be properly broken. However, for simple things like text labels, line breaking is not an issue.
Available in OS X v10.5 and later.

61.8.11 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete line.
Notes:

context: The context into which the line is drawn.

This is a convenience function because the line could be drawn run-by-run by getting the glyph runs, getting

the glyphs out of them, and calling a function such as CGContextMBS.ShowGlyphsAtPositions. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

61.8.12 GlyphRuns as CTRunMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the array of glyph runs that make up the line object.
Notes:

Returns an array containing the CTRunMBS objects that make up the line.
Available in OS X v10.5 and later.

61.8.13 ImageBounds(context as CGContextMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a line.
Notes:

context: The context for which the image bounds are calculated. This is required because the context could have settings in it that would cause changes in the image bounds.

Returns a rectangle that tightly encloses the paths of the line's glyphs, or, if the line or context is invalid, CGRectNull.
Available in OS X v10.5 and later.

61.8.14 OffsetForStringIndex(charIndex as Integer, byref secondaryOffset as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Determines the graphical offset or offsets for a string index.
Notes:

charIndex: The string index corresponding to the desired position.
secondaryOffset: On output, the secondary offset along the baseline for charIndex. When a single caret is sufficient for a string index, this value will be the same as the primary offset, which is the return value of this function. May be NULL.

Returns the primary offset along the baseline for charIndex, or 0.0 if the line does not support string access.

This function returns the graphical offset or offsets corresponding to a string index, suitable for movement between adjacent lines or for drawing a custom caret. For moving between adjacent lines, the primary offset can be adjusted for any relative indentation of the two lines; a CGPoint constructed with the adjusted offset for its x value and 0.0 for its y value is suitable for passing to CTLineGetStringIndexForPosition. For drawing a custom caret, the returned primary offset corresponds to the portion of the caret that represents the visual insertion location for a character whose direction matches the line's writing direction.

Available in OS X v10.5 and later.

61.8.15 PenOffsetForFlush(flushFactor as Double, flushWidth as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the pen offset required to draw flush text.
Notes:

flushFactor: Determines the type of flushness. A flushFactor of 0 or less indicates left flush. A flushFactor of 1.0 or more indicates right flush. Flush factors between 0 and 1.0 indicate varying degrees of center flush, with a value of 0.5 being totally center flush.
flushWidth: Specifies the width to which the flushness operation should apply.

Returns the offset from the current pen position for the flush operation.
Available in OS X v10.5 and later.

61.8.16 StringIndexForPosition(position as CGPointMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Performs hit testing.
Notes:

position: The location of the mouse click relative to the line's origin.

Returns the string index for the position, or if the line does not support string access, kCFNotFound. Relative to the line's string range, this value can be no less than the first string index and no greater than the last string index plus 1.

This function can be used to determine the string index for a mouse click or other event. This string index corresponds to the character before which the next character should be inserted. This determination is made

by analyzing the string from which a typesetter was created and the corresponding glyphs as embodied by a particular line.
Available in OS X v10.5 and later.

61.8.17 TypographicBounds(byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the typographic bounds of a line.
Notes:

ascent: On output, the ascent of the line.
descent: On output, the descent of the line.
leading: On output, the leading of the line.

Returns the typographic width of the line. If the line is invalid, this function returns 0.

61.8.18 Properties

61.8.19 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the total glyph count for the line object.
Notes:

The total glyph count is equal to the sum of all of the glyphs in the glyph runs forming the line.
(Read only property)

61.8.20 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

61.8.21 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the line.
Notes: (Read only property)

61.8.22 TrailingWhitespaceWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the trailing whitespace width for a line.
Notes:

The width of the line's trailing whitespace. If the line is invalid, this function will always return zero.

Creating a line for a width can result in a line that is actually longer than the desired width due to trailing whitespace. Although this is typically not an issue due to whitespace being invisible, this function can be used to determine what amount of a line's width is due to trailing whitespace.
Available in OS X v10.5 and later.
(Read only property)

61.8.23 Constants

61.8.24 kCTLineBoundsExcludeTypographicLeading = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to exclude typographic leading.

61.8.25 kCTLineBoundsExcludeTypographicShifts = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to ignore cross-stream shifts due to positioning (such as kerning or baseline alignment).

61.8.26 kCTLineBoundsUseGlyphPathBounds = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to use glyph path bounds rather than the default typographic bounds.

61.8.27 kCTLineBoundsUseHangingPunctuation = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Normally line bounds include all glyphs; pass this option to treat standard punctuation hanging off either end of the line as fully hanging.

61.8.28 kCTLineBoundsUseOpticalBounds = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the line bounds constants.
Notes: Pass this option to use optical bounds. This option overrides kCTLineBoundsUseGlyphPathBounds.

61.8.29 kCTLineTruncationEnd = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the end of the line, leaving the start portion visible.

61.8.30 kCTLineTruncationMiddle = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the middle of the line, leaving both the start and the end portions visible.

61.8.31 kCTLineTruncationStart = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the values to tell the truncation engine which type of truncation is being requested..
Notes: Truncate the beginning of the line, leaving the end portion visible.

61.9 class CTMutableFontCollectionMBS

61.9.1 class CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The mutable font collection class.
Notes:

Subclass of the CTFontCollectionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.9.3 Blog Entries

- CoreText Completed

61.9.4 Methods

61.9.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

61.9.6 SetExclusionDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to exclude from the match.

61.9.7 SetQueryDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Replaces the array of descriptors to match.

61.10 class CTParagraphStyleMBS

61.10.1 class CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTParagraphStyle opaque type represents paragraph or ruler attributes in an attributed string.
Notes:

A paragraph style object represents a complex attribute value in an attributed string, storing a number of subattributes that affect paragraph layout for the characters of the string. Among these subattributes are alignment, tab stops, writing direction, line-breaking mode, and indentation settings.
Subclass of the CFObjectMBS class.

61.10.4 Methods

61.10.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.10.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.

61.10.7 Create as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 61.10.8 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS 12539

61.10.8 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Notes:

settings: The settings with which to preload the paragraph style.

Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The rea-

son is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
See also:

- 61.10.7 Create as CTParagraphStyleMBS 12539

61.10.9 CreateCopy as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable copy of a paragraph style.
Notes: A valid reference to an immutable CTParagraphStyle object that is a copy of the one passed into paragraphStyle, If the paragraphStyle reference is valid; otherwise nil, if any error occurred, including being supplied with an invalid reference.

61.10.10 CreateWithAlignment(Alignment as Integer) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

Function: Creates an immutable paragraph style.
Example:

```
dim a as Integer
dim t as CTParagraphStyleMBS

a = CTParagraphStyleMBS.kCTTextAlignmentRight
t = CTParagraphStyleMBS.CreateWithAlignment(a)

MsgBox str(T.Alignment) // shows 1
```

61.10.11 TabStops as CTTextTabMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style.
Notes: Type: Array of CTTextTabMBS. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

61.10.12 Properties

61.10.13 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The text alignment.
Notes:

Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
(Read only property)

61.10.14 BaseWritingDirection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The base writing direction of the lines.
Notes:

Type: CTWritingDirection. Default: kCTWritingDirectionNatural. Application: CTFramesetter, CTTypesetter.
(Read only property)

61.10.15 DefaultTabInterval as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The documentwide default tab interval.
Notes:

Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0. Application: CTFramesetter, CTTypesetter.
(Read only property)

61.10.16 FirstLineHeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a frame to the beginning of the paragraph's first line.
Notes:

This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.17 HeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the leading margin of a text container to the beginning of lines other than the first.
Notes:

This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter
(Read only property)

61.10.18 LineBoundsOptions as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The options controlling the alignment of the line edges with the leading and trailing margins.
Notes:

Type: CTLineBoundsOptions
Default: 0 (no options)
Application: CTTypesetter
(Read only property)

61.10.19 LineBreakMode as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The mode that should be used to break lines when laying out the paragraph's text.
Notes:

Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter
(Read only property)

61.10.20 LineHeightMultiple as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The line height multiple.
Notes:

The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.21 LineSpacingAdjustment as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space in points added between lines within the paragraph (commonly known as leading).
Notes:

Available in OS X v10.7 and later.
(Read only property)

61.10.22 MaximumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes:

Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.23 MaximumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The maximum space in points between lines within the paragraph (commonly known as leading).
Notes:

This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

61.10.24 MinimumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.
Notes:

This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.25 MinimumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The minimum space in points between lines within the paragraph (commonly known as leading).
Notes:

This value is always nonnegative.
Available in OS X v10.7 and later.
(Read only property)

61.10.26 ParagraphSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The space added at the end of the paragraph to separate it from the following paragraph.
Notes:

This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.27 ParagraphSpacingBefore as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance between the paragraph's top and the beginning of its text content.
Notes:

Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.28 TailIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The distance, in points, from the margin of a frame to the end of lines.
Notes:

If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it's the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

61.10.29 Constants

61.10.30 kCTLineBreakByCharWrapping = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Wrapping occurs before the first character that doesn't fit.

61.10.31 kCTLineBreakByClipping = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Lines are simply not drawn past the edge of the frame.

61.10.32 kCTLineBreakByTruncatingHead = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the end fits in the frame and the missing text is indicated by an ellipsis glyph.

61.10.33 kCTLineBreakByTruncatingMiddle = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the beginning and end fit in the container and the missing text is indicated by an ellipsis glyph in the middle.

61.10.34 kCTLineBreakByTruncatingTail = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Each line is displayed so that the beginning fits in the container and the missing text is indicated by an ellipsis glyph.

61.10.35 kCTLineBreakByWordWrapping = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify what happens when a line is too long for its frame.
Notes: Wrapping occurs at word boundaries unless the word itself doesn't fit on a single line.

61.10.36 kCTParagraphStyleSpecifierAlignment = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The text alignment. Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
Available in OS X v10.5 and later.

61.10.37 kCTParagraphStyleSpecifierBaseWritingDirection = 13

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The base writing direction of the lines. Type: CTWritingDirection. Default: kCTWritingDirectionNatural. Application: CTFramesetter, CTTypesetter.

61.10.38 kCTParagraphStyleSpecifierDefaultTabInterval = 5

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The documentwide default tab interval. Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0.

Application: CTFramesetter, CTTypesetter.

61.10.39 kCTParagraphStyleSpecifierFirstLineHeadIndent = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the leading margin of a frame to the beginning of the paragraph's first line. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.40 kCTParagraphStyleSpecifierHeadIndent = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the leading margin of a text container to the beginning of lines other than the first. This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter

61.10.41 kCTParagraphStyleSpecifierLineBoundsOptions = 17

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The options controlling the alignment of the line edges with the leading and trailing margins.

Type: CTLineBoundsOptions
Default: 0 (no options)
Application: CTTypesetter

61.10.42 kCTParagraphStyleSpecifierLineBreakMode = 6

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The mode that should be used to break lines when laying out the paragraph's text. Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter

61.10.43 kCTParagraphStyleSpecifierLineHeightMultiple = 7

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The line height multiple. The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.44 kCTParagraphStyleSpecifierLineSpacing = 10

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: Deprecated. Use kCTParagraphStyleSpecifierMaximumLineSpacing, kCTParagraphStyleSpecifier-MinimumLineSpacing, and kCTParagraphStyleSpecifierLineSpaceAdjustment to control space between lines. The space in points added between lines within the paragraph (commonly known as leading). This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.45 kCTParagraphStyleSpecifierLineSpacingAdjustment = 16

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The space in points added between lines within the paragraph (commonly known as leading).
Available in OS X v10.7 and later.

61.10.46 kCTParagraphStyleSpecifierMaximumLineHeight = 8

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.47 kCTParagraphStyleSpecifierMaximumLineSpacing = 14

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The maximum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.

61.10.48 kCTParagraphStyleSpecifierMinimumLineHeight = 9

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.49 kCTParagraphStyleSpecifierMinimumLineSpacing = 15

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes:

The minimum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.

61.10.50 kCTParagraphStyleSpecifierParagraphSpacing = 11

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The space added at the end of the paragraph to separate it from the following paragraph. This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.51 kCTParagraphStyleSpecifierParagraphSpacingBefore = 12

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.

Notes: The distance between the paragraph's top and the beginning of its text content. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.52 kCTParagraphStyleSpecifierTabStops = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style. Type: CFArray of CTTextTabRef. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

61.10.53 kCTParagraphStyleSpecifierTailIndent = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants used to query and modify the CTParagraphStyle object.
Notes: The distance, in points, from the margin of a frame to the end of lines. If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it's the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

61.10.54 kCTTextAlignmentCenter = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually center aligned.

61.10.55 kCTTextAlignmentJustified = 3

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is fully justified. The last line in a paragraph is naturally aligned.

61.10.56 kCTTextAlignmentLeft = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually left aligned.

61.10.57 kCTTextAlignmentNatural = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text uses the natural alignment of the text's script.

61.10.58 kCTTextAlignmentRight = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify text alignment.
Notes: Text is visually right aligned.

61.10.59 kCTWritingDirectionLeftToRight = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is left to right.

61.10.60 kCTWritingDirectionNatural = -1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is algorithmically determined using the Unicode Bidirectional Algorithm rules P2 and P3.

61.10.61 kCTWritingDirectionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the constants to specify the writing direction.
Notes: The writing direction is right to left.

61.11 class CTParagraphStyleSettingMBS

61.11.1 class CTParagraphStyleSettingMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: This class is used to alter the paragraph style.

61.11.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr11
- CoreText Completed

61.11.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr11

61.11.4 Methods

61.11.5 SetTextTabs(textTabs() as CTTextTabMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Sets the array of text tabs.
Notes: for use with kCTParagraphStyleSpecifierTabStops.

61.11.6 Properties

61.11.7 doubleValue as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The double value.
Notes: (Read and Write property)

61.11.8 intValue as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The integer value.
Notes:

Also used for enumerations.
(Read and Write property)

61.11.9 Spec as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The specifier of the setting.
Notes:

See CTParagraphStyleMBS for possible values.
(Read and Write property)

61.12 class CTRunDelegateMBS

61.12.1 class CTRunDelegateMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The class to get events for CTRun runs.
Notes:

The CTRunDelegate opaque type represents a run delegate, which is assigned to a run (attribute range) to control typographic traits such glyph ascent, glyph descent, and glyph width.

The events defined for CTRunDelegate are used to modify glyph metrics during layout. The values returned by the delegate are applied to each glyph in the run or runs corresponding to the attribute with that delegate.
Subclass of the CFObjectMBS class.

61.12.3 Blog Entries

- CoreText Completed

61.12.4 Methods

61.12.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.12.6 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Shuts down the delegate.
Notes: Please call this to explicit end the delegate and avoid memory leaks.
See also:

- 61.12.9 Close

61.12.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable instance of a run delegate.
Notes: The run-delegate object can be used for reserving space in a line or for eliding the glyphs for a range of text altogether.

61.12.8 Events

61.12.9 Close

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event called when item closes.
See also:

- 61.12.6 Close 12554

61.12.10 GetAscent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines typographic ascent of glyphs in the run.
Notes: Returns the typographic ascent of glyphs in the run associated with the run delegate.

61.12.11 GetDescent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines typographic descent of glyphs in the run.
Notes: Returns the typographic descent of glyphs in the run associated with the run delegate.

61.12.12 GetWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Event that determines the typographic width of glyphs in the run.
Notes: Returns the typographic width of glyphs in the run associated with the run delegate. A value of 0.0 indicates that the glyphs should not be drawn.

61.13 class CTRunMBS

61.13.1 class CTRunMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTRun opaque type represents a glyph run, which is a set of consecutive glyphs sharing the same attributes and direction.
Notes:

The typesetter creates glyph runs as it produces lines from character strings, attributes, and font objects. That is, a line is constructed of one or more glyphs runs. Glyph runs can draw themselves into a graphic context, if desired, although most users have no need to interact directly with glyph runs.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.13.4 Methods

61.13.5 Advances as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph advances into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

61.13.6 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.13.7 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.13.8 Draw(context as CGContextMBS, location as Integer, length as Integer = 0)

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Draws a complete run or part of one.
Notes:

context: The context into which to draw the run.
range: The portion of the run to draw. If the length of the range is set to 0, then the draw operation continues from the start index of the range to the end of the run.

This is a convenience call, because the run could be drawn by accessing the glyphs. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

61.13.9 Glyphs as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyphs into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

61.13.10 ImageBounds(context as CGContextMBS, location as Integer, length as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Calculates the image bounds for a glyph range.
Notes:

context: The context for the image bounds being calculated. This is required because the context could have settings in it that would cause changes in the image bounds.
range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the start index of the range to the end of the run.

Returns a rectangle that tightly encloses the paths of the run's glyphs, or, if run, context, or range is invalid, CGRectNull.
Available in OS X v10.5 and later.

61.13.11 Positions as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of glyph positions into an array.
Notes: Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

61.13.12 StringIndices as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Copies a range of string indices into an array.
Notes:

The indices are the character indices that originally spawned the glyphs that make up the run. They can be used to map the glyphs in the run back to the characters in the backing store.

Changed in v22.2 to use copy function to get array instead Ptr function, if no pointer is available.

61.13.13 TypographicBounds(location as Integer, length as Integer, byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the typographic bounds of the run.
Notes:

range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the range's start index to the end of the run.
ascent: On output, the ascent of the run.
descent: On output, the descent of the run.
leading: On output, the leading of the run.

Returns the typographic width of the run, or if run or range is invalid, 0.
Available in OS X v10.5 and later.

61.13.14 Properties

61.13.15 AttributeValues as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the attribute dictionary that was used to create the glyph run.
Notes:

Return a valid Dictionary or nil on error or if the run has no attributes.

The dictionary returned is either the same one that was set as an attribute dictionary on the original attributed string or a dictionary that has been manufactured by the layout engine. Attribute dictionaries can be manufactured in the case of font substitution or if the run is missing critical attributes.
(Read only property)

61.13.16 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the glyph count for the run.
Notes:

run: The run for which to return the glyph count.

Returns the number of glyphs that the run contains, or if there are no glyphs in this run, a value of 0.
Available in OS X v10.5 and later.
(Read only property)

61.13.17 Status as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the run's status.
Notes:

Runs have status that can be used to expedite certain operations. Knowing the direction and ordering of a run's glyphs can aid in string index analysis, whereas knowing whether the positions reference the identity

text matrix can avoid expensive comparisons. This status is provided as a convenience, because this information is not strictly necessary but can be helpful in some circumstances.
(Read only property)

61.13.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes:

The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

61.13.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Gets the range of characters that originally spawned the glyphs in the run.
Notes:

The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

61.13.20 TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text matrix needed to draw this run.
Notes:

To properly draw the glyphs in a run, the fields tx and ty of the CGAffineTransform returned by this function should be set to the current text position.
(Read only property)

61.13.21 Constants

61.13.22 kCTRunStatusHasNonIdentityMatrix = 4

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run requires a specific text matrix to be set in the current Core Graphics context for proper drawing.
Use BitwiseAnd() to check if the status has a given value.

61.13.23 kCTRunStatusNonMonotonic = 2

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run has been reordered in some way such that the string indices associated with the glyphs are no longer strictly increasing (for left-to-right runs) or decreasing (for right-to-left runs).
Use BitwiseAnd() to check if the status has a given value.

61.13.24 kCTRunStatusNoStatus = 0

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes: The run has no special attributes.

61.13.25 kCTRunStatusRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2.

Function: One of the possible values for the status bitfield.
Notes:

The run proceeds from right to left.
Use BitwiseAnd() to check if the status has a given value.

61.14 class CTTextTabMBS

61.14.1 class CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTextTab opaque type represents a tab in a paragraph style, storing an alignment type and location.
Notes:

Core Text supports four alignment types: left, center, right, and decimal. These alignment types are absolute, not based on the line sweep direction of text. For example, tabbed text is always positioned to the left of a right-aligned tab, whether the line sweep direction is left to right or right to left. A tab's location, on the other hand, is relative to the back margin. A tab set at 1.5 inches, for example, is at 1.5 inches from the right in right-to-left text.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.14.2 Blog Entries

61.14.4 Methods

61.14.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.14.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.14.7 Create(alignment as Integer, location as Double, options as Dictionary = nil) as CTTextTabMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates and initializes a new text tab object.
Notes:

alignment: The tab's alignment. This is used to determine the position of text inside the tab column. This parameter must be set to a valid CTTextAlignment value or this function returns nil.
location: The tab's ruler location, relative to the back margin.
options: Options to pass in when the tab is created. Currently, the only option available is kCTTabColumnTerminatorsAttributeName. This parameter is optional and can be set to nil if not needed.
Return a reference to a CTTextTab object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

61.14.8 kCTTabColumnTerminatorsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the options keys.
Notes:

Specifies the terminating character for a tab column.

The value associated with this attribute is a CFCharacterSet object. The character set is used to determine the terminating character for a tab column. The tab and newline characters are implied even if they don't exist in the character set. This attribute can be used to implement decimal tabs, for instance. This attribute is optional.

61.14.9 Properties

61.14.10 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the text alignment of the tab.
Notes: (Read only property)

61.14.11 Location as Double

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the tab's ruler location.
Notes:

The tab's ruler location relative to the back margin.
(Read only property)

61.14.12 Options as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Returns the dictionary of attributes associated with the tab.
Notes:

The dictionary of attributes associated with the tab, or if no dictionary is present, nil.
(Read only property)

61.15 class CTTypesetterMBS

61.15.1 class CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The CTTypesetter opaque type represents a typesetter, which performs line layout.
Notes:

Line layout includes word wrapping, hyphenation, and line breaking in either vertical or horizontal rectangles. A typesetter object takes as input an attributed string and produces a line of typeset glyphs (composed into glyph runs) in a CTLine object. The typesetter performs character-to-glyph encoding, glyph ordering, and positional operations, such as kerning, tracking, and baseline adjustments. If multiline layout is needed, it is performed by a framesetter object, which calls into the typesetter to generate the typeset lines to fill the frame.

A framesetter encapsulates a typesetter and provides a reference to it as a convenience, but a caller may also choose to create a freestanding typesetter.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

61.15.2 Blog Entries

- CoreText Completed

61.15.3 Blog Entries

- CoreText Completed

61.15.4 Methods

61.15.5 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

61.15.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: The private constructor.

61.15.7 CreateLine(location as Integer, length as Integer, offset as Double = 0.0) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable line from the typesetter at a specified line offset.
Notes:

location and length: The string range on which the line is based. If the length portion of range is set to 0, then the typesetter continues to add glyphs to the line until it runs out of characters in the string. The location and length of the range must be within the bounds of the string, or the call will fail.
offset: The line position offset.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.
The resultant line consists of glyphs in the correct visual order, ready to draw.
Available in OS X v10.6 and later.

61.15.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string.
Notes:

s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.

Available in OS X v10.5 and later.
See also:

- 61.15.9 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

61.15.9 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Creates an immutable typesetter object using an attributed string and a dictionary of options.
Notes:

s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.
options: A dictionary of typesetter options, or nil if there are none.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.

The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.
Available in OS X v10.5 and later.
See also:

- 61.15.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS 12566

61.15.10 kCTTypesetterOptionDisableBidiProcessing as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter,Äôs bidirectional text processing.
Notes:

Disables bidirectional processing. Value must be a CFBoolean object. Default value is false. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If a typesetter is created with this option set to true, no directional reordering is performed, and any directional control characters are ignored.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

61.15.11 kCTTypesetterOptionForcedEmbeddingLevel as string

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: One of the constants to control aspects of the typesetter,Äôs bidirectional text processing.
Notes:

Specifies the embedding level. Value must be a CFNumberRef object. Default is unset. Normally, typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If present, this option specifies the embedding level, and any directional control characters are ignored.
Available in OS X v10.5 and later.

61.15.12 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the width provided.
Notes:

startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.

Return a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CTTypesetterCreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character in the stream. This function is equivalent to SuggestClusterBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 61.15.13 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer 12568

61.15.13 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a cluster line breakpoint based on the specified width and line offset.
Notes:

startIndex: The starting point for the typographic cluster-break calculations. The break calculations include the character starting at startIndex.
width: The requested typographic cluster-break width.
offset: The line offset position.

Returns a count of the characters from startIndex that would cause the cluster break. The value returned can be used to construct a character range for CreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters. No other contextual analysis is done. This can be used by the caller to implement a different line-breaking scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character

in the stream.

Available in OS X v10.6 and later.
See also:

- 61.15.12 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer 12568

61.15.14 SuggestLineBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided.
Notes:

startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.

Returns a count of the characters from startIndex that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters. This function is equivalent to SuggestLineBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 61.15.15 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer 12569

61.15.15 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

Function: Suggests a contextual line breakpoint based on the width provided and the specified offset.
Notes:

startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.
offset: The line position offset.

Returns a count of the characters from startIndex and offset that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters.
Available in OS X v10.6 and later.
See also:

- 61.15.14 SuggestLineBreak(startIndex as Integer, width as Double) as Integer 12569

Chapter 62

CPUInfo

62.1 class CPUIDMBS

62.1.1 class CPUIDMBS

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class around the CPUID command of x86 CPUs.
Example:

```
dim c as new CPUIDMBS
MsgBox c.BrandString
```

Notes:

This class works only on x86 CPUs.
Values returned in the properties have very CPU vendor specific values.
So Intel and AMD use different meanings for a lot of values.

62.1.2 Blog Entries

62.1.6 Methods

62.1.7 BrandString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brand string.
Notes: contains the brand string, e.g. "Intel(R) Xeon(TM) CPU 2.40GHz"
See also:

- 62.1.27 BrandString as String 12577

62.1.8 CodeName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The brief and human-friendly CPU codename, which was recognized.

62.1.9 CPUID(Selector as Integer) as boolean

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls CPUID for the given selector.
Example:

```
dim c as new CPUIDMBS

if c.CPUID(0) then
MsgBox hex(c.EDX)
end if
```

Notes:

Returns true on success and false on failure.
(always true on x86 CPUs and always false on PowerPC CPUs.)
Result values are stored in the four properties EAX, EBX, ECX and EDX.

62.1.10 ExtFamily as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended family.

62.1.11 ExtModel as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU extended model

62.1.12 Family as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU family.
See also:

- 62.1.32 Family as Integer 12579

62.1.13 FeatureName(index as Integer) as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short textual representation of a CPU flag.
Notes:

A constant string like "fpu", "tsc", "sse2", etc.
See kFeature* constants.

62.1.14 Flags(index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries whether a given feature is available.
Example:

```
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
end if
```

Notes: See kFeature* constants.

62.1.15 L1DataCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 data cache size in KB.
Notes:

Could be zero, if the CPU lacks cache.
If the size cannot be determined, it will be -1.

62.1.16 L1InstructionCache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L1 instruction cache size in KB.
Notes:

Could be zero, if the CPU lacks cache. If the size cannot be determined, it will be -1.
On some Intel CPUs, whose instruction cache is in fact a trace cache, the size will be expressed in K uOps.

62.1.17 L2Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L2 cache size in KB.
Notes:

Could be zero, if the CPU lacks L2 cache.
If the size of the cache could not be determined, it will be -1

62.1.18 L3Cache as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: L3 cache size in KB.
Notes: Zero on most systems.

62.1.19 Model as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU model.
See also:

- 62.1.33 Model as Integer 12579

62.1.20 NumCores as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of CPU cores on the current processor.

62.1.21 NumLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of logical processors on the current processor.
Notes: Could be more than the number of physical cores, e.g. when the processor has HyperThreading.

62.1.22 Stepping as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CPU stepping.
See also:

- 62.1.35 Stepping as Integer 12580

62.1.23 TotalLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of logical processors.
Notes:

This is num_logical_cpus * { total physical processors in the system }

If you're writing a multithreaded program and you want to run it on all CPUs, this is the number of threads you need.

62.1.24 Vendor as Integer

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The recognized CPU vendor.
Notes: See kVendor constants.

62.1.25 VendorName as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The vendor name.
Notes: contains the CPU vendor string, e.g. "GenuineIntel"

62.1.26 Properties

62.1.27 BrandString as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string (47 characters maximum) with the brand name of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox c.BrandString
```

Notes:

Is "" if not supported.
(Read and Write property)
See also:

- 62.1.7 BrandString as String 12572

62.1.28 EAX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EAX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EAX)
```

Notes: (Read and Write property)

62.1.29 EBX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EBX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EBX)
```

Notes: (Read and Write property)

62.1.30 ECX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ECX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.ECX)
```

Notes: (Read and Write property)

62.1.31 EDX as UInt32

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The EDX register value after a CPUID function call.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.EDX)
```

Notes: (Read and Write property)

62.1.32 Family as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Family ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Family)
```

Notes:

e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 62.1.12 Family as Integer 12573

62.1.33 Model as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Model ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Model)
```

Notes:

Every CPU Family has several Models.
e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 62.1.19 Model as Integer 12575

62.1.34 ProcessorVendor as String

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Name of the Processor Vendor.
Example:

```
dim c as new CPUIDMBS
MsgBox c.ProcessorVendor
```

Notes:

Possible values:

CPUID_VID_INTEL	"GenuineIntel"
CPUID_VID_UMC	"UMC UMC UMC "
CPUID_VID_AMD	"AuthenticAMD"
CPUID_VID_CYRIX	"CyrixInstead"
CPUID_VID_NEXGEN	"NexGenDriven"
CPUID_VID_CENTAUR	"CentaurHauls"
CPUID_VID_RISE	"RiseRiseRise"
CPUID_VID_SIS	"SiS SiS SiS "
CPUID_VID_TRANSMETA	"GenuineTMx86"
CPUID_VID_NSC	"Geode by NSC"

(Read and Write property)

62.1.35 Stepping as Integer

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The stepping ID of the CPU.
Example:

```
dim c as new CPUIDMBS
MsgBox str(c.Stepping)
```

Notes:

Can be seen as a revision number of the processor.
(Read and Write property)
See also:

- 62.1.22 Stepping as Integer 12576

62.1.36 Constants

62.1.37 kFeature100MHzSteps = 80

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 100 MHz multiplier control

62.1.38 kFeature3DNOW = 56

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD 3DNow! instructions supported

62.1.39 kFeature3DNOWEXT = 57

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD 3DNow! extended instructions supported

62.1.40 kFeature3DNOWPrefetch = 68

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: PREFETCH/PREFETCHW support

62.1.41 kFeatureABM = 65

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: LZCNT instruction support

62.1.42 kFeatureACPI = 20

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: ACPI support (power states)

62.1.43 kFeatureAES = 51

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AES* instructions supported

62.1.44 kFeatureAPERFMPERF = 91

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: MPERF/APERF MSRs support

62.1.45 kFeatureAPIC = 9

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: APIC support

62.1.46 kFeatureAVX = 54

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Advanced vector extensions supported

62.1.47 kFeatureCID = 40

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Context ID supported

62.1.48 kFeatureCLFLUSH = 18

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CLFLUSH instruction supported

62.1.49 kFeatureCMOV = 14

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMOVxx instructions supported

62.1.50 kFeatureCMP_LEGACY = 63

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: core multi-processing legacy mode

62.1.51 kFeatureConstantTSC = 82

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: TSC ticks at constant rate

62.1.52 kFeatureCPB = 90

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Core performance boost

62.1.53 kFeatureCX16 = 41

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMPXCHG16B instruction supported

62.1.54 kFeatureCX8 = 8

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CMPXCHG8B instruction supported

62.1.55 kFeatureDCA = 44

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Direct cache access supported

62.1.56 kFeatureDE = 2

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Debugging extension

62.1.57 kFeatureDS_CPL = 34

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: CPL Qualified Debug Store

62.1.58 kFeatureDTS = 19

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Debug store supported

62.1.59 kFeatureDTS64 = 32

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 64-bit Debug store supported

62.1.60 kFeatureEST = 37

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Enhanced SpeedStep

62.1.61 kFeatureF16C = 87

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 16-bit FP convert instruction support

62.1.62 kFeatureFID = 75

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Frequency ID control

62.1.63 kFeatureFMA3 = 84

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: The FMA3 instruction set

62.1.64 kFeatureFMA4 = 85

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: The FMA4 instruction set

62.1.65 kFeatureFPU = 0

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Floating point unit

62.1.66 kFeatureFXSR = 22

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: FXSAVE / FXRSTOR supported

62.1.67 kFeatureFXSR_OPT = 59

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: FFXSR: FXSAVE and FXRSTOR optimizations

62.1.68 kFeatureHT = 26

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Hyper-threading supported (but might be disabled)

62.1.69 kFeatureHWPState = 81

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Hardware P-state control

62.1.70 kFeatureIA64 = 28

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: IA64 supported (Itanium only)

62.1.71 kFeatureIBS = 70

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Instruction-based sampling

62.1.72 kFeatureLAHF_LM = 62

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: LAHF/SAHF supported in 64-bit mode

62.1.73 kFeatureLM = 61

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Example:

```
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
end if
```

Notes: Long mode (x86_64/EM64T) supported

62.1.74 kFeatureMCA = 13

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Machine check architecture

62.1.75 kFeatureMCE = 7

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Machine check exception

62.1.76 kFeatureMisalignSSE = 66

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Misaligned SSE supported

62.1.77 kFeatureMMX = 21

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: MMX instruction set supported

62.1.78 kFeatureMMXEXT = 55

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD MMX-extended instructions supported

62.1.79 kFeatureMONITOR = 33

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: MONITOR / MWAIT supported

62.1.80 kFeatureMOVBE = 49

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: MOVBE instruction supported

62.1.81 kFeatureMSR = 5

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Model-specific regsisters, RDMSR/WRMSR supported

62.1.82 kFeatureMTRR = 10

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Memory type range registers

62.1.83 kFeatureNX = 58

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: No-execute bit supported

62.1.84 kFeatureOSVW = 69

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: OS Visible Workaround (AMD)

62.1.85 kFeatureOSXSAVE = 53

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: non-privileged copy of OSXSAVE supported

62.1.86 kFeaturePA = 93

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Processor accumulator

62.1.87 kFeaturePAE = 6

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Physical address extension

62.1.88 kFeaturePAT = 15

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Page attribute table

62.1.89 kFeaturePBE = 29

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Pending-break enable

62.1.90 kFeaturePCLMUL = 31

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: PCLMULQDQ instruction supported

62.1.91 kFeaturePDCM = 43

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Performance capabilities MSR supported

62.1.92 kFeaturePFI = 92

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Processor Feedback Interface support

62.1.93 kFeaturePGE = 12

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Page global enable

62.1.94 kFeaturePN = 17

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Processor serial # implemented (Intel P3 only)

62.1.95 kFeaturePNI = 30

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: PNI (SSE3) instructions supported

62.1.96 kFeaturePOPCNT = 50

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: POPCNT instruction supported

62.1.97 kFeaturePSE = 3

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Page size extension

62.1.98 kFeaturePSE36 = 16

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: 36-bit page address extension

62.1.99 kFeatureRDRAND = 88

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: RdRand instruction

62.1.100 kFeatureRDTSCP = 60

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: RDTSCP instruction supported (AMD-only)

62.1.101 kFeatureSEP = 11

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SYSENTER / SYSEXIT instructions supported

62.1.102 kFeatureSKINIT = 72

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SKINIT / STGI supported

62.1.103 kFeatureSMX = 36

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Safer mode exceptions

62.1.104 kFeatureSS = 25

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Self-snoop

62.1.105 kFeatureSSE = 23

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Streaming-SIMD Extensions (SSE) supported

62.1.106 kFeatureSSE2 = 24

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSE2 instructions supported

62.1.107 kFeatureSSE4A = 67

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSE 4a from AMD

62.1.108 kFeatureSSE4_1 = 45

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSE 4.1 instructions supported

62.1.109 kFeatureSSE4_2 = 46

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSE 4.2 instructions supported

62.1.110 kFeatureSSE5 = 71

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSE 5 instructions supported (deprecated, will never be 1)

62.1.111 kFeatureSSSE3 = 39

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SSSE3 instructionss supported (this is different from SSE3!)

62.1.112 kFeatureSTC = 79

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Software thermal control

62.1.113 kFeatureSVM = 64

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD Secure virtual machine

62.1.114 kFeatureSYSCALL = 47

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: SYSCALL / SYSRET instructions supported

62.1.115 kFeatureTBM = 86

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Trailing bit manipulation instruction support

62.1.116 kFeatureTM = 27

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Thermal monitor

62.1.117 kFeatureTM2 = 38

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Thermal monitor 2

62.1.118 kFeatureTM_AMD = 78

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: AMD-specified hardware thermal control

62.1.119 kFeatureTS = 74

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Temperature sensor

62.1.120 kFeatureTSC = 4

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Time-stamp counter

62.1.121 kFeatureTTP = 77

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: THERMTRIP

62.1.122 kFeatureVID = 76

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Voltage ID control

62.1.123 kFeatureVME = 1

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Virtual mode extension

62.1.124 kFeatureVMX = 35

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Virtualization technology supported

62.1.125 kFeatureWDT = 73

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Watchdog timer support

62.1.126 kFeatureX2APIC = 89

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: x2APIC, APIC_BASE.EXTD, MSRs 0000_0800h...0000_0BFFh 64-bit ICR (+030h but not +031h), no DFR (+00Eh), SELF_IPI (+040h) also see standard level 0000_000Bh.

62.1.127 kFeatureXD = 48

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Execute disable bit supported

62.1.128 kFeatureXOP = 83

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: The XOP instruction set (same as the old CPU_FEATURE_SSE5)

62.1.129 kFeatureXSAVE = 52

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: XSAVE/XRSTOR/etc instructions supported

62.1.130 kFeatureXTPR = 42

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the feature constants.
Notes: Send Task Priority Messages disable

62.1.131 kVendorAMD = 1

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: AMD CPU

62.1.132 kVendorCentaur = 6

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by IDT

62.1.133 kVendorCyrix = 2

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: Cyrix CPU

62.1.134 kVendorIntel = 0

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: Intel CPU

62.1.135 kVendorNexGen = 3

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: NexGen CPU

62.1.136 kVendorNSC = 9

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by National Semiconductor

62.1.137 kVendorRISE = 7

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by Rise Technology

62.1.138 kVendorSiS = 8

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by SiS

62.1.139 kVendorTransmeta = 4

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: Transmeta CPU

62.1.140 kVendorUMC = 5

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: x86 CPU by UMC

62.1.141 kVendorUnknown = -1

MBS Util Plugin, Plugin Version: 14.3.

Function: One of the vendor constants.
Notes: Unknown

Chapter 63

CUPS

63.1 class CUPSDestinationMBS

63.1.1 class CUPSDestinationMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for a CUPS destination.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

63.1.2 Blog Entries

- About plug-in functions returning array

63.1.3 Blog Entries

- About plug-in functions returning array

63.1.4 Methods

63.1.5 Options as CUPSOptionMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop only.

Function: Options values.

63.1.6 Properties

63.1.7 Instance as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Local instance name or "".
Notes: (Read and Write property)

63.1.8 isDefault as Boolean

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Is this printer the default?
Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox c.Name
end if
next
```

Notes: (Read and Write property)

63.1.9 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The name of the printer.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
```

next

MsgBox Join(lines,EndOfLine)

Notes: (Read and Write property)

63.2 class CUPSErrorExceptionMBS

63.2.1 class CUPSErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The error exception raised by some CUPS functions.
Notes: Subclass of the RuntimeException class.

63.3 class CUPSJobMBS

63.3.1 class CUPSJobMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for job details.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsActive)

if UBound(jobs)<0 then
MsgBox "no job"
else

dim j as CUPSJobMBS = jobs(0)
dim lines(-1) as string

lines.Append "Title: "+j.Title
lines.Append "User: "+j.User
lines.Append "Format: "+j.Format
lines.Append "Dest: "+j.Dest
lines.Append "ID: "+str(j.ID)
lines.Append "Priority: "+str(j.Priority)
lines.Append "Size: "+str(j.Size)
lines.Append "State: "+str(j.State)

if j.CompletedTime<>nil then
lines.Append "CompletedTime: "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
else
lines.Append "CompletedTime: nil"
end if

if j.CreationTime<>nil then
lines.Append "CreationTime: "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
else
lines.Append "CreationTime: nil"
end if

if j.ProcessingTime<>nil then
lines.Append "ProcessingTime: "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
else
lines.Append "ProcessingTime: nil"
end if

MsgBox join(lines,EndOfLine)

end if
```

63.3.2 Properties

63.3.3 CompletedDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.4 CompletedTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was completed.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.5 CreationDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.6 CreationTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was created.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.7 Dest as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Printer or class name.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Dest
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

63.3.8 Format as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Document format.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Format
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

63.3.9 ID as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The job ID.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has ID "+str(jobs(0).ID)
```

Notes: (Read and Write property)

63.3.10 Priority as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Priority (1-100).
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title+" has priority "+str(jobs(0).Priority)
```

Notes: (Read and Write property)

63.3.11 ProcessingDateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.12 ProcessingTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Time the job was processed.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)

if UBound(jobs)<0 then
MsgBox "no job"
else
dim j as CUPSJobMBS = jobs(0)

MsgBox j.Title+" completed at "+j.ProcessingTime.AbbreviatedDate+" "+j.ProcessingTime.longtime
end if
```

Notes:

Value is nil if the value is not set.
(Read and Write property)

63.3.13 Size as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Size in kilobytes.
Example:

```
dim sum as Integer
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
```

```
if UBound(jobs)<0 then
MsgBox "no job"
else
for each j as CUPSJobMBS in jobs
sum=sum+j.Size
next

MsgBox "Total size of all print jobs: "+str(sum)+" KB"
end if
```

Notes: (Read and Write property)

63.3.14 State as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: (Read and Write property)

63.3.15 Title as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Title/job name.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.Title
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

63.3.16 User as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: User the submitted the job.
Example:

```
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
lines.Append j.User
next

MsgBox Join(lines,EndOfLine)
```

Notes: (Read and Write property)

63.4 module CUPSMBS

63.4.1 module CUPSMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: All.

Function: The module to control the CUPS printing system.

63.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Real Studio Plugins, version 12.5pr8

63.4.4 Methods

63.4.5 CancelJob(name as string, job as Int32)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Cancel a print job on the default server.
Notes:

name: Name of printer or class
job: Job ID, kJobIDCurrent for the current job, or kJobIDAll for all jobs

Pass kJobIDAll to cancel all jobs or kJobIDCurrent to cancel the current job on the named destination.

Raises exception on error.

63.4.6 GetDefault as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the default printer or class for the default server.
Example:

```
MsgBox CUPSMBS.GetDefault
```

63.4.7 GetDestinations as CUPSDestinationMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the list of destinations from the default server.
Example:

```
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next

MsgBox Join(lines,EndOfLine)
```

Notes: Starting with CUPS 1.2, the returned list of destinations include the printer-info, printer-is-accepting-jobs, printer-is-shared, printer-make-and-model, printer-state, printer-state-change-time, printer-state-reasons, and printer-type attributes as options. CUPS 1.4 adds the marker-change-time, marker-colors, marker-high-levels, marker-levels, marker-low-levels, marker-message, marker-names, marker-types, and printer-commands attributes as well.

63.4.8 GetJobs(name as string, OnlyMyJobs as boolean, whichjobs as Integer) as CUPSJobMBS()

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the jobs from the default server.
Notes:

name: "" = all destinations, otherwise show jobs for named destination
OnlyMyJobs: false = all users, true = mine
whichjobs: kWhichJobsAll, kWhichJobsActive, or kWhichJobsComplete

A "whichjobs" value of kWhichJobsAll returns all jobs regardless of state, while kWhichJobsActive returns jobs that are pending, processing, or held and kWhichJobsComplete returns jobs that are stopped, canceled,

aborted, or completed.

63.4.9 GetPassword(prompt as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get a password from the user.
Notes: Returns "" if the user does not provide a password.

63.4.10 GetPPD(name as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Get the PPD file for a printer on the default server.
Example:

```
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
MsgBox cupsmbs.GetPPD(c.Name)
end if
next
```

Notes:

Returns Filename for PPD file.

For classes, cupsGetPPD returns the PPD file for the first printer in the class.

The returned filename is stored in a static buffer and is overwritten with each call to cupsGetPPD or cupsGetPPD2. The caller "owns" the file that is created and must unlink the returned filename.

63.4.11 LastError as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status code.

63.4.12 LastErrorString as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the last IPP status-message.
Example:

MsgBox CUPSMBS.LastErrorString

Notes: Returns status-message text from last request.

63.4.13 PrintData(name as string, Data as String, Title as string) as Integer

MBS Tools Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes:

Name: Destination name
Data: Data to print
Title: Title of job

Returns Job ID or 0 on error

63.4.14 PrintFile(name as string, file as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Example:

```
// Print file on default printer...
dim f as FolderItem = SpecialFolder.Desktop.Child("test.ps")

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then

call CUPSMBS.PrintFile(c.Name, f, f.Name)

end if
next
```

Notes:

name: Destination name
filename: File to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 63.4.15 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer 12616

63.4.15 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print a file to a printer or class on the default server.
Notes:

name: Destination name
filename: File to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 63.4.14 PrintFile(name as string, file as folderitem, title as string) as Integer 12615

63.4.16 PrintFiles(name as string, files() as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes:

name: Destination name
filename: Files to print
title: Title of job

Returns Job ID or 0 on error
See also:

- 63.4.17 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer 12617

63.4.17 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Print files to a printer or class on the default server.
Notes:

name: Destination name
files: Files to print
title: Title of job
options: Options

Returns Job ID or 0 on error
See also:

- 63.4.16 PrintFiles(name as string, files() as folderitem, title as string) as Integer 12616

63.4.18 Server as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the hostname/address of the default server.
Example:

MsgBox CUPSMBS.Server

Notes: The returned value can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname.

63.4.19 SetDefaultPrinter(printer as string)

MBS Tools Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Sets the default printer.
Notes: Name must be one of CUPSDestinationMBS's name.

63.4.20 SetServer(server as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default server name.
Notes:

server: Server name

The "server" string can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname. Pass "" to restore the default server name.

63.4.21 SetUser(user as string)

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Set the default user name.
Notes:

user: User name

Pass "" to restore the default user name.

63.4.22 User as string

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Return the current user's name.
Example:

```
MsgBox CUPSMBS.User
```

63.4.23 Constants

63.4.24 kJobAborted = 8

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
```

```
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job was aborted.

63.4.25 kJobCanceled = 7

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
```

```
end Select

MsgBox str(State)+": "+s
```

Notes: Job was canceled.

63.4.26 kJobCompleted = 9

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job was completed.

63.4.27 kJobHeld = 4

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is held.

63.4.28 kJobIDAll = -1

MBS Tools Plugin, Plugin Version: 9.7.

Function: A job constant for all jobs.

63.4.29 kJobIDCurrent = 0

MBS Tools Plugin, Plugin Version: 9.7.

Function: A job constant for the current job.

63.4.30 kJobPending = 3

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is pending

63.4.31 kJobProcessing = 5

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
```

```
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State)+": "+s
```

Notes: Job is processing.

63.4.32 kJobStopped = 6

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the constants for the job state.
Example:

```
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select
```

```
MsgBox str(State)+": "+s
```

Notes: Job is stopped.

63.4.33 kPrinterAUTHENTICATED = & h400000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer requires authentication

63.4.34 kPrinterBIND = & h0400

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can bind output

63.4.35 kPrinterBW = & h0004

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterBW)=CUPSMBS.kPrinterBW then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next
```

MsgBox Join(lines,EndOfLine)

Notes: Can do B& W printing

63.4.36 kPrinterCLASS = & h0001

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer class

63.4.37 kPrinterCOLLATE = & h0080

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can collage copies

63.4.38 kPrinterCOLOR = & h0008

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterCOLOR)=CUPSMBS.kPrinterCOLOR then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do color printing

63.4.39 kPrinterCOMMANDS = & h800000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer supports maintenance commands

63.4.40 kPrinterCOPIES = & h0040

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do copies

63.4.41 kPrinterCOVER = & h0200

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can cover output

63.4.42 kPrinterDEFAULT = & h20000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Default printer on network

63.4.43 kPrinterDELETE = & h100000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Delete printer

63.4.44 kPrinterDISCOVERED = & h1000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer was automatically discovered and added.

63.4.45 kPrinterDUPLEX = & h0010

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterDUPLEX)=CUPSMBS.kPrinterDUPLEX then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do duplexing

63.4.46 kPrinterFAX = & h40000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
```

```
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterFAX)=CUPSMBS.kPrinterFAX then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Fax queue

63.4.47 kPrinterIMPLICIT = & h10000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Implicit class

63.4.48 kPrinterLARGE = & h4000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do D/E/A1/A0

63.4.49 kPrinterLOCAL = & h0000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Local printer or class

63.4.50 kPrinterMEDIUM = & h2000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do Tabloid/B/C/A3/A2

63.4.51 kPrinterMFP = & h4000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterMFP)=CUPSMBS.kPrinterMFP then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Printer with scanning capabilities

63.4.52 kPrinterNotShared = & h200000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer is not shared.

63.4.53 kPrinterOPTIONS = & h6fffc

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.

63.4.54 kPrinterPUNCH = & h0100

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can punch output.

63.4.55 kPrinterREJECTING = & h80000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Printer is rejecting jobs.

63.4.56 kPrinterREMOTE = & h0002

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Remote printer or class.

63.4.57 kPrinterSCANNER = & h2000000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterSCANNER)=CUPSMBS.kPrinterSCANNER then
```

```
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Scanner-only device

63.4.58 kPrinterSMALL = & h1000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Example:

```
dim lines(-1) as string

for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
for each o as CUPSOptionMBS in c.Options
if o.Name="printer-type" then
dim x as Integer = val(o.Value)

if BitwiseAnd(x, CUPSMBS.kPrinterSMALL)=CUPSMBS.kPrinterSMALL then
lines.Append c.Name+": yes"
else
lines.Append c.Name+": no"
end if
end if
next
next

MsgBox Join(lines,EndOfLine)
```

Notes: Can do Letter/Legal/A4.

63.4.59 kPrinterSORT = & h0800

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can sort output.

63.4.60 kPrinterSTAPLE = & h0020

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can staple output.

63.4.61 kPrinterVARIABLE = & h8000

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the printer type/capability bit constants.
Notes: Can do variable sizes.

63.4.62 kStatusAttributes = & h040B

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error attributes or values not supported

63.4.63 kStatusAttributesNotSettable = & h0413

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error attributes not settable

63.4.64 kStatusBadRequest = & h0400

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error bad request

63.4.65 kStatusCharset = & h040D

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error charset not supported

63.4.66 kStatusCompressionError = & h0410

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error compression error

63.4.67 kStatusCompressionNotSupported = & h040F

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error compression not supported

63.4.68 kStatusConflict = & h040E

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error conflicting attributes

63.4.69 kStatusDeviceError = & h0504

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error device error

63.4.70 kStatusDocumentAccessError = & h0412

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error document access error

63.4.71 kStatusDocumentFormat = & h040A

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error document format not supported

63.4.72 kStatusDocumentFormatError = & h0411

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error document format error

63.4.73 kStatusErrorJobCanceled = & h0508

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error job canceled

63.4.74 kStatusForbidden = & h0401

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error forbidden

63.4.75 kStatusGone = & h0407

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error gone

63.4.76 kStatusIgnoredAllNotifications = & h0416

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error ignored all notifications

63.4.77 kStatusIgnoredAllSubscriptions = & h0414

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error ignored all subscriptions

63.4.78 kStatusInternalError = & h0500

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error internal error

63.4.79 kStatusMultipleJobsNotSupported = & h0509

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error multiple document jobs not supported

63.4.80 kStatusNotAccepting = & h0506

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error not accepting jobs

63.4.81 kStatusNotAuthenticated = & h0402

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error not authenticated

63.4.82 kStatusNotAuthorized = & h0403

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error not authorized

63.4.83 kStatusNotFound = & h0406

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error not found

63.4.84 kStatusNotPossible = & h0404

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error not possible

63.4.85 kStatusOK = 0

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok

63.4.86 kStatusOKButCancelSubscription = 6

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok but cancel subscription

63.4.87 kStatusOKConflict = 2

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok conflicting attributes

63.4.88 kStatusOKEventsComplete = 7

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok events complete

63.4.89 kStatusOKIgnoredNotifications = 4

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok ignored notifications

63.4.90 kStatusOKIgnoredSubscriptions = 3

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok ignored subscriptions

63.4.91 kStatusOKSubst = 1

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok ignored or substituted attributes

63.4.92 kStatusOKTooManyEvents = 5

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: successful ok too many events

63.4.93 kStatusOperationNotSupported = & h0501

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error operation not supported

63.4.94 kStatusPrinterBusy = & h0507

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error busy

63.4.95 kStatusPrinterIsDeactivated = & h050A

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error printer is deactivated

63.4.96 kStatusPrintSupportFileNotFound = & h0417

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error print support file not found

63.4.97 kStatusRedirectionOtherSite = & h200

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: redirection other site

63.4.98 kStatusRequestEntity = & h0408

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error request entity too large

63.4.99 kStatusRequestValue = & h0409

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error request value too long

63.4.100 kStatusSeeOther = & h280

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: cups see other

63.4.101 kStatusServiceUnavailable = & h0502

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error service unavailable

63.4.102 kStatusTemporaryError = & h0505

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error temporary error

63.4.103 kStatusTimeout = & h0405

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error timeout

63.4.104 kStatusTooManySubscriptions = & h0415

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error too many subscriptions

63.4.105 kStatusURIScheme = & h040C

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: client error uri scheme not supported

63.4.106 kStatusVersionNotSupported = & h0503

MBS Tools Plugin, Plugin Version: 9.7.

Function: One of the CUPS error constants.
Notes: server error version not supported

63.4.107 kWhichJobsActive = 0

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

63.4.108 kWhichJobsAll = -1

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

63.4.109 kWhichJobsComplete = 1

MBS Tools Plugin, Plugin Version: 9.7.

Function: One constant for using in GetJobs.

63.5 class CUPSMissingFunctionExceptionMBS

63.5.1 class CUPSMissingFunctionExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The exception raised if a CUPS function is not found.
Notes:

On Windows this method is raised for each function you call.
Subclass of the RuntimeException class.

63.6 class CUPSOptionMBS

63.6.1 class CUPSOptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: The class for the options in CUPS.
Example:

```
dim options() as CUPSOptionMBS

dim o1 as new CUPSOptionMBS
o1.Name = "media"
o1.Value = "A4"
options.Append o1

dim o2 as new CUPSOptionMBS
o2.Name = "scaling"
o2.Value = "75"
options.Append o2

dim o3 as new CUPSOptionMBS
o3.Name = "Collate"
o3.Value = "True"
options.Append o3

dim o4 as new CUPSOptionMBS
o4.Name = "sides"
o4.Value = "two-sided-long-edge"
options.Append o4
```

63.6.2 Properties

63.6.3 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Name of option.
Notes: (Read and Write property)

63.6.4 Value as String

MBS Tools Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

Function: Value of option.
Notes: (Read and Write property)

Chapter 64

CURL

64.1 class CURLEmailMBS

64.1.1 class CURLEmailMBS

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Our plugin class to help building and sending emails.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

Please make sure you set from, to, subject, plaintext to have a minimum email always.
If your email misses required fields, the email server may silently discard it.

64.1.6 Methods

64.1.7 AddAttachment(data as MemoryBlock, name as string, type as string = ””, InlineID as string = ””, ContentTypeMethod as String = ””)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment.
type: Optional, the mime type to use. e.g. ”application/pdf” for PDF files. If missing, we use ”application/octet-stream”.
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type ”image/png”) or PictureToJPEGStringMBS (mime type ”image/jpeg”) to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 64.1.8 AddAttachment(data as string, name as string, type as string = ””, InlineID as string = ””, ContentTypeMethod as String = ””) 12648

- 64.1.9 AddAttachment(file as FolderItem, name as string = ””, type as string = ””, InlineID as string = ””, ContentTypeMethod as String = ””) 12648

64.1.8 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.

The optional ContentTypeMethod parameter allows to specify the method value for the content-type header. Currently only for sending calendar invitiations.
See also:

- 64.1.7 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 12647
- 64.1.9 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 12648

64.1.9 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "", ContentTypeMethod as String = "")

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an attachment to the email.
Notes:

name: The name for the attachment. If empty, version 16.2 uses file name from folderitem.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".

file: The file to use. This file is read and content used for attachment.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

- 64.1.8 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "", ContentTypeMethod as String = "") 12648

64.1.10 AddBcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a blind copy recipient.
Example:

```
dim e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test M√ºller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

64.1.11 Addcc(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a copy recipient.
Example:

```
dim e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test M√ºller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

64.1.12 AddHeader(header as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a header entry.
Example:

```
dim e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

Notes:

This header is passed as is and not preprocessed.
You can use this function to pass custom headers for "X-Universally-Unique-Identifier:", "Date:", "X-Mailer:", "Message-Id:" and "Mime-Version:".
If you pass header without text following ":", the header is not included.

64.1.13 AddReplyTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient for a reply.
Example:

```
dim e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test M√ºller"

dim ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

64.1.14 AddTo(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a recipient.
Example:

```
dim e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test M√ºller"

dim TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes:

Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

64.1.15 Bccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of Bcc recipients.
Example:

```
dim e as new CURLEmailMBS
```

```
e.AddBcc "test@monkeybreadsoftware.test", "Test M√ºller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes: Entries may be encoded if necessary.

64.1.16 ccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of cc recipients.
Example:

```
dim e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test M√ºller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```

Notes: Entries may be encoded if necessary.

64.1.17 clearAttachments

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all attachments from this email.
Notes: Useful in case you want to send same email with different attachments to another recipient.

64.1.18 ClearHeaders

MBS CURL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all headers from this email.
Notes: Useful in case you want to send same email with different headers to another recipient.

64.1.19 clearRecipients

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: clears all recipients.
Notes:

Removes all TO, cc, Bcc and ReplyTO entries.
Useful in case you want to send same email to another recipient.

64.1.20 constructor(Encoding as string = "UTF-8")

MBS CURL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

Normally, ignore parameter and use UTF-8.
But alternative you can pass: UTF-8, AScII, MacRoman, Latin1 or Windows.

64.1.21 EmailSource as string

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the source code for the email.
Notes:

This is more for debugging, than for real use.
You can write this into a EML file.

64.1.22 Headers as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of extra header entries.
Example:

```
dim e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

64.1.23 ReplyTOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of ReplyTo recipients.
Example:

```
dim e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test M√ºller"

dim ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes: Entries may be encoded if necessary.

64.1.24 SetFrom(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the email from address.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian M√ºller"
```

Notes: Please pass email and name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

64.1.25 SetServer(server as string, UseSSL as boolean = false)

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the server to use.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes:

Sets which SMTP server to use.
There are a few combinations possible.
First you can use SetServer with SSL and pass true for UseURL parameter.

Or you pass false for no SSL. Still you can use CURL's OptionFTPSSL set to 3 to allow TLS for an upgrade of the unencrypted connection to SSL later.

Some servers don't support unencrypted, SSL or TLS, so only one may work.

And ports can be difficult, too. You can use CURL OptionPort to set a port explicit or include it in the server with double colon on the end. common ports are 25, 587 or 465.

Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
Sets UseSSL property.

64.1.26 TOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of TO recipients.
Example:

```
dim e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test M√ºller"

dim TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes: Entries may be encoded if necessary.

64.1.27 Properties

64.1.28 Attachmentcount as Integer

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of attachments.

Notes: (Read only property)

64.1.29 BoundaryName as String

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional name to use in boundaries for MIME parts.
Notes:

by default MBS Plugin.
(Read and Write property)

64.1.30 HTMLText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The HTML text of the email.
Notes:

This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

64.1.31 InReplyTo as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The in reply to message ID.
Notes:

Here you can define the message ID of the email you reply to.
(Read and Write property)

64.1.32 MessageID as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a custom message ID.
Notes:

The plugin normally creates one by default when setting from address.
(Read and Write property)

64.1.33 PlainText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plain text of the email.
Example:

```
dim e as new CURLEmailMBS
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"
```

Notes:

This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

64.1.34 RichText as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The enriched text of the email.
Notes:

This text is encoded as quoted printable UTF-8 text.
This is not to be confused with RTF file format. Enriched text is described here:
http://en.wikipedia.org/wiki/Enriched_text
Please note that most email clients do not support this nowadays.
(Read and Write property)

64.1.35 Server as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The effective server URL used.
Notes:

Only for debugging.
(Read only property)

64.1.36 SMTPPassword as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password for SMTP server authentication.

Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

64.1.37 SMTPServer as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The domain name of the SMTP Server to use.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes: (Read and Write property)

64.1.38 SMTPUsername as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The username for SMTP server authentication.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes: (Read and Write property)

64.1.39 Subject as String

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subject line.
Example:

```
dim e as new CURLEmailMBS

e.Subject = "Hello World ,òÔè"
```

Notes:

If subject lines contains special characters, it is automatically encoded as UTF-8.
(Read and Write property)

64.1.40 UseSSL as Boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use SSL or not.
Example:

```
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

Notes:

When using SSL right, please also check cAInfo, cAPath, OptionSSLVerifyHost and OptionSSLVerifyPeer properties on the CURLSMBS class.

Pass false for TLS and later configure CURL for TLS.
Port 465 usually Requires UseSSL=true, but other ports need UseSSL=false.
(Read and Write property)

64.2 class CURLFileInfoMBS

64.2.1 class CURLFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

64.2.2 Properties

64.2.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

64.2.4 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

64.2.5 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file name.
Notes: (Read only property)

64.2.6 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file type.
Notes: (Read only property)

64.2.7 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

64.2.8 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group ID.
Notes: (Read only property)

64.2.9 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group string.
Notes: (Read only property)

64.2.10 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hard link count.
Notes: (Read only property)

64.2.11 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filename property is valid.
Notes: (Read only property)

64.2.12 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filetype property is valid.
Notes: (Read only property)

64.2.13 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if GID property is valid.
Notes: (Read only property)

64.2.14 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if hardlinks property is valid.
Notes: (Read only property)

64.2.15 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if permissions property is valid.
Notes: (Read only property)

64.2.16 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if size property is valid.
Notes: (Read only property)

64.2.17 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if time and date properties have values.
Notes: (Read only property)

64.2.18 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if UID field has a value.
Notes: (Read only property)

64.2.19 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

64.2.20 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

64.2.21 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission value.
Notes: (Read only property)

64.2.22 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission string.
Notes: (Read only property)

64.2.23 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

64.2.24 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target for a symlink.
Notes: (Read only property)

64.2.25 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read only property)

64.2.26 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time string parsed.
Notes: (Read only property)

64.2.27 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID.
Notes: (Read only property)

64.2.28 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID as text.
Notes: (Read only property)

64.2.29 Constants

64.2.30 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

64.2.31 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

64.2.32 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

64.2.33 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

64.2.34 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

64.2.35 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

64.2.36 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

64.2.37 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

64.2.38 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

64.2.39 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

64.2.40 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

64.2.41 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

64.2.42 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

64.2.43 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

64.2.44 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

64.2.45 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

64.2.46 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

64.3 class CURLListMBS

64.3.1 class CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

64.3.2 Methods

64.3.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the item with the given index.
Notes: Index is zero based.

64.3.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

64.3.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

64.3.6 Properties

64.3.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of items in this list.
Notes: (Read only property)

64.4 class CURLMBS

64.4.1 class CURLMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to wrap libCURL.
Example:

```
Dim d As New CURLMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication

(Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

64.4.6 Methods

64.4.7 AddMimePart as CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

64.4.8 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	"test=abc"
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	

Returns the pre-signed URL. May raise an exception in case of error.

64.4.9 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears data properties.
Notes: Resets OutputData, DebugMessages and Headers.

64.4.10 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.4.11 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.4.12 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.4.13 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.4.14 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.15 CreateMTDebugOutputFile(Path as String) as boolean 12677

64.4.15 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.14 CreateMTDebugOutputFile(file as folderitem) as boolean 12676

64.4.16 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.17 CreateMTHeaderOutputFile(Path as String) as boolean 12677

64.4.17 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.16 CreateMTHeaderOutputFile(file as folderitem) as boolean 12677

64.4.18 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.4.19 CreateMTOutputFile(Path as String) as boolean 12678

64.4.19 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.4.18 CreateMTOutputFile(file as folderitem) as boolean 12678

64.4.20 FileInfos as CURLFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

64.4.21 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes mime data.
Example:

```
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

64.4.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLMBS
dim file1 as string = "my-face.jpg"
```

```
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.
See other FormAdd methods for details.

64.4.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename

(and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 64.4.27 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 12683
- 64.4.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 12687

64.4.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.
See also:

- 64.4.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 12679

64.4.30 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

64.4.31 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)

// init some curl object
dim d as new CURLMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

64.4.32 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

64.4.33 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

64.4.34 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
```

```
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

,
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"
```

```
'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

64.4.35 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

64.4.36 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time stamp when app connected.

64.4.37 GetInfoCAInfo as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries default CAInfo value.

64.4.38 GetInfoCAPath as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries default CAPath value.

64.4.39 GetInfoCertInfo as CURLListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
c.OptionCertInfo = true
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLListMBS = c.GetInfoCertInfo

for each l as CURLListMBS in lists
MsgBox Join(l, EndOfLine)
next
```

MsgBox c.DebugMessages

Notes: Please set OptionCertInfo first.

64.4.40 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return if the time condition prevented the document to get transferred.

64.4.41 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

64.4.42 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

64.4.43 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

64.4.44 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

64.4.45 GetInfoCookieList as CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

64.4.46 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

64.4.47 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

64.4.48 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

64.4.49 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

64.4.50 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

64.4.51 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

64.4.52 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

64.4.53 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

64.4.54 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use GetInfoActiveSocket instead. **Function:** Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

64.4.55 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries local IP.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

64.4.56 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
```

```
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

64.4.57 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

64.4.58 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

64.4.59 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

64.4.60 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

64.4.61 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.4.62 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.4.63 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Get the protocol used in the connection.
Notes: See kProtocol* constants.

64.4.64 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

64.4.65 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries proxy error code.

64.4.66 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

64.4.67 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

64.4.68 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pre-transfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

64.4.69 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The redirection URL.

64.4.70 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries referrer text.

64.4.71 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

64.4.72 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

64.4.73 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

64.4.74 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Client sequence counter.

64.4.75 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP sequence counter received.

64.4.76 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Server sequence counter.

64.4.77 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP session ID.

64.4.78 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the URL scheme (sometimes called protocol) used in the connection

64.4.79 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

64.4.80 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

64.4.81 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

64.4.82 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

64.4.83 GetInfoSSLEngines as CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

64.4.84 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

64.4.85 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

64.4.86 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

64.4.87 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

64.4.88 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error string from the LoadLibrary function.

64.4.89 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 64.4.90 LoadLibrary(path as string) as boolean 12706

64.4.90 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 64.4.89 LoadLibrary(file as folderitem) as boolean 12705

64.4.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Example:

```
Dim c As New CURLMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
```

```
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"
c.CollectOutputData = false

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 12707

64.4.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.4.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 12706

64.4.93 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer
Example:

```
// if you get a curl call like this

'curl -X PATCH "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } " \
'-H "Authorization: Bearer YOUR_TOKEN" \
'-H "Content-Type: application/json" \
'–data ' {
'"fields": {
'"Address": "1 Ferry Building",
'"Name": "Ferry Building",
'"Visited": True
' }
' } '

// you translate it to this:

Dim c As New CURLMBS

Dim Payload As String = _
" { "+_
"""fields"": { "+_
"""Address"": ""1 Ferry Building"","+_
"""Name"": ""Ferry Building"","+_
"""Visited"": True"+_
" } "+_
" } "

c.OptionCustomRequest = "PATCH"
c.OptionURL = "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } "
c.SetOptionHTTPHeader Array("Content-Type: application/json", "Authorization: Bearer YOUR_TOKEN")
c.OptionPostFields = Payload

Dim Error As Integer = c.Perform
Dim ResponseCode As Integer = c.GetInfoResponseCode
Dim DebugLog As String = c.DebugMessages
Dim Output As String = c.OutputData

Break
```

Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

64.4.94 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer with preemptive multithreading.
Example:

```
Dim c As New CURLMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"

Dim e As Integer = c.PerformMT

Dim ErrorMessage As String = c.LasterrorMessage
```

```
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

64.4.95 ProcessRelativeURL(BaseURL as String, RelativeURL as String) as String

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Processes an URL to come from relative URL to a new absolute URL.
Example:

```
Dim baseURL As String = "https://monkeybreadsoftware.net/themes.shtml"
Dim RelativeURL As String = "topic-curl.shtml"

Dim URL As String = CURLMBS.ProcessRelativeURL(baseURL, RelativeURL)
Break
```

Notes: Raises an UnsuppportedOperationException in case of failure.

64.4.96 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

64.4.97 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

64.4.98 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

64.4.100 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.4.101 SetInputData(data as string) 12714

64.4.101 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Example:

```
Dim c As New CURLMBS

c.SetInputData "Hello World"

// do a HTTP Upload with PUT
c.OptionUpload = True
c.OptionURL = "https://monkeybreadsoftware.de/filemaker/examples/echo.php"

// or do a FTP upload
'c.OptionURL = "ftp://monkeybreadsoftware.de/folder/file.txt"

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.4.100 SetInputData(data as MemoryBlock) 12713

64.4.102 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

64.4.103 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

64.4.104 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

64.4.105 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used

instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

64.4.106 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the array of email recipient addresses.

64.4.107 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
dim d as CURLMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

64.4.108 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

64.4.109 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of headers used for proxy requests only.

64.4.110 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

64.4.111 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send linked-list of name:port:address sets.

64.4.112 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

64.4.113 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.4.114 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if

libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.4.115 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

64.4.116 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSS-

LVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

64.4.117 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.4.118 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

64.4.119 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Setups existing CURL session for an email transfer.

Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

dim c as new CURLMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

64.4.120 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

64.4.121 WebSocketMeta as CURLWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries last frame metadata.
Notes: Only useful if called in Write event.

64.4.122 WebSocketReceive(BufferSize as Integer = 65536) as CURLWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive WebSocket data.
Example:

```
dim curl as CURLMBS // your curl handle

dim m as CURLWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if
```

Notes:

Retrieves as much as possible of a received WebSocket data fragment into the buffer, but not more than BufferSize bytes. The bytesReceived property in CURLWebSocketFrameMBS is set to the number of bytes actually stored.

If there is more fragment data to deliver than what fits in the provided buffer, CURL returns a full buffer and the application needs to call this function again to continue draining the buffer.

The returned CURLWebSocketFrameMBS contains the data and the metadata about the received data.

Lasterror property is set.

64.4.123 WebSocketSend(Data as MemoryBlock, FrameSize as Integer = 0, SendFlags as Integer = 0) as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send the specific message fragment over an established WebSocket connection.
Notes:

The buffer holds the data to send.
Returns the number of payload bytes actually sent.

To send a (huge) fragment using multiple calls with partial content per invoke, set the kFlagOffset bit and the FrameSize argument as the total expected size for the first part, then set the kFlagOffset with a zero FrameSize for the following parts.

If not sending a partial fragment or if this is raw mode, FrameSize should be set to zero.

If kWebSocketRaw is enabled in WebSocketOptions, the flags argument should be set to 0.

Lasterror property is set.

64.4.124 Properties

64.4.125 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the CURL library was loaded.
Notes:

The CURLMBS constructor loads the library if it was not loaded before.
(Read only property)

64.4.126 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

64.4.127 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use CollectDebugMessages instead. **Function:** Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.4.128 CollectDebugMessages as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.4.129 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use CollectHeaders instead. **Function:** Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.

Renamed to CollectHeaders in v23.0.
(Read and Write property)

64.4.130 CollectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.4.131 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.4.132 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use DebugMessages instead.
Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.

Newer code should use DebugMessages property instead.
(Read only property)

64.4.133 DebugMessages as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The debug messages from CURL.
Notes:

If CollectDebugMessage property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.
(Read only property)

64.4.134 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLMBS
c.DebugWithData = true
c.OptionVerbose = true
c.CollectDebugMessages = true
```

Notes: (Read and Write property)

64.4.135 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

64.4.136 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property,

so you can grab it after the transfer.

Renamed to Headers in v23.0.
(Read only property)

64.4.137 Headers as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use Headers instead. **Function:** The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.
(Read only property)

64.4.138 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

64.4.139 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lasterror from the library.
Example:

```
Dim d As New CURLMBS
```

```
d.OptionSSLVersion = 123

Dim LastError As Integer = d.LastError
// gives 43
Dim LastErrorText As String = d.LastErrorText
// A libcurl function was given a bad argument

Break
```

Notes:

Set in the constructor while doing initialization as well as by by various curl calls.
Check the kError* constants.
(Read and Write property)

64.4.140 LastErrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Example:

```
Dim d As New CURLMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

The error message from the transfer.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".

(Read only property)

64.4.141 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text for the lasterror code.
Example:

```
Dim d As New CURLMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

Static string matched to the error code, so you have an idea what's wrong.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read and Write property)

64.4.142 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

64.4.143 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

64.4.144 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

64.4.145 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

64.4.146 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

64.4.147 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

64.4.148 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

64.4.149 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a

Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

64.4.150 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

64.4.151 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write event gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

64.4.152 OptionCACacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the life-time for cached certificate stores.
Notes:

Pass a number, this sets the timeout in seconds. This tells libcurl the maximum time any cached certificate store it has in memory may be kept and reused for new connections. Once the timeout has expired, a subsequent fetch requiring a certificate store will have to build a new one.
Building a certificate store from a CAINFO file (see OptionCAInfo) is a slow operation so curl may cache the generated certificate store internally to speed up future connections.
Set to zero to completely disable caching, or set to -1 to retain the cached store remain forever. By default, libcurl caches this info for 24 hours.
(Read and Write property)
See also CA_CACHE_TIMEOUT option in CURL manual.

64.4.153 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

64.4.154 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo as blob value.
Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

64.4.155 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

64.4.156 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

64.4.157 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

64.4.158 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

64.4.159 OptionConnectOnly as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)

Type changed to integer in v23.0 to enable passing 2 for WebSockets.
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

64.4.160 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

64.4.161 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

64.4.162 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also COOKIEJAR option in CURL manual.

64.4.163 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

64.4.164 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

64.4.165 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

64.4.166 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

64.4.167 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

64.4.168 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

64.4.169 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

64.4.170 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

64.4.171 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

64.4.172 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

64.4.173 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

64.4.174 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

64.4.175 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

64.4.176 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

64.4.177 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

64.4.178 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.
Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

64.4.179 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate's status.
Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name

field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

64.4.180 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

64.4.181 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** The path name to the Entropy Gathering Daemon socket.

Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.182 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

64.4.183 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

64.4.184 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

64.4.185 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLMBS

c.OptionFollowLocation = true
```

```
c.OptionMaxRedirs = 3
```

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

64.4.186 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.187 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

64.4.188 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

64.4.189 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

64.4.190 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.191 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

64.4.192 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

64.4.193 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Notes:

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.194 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP

address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

64.4.195 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionServerResponseTimeout instead. **Function:** Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

With v22.4 or newer, please use newer property name OptionServerResponseTimeout.

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.196 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

64.4.197 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

64.4.198 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

64.4.199 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

64.4.200 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

64.4.201 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

64.4.202 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

64.4.203 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.204 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

64.4.205 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.

(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

64.4.206 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

64.4.207 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

64.4.208 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

64.4.209 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

64.4.210 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

64.4.211 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also HTTPPROXYTUNNEL option in CURL manual.

64.4.212 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

64.4.213 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also HTTP_VERSION option in CURL manual.

64.4.214 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

64.4.215 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

64.4.216 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.217 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

64.4.218 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

64.4.219 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

64.4.220 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

64.4.221 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to keep sending on error.
Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

64.4.222 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key. You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

64.4.223 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Function: Set the krb4 security level, this also enables krb4 awareness.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.224 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

64.4.225 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

64.4.226 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

64.4.227 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

64.4.228 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

64.4.229 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

64.4.230 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

64.4.231 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

64.4.232 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

64.4.233 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also MAXCONNECTS option in CURL manual.

64.4.234 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

64.4.235 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Function:** This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.236 OptionMaxLifeTimeConnection as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets maximum lifetime (since creation) allowed for reusing a connection.
Notes:

Pass a number as parameter containing maxlifetime - the maximum time in seconds, since the creation of the connection, that you allow an existing connection to have to be considered for reuse for this request.

libcurl features a connection cache that holds previously used connections. When a new request is to be done, it will consider any connection that matches for reuse. The MaxLifeTimeConnection limit prevents libcurl from trying too old connections for reuse. This can be used for client-side load balancing. If a connection is found in the cache that is older than this set maxlifetime, it will instead be closed once any in-progress transfers complete.

If set to 0, this behavior is disabled: all connections are eligible for reuse.
(Read and Write property)

64.4.237 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

64.4.238 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Function:** Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited

speed. (Added in 7.15.5)
(Read and Write property)

64.4.239 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

64.4.240 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

64.4.241 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Function:** Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

64.4.242 OptionMimeOptions as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set MIME option flags.
Notes:

Pass a number that holds a bitmask of CURLMIMEOPT constants. Each bit is a Boolean flag used while encoding a MIME tree or multipart form data.

Available bits are:

CURLMIMEOPT_FORMESCAPE = 1

Tells libcurl to escape multipart form field and file names using the backslash-escaping algorithm rather than percent-encoding (HTTP only).

Backslash-escaping consists in preceding backslashes and double quotes with a backslash. Percent encoding maps all occurrences of double quote, carriage return and line feed to % 22, % 0D and % 0A respectively.

Before version 7.81.0, percent-encoding was never applied.

HTTP browsers used to do backslash-escaping in the past but have over time transitioned to use percent-encoding. This option allows to address server-side applications that have not yet have been converted.

As an example, consider field or file name strange\name"kind. When the containing multipart form is sent,

this is normally transmitted as strange\name% 22kind. When this option is set, it is sent as strange\\name\"kind.
(Read and Write property)
See also MIME_OPTIONS option in CURL manual.

64.4.243 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

64.4.244 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

64.4.245 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)

See also NEW_DIRECTORY_PERMS option in CURL manual.

64.4.246 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

64.4.247 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.

64.4.248 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

64.4.249 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

64.4.250 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

64.4.251 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

64.4.252 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

64.4.253 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)
See also PIPEWAIT option in CURL manual.

64.4.254 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

64.4.255 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

64.4.256 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

64.4.257 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

64.4.258 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Function:** The size of the post data. (64 bit version)
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

64.4.259 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)

See also POSTREDIR option in CURL manual.

64.4.260 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

64.4.261 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionProtocolsString instead. **Function:** A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)

64.4.262 OptionProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The protocols allowed-
Example:

```
dim c as new CURLMBS
c.OptionProtocolsString = "http,tftp,sftp"
```

Notes:

Pass a string that holds a comma-separated list of case insensitive protocol names (URL schemes) to allow in the transfer. This option allows applications to use libcurl built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default, libcurl accepts all protocols it was built with support for. See also OptionReditProtocolsString.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

CURLVersionMBS class can be used to get a list of all supported protocols in the current libcurl. GetInfoProtocol function is the recommended way to figure out the protocol used in a previous transfer.
(Read and Write property)

64.4.263 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP

even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

64.4.264 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

64.4.265 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

64.4.266 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

64.4.267 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

64.4.268 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

64.4.269 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

64.4.270 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)
See also PROXY_ISSUERCERT_BLOB option in CURL manual.

64.4.271 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

64.4.272 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option. (Added in 7.19.1)

(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

64.4.273 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

64.4.274 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

64.4.275 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

64.4.276 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

64.4.277 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

64.4.278 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

64.4.279 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

64.4.280 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

64.4.281 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

64.4.282 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

64.4.283 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

64.4.284 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

64.4.285 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?
```

```
dim d as CURLMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

64.4.286 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

See also PROXY_SSLVERSION option in CURL manual.

64.4.287 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.

(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

64.4.288 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

64.4.289 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

64.4.290 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

64.4.291 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)

See also PROXY_TRANSFER_MODE option in CURL manual.

64.4.292 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5. The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

64.4.293 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

64.4.294 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUpload instead.
Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.4.295 OptionQuickExit as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to allow to exit quickly.
Notes:

Pass a number as a parameter, 1 meaning that when recovering from a timeout, libcurl should skip lengthy cleanups that are intended to avoid all kinds of leaks (threads etc.), as the caller program is about to call exit() anyway. This allows for a swift termination after a DNS timeout for example, by canceling and/or forgetting about a resolver thread, at the expense of a possible (though short-lived) leak of associated resources.
(Read and Write property)
See also QUICK_EXIT option in CURL manual.

64.4.296 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

64.4.297 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

64.4.298 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionRedirProtocolsString instead. **Function:** An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)

64.4.299 OptionReditProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The protocols allowed to redirect to.
Example:

```
dim c as new CURLMBS
c.OptionReditProtocolsString = "http,https"
```

Notes:

Pass string that holds a comma-separated list of case insensitive protocol names (URL schemes). That list limits what protocols libcurl may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This option allows applications to limit specific transfers to only be allowed to use a subset of protocols in redirections.

Protocols denied by OptionProtocolsString are not overridden by this option.

By default libcurl will allow HTTP, HTTPS, FTP and FTPS on redirects (since 7.65.2). Older versions of libcurl allowed all protocols on redirect except several disabled for security reasons: Since 7.19.4 FILE and SCP are disabled, and since 7.40.0 SMB and SMBS are also disabled.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

Default

HTTP, HTTPS, FTP and FTPS (Added in 7.65.2).

Older versions defaulted to all protocols except FILE, SCP and since 7.40.0 SMB and SMBS.
(Read and Write property)

64.4.300 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

64.4.301 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

64.4.302 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

64.4.303 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Function:** It contains the offset in number of bytes that you want the transfer to start from.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

64.4.304 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

64.4.305 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

64.4.306 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

64.4.307 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

64.4.308 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

64.4.309 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

64.4.310 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

64.4.311 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)

See also SASL_IR option in CURL manual.

64.4.312 OptionServerResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Causes libcurl to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to send a response message for a command before the session is considered dead.
Notes:

While libcurl is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionServerResponseTimeout to a value smaller than OptionTimeout.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SERVER_RESPONSE_TIMEOUT option in CURL manual.

64.4.313 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

64.4.314 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

64.4.315 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).
(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

64.4.316 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)

64.4.317 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Define the SSH authorization types.
Example:

```
dim c as CURLMBS // your instance

// only do password
c.OptionSSHAuthTypes = c.kSSHAuthKeyboard or c.kSSHAuthPassword
```

Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

See kSSHAuth* constants.
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

64.4.318 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

64.4.319 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

64.4.320 OptionSSHHostPublicKeySHA256 as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: SHA256 hash of SSH server public key.
Notes:

Pass a string containing a Base64-encoded SHA256 hash of the remote host's public key. The transfer will fail if the given hash does not match the hash the remote host provides.
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_SHA256 option in CURL manual.

64.4.321 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

64.4.322 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

64.4.323 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

64.4.324 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

64.4.325 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

64.4.326 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The certificate password.
Notes: (Read and Write property)

64.4.327 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

64.4.328 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the list of ciphers to use for the SSL connection.
Example:

```
// allow lower secure ciphers
curl.OptionSSLCipherList = "DEFAULT@SECLEVEL=0"
```

Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

64.4.329 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

64.4.330 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)

Notes: (Read and Write property)

64.4.331 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

64.4.332 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

64.4.333 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

64.4.334 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

64.4.335 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

64.4.336 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The password required to use the OptionSSLKEY private key.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

64.4.337 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

64.4.338 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

64.4.339 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)

See also SSL_SESSIONID_CACHE option in CURL manual.

64.4.340 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

64.4.341 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies

whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

64.4.342 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

64.4.343 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent

TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

64.4.344 OptionStreamDepends as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

64.4.345 OptionStreamDependsE as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

64.4.346 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

64.4.347 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Suppress proxy CONNECT response headers from events.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

64.4.348 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set TCP Fast Open.
Notes: (Read and Write property)

See also TCP_FASTOPEN option in CURL manual.

64.4.349 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeepInterval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

64.4.350 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

64.4.351 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

64.4.352 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

64.4.353 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify block size to use for TFTP data transmission.
Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

64.4.354 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

64.4.355 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

64.4.356 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

64.4.357 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

64.4.358 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

64.4.359 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

64.4.360 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

64.4.361 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

64.4.362 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

64.4.363 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

64.4.364 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

64.4.365 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

64.4.366 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

64.4.367 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

64.4.368 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

64.4.369 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

64.4.370 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The actual URL to deal with.
Example:

```
Dim c As New CURLMBS

// this example sends a xml request to a server
c.OptionURL = "http://www.someserver.com/service"

// some XML for a SOAP request
Dim request As String = "<?xml version=""1.0""?><methodCall><methodName>application.getValue</methodName><params><param><value>info</value></param></params></methodCall>"

c.OptionPostFields = request

Dim header(-1) As String
header.Append "Content-Type: text/xml"
c.SetOptionHTTPHeader header

// this should be c.kError_OK if okay.
Dim result As Integer = c.Perform

Dim output As String = c.OutputData
Dim debugLog As String = c.DebugMessages
Dim HTTPStatus As Integer = c.GetInfoResponseCode

Break
```

Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

64.4.371 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user agent string to pass to the server.
Example:

```
Dim c As New CURLMBS

// setup request and any options you need
c.OptionURL = URL
c.OptionUserAgent = "MyDownloader 1.0"
```

Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

64.4.372 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

64.4.373 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

(Read and Write property)

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

See also USE_SSL option in CURL manual.

64.4.374 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLMBS class to add code in the DebugMessage event.
Or you set CollectDebugMessages = true and later query DebugMessages property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

64.4.375 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '¬¥.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

64.4.376 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

64.4.377 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output data from CURL.
Example:

```
Dim d As New CURLMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.

Limited to 2 GB. Please stream to file for bigger data with CreateMTOutputFile function.
(Read only property)

64.4.378 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

64.4.379 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes downloaded so far.
Notes: (Read only property)

64.4.380 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to download in total.
Notes: (Read only property)

64.4.381 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

64.4.382 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes uploaded so far.
Notes: (Read only property)

64.4.383 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to upload in total.
Notes: (Read only property)

64.4.384 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.4.385 Version as CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

64.4.386 WebSocketOptions as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: WebSocket behavior options.
Notes:

Pass a bitmask to tell libcurl about specific WebSocket behaviors.

To detach a WebSocket connection and use the WebSocketSend and WebSocketReceive functions after the HTTP upgrade procedure, set the OptionConnectOnly option to 2.

Available bits in the bitmask:

kWebSocketRaw:
Deliver "raw" WebSocket traffic to the Write event.

In raw mode, libcurl does not handle pings or any other frame for the application.
(Read and Write property)

64.4.387 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

64.4.388 Events

64.4.389 ChunkBegin(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this event is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

64.4.390 ChunkEnd(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this event is called after download of an individual chunk finished.
This event is called for skipped or downloaded files.

64.4.391 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugMessages, the plugin will collect the messages and provide them via the DebugMessages property. You can still use this event to write your own log instead of in addition.

64.4.392 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

64.4.393 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLMultiMBS, it is called after TransferFinished event and before TransfersFinished event.
If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

64.4.394 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

64.4.395 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the event will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

64.4.396 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

64.4.397 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

64.4.398 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

64.4.399 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts event for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw"

data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

64.4.400 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write event is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

64.4.401 Constants

64.4.402 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

64.4.403 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.4.404 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

64.4.405 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

64.4.406 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

64.4.407 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

64.4.408 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

64.4.409 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLVersionMBS class whether this is supported/implemented by your copy of the CURL library.

64.4.410 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

64.4.411 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.4.412 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.4.413 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

64.4.414 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

64.4.415 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

64.4.416 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

64.4.417 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

64.4.418 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

64.4.419 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

64.4.420 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.421 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

64.4.422 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

64.4.423 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

64.4.424 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

64.4.425 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.426 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk event reported error.

64.4.427 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

64.4.428 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

64.4.429 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.430 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.431 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.432 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

64.4.433 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.434 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

64.4.435 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

64.4.436 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

64.4.437 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.438 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.439 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.440 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

64.4.441 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

64.4.442 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

64.4.443 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.444 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.445 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.446 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.447 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.448 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

64.4.449 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

64.4.450 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

64.4.451 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

64.4.452 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.453 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.454 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.455 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.456 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

64.4.457 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.458 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

64.4.459 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

64.4.460 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

64.4.461 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.462 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.463 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.464 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.465 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.466 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

64.4.467 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

64.4.468 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.469 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.470 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

64.4.471 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside an event.

64.4.472 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

64.4.473 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.474 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

64.4.475 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

64.4.476 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

64.4.477 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

64.4.478 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

64.4.479 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

64.4.480 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

64.4.481 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

64.4.482 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

64.4.483 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

64.4.484 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

64.4.485 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

64.4.486 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

64.4.487 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

64.4.488 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

64.4.489 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

64.4.490 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

64.4.491 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

64.4.492 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

64.4.493 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

64.4.494 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

64.4.495 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

64.4.496 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

64.4.497 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

64.4.498 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

64.4.499 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

64.4.500 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

64.4.501 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

64.4.502 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

64.4.503 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

64.4.504 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

64.4.505 kError_Unrecoverable_poll = 99

MBS CURL Plugin, Plugin Version: 22.3.

Function: One of the error constants for the Error event.
Notes: poll/select returned fatal error

64.4.506 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.507 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.4.508 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.509 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

64.4.510 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.4.511 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

64.4.512 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

64.4.513 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

64.4.514 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.515 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.516 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.517 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.518 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.519 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.520 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.521 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.522 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.523 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.524 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.525 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.526 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.527 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.528 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.529 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.4.530 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

64.4.531 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

64.4.532 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

64.4.533 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

64.4.534 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

64.4.535 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

64.4.536 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

64.4.537 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.4.538 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.4.539 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.4.540 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.4.541 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

64.4.542 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

64.4.543 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

64.4.544 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

64.4.545 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

64.4.546 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

64.4.547 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

64.4.548 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

64.4.549 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

64.4.550 kHTTP_VERSION_3Only = 31

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Use HTTP/3 without fallback. For HTTPS only. For HTTP, this makes libcurl return error.

64.4.551 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

64.4.552 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.4.553 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.4.554 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

64.4.555 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

64.4.556 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.4.557 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.4.558 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

64.4.559 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

64.4.560 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

64.4.561 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

64.4.562 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

64.4.563 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

64.4.564 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

64.4.565 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

64.4.566 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

64.4.567 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

64.4.568 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

64.4.569 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

64.4.570 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

64.4.571 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

64.4.572 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

64.4.573 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

64.4.574 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

64.4.575 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

64.4.576 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

64.4.577 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

64.4.578 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

64.4.579 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

64.4.580 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

64.4.581 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

64.4.582 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

64.4.583 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

64.4.584 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

64.4.585 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

64.4.586 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

64.4.587 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

64.4.588 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

64.4.589 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

64.4.590 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

64.4.591 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

64.4.592 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

64.4.593 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

64.4.594 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

64.4.595 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

64.4.596 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.4.597 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

64.4.598 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

64.4.599 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.4.600 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

64.4.601 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.4.602 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

64.4.603 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

64.4.604 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

64.4.605 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

64.4.606 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

64.4.607 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

64.4.608 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

64.4.609 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

64.4.610 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

64.4.611 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

64.4.612 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

64.4.613 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

64.4.614 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

64.4.615 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

64.4.616 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

64.4.617 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

64.4.618 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this way allow the vulnerability back.

64.4.619 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

64.4.620 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

64.4.621 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

64.4.622 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

64.4.623 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those SSL backends where such behavior is present.

64.4.624 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

64.4.625 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

64.4.626 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

64.4.627 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

64.4.628 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

64.4.629 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

64.4.630 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

64.4.631 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

64.4.632 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.4.633 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.4.634 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

64.4.635 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

64.4.636 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.4.637 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.4.638 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.4.639 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.4.640 kWebSocketRaw = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the options for web sockets.
Notes: RAW mode for WebSocketOptions.

64.5 class CURLMimePartMBS

64.5.1 class CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

64.5.2 Methods

64.5.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

64.5.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries header.

64.5.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets header.

64.5.6 Properties

64.5.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

64.5.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

64.5.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

64.5.10 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

64.5.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

64.5.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from named file.
Notes: (Read and Write property)

64.5.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

64.5.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part type.
Notes: (Read and Write property)

64.5.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime/form part name.
Notes: (Read and Write property)

64.5.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes: (Read only property)

64.5.17 Constants

64.5.18 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

64.5.19 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

64.5.20 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

64.5.21 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

64.5.22 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

64.5.23 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

64.5.24 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

64.5.25 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

64.5.26 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

64.5.27 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

64.5.28 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

64.5.29 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

64.5.30 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

64.5.31 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

64.6 class CURLMissingFunctionExceptionMBS

64.6.1 class CURLMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.7 class CURLMultiMBS

64.7.1 class CURLMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for multiple CURL transfers running in parallel.

64.7.2 Blog Entries

- News from the MBS Xojo Plugins Version 23.2

64.7.3 Blog Entries

- News from the MBS Xojo Plugins Version 23.2

64.7.4 Methods

64.7.5 AddCURL(curl as CURLMBS, handler as CURLTransferFinishedMBS = nil) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a standard CURL handle to the multi stack.
Notes:

Lasterror is set.

We added handler parameter for v23.2 to make it easier to run things asynchronously.

64.7.6 CURLs as CURLMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries list of current CURL instances.

64.7.7 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries text message for a given error code.

64.7.8 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

64.7.9 RemoveAll

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes all curl handles.
Notes:

Same as looping over CURLs() array and calling RemoveCURL for each.
This effectively cancels all requests.

64.7.10 RemoveCURL(CURL as CURLMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

64.7.11 SharedInstance as CURLMultiMBS

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The shared instance.
Notes:

Either you create a new CURLMultiMBS object, which then takes this place.
Or you don't and the plugin creates an object for you to easily schedule transfers asynchronously.

64.7.12 Properties

64.7.13 AutoPerform as Boolean

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to run a timer and run Perform automatically for you.
Notes:

Set to true to run Perform automatically. For this the plugin manages a timer to call perform regularly.
We set this to true for the default shared instance, so it runs without you doing anything.
(Read and Write property)

64.7.14 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.7.15 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.7.16 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

64.7.17 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

64.7.18 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

64.7.19 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

64.7.20 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

64.7.21 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

64.7.22 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

64.7.23 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

64.7.24 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

64.7.25 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.7.26 Events

64.7.27 TransferFinished(CURL as CURLMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

64.7.28 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

64.7.29 Constants

64.7.30 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

64.7.31 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

64.7.32 kErrorBadFunctionArgument = 10

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: A function was called with a bad parameter.

64.7.33 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

64.7.34 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

64.7.35 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

64.7.36 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

64.7.37 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

64.7.38 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

64.7.39 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

64.7.40 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

64.7.41 kErrorWakeupFailure = 9

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: Wakeup is unavailable or failed.

64.7.42 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

64.7.43 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

64.7.44 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

64.7.45 Delegates

64.7.46 CURLTransferFinishedMBS(curl as CURLMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes:

ErrorCode is zero for a successful.
See kError* constants in CURLSMBS class.
See also:

- 64.7.47 CURLTransferFinishedMBS(curl as CURLMBS, ErrorCode as Integer) 12901

64.7.47 CURLTransferFinishedMBS(curl as CURLMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes:

ErrorCode is zero for a successful.
See kError* constants in CURLMBS class.
See also:

- 64.7.46 CURLTransferFinishedMBS(curl as CURLMBS, ErrorCode as Integer) 12900

64.8 class CURLNFileInfoMBS

64.8.1 class CURLNFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

64.8.2 Properties

64.8.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

64.8.4 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

64.8.5 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file name.
Notes: (Read only property)

64.8.6 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file type.
Notes: (Read only property)

64.8.7 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

64.8.8 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group ID.
Notes: (Read only property)

64.8.9 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The group string.
Notes: (Read only property)

64.8.10 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hard link count.
Notes: (Read only property)

64.8.11 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filename property is valid.
Notes: (Read only property)

64.8.12 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if filetype property is valid.
Notes: (Read only property)

64.8.13 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if GID property is valid.
Notes: (Read only property)

64.8.14 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if hardlinks property is valid.
Notes: (Read only property)

64.8.15 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if permissions property is valid.
Notes: (Read only property)

64.8.16 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if size property is valid.
Notes: (Read only property)

64.8.17 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if time and date properties have values.
Notes: (Read only property)

64.8.18 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if UID field has a value.
Notes: (Read only property)

64.8.19 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

64.8.20 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

64.8.21 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission value.
Notes: (Read only property)

64.8.22 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The permission string.
Notes: (Read only property)

64.8.23 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

64.8.24 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target for a symlink.
Notes: (Read only property)

64.8.25 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read only property)

64.8.26 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time string parsed.
Notes: (Read only property)

64.8.27 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID.
Notes: (Read only property)

64.8.28 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user ID as text.
Notes: (Read only property)

64.8.29 Constants

64.8.30 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

64.8.31 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

64.8.32 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

64.8.33 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

64.8.34 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

64.8.35 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

64.8.36 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

64.8.37 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

64.8.38 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

64.8.39 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

64.8.40 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

64.8.41 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

64.8.42 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

64.8.43 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

64.8.44 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

64.8.45 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

64.8.46 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

64.9 class CURLNListMBS

64.9.1 class CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

64.9.2 Methods

64.9.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the item with the given index.
Notes: Index is zero based.

64.9.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

64.9.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts list to a string array.

64.9.6 Properties

64.9.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of items in this list.
Notes: (Read only property)

64.10 class CURLNMBS

64.10.1 class CURLNMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to wrap libCURL.
Example:

```
Dim d As New CURLNMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication

(Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

64.10.6 Methods

64.10.7 AddMimePart as CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

64.10.8 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLNMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret	
Region	The region to use.	"us-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.us-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	"test=abc"
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	

Returns the pre-signed URL. May raise an exception in case of error.

64.10.9 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears data properties.
Notes: Resets OutputData, DebugMessages and Headers.

64.10.10 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.10.11 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.10.12 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.10.13 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.10.14 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.15 CreateMTDebugOutputFile(Path as String) as boolean

64.10.15 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.14 CreateMTDebugOutputFile(file as folderitem) as boolean 12918

64.10.16 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.17 CreateMTHeaderOutputFile(Path as String) as boolean 12919

64.10.17 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.16 CreateMTHeaderOutputFile(file as folderitem) as boolean 12919

64.10.18 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.10.19 CreateMTOutputFile(Path as String) as boolean 12920

64.10.19 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.10.18 CreateMTOutputFile(file as folderitem) as boolean 12920

64.10.20 FileInfos as CURLNFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLNFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

64.10.21 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes mime data.
Example:

```
dim c as new CURLNMBS

// add mime
dim p as CURLNMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

64.10.22 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLNMBS
dim file1 as string = "my-face.jpg"
```

```
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.
See other FormAdd methods for details.

- 64.10.29 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 12929

64.10.28 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename

(and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.

64.10.30 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLNMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

64.10.31 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)

// init some curl object
dim d as new CURLNMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

64.10.32 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

64.10.33 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

64.10.34 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLNMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
```

```
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

,
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"
```

```
'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

64.10.35 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

64.10.36 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time stamp when app connected.

64.10.37 GetInfoCAInfo as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries default CAInfo value.

64.10.38 GetInfoCAPath as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries default CAPath value.

64.10.39 GetInfoCertInfo as CURLNListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
c.OptionCertInfo = true
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLNListMBS = c.GetInfoCertInfo

for each l as CURLNListMBS in lists
MsgBox Join(l, EndOfLine)
next
```

MsgBox c.DebugMessages

Notes: Please set OptionCertInfo first.

64.10.40 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return if the time condition prevented the document to get transferred.

64.10.41 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

64.10.42 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

64.10.43 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

64.10.44 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

64.10.45 GetInfoCookieList as CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

64.10.46 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

64.10.47 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

64.10.48 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

64.10.49 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

64.10.50 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

64.10.51 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

64.10.52 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

64.10.53 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

64.10.54 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use GetInfoActiveSocket instead. **Function:** Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

64.10.55 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries local IP.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

64.10.56 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
```

```
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

64.10.57 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

64.10.58 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

64.10.59 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

64.10.60 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

64.10.61 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.10.62 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.10.63 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Get the protocol used in the connection.
Notes: See kProtocol* constants.

64.10.64 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

64.10.65 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries proxy error code.

64.10.66 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

64.10.67 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

64.10.68 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pre-transfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

64.10.69 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The redirection URL.

64.10.70 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries referrer text.

64.10.71 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

64.10.72 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

64.10.73 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

64.10.74 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Client sequence counter.

64.10.75 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP sequence counter received.

64.10.76 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP Server sequence counter.

64.10.77 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query RTSP session ID.

64.10.78 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the URL scheme (sometimes called protocol) used in the connection

64.10.79 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

64.10.80 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

64.10.81 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

64.10.82 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

64.10.83 GetInfoSSLEngines as CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

64.10.84 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

64.10.85 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

64.10.86 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

64.10.87 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLNMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

64.10.88 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error string from the LoadLibrary function.

64.10.89 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 64.10.90 LoadLibrary(path as string) as boolean 12948

64.10.90 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 64.10.89 LoadLibrary(file as folderitem) as boolean 12947

64.10.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Example:

```
Dim c As New CURLNMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
```

```
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"
c.CollectOutputData = false

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 12949

64.10.92 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.10.91 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 12948

64.10.93 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer
Example:

```
// if you get a curl call like this

'curl -X PATCH "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } " \
'-H "Authorization: Bearer YOUR_TOKEN" \
'-H "Content-Type: application/json" \
'–data ' {
'"fields": {
'"Address": "1 Ferry Building",
'"Name": "Ferry Building",
'"Visited": True
' }
' } '

// you translate it to this:

Dim c As New CURLNMBS

Dim Payload As String = _
" { "+_
"""fields"": { "+_
"""Address"": ""1 Ferry Building"","+_
"""Name"": ""Ferry Building"","+_
"""Visited"": True"+_
" } "+_
" } "

c.OptionCustomRequest = "PATCH"
c.OptionURL = "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } "
c.SetOptionHTTPHeader Array("Content-Type: application/json", "Authorization: Bearer YOUR_TO-
KEN")
c.OptionPostFields = Payload

Dim Error As Integer = c.Perform
Dim ResponseCode As Integer = c.GetInfoResponseCode
Dim DebugLog As String = c.DebugMessages
Dim Output As String = c.OutputData

Break
```

Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

64.10.94 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a file transfer with preemptive multithreading.
Example:

```
Dim c As New CURLNMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"

Dim e As Integer = c.PerformMT

Dim ErrorMessage As String = c.LasterrorMessage
```

```
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLNMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

64.10.95 ProcessRelativeURL(BaseURL as String, RelativeURL as String) as String

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Processes an URL to come from relative URL to a new absolute URL.
Example:

```
Dim baseURL As String = "https://monkeybreadsoftware.net/themes.shtml"
Dim RelativeURL As String = "topic-curl.shtml"

Dim URL As String = CURLNMBS.ProcessRelativeURL(baseURL, RelativeURL)
Break
```

Notes: Raises an UnsuppportedOperationException in case of failure.

64.10.96 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

64.10.97 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

64.10.98 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 64.10.99 SendData(data as string) as Integer

64.10.99 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 64.10.98 SendData(data as Memoryblock) as Integer 12954

64.10.100 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.10.101 SetInputData(data as string) 12956

64.10.101 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the input data.
Example:

```
Dim c As New CURLNMBS

c.SetInputData "Hello World"

// do a HTTP Upload with PUT
c.OptionUpload = True
c.OptionURL = "https://monkeybreadsoftware.de/filemaker/examples/echo.php"

// or do a FTP upload
'c.OptionURL = "ftp://monkeybreadsoftware.de/folder/file.txt"

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.10.100 SetInputData(data as MemoryBlock) 12955

64.10.102 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

64.10.103 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

64.10.104 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

64.10.105 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLNMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used

instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

64.10.106 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the array of email recipient addresses.

64.10.107 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
dim d as CURLNMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

64.10.108 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

64.10.109 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set list of headers used for proxy requests only.

64.10.110 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLNMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

64.10.111 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send linked-list of name:port:address sets.

64.10.112 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

64.10.113 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.10.114 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLNMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if

libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.10.115 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

64.10.116 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSS-

LVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

64.10.117 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.10.118 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

64.10.119 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Setups existing CURL session for an email transfer.

Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

dim c as new CURLNMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

64.10.120 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

64.10.121 WebSocketMeta as CURLNWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries last frame metadata.
Notes: Only useful if called in Write event.

64.10.122 WebSocketReceive(BufferSize as Integer = 65536) as CURLNWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Receive WebSocket data.
Example:

```
dim curl as CURLNMBS // your curl handle

dim m as CURLNWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if
```

Notes:

Retrieves as much as possible of a received WebSocket data fragment into the buffer, but not more than BufferSize bytes. The bytesReceived property in CURLNWebSocketFrameMBS is set to the number of bytes actually stored.

If there is more fragment data to deliver than what fits in the provided buffer, CURL returns a full buffer and the application needs to call this function again to continue draining the buffer.

The returned CURLNWebSocketFrameMBS contains the data and the metadata about the received data.

Lasterror property is set.

64.10.123 WebSocketSend(Data as MemoryBlock, FrameSize as Integer = 0, SendFlags as Integer = 0) as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send the specific message fragment over an established WebSocket connection.
Notes:

The buffer holds the data to send.
Returns the number of payload bytes actually sent.

To send a (huge) fragment using multiple calls with partial content per invoke, set the kFlagOffset bit and the FrameSize argument as the total expected size for the first part, then set the kFlagOffset with a zero FrameSize for the following parts.

If not sending a partial fragment or if this is raw mode, FrameSize should be set to zero.

If kWebSocketRaw is enabled in WebSocketOptions, the flags argument should be set to 0.

Lasterror property is set.

64.10.124 Properties

64.10.125 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the CURL library was loaded.
Notes:

The CURLNMBS constructor loads the library if it was not loaded before.
(Read only property)

64.10.126 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

64.10.127 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use CollectDebugMessages instead. **Function:** Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.10.128 CollectDebugMessages as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.10.129 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use CollectHeaders instead.
Function: Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.

Renamed to CollectHeaders in v23.0.
(Read and Write property)

64.10.130 CollectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.10.131 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.10.132 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use DebugMessages instead.
Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.

Newer code should use DebugMessages property instead.
(Read only property)

64.10.133 DebugMessages as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The debug messages from CURL.
Notes:

If CollectDebugMessage property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.
(Read only property)

64.10.134 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLNMBS
c.DebugWithData = true
c.OptionVerbose = true
c.CollectDebugMessages = true
```

Notes: (Read and Write property)

64.10.135 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

64.10.136 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property,

so you can grab it after the transfer.

Renamed to Headers in v23.0.
(Read only property)

64.10.137 Headers as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use Headers instead. **Function:** The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.
(Read only property)

64.10.138 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

64.10.139 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lasterror from the library.
Example:

```
Dim d As New CURLNMBS
```

```
d.OptionSSLVersion = 123

Dim LastError As Integer = d.LastError
// gives 43
Dim LastErrorText As String = d.LastErrorText
// A libcurl function was given a bad argument

Break
```

Notes:

Set in the constructor while doing initialization as well as by by various curl calls.
Check the kError* constants.
(Read and Write property)

64.10.140 LastErrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Example:

```
Dim d As New CURLNMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

The error message from the transfer.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".

(Read only property)

64.10.141 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text for the lasterror code.
Example:

```
Dim d As New CURLNMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

Static string matched to the error code, so you have an idea what's wrong.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read and Write property)

64.10.142 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

64.10.143 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

64.10.144 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

64.10.145 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLNMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

64.10.146 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

64.10.147 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

64.10.148 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

64.10.149 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a

Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

64.10.150 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

64.10.151 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write event gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

64.10.152 OptionCACacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the life-time for cached certificate stores.
Notes:

Pass a number, this sets the timeout in seconds. This tells libcurl the maximum time any cached certificate store it has in memory may be kept and reused for new connections. Once the timeout has expired, a subsequent fetch requiring a certificate store will have to build a new one.
Building a certificate store from a CAINFO file (see OptionCAInfo) is a slow operation so curl may cache the generated certificate store internally to speed up future connections.
Set to zero to completely disable caching, or set to -1 to retain the cached store remain forever. By default, libcurl caches this info for 24 hours.
(Read and Write property)
See also CA_CACHE_TIMEOUT option in CURL manual.

64.10.153 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

64.10.154 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo as blob value.
Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

64.10.155 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLNMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

64.10.156 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

64.10.157 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

64.10.158 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

64.10.159 OptionConnectOnly as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLNMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)

Type changed to integer in v23.0 to enable passing 2 for WebSockets.
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

64.10.160 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

64.10.161 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

64.10.162 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also COOKIEJAR option in CURL manual.

64.10.163 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

64.10.164 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

64.10.165 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

64.10.166 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

64.10.167 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLNMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

64.10.168 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

64.10.169 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

64.10.170 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

64.10.171 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

64.10.172 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

64.10.173 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

64.10.174 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

64.10.175 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

64.10.176 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

64.10.177 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

64.10.178 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.
Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

64.10.179 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to verify the DOH SSL certificate's status.
Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name

field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

64.10.180 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

64.10.181 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** The path name to the Entropy Gathering Daemon socket.

Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.182 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

64.10.183 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

64.10.184 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

64.10.185 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLNMBS

c.OptionFollowLocation = true
```

c.OptionMaxRedirs = 3

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

64.10.186 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.187 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLNMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

64.10.188 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

64.10.189 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

64.10.190 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.191 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

64.10.192 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

64.10.193 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Notes:

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.194 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP

address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

64.10.195 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionServerResponseTimeout instead. **Function:** Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

With v22.4 or newer, please use newer property name OptionServerResponseTimeout.

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.196 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

64.10.197 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

64.10.198 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

64.10.199 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

64.10.200 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

64.10.201 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

64.10.202 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

64.10.203 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.204 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

64.10.205 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.

(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

64.10.206 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

64.10.207 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

64.10.208 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

64.10.209 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

64.10.210 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

64.10.211 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also HTTPPROXYTUNNEL option in CURL manual.

64.10.212 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

64.10.213 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also HTTP_VERSION option in CURL manual.

64.10.214 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

64.10.215 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

64.10.216 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.217 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

64.10.218 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

64.10.219 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string naming a file holding a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

64.10.220 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

64.10.221 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to keep sending on error.
Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

64.10.222 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key. You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

64.10.223 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Function: Set the krb4 security level, this also enables krb4 awareness.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.224 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

64.10.225 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

64.10.226 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

64.10.227 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

64.10.228 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

64.10.229 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

64.10.230 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

64.10.231 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

64.10.232 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

64.10.233 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also MAXCONNECTS option in CURL manual.

64.10.234 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

64.10.235 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Function:** This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.236 OptionMaxLifeTimeConnection as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets maximum lifetime (since creation) allowed for reusing a connection.
Notes:

Pass a number as parameter containing maxlifetime - the maximum time in seconds, since the creation of the connection, that you allow an existing connection to have to be considered for reuse for this request.

libcurl features a connection cache that holds previously used connections. When a new request is to be done, it will consider any connection that matches for reuse. The MaxLifeTimeConnection limit prevents libcurl from trying too old connections for reuse. This can be used for client-side load balancing. If a connection is found in the cache that is older than this set maxlifetime, it will instead be closed once any in-progress transfers complete.

If set to 0, this behavior is disabled: all connections are eligible for reuse.
(Read and Write property)

64.10.237 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

64.10.238 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Function:** Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited

speed. (Added in 7.15.5)
(Read and Write property)

64.10.239 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

64.10.240 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

64.10.241 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Function:** Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

64.10.242 OptionMimeOptions as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set MIME option flags.
Notes:

Pass a number that holds a bitmask of CURLMIMEOPT constants. Each bit is a Boolean flag used while encoding a MIME tree or multipart form data.

Available bits are:

CURLMIMEOPT_FORMESCAPE = 1

Tells libcurl to escape multipart form field and file names using the backslash-escaping algorithm rather than percent-encoding (HTTP only).

Backslash-escaping consists in preceding backslashes and double quotes with a backslash. Percent encoding maps all occurrences of double quote, carriage return and line feed to % 22, % 0D and % 0A respectively.

Before version 7.81.0, percent-encoding was never applied.

HTTP browsers used to do backslash-escaping in the past but have over time transitioned to use percent-encoding. This option allows to address server-side applications that have not yet have been converted.

As an example, consider field or file name strange\name"kind. When the containing multipart form is sent,

this is normally transmitted as strange\name% 22kind. When this option is set, it is sent as strange\\name\"kind.
(Read and Write property)
See also MIME_OPTIONS option in CURL manual.

64.10.243 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

64.10.244 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

64.10.245 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)

See also NEW_DIRECTORY_PERMS option in CURL manual.

64.10.246 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

64.10.247 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.

64.10.248 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

64.10.249 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

64.10.250 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

64.10.251 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

64.10.252 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

64.10.253 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)
See also PIPEWAIT option in CURL manual.

64.10.254 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

64.10.255 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

64.10.256 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

64.10.257 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

64.10.258 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Function:** The size of the post data. (64 bit version)
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

64.10.259 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)

See also POSTREDIR option in CURL manual.

64.10.260 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

64.10.261 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionProtocolsString instead. **Function:** A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)

64.10.262 OptionProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The protocols allowed-
Example:

```
dim c as new CURLNMBS
c.OptionProtocolsString = "http,tftp,sftp"
```

Notes:

Pass a string that holds a comma-separated list of case insensitive protocol names (URL schemes) to allow in the transfer. This option allows applications to use libcurl built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default, libcurl accepts all protocols it was built with support for. See also OptionReditProtocolsString.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

CURLVersionMBS class can be used to get a list of all supported protocols in the current libcurl. GetInfoProtocol function is the recommended way to figure out the protocol used in a previous transfer.
(Read and Write property)

64.10.263 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLNMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP

even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

64.10.264 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

64.10.265 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

64.10.266 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

64.10.267 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

64.10.268 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

64.10.269 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

64.10.270 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)
See also PROXY_ISSUERCERT_BLOB option in CURL manual.

64.10.271 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

64.10.272 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option. (Added in 7.19.1)

(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

64.10.273 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

64.10.274 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

64.10.275 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

64.10.276 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

64.10.277 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

64.10.278 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

64.10.279 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

64.10.280 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

64.10.281 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

64.10.282 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

64.10.283 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

64.10.284 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

64.10.285 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?
```

```
dim d as CURLNMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

64.10.286 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

See also PROXY_SSLVERSION option in CURL manual.

64.10.287 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.

(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

64.10.288 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

64.10.289 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

64.10.290 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

64.10.291 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)

See also PROXY_TRANSFER_MODE option in CURL manual.

64.10.292 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5. The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

64.10.293 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

64.10.294 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUpload instead.
Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.10.295 OptionQuickExit as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to allow to exit quickly.
Notes:

Pass a number as a parameter, 1 meaning that when recovering from a timeout, libcurl should skip lengthy cleanups that are intended to avoid all kinds of leaks (threads etc.), as the caller program is about to call exit() anyway. This allows for a swift termination after a DNS timeout for example, by canceling and/or forgetting about a resolver thread, at the expense of a possible (though short-lived) leak of associated resources.
(Read and Write property)
See also QUICK_EXIT option in CURL manual.

64.10.296 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

64.10.297 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

64.10.298 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionRedirProtocolsString instead. **Function:** An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)

64.10.299 OptionReditProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The protocols allowed to redirect to.
Example:

```
dim c as new CURLNMBS
c.OptionReditProtocolsString = "http,https"
```

Notes:

Pass string that holds a comma-separated list of case insensitive protocol names (URL schemes). That list limits what protocols libcurl may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This option allows applications to limit specific transfers to only be allowed to use a subset of protocols in redirections.

Protocols denied by OptionProtocolsString are not overridden by this option.

By default libcurl will allow HTTP, HTTPS, FTP and FTPS on redirects (since 7.65.2). Older versions of libcurl allowed all protocols on redirect except several disabled for security reasons: Since 7.19.4 FILE and SCP are disabled, and since 7.40.0 SMB and SMBS are also disabled.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

Default

HTTP, HTTPS, FTP and FTPS (Added in 7.65.2).

Older versions defaulted to all protocols except FILE, SCP and since 7.40.0 SMB and SMBS.
(Read and Write property)

64.10.300 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

64.10.301 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

64.10.302 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

64.10.303 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Function:** It contains the offset in number of bytes that you want the transfer to start from.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

64.10.304 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

64.10.305 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

64.10.306 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

64.10.307 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

64.10.308 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

64.10.309 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

64.10.310 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

64.10.311 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)

See also SASL_IR option in CURL manual.

64.10.312 OptionServerResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Causes libcurl to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to send a response message for a command before the session is considered dead.
Notes:

While libcurl is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionServerResponseTimeout to a value smaller than OptionTimeout.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SERVER_RESPONSE_TIMEOUT option in CURL manual.

64.10.313 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

64.10.314 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

64.10.315 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).
(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

64.10.316 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)

64.10.317 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Define the SSH authorization types.
Example:

```
dim c as CURLNMBS // your instance

// only do password
c.OptionSSHAuthTypes = c.kSSHAuthKeyboard or c.kSSHAuthPassword
```

Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

See kSSHAuth* constants.
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

64.10.318 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

64.10.319 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

64.10.320 OptionSSHHostPublicKeySHA256 as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: SHA256 hash of SSH server public key.
Notes:

Pass a string containing a Base64-encoded SHA256 hash of the remote host's public key. The transfer will fail if the given hash does not match the hash the remote host provides.
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_SHA256 option in CURL manual.

64.10.321 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

64.10.322 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLNMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

64.10.323 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLNMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

64.10.324 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

64.10.325 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

64.10.326 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The certificate password.
Notes: (Read and Write property)

64.10.327 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

64.10.328 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A string holding the list of ciphers to use for the SSL connection.
Example:

```
// allow lower secure ciphers
curl.OptionSSLCipherList = "DEFAULT@SECLEVEL=0"
```

Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

64.10.329 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

64.10.330 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)

Notes: (Read and Write property)

64.10.331 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

64.10.332 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets the actual crypto engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

64.10.333 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

64.10.334 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

64.10.335 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

64.10.336 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The password required to use the OptionSSLKEY private key.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

64.10.337 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

64.10.338 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

64.10.339 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)

See also SSL_SESSIONID_CACHE option in CURL manual.

64.10.340 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

64.10.341 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLNMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies

whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

64.10.342 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

64.10.343 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent

TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

64.10.344 OptionStreamDepends as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

64.10.345 OptionStreamDependsE as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

64.10.346 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

64.10.347 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Suppress proxy CONNECT response headers from events.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

64.10.348 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set TCP Fast Open.
Notes: (Read and Write property)

See also TCP_FASTOPEN option in CURL manual.

64.10.349 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-Interval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

64.10.350 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

64.10.351 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.
