64.10.352 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

64.10.353 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify block size to use for TFTP data transmission.
Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

64.10.354 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

64.10.355 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

64.10.356 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

64.10.357 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

64.10.358 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

64.10.359 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

64.10.360 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

64.10.361 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

64.10.362 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

64.10.363 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

64.10.364 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

64.10.365 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

64.10.366 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

64.10.367 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

64.10.368 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

64.10.369 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

64.10.370 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The actual URL to deal with.
Example:

```
Dim c As New CURLNMBS

// this example sends a xml request to a server
c.OptionURL = "http://www.someserver.com/service"

// some XML for a SOAP request
Dim request As String = "<?xml version=""1.0""?><methodCall><methodName>application.getValue</methodName><params><param><value>info</value></param></params></methodCall>"

c.OptionPostFields = request

Dim header(-1) As String
header.Append "Content-Type: text/xml"
c.SetOptionHTTPHeader header

// this should be c.kError_OK if okay.
Dim result As Integer = c.Perform

Dim output As String = c.OutputData
Dim debugLog As String = c.DebugMessages
Dim HTTPStatus As Integer = c.GetInfoResponseCode

Break
```

Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

64.10.371 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user agent string to pass to the server.
Example:

```
Dim c As New CURLNMBS

// setup request and any options you need
c.OptionURL = URL
c.OptionUserAgent = "MyDownloader 1.0"
```

Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

64.10.372 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

64.10.373 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

(Read and Write property)

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

See also USE_SSL option in CURL manual.

64.10.374 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLNMBS class to add code in the DebugMessage event.
Or you set CollectDebugMessages = true and later query DebugMessages property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

64.10.375 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLNMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '¬¥.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

64.10.376 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

64.10.377 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output data from CURL.
Example:

```
Dim d As New CURLNMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.

Limited to 2 GB. Please stream to file for bigger data with CreateMTOutputFile function.
(Read only property)

64.10.378 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

64.10.379 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes downloaded so far.
Notes: (Read only property)

64.10.380 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to download in total.
Notes: (Read only property)

64.10.381 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

64.10.382 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes uploaded so far.
Notes: (Read only property)

64.10.383 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bytes to upload in total.
Notes: (Read only property)

64.10.384 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.10.385 Version as CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

64.10.386 WebSocketOptions as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: WebSocket behavior options.
Notes:

Pass a bitmask to tell libcurl about specific WebSocket behaviors.

To detach a WebSocket connection and use the WebSocketSend and WebSocketReceive functions after the HTTP upgrade procedure, set the OptionConnectOnly option to 2.

Available bits in the bitmask:

kWebSocketRaw:
Deliver "raw" WebSocket traffic to the Write event.

In raw mode, libcurl does not handle pings or any other frame for the application.
(Read and Write property)

64.10.387 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

64.10.388 Events

64.10.389 ChunkBegin(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this event is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

64.10.390 ChunkEnd(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this event is called after download of an individual chunk finished. This event is called for skipped or downloaded files.

64.10.391 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugMessages, the plugin will collect the messages and provide them via the DebugMessages property. You can still use this event to write your own log instead of in addition.

64.10.392 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

64.10.393 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLNMultiMBS, it is called after TransferFinished event and before TransfersFinished event.
If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

64.10.394 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

64.10.395 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the event will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

64.10.396 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

64.10.397 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

64.10.398 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

64.10.399 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts event for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw"

data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

64.10.400 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write event is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

64.10.401 Constants

64.10.402 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

64.10.403 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.10.404 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

64.10.405 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

64.10.406 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

64.10.407 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

64.10.408 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

64.10.409 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLNVersionMBS class whether this is supported/implemented by your copy of the CURL library.

64.10.410 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

64.10.411 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.10.412 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.10.413 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

64.10.414 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

64.10.415 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

64.10.416 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

64.10.417 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

64.10.418 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

64.10.419 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

64.10.420 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.421 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

64.10.422 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

64.10.423 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

64.10.424 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

64.10.425 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.426 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk event reported error.

64.10.427 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

64.10.428 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

64.10.429 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.430 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.431 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.432 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

64.10.433 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.434 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

64.10.435 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

64.10.436 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

64.10.437 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.438 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.439 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.440 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

64.10.441 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

64.10.442 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

64.10.443 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.444 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.445 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.446 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.447 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.448 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

64.10.449 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

64.10.450 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

64.10.451 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

64.10.452 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.453 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.454 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.455 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.456 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

64.10.457 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.458 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

64.10.459 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

64.10.460 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

64.10.461 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.462 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.463 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.464 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.465 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.466 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

64.10.467 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

64.10.468 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.469 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.470 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

64.10.471 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside an event.

64.10.472 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

64.10.473 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.474 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

64.10.475 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

64.10.476 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

64.10.477 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

64.10.478 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

64.10.479 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

64.10.480 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

64.10.481 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

64.10.482 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

64.10.483 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

64.10.484 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

64.10.485 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

64.10.486 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

64.10.487 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

64.10.488 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

64.10.489 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

64.10.490 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

64.10.491 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

64.10.492 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

64.10.493 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

64.10.494 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

64.10.495 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

64.10.496 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

64.10.497 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

64.10.498 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

64.10.499 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

64.10.500 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

64.10.501 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

64.10.502 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

64.10.503 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

64.10.504 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

64.10.505 kError_Unrecoverable_poll = 99

MBS CURL Plugin, Plugin Version: 22.3.

Function: One of the error constants for the Error event.
Notes: poll/select returned fatal error

64.10.506 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.507 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.10.508 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.509 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

64.10.510 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.10.511 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

64.10.512 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

64.10.513 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

64.10.514 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.515 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.516 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.517 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.518 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.519 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.520 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.521 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.522 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.523 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.524 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.525 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.526 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.527 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.528 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.529 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.10.530 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

64.10.531 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

64.10.532 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

64.10.533 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

64.10.534 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

64.10.535 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

64.10.536 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

64.10.537 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.10.538 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.10.539 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.10.540 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.10.541 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

64.10.542 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

64.10.543 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

64.10.544 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

64.10.545 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

64.10.546 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

64.10.547 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

64.10.548 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

64.10.549 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

64.10.550 kHTTP_VERSION_3Only = 31

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Use HTTP/3 without fallback. For HTTPS only. For HTTP, this makes libcurl return error.

64.10.551 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

64.10.552 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.10.553 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.10.554 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

64.10.555 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

64.10.556 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.10.557 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.10.558 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

64.10.559 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

64.10.560 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

64.10.561 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLNMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

64.10.562 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

64.10.563 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

64.10.564 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

64.10.565 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

64.10.566 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

64.10.567 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

64.10.568 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

64.10.569 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

64.10.570 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

64.10.571 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

64.10.572 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

64.10.573 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

64.10.574 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

64.10.575 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

64.10.576 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

64.10.577 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

64.10.578 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

64.10.579 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

64.10.580 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

64.10.581 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

64.10.582 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

64.10.583 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

64.10.584 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

64.10.585 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

64.10.586 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

64.10.587 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

64.10.588 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

64.10.589 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

64.10.590 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

64.10.591 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

64.10.592 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

64.10.593 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

64.10.594 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

64.10.595 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

64.10.596 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.10.597 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

64.10.598 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

64.10.599 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.10.600 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

64.10.601 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.10.602 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

64.10.603 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

64.10.604 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

64.10.605 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

64.10.606 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

64.10.607 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

64.10.608 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

64.10.609 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

64.10.610 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

64.10.611 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

64.10.612 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

64.10.613 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

64.10.614 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

64.10.615 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

64.10.616 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

64.10.617 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

64.10.618 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this way allow the vulnerability back.

64.10.619 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

64.10.620 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

64.10.621 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

64.10.622 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

64.10.623 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those SSL backends where such behavior is present.

64.10.624 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

64.10.625 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

64.10.626 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

64.10.627 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

64.10.628 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

64.10.629 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

64.10.630 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

64.10.631 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

64.10.632 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.10.633 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.10.634 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

64.10.635 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

64.10.636 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.10.637 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.10.638 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.10.639 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.10.640 kWebSocketRaw = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the options for web sockets.
Notes: RAW mode for WebSocketOptions.

64.11 class CURLNMimePartMBS

64.11.1 class CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

64.11.2 Methods

64.11.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

64.11.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries header.

64.11.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets header.

64.11.6 Properties

64.11.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

64.11.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLNMBS

// add mime
dim p as CURLNMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

64.11.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

64.11.10 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

64.11.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

64.11.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part data source from named file.
Notes: (Read and Write property)

64.11.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

64.11.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime part type.
Notes: (Read and Write property)

64.11.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mime/form part name.
Notes: (Read and Write property)

64.11.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes: (Read only property)

64.11.17 Constants

64.11.18 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

64.11.19 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

64.11.20 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

64.11.21 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

64.11.22 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

64.11.23 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

64.11.24 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

64.11.25 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

64.11.26 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

64.11.27 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

64.11.28 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

64.11.29 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

64.11.30 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

64.11.31 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

64.12 class CURLNMissingFunctionExceptionMBS

64.12.1 class CURLNMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLNMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.13 class CURLNMultiMBS

64.13.1 class CURLNMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for multiple CURL transfers running in parallel.

64.13.2 Blog Entries

- News from the MBS Xojo Plugins Version 23.2

64.13.3 Blog Entries

- News from the MBS Xojo Plugins Version 23.2

64.13.4 Methods

64.13.5 AddCURL(curl as CURLNMBS, handler as CURLNTransferFinishedMBS = nil) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add a standard CURL handle to the multi stack.
Notes:

Lasterror is set.

We added handler parameter for v23.2 to make it easier to run things asynchronously.

64.13.6 CURLs as CURLNMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries list of current CURL instances.

64.13.7 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries text message for a given error code.

64.13.8 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

64.13.9 RemoveAll

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes all curl handles.
Notes:

Same as looping over CURLs() array and calling RemoveCURL for each.
This effectively cancels all requests.

64.13.10 RemoveCURL(CURL as CURLNMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

64.13.11 SharedInstance as CURLNMultiMBS

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The shared instance.
Notes:

Either you create a new CURLNMultiMBS object, which then takes this place.
Or you don't and the plugin creates an object for you to easily schedule transfers asynchronously.

64.13.12 Properties

64.13.13 AutoPerform as Boolean

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether to run a timer and run Perform automatically for you.
Notes:

Set to true to run Perform automatically. For this the plugin manages a timer to call perform regularly.
We set this to true for the default shared instance, so it runs without you doing anything.
(Read and Write property)

64.13.14 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.13.15 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.13.16 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

64.13.17 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

64.13.18 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

64.13.19 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

64.13.20 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

64.13.21 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

64.13.22 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

64.13.23 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

64.13.24 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

64.13.25 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.13.26 Events

64.13.27 TransferFinished(CURL as CURLNMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

64.13.28 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

64.13.29 Constants

64.13.30 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

64.13.31 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

64.13.32 kErrorBadFunctionArgument = 10

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: A function was called with a bad parameter.

64.13.33 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

64.13.34 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

64.13.35 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

64.13.36 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

64.13.37 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

64.13.38 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

64.13.39 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

64.13.40 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

64.13.41 kErrorWakeupFailure = 9

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: Wakeup is unavailable or failed.

64.13.42 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

64.13.43 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

64.13.44 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

64.13.45 Delegates

64.13.46 CURLNTransferFinishedMBS(curl as CURLNMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes:

ErrorCode is zero for a successful.
See kError* constants in CURLSMBS class.
See also:

- 64.13.47 CURLNTransferFinishedMBS(curl as CURLNMBS, ErrorCode as Integer) 13143

64.13.47 CURLNTransferFinishedMBS(curl as CURLNMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes:

ErrorCode is zero for a successful.
See kError* constants in CURLNMBS class.
See also:

- 64.13.46 CURLNTransferFinishedMBS(curl as CURLNMBS, ErrorCode as Integer) 13142

64.14 class CURLNNotInitializedExceptionMBS

64.14.1 class CURLNNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.15 class CURLNotInitializedExceptionMBS

64.15.1 class CURLNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.16 class CURLNSSLBackendMBS

64.16.1 class CURLNSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

64.16.2 Methods

64.16.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

64.16.4 List as CURLNSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Lists the backends.
Example:

```
dim list() as CURLNSSLBackendMBS = CURLNSSLBackendMBS.List

for each l as CURLNSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

64.16.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 64.16.6 SetSSLBackend(name as string) as Integer 13147

64.16.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 64.16.5 SetSSLBackend(id as Integer) as Integer 13146

64.16.7 Properties

64.16.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of this SSL backend.
Notes: (Read only property)

64.16.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this SSL backend.
Notes: (Read only property)

64.16.10 Constants

64.16.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: libcurl was built without any SSL support

64.16.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: OK

64.16.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: You can't set SSL backend after SSL initialization.

64.16.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: Unknown backend name or ID.

64.16.15 kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

64.16.16 kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GNUTLS

64.16.17 kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GSKIT

64.16.18 kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: MBEDTLS

64.16.19 kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.

64.16.20 kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: NSS

64.16.21 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: OpenSSL or BoringSSL

64.16.22 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: SChannel

64.16.23 kSSLBackendSecureTransport = 9

MBS CURL Plugin, Plugin Version: 19.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

64.16.24 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: WolfSSL

64.17 class CURLNURLMBS

64.17.1 class CURLNURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for CURL's URL parser.
Example:

```
dim c as new CURLNURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

64.17.2 Methods

64.17.3 Clone as CURLNURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duplicates the object.

64.17.4 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new URL object.

64.17.5 Properties

64.17.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme
- kFlagsDefaultScheme

(Read and Write property)

64.17.7 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.8 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

64.17.9 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.10 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

64.17.11 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.12 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.13 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.14 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.15 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.16 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.17 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLNURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

64.17.18 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.17.19 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The zone ID.
Notes: (Read and Write property)

64.17.20 Constants

64.17.21 kErrorBadFileURL = 19

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.

Notes: The file:// URL is invalid.

64.17.22 kErrorBadFragment = 20

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The fragment part of the URL contained bad or invalid characters.

64.17.23 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

64.17.24 kErrorBadHostname = 21

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The hostname contained bad or invalid characters.

64.17.25 kErrorBadIPv6 = 22

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The IPv6 address hostname contained bad or invalid characters.

64.17.26 kErrorBadLogin = 23

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The login part of the URL contained bad or invalid characters.

64.17.27 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

64.17.28 kErrorBadPassword = 24

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The password part of the URL contained bad or invalid characters.

64.17.29 kErrorBadPath = 25

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The path part of the URL contained bad or invalid characters.

64.17.30 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

64.17.31 kErrorBadQuery = 26

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The query part of the URL contained bad or invalid characters.

64.17.32 kErrorBadScheme = 27

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The scheme part of the URL contained bad or invalid characters.

64.17.33 kErrorBadSlashes = 28

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The URL contained an invalid number of slashes.

64.17.34 kErrorBadUser = 29

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The user part of the URL contained bad or invalid characters.

64.17.35 kErrorLacksIDN = 30

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the error codes.
Notes: IDN missing.

64.17.36 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

64.17.37 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

64.17.38 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

64.17.39 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

64.17.40 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

64.17.41 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

64.17.42 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

64.17.43 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

64.17.44 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

64.17.45 kErrorNoZoneID = 18

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: There is no zoneid set in the URL.

64.17.46 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

64.17.47 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

64.17.48 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

64.17.49 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

64.17.50 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

64.17.51 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

64.17.52 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

64.17.53 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

64.17.54 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

64.17.55 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

64.17.56 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

64.17.57 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

64.17.58 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

64.17.59 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

64.17.60 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

64.17.61 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

64.17.62 kFlagsPunyCode = 4096

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the flags.
Notes: get the host name in pynycode

64.17.63 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

64.17.64 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

64.18 class CURLNVersionMBS

64.18.1 class CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold version information from libCURL.

64.18.2 Blog Entries

64.18.4 Methods

64.18.5 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

64.18.6 FeatureNames as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the feature names.
Example:

```
dim v as new CURLNVersionMBS
dim features() as string = v.FeatureNames
dim Names as string = string.FromArray(features)
MessageBox Names
```

Notes: Values are e.g. alt-svc AsynchDNS HSTS HTTPS-proxy IPv6 Largefile libz NTLM NTLM_WB SSL threadsafe TLS-SRP UnixSockets zstd

64.18.7 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

64.18.8 Protocols as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Example:

```
dim v as new CURLNVersionMBS
dim Protocols() as string = v.Protocols
dim Names as string = string.FromArray(Protocols)
MessageBox Names
```

Notes: The protocol names are the same as would be used in URLs.

64.18.9 Properties

64.18.10 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.18.11 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of brotli version.
Notes: (Read only property)

64.18.12 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

64.18.13 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

64.18.14 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

64.18.15 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

64.18.16 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

64.18.17 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string.
Notes: (Read only property)

64.18.18 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version number of iconv library.
Notes: (Read only property)

64.18.19 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.18.20 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.18.21 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

64.18.22 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string for nghttp2 library.
Notes: (Read only property)

64.18.23 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

64.18.24 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

64.18.25 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

64.18.26 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

64.18.27 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

64.18.28 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli features are present.
Notes: (Read only property)

64.18.29 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Character conversions supported.
Notes: (Read only property)

64.18.30 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Built against a GSS-API library.
Notes: (Read only property)

64.18.31 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

64.18.32 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLNMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

64.18.33 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

64.18.34 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

64.18.35 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

64.18.36 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

64.18.37 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

64.18.38 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

64.18.39 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

64.18.40 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

64.18.41 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Multiple SSL backends available.
Notes: (Read only property)

64.18.42 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

64.18.43 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

64.18.44 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

64.18.45 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

64.18.46 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

64.18.47 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

64.18.48 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

64.18.49 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

64.18.50 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unix domain sockets support.
Notes: (Read only property)

64.18.51 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

64.18.52 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the libCURL version.
Notes:

e.g. "7.13.1"
(Read only property)

64.18.53 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

64.18.54 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string version for zstd library.
Notes: (Read only property)

64.18.55 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

64.19 class CURLNWebSocketFrameMBS

64.19.1 class CURLNWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a WebSocket frame.
Notes:

dim curl as CURLNMBS // your curl handle

dim m as CURLNWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if

64.19.2 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0

64.19.3 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0

64.19.4 Properties

64.19.5 BytesLeft as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of pending bytes left of the payload.
Notes: (Read only property)

64.19.6 BytesReceived as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of bytes received.
Notes: (Read only property)

64.19.7 Data as MemoryBlock

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read.
Notes: (Read only property)

64.19.8 FlagBinary as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is binary data.
Notes: (Read only property)

64.19.9 FlagClose as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Close this transfer.
Notes: (Read only property)

64.19.10 FlagContinue as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.
Notes: (Read only property)

64.19.11 FlagOffset as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a partial fragment.
Notes:

The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.
(Read only property)

64.19.12 FlagPing as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This as a ping.
Notes: (Read only property)

64.19.13 FlagPong as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a pong.
Notes: (Read only property)

64.19.14 Flags as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flags for this packet.
Notes:

See kFlag* contants.
(Read only property)

64.19.15 FlagText as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The buffer contains text data.
Notes:

Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.
(Read only property)

64.19.16 Offset as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The offset of this data into the frame.
Notes: (Read only property)

64.19.17 Text as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read as text.
Notes:

If this is not a binary transfer, we put the text here.
(Read only property)

64.19.18 Constants

64.19.19 kFlagBinary = 2

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is binary data.

64.19.20 kFlagClose = 8

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: Close this transfer.

64.19.21 kFlagContinue = 4

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.

64.19.22 kFlagOffset = 32

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

This is a partial fragment.
The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.

64.19.23 kFlagPing = 16

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This as a ping.

64.19.24 kFlagPong = 64

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is a pong.

64.19.25 kFlagText = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

The buffer contains text data.
Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.

64.20 class CURLSFileInfoMBS

64.20.1 class CURLSFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for file information.
Notes: Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

64.20.8 Properties

64.20.9 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The timstamp as a date object.
Notes:

As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.
(Read only property)

64.20.10 DateTime as DateTime

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timstamp as a date object.
Notes:

As of plugin version 20.5 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn't provide year details.

(Read only property)

64.20.11 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes: (Read only property)

64.20.12 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file type.
Notes: (Read only property)

64.20.13 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes:

Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

64.20.14 GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group ID.
Notes: (Read only property)

64.20.15 GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The group string.
Notes: (Read only property)

64.20.16 HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hard link count.
Notes: (Read only property)

64.20.17 HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filename property is valid.
Notes: (Read only property)

64.20.18 HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if filetype property is valid.
Notes: (Read only property)

64.20.19 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if GID property is valid.
Notes: (Read only property)

64.20.20 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if hardlinks property is valid.
Notes: (Read only property)

64.20.21 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if permissions property is valid.
Notes: (Read only property)

64.20.22 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if size property is valid.
Notes: (Read only property)

64.20.23 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if time and date properties have values.
Notes: (Read only property)

64.20.24 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if UID field has a value.
Notes: (Read only property)

64.20.25 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a directory.
Notes:

Same as FileType = FileTypeDirectory.
(Read only property)

64.20.26 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if entry is a regular file.
Notes:

Same as FileType = FileTypeFile.
(Read only property)

64.20.27 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission value.
Notes: (Read only property)

64.20.28 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The permission string.
Notes: (Read only property)

64.20.29 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file size.
Notes: (Read only property)

64.20.30 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target for a symlink.
Notes: (Read only property)

64.20.31 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time value.
Notes: (Read only property)

64.20.32 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time string parsed.
Notes: (Read only property)

64.20.33 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID.
Notes: (Read only property)

64.20.34 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user ID as text.
Notes: (Read only property)

64.20.35 Constants

64.20.36 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Block Device

64.20.37 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Character Device

64.20.38 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Directory

64.20.39 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

64.20.40 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Regular file

64.20.41 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Named Pipe

64.20.42 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Socket

64.20.43 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Symbolic links

64.20.44 FileTypeUnknown = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the file type constants.
Notes: Unknown file type. Should never occur.

64.20.45 FlagKnownFileName = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Filename Known

64.20.46 FlagKnownFileType = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: File Type Known

64.20.47 FlagKnownGID = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: GID Known

64.20.48 FlagKnownHardLinks = 128

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Hardlink Count Known

64.20.49 FlagKnownPermissions = 8

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Permissions Known

64.20.50 FlagKnownSize = 64

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Size Known

64.20.51 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: Time Known

64.20.52 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the flag constants.
Notes: UID Known

64.21 class CURLSListMBS

64.21.1 class CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

64.21.2 Methods

64.21.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the item with the given index.
Notes: Index is zero based.

64.21.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

64.21.5 Operator_Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts list to a string array.

64.21.6 Properties

64.21.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of items in this list.
Notes: (Read only property)

64.22 class CURLSMBS

64.22.1 class CURLSMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap libCURL.
Example:

```
Dim d As New CURLSMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

We have three variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
https://curl.haxx.se/libcurl/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

64.22.8 Methods

64.22.9 AddMimePart as CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new blank mime part.
Notes: Returns mime object, so you can set properties.

64.22.10 AWSPresignURL(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String = "GET", Expires as Integer = 86400, QueryParameters() as String = nil, Headers() as String = nil) as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query predigend URL for Amazon Webservices.
Example:

```
Dim URL As String = CURLSMBS.AWSPresignURL( _
"AKIAIOSFODNN7EXAMPLE", _
"wJalrXUtnFEMI/K7MDENG/bPxRfiCYEXAMPLEKEY", _
"us-east-1", _
"s3", _
"/test.txt", _
"examplebucket.s3.amazonaws.com", _
"GET", _
86400 )

Break // see URL in debugger
```

Notes:

This implements AWS4-HMAC-SHA256 pre-signature for credentials.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Returns the pre-signed URL. May raise an exception in case of error.

Parameter	Description	Example
AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"us-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/bucketname/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, GET or DELETE. Default is GET.	"GET"
Expires	Expiration duration. Provides the time period, in seconds, for which the generated presigned URL is valid. For example, 86400 (24 hours). This value is an integer. The minimum value you can set is 1, and the maximum is 604800 (seven days). A presigned URL can be valid for a maximum of seven days because the signing key you use in signature calculation is valid for up to seven days. Default is 86400 for one day.	
QueryParameters	List of query parameters to include.	"test=abc"
Headers	Extra HTTP headers to include. Here you can specify various headers to include in signature and request.	

64.22.11 CipherNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all cipher algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CURLSMBS.CipherNames
dim DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

64.22.12 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears data properties.
Notes: Resets OutputData, DebugMessages and Headers.

64.22.13 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the debug output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.22.14 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the header output file for PerformMT.
Notes:

Call after PerformMT finished.

With 15.2 version of plugin, this also works with Perform.

64.22.15 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the input file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.22.16 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the output file for PerformMT.
Notes:

Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

64.22.17 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.22.18 CreateMTDebugOutputFile(Path as String) as boolean 13200

64.22.18 CreateMTDebugOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where debug data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.22.17 CreateMTDebugOutputFile(file as folderitem) as boolean 13200

64.22.19 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.22.20 CreateMTHeaderOutputFile(Path as String) as boolean 13201

64.22.20 CreateMTHeaderOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where header data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.22.19 CreateMTHeaderOutputFile(file as folderitem) as boolean 13201

64.22.21 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.22.22 CreateMTOutputFile(Path as String) as boolean 13202

64.22.22 CreateMTOutputFile(Path as String) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a file where output data is written to.
Notes:

Returns true on success and false on failure (e.g. permission error).

Must be called before Perform, so we can stream data to the file.
The file is closed automatically when Perform methods finish their work.

You can set CollectOutputData to false in order to disable dat being collected.
See also:

- 64.22.21 CreateMTOutputFile(file as folderitem) as boolean 13201

64.22.23 DigestNames as String()

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = CURLSMBS.CipherNames
dim DigestNames() as string = CURLSMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

64.22.24 FileInfos as CURLSFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array with file information.
Notes:

If you use OptionWildcard, you find after the transfer all CURLSFileInfoMBS objects for all the files/folders found.

For MBS Plugin 19.0 or newer you can alternatively run a custom request "MLSD" and than get file infos, too.

64.22.25 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes mime data.
Example:

```
dim c as new CURLSMBS

// add mime
dim p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

64.22.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim c as new CURLSMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

Notes:

Lasterror is set.
See other FormAdd methods for details.

64.22.32 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename (and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string

as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 64.22.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 13211

64.22.33 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Notes:

Lasterror is set.
See other FormAdd methods for details.
See also:

- 64.22.26 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 13203

64.22.34 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
dim d as new CURLSMBS
d.FormAddField("company", "Test, Inc.")
```

Notes:

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.
ContentType is optional.

Please call FormFinish method later!

64.22.35 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a section to a multipart/formdata HTTP POST.
Example:

```
// read content of some file
dim file as folderitem = specialFolder.desktop.Child("test.txt")
dim b as BinaryStream = binarystream.Open(file)
dim FileContent as String = b.read(b.length)

// init some curl object
dim d as new CURLSMBS

// add the file as part of a form
d.FormAddFile("FileAttachment", "test.txt", FileContent, "text/plain")

// later
d.FormFinish
```

Notes:

For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

Please call FormFinish method later!

64.22.36 FormClear

MBS CURL Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears current form data.
Notes: You usually don't need to call this as Perform clears form data when transfer is done.

64.22.37 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current form data.
Notes: This is more for debugging as it builds form data as if we would send it.

64.22.38 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes constructing a form.
Example:

```
dim c as new CURLSMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM_NOTHING = 0
const CURLFORM_COPYNAME = 1
const CURLFORM_PTRNAME = 2
const CURLFORM_NAMELENGTH = 3
const CURLFORM_COPYCONTENTS = 4
const CURLFORM_PTRCONTENTS = 5
const CURLFORM_CONTENTSLENGTH = 6
const CURLFORM_FILECONTENT = 7
```

```
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */

c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

,
'/* Add simple name/content/contenttype section */

c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>",CURL-
FORM_CONTENTTYPE,"text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_COPYNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAME-
LENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, html-
buffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture",CURLFORM_FILE, "my-face.jpg",CURLFORM_CONTENTTYPE,
"image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures",CURLFORM_FILE, "my-face.jpg",CURLFORM_FILE,
"your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```

```
'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR,
recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"
'/* Set the form info */

c.FormFinish
```

Notes:

Lasterror is set.
The form is assigned to the HTTPPost property.

64.22.39 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive the active socket used by this curl session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn't working on all platforms.

64.22.40 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time stamp when app connected.

64.22.41 GetInfoCAInfo as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries default CAInfo value.

64.22.42 GetInfoCAPath as string

MBS CURL Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries default CAPath value.

64.22.43 GetInfoCertInfo as CURLSListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries information on the certificate chain.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
c.OptionCertInfo = true
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLSListMBS = c.GetInfoCertInfo

for each l as CURLSListMBS in lists
MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugMessages
```

Notes: Please set OptionCertInfo first.

64.22.44 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return if the time condition prevented the document to get transferred.

64.22.45 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
Notes: The Lasterror property is set. 0 for success.

64.22.46 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-length of the download.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

64.22.47 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

64.22.48 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content-type of the downloaded object.
Notes:

The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn't send a valid Content-Type header or that the protocol used doesn't support this.

64.22.49 GetInfoCookieList as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked-list of all cookies CURL knows (expired ones, too).
Notes:

The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

64.22.50 GetInfoEffectiveMethod as string

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the last used effective HTTP method.
Notes: In cases when you've asked libcurl to follow redirects, the method may very well not be the same method the first request would use.

64.22.51 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

64.22.52 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the remote time of the retrieved document (in number of seconds since 1 jan 1970 in the GMT/UTC time zone).
Example:

```
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn't support the command that tells document time etc) and the time of the document is unknown. Note that you must tell the server to collect this information before the transfer is made, by using the OptionFileTime option or you will unconditionally get a -1 back. (Added in 7.5)

64.22.53 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string holding the path of the entry path.
Notes:

That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

64.22.54 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

64.22.55 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available.
Notes:

The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.

64.22.56 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received proxy response code to a CONNECT request.
Notes:

The Lasterror property is set. 0 for success.
none

64.22.57 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the http version used in the connection.
Notes: The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can't be determined.

64.22.58 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use GetInfoActiveSocket instead. **Function:** Receive the last socket used by this CURL session.
Notes:

If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

64.22.59 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP
MsgBox c.GetInfoLocalIP
```

64.22.60 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the local port of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+":"+str(c.GetInfoLocalPort)
```

64.22.61 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the name resolving was completed.
Notes: The Lasterror property is set. 0 for success.

64.22.62 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: How many new connections libCURL had to create to achieve the previous transfer.
Notes:

The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

64.22.63 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

64.22.64 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time, in seconds, it took from the start until the file transfer is just about to begin.
Notes:

The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

64.22.65 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the ip address of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.22.66 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the (remote) port of the most recent (primary) connection.
Example:

```
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

64.22.67 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Get the protocol used in the connection.
Notes: See kProtocol* constants.

64.22.68 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask indicating the authentication method(s) available for your proxy authentication.
Notes: The Lasterror property is set. 0 for success.

64.22.69 GetInfoProxyError as integer

MBS CURL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries proxy error code.

64.22.70 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the result of the proxy certificate verification.
Notes: receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

64.22.71 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total number of redirections that were actually followed.
Notes: The Lasterror property is set. 0 for success.

64.22.72 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the total time, in seconds, it took for all redirection steps include name lookup, connect, pre-transfer and transfer before final transaction was started.
Notes:

The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)

64.22.73 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The redirection URL.

64.22.74 GetInfoReferer as string

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries referrer text.

64.22.75 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of the issued requests.
Notes:

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

64.22.76 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last received HTTP or FTP code.
Notes:

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

64.22.77 GetInfoRetryAfter as integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Retry-After retry delay.
Notes:

Receive the number of seconds the HTTP server suggesets the client should wait until the next request is issued.
The information from the "Retry-After:" header.

While the HTTP header might contain a fixed date string, the RetryAfter will always return number of seconds to wait - or zero if there was no header or the header couldn't be parsed.

64.22.78 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Client sequence counter.

64.22.79 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP sequence counter received.

64.22.80 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP Server sequence counter.

64.22.81 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query RTSP session ID.

64.22.82 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the URL scheme (sometimes called protocol) used in the connection

64.22.83 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were downloaded.
Notes:

The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

64.22.84 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total amount of bytes that were uploaded.
Notes: The Lasterror property is set. 0 for success.

64.22.85 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average download speed that CURL measured for the complete download.
Notes: The Lasterror property is set. 0 for success.

64.22.86 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The average upload speed that CURL measured for the complete upload.
Notes: The Lasterror property is set. 0 for success.

64.22.87 GetInfoSSLEngines as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive a linked-list of OpenSSL crypto-engines supported.
Notes:

The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

64.22.88 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the result of the certification verification that was requested (using the SSLVerifyPeer option).
Notes: The Lasterror property is set. 0 for success.

64.22.89 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: the time, in seconds, it took from the start until the first byte is just about to be transferred.
Notes:

The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

64.22.90 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
Notes: The Lasterror property is set. 0 for success.

64.22.91 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the default CURL library.
Notes:

This method is called by the constructor. So you don't need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLSMBS class.

Loads the "libCURL.dll" Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in /usr/lib.

64.22.92 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error string from the LoadLibrary function.

64.22.93 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

- 64.22.94 LoadLibrary(path as string) as boolean 13228

64.22.94 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the CURL library from the given path.
Notes:

You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:

• 64.22.93 LoadLibrary(file as folderitem) as boolean 13228

64.22.95 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Example:

```
Dim c As New CURLSMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"
c.CollectOutputData = false

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

• 64.22.96 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean 13230

64.22.96 OpenMTInputFile(Path as String, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens input file for reading data while PerformMT runs.
Notes:

The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.

Must be called before Perform or PerformMT, so we can stream data from the file.
The file is closed automatically when Perform methods finish their work.
See also:

- 64.22.95 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean 13229

64.22.97 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer
Example:

```
// if you get a curl call like this

'curl -X PATCH "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } " \
'-H "Authorization: Bearer YOUR_TOKEN" \
'-H "Content-Type: application/json" \
'–data ' {
'"fields": {
'"Address": "1 Ferry Building",
'"Name": "Ferry Building",
'"Visited": True
' }
' } '

// you translate it to this:

Dim c As New CURLSMBS

Dim Payload As String = _
" { "+_
"""fields"": { "+_
"""Address"": ""1 Ferry Building"","+_
"""Name"": ""Ferry Building"","+_
"""Visited"": True"+_
" } "+_
" } "
```

```
c.OptionCustomRequest = "PATCH"
c.OptionURL = "https://api.airtable.com/v0/ { baseId } / { tableIdOrName } / { recordId } "
c.SetOptionHTTPHeader Array("Content-Type: application/json", "Authorization: Bearer YOUR_TOKEN")
c.OptionPostFields = Payload

Dim Error As Integer = c.Perform
Dim ResponseCode As Integer = c.GetInfoResponseCode
Dim DebugLog As String = c.DebugMessages
Dim Output As String = c.OutputData

Break
```

Notes:

This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the retun value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.

64.22.98 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform a file transfer with preemptive multithreading.
Example:

```
Dim c As New CURLSMBS
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
```

```
If c.OpenMTInputFile(file) Then
// okay
Else
MessageBox "Failed to open file to upload."
Return
End If

// do a SFTP upload
c.OptionURL = "sftp://monkeybreadsoftware.de/folder/test.rtf"
c.OptionUpload = True
c.OptionUsername = "test"
c.OptionPassword = "test"

Dim e As Integer = c.PerformMT

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

Same as Perform, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchrounously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHeaderOutputFile and CreateMTOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLSMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

64.22.99 ProcessRelativeURL(BaseURL as String, RelativeURL as String) as String

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Processes an URL to come from relative URL to a new absolute URL.
Example:

```
Dim baseURL As String = "https://monkeybreadsoftware.net/themes.shtml"
Dim RelativeURL As String = "topic-curl.shtml"

Dim URL As String = CURLSMBS.ProcessRelativeURL(baseURL, RelativeURL)
Break
```

Notes: Raises an UnsuppportedOperationException in case of failure.

64.22.100 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receives raw data on a connection.
Notes:

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.

The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there's no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

64.22.101 Reset

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Re-initializes all options previously set on a specified CURL handle to the default values.
Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

64.22.102 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 64.22.103 SendData(data as string) as Integer 13235

64.22.103 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends raw data over a connection.
Notes:

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it's not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it's writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.
See also:

- 64.22.102 SendData(data as Memoryblock) as Integer 13234

64.22.104 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.22.105 SetInputData(data as string) 13236

64.22.105 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the input data.
Example:

```
Dim c As New CURLSMBS

c.SetInputData "Hello World"

// do a HTTP Upload with PUT
c.OptionUpload = True
c.OptionURL = "https://monkeybreadsoftware.de/filemaker/examples/echo.php"

// or do a FTP upload
'c.OptionURL = "ftp://monkeybreadsoftware.de/folder/file.txt"

Dim e As Integer = c.Perform

Dim ErrorMessage As String = c.LasterrorMessage
Dim ErrorLog As String = c.DebugMessages
Dim ResultData As String = c.OutputData

Break
```

Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 64.22.104 SetInputData(data as MemoryBlock) 13235

64.22.106 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of host:port:connect-to-host:connect-to-port, overrides the URL's host:port (only for the network layer)

64.22.107 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an empty password.
Notes:

Normally you have no password unless you set it.
But if you set a password with empty string, the plugin sets CURL to use no password.
This method is to use an empty password.

64.22.108 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:

Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

64.22.109 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:

```
dim c as new CURLSMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

64.22.110 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the array of email recipient addresses.

64.22.111 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
Example:

```
dim d as CURLSMBS // your CURL object
```

```
dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

Notes:

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

64.22.112 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
Notes:

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn't work.

The Lasterror property is set. 0 for success.

64.22.113 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set list of headers used for proxy requests only.

64.22.114 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an array or a list of FTP commands to pass to the server prior to your ftp request.
Example:

```
dim curl as new CURLSMBS
curl.SetOptionQuote array("DELE filename.txt")
```

Notes:

This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

64.22.115 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send linked-list of name:port:address sets.

64.22.116 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provide an array of variables to pass to the telnet negotiations.
Notes:

The variables should be in the format <option=value>. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.

The Lasterror property is set. 0 for success.

64.22.117 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path holding one or more certificates to verify the peer with.
Example:

```
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.22.118 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A path to the directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLSMBS

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
c.SetPathCAPath cacert
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.22.119 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK

and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

64.22.120 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

64.22.121 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the path to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

64.22.122 SetPathProxyIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

64.22.123 SetupAWS(AWSAccessKeyId as String, AWSSecretAccessKey as String, Region as String, Service as String, Path as String, Domain as String, Verb as String, HashedPayload as String = """, Headers() as String = nil, queryParameters() as string = nil, NoSSL as boolean = false) as boolean

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setup CURL to transfer to Amazon Webservices.
Notes:

This implements AWS4-HMAC-SHA256 signature for credentials, sets authentication, URL, HTTP Headers and other parameters.
For upload or post, please set input parameters first.

AWSAccessKeyId	Your access key for AWS.	
AWSSecretAccessKey	Your secret.	
Region	The region to use.	"eu-central-1"
Service	The service to use.	"s3"
Path	The path for the URL. Should always start with "/".	"/test.jpg"
Domain	Optional the domain to use. By default we just build it from region and service.	"s3.eu-central-1.amazonaws.com" or "s3-ap-southeast-2.amazonaws.com"
Verb	The HTTP Operation to do. Can be POST, PUT, PATCH, GET or DELETE.	"PUT"
HashedPayload	The hashed payload. If empty, we calculate it automatically from input data or postfields. This is a lowercase hex SHA256.	
Headers	Optional extra HTTP headers to include.	"x-amz-acl: public-read"
queryParameters	Optional query parameter list with entries like "key=value", URL encoded.	

Returns true on success or false on failure.
Throws exceptions when parameters are insufficient.

Works also for other compatible S3 services beside Amazon's like the one from Wasabi or Dell ECS.

Added PATCH as verb in version 23.0.

Please be aware that this function depends on a correct time and date set on the computer. If the time is not set correct, the authentication will fail.

64.22.124 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups existing CURL session for an email transfer.
Example:

```
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian M√ºller"
e.Subject = "Hello World ,òÔè"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test M√ºller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: ,òÔè üòò üòÑ"

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

Notes:

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.

64.22.125 SetupOAuth(ConsumerKey as String, ConsumerSecret as String, AccessToken as String, AccessTokenSecret as String, HTTPVerb as String, URL as String, Parameters() as String = nil, Headers() as String = nil, Datas() as String = nil, Nonce as String = "", Timestamp as String = "", HMAC as String = "", Verifier as String = "", Realm as String = "") as boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Setups an OAuth signed transfer.
Notes:

The plugin calculates the signature and adds headers for authorization to the CURL handle.
Sets URL with parameters and optionally data values for POST.

Parameter	Description	Example
ConsumerKey	The oauth consumer key.	"xvz1evFS4wEEPTGEFPHBog"
ConsumerSecret	The oauth consumer secret.	"kAcSOqF21Fu85e7zjz7ZN2U4ZRhfV3WpwPAoE3Z7kBw"
AccessToken	The oauth access token.	"370773112-GmHxMAgYyLbNEtIKZeRNFsMKPR9EyMZeS9weJAEb"
AccessTokenSecret	The oauth access token secret. Can be empty if not yet known.	"LswwdoUaIvS8ltyTt5jkRh4J50vUPVVHtR2YPi5kE"
HTTPVerb	The HTTP verb. e.g. POST, PUT, GET, DELETE. Default if empty is GET.	"POST"
URL	The URL to query without parameters.	"https://api.twitter.com/1.1/statuses/update.json"
Parameters	List of parameters. Can be empty. Please pass list with newline as delimiter. Values should be URL encoded already.	"include_entities=true"
Headers	List of additional header entries to include. Can be empty. We automatically set Authorization header.	"Accept: application/json¶Content-Type: application/json"
Datas	Data value list for POST.	"status=Hello¶others=123"
Nonce	The nonce value. If empty, we generate it automatically for you.	"kYjzVBB8Y0ZFabxSWbWovY3uYSQ2pTgmZeNu2VS4cg"
Timestamp	The timestamp to use for signature. If empty, we query current timestamp (same as you calling Time.UnixTimeStamp)	1318622958
HMAC	Which HMAC algorithm to use. Can be HMAC-SHA512, HMAC-SHA256 or HMAC-SHA1. Default is HMAC-SHA1 if parameter is missing or empty.	"HMAC-SHA1"
Verifier	The verifier. Usually an ID shown on a website after login to the service and authorization of an app.	"3456789"

Added Realm parameter for version 20.5.

64.22.126 UpKeep

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform any connection upkeep checks.
Notes:

Perform any connection upkeep checks.
Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.
Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
This function must be explicitly called in order to perform the upkeep work. The connection upkeep interval is set with OptionUpkeepIntervalMS.

64.22.127 UseSystemCertificates as Integer

MBS CURL Plugin, Plugin Version: 17.2, Platforms: macOS, Windows, Targets: All.

Function: Read certificate from system and installs them in CURL session,.
Notes:

For macOS and Windows we load the available certificates from keychain or Windows Certificate Store and pass them to CURL. This is better than having no certificates at all.
Even better is normally to provide a cacert.pem file with only the expected certificates.

Returns number of certificates loaded.

64.22.128 WebSocketMeta as CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries last frame metadata.
Notes: Only useful if called in Write event.

64.22.129 WebSocketReceive(BufferSize as Integer = 65536) as CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Receive WebSocket data.
Example:

```
dim curl as CURLSMBS // your curl handle

dim m as CURLSWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if
```

Notes:

Retrieves as much as possible of a received WebSocket data fragment into the buffer, but not more than BufferSize bytes. The bytesReceived property in CURLSWebSocketFrameMBS is set to the number of bytes actually stored.

If there is more fragment data to deliver than what fits in the provided buffer, CURL returns a full buffer and the application needs to call this function again to continue draining the buffer.

The returned CURLSWebSocketFrameMBS contains the data and the metadata about the received data.

Lasterror property is set.

64.22.130 WebSocketSend(Data as MemoryBlock, FrameSize as Integer = 0, SendFlags as Integer = 0) as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send the specific message fragment over an established WebSocket connection.
Notes:

The buffer holds the data to send.
Returns the number of payload bytes actually sent.

To send a (huge) fragment using multiple calls with partial content per invoke, set the kFlagOffset bit and the FrameSize argument as the total expected size for the first part, then set the kFlagOffset with a zero FrameSize for the following parts.

If not sending a partial fragment or if this is raw mode, FrameSize should be set to zero.

If kWebSocketRaw is enabled in WebSocketOptions, the flags argument should be set to 0.

Lasterror property is set.

64.22.131 Properties

64.22.132 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the CURL library was loaded.
Notes:

The CURLSMBS constructor loads the library if it was not loaded before.
(Read only property)

64.22.133 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tells CURL instance to cancel transfer as soon as possible.
Notes:

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

64.22.134 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CollectDebugMessages instead. **Function:** Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.22.135 CollectDebugMessages as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect debug message data.
Notes:

If you set this property to true, you can grab the data from the transfer in the DebugMessages Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.22.136 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use CollectHeaders instead.
Function: Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.

Due to memory limitation, collecting data will not work right if your app is running low on memory.

Renamed to CollectHeaders in v23.0.
(Read and Write property)

64.22.137 CollectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect headers.
Notes:

If you set this property to true, you can grab the data from the transfer in the Headers Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.22.138 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to collect output data.
Notes:

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

64.22.139 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use DebugMessages instead.
Function: The debug data from CURL.
Notes:

If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.

Newer code should use DebugMessages property instead.

(Read only property)

64.22.140 DebugMessages as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug messages from CURL.
Notes:

If CollectDebugMessage property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer.
(Read only property)

64.22.141 DebugWithData as Boolean

MBS CURL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to include data in debug messages.
Example:

```
dim c as new CURLSMBS
c.DebugWithData = true
c.OptionVerbose = true
c.CollectDebugMessages = true
```

Notes: (Read and Write property)

64.22.142 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle of the CURL object.
Notes: (Read and Write property)

64.22.143 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.

Renamed to Headers in v23.0.
(Read only property)

64.22.144 Headers as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use Headers instead. **Function:** The headers from CURL.
Notes:

If CollectHeaders property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer.
(Read only property)

64.22.145 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input data.
Notes:

If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
(Read and Write property)

64.22.146 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The lasterror from the library.
Example:

```
Dim d As New CURLSMBS

d.OptionSSLVersion = 123
```

```
Dim LastError As Integer = d.LastError
// gives 43
Dim LastErrorText As String = d.LastErrorText
// A libcurl function was given a bad argument

Break
```

Notes:

Set in the constructor while doing initialization as well as by by various curl calls.
Check the kError* constants.
(Read and Write property)

64.22.147 LastErrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Example:

```
Dim d As New CURLSMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

The error message from the transfer.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read only property)

64.22.148 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text for the lasterror code.
Example:

```
Dim d As New CURLSMBS

d.OptionURL = "http://192.168.2.53"
d.OptionConnectionTimeout = 5

Dim ErrorCode As Integer = d.Perform

Dim LastErrorMessage As String = d.LastErrorMessage
Dim LastErrorText As String = d.LastErrorText

Break
```

Notes:

Static string matched to the error code, so you have an idea what's wrong.

e.g. Perform may report a timeout with code 28.
Then LasterrorText is "Timeout was reached" looked up for 28.

But LasterrorMessage would be something like "Failed to connect to x.x.x.x port 80 after 5000 ms: Timeout was reached".
(Read and Write property)

64.22.149 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which library is in use.
Notes:

This is for debugging only to see which library is in use.
(Read only property)

64.22.150 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
Notes: (Read only property)

64.22.151 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to an abstract Unix domain socket.
Notes: (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

64.22.152 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
Example:

```
dim c as new CURLSMBS
c.OptionAcceptEncoding = "deflate"
```

Notes:

Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

64.22.153 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Time-out accept operations (currently for FTP only) after this amount of milliseconds.
Notes: (Read and Write property)

See also ACCEPTTIMEOUT_MS option in CURL manual.

64.22.154 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:

(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

64.22.155 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

64.22.156 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.

64.22.157 OptionAWSSigV4 as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides AWS V4 signature authentication on HTTP(S) header.
Notes:

Pass a text that is the collection of specific arguments are used for creating outgoing authentication headers. The format of the param option is:

provider1 [:provider2 [:region [:service]]]

provider1, provider2:
The providers arguments are used for generating some authentication parameters such as "Algorithm", "date", "request type" and "signed headers".

region:
The argument is a geographic area of a resources collection. It is extracted from the host name specified in the URL if omitted.

service:
The argument is a function provided by a cloud. It is extracted from the host name specified in the URL if omitted.

Note: This call set CURLOPT_HTTPAUTH to CURLAUTH_AWS_SIGV4. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.

Example with "Test:Try", when curl will do the algorithm, it will generate "TEST-HMAC-SHA256" for "Algorithm", "x-try-date" and "X-Try-Date" for "date", "test4_request" for "request type", "SignedHeaders=content-type;host;x-try-date" for "signed headers"
If you use just "test", instead of "test:try", test will be use for every strings generated

By default, the value of this parameter is empty. Calling CURLOPT_HTTPAUTH with CURLAUTH_AWS_SIGV4 is the same as calling this with "aws:amz" in parameter.
(Read and Write property)
See also AWS_SIGV4 option in CURL manual.

64.22.158 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:

The main point of this would be that the write event gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

64.22.159 OptionCACacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the life-time for cached certificate stores.
Notes:

Pass a number, this sets the timeout in seconds. This tells libcurl the maximum time any cached certificate store it has in memory may be kept and reused for new connections. Once the timeout has expired, a subsequent fetch requiring a certificate store will have to build a new one.
Building a certificate store from a CAINFO file (see OptionCAInfo) is a slow operation so curl may cache the generated certificate store internally to speed up future connections.
Set to zero to completely disable caching, or set to -1 to retain the cached store remain forever. By default, libcurl caches this info for 24 hours.
(Read and Write property)
See also CA_CACHE_TIMEOUT option in CURL manual.

64.22.160 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding one or more certificates to verify the peer with.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object
```

```
// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

64.22.161 OptionCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo as blob value.
Notes:

Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also CAINFO_BLOB option in CURL manual.

64.22.162 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a directory holding multiple CA certificates to verify the peer with.
Example:

```
dim c as new CURLSMBS
c.OptionCAPath = "/data/MyCertificates"
```

Notes:

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.

64.22.163 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to enable libCURL's certificate chain info gatherer.
Notes:

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)
(Read and Write property)
See also CERTINFO option in CURL manual.

64.22.164 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero

to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)
See also CONNECTTIMEOUT option in CURL manual.

64.22.165 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in milli seconds that you allow the connection to the server to take.
Notes:

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system's internal timeouts). See also the OptionTimeout option.
(Read and Write property)

64.22.166 OptionConnectOnly as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.
Notes:

This option is useful with the CURLSMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)

Type changed to integer in v23.0 to enable passing 2 for WebSockets.
(Read and Write property)
See also CONNECT_ONLY option in CURL manual.

64.22.167 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be used to set a cookie in the http request.
Notes:

The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

64.22.168 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie file content.
Notes:

It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

64.22.169 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: File path where to write the cookies to.
Notes:

This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can't be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEJAR option in CURL manual.

64.22.170 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cookie string.
Notes:

Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

64.22.171 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to mark this as a new cookie "session".
Notes:

It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are

not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

64.22.172 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert Unix newlines to CRLF newlines on transfers.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

64.22.173 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.
Notes:

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)
(Read and Write property)
See also CRLFILE option in CURL manual.

64.22.174 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.
Example:

```
dim c as CURLSMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

Notes:

This is useful for doing DELETE or other more or less obscure HTTP requests. Don't do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

For WebDAV, you can set this to "MKCOL" to create a folder at the given URL.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

64.22.175 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

64.22.176 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:

For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn't end with a slash, which otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

64.22.177 OptionDisableUserNameInURL as Boolean

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disallow specifying username/login in URL.
Notes:

The value true tells the library to not allow URLs that include an username.
(Read and Write property)

64.22.178 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timeout in seconds.
Notes:

Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

64.22.179 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name of the network interface that the DNS resolver should bind to.
Notes:

This must be an interface name (not an address). Set this option to "" to use the default setting (don't bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

64.22.180 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv4 address that the resolver should bind to.
Notes:

The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

64.22.181 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the local IPv6 address that the resolver should bind to.
Notes:

The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don't bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

64.22.182 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name servers to use for DNS resolution.
Notes: (Read and Write property)
See also DNS_SERVERS option in CURL manual.

64.22.183 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to shuffle DNS addresses.
Notes:

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system's name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

64.22.184 OptionDOHSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the host name in the DOH (DNS-over-HTTPS) SSL certificate.
Notes:

Pass a 2 as asking curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyPeer and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.

When the verify value is set to 1 it is treated the same as 2. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!
(Read and Write property)
See also DOH_SSL_VERIFYHOST option in CURL manual.

64.22.185 OptionDOHSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate.
Notes:

Pass 1 to enable or 0 to disable.
This option tells curl to verify the authenticity of the DOH (DNS-over-HTTPS) server's certificate. A value of 1 means curl verifies; 0 (zero) means it doesn't.
This option is the DOH equivalent of CURL.SetOptionSSLVerifyPeer and only affects requests to the DOH server.
When negotiating a TLS or SSL connection, the server sends a certificate indicating its identity. Curl verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. curl uses a default bundle of CA certificates (the path for that is determined at build time) and you can specify alternate certificates with the CURL.SetOptionCAInfo option or the CURL.SetOptionCAPath option.
When CURL.SetOptionDOHSSLVerifyPeer is enabled, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the peer certificate verification succeeds regardless.
Authenticating the certificate is not enough to be sure about the server. You typically also want to ensure that the server is the server you mean to be talking to. Use CURL.SetOptionDOHSSLVerifyHost for that. The check that the host name in the certificate is valid for the host name you're connecting to is done independently of the CURL.SetOptionDOHSSLVerifyPeer option.

WARNING: disabling verification of the certificate allows bad guys to man-in-the-middle the communication without you knowing it. Disabling verification makes the communication insecure. Just having encryption on a transfer is not enough as you cannot be sure that you are communicating with the correct end-point.
(Read and Write property)
See also DOH_SSL_VERIFYPEER option in CURL manual.

64.22.186 OptionDOHSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to verify the DOH SSL certificate's status.

Notes:

Pass 2 to ask curl to verify the DOH (DNS-over-HTTPS) server's certificate name fields against the host name.
This option is the DOH equivalent of OptionSSLVerifyHost and only affects requests to the DOH server.
When OptionDOHSSLVerifyHost is 2, the SSL certificate provided by the DOH server must indicate that the server name is the same as the server name to which you meant to connect to, or the connection fails.
Curl considers the DOH server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the DOH URL to which you told Curl to connect.
When the verify value is set to 1L it is treated the same as 2L. However for consistency with the other VerifyHost options we suggest use 2 and not 1.
When the verify value is set to 0L, the connection succeeds regardless of the names used in the certificate. Use that ability with caution!

See also OptionDOHSSLVerifyPeer to verify the digital signature of the DOH server certificate. If libcurl is built against NSS and OptionDOHSSLVerifyPeer is zero, OptionDOHSSLVerifyHost is also set to zero and cannot be overridden.
(Read and Write property)
See also DOH_SSL_VERIFYSTATUS option in CURL manual.

64.22.187 OptionDOHURL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provides the DNS-over-HTTPS URL.
Notes:

Pass in a string to a URL for the DOH server to use for name resolving. The parameter should be URL-encoded in the following format: "https://host:port/path". It MUST specify a HTTPS URL.

libcurl doesn't validate the syntax or use this variable until the transfer is issued. Even if you set a crazy value here, OptionDOHURL will still return CURLE_OK.

curl sends POST requests to the given DNS-over-HTTPS URL.

To find the DOH server itself, which might be specified using a name, libcurl will use the default name lookup function. You can bootstrap that by providing the address for the DOH server with OptionResolve.

Disable DOH use again by setting this option to "".
(Read and Write property)
See also DOH_URL option in CURL manual.

64.22.188 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** The path name to the Entropy Gathering Daemon socket.
Notes:

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.189 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets Expect 100 timeout.
Notes:

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

64.22.190 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a "100-continue" is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.

64.22.191 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filetime should be querried.
Example:

```
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)
da.TotalSeconds = da.TotalSeconds + d.GetInfoFileTime

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime
```

Notes:

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FILETIME option in CURL manual.

64.22.192 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.
Example:

```
dim c as new CURLSMBS

c.OptionFollowLocation = true
```

c.OptionMaxRedirs = 3

Notes:

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

64.22.193 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer explicitly close the connection when done.
Notes:

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.194 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```
dim c as new CURLSMBS

c.OptionFreshConnect=True
```

Notes:

If the connection cache is full before this connection, one of the existing connections will be closed as accord-

ing to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

64.22.195 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FTP account name to use.
Notes:

When an FTP server asks for "account data" after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

64.22.196 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative username.
Notes:

Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed's Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

64.22.197 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionAppend instead.
Function: True tells the library to append to the remote file instead of overwrite it.
Notes:

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.198 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
Notes:

CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

64.22.199 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer that should have one of the following values.
Notes:

This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

64.22.200 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
Notes:

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.201 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port to use for ftp.
Notes:

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won't use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

64.22.202 OptionFTPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionServerResponseTimeout instead. **Function:** Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
Notes:

With v22.4 or newer, please use newer property name OptionServerResponseTimeout.

While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.203 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.
Notes:

Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

64.22.204 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLSMBS
```

c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)

64.22.205 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What kind of SSL authentication to use for FTP.
Notes:

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

64.22.206 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If enabled, this option makes libCURL use CCC (Clear Command Channel).
Notes:

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

CURLFTPSSL_CCC_NONE	0	Don't attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE	1	Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE	2	Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

64.22.207 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).
Notes:

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

64.22.208 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
Notes:

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

64.22.209 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes:

Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

64.22.210 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: If the true, this forces the HTTP request to get back to GET.
Notes:

usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

64.22.211 OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow GSSAPI credential delegation.
Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

64.22.212 OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The happy eyeballs timeout.
Notes:

Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

64.22.213 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to send an HAProxy PROXY protocol header.
Notes:

Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

64.22.214 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

64.22.215 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass in a bitmask of "header options".
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

64.22.216 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which http authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4

HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

64.22.217 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long to tell libCURL how to act on content decoding.
Notes:

If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

64.22.218 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:

There is a big difference between using a proxy and to tunnel through it. If you don't know what this means, you probably don't want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

64.22.219 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass an integer to tell libCURL how to act on transfer decoding.
Notes:

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

64.22.220 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to one of the values described below.
Notes:

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don't care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

64.22.221 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore the Content-Length header.
Notes:

This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

64.22.222 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

64.22.223 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionInFileSize instead.
Function: When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
Notes:

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read event returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.224 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This set the interface name to use as outgoing network interface.
Notes:

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

64.22.225 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows an application to select what kind of IP addresses to use when resolving host names.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

Notes:

This is only interesting when using host names that resolve addresses using more than one version of IP. The allowed values are:

kIPRESOLVE_WHATEVER = 0

Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

64.22.226 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string naming a file holding a CA certificate in PEM format.
Notes:

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

See also ISSUERCERT option in CURL manual.

64.22.227 OptionIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionIssuerCert which instead expects a file name as input.
(Read and Write property)
See also ISSUERCERT_BLOB option in CURL manual.

64.22.228 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep sending on error.
Notes:

Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.

64.22.229 OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set passphrase to private key.
Notes:

It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key. You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

64.22.230 OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Function: Set the krb4 security level, this also enables krb4 awareness.
Notes:

This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.231 OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: FTP kerberos security level.
Notes:

Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn't match one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

64.22.232 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This sets the local port number of the socket used for connection.
Notes:

This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)

See also LOCALPORT option in CURL manual.

64.22.233 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the number of attempts libCURL should do to find a working local port number.
Notes:

It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

64.22.234 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Login options string to use for the transfer.
Notes:

For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
See also LOGIN_OPTIONS option in CURL manual.

64.22.235 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

See also LOW_SPEED_LIMIT option in CURL manual.

64.22.236 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

64.22.237 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.
Notes:

This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

64.22.238 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
Notes: (Read and Write property)
See also MAIL_FROM option in CURL manual.

64.22.239 OptionMaxAgeConn as Integer

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum age the connection should have in seconds.
Notes:

Older connections are not reused, but discarded.
(Read and Write property)
See also MAXAGE_CONN option in CURL manual.

64.22.240 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the persistent connection cache size.
Notes:

The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn't much point in changing this value unless you are perfectly aware of how this work and changes libCURL's behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

64.22.241 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

64.22.242 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Function:** This allows you to specify the maximum size (in bytes) of a file to download.
Notes:

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.243 OptionMaxLifeTimeConnection as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets maximum lifetime (since creation) allowed for reusing a connection.
Notes:

Pass a number as parameter containing maxlifetime - the maximum time in seconds, since the creation of the connection, that you allow an existing connection to have to be considered for reuse for this request.

libcurl features a connection cache that holds previously used connections. When a new request is to be done, it will consider any connection that matches for reuse. The MaxLifeTimeConnection limit prevents libcurl from trying too old connections for reuse. This can be used for client-side load balancing. If a connection is found in the cache that is older than this set maxlifetime, it will instead be closed once any in-progress transfers complete.

If set to 0, this behavior is disabled: all connections are eligible for reuse.
(Read and Write property)

64.22.244 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

64.22.245 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Function:** Defines the maximum download speed.
Notes:

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)

64.22.246 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The set number will be the redirection limit.
Example:

```
dim c as new CURLSMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

Notes:

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

64.22.247 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

64.22.248 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Function:** Defines the maximum upload speed.
Notes:

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you'd like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)

64.22.249 OptionMimeOptions as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set MIME option flags.
Notes:

Pass a number that holds a bitmask of CURLMIMEOPT constants. Each bit is a Boolean flag used while encoding a MIME tree or multipart form data.

Available bits are:

CURLMIMEOPT_FORMESCAPE = 1

Tells libcurl to escape multipart form field and file names using the backslash-escaping algorithm rather than percent-encoding (HTTP only).

Backslash-escaping consists in preceding backslashes and double quotes with a backslash. Percent encoding maps all occurrences of double quote, carriage return and line feed to % 22, % 0D and % 0A respectively.

Before version 7.81.0, percent-encoding was never applied.

HTTP browsers used to do backslash-escaping in the past but have over time transitioned to use percent-encoding. This option allows to address server-side applications that have not yet have been converted.

As an example, consider field or file name strange\name"kind. When the containing multipart form is sent, this is normally transmitted as strange\name% 22kind. When this option is set, it is sent as strange\\name\"kind.
(Read and Write property)
See also MIME_OPTIONS option in CURL manual.

64.22.250 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Controls usage of netrc file.
Notes:

This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your
textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

64.22.251 OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

64.22.252 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:

The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

64.22.253 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.
Notes:

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Xojo.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

64.22.254 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to not include the body-part in the output.
Notes:

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.

64.22.255 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string with a comma- separated list of hosts which do not use a proxy, if one is specified.
Notes:

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4)
(Read and Write property)
See also NOPROXY option in CURL manual.

64.22.256 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not use signals.
Notes:

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary

to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.
(Read and Write property)
See also NOSIGNAL option in CURL manual.

64.22.257 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The password to use for the transfer.
Notes:

The OptionPassword option should be used in conjunction with the OptionUsername option.
(Read and Write property)
See also PASSWORD option in CURL manual.

64.22.258 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass path as it is and do not resolve dots.
Notes:

Do not squash dot-dot sequences.
(Read and Write property)
See also PATH_AS_IS option in CURL manual.

64.22.259 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the peer public key.
Notes:

Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

64.22.260 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait/don't wait for pipe/mutex to clarify.
Notes: (Read and Write property)
See also PIPEWAIT option in CURL manual.

64.22.261 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

64.22.262 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library to do a regular HTTP post.
Notes:

This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

64.22.263 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be the full data to post in an HTTP POST operation.
Example:

```
dim xml as string // XML or JSON to send as payload
dim c as new CURLSMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

64.22.264 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the post data.
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

64.22.265 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Function:** The size of the post data. (64 bit version)
Notes:

Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

64.22.266 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response

back.
Notes:

A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_A is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

64.22.267 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of pre proxy to use.
Notes: (Read and Write property)
See also PRE_PROXY option in CURL manual.

64.22.268 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionProtocolsString instead. **Function:** A bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols. (Added in 7.19.4)
(Read and Write property)

64.22.269 OptionProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The protocols allowed-
Example:

```
dim c as new CURLSMBS
c.OptionProtocolsString = "http,tftp,sftp"
```

Notes:

Pass a string that holds a comma-separated list of case insensitive protocol names (URL schemes) to allow in the transfer. This option allows applications to use libcurl built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default, libcurl accepts all protocols it was built with support for. See also OptionReditProtocolsString.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

CURLVersionMBS class can be used to get a list of all supported protocols in the current libcurl. GetInfoProtocol function is the recommended way to figure out the protocol used in a previous transfer.
(Read and Write property)

64.22.270 OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set HTTP proxy to use.
Example:

```
dim c as CURLSMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

64.22.271 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which proxy authentication to use.
Notes:

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or'ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

64.22.272 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath or CAfile used to validate the proxy certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Pass native file path.
This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

64.22.273 OptionProxyCAInfoBlob as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CAInfo for proxy as blob value.
Notes:

This option is for connecting to an HTTPS proxy, not an HTTPS server.
Certificate Authority (CA) bundle in PEM format passed PEM encoded content holding one or more certificates to verify the HTTPS server with.
(Read and Write property)
See also PROXY_CAINFO_BLOB option in CURL manual.

64.22.274 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CApath directory used to validate the proxy certificate.
Notes:

Pass native file path.
This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.

64.22.275 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: CRL file for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_CRLFILE option in CURL manual.

64.22.276 OptionProxyIssuerCert as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the proxy issuer SSL certificate filename.
Notes:

Pass a string naming a file holding a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).
(Read and Write property)
See also PROXY_ISSUERCERT option in CURL manual.

64.22.277 OptionProxyIssuerCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set proxy issuer SSL certificate from memory blob.
Notes:

Pass data, which contains binary data of a CA certificate in PEM format. If the option is set, an additional check against the peer certificate is performed to verify the issuer of the the HTTPS proxy is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option should be used in combination with the OptionProxySSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionProxySSLVerifyPeer has to be set too for the check to fail).

This option is an alternative to OptionProxyIssuerCert which instead expects a file name as input.
(Read and Write property)
See also PROXY_ISSUERCERT_BLOB option in CURL manual.

64.22.278 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for the SSL private key for proxy.
Notes: (Read and Write property)
See also PROXY_KEYPASSWD option in CURL manual.

64.22.279 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should be pointing to the password to use for the transfer while connecting to Proxy.
Notes:

The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option.
(Added in 7.19.1)
(Read and Write property)
See also PROXYPASSWORD option in CURL manual.

64.22.280 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The public key in DER form used to validate the proxy public key.
Notes:

This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true.
Please path native file path to key file.
(Read and Write property)
See also PROXY_PINNEDPUBLICKEY option in CURL manual.

64.22.281 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proxy port to connect to unless it is specified in the proxy string OptionProxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

64.22.282 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Proxy Service Name.
Notes: (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

64.22.283 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-certificate for proxy.
Notes: (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

64.22.284 OptionProxySSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets private key for proxy cert from memory blob.
Notes:

Pass data, which contains the private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with CURL.SetOptionProxySSLKeyType.
(Read and Write property)
See also PROXY_SSLCERT_BLOB option in CURL manual.

64.22.285 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Type of the file keeping your SSL-certificate for proxy.
Notes:

Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

64.22.286 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which SSL ciphers to use for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

64.22.287 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file keeping your private SSL-key for proxy.
Notes:

Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

64.22.288 OptionProxySSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for proxy cert from memory blob.
Notes:

Pass data, which contains a private key for connecting to the HTTPS proxy. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionProxySSLKeyType.

This option is an alternative to OptionProxySSLKey which instead expects a file name as input.
(Read and Write property)
See also PROXY_SSLKEY_BLOB option in CURL manual.

64.22.289 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets type of the file keeping your private SSL-key for proxy.
Notes:

Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.

64.22.290 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask for proxy.
Notes: (Read and Write property)
See also PROXY_SSL_OPTIONS option in CURL manual.

64.22.291 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable SSL Host verification.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object
```

```
// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

64.22.292 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the proxy in ssl handshake.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionProxySSLVerifyHost = 0
d.OptionProxySSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionProxyCAInfo = cacert.NativePath
d.OptionProxySSLVerifyHost = 2
d.OptionProxySSLVerifyPeer = 1
```

Notes:

set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

64.22.293 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version to specifically try to use for proxy.
Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.

64.22.294 OptionProxyTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

Function: Specify which TLS 1.3 ciphers suites to use for proxy.
Notes:

The list of cipher suites to use for the TLS 1.3 connection to a proxy. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also PROXY_TLS13_CIPHERS option in CURL manual.

64.22.295 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Password for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

64.22.296 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set authentication type for authenticated TLS for proxy
Notes: (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

64.22.297 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set a username for authenticated TLS for proxy.
Notes: (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

64.22.298 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
Notes:

Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0)
(Read and Write property)
See also PROXY_TRANSFER_MODE option in CURL manual.

64.22.299 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option is to set type of the proxy.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5.
The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

64.22.300 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

64.22.301 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionUpload instead.
Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:

The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.302 OptionQuickExit as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to allow to exit quickly.
Notes:

Pass a number as a parameter, 1 meaning that when recovering from a timeout, libcurl should skip lengthy cleanups that are intended to avoid all kinds of leaks (threads etc.), as the caller program is about to call exit() anyway. This allows for a swift termination after a DNS timeout for example, by canceling and/or forgetting about a resolver thread, at the expense of a possible (though short-lived) leak of associated resources.
(Read and Write property)
See also QUICK_EXIT option in CURL manual.

64.22.303 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A file name for the random file.
Notes:

The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)

64.22.304 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string which should contain the specified range you want.
Notes:

It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

64.22.305 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionRedirProtocolsString instead. **Function:** An integer that holds a bitmask of kProtocol* constants.
Notes:

If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)

(Read and Write property)

64.22.306 OptionReditProtocolsString as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The protocols allowed to redirect to.
Example:

```
dim c as new CURLSMBS
c.OptionReditProtocolsString = "http,https"
```

Notes:

Pass string that holds a comma-separated list of case insensitive protocol names (URL schemes). That list limits what protocols libcurl may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This option allows applications to limit specific transfers to only be allowed to use a subset of protocols in redirections.

Protocols denied by OptionProtocolsString are not overridden by this option.

By default libcurl will allow HTTP, HTTPS, FTP and FTPS on redirects (since 7.65.2). Older versions of libcurl allowed all protocols on redirect except several disabled for security reasons: Since 7.19.4 FILE and SCP are disabled, and since 7.40.0 SMB and SMBS are also disabled.

These are the available protocols:

DICT, FILE, FTP, FTPS, GOPHER, GOPHERS, HTTP, HTTPS, IMAP, IMAPS, LDAP, LDAPS, POP3, POP3S, RTMP, RTMPE, RTMPS, RTMPT, RTMPTE, RTMPTS, RTSP, SCP, SFTP, SMB, SMBS, SMTP, SMTPS, TELNET, TFTP

You can set "ALL" as a short-cut to enable all protocols. Note that by setting all, you may enable protocols that were not supported the day you write this but are introduced in a future libcurl version.

If trying to set a non-existing protocol or if no matching protocol at all is set, it returns error.

Default

HTTP, HTTPS, FTP and FTPS (Added in 7.65.2).

Older versions defaulted to all protocols except FILE, SCP and since 7.40.0 SMB and SMBS.

(Read and Write property)

64.22.307 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The referer to pass to the server.
Notes:

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

64.22.308 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

64.22.309 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: It contains the offset in number of bytes that you want the transfer to start from.
Notes:

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

64.22.310 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Function:** It contains the offset in number of bytes that you want the transfer to start from.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.311 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

64.22.312 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

64.22.313 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

64.22.314 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP session identifier.
Notes: (Read and Write property)

See also RTSP_SESSION_ID option in CURL manual.

64.22.315 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RTSP stream URI.
Notes: (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

64.22.316 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Transport: header to use in RTSP requests.
Notes: (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

64.22.317 OptionSASLAuthZID as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The authorisation identity (identity to act as).
Notes:

Sets the authorisation identity (identity to act as).
Pass a text as parameter, which should be pointing to the authorisation identity (authzid) for the transfer. Only applicable to the PLAIN SASL authentication mechanism where it is optional.
When not specified only the authentication identity (authcid) as specified by the username will be sent to the server, along with the password. The server will derive a authzid from the authcid when not provided, which it will then uses internally.
When the authzid is specified, the use of which is server dependent, it can be used to access another user's inbox, that the user has been granted access to, or a shared mailbox for example.
(Read and Write property)
See also SASL_AUTHZID option in CURL manual.

64.22.318 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SASL initial response.
Notes: (Read and Write property)

See also SASL_IR option in CURL manual.

64.22.319 OptionServerResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Causes libcurl to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to send a response message for a command before the session is considered dead.
Notes:

While libcurl is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionServerResponseTimeout to a value smaller than OptionTimeout.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SERVER_RESPONSE_TIMEOUT option in CURL manual.

64.22.320 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Service Name.
Notes: (Read and Write property)
See also SERVICE_NAME option in CURL manual.

64.22.321 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitmask of allowed auth methods for connections to SOCKS5 proxies.
Notes: (Read and Write property)
See also SOCKS5_AUTH option in CURL manual.

64.22.322 OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to protect SOCKS5 connection is protected.
Notes:

Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).
(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

64.22.323 OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** A string holding the name of the service.
Notes:

The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)

64.22.324 OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Define the SSH authorization types.
Example:

```
dim c as CURLSMBS // your instance

// only do password
c.OptionSSHAuthTypes = c.kSSHAuthKeyboard or c.kSSHAuthPassword
```

Notes:

Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

See kSSHAuth* constants.
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.

64.22.325 OptionSSHCompression as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable SSH compression.
Notes: (Read and Write property)
See also SSH_COMPRESSION option in CURL manual.

64.22.326 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host's public key.
Notes:

libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

64.22.327 OptionSSHHostPublicKeySHA256 as String

MBS CURL Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: SHA256 hash of SSH server public key.
Notes:

Pass a string containing a Base64-encoded SHA256 hash of the remote host's public key. The transfer will fail if the given hash does not match the hash the remote host provides.
(Read and Write property)
See also SSH_HOST_PUBLIC_KEY_SHA256 option in CURL manual.

64.22.328 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the file name of the known_host file to use.
Notes:

The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also SSH_KNOWNHOSTS option in CURL manual.

64.22.329 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your private key.
Example:

```
Dim c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword.
(Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PRIVATE_KEYFILE option in CURL manual.

64.22.330 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a path pointing to a file name for your public key.
Example:

```
Dim c As New CURLSMBS

c.OptionSSHPrivateKeyfile = "/Users/test/.ssh/id_rsa"
c.OptionSSHPublicKeyfile = "/Users/test/.ssh/id_rsa.pub"
c.OptionUsername = "test"
```

Notes:

If not used, libCURL defaults to using
textasciitilde /.ssh/id_dsa.pub. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSH_PUBLIC_KEYFILE option in CURL manual.

64.22.331 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your certificate.
Notes:

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

64.22.332 OptionSSLCertBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set SSL client certificate from memory blob.
Notes:

Pass data, which contains a client certificate. The format must be "P12" on Secure Transport or Schannel. The format must be "P12" or "PEM" on OpenSSL. The string "P12" or "PEM" must be specified with OptionSSLCertType.

This option is an alternative to OptionSSLCert which instead expects a file name as input.
(Read and Write property)
See also SSLCERT_BLOB option in CURL manual.

64.22.333 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The certificate password.
Notes: (Read and Write property)

64.22.334 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your certificate.
Notes:

Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

64.22.335 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A string holding the list of ciphers to use for the SSL connection.
Example:

```
// allow lower secure ciphers
curl.OptionSSLCipherList = "DEFAULT@SECLEVEL=0"
```

Notes:

The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

64.22.336 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable TLS ALPN extension (http2 over ssl might fail without).
Notes: (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

64.22.337 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)
Notes: (Read and Write property)

64.22.338 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
Notes:

If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

64.22.339 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Sets the actual crypto

engine as the default for (asymmetric) crypto operations.
Notes:

If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

64.22.340 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should enable TLS false start.
Notes: (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

64.22.341 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the file name of your private key.
Notes:

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

64.22.342 OptionSSLKeyBlob as String

MBS CURL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set private key for client cert from memory blob.
Notes:

Pass data, which contains a private key. Compatible with OpenSSL. The format (like "PEM") must be specified with OptionSSLKeyType.

This option is an alternative to OptionSSLKey which instead expects a file name as input.
(Read and Write property)
See also SSLKEY_BLOB option in CURL manual.

64.22.343 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Function:** The password required to use the OptionSSLKEY private key.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

64.22.344 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string should be the format of your private key.
Notes:

Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

64.22.345 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable/disable specific SSL features with a bitmask.

Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

64.22.346 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use the SSL session ID cache.
Notes:

Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

64.22.347 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option determines whether libCURL verifies that the server cert is for the server it is known as.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:

Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn't matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

64.22.348 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configure whether this CURL instance will verify the SSL peer certificate.
Example:

```
// if you use SSL, maybe put in a certificate or disable verification?

dim d as CURLSMBS
// your CURL object

// disable
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// or better provide root certificates:
```

```
Dim cacert As FolderItem = GetFolderItem("cacert.pem")
d.OptionCAInfo = cacert.NativePath
d.OptionSSLVerifyHost = 2
d.OptionSSLVerifyPeer = 1
```

Notes:

This option determines whether CURL verifies the authenticity of the peer's certificate. A value of 1 means CURL verifies; zero means it doesn't. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

When you don't set the options for certificate path or load system certificates, the MBS Plugin will disable the verify step to let the transfer run.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

64.22.349 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set if we should verify the certificate status.
Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

64.22.350 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: What version of SSL/TLS to attempt to use.
Example:

```
dim c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

The SSL and TLS versions have typically developed from the most insecure version to be more and more secure in this order through history: SSL v2, SSLv3, TLS v1.0, TLS v1.1, TLS v1.2 and the most recent TLS v1.3.

Use one of the available defines for this purpose. The available options are:

Default	0	The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).
TLSv1	1	TLS v1.0 or later
SSLv2	2	SSL v2 (but not SSLv3)
SSLv3	3	SSL v3 (but not SSLv2)
TLSv1.0	4	TLS v1.0 or later (Added in 7.34.0)
TLSv1.1	5	TLS v1.1 or later (Added in 7.34.0)
TLSv1.2	6	TLS v1.2 or later (Added in 7.34.0)
TLSv1.3	7	TLS v1.3 or later (Added in 7.52.0)

See also kSSLVersion* constants.

The maximum TLS version can be set by using one of the CURL_SSLVERSION_MAX_ macros below. It is also possible to OR one of the CURL_SSLVERSION_ macros with one of the CURL_SSLVERSION_MAX_ macros.

Please note that MBS Plugin does not yet support TLS v1.3 now, but may in future.
(Read and Write property)
See also SSLVERSION option in CURL manual.

64.22.351 OptionStreamDepends as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream dependency on another CURL handle.
Notes: (Read and Write property)

Default	& h10000	The flag defines the maximum supported TLS version by libcurl, or the default value from the SSL library is used. libcurl will use a sensible default maximum, which was TLS v1.2 up to before 7.61.0 and is TLS v1.3 since then - assuming the TLS library support it. (Added in 7.54.0)
Max TLSv1.0	& h40000	The flag defines maximum supported TLS version as TLS v1.0. (Added in 7.54.0)
Max TLSv1.1	& h50000	The flag defines maximum supported TLS version as TLS v1.1. (Added in 7.54.0)
Max TLSv1.2	& h60000	The flag defines maximum supported TLS version as TLS v1.2. (Added in 7.54.0)
Max TLSv1.3	& h70000	The flag defines maximum supported TLS version as TLS v1.3. (Added in 7.54.0)

See also STREAM_DEPENDS option in CURL manual.

64.22.352 OptionStreamDependsE as CURLSMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

64.22.353 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set stream weight, 1 - 256.
Notes:

Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

64.22.354 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Suppress proxy CONNECT response headers from events.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.

64.22.355 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set TCP Fast Open.
Notes: (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

64.22.356 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set to true, TCP keepalive probes will be sent.
Notes:

The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-Interval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

64.22.357 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

64.22.358 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
Notes:

Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

64.22.359 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).
Notes:

The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP's Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

64.22.360 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify block size to use for TFTP data transmission.
Notes:

Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

64.22.361 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether not send any tftp option requests to the server.
Notes: (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.

64.22.362 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Time condition option.
Notes:

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

64.22.363 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum time in seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

64.22.364 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
Notes:

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

64.22.365 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

64.22.366 OptionTLS13Ciphers as String

MBS CURL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specify which TLS 1.3 ciphers suites to use.
Notes:

string holding the list of cipher suites to use for the TLS 1.3 connection. The list must be syntactically correct, it consists of one or more cipher suite strings separated by colons.

You'll find more details about cipher lists on this URL:

https://curl.haxx.se/docs/ssl-ciphers.html

The application does not have to keep the string around after setting this option.
(Read and Write property)
See also TLS13_CIPHERS option in CURL manual.

64.22.367 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication password.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

64.22.368 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TLS authentication type.
Notes:

You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.

64.22.369 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the TSL authentication user name.
Notes:

Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

64.22.370 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a request for compressed Transfer Encoding in the outgoing HTTP request.
Notes:

If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

64.22.371 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.
Notes:

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

64.22.372 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Path to Unix domain socket.
Notes: (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

64.22.373 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.
Notes:

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

64.22.374 OptionUpkeepIntervalMS as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connection upkeep interval.
Notes:

Some protocols have "connection upkeep" mechanisms. These mechanisms usually send some traffic on existing connections in order to keep them alive; this can prevent connections from being closed due to overzealous firewalls, for example.

The user needs to explicitly call Upkeep in order to perform the upkeep work.

Currently the only protocol with a connection upkeep mechanism is HTTP/2: when the connection upkeep interval is exceeded and Upkeep is called, an HTTP/2 PING frame is sent on the connection.
(Read and Write property)
See also UPKEEP_INTERVAL_MS option in CURL manual.

64.22.375 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: True tells the library to prepare for an upload.
Notes:

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header

with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

64.22.376 OptionUploadBufferSize as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set preferred upload buffer size.
Notes:

Pass a long specifying your preferred size (in bytes) for the upload buffer in libcurl. It makes libcurl uses a larger buffer that gets passed to the next layer in the stack to get sent off. In some setups and for some protocols, there's a huge performance benefit of having a larger upload buffer.

This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size.

The upload buffer size is by default 64 kilobytes. The maximum buffer size allowed to be set is 2 megabytes. The minimum buffer size allowed to be set is 16 kilobytes.

Since curl 7.61.1 the upload buffer is allocated on-demand - so if the handle isn't used for upload, this buffer will not be allocated at all.

For slow upload/downloads, it may be better to set buffer size to 1 MB with OptionUploadBufferSize or OptionBufferSize properties to make transfers faster.
(Read and Write property)
See also UPLOAD_BUFFERSIZE option in CURL manual.

64.22.377 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual URL to deal with.
Example:

```
Dim c As New CURLSMBS

// this example sends a xml request to a server
c.OptionURL = "http://www.someserver.com/service"

// some XML for a SOAP request
Dim request As String = "<?xml version=""1.0""?><methodCall><methodName>application.getValue</methodName><params><param><value>info</value></param></params></methodCall>"

c.OptionPostFields = request

Dim header(-1) As String
header.Append "Content-Type: text/xml"
c.SetOptionHTTPHeader header

// this should be c.kError_OK if okay.
Dim result As Integer = c.Perform

Dim output As String = c.OutputData
Dim debugLog As String = c.DebugMessages
Dim HTTPStatus As Integer = c.GetInfoResponseCode

Break
```

Notes:

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn't copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.

If you miss the protocol in the URL, you may get an error about HTTP/0.9 being used and not allowed.
(Read and Write property)
See also URL option in CURL manual.

64.22.378 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user agent string to pass to the server.
Example:

```
Dim c As New CURLSMBS

// setup request and any options you need
c.OptionURL = URL
c.OptionUserAgent = "MyDownloader 1.0"
```

Notes:

It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

64.22.379 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The user name to be used in protocol authentication
Notes:

In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

64.22.380 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request using SSL / TLS for the transfer.
Example:

```
dim c as CURLSMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

CURLUSESSL_NONE	0	Don't attempt to use SSL.
CURLUSESSL_TRY	1	Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL	2	Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL	3	Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

(Read and Write property)
See also USE_SSL option in CURL manual.

64.22.381 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether debug messages are sent to the DebugMessage event.
Notes:

Default is false.
You need to subclass the CURLSMBS class to add code in the DebugMessage event.
Or you set CollectDebugMessages = true and later query DebugMessages property.
Or you use CreateMTDebugOutputFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

64.22.382 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable wildcard matching.
Notes:

Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLSMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- - ASTERISK

ftp://example.com/some/path/*.txt (for all txt's from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[- BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[a-zA-Z0-9] or [f-gF-G] - character interval
[abc] - character enumeration
[^abc] or [!abc] - negation
[[:name:]] class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.
[ ] [-!^] - special case - matches only '-', '] ', ' [', '!' or '^'. These characters have no special purpose.
[\[\] \\] - escape syntax. Matches ' [', '] ' or '¬¥.

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [a-z [:upper:] \\] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

64.22.383 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

64.22.384 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output data from CURL.
Example:

```
Dim d As New CURLSMBS

// download here
d.OptionURL = URL

// if you use SSL, maybe put in a certificate or disable verification?
d.OptionSSLVerifyHost = 0
d.OptionSSLVerifyPeer = 0

// run download
dim e as integer = d.Perform

// check result
Dim data As String = d.OutputData
Dim DebugMessage As String = d.DebugMessages // check in debugger on error

ResultText.text="Result: "+str(e) // 0 = Okay, others are error codes, so check debug messsages
```

Notes:

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.

Limited to 2 GB. Please stream to file for bigger data with CreateMTOutputFile function.
(Read only property)

64.22.385 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether transfer is paused.
Notes:

You can set it to true while transfer runs to pause it.
(Read and Write property)

64.22.386 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes downloaded so far.
Notes: (Read only property)

64.22.387 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to download in total.
Notes: (Read only property)

64.22.388 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Current download/upload progress in percent.
Notes:

Range from 0 to 100.
(Read only property)

64.22.389 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes uploaded so far.
Notes: (Read only property)

64.22.390 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bytes to upload in total.
Notes: (Read only property)

64.22.391 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.22.392 Version as CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a version object to a filled with information about various run-time features in libCURL.
Notes: (Read only property)

64.22.393 WebSocketOptions as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: WebSocket behavior options.
Notes:

Pass a bitmask to tell libcurl about specific WebSocket behaviors.

To detach a WebSocket connection and use the WebSocketSend and WebSocketReceive functions after the HTTP upgrade procedure, set the OptionConnectOnly option to 2.

Available bits in the bitmask:

kWebSocketRaw:
Deliver "raw" WebSocket traffic to the Write event.

In raw mode, libcurl does not handle pings or any other frame for the application.
(Read and Write property)

64.22.394 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether plugin should yield time.
Notes:

If set the plugin will yield time to Xojo back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

64.22.395 Events

64.22.396 ChunkBegin(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called on begin of a new chunk.
Notes: If splitting of data transfer is enabled, this event is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

64.22.397 ChunkEnd(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Download of a chunk ended.
Notes:

If splitting of data transfer is enabled this event is called after download of an individual chunk finished.
This event is called for skipped or downloaded files.

64.22.398 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: A debug event to get data of ongoing process.
Notes:

You may need to set OptionVerbose to true.

infotype constants:

kInfo_TEXT	0	The data is informational text.
kInfo_HEADER_IN	1	The data is header (or header-like) data received from the peer.
kInfo_HEADER_OUT	2	The data is header (or header-like) data sent to the peer.
kInfo_DATA_IN	3	The data is protocol data received from the peer.
kInfo_DATA_OUT	4	The data is protocol data sent to the peer.
kInfo_SSL_DATA_IN	5	The data is protocol data received from the peer.
kInfo_SSL_DATA_OUT	6	The data is protocol data sent to the peer.

If you set CollectDebugMessages, the plugin will collect the messages and provide them via the DebugMessages property. You can still use this event to write your own log instead of in addition.

64.22.399 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Match a file against a pattern.
Notes:

If you don't implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

64.22.400 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when transfer has finished.
Notes:

For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLSMultiMBS, it is called after TransferFinished event and before TransfersFinished event.

If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

64.22.401 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: New Header data was received.
Notes:

You can get error 23 if you don't return lenb(data) in this event.
Or just leave it emtpy so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the HeaderData property. You can still use this event to write your own log instead of in addition.

64.22.402 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to report progress of ongoing transfers.
Notes:

This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transfered or not. Unknown/unused argument values passed to the event will be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

64.22.403 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
Notes:

Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when you've told you will upload N bytes and you upload less than N bytes), you may experience that the server "hangs" waiting for the rest of the data that won't come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

64.22.404 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: An event to inform you that reading on the file needs to start at the beginning again.
Notes:

Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

64.22.405 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when CURL needs to perform a seek.
Notes:

Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

64.22.406 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for known hosts event for SFTP and SCP.
Notes:

KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

CURLKHSTAT_FINE_ADD_TO_FILE	0	Fine and add to file
CURLKHSTAT_FINE	1	Fine
CURLKHSTAT_REJECT	2	reject the connection, return an error
CURLKHSTAT_DEFER	3	do not accept it, but we can't answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

64.22.407 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: .

Function: This event gets called by libCURL as soon as there is data received that needs to be saved.
Notes:

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write event is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is

enough free memory. You can of course still process data yourself in this event instead of in addition.

64.22.408 Constants

64.22.409 kAUTH_ANY = & hFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: all types set

64.22.410 kAUTH_ANYSAFE = & hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.22.411 kAUTH_AWS_SIGV4 = 128

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: AWS Signature v4

64.22.412 kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Basic (default)

64.22.413 kAUTH_Bearer = 64

MBS CURL Plugin, Plugin Version: 18.3.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Bearer token authentication

64.22.414 kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: Digest

64.22.415 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

64.22.416 kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLSVersionMBS class whether this is supported/implemented by your copy of the CURL library.

64.22.417 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

64.22.418 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.22.419 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the authentication constants for the OptionHTTPAuth property.

64.22.420 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes:

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

64.22.421 kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the authentication constants for the OptionHTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

64.22.422 kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

64.22.423 kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

64.22.424 kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

64.22.425 kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

64.22.426 kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the result values for the ChunkEnd event.
Notes: Download success.

64.22.427 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.428 kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: socket is not ready for send/recv, wait till it's ready and try again (Added in CURL 7.18.2)

64.22.429 kError_Auth_Error = 94

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the error constants for the Error event.
Notes: An authentication function returned an error.

64.22.430 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Unrecognized transfer encoding

64.22.431 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't resume download

64.22.432 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.433 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Chunk event reported error.

64.22.434 kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Not used with plugin.

64.22.435 kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Could not connect. Proxy set? Firewall open?

64.22.436 kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.437 kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.438 kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.439 kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Maximum file size exceeded

64.22.440 kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.441 kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

64.22.442 kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

64.22.443 kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unable to parse FTP file list.

64.22.444 kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.445 kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.446 kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.447 kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: the REST command failed

64.22.448 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: FTP PORT operation failed

64.22.449 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: a PRET command failed

64.22.450 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.451 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.452 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.453 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.454 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.455 kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: when this is a specific error

64.22.456 kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

64.22.457 kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: stream error in HTTP/2 framing layer

64.22.458 kError_HTTP3 = 95

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: HTTP3 layer failed.

64.22.459 kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.460 kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.461 kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.462 kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.463 kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Invalid LDAP URL

64.22.464 kError_LDAP_SEARCH_FAILED = 39

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.465 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: user, password or similar was not accepted and we failed to login

64.22.466 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

64.22.467 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes:

For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

64.22.468 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.469 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.470 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.471 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.472 kError_PEER_FAILED_VERIFICATION = 60

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.473 kError_Proxy = 96

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Proxy handshake error.

64.22.474 kError_Quic_Connect_Error = 96

MBS CURL Plugin, Plugin Version: 20.5.

Function: One of the error constants for the Error event.
Notes: Quic had a connect error.

64.22.475 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.476 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.477 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: could open/read from file

64.22.478 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: an api function was called from inside an event.

64.22.479 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failure in receiving network data

64.22.480 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.481 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Out of disk space on server.

64.22.482 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File already exists.

64.22.483 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Remote file not found.

64.22.484 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

64.22.485 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

64.22.486 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed sending network data

64.22.487 kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Sending the data requires a rewind that failed

64.22.488 kError_SETOPT_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call.

64.22.489 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

64.22.490 kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes:

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

64.22.491 kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CACERT file, missing or wrong format.

64.22.492 kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: problem with the local certificate

64.22.493 kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: couldn't use specified cipher

64.22.494 kError_SSL_ClientCert = 97

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the error constants for the Error event.
Notes: Client-side certificate required.

64.22.495 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: wrong when connecting with SSL

64.22.496 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Could not load CRL file, missing or wrong format (Added in 7.19.0)

64.22.497 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: failed to initialise ENGINE

64.22.498 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: SSL crypto engine not found

64.22.499 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: can not set SSL crypto engine as default

64.22.500 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error constants for the Error event.
Notes: invalid certificate status

64.22.501 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Issuer check failed. (Added in CURL 7.19.0)

64.22.502 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the error constants for the Error event.
Notes: specified pinned public key did not match.

64.22.503 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Failed to shut down the SSL connection.

64.22.504 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: Malformed option for CURL via setOpt call. Used to be for telnet, but now generic.

64.22.505 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Illegal TFTP operation.

64.22.506 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: No such user.

64.22.507 kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: File not found on server.

64.22.508 kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Permission problem on server.

64.22.509 kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Unknown transfer ID.

64.22.510 kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: catch endless re-direct loops

64.22.511 kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.
Notes: User specified an unknown option

64.22.512 kError_Unrecoverable_poll = 99

MBS CURL Plugin, Plugin Version: 22.3.

Function: One of the error constants for the Error event.
Notes: poll/select returned fatal error

64.22.513 kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.514 kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.

64.22.515 kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.516 kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2.

Function: One of the error constants for the Error event.
Notes: Requested FTP SSL level failed

64.22.517 kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the error constants for the Error event.

64.22.518 kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Failed.

64.22.519 kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: Is Match.

64.22.520 kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the possible return values for FileNameMatch event.
Notes: No match.

64.22.521 kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.522 kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.523 kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.524 kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.525 kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.526 kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.527 kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.528 kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.529 kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.530 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.531 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.532 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.533 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.534 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.535 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.536 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the form constants.

64.22.537 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Allow libCURL to decide

64.22.538 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

64.22.539 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP Authentication constants for the OptionFTPSSLAuth property.
Notes: Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

64.22.540 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: let libcurl pick

64.22.541 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: single CWD operation for each path part

64.22.542 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: no CWD at all

64.22.543 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the FTP CWD method.
Notes: one CWD to full dir, then work on file

64.22.544 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.22.545 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.22.546 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.22.547 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the FTP SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.22.548 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: delegate always

64.22.549 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: no delegation (default)

64.22.550 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the GSS API delegation modes.
Notes: if permitted by policy

64.22.551 kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.0 requests.

64.22.552 kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Enforce HTTP 1.1 requests.

64.22.553 kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: use version 2 for HTTPS, version 1.1 for HTTP

64.22.554 kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 in the request

64.22.555 kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 2 without HTTP/1.1 Upgrade

64.22.556 kHTTP_VERSION_3 = 30

MBS CURL Plugin, Plugin Version: 19.4.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: please use HTTP 3 in the request

64.22.557 kHTTP_VERSION_3Only = 31

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: Use HTTP/3 without fallback. For HTTPS only. For HTTP, this makes libcurl return error.

64.22.558 kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the HTTP Version constants for the OptionHTTPVersion property.
Notes: We don't care about what version the library uses. libCURL will use whatever it thinks fit.

64.22.559 kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.22.560 kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.22.561 kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data received from the peer.

64.22.562 kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is header (or header-like) data sent to the peer.

64.22.563 kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data received from the peer.

64.22.564 kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is protocol data sent to the peer.

64.22.565 kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the info constants for the DebugMessage event.
Notes: The data is informational text.

64.22.566 kIPRESOLVE_V4 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

64.22.567 kIPRESOLVE_V6 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V6
```

64.22.568 kIPRESOLVE_WHATEVER=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the IP Resolve constants for the OptionIPResolve property.
Example:

```
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_WHATEVER
```

64.22.569 kNETRC_IGNORED=0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes:

The .netrc will never be read.
This is the default.

64.22.570 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be preferred to one in the .netrc.

64.22.571 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the NetRC constants for the OptionNetRC property.
Notes: A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

64.22.572 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Enable all protocols.

64.22.573 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: DICT

64.22.574 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: File

64.22.575 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTP

64.22.576 kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: FTPS

64.22.577 kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Gopher

64.22.578 kProtocolGophers = & h20000000

MBS CURL Plugin, Plugin Version: 21.1.

Function: One of the constants for the OptionProtocols properties.

64.22.579 kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTP

64.22.580 kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: HTTPS

64.22.581 kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAP

64.22.582 kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: IMAPS

64.22.583 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAP

64.22.584 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: LDAPS

64.22.585 kProtocolMQTT = & h10000000

MBS CURL Plugin, Plugin Version: 20.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: MQTT

64.22.586 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3

64.22.587 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: POP3S

64.22.588 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMP

64.22.589 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPE

64.22.590 kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPS

64.22.591 kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPT

64.22.592 kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTE

64.22.593 kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTMPTS

64.22.594 kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: RTSP

64.22.595 kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SCP

64.22.596 kProtocolSFTP = & h20

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SFTP

64.22.597 kProtocolSMB = & h4000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMB

64.22.598 kProtocolSMBS = & h8000000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMBS

64.22.599 kProtocolSMTP = & h10000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTP

64.22.600 kProtocolSMTPS = & h20000

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: SMTPS

64.22.601 kProtocolTelnet = & h40

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: Telnet

64.22.602 kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0.

Function: One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
Notes: TFTP

64.22.603 kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.22.604 kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Force to use CONNECT HTTP/1.0.

64.22.605 kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Connect using HTTP/1.1.

64.22.606 kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.22.607 kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Using SOCKS 4A.

64.22.608 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the proxy constants for the OptionProxyType property.

64.22.609 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2.

Function: One of the proxy constants for the OptionProxyType property.
Notes: Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

64.22.610 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to current file position.

64.22.611 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to end of file.

64.22.612 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the origin values for seek event.
Notes: Seek relative to start of file.

64.22.613 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Return this value if you can't seek as you are not using a file, but for example a stream.

64.22.614 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation failed.

64.22.615 kSeekReturnOk = 1

MBS CURL Plugin, Plugin Version: 12.2.

Function: One of the result values for the Seek Event.
Notes: Returns this value if your seek operation succeeded.

64.22.616 kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: agent (ssh-agent, pageant...)

64.22.617 kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Any allowed

64.22.618 kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: Default: Any

64.22.619 kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: gssapi (kerberos, ...)

64.22.620 kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: host key files

64.22.621 kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: keyboard interactive

64.22.622 kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: none allowed, silly but complete

64.22.623 kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: password

64.22.624 kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSH Authentication modes.
Notes: public/private key files

64.22.625 kSSLOptionAllowBeast = 1

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to allow the BEAST SSL vulnerability in the name of improving interoperability with older servers. Some SSL libraries have introduced work-arounds for this flaw but those work-arounds sometimes make the SSL communication fail. To regain functionality with those broken servers, a user can this way allow the vulnerability back.

64.22.626 kSSLOptionAutoClientCert = 32

MBS CURL Plugin, Plugin Version: 21.3.

Function: One of the SSL option flags.
Notes: Tells libcurl to automatically locate and use a client certificate for authentication. (Schannel)

64.22.627 kSSLOptionNativeCA = 16

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to use standard certificate store of operating system. Currently implemented under MS-Windows.

64.22.628 kSSLOptionNoPartialChain = 4

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to *NOT* accept a partial certificate chain if possible. The OpenSSL backend has this ability.

64.22.629 kSSLOptionNoRevoke = 2

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to disable certificate revocation checks for those SSL backends where such behavior is present.

64.22.630 kSSLOptionRevokeBestEffort = 8

MBS CURL Plugin, Plugin Version: 20.3.

Function: One of the SSL option flags.
Notes: tells libcurl to ignore certificate revocation offline checks and ignore missing revocation list for those SSL backends where such behavior is present.

64.22.631 kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: The default acceptable version range. The minimum acceptable version is by default TLS v1.0 since 7.39.0 (unless the TLS library has a stricter rule).

64.22.632 kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v2 (but not SSLv3)

64.22.633 kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: SSL v3 (but not SSLv2)

64.22.634 kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later

64.22.635 kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.0 or later (Added in 7.34.0)

64.22.636 kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.1 or later (Added in 7.34.0)

64.22.637 kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.2 or later (Added in 7.34.0)

64.22.638 kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2.

Function: One of the SSL Version constants for the OptionSSLVersion property.
Notes: TLS v1.3 or later (Added in 7.52.0)

64.22.639 kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.22.640 kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.

64.22.641 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8.

Function: One of the time condition constants for the OptionTimeCondition property.
Notes: No condition.

64.22.642 kUpkeepIntervalDefault = 50000

MBS CURL Plugin, Plugin Version: 18.5.

Function: The default connection upkeep interval in milliseconds.

64.22.643 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

64.22.644 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

64.22.645 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Don't attempt to use SSL.

64.22.646 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL constants for the OptionFTPSSL property.
Notes: Try using SSL, proceed as normal otherwise.

64.22.647 kWebSocketRaw = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the options for web sockets.
Notes: RAW mode for WebSocketOptions.

64.23 class CURLSMimePartMBS

64.23.1 class CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for mime parts.
Notes:

You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Presentation from Munich conference about MBS Plugins.
- Presentation from Xojo Developer Conference 2019 in Miami.

64.23.6 Methods

64.23.7 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

64.23.8 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries header.

64.23.9 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets header.

64.23.10 Properties

64.23.11 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Notes: (Read and Write property)

64.23.12 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from memory data.
Example:

```
dim c as new CURLSMBS

// add mime
dim p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: (Read and Write property)

64.23.13 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime data transfer encoder.
Notes:

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

64.23.14 File as FolderItem

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to stream.
Notes:

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)

64.23.15 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part remote file name.
Notes:

If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

64.23.16 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part data source from named file.
Notes: (Read and Write property)

64.23.17 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

64.23.18 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime part type.
Notes: (Read and Write property)

64.23.19 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mime/form part name.
Notes: (Read and Write property)

64.23.20 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent object.
Notes: (Read only property)

64.23.21 Constants

64.23.22 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 7bit

64.23.23 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: 8bit

64.23.24 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Base64

64.23.25 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Binary mode

64.23.26 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: No mode, so data is passed through and header has no encoding defined.

64.23.27 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the encoding modes.
Notes: Quoted printable

64.23.28 kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: GIF

64.23.29 kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: HTML

64.23.30 kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: JPEG

64.23.31 kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PDF

64.23.32 kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: PNG

64.23.33 kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: SVG

64.23.34 kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: Text

64.23.35 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the mime types.
Notes: XML

64.24 class CURLSMissingFunctionExceptionMBS

64.24.1 class CURLSMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if a CURL library function is not loaded.
Notes:

If you call load library before you use the CURLSMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.25 class CURLSMultiMBS

64.25.1 class CURLSMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for multiple CURL transfers running in parallel.

64.25.6 Methods

64.25.7 AddCURL(curl as CURLSMBS, handler as CURLSTransferFinishedMBS = nil) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Add a standard CURL handle to the multi stack.
Notes:

Lasterror is set.

We added handler parameter for v23.2 to make it easier to run things asynchronously.

64.25.8 CURLs as CURLSMBS()

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of current CURL instances.

64.25.9 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries text message for a given error code.

64.25.10 Perform

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for things to see.
Notes:

When the app thinks there's data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.

Sets RunningTransfers property.

64.25.11 RemoveAll

MBS CURL Plugin, Plugin Version: 23.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all curl handles.
Notes:

Same as looping over CURLs() array and calling RemoveCURL for each.
This effectively cancels all requests.

64.25.12 RemoveCURL(CURL as CURLSMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes a CURL handle from the multi stack again.
Notes:

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

64.25.13 SharedInstance as CURLSMultiMBS

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The shared instance.
Notes:

Either you create a new CURLSMultiMBS object, which then takes this place.
Or you don't and the plugin creates an object for you to easily schedule transfers asynchronously.

64.25.14 Properties

64.25.15 AutoPerform as Boolean

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to run a timer and run Perform automatically for you.
Notes:

Set to true to run Perform automatically. For this the plugin manages a timer to call perform regularly.
We set this to true for the default shared instance, so it runs without you doing anything.
(Read and Write property)

64.25.16 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A connection with a chunk length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.25.17 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A connection with a content-length longer than this will not be considered for pipelining.
Notes: (Read and Write property)

64.25.18 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

64.25.19 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

64.25.20 MaxConcurrentStreams as Integer

MBS CURL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of concurrent connections to a server.
Notes:

Maximum number of concurrent streams to support on a connection.
(Read and Write property)

64.25.21 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of entries in the connection cache.
Notes: (Read and Write property)

64.25.22 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of (pipelining) connections to one host.
Notes: (Read and Write property)

64.25.23 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of requests in a pipeline.
Notes: (Read and Write property)

64.25.24 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum number of open connections in total.
Notes: (Read and Write property)

64.25.25 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set to 1 to enable pipelining for this multi handle.
Notes:

Only for HTTP protocol.
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
(Read and Write property)

64.25.26 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of running transfers.
Notes:

Set by Perform method.
(Read only property)

64.25.27 Tag as Variant

MBS CURL Plugin, Plugin Version: 23.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

You can store whatever reference value you need.
(Read and Write property)

64.25.28 Events

64.25.29 TransferFinished(CURL as CURLSMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: One transfer finished.
Notes:

Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.

RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

64.25.30 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: All pending transfers finished.

64.25.31 Constants

64.25.32 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: An easy handle already added to a multi handle was attempted to get added - again.

64.25.33 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An easy handle was not good/valid.

64.25.34 kErrorBadFunctionArgument = 10

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: A function was called with a bad parameter.

64.25.35 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed-in handle is not a valid CURLM handle.

64.25.36 kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: The passed in socket argument did not match.

64.25.37 kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Please call Perform soon to do some tasks.

64.25.38 kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: This is a libCURL bug.

64.25.39 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Everything OK.

64.25.40 kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Running low on memory.

64.25.41 kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the multi interface error codes.
Notes: An api function was called from inside an event.

64.25.42 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0.

Function: One of the multi interface error codes.
Notes: Tried to set unsupported option.

64.25.43 kErrorWakeupFailure = 9

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the multi interface error codes.
Notes: Wakeup is unavailable or failed.

64.25.44 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with HTTP/1.1.

64.25.45 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: Pipe with multiplex.

64.25.46 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the pipeline modes.
Notes: No piping.

64.25.47 Delegates

64.25.48 CURLSTransferFinishedMBS(curl as CURLSMBS, ErrorCode as Integer)

MBS CURL Plugin, Plugin Version: 23.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate used to indicate a transfer finished.
Notes:

ErrorCode is zero for a successful.
See kError* constants in CURLSMBS class.

64.25.49 Blog Entries

- Easier multi transfer for our Xojo CURL Plugin

64.26 class CURLSNotInitializedExceptionMBS

64.26.1 class CURLSNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An exception raised if CURL library is not initialized.
Notes:

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.

64.27 class CURLSSLBackendMBS

64.27.1 class CURLSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

64.27.2 Methods

64.27.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

64.27.4 List as CURLSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Lists the backends.
Example:

```
dim list() as CURLSSLBackendMBS = CURLSSLBackendMBS.List

for each l as CURLSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

64.27.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 64.27.6 SetSSLBackend(name as string) as Integer 13421

64.27.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 64.27.5 SetSSLBackend(id as Integer) as Integer 13420

64.27.7 Properties

64.27.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of this SSL backend.
Notes: (Read only property)

64.27.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this SSL backend.
Notes: (Read only property)

64.27.10 Constants

64.27.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: libcurl was built without any SSL support

64.27.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: OK

64.27.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: You can't set SSL backend after SSL initialization.

64.27.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the error codes.
Notes: Unknown backend name or ID.

64.27.15 kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

64.27.16 kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GNUTLS

64.27.17 kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: GSKIT

64.27.18 kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: MBEDTLS

64.27.19 kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.

64.27.20 kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: NSS

64.27.21 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: OpenSSL or BoringSSL

64.27.22 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: SChannel

64.27.23 kSSLBackendSecureTransport = 9

MBS CURL Plugin, Plugin Version: 19.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

64.27.24 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: WolfSSL

64.28 class CURLSSSLBackendMBS

64.28.1 class CURLSSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSL backend.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

64.28.8 Methods

64.28.9 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

64.28.10 List as CURLSSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lists the backends.
Example:

```
dim list() as CURLSSSLBackendMBS = CURLSSSLBackendMBS.List

for each l as CURLSSSLBackendMBS in list
MsgBox l.name
next
```

Notes: The list may not be available if called too late.

64.28.11 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the SSL backend.
Notes:

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will

result in a kErrorTooLate.

Returns nil, if there are no backends to choose.

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.

64.28.26 kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: NSS

64.28.27 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: OpenSSL or BoringSSL

64.28.28 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: SChannel

64.28.29 kSSLBackendSecureTransport = 9

MBS CURL Plugin, Plugin Version: 19.2.

Function: One of the SSL backend IDs.
Notes: DarwinSSL

64.28.30 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2.

Function: One of the SSL backend IDs.
Notes: WolfSSL

64.29 class CURLSURLMBS

64.29.1 class CURLSURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for CURL's URL parser.
Example:

```
dim c as new CURLSURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

64.29.8 Methods

64.29.9 Clone as CURLSURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Duplicates the object.

64.29.10 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new URL object.

64.29.11 Properties

64.29.12 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme

- kFlagsDefaultScheme

(Read and Write property)

64.29.13 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.14 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

64.29.15 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.16 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

64.29.17 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.18 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.19 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.20 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.21 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.22 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.23 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLSURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

64.29.24 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.29.25 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zone ID.
Notes: (Read and Write property)

64.29.26 Constants

64.29.27 kErrorBadFileURL = 19

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The file:// URL is invalid.

64.29.28 kErrorBadFragment = 20

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The fragment part of the URL contained bad or invalid characters.

64.29.29 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

64.29.30 kErrorBadHostname = 21

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The hostname contained bad or invalid characters.

64.29.31 kErrorBadIPv6 = 22

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The IPv6 address hostname contained bad or invalid characters.

64.29.32 kErrorBadLogin = 23

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The login part of the URL contained bad or invalid characters.

64.29.33 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

64.29.34 kErrorBadPassword = 24

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The password part of the URL contained bad or invalid characters.

64.29.35 kErrorBadPath = 25

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The path part of the URL contained bad or invalid characters.

64.29.36 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

64.29.37 kErrorBadQuery = 26

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The query part of the URL contained bad or invalid characters.

64.29.38 kErrorBadScheme = 27

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The scheme part of the URL contained bad or invalid characters.

64.29.39 kErrorBadSlashes = 28

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The URL contained an invalid number of slashes.

64.29.40 kErrorBadUser = 29

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The user part of the URL contained bad or invalid characters.

64.29.41 kErrorLacksIDN = 30

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the error codes.
Notes: IDN missing.

64.29.42 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

64.29.43 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

64.29.44 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

64.29.45 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

64.29.46 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

64.29.47 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

64.29.48 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

64.29.49 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

64.29.50 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

64.29.51 kErrorNoZoneID = 18

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: There is no zoneid set in the URL.

64.29.52 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

64.29.53 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

64.29.54 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

64.29.55 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

64.29.56 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

64.29.57 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

64.29.58 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

64.29.59 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

64.29.60 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

64.29.61 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

64.29.62 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

64.29.63 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

64.29.64 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

64.29.65 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

64.29.66 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

64.29.67 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

64.29.68 kFlagsPunyCode = 4096

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the flags.
Notes: get the host name in pynycode

64.29.69 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

64.29.70 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

64.30 class CURLSVersionMBS

64.30.1 class CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold version information from libCURL.

64.30.6 Methods

64.30.7 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

64.30.8 FeatureNames as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the feature names.
Example:

```
dim v as new CURLSVersionMBS
dim features() as string = v.FeatureNames
dim Names as string = string.FromArray(features)
MessageBox Names
```

Notes: Values are e.g. alt-svc AsynchDNS HSTS HTTPS-proxy IPv6 Largefile libz NTLM NTLM_WB SSL threadsafe TLS-SRP UnixSockets zstd

64.30.9 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

64.30.10 Protocols as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Example:

```
dim v as new CURLSVersionMBS
dim Protocols() as string = v.Protocols
dim Names as string = string.FromArray(Protocols)
MessageBox Names
```

Notes: The protocol names are the same as would be used in URLs.

64.30.11 Properties

64.30.12 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.30.13 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of brotli version.
Notes: (Read only property)

64.30.14 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

64.30.15 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

64.30.16 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

64.30.17 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

64.30.18 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

64.30.19 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string.
Notes: (Read only property)

64.30.20 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version number of iconv library.
Notes: (Read only property)

64.30.21 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.30.22 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.30.23 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

64.30.24 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string for nghttp2 library.
Notes: (Read only property)

64.30.25 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

64.30.26 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

64.30.27 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

64.30.28 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"

(Read only property)

64.30.29 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

64.30.30 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Brotli features are present.
Notes: (Read only property)

64.30.31 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Character conversions supported.
Notes: (Read only property)

64.30.32 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built against a GSS-API library.
Notes: (Read only property)

64.30.33 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

64.30.34 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLSMBS
dim v as CURLSVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLSMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

64.30.35 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

64.30.36 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

64.30.37 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

64.30.38 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

64.30.39 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

64.30.40 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

64.30.41 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

64.30.42 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

64.30.43 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiple SSL backends available.
Notes: (Read only property)

64.30.44 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLSMBS
dim v as CURLSVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

64.30.45 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

64.30.46 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

64.30.47 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

64.30.48 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

64.30.49 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

64.30.50 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

64.30.51 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

64.30.52 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unix domain sockets support.
Notes: (Read only property)

64.30.53 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

64.30.54 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ascii string for the libCURL version.
Notes:

e.g. "7.13.1"
(Read only property)

64.30.55 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

64.30.56 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Human readable string version for zstd library.
Notes: (Read only property)

64.30.57 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

64.31 class CURLSWebSocketFrameMBS

64.31.1 class CURLSWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a WebSocket frame.
Notes:

dim curl as CURLSMBS // your curl handle

dim m as CURLSWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if

- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0
- MBS Xojo Plugins, version 22.6pr3

64.31.4 Properties

64.31.5 BytesLeft as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of pending bytes left of the payload.
Notes: (Read only property)

64.31.6 BytesReceived as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of bytes received.
Notes: (Read only property)

64.31.7 Data as MemoryBlock

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read.
Notes: (Read only property)

64.31.8 FlagBinary as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is binary data.
Notes: (Read only property)

64.31.9 FlagClose as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Close this transfer.
Notes: (Read only property)

64.31.10 FlagContinue as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.
Notes: (Read only property)

64.31.11 FlagOffset as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a partial fragment.
Notes:

The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.
(Read only property)

64.31.12 FlagPing as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This as a ping.
Notes: (Read only property)

64.31.13 FlagPong as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a pong.
Notes: (Read only property)

64.31.14 Flags as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flags for this packet.
Notes:

See kFlag* contants.
(Read only property)

64.31.15 FlagText as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The buffer contains text data.
Notes:

Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.
(Read only property)

64.31.16 Offset as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The offset of this data into the frame.
Notes: (Read only property)

64.31.17 Text as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read as text.
Notes:

If this is not a binary transfer, we put the text here.
(Read only property)

64.31.18 Constants

64.31.19 kFlagBinary = 2

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is binary data.

64.31.20 kFlagClose = 8

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: Close this transfer.

64.31.21 kFlagContinue = 4

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.

64.31.22 kFlagOffset = 32

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

This is a partial fragment.
The provided data is only a partial fragment and there will be more in a following call to WebSocketSend().
When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.

64.31.23 kFlagPing = 16

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This as a ping.

64.31.24 kFlagPong = 64

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is a pong.

64.31.25 kFlagText = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

The buffer contains text data.
Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.

64.32 class CURLURLMBS

64.32.1 class CURLURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for CURL's URL parser.
Example:

```
dim c as new CURLURLMBS

c.URL = "www.test.de/Hello World test.pdf"

// setting URL will repair the spaces
c.path = c.Path

MsgBox c.URL
```

64.32.2 Methods

64.32.3 Clone as CURLURLMBS

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duplicates the object.

64.32.4 Constructor

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new URL object.

64.32.5 Properties

64.32.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The flags to use.
Notes:

Our default is combination of:

- kFlagsNoDefaultPort
- kFlagsNonSupportScheme
- kFlagsURLDecode
- kFlagsURLEncode
- kFlagsGuessScheme
- kFlagsDefaultScheme

(Read and Write property)

64.32.7 Fragment as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set fragment part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.8 Handle as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

64.32.9 Host as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set host part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.10 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the functions.
Notes:

This changes while using debugger because getting or setting properties also sets this property.
(Read and Write property)

64.32.11 Options as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set options part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.12 Password as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set password part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.13 Path as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set path part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.14 Port as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set port part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.15 Query as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set query part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.16 Scheme as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set scheme part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.17 URL as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set full URL.
Example:

```
Dim c As New CURLURLMBS

// load absolute URL
c.URL = "http://domain.com/folder/page1.htm"

// load relative URL
c.URL = "page2.htm"

// get final URL
MsgBox c.URL
```

Notes:

Sets lasterror property.
(Read and Write property)

64.32.18 User as String

MBS CURL Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set user part of URL.
Notes:

Sets lasterror property.
(Read and Write property)

64.32.19 ZoneID as String

MBS CURL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The zone ID.
Notes: (Read and Write property)

64.32.20 Constants

64.32.21 kErrorBadFileURL = 19

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.

Notes: The file:// URL is invalid.

64.32.22 kErrorBadFragment = 20

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The fragment part of the URL contained bad or invalid characters.

64.32.23 kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

An argument that should be a CURLU pointer was passed in as a NULL.
Should never happen with plugin as you would get exception.

64.32.24 kErrorBadHostname = 21

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The hostname contained bad or invalid characters.

64.32.25 kErrorBadIPv6 = 22

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The IPv6 address hostname contained bad or invalid characters.

64.32.26 kErrorBadLogin = 23

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The login part of the URL contained bad or invalid characters.

64.32.27 kErrorBadPartpointer = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

A NULL pointer was passed to the 'part' argument of curl_url_get.
Should never happen with plugin as you would get exception.

64.32.28 kErrorBadPassword = 24

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The password part of the URL contained bad or invalid characters.

64.32.29 kErrorBadPath = 25

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The path part of the URL contained bad or invalid characters.

64.32.30 kErrorBadPortNumber = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The port number was not a decimal number between 0 and 65535.

64.32.31 kErrorBadQuery = 26

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The query part of the URL contained bad or invalid characters.

64.32.32 kErrorBadScheme = 27

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The scheme part of the URL contained bad or invalid characters.

64.32.33 kErrorBadSlashes = 28

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The URL contained an invalid number of slashes.

64.32.34 kErrorBadUser = 29

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: The user part of the URL contained bad or invalid characters.

64.32.35 kErrorLacksIDN = 30

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the error codes.
Notes: IDN missing.

64.32.36 kErrorMalformedInput = 3

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A malformed input was passed to a URL API function.

64.32.37 kErrorNoFragment = 17

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no fragment part in the URL.

64.32.38 kErrorNoHost = 14

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no host part in the URL.

64.32.39 kErrorNoOptions = 13

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no options part in the URL.

64.32.40 kErrorNoPassword = 12

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no password part in the URL.

64.32.41 kErrorNoPort = 15

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no port part in the URL.

64.32.42 kErrorNoQuery = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no query part in the URL.

64.32.43 kErrorNoScheme = 10

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no scheme part in the URL.

64.32.44 kErrorNoUser = 11

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: There is no user part in the URL.

64.32.45 kErrorNoZoneID = 18

MBS CURL Plugin, Plugin Version: 22.0.

Function: One of the error constants for the Error event.
Notes: There is no zoneid set in the URL.

64.32.46 kErrorOk = 0

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: No error.

64.32.47 kErrorOutOfMemory = 7

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: A memory function failed.

64.32.48 kErrorUnknownPart = 9

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: An unknown part ID was passed to a URL API function.

64.32.49 kErrorUnsupportedScheme = 5

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: This libcurl build doesn't support the given URL scheme.

64.32.50 kErrorUrlDecode = 6

MBS CURL Plugin, Plugin Version: 18.5.

Function: URL decode error, most likely because of rubbish in the input.

64.32.51 kErrorUserNotAllowed = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Credentials was passed in the URL when prohibited.

64.32.52 kFlagsAllowSpace = 2048

MBS CURL Plugin, Plugin Version: 21.4.

Function: One of the flags.
Notes: Whether to allow space character in URLs.

64.32.53 kFlagsAppendQuery = 256

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Append a form style part.

64.32.54 kFlagsDefaultPort = 1

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default port number.

64.32.55 kFlagsDefaultScheme = 4

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Return default scheme if missing.

64.32.56 kFlagsDisallowUser = 32

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: No user+password allowed.

64.32.57 kFlagsGuessScheme = 512

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Legacy curl-style guessing.

64.32.58 kFlagsNoAuthority = 1024

MBS CURL Plugin, Plugin Version: 20.0.

Function: Allow URLs without authority.
Notes: Allow empty authority when the scheme is unknown.

64.32.59 kFlagsNoDefaultPort = 2

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Act as if no port number was set, if the port number matches the default for the scheme.

64.32.60 kFlagsNonSupportScheme = 8

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Allow non-supported scheme.

64.32.61 kFlagsPathAsIs = 16

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: Leave dot sequences.

64.32.62 kFlagsPunyCode = 4096

MBS CURL Plugin, Plugin Version: 23.1.

Function: One of the flags.
Notes: get the host name in pynycode

64.32.63 kFlagsURLDecode = 64

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL decode on get.

64.32.64 kFlagsURLEncode = 128

MBS CURL Plugin, Plugin Version: 18.5.

Function: One of the flags.
Notes: URL encode on set.

64.33 class CURLVersionMBS

64.33.1 class CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to hold version information from libCURL.

64.33.2 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- News from the MBS Xojo Plugins Version 21.1

64.33.3 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- News from the MBS Xojo Plugins Version 21.1

64.33.4 Methods

64.33.5 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

64.33.6 FeatureNames as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the feature names.
Example:

```
dim v as new CURLVersionMBS
dim features() as string = v.FeatureNames
dim Names as string = string.FromArray(features)
MessageBox Names
```

Notes: Values are e.g. alt-svc AsynchDNS HSTS HTTPS-proxy IPv6 Largefile libz NTLM NTLM_WB SSL threadsafe TLS-SRP UnixSockets zstd

64.33.7 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Notes:

The protocol names are the same as would be used in URLs.
Index is zero based.

64.33.8 Protocols as String()

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An array containing the names protocols that libCURL supports (using lowercase letters).
Example:

```
dim v as new CURLVersionMBS
dim Protocols() as string = v.Protocols
dim Names as string = string.FromArray(Protocols)
MessageBox Names
```

Notes: The protocol names are the same as would be used in URLs.

64.33.9 Properties

64.33.10 brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli library version string.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.33.11 brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of brotli version.
Notes: (Read only property)

64.33.12 CAInfo as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAINFO.
Notes:

Should be empty within plugin.
(Read only property)

64.33.13 CAPath as String

MBS CURL Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in default CURLOPT_CAPATH.
Notes:

Should be empty within plugin.
(Read only property)

64.33.14 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bits which define what features libCURL can and can't.
Notes:

Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read only property)

64.33.15 gsaslVersion as String

MBS CURL Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string of the GNU SASL Library version.
Notes: (Read only property)

64.33.16 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string showing what host information that this libCURL was built for.
Notes:

As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read only property)

64.33.17 hyperVersion as String

MBS CURL Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string.
Notes: (Read only property)

64.33.18 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version number of iconv library.
Notes: (Read only property)

64.33.19 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibIDN used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.33.20 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Version of LibSSH2 used.
Notes:

Empty if library is not used in the CURL library you use.
(Read only property)

64.33.21 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string (there is no numerical version).
Notes:

If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read only property)

64.33.22 nghttp2Version as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version string for nghttp2 library.
Notes: (Read only property)

64.33.23 nghttp2VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version number for nghttp2.
Notes:

Numeric nghttp2 version: (MAJOR * 65536) + (MINOR * 256) + PATCH
(Read only property)

64.33.24 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of entries in the Protocol array.
Notes: (Read only property)

64.33.25 quicVersion as String

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of quic version.
Notes:

human readable quic (+ HTTP/3) library version.
(Read only property)

64.33.26 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the OpenSSL version used.
Notes:

If libCURL has no SSL support, this is "".
e.g. " OpenSSL/0.9.7l"
(Read only property)

64.33.27 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
Notes:

(added in 7.10.7)
(Read only property)

64.33.28 SupportsBrotli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Brotli features are present.
Notes: (Read only property)

64.33.29 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Character conversions supported.
Notes: (Read only property)

64.33.30 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Built against a GSS-API library.
Notes: (Read only property)

64.33.31 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP GSS-Negotiate
Notes:

(added in 7.10.6)
(Read only property)

64.33.32 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether currently used CURL library supports HTTP2.
Example:

```
dim c as new CURLMBS
dim v as CURLVersionMBS = c.version

if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if
```

Notes:

While our CURL Plugin with CURLMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

64.33.33 SupportsHTTP3 as Boolean

MBS CURL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether HTTP3 features are present.
Notes: (Read only property)

64.33.34 SupportsHTTPSProxy as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: HTTPS-proxy support built-in.
Notes: (Read only property)

64.33.35 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes:

(Added in 7.12.0)
(Read only property)

64.33.36 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports IPv6
Notes: (Read only property)

64.33.37 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports kerberos4 (when using FTP).
Notes: (Read only property)

64.33.38 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Kerberos V5 auth is supported.
Notes: (Read only property)

64.33.39 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for large files.
Notes:

(Added in 7.11.1)
(Read only property)

64.33.40 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP deflate using libz
Notes:

(Added in 7.10)
(Read only property)

64.33.41 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Multiple SSL backends available.
Notes: (Read only property)

64.33.42 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports HTTP NTLM
Example:

```
dim c as new CURLMBS
dim v as CURLVersionMBS = c.Version

MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

Notes:

(added in 7.10.6)
(Read only property)

64.33.43 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NTLM delegation to winbind helper is supported.
Notes: (Read only property)

64.33.44 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mozilla's Public Suffix List, used for cookie domain verification.
Notes: (Read only property)

64.33.45 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SPNEGO authentication
Notes:

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

64.33.46 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL supports SSL (HTTPS/FTPS)
Notes:

(Added in 7.10)
(Read only property)

64.33.47 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether libCURL was built with support for SSPI.
Notes:

This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user's password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

64.33.48 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: TLS-SRP auth is supported.
Notes: (Read only property)

64.33.49 SupportsUnicode as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether unicode for Windows is enabled.
Notes:

libcurl was built with Unicode support on Windows. This makes non-ASCII characters work in filenames and options passed to libcurl. (Added in 7.72.0)
(Read only property)

64.33.50 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unix domain sockets support.
Notes: (Read only property)

64.33.51 SupportsZSTD as Boolean

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Supports HTTP zstd content encoding using zstd library.
Notes:

Added in CURL 7.72.0
(Read only property)

64.33.52 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: An ascii string for the libCURL version.
Notes:

e.g. "7.13.1"
(Read only property)

64.33.53 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The version of libCURL as number.
Notes:

a 24 bit number created like this:
<8 bits major number>| <8 bits minor number>| <8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read only property)

64.33.54 zstdVersion as String

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Human readable string version for zstd library.
Notes: (Read only property)

64.33.55 zstdVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Numeric Zstd version.
Notes:

Major 8 bits, minor 12 bits, Patch 12 bits.
(Read only property)

64.34 class CURLWebSocketFrameMBS

64.34.1 class CURLWebSocketFrameMBS

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for a WebSocket frame.
Notes:

dim curl as CURLMBS // your curl handle

dim m as CURLWebSocketFrameMBS = curl.WebSocketReceive

if m <>nil then
TextAreaLog.AddText "Received: "+m.Text
end if

64.34.4 Properties

64.34.5 BytesLeft as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Number of pending bytes left of the payload.
Notes: (Read only property)

64.34.6 BytesReceived as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The number of bytes received.
Notes: (Read only property)

64.34.7 Data as MemoryBlock

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read.
Notes: (Read only property)

64.34.8 FlagBinary as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is binary data.
Notes: (Read only property)

64.34.9 FlagClose as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Close this transfer.
Notes: (Read only property)

64.34.10 FlagContinue as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.
Notes: (Read only property)

64.34.11 FlagOffset as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a partial fragment.
Notes:

The provided data is only a partial fragment and there will be more in a following call to WebSocketSend(). When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.
(Read only property)

64.34.12 FlagPing as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This as a ping.
Notes: (Read only property)

64.34.13 FlagPong as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: This is a pong.
Notes: (Read only property)

64.34.14 Flags as Integer

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Flags for this packet.
Notes:

See kFlag* contants.
(Read only property)

64.34.15 FlagText as Boolean

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The buffer contains text data.
Notes:

Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.
(Read only property)

64.34.16 Offset as Int64

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The offset of this data into the frame.
Notes: (Read only property)

64.34.17 Text as String

MBS CURL Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The data read as text.
Notes:

If this is not a binary transfer, we put the text here.
(Read only property)

64.34.18 Constants

64.34.19 kFlagBinary = 2

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is binary data.

64.34.20 kFlagClose = 8

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: Close this transfer.

64.34.21 kFlagContinue = 4

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is not the final fragment of the message, which implies that there will be another fragment coming as part of the same message where this bit is not set.

64.34.22 kFlagOffset = 32

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

This is a partial fragment.
The provided data is only a partial fragment and there will be more in a following call to WebSocketSend().
When sending only a piece of the fragment like this, the fragsize must be provided with the total expected fragment size in the first call and it needs to be zero in subsequent calls.

64.34.23 kFlagPing = 16

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This as a ping.

64.34.24 kFlagPong = 64

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes: This is a pong.

64.34.25 kFlagText = 1

MBS CURL Plugin, Plugin Version: 23.0.

Function: One of the flag constants.
Notes:

The buffer contains text data.
Note that this makes a difference to WebSocket but CURL itself will not make any verification of the content or precautions that you actually send valid UTF-8 content.

64.35 Globals

64.35.1 FileExtensionToMimeTypeMBS(FileExtension as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a mime type for a file extension.
Example:

```
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes:

Please report any missing mime type in our lookup table, so we can add more.
See also MimeTypeToFileExtensionMBS.
Returns empty string if not found.

64.35.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr2

64.35.3 MimeTypeToFileExtensionMBS(MimeType as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns file extension for given mime type.
Example:

```
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
Break
```

Notes:

Extension is returned with dot prefix.
Please report any missing file extensions in our lookup table, so we can add more.
See also FileExtensionToMimeTypeMBS.
Returns empty string if not found.

Chapter 65

Currency, Date and Time Format

65.1 Globals

65.1.1 CDblMBS(text as string, byref value as Double, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a double value from a text with given locale.
Example:

```
dim value as Double
if CDblMBS("12,345", value, "de_DE") then
MsgBox str(value)
end if
```

Notes:

Returns true on success and false on failure.
Value is set to the value detected.
Raises exception on invalid locale.

65.1.4 FormatDateMBS(format as string, value as date, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Formats a date with C time formatting functions.
Example:

```
// for Mac, Windows and Linux we usually have different locale names
dim fr as string
# if TargetMacOS then
fr = "fr_FR"
# elseif TargetWin32 then
fr = "fra"
# elseif TargetLinux
fr = "fr_FR.UTF8"
# else
?
# endif

dim d as new date
MsgBox FormatDateMBS("% x % X", d, fr)
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

The format specification is a string and may contain special character sequences called conversion specifications, each of which is introduced by a '% ' character and terminated by some other character known as a conversion specifier character. All other character sequences are ordinary character sequences.

The characters of ordinary character sequences (including the null byte) are copied verbatim from format to s. However, the characters of conversion specifications are replaced as follows:

Some conversion specifications can be modified by preceding the conversion specifier character by the E or O modifier to indicate that an alternative format should be used. If the alternative format or specification does not exist for the current locale, the behavior will be as if the unmodified conversion specification were used. (SU) The Single UNIX Specification mentions % Ec, % EC, % Ex, % EX, % Ey, % EY, % Od, % Oe, % OH, % OI, % Om, % OM, % OS, % Ou, % OU, % OV, % Ow, % OW, % Oy, where the effect of the O

modifier is to use alternative numeric symbols (say, roman numerals), and that of the E modifier is to use a locale-dependent alternative representation.

65.1.6 FormatDateTimeMBS(format as string, value as dateTime, locale as string = "") as string

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a date with C time formatting functions.
Notes: Same as FormatDateMBS, but using DateTime class instead.

65.1.7 FormatMBS(format as string, value as Double, locale as string = "") as string

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats a double value.
Example:

```
MsgBox FormatMBS("% 1.2f", 12.345, "de_DE")
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for printf command in C.

The FormatMBS formats the value under control of the format. The format is a character string which contains three types of objects: plain characters, which are simply copied to standard output, character escape sequences which are converted and copied to the standard output, and format specifications, each of

which causes printing of the next successive argument.

Character escape sequences are in backslash notation as defined in the ANSI X3.159-1989 ("ANSI C89"), with extensions. The characters and their meanings are as follows:

Each format specification is introduced by the percent character ("% "). The remainder of the format specification includes, in the following order:

Zero or more of the following flags:

65.1.9 Xojo Developer Magazine

- 11.2, page 10: News

65.1.10 ParseDateMBS(format as string, text as string, byref value as date, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parses a date.
Example:

```
dim s as string = "2013-11-12 18:31:01"
dim f as string = "% Y-% m-% d % H:% M:% S"
dim d as date

if ParseDateMBS(f, s, d) then
MsgBox d.LongDate + " "+ d.LongTime
end if
```

Notes:

locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

On success returns true. But even for half parsed dates you can find values in date.
Locale not supported on Windows.
The plugin does not support parsing time zones.

The ParseDateMBS function is the converse function to FormateDateMBS and converts the character string pointed to by s to values which are stored in the date, using the format specified by format. Here format is a character string that consists of field descriptors and text characters, reminiscent of scanf (in C++). Each field descriptor consists of a % character followed by another character that specifies the replacement for the field descriptor. All other characters in the format string must have a matching character in the input string, except for whitespace, which matches zero or more whitespace characters in the input string. There should be whitespace or other alphanumeric characters between any two field descriptors.

The ParseDateMBS function processes the input string from left to right. Each of the three possible input elements (whitespace, literal, or format) are handled one after the other. If the input cannot be matched to the format string the function stops. The remainder of the format and input strings are not processed.

The supported input field descriptors are listed below. In case a text string (such as a weekday or month name) is to be matched, the comparison is case insensitive. In case a number is to be matched, leading zeros are permitted but not required.

Some field descriptors can be modified by the E or O modifier characters to indicate that an alternative format or specification should be used. If the alternative format or specification does not exist in the current locale, the unmodified field descriptor is used.
The E modifier specifies that the input string may contain alternative locale-dependent versions of the date and time representation:

Returns true on success. If the functions fails to match all of the format string and therefore an error occurred the function returns false.

Before libc 5.4.13 whitespace (and the 'n' and 't' specifications) was not handled, no 'E' and 'O' locale modifier characters were accepted, and the 'C' specification was a synonym for the 'c' specification.

The 'y' (year in century) specification is taken to specify a year in the 20th century by libc4 and libc5. It is taken to be a year in the range 1950-2049 by glibc 2.0. It is taken to be a year in 1969-2068 since glibc 2.1.

For reasons of symmetry, glibc tries to support for ParseDateMBS the same format characters as for FormatDateMBS. (In most cases the corresponding fields are parsed, but no field in tm is changed.) This leads to

Similarly, because of GNU extensions to FormatDateMBS, % k is accepted as a synonym for % H, and % l

should be accepted as a synonym for % I, and % P is accepted as a synonym for % p. Finally

The glibc implementation does not require whitespace between two field descriptors.

65.1.13 ParseDateTimeMBS(format as string, text as string, byref value as dateTime, locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a date.
Notes: Same as ParseDateMBS, but using DateTime class instead.

65.2 class LocaleMBS

65.2.1 class LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class which provides parameters for formatting numbers, especially currency values.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

65.2.6 Methods

65.2.7 Constructor

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

65.2.8 Locale(Locale as string = "") as LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries C locale for the given locale name.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes:

Returns nil if no locale for that name was found.

If name is empty, you get current locale. If you use locale name "C", you get the default C locale.
The locale name depends on the OS. For Mac and Linux you can see available locales in /usr/share/locale directory.
For Windows, please take a look here:
http://msdn.microsoft.com/en-us/library/hzz3tw78(v=vs.71).aspx

65.2.9 Properties

65.2.10 CurrencySymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local currency symbol.
Example:

```
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

Notes: (Read only property)

65.2.11 DecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character, except for currency values, cannot be an empty string.
Notes: (Read only property)

65.2.12 FracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in the local style for currency values.
Notes: (Read only property)

65.2.13 Grouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sizes of the groups of digits, except for currency values.
Notes:

This is a string where the asc value gives the actual value, representing group size from low order digit groups to high order (right to left). The list may be terminated with 0 or CHAR_MAX. If the list is terminated with 0, the last group size before the 0 is repeated to account for all the digits. If the list is terminated with CHAR_MAX, no more grouping is performed.

See example project for a function to decode.
(Read only property)

65.2.14 IntCurrSymbol as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The standardized international currency symbol.
Notes: (Read only property)

65.2.15 IntFracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits after the decimal point in an international-style currency value.
Notes: (Read only property)

65.2.16 IntNegCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes:

For internationally formatted monetary quantities.
(Read only property)

65.2.17 IntNegSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes:

For internationally formatted monetary quantities.

(Read only property)

65.2.18 IntNegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes:

For internationally formatted monetary quantities.

Possible values:

(Read only property)

65.2.19 IntPosCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes:

For internationally formatted monetary quantities.
(Read only property)

65.2.20 IntPosSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes:

For internationally formatted monetary quantities.
(Read only property)

65.2.21 IntPosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes:

For internationally formatted monetary quantities.

Possible values:

(Read only property)

65.2.22 monDecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decimal point character for currency values.
Notes: (Read only property)

65.2.23 monGrouping as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Like grouping but for currency values.
Notes: (Read only property)

65.2.24 monThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator for digit groups in currency values.
Notes: (Read only property)

65.2.25 Name as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the locale.
Notes:

The name may be different to the one you asked for as some locales are mapped to others internally.
(Read only property)

65.2.26 NegativeSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote negative currency values, usually a minus sign.
Notes: (Read only property)

65.2.27 NegCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for negative values, false if it follows.
Notes: (Read only property)

65.2.28 NegSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise.
Notes: (Read only property)

65.2.29 NegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol.
Notes:

Possible values:

(Read only property)

65.2.30 PosCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the currency symbol precedes the currency value for nonnegative values, false if it follows.
Notes: (Read only property)

65.2.31 PositiveSign as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The character used to denote nonnegative currency values, usually the empty string.
Notes: (Read only property)

65.2.32 PosSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise.
Notes: (Read only property)

65.2.33 PosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
Notes:

Possible values:

(Read only property)

65.2.34 ThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The separator between groups of digits before the decimal point, except for currency values.
Notes: (Read only property)

% a The abbreviated weekday name according to the current locale.

% A The full weekday name according to the current locale.

% b The abbreviated month name according to the current locale.

% B The full month name according to the current locale.

% c The preferred date and time representation for the current locale.

% C The century number (year/100) as a 2-digit integer. (SU)

% d The day of the month as a decimal number (range 01 to 31).

% D Equivalent to % m/% d/% y. (Yecch-for Americans only. Americans should note that in other countries % d/% m/% y is rather common. This means that in international context this format is ambiguous and should not be used.) (SU)

% e Like % d, the day of the month as a decimal number, but a leading zero is replaced by a space. (SU)

% E Modifier: use alternative format, see below. (SU)

% F Equivalent to % Y-% m-% d (the ISO 8601 date format). (C99)

% G The ISO 8601 week-based year (see NOTES) with century as a decimal number. The 4-digit year corresponding to the ISO week number (see % V). This has the same format and value as % Y, except that if the ISO week number belongs to the previous or next year, that year is used instead. (TZ)

% g Like % G, but without century, that is, with a 2-digit year (00-99). (TZ)

% h Equivalent to % b. (SU)

% H The hour as a decimal number using a 24-hour clock (range 00 to 23).

% I The hour as a decimal number using a 12-hour clock (range 01 to 12).

% j The day of the year as a decimal number (range 001 to 366).

% k The hour (24-hour clock) as a decimal number (range 0 to 23); single digits are preceded by a blank. (See also % H.) (TZ)

% l The hour (12-hour clock) as a decimal number (range 1 to 12); single digits are preceded by a blank. (See also % I.) (TZ)

% m The month as a decimal number (range 01 to 12).

% M The minute as a decimal number (range 00 to 59).

% n A newline character. (SU)

% O Modifier: use alternative format, see below. (SU)

% p Either "AM" or "PM" according to the given time value, or the corresponding strings for the current locale. Noon is treated as "PM" and midnight as "AM".

% P Like % p but in lowercase: "am" or "pm" or a corresponding string for the current locale. (GNU)

% r The time in a.m. or p.m. notation. In the POSIX locale this is equivalent to % I:% M:% S % p. (SU)

% R The time in 24-hour notation (% H:% M). (SU) For a version including the seconds, see % T below.

% s The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). (TZ)

% S The second as a decimal number (range 00 to 60). (The range is up to 60 to allow for occasional leap seconds.)

% t A tab character. (SU)

% T The time in 24-hour notation (% H:% M:% S). (SU)

% u The day of the week as a decimal, range 1 to 7, Monday being 1. See also % w. (SU)

% U The week number of the current year as a decimal number, range 00 to 53,

\a	Write a <bell>character.
\b	Write a <backspace>character.
\c	Ignore remaining characters in this string.
\f	Write a <form-feed>character.
\n	Write a <new-line>character.
\r	Write a <carriage return>character.
\t	Write a <tab>character.
\v	Write a <vertical tab>character.
\'	Write a <single quote>character.
\\	Write a backslash character.
\num or \0num	Write an 8-bit character whose ASCII value is the 1-, 2-, or 3-digit octal number num.

% %	The % character.
% a or % A	The weekday name according to the current locale, in abbreviated form or the full name.
% b or % B or % h	The month name according to the current locale, in abbreviated form or the full name.
% c	The date and time representation for the current locale.
% C	The century number (0-99).
% d or % e	The day of month (1-31).
% D	Equivalent to % m/% d/% y. (This is the American style date, very confusing to non-Americans, especially since % d/% m/% y is widely used in Europe. The ISO 8601 standard format is % Y-% m-% d.)
% H	The hour (0-23).
% I	The hour on a 12-hour clock (1-12).
% j	The day number in the year (1-366).
% m	The month number (1-12).
% M	The minute (0-59).
% n	Arbitrary whitespace.
% p	The locale's equivalent of AM or PM. (Note: there may be none.)
% r	The 12-hour clock time (using the locale's AM or PM). In the POSIX locale equivalent to % I:% M:% S % p. If t_fmt_ampm is empty in the LC_TIME part of the current locale then the behavior is undefined.
% R	Equivalent to % H:% M.
% S	The second (0-60; 60 may occur for leap seconds; earlier also 61 was allowed).
% t	Arbitrary whitespace.
% T	Equivalent to % H:% M:% S.
% U	The week number with Sunday the first day of the week (0-53). The first Sunday of January is the first day of week 1.
% w	The weekday number (0-6) with Sunday = 0.
% W	The week number with Monday the first day of the week (0-53). The first Monday of January is the first day of week 1.
% x	The date, using the locale's date format.
% X	The time, using the locale's time format.
% y	The year within century (0-99). When a century is not otherwise specified, values in the range 69-99 refer to years in the twentieth century (1969-1999); values in the range 00-68 refer to years in the twenty-first century (2000-2068).
% Y	The year, including century (for example, 1991).

% Ec	The locale's alternative date and time representation.
% EC	The name of the base year (period) in the locale's alternative representation.
% Ex	The locale's alternative date representation.
% EX	The locale's alternative time representation.
% Ey	The offset from % EC (year only) in the locale's alternative representation.
% EY	The full alternative year representation. The O modifier specifies that the numerical input may be in an alternative locale-dependent format:
% Od or % Oe	The day of the month using the locale's alternative numeric symbols; leading zeros are permitted but not required.
% OH	The hour (24-hour clock) using the locale's alternative numeric symbols.
% OI	The hour (12-hour clock) using the locale's alternative numeric symbols.
% Om	The month using the locale's alternative numeric symbols.
% OM	The minutes using the locale's alternative numeric symbols.
% OS	The seconds using the locale's alternative numeric symbols.
% OU	The week number of the year (Sunday as the first day of the week) using the locale's alternative numeric symbols.
% Ow	The number of the weekday (Sunday=0) using the locale's alternative numeric symbols.
% OW	The week number of the year (Monday as the first day of the week) using the locale's alternative numeric symbols.
% Oy	The year (offset from % C) using the locale's alternative numeric symbols.

% F	Equivalent to % Y-% m-% d, the ISO 8601 date format.
% g	The year corresponding to the ISO week number, but without the century (0-99).
% G	The year corresponding to the ISO week number. (For example, 1991.)
% u	The day of the week as a decimal number (1-7, where Monday = 1).
% V	The ISO 8601:1988 week number as a decimal number (1-53). If the week (starting on Monday) containing 1 January has four or more days in the new year, then it is considered week 1. Otherwise, it is the last week of the previous year, and the next week is week 1.
% z	An RFC-822/ISO 8601 standard timezone specification.
% Z	The timezone name.

% s	The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). Leap seconds are not counted unless leap second support is available.

0 Parentheses around the entire string.
1 Before the string.
2 After the string.

4 Just after CurrencySymbol.

65.3 class NSLocaleDateMBS

65.3.1 class NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a date format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.

65.3.2 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4

65.3.3 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4

65.3.4 Methods

65.3.5 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes: Creates a different object than the once you get by the NSLocaleMBS class. But this date information you get than works on Mac OS X 10.0. The NSLocaleMBS class is Mac OS X 10.4 only.
See also:

- 65.3.6 Constructor(locale as NSLocaleMBS) 13517

65.3.6 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim n1 as new NSLocaleDateMBS
dim n2 as new NSLocaleDateMBS(NSLocaleMBS.currentLocale)
dim n3 as new NSLocaleDateMBS(NSLocaleMBS.systemLocale)
```

```
break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 65.3.5 Constructor 13517

65.3.7 eraSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of era symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.eraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "BC, AD" (in USA)
// shows for example "av. J.-C., ap. J.-C." (in France)
```

Notes:

for example, "BCE", "CE" in the USA.
On error returns an empty array.

65.3.8 longEraSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the long era symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.longEraSymbols

MsgBox join(s,", ")

// shows for example "v. Chr., n. Chr." (in Germany)
```

// shows for example "Before Christ, Anno Domini" (in USA)
// shows for example "avant J√©sus-Christ, apr√®s J√©sus-Christ" (in France)

Notes:

An array containing strings representing the era symbols for the receiver (for example, { "Before Common Era", "Common Era" }).
Available in Mac OS X v10.5 and later.

65.3.9 monthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the month symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.monthSymbols

MsgBox join(s,", ")
```

// shows for example "Januar, Februar, M√§rz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, f√©vrier, mars, avril, mai, juin, juillet, ao√ªt, septembre, octobre, novembre, d√©cembre" (in France)

Notes: On error returns an empty array.

65.3.10 quarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.quarterSymbols

MsgBox join(s,", ")
```

```
// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.11 shortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the array of short month.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, Mrz, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., f√©vr., mars, avr., mai, juin, juil., ao√ªt, sept., oct., nov., d√©c." (in France)
```

Notes: On error returns an empty array.

65.3.12 shortQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortQuarterSymbols

MsgBox join(s,", ")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.13 shortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Jan, Feb, M√§r, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
// shows for example "Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec" (in USA)
// shows for example "janv., f√©vr., mars, avr., mai, juin, juil., ao√ªt, sept., oct., nov., d√©c." (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.14 shortStandaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the short standalone quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneQuarterSymbols

MsgBox join(s,", ")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.15 shortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of short standalone weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.16 shortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Sets the short weekday symbols.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)
```

Notes: On error returns an empty array.

65.3.17 standaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneMonthSymbols

MsgBox join(s,", ")

// shows for example "Januar, Februar, M√§rz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, f√©vrier, mars, avril, mai, juin, juillet, ao√ªt, septembre, octobre, novembre, d√©cembre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.18 standaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the standalone quarter symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneQuarterSymbols

MsgBox join(s,", ")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.19 standaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of standalone weekday symbols for the receiver.

Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.20 verySHortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortMonthSymbols

MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.21 verySHortStandaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the very short month symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortStandaloneMonthSymbols
```

```
MsgBox join(s,", ")

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.22 verySHortStandaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short standalone weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortStandaloneWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.23 verySHortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of very short weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.verySHortWeekdaySymbols

MsgBox join(s,", ")

// shows for example "S, M, D, M, D, F, S" (in Germany)
```

```
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

65.3.24 weekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Platform: macOS, Targets: All.

Function: Returns the array of weekday symbols for the receiver.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.weekdaySymbols

MsgBox join(s,", ")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
```

Notes: Available in Mac OS X v10.4 and later.

65.3.25 Properties

65.3.26 AMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the AM symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.AMSymbol // shows for example "vorm." (in Germany)
```

Notes: (Read only property)

65.3.27 dateFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the date format string,
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.dateFormat // shows for example: "d. MMMM yyyy" (in Germany)
```

Notes:

Format of this string (if object was made with new):
http://developer.apple.com/documentation/Cocoa/Conceptual/DataFormatting/Articles/dfDateFormatter-Syntax.html# //apple_ref/doc/uid/20000194

If you got this object from NSLocale, it uses a different format.
(Read only property)

65.3.28 PMSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the PM symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.PMSymbol // shows for example "nachm." (in Germany)
```

Notes: (Read only property)

65.4 class NSLocaleMBS

65.4.1 class NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The class for Cocoas localization data.
Example:

```
dim n as NSLocaleMBS

n=NSLocaleMBS.currentLocale

MsgBox n.CountryCode
```

Notes: Available in Mac OS X v10.4 and later.

65.4.2 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Real Studio Plugins, version 12.5pr8
- MBS REALbasic plug-in 9.6

65.4.3 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Real Studio Plugins, version 12.5pr8
- MBS REALbasic plug-in 9.6

65.4.4 Methods

65.4.5 autoupdatingCurrentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the current logical locale for the current user.
Notes:

The current logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

The object always reflects the current state of the current user's locale settings.

Settings you get from this locale do change as the user's settings change (contrast with currentLocale).

Note that if you cache values based on the locale or related information, those caches will of course not be automatically updated by the updating of the locale object.

Available in Mac OS X v10.5 and later.

65.4.6 availableLocaleIdentifiers as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings, each of which identifies a locale available on the system.
Example:

```
MsgBox join(NSLocaleMBS.availableLocaleIdentifiers,", ")

// shows "zh_Hans_CN, sq_AL, he_IL, uz_Latn, en_CA, zh, kk_Cyrl, sr_Cyrl,
// fr_CA, sr_Cyrl_RS, fr_LU, bg_BG, es_ES, da_DK, el_CY, ja_JP, kok_IN,
// mt_MT, ar_JO, de_LU, uz_Cyrl, pt_PT, af, ms_MY, nl_BE, es_US, en_PH,
// es_HN, be, sr_Latn_BA, es_CR, ca, vi_VN, zh_Hant_HK, bg, gu_IN, si_LK,
// am, or_IN, en_ZA, ar_YE, da, uk_UA, ar_OM, es_PE, cs_CZ, kk_Cyrl_KZ,
// de_AT, lv_LV, en_NZ, ar_BH, ar, en_AU, az_Cyrl, de, as, bn, zh_Hans_SG,
// es_PY, es_EC, ne_IN, pa_Guru_IN, fa, sw_KE, es_AR, az, fr_FR,
// en_US_POSIX, sr_Cyrl_BA, cs, zh_Hans, eu_ES, ga, en_PK, ar_LB, el,
// zh_Hant_TW, et_EE, fi, en, uz_Arab_AF, sw_TZ, it_CH, en_ZW, ha, eo,
// ar_SA, cy, th_TH, bn_BD, te_IN, ml_IN, he, es, fo, en_IN, et, om_KE,
// haw, eu, gl, ta_IN, zh_Hans_MO, id, fr, hi, ja, es_SV, hu_HU, en_SG,
// nn_NO, az_Latn, ii, id_ID, es_DO, fr_CH, ka, es_UY, en_MT, ar_QA, ar_TN,
// gu, de_CH, gv, sk_SK, hr, kn_IN, de_LI, ar_EG, el_GR, ar_SD, hu, af_NA,
// zh_Hant, ti_ER, ar_LY, is, ka_GE, it, om_ET, hy, ii_CN, hr_HR, ps_AF,
// pa_Arab_PK, es_NI, en_TT, pa_Guru, kk, kl, be_BY, km, zh_Hans_HK, kn,
// sv_SE, es_BO, ko, nb, ne_NP, pa_Arab, fr_MC, is_IS, ne, ar_SY, mk,

// nb_NO, en_HK, fr_SN, si, km_KH, te, ro, ko_KR, mr_IN, sk, en_BE, en_MH,
// sl, th, ti, fr_BE, es_CL, pt_BR, en_VI, es_VE, sr_Latn_ME, so, hi_IN,
//as_IN, ru, de_BE, sq, en_GB, sr, fa_AF, es_MX, kw_GB, es_PR, ro_RO, uk,
```

// cy_GB, en_NA, fi_FI, ca_ES, az_Cyrl_AZ, en_IE, gv_GB, sv, tr, sw, vi,
// en_BZ, en_US, hy_AM_REVISED, ru_UA, ur_PK, ur, sr_Latn_RS, am_ET, bn_IN,
// ar_KW, haw_US, sr_Cyrl_ME, es_PA, es_CO, kl_GL, sr_Latn, uz, ur_IN,
// zh_Hant_MO, ha_Latn_NG, es_GT, tr_TR, fa_IR, pl_PL, sv_FI, ar_DZ"

Notes: Available in Mac OS X v10.4 and later.

65.4.7 canonicalLanguageIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: eturns a canonical language identifier by mapping an arbitrary locale identification string to the canonical identifier.
Notes:

s: A string representation of an arbitrary locale identifier.
Returns a string that represents the canonical language identifier for the specified arbitrary locale identifier.
Available in Mac OS X v10.6 and later.

65.4.8 canonicalLocaleIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the canonical identifier for a given locale identification string.
Notes: Available in Mac OS X v10.4 and later.

65.4.9 characterDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the character direction for the specified ISO language code.
Notes:

Returns the character direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

65.4.10 commonISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns an array of common ISO currency codes.
Example:

```
MsgBox join(NSLocaleMBS.commonISOCurrencyCodes,", ")

// shows "AED, AFN, ALL, AMD, ANG, AOA, ARS, AUD, AWG, AZN,
// BAM, BBD, BDT, BGN, BHD, BIF, BMD, BND, BOB, BRL, BSD, BTN,
// BWP, BYR, BZD, CAD, CDF, CHF, CLP, CNY, COP, CRC, CUP, CVE,
// CZK, DJF, DKK, DOP, DZD, EEK, EGP, ERN, ETB, EUR, FJD, FKP,
// GBP, GEL, GHS, GIP, GMD, GNF, GTQ, GWP, GYD, HKD, HNL, HRK,
// HTG, HUF, IDR, ILS, INR, IQD, IRR, ISK, JMD, JOD, JPY, KES,
// KGS, KHR, KMF, KPW, KRW, KWD, KYD, KZT, LAK, LBP, LKR, LRD,
// LSL, LTL, LVL, LYD, MAD, MDL, MGA, MKD, MMK, MNT, MOP, MRO,
// MUR, MVR, MWK, MXN, MYR, MZE, MZN, NAD, NGN, NIO, NOK, NPR,
// NZD, OMR, PAB, PEN, PGK, PHP, PKR, PLN, PYG, QAR, RON, RSD,
// RUB, RWF, SAR, SBD, SCR, SDG, SEK, SGD, SHP, SKK, SLL, SOS,
// SRD, STD, SVC, SYP, SZL, THB, TJS, TMM, TND, TOP, TRY, TTD,
// TWD, TZS, UAH, UGX, USD, UYU, UZS, VEF, VND, VUV, WST, XAF,
// XCD, XOF, XPF, YER, ZAR, ZMK, ZWD"
```

Notes:

Common codes may include, for example, AED, AUD, BZD, DKK, EUR, GBP, JPY, KES, MXN, OMR, STD, USD, XCD, and ZWD.
Available in Mac OS X v10.5 and later.

65.4.11 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The default constructor.
Notes:

Available in Mac OS X v10.4 and later.
Loads the same values for this object as if you just take the object from NSLocaleMBS.currentLocale.
See also:

- 65.4.12 Constructor(Identifier as string) 13532

65.4.12 Constructor(Identifier as string)

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim a(-1) as string = NSLocalembs.availableLocaleIdentifiers

// show all identifers:
dim s(-1) as string
s.Append "All available Locale Identifiers:"

dim c as Integer = UBound(a)

for i as Integer=0 to c
dim identifier as string=a(i)
s.Append identifier
next

MsgBox Join(s)

// now show the currency symbols:

redim s(-1)
s.Append "All Currency symbols:"

c = UBound(a)
for i as Integer=0 to c
dim identifier as string=a(i)
dim n as new NSLocaleMBS(identifier)
s.Append n.CurrencySymbol
next

MsgBox Join(s)
```

Notes:

Available in Mac OS X v10.4 and later.
Pass in the country identifier which you get with the availableLocaleIdentifiers function.
See also:

65.4.13 currentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the logical locale for the current user.
Notes:

Available in Mac OS X v10.4 and later.

The logical locale for the current user. The locale is formed from the settings for the current user's chosen system locale overlaid with any custom settings the user has specified in System Preferences.

This method may return a retained cached object.

Discussion:
Settings you get from this locale do not change as System Preferences are changed so that your operations are consistent. Typically you perform some operations on the returned object and then allow it to be disposed of. Moreover, since the returned object may be cached, you do not need to hold on to it indefinitely.

65.4.14 displayName(key as string, value as string) as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the display name for the given value.
Example:

```
dim displayNameString as string

// The first uses the fr_FR locale.

dim frLocale as new NSLocaleMBS("fr_FR")

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in fr_FR: "+displayNameString
// shows: "display name for fr_FR in fr_FR: fran√ßais (France)"

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in fr_FR: "+displayNameString
// shows: "display name for en_US in fr_FR: anglais (√âtats-Unis)"

// The following example uses the en_GB locale.

dim gbLocale as new NSLocaleMBS("en_US")

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
```

```
MsgBox "display name for fr_FR in en_US: "+displayNameString
// shows: "display name for fr_FR in en_US: French (France)"

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in en_US: "+displayNameString
// shows: "display name for en_US in en_US: English (United States)"
```

Notes:

Not all locale property keys have values with display name values.

You can use the NSLocaleIdentifier key to get the name of a locale in the language of another locale, as illustrated in the example code above.

65.4.15 ExemplarCharacterSet as Variant

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: The exemplar character set for the locale.
Example:

```
dim n as NSLocaleMBS = NSLocaleMBS.currentLocale

MsgBox n.ExemplarCharacterSet.StringValue
// shows "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz√Ñ√ñ√ú√ü√§√√º" in Germany
```

Notes:

Returns a NSCharacterSetMBS object.
Available in Mac OS X v10.4 and later.

65.4.16 GetString(key as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string for one of the NSLocate keys.
Notes:

Available in Mac OS X v10.4 and later.
This keys can be found int he NSLocale reference from Apple.

65.4.17 ISOCountryCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal country codes.
Example:

MsgBox join(NSLocaleMBS.ISOCountryCodes,", ")

// shows "AD, AE, AF, AG, AI, AL, AM, AN, AO, AQ, AR, AS, AT, AU,
// AW, AX, AZ, BA, BB, BD, BE, BF, BG, BH, BI, BJ, BL, BM, BN, BO,
// BR, BS, BT, BV, BW, BY, BZ, CA, CC, CD, CF, CG, CH, CI, CK, CL,
// CM, CN, CO, CR, CU, CV, CX, CY, CZ, DE, DJ, DK, DM, DO, DZ, EC,
// EE, EG, EH, ER, ES, ET, FI, FJ, FK, FM, FO, FR, GA, GB, GD, GE,
// GF, GG, GH, GI, GL, GM, GN, GP, GQ, GR, GS, GT, GU, GW, GY, HK,
// HM, HN, HR, HT, HU, ID, IE, IL, IM, IN, IO, IQ, IR, IS, IT, JE,
// JM, JO, JP, KE, KG, KH, KI, KM, KN, KP, KR, KW, KY, KZ, LA, LB,
// LC, LI, LK, LR, LS, LT, LU, LV, LY, MA, MC, MD, ME, MF, MG, MH,
// MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ,
// NA, NC, NE, NF, NG, NI, NL, false, NP, NR, NU, NZ, OM, PA, PE, PF,
// PG, PH, PK, PL, PM, PN, PR, PS, PT, PW, PY, QA, RE, RO, RS, RU,
// RW, SA, SB, SC, SD, SE, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SR,
// ST, SV, SY, SZ, TC, TD, TF, TG, TH, TJ, TK, TL, TM, TN, TO, TR,
// TT, TV, TW, TZ, UA, UG, UM, US, UY, UZ, VA, VC, VE, VG, VI, VN,
// VU, WF, WS, YE, YT, ZA, ZM, ZW"

Notes:

Available in Mac OS X v10.4 and later.
Note that many of country codes do not have any supporting locale data in Mac OS X.

65.4.18 ISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO currency codes.
Example:

MsgBox join(NSLocaleMBS.ISOCurrencyCodes,", ")

// shows "ADP, AED, AFA, AFN, ALK, ALL, AMD, ANG, AOA, AOK, AON, AOR,
// ARA, ARP, ARS, ATS, AUD, AWG, AZM, AZN, BAD, BAM, BBD, BDT, BEC,
// BEF, BEL, BGL, BGM, BGN, BHD, BIF, BMD, BND, BOB, BOP, BOV, BRB,

```
// BRC, BRE, BRL, BRN, BRR, BSD, BTN, BUK, BWP, BYB, BYR, BZD, CAD,
// CDF, CHE, CHF, CHW, CLF, CLP, CNX, CNY, COP, COU, CRC, CSD, CSK,
// CUP, CVE, CYP, CZK, DDM, DEM, DJF, DKK, DOP, DZD, ECS, ECV, EEK,
// EGP, EQE, ERN, ESA, ESB, ESP, ETB, EUR, FIM, FJD, FKP, FRF, GBP,
// GEK, GEL, GHC, GHS, GIP, GMD, GNF, GNS, GQE, GRD, GTQ, GWE, GWP,
// GYD, HKD, HNL, HRD, HRK, HTG, HUF, IDR, IEP, ILP, ILS, INR, IQD,
// IRR, ISK, ITL, JMD, JOD, JPY, KES, KGS, KHR, KMF, KPW, KRW, KWD,
// KYD, KZT, LAK, LBP, LKR, LRD, LSL, LSM, LTL, LTT, LUC, LUF, LUL,
// LVL, LVR, LYD, MAD, MAF, MDL, MGA, MGF, MKD, MLF, MMK, MNT, MOP,
// MRO, MTL, MTP, MUR, MVR, MWK, MXN, MXP, MXV, MYR, MZE, MZM, MZN,
// NAD, NGN, NIC, NIO, NLG, NOK, NPR, NZD, OMR, PAB, PEI, PEN, PES,
// PGK, PHP, PKR, PLN, PLZ, PTE, PYG, QAR, RHD, ROL, RON, RSD, RUB,
// RUR, RWF, SAR, SBD, SCR, SDD, SDG, SDP, SEK, SGD, SHP, SIT, SKK,
// SLL, SOS, SRD, SRG, STD, SUR, SVC, SYP, SZL, THB, TJR, TJS, TMM,
// TND, TOP, TPE, TRL, TRY, TTD, TWD, TZS, UAH, UAK, UGS, UGX, USD,
// USN, USS, UYP, UYI, UYU, UZS, VEB, VEF, VND, VUV, WST, XAF, XAG,
// XAU, XBA, XBB, XBC, XBD, XCD, XDR, XEU, XFO, XFU, XOF, XPD, XPF,
// XPT, XRE, XTS, XXX, YDD, YER, YUD, YUM, YUN, ZAL, ZAR, ZMK, ZRN,
// ZRZ, ZWD"
```

Notes:

Available in Mac OS X v10.4 and later.

Note that some of the currency codes may not have any supporting locale data in Mac OS X.

65.4.19 ISOLanguageCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns an array of strings that represents all known legal ISO language codes.
Example:

```
MsgBox join(NSLocaleMBS.ISOLanguageCodes,", ")

// shows "aa, ab, ace, ach, ada, ady, ae, af, afa, afh, ain, ak, akk,
// ale, alg, alt, am, an, ang, anp, apa, ar, arc, arn, arp, art, arw,
// as, ast, ath, aus, av, awa, ay, az, ba, bad, bai, bal, ban, bas,
// bat, be, bej, bem, ber, bg, bh, bho, bi, bik, bin, bla, bm, bn, bnt,
// bo, br, bra, bs, btk, bua, bug, byn, ca, cad, cai, car, cau, cch,
// ce, ceb, cel, ch, chb, chg, chk, chm, chn, cho, chp, chr, chy, cmc,
// co, cop, cpe, cpf, cpp, cr, crh, crp, cs, csb, cu, cus, cv, cy, da,
// dak, dar, day, de, del, den, dgr, din, doi, dra, dsb, dua, dum, dv,
// dyu, dz, ee, efi, egy, eka, el, elx, en, enm, eo, es, et, eu, ewo,
// fa, fan, fat, ff, fi, fil, fiu, fj, fo, fon, fr, frm, fro, frr, frs,
```

// fur, fy, ga, gaa, gay, gba, gd, gem, gez, gil, gl, gmh, gn, goh,
// gon, gor, got, grb, grc, gsw, gu, gv, gwi, ha, hai, haw, he, hi,
// hil, him, hit, hmn, ho, hr, hsb, ht, hu, hup, hy, hz, ia, iba, id,
// ie, ig, ii, ijo, ik, ilo, inc, ine, inh, io, ira, iro, is, it, iu,
// ja, jbo, jpr, jrb, jv, ka, kaa, kab, kac, kaj, kam, kar, kaw, kbd,
// kcg, kfo, kg, kha, khi, kho, ki, kj, kk, kl, km, kmb, kn, ko, kok,
// kos, kpe, kr, krc, krl, kro, kru, ks, ku, kum, kut, kv, kw, ky, la,
// lad, lah, lam, lb, lez, lg, li, ln, lo, lol, loz, lt, lu, lua, lui,
// lun, luo, lus, lv, mad, mag, mai, mak, man, map, mas, mdf, mdr, men,
// mg, mga, mh, mi, mic, min, mis, mk, mkh, ml, mn, mnc, mni, mno, mo,
// moh, mos, mr, ms, mt, mul, mun, mus, mwl, mwr, my, myn, myv, na,
// nah, nai, nap, nb, nd, nds, ne, new, ng, nia, nic, niu, nl, nn, no,
// nog, non, nqo, nr, nso, nub, nv, nwc, ny, nym, nyn, nyo, nzi, oc,
// oj, om, or, os, osa, ota, oto, pa, paa, pag, pal, pam, pap, pau,
// peo, phi, phn, pi, pl, pon, pra, pro, ps, pt, qu, raj, rap, rar, rm,
// rn, ro, roa, rom, ru, rup, rw, sa, sad, sah, sai, sal, sam, sas,
// sat, sc, scn, sco, sd, se, sel, sem, sg, sga, sgn, shn, si, sid,
// sio, sit, sk, sl, sla, sm, sma, smi, smj, smn, sms, sn, snk, so,
// sog, son, sq, sr, srn, srr, ss, ssa, st, su, suk, sus, sux, sv, sw,
// syc, syr, ta, tai, te, tem, ter, tet, tg, th, ti, tig, tiv, tk, tkl,
// tl, tlh, tli, tmh, tn, to, tog, tpi, tr, ts, tsi, tt, tum, tup, tut,
// tvl, tw, ty, tyv, udm, ug, uga, uk, umb, und, ur, uz, vai, ve, vi,
// vo, vot, wa, wak, wal, war, was, wen, wo, xal, xh, yao, yap, yi, yo,
// ypk, za, zap, zbl, zen, zh, znd, zu, zun, zxx, zza"

Notes:

Available in Mac OS X v10.4 and later.

Note that many of the language codes will not have any supporting locale data in Mac OS X.

65.4.20 lineDirectionForLanguage(isoLangCode as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the line direction for the specified ISO language code.
Notes:

Returns the line direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

65.4.21 localeIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the identifier for the receiver.
Notes:

The identifier for the receiver. This may not be the same string that the locale was created with, since NSLocale may canonicalize it.

Available in Mac OS X v10.4 and later.

65.4.22 localeIdentifierFromWindowsLocaleCode(code as Integer) as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a locale identifier from a Windows locale code.
Notes: Available in Mac OS X v10.6 and later.

65.4.23 NSBuddhistCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Buddhist calendar.
Available in Mac OS X v10.4 and later.

65.4.24 NSChineseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Chinese calendar (unsupported).

Note that the Chinese calendar is not supported in Mac OS X v10.4-10.5. Although you can create a calendar using this constant, the object will not function correctly.

Available in Mac OS X v10.4 and later.

65.4.25 NSGregorianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Gregorian calendar.
Available in Mac OS X v10.4 and later.

65.4.26 NSHebrewCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Hebrew calendar.

Available in Mac OS X v10.4 and later.

65.4.27 NSIndianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Indian calendar

Available in Mac OS X v10.6 and later.

65.4.28 NSIslamicCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Islamic calendar.

Available in Mac OS X v10.4 and later.

65.4.29 NSIslamicCivilCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Islamic civil calendar.

Available in Mac OS X v10.4 and later.

65.4.30 NSISO8601Calendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the ISO8601. The ISO8601 calendar is not yet implemented.

Available in Mac OS X v10.6 and later.

65.4.31 NSJapaneseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Japanese calendar.
Available in Mac OS X v10.4 and later.

65.4.32 NSLocaleAlternateQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the alternating begin quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationBeginDelimiterKey, then NSLocaleAlternateQuotationBeginDelimiterKey, etc.

The corresponding value is a string.
Available in Mac OS X v10.6 and later.

65.4.33 NSLocaleAlternateQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the alternating enda quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationEndDelimiterKey, then NSLocaleAlternateQuotationEndDelimiterKey, etc.

The corresponding value is a string.

Available in Mac OS X v10.6 and later.

65.4.34 NSLocaleCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.

65.4.35 NSLocaleCollationIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.36 NSLocaleCollatorIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the collation identifier for the locale.
The corresponding value is a string. If unknown, "" is returned.
Available in Mac OS X v10.6 and later.

65.4.37 NSLocaleCountryCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.38 NSLocaleCurrencyCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.39 NSLocaleCurrencySymbol as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.40 NSLocaleDecimalSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.41 NSLocaleExemplarCharacterSet as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.42 NSLocaleGroupingSeparator as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.43 NSLocaleIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Example:

```
dim n as new NSLocaleMBS("de")

MsgBox n.displayName(n.NSLocaleIdentifier, "en")
```

65.4.44 NSLocaleLanguageCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.45 NSLocaleMeasurementSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.46 NSLocaleQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the begin quotation symbol associated with the locale.
The corresponding value is a string.
Available in Mac OS X v10.6 and later.

65.4.47 NSLocaleQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.
Notes:

The key for the begin quotation symbol associated with the locale.
The corresponding value is string.
Available in Mac OS X v10.6 and later.

65.4.48 NSLocaleScriptCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.49 NSLocaleUsesMetricSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.50 NSLocaleVariantCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: One of the constants for the displayName and GetString functions.

65.4.51 NSPersianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Persian calendar.
Available in Mac OS X v10.6 and later.

65.4.52 NSRepublicOfChinaCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the calendar indentifiers.
Notes:

Identifier for the Republic of China (Taiwan) calendar.

A Chinese calendar can be created, and one can do calendrical calculations with it, but it should not be used for formatting as the necessary underlying functionality is not functioning correctly yet.

Available in Mac OS X v10.6 and later.

65.4.53 preferredLanguages as string()

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns the user's language preference order as an array of strings.
Example:

MsgBox join(NSLocaleMBS.preferredLanguages,", ")

// shows "de, en, fr, es, it, pt, pt-PT, nl, sv, nb, da, fi, ru, pl, zh-Hans, ja, zh-Hant, ko"

Notes:

The user's language preference order as an array of String objects, each of which is a canonicalized IETF BCP 47 language identifier.

Available in Mac OS X v10.5 and later.
This is the language the user prefers. To get the country linked to the number and date formats, use the CountryCode property.

65.4.54 systemLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the "root", canonical locale, that contains fixed "backstop" settings that provide values for otherwise undefined keys.
Notes: Available in Mac OS X v10.4 and later.

65.4.55 windowsLocaleCodeFromLocaleIdentifier(s as string) as Integer

MBS MacBase Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Returns a Window locale code from the locale identifier.
Notes: Available in Mac OS X v10.6 and later.

65.4.56 Properties

65.4.57 CollationIdentifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The collation associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CollationIdentifier // shows "" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.58 CountryCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The country code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CountryCode // shows "DE" in Germany
```

Notes:

An example value might be "ES".
Available in Mac OS X v10.4 and later.

This code here is the country where the number and date settings belong to. This is not the language the user has. To get the languages, check the preferredLanguages array.
(Read only property)

65.4.59 CurrencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency code associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CurrencyCode // shows "EUR" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.60 CurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency symbol associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.CurrencySymbol // shows ",Ç¨" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.61 DateFull as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The full date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.62 DateLong as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The long date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.63 DateMedium as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The medium date format.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.64 DateShort as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The short date format.
Example:

```
MsgBox NSLocaleMBS.currentLocale.DateShort.dateFormat
// in Germany: "dd.MM.yy"
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.65 DecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The decimal separator associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.DecimalSeparator // shows "," in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.66 GroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The numeric grouping separator associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.GroupingSeparator // shows "." in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.67 Identifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale identifier.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.Identifier // shows "de_DE" in Germany
```

Notes:

An example value might be "es_ES_PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

65.4.68 LanguageCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The language code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.LanguageCode // shows "de" in Germany
```

Notes:

An example value might be "es".
Available in Mac OS X v10.4 and later.
(Read only property)

65.4.69 MeasurementSystem as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The measurement system associated with the locale.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.MeasurementSystem // shows "Metric" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.70 NumberCurrency as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The currency style for number formatting.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.71 NumberDecimal as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a decimal style for numbers.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.72 NumberPercent as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The percent style for number formatting.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.73 NumberScientific as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a scientific style for numbers.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.74 NumberSpellOut as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Specifies a spell-out format; for numbers, ”23” becomes ”twenty-three”.
Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.75 ScriptCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale script code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.ScriptCode // shows "" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.76 UsesMetricSystem as Boolean

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The flag that indicates whether the locale uses the metric system.
Example:

```
dim n as new NSLocaleMBS
dim v as Variant

v=n.UsesMetricSystem
MsgBox v // shows "True" in Germany
```

Notes:

Available in Mac OS X v10.4 and later.
(Read only property)

65.4.77 VariantCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The locale variant code.
Example:

```
dim n as new NSLocaleMBS

MsgBox n.VariantCode // shows "" in Germany
```

Notes:

An example value might be "PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

65.4.78 Constants

65.4.79 NSLocaleLanguageDirectionBottomToTop = 4

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from bottom to top.
Available in Mac OS X v10.6 and later.

65.4.80 NSLocaleLanguageDirectionLeftToRight = 1

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from left to right.
Available in Mac OS X v10.6 and later.

65.4.81 NSLocaleLanguageDirectionRightToLeft = 2

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from right to left.
Available in Mac OS X v10.6 and later.

65.4.82 NSLocaleLanguageDirectionTopToBottom = 3

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The language direction is from top to bottom.
Available in Mac OS X v10.6 and later.

65.4.83 NSLocaleLanguageDirectionUnknown = 0

MBS MacBase Plugin, Plugin Version: 9.6.

Function: One of the constants describing the text direction for a language.
Notes:

The direction of the language is unknown.
Available in Mac OS X v10.6 and later.

65.5 class NSLocaleNumberMBS

65.5.1 class NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: A class for a number format.
Notes: Should be used with the NSLocaleMBS class, but can be used on its own, too.

65.5.2 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Plugins 10.3 Release Notes

65.5.3 Blog Entries

- MBS Xojo Plugins, version 22.2pr1
- MBS Xojo / Real Studio Plugins, version 13.5pr4
- MBS Plugins 10.3 Release Notes

65.5.4 Methods

65.5.5 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes:

Loads values.
No the same values as if you get when using this class with NSLocaleMBS.
See also:

- 65.5.6 Constructor(locale as NSLocaleMBS) 13555

65.5.6 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

Function: The constructor.
Example:

```
dim n1 as new NSLocaleNumberMBS
dim n2 as new NSLocaleNumberMBS(NSLocaleMBS.currentLocale)
dim n3 as new NSLocaleNumberMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

Notes: Initializes the object for a given locale.
See also:

- 65.5.5 Constructor 13555

65.5.7 Properties

65.5.8 alwaysShowsDecimalSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver always shows a decimal separator, even if the number is an integer.
Notes: (Read and Write property)

65.5.9 currencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency code.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g "EUR" (in Germany)
```

Notes:

A currency code is a three-letter code that is, in most cases, composed of a country's two-character Internet country code plus an extra character to denote the currency unit. For example, the currency code for the Australian dollar is "AUD". Currency codes are based on the ISO 4217 standard.

Available in Mac OS X v10.4 and later.
(Read and Write property)

65.5.10 currencyDecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the currency decimal separator as a string.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencyDecimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

65.5.11 currencyGroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The currency grouping separator for the receiver.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

65.5.12 currencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the local currency symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.currencycode
// shows for example: e.g ",Ç¨" (in Germany)
```

Notes: (Read and Write property)

65.5.13 decimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the character to represent decimal separators.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.decimalSeparator
// shows for example: e.g "," (in Germany)
```

Notes: (Read and Write property)

65.5.14 exponentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as an exponent symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.exponentSymbol
// shows for example: e.g "E" (in Germany)
```

Notes:

The exponent symbol is the "E" or "e" in the scientific notation of numbers, as in 1.0e+56.
(Read and Write property)

65.5.15 format as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The format used by the receiver.
Notes: (Read and Write property)

65.5.16 groupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the grouping separator.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.groupingSeparator
// shows for example: e.g "." (in Germany)
```

Notes:

For example, the grouping separator used in the United States is the comma ("10,000") whereas in France it is the period ("10.000").
(Read and Write property)

65.5.17 hasThousandSeparators as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

65.5.18 internationalCurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the international currency symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.internationalCurrencySymbol
// shows for example: e.g "EUR" (in Germany)
```

Notes:

A country typically has a local currency symbol and an international currency symbol. The local symbol is used within the country, while the international currency symbol is used in international contexts to specify that country's currency unambiguously. The international currency symbol is often represented by a Unicode code point.
(Read and Write property)

65.5.19 Lenient as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses heuristics to guess at the date which is intended by a string.
Notes: (Read and Write property)

65.5.20 localizesFormat as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver localizes formats.
Notes: (Read and Write property)

65.5.21 minusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent the minus sign.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.minusSign
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

65.5.22 negativeFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display negative numbers.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "# ,# # 0.00 ¬§" (in Germany)
```

Notes: (Read and Write property)

65.5.23 negativeInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent negative infinity.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

65.5.24 negativePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which is inserted as a prefix to negative values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativePrefix
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

65.5.25 negativeSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string which adds as a suffix to negative values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeSuffix
// shows for example: e.g ",Ç¨" (in Germany)
```

Notes: (Read and Write property)

65.5.26 nilSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used to represent a nil value.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.nilSymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

65.5.27 notANumberSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the symbol used to represent NaN ("not a number") when it converts values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.notANumberSymbol
// shows for example: e.g "NaN" (in Germany)
```

Notes: (Read only property)

65.5.28 paddingCharacter as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns a string containing the padding character.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.paddingCharacter
// shows for example: e.g "*" (in Germany)
```

Notes: (Read and Write property)

65.5.29 PartialStringValidationEnabled as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether partial string validation is enabled.
Notes: (Read and Write property)

65.5.30 percentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used to represent the percent symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.percentSymbol
// shows for example: e.g "% " (in Germany)
```

Notes: (Read and Write property)

65.5.31 perMillSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string that is used for the per-thousands symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.perMillSymbol
// shows for example: e.g ",Ä∞" (in Germany)
```

Notes: (Read and Write property)

65.5.32 plusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the plus sign.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.plusSign
// shows for example: e.g "+" (in Germany)
```

Notes: (Read and Write property)

65.5.33 positiveFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the format used to display positive numbers.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g "# ,# # 0.00 ¬§" (in Germany)
```

Notes: (Read and Write property)

65.5.34 positiveInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used for the positive infinity symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveInfinitySymbol
// shows for example: e.g "" (in Germany)
```

Notes: (Read only property)

65.5.35 positivePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the prefix for positive values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positivePrefix
// shows for example: e.g "" (in Germany)
```

Notes: (Read and Write property)

65.5.36 positiveSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the suffix for positive values.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveSuffix
// shows for example: e.g " ,Ç¨" (in Germany)
```

Notes: (Read and Write property)

65.5.37 thousandSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver's format includes thousand separators.
Notes: (Read and Write property)

65.5.38 usesGroupingSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses the grouping separator.
Notes: (Read and Write property)

65.5.39 usesSignificantDigits as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A Boolean value that indicates whether the receiver uses significant digits.
Notes: (Read and Write property)

65.5.40 zeroSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: All.

Function: Returns the string used as the zero symbol.
Example:

```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.zeroSymbol
```

// shows for example: e.g "0" (in Germany)

Notes: (Read and Write property)

65.6 class WinLocalizationMBS

65.6.1 class WinLocalizationMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for details about the current localization
Example:

```
dim l as WinLocalizationMBS
l=new WinLocalizationMBS
```

Notes:

This class has a constructor to specify whether you want unicode or not.

You may write yourself functions to acquire the details you need in your application from the Windows and from the Mac classes.
Also you may consider to update your values as the user may change them while your application is running.

65.6.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr4

65.6.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr4

65.6.4 Methods

65.6.5 AbbreviatedDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes:

Index from 0 to 6.
e.g. on a German Windows XP system: AbbreviatedDayName(0)="Mo"

65.6.6 AbbreviatedMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes:

Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: AbbreviatedMonthName(0)="Jan"

65.6.7 Constructor

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to get the values for the current locale.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 65.6.8 Constructor(LanguageID as Integer, SortID as Integer) 13569
- 65.6.9 Constructor(LCID as Integer) 13570
- 65.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 13570

65.6.8 Constructor(LanguageID as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.

- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 65.6.7 Constructor 13569
- 65.6.9 Constructor(LCID as Integer) 13570
- 65.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 13570

65.6.9 Constructor(LCID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 65.6.7 Constructor 13569
- 65.6.8 Constructor(LanguageID as Integer, SortID as Integer) 13569
- 65.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer) 13570

65.6.10 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to query values for a given language.
Notes:

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.
See also:

- 65.6.7 Constructor 13569
- 65.6.8 Constructor(LanguageID as Integer, SortID as Integer) 13569
- 65.6.9 Constructor(LCID as Integer) 13570

65.6.11 LongDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized name of the day.
Notes:

Index from 0 to 6.
e.g. on a German Windows XP system: LongDayName(0)="Montag"

65.6.12 LongMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The localized month name.
Notes:

Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: LongMonthName(0)="Januar"

65.6.13 Properties

65.6.14 CalendarTypeSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Current calendar type.
Notes:

This type can be one of these values:

Value	Meaning
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.15 CalendarTypeSpecifier2 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Additional calendar types.
Notes:

This can be a zero-separated list of one or more of these calendars type values:

Value	Meaning
0	No additional types valid
1	Gregorian (as in United States)
2	Gregorian (English strings always)
3	Era: Year of the Emperor (Japan)
4	Era: Year of Taiwan Region
5	Tangun Era (Korea)

e.g. on a German Windows XP system: ""
(Read only property)

65.6.16 CountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code, based on international phone codes, also referred to as IBM country codes.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

65.6.17 CountryNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the country from the ISO Standard 3166.
Notes:

e.g. on a German Windows XP system: "DEU"
(Read only property)

65.6.18 CountryNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated country name.
Notes:

e.g. on a German Windows XP system: "DE"
(Read only property)

65.6.19 CountryNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the country.
Notes:

This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "English"
(Read only property)

65.6.20 CountryNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the country.
Notes:

e.g. on a German Windows XP system: "Deutschland"
(Read only property)

65.6.21 CountryNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the country.
Notes:

e.g. on a German Windows XP system: "Deutschland"
(Read only property)

65.6.22 CurrencyDecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary decimal separator.
Notes:

e.g. on a German Windows XP system: ","
(Read only property)

65.6.23 CurrencyDigitsInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the international monetary format.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

65.6.24 CurrencyDigitsLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits for the local monetary format.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

65.6.25 CurrencyGroupingMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of monetary digits to the left of the decimal.
Notes:

An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

65.6.26 CurrencyNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full English name of the currency associated with the locale.
Notes:

e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

65.6.27 CurrencyNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The native name of the currency associated with the locale.
Notes:

e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

65.6.28 CurrencyNegativeMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative currency mode.
Notes:

The maximum number of characters allowed for this string is 3. The mode can be one of the following values:

Value	Example
0	($ 1.1)
1	,Äì$ 1.1
2	$,Äì1.1
3	$ 1.1,Äì
4	(1.1$)
5	,Äì1.1$
6	1.1,Äì$
7	1.1$,Äì
8	,Äì1.1 $ (space before $)
9	,Äì$ 1.1 (space after $)
10	1.1 $,Äì (space before $)
11	$ 1.1,Äì (space after $)
12	$,Äì1.1 (space after $)
13	1.1,Äì $ (space before $)
14	($ 1.1) (space after $)
15	(1.1 $) (space before $)

e.g. on a German Windows XP system: ”8”
(Read only property)

65.6.29 CurrencyPositiveMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Positive currency mode.
Notes:

The maximum number of characters allowed for this string is 2. The mode can be one of the following values:

e.g. on a German Windows XP system: ”3”
(Read only property)

Value	Meaning
0	Prefix, no separation
1	Suffix, no separation
2	Prefix, 1-char. separation
3	Suffix, 1-char. separation

65.6.30 CurrencySymbolInternational as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Three characters of the international monetary symbol specified in ISO 4217, "Codes for the Representation of Currencies and Funds," followed by the character separating this string from the amount.
Example:

```
Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes:

e.g. on a German Windows XP system: "EUR"
(Read only property)

65.6.31 CurrencySymbolLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String used as the local monetary symbol.
Example:

```
Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS
```

```
s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+" "+str(len(s))+" "+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+" "+str(len(s))+" "+s
```

Notes:

e.g. on a German Windows XP system: ",Ç¨"
(Read only property)

65.6.32 CurrencyThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the monetary separator between groups of digits to the left of the decimal.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

65.6.33 DateLeadingZerosDay as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in day fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for days
1	Leading zeros for days

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.34 DateLeadingZerosMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in month fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for months
1	Leading zeros for months

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.35 DateLongFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date format-ordering specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.36 DateLongFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Long date formatting string for this locale.
Notes:

The string can consist of a combination of day, month, and year format pictures defined in the Day, Month, Year, and Era Format Pictures table in National Language Support Constants and any string of characters enclosed in single quotes. Characters in single quotes remain as given.
e.g. on a German Windows XP system: "dddd, d. MMMM yyyy"
(Read only property)

65.6.37 DateSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the date separator.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

65.6.38 DateShortFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date format-ordering specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	Month-Day-Year
1	Day-Month-Year
2	Year-Month-Day

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.39 DateShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Short date formatting string for this locale.
Example:

```
dim w as new WinLocalizationMBS

MsgBox w.DateShortFormatString
```

Notes:

The string can consist of a combination of day, month, and year format pictures defined in Day, Month, Year, and Era Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "dd.MM.yyyy"
(Read only property)

65.6.40 DateShortYearMonth as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Year/Month formatting string for the locale.
Notes:

This string shows the proper format for a date string that contains only the year and the month.
e.g. on a German Windows XP system: "MMMM yyyy"
Introduced with Windows 2000.
(Read only property)

65.6.41 DecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used as the decimal separator.
Notes:

e.g. on a German Windows XP system: ","
(Read only property)

65.6.42 DefaultCodePageANSI as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: American National Standards Institute (ANSI) code page associated with this locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "1252"

(Read only property)

65.6.43 DefaultCodePageEBCDIC as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default EBCDIC code page associated with the locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "20273"
Introduced with Windows 2000.
(Read only property)

65.6.44 DefaultCodePageMac as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the country.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "10000"
(Read only property)

65.6.45 DefaultCodePageOEM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Original equipment manufacturer (OEM) code page associated with the locale.
Notes:

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "850"
(Read only property)

65.6.46 DefaultCountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Country code for the principal country in this locale.
Notes:

This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

65.6.47 DefaultLanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier for the principal language spoken in this locale.
Notes:

This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

65.6.48 DigitGrouping as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sizes for each group of digits to the left of the decimal.
Notes:

An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

65.6.49 DigitSubstitution as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes:

0 = context, 1 = none, 2 = national
e.g. on a German Windows XP system: "1"
Introduced with Windows 2000.
(Read only property)

65.6.50 FirstDayOfWeek as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first day in a week.
Notes:

Value from 0 to 6.
e.g. on a German Windows XP system: "0"
(Read only property)

65.6.51 FirstWeekOfYear as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for the first week of the year.
Notes:

The specifier can be one of these values:

Value	Meaning
0	Week containing 1/1 is the first week of that year.
1	First full week following 1/1 is the first week of that year.
2	First week containing at least 4 days is the first week of that year.

e.g. on a German Windows XP system: "2"
(Read only property)

65.6.52 LanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language identifier indicating the language.
Notes:

The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

65.6.53 LanguageNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Abbreviated name of the language, created by taking the 2-letter language abbreviation from the ISO Standard 639 and adding a third letter, as appropriate, to indicate the sublanguage.
Notes:

e.g. on a German Windows XP system: "DEU"
(Read only property)

65.6.54 LanguageNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: ISO abbreviated language name.
Notes:

e.g. on a German Windows XP system: "de"
(Read only property)

65.6.55 LanguageNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full English name of the language from the International Organization for Standardization (ISO) Standard 639.
Notes:

This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "German"
(Read only property)

65.6.56 LanguageNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Full localized name of the language.
Notes:

e.g. on a German Windows XP system: "Deutsch (Deutschland)"
(Read only property)

65.6.57 LanguageNameNativ as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native name of the language.
Notes:

e.g. on a German Windows XP system: "Deutsch"
(Read only property)

65.6.58 LeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in decimal fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros
1	Leading zeros

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.59 ListItemSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate list items.
Notes:

For example, a comma is used in many locales.
e.g. on a German Windows XP system: ";"
(Read only property)

65.6.60 MeasureSystem as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: System of measurement.
Notes:

This value is 0 if the metric system (Syst√©me International d'Unit√©s, or S.I.) is used and 1 if the U.S. system is used. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

65.6.61 NativeASCII0to9 as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native equivalents to ASCII 0 through 9.
Notes:

e.g. on a German Windows XP system: "0123456789"
(Read only property)

65.6.62 NegativeNumberMode as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Negative number mode.
Notes:

The mode can be one of these values:

Value	Meaning
0	(1.1)
1	,Äì1.1
2	,Äì 1.1
3	1.1,Äì
4	1.1 ,Äì

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.63 NegSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a negative monetary value.
Notes:

This value is 1 if the monetary symbol is separated by a space from the negative amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

65.6.64 NegSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a negative monetary value.
Notes:

This value is 1 if the monetary symbol precedes the negative amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

65.6.65 NumberOfFraction as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of fractional digits.
Notes:

The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

65.6.66 Papersize as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Default paper size associated with the locale.
Notes:

Possible values:

e.g. on a German Windows XP system: "9"
Introduced with Windows 2000.
(Read only property)

1 Letter
5 Legal
8 DIN A3
9 DIN A4

65.6.67 PosSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Separation of monetary symbol in a positive monetary value.
Notes:

This value is 1 if the monetary symbol is separated by a space from a positive amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

65.6.68 PosSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Position of monetary symbol in a positive monetary value.
Notes:

This value is 1 if the monetary symbol precedes the positive amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

65.6.69 SignNegative as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the negative sign.
Notes:

e.g. on a German Windows XP system: "-"
(Read only property)

65.6.70 SignNegativePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for negative values.
Notes:

This index uses the same values as SignPositivePosition. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

65.6.71 SignPositive as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String value for the positive sign.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

65.6.72 SignPositivePosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formatting index for positive values.
Notes:

The maximum number of characters allowed for this string is 2. The index can be one of the following values:

Value	Meaning
0	Parentheses surround the amount and the monetary symbol.
1	The sign string precedes the amount and the monetary symbol.
2	The sign string succeeds the amount and the monetary symbol.
3	The sign string immediately precedes the monetary symbol.
4	The sign string immediately succeeds the monetary symbol.

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.73 Sortname as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The full localized name of the sort for the given locale ID.
Notes:

e.g. on a German Windows XP system: "W√rterbuch"
Introduced with Windows 2000.
(Read only property)

65.6.74 ThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) used to separate groups of digits to the left of the decimal.
Notes:

e.g. on a German Windows XP system: "."
(Read only property)

65.6.75 TimeAM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the AM designator.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

65.6.76 TimeCenturyFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for full 4-digit century.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

e.g. on a German Windows XP system: "1"
(Read only property)

Value	Meaning
0	Abbreviated 2-digit century
1	Full 4-digit century

65.6.77 TimeFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time format specifier.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	AM / PM 12-hour format
1	24-hour format

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.78 TimeLeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifier for leading zeros in time fields.
Notes:

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

Value	Meaning
0	No leading zeros for hours
1	Leading zeros for hours

e.g. on a German Windows XP system: "1"
(Read only property)

65.6.79 TimeMarkerPosition as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unkown.
Notes:

e.g. on a German Windows XP system: "0"
(Read only property)

65.6.80 TimePM as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: String for the PM designator.
Notes:

e.g. on a German Windows XP system: ""
(Read only property)

65.6.81 TimeSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Character(s) for the time separator.
Notes:

e.g. on a German Windows XP system: ":"
(Read only property)

65.6.82 TimeShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Time formatting strings for this locale.
Notes:

The string can consist of a combination of the hour, minute, and second format pictures defined in the Hour, Minute, and Second Format Pictures table in National Language Support Constants.
e.g. on a German Windows XP system: "HH:mm:ss"
(Read only property)

65.6.83 Constants

65.6.84 LANG_AFRIKAANS = & h36

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.85 LANG_ALBANIAN = & h1c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.86 LANG_ARABIC = 1

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.87 LANG_ARMENIAN = & h2b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.88 LANG_ASSAMESE = & h4d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.89 LANG_AZERI = & h2c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.90 LANG_BASQUE = & h2d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.91 LANG_BELARUSIAN = & h23

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.92 LANG_BENGALI = & h45

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.93 LANG_BULGARIAN = 2

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.94 LANG_CATALAN = 3

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.95 LANG_CHINESE = 4

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.96 LANG_CROATIAN = & h1a

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.97 LANG_CZECH = 5

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.98 LANG_DANISH = 6

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.99 LANG_DUTCH = & h13

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.100 LANG_ENGLISH = 9

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.101 LANG_ESTONIAN = & h25

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.102 LANG_FAEROESE = & h38

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.103 LANG_FARSI = & h29

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.104 LANG_FINNISH = & h0b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.105 LANG_FRENCH = & h0c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.106 LANG_GEORGIAN = & h37

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.107 LANG_GERMAN = 7

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.108 LANG_GREEK = 8

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.109 LANG_GUJARATI = & h47

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.110 LANG_HEBREW = & h0d

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.111 LANG_HINDI = & h39

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.112 LANG_HUNGARIAN = & h0e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.113 LANG_ICELANDIC = & h0f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.114 LANG_INDONESIAN = & h21

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.115 LANG_ITALIAN = & h10

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.116 LANG_JAPANESE = & h11

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.117 LANG_KANNADA = & h4b

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.118 LANG_KASHMIRI = & h60

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.119 LANG_KAZAK = & h3f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.120 LANG_KONKANI = & h57

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.121 LANG_KOREAN = & h12

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.122 LANG_LATVIAN = & h26

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.123 LANG_LITHUANIAN = & h27

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.124 LANG_MACEDONIAN = & h2f

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.125 LANG_MALAY = & h3e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.126 LANG_MALAYALAM = & h4c

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.127 LANG_MANIPURI = & h58

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

65.6.128 LANG_MARATHI = & h4e

MBS Win Plugin, Plugin Version: 9.1.

Function: One of the constants for the LanguageID.

Function: One of the constants for the SubLanguageID.

Chapter 66

Data Types

66.1 class ComplexDoubleMBS

66.1.1 class ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(4,7)

dim sum as ComplexDoubleMBS = c+d

MsgBox sum.str
```

66.1.2 Blog Entries

- New MBS REALbasic Plugin Version 10.4
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

66.1.3 Blog Entries

- New MBS REALbasic Plugin Version 10.4
- MBS REALbasic Plugins Version 10.4 release notes

- MBS REALbasic Plugins, version 10.4pr4

66.1.4 Methods

66.1.5 abs as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.abs)
```

66.1.6 Add(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 66.1.7 Add(x as Double) 13626

66.1.7 Add(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 66.1.6 Add(c as ComplexDoubleMBS) 13626

66.1.8 arg as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.arg)
```

66.1.9 conj as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim e as ComplexDoubleMBS = c.conj
MsgBox e.str
```

66.1.10 Constructor(other as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 66.1.11 Constructor(x as Double = 0.0, y as Double = 0.0) 13627

66.1.11 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

- 66.1.10 Constructor(other as ComplexDoubleMBS) 13627

66.1.12 cos as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cos.str
```

66.1.13 cosh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cosh.str
```

66.1.14 Divide(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

- 66.1.15 Divide(x as Double) 13628

66.1.15 Divide(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 66.1.14 Divide(c as ComplexDoubleMBS) 13628

66.1.16 exp as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes:

dim c as new ComplexDoubleMBS(1,2)
MsgBox c.exp.str

66.1.17 log as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

dim c as new ComplexDoubleMBS(10,10)
MsgBox c.log.str

66.1.18 log10 as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

dim c as new ComplexDoubleMBS(10,0)
MsgBox c.log10.str

66.1.19 Multiply(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

- 66.1.20 Multiply(x as Double) 13629

66.1.20 Multiply(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

- 66.1.19 Multiply(c as ComplexDoubleMBS) 13629

66.1.21 norm as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.norm)
```

66.1.22 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+d
MsgBox e.str
```

See also:

- 66.1.23 Operator_Add(x as Double) as ComplexDoubleMBS 13630

66.1.23 Operator_Add(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+2
MsgBox e.str
```

See also:

- 66.1.22 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS 13630

66.1.24 Operator_Compare(c as ComplexDoubleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

66.1.25 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/d
MsgBox e.str
```

See also:

- 66.1.26 Operator_Divide(x as Double) as ComplexDoubleMBS 13631

66.1.26 Operator_Divide(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/2
MsgBox e.str
```

See also:

- 66.1.25 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS 13631

66.1.27 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*d
MsgBox e.str
```

See also:

- 66.1.28 Operator_Multiply(x as Double) as ComplexDoubleMBS 13632

66.1.28 Operator_Multiply(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a double to a complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*2
MsgBox e.str
```

See also:

- 66.1.27 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS 13632

66.1.29 Operator_Power(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
```

```
dim e as ComplexDoubleMBS = c^d
MsgBox e.str
```

66.1.30 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c-d
MsgBox e.str
```

See also:

- 66.1.31 Operator_Subtract(x as Double) as ComplexDoubleMBS 13633

66.1.31 Operator_Subtract(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c-2
MsgBox e.str
```

See also:

- 66.1.30 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS 13633

66.1.32 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

MsgBox str(ComplexDoubleMBS.PI)

66.1.33 polar(rho as Double, theta as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexDoubleMBS.polar(10, 0.5).str
```

66.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(2,0)
dim m as ComplexDoubleMBS = c.pow(d)

MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 66.1.35 pow(x as Double) as ComplexDoubleMBS 13634
- 66.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 13635

66.1.35 pow(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim m as ComplexDoubleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 66.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 13634
- 66.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS 13635

66.1.36 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
dim x as new ComplexDoubleMBS(2,3)
dim c as ComplexDoubleMBS = ComplexDoubleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 66.1.34 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS 13634
- 66.1.35 pow(x as Double) as ComplexDoubleMBS 13634

66.1.37 sin as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.sin.str
```

66.1.38 sinh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.sinh.str
```

66.1.39 sqrt as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim r as ComplexDoubleMBS = c.sqrt
dim m as ComplexDoubleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

66.1.40 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

66.1.41 Subtract(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 66.1.42 Subtract(x as Double)

66.1.42 Subtract(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 66.1.41 Subtract(c as ComplexDoubleMBS) 13636

66.1.43 tan as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tan.str
```

66.1.44 tanh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tanh.str
```

66.1.45 Properties

66.1.46 Imag as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

66.1.47 Real as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

66.2 class ComplexSingleMBS

66.2.1 class ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(4,7)

dim sum as ComplexSingleMBS = c+d

MsgBox sum.str
```

66.2.2 Blog Entries

- New MBS REALbasic Plugin Version 10.4
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

66.2.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

66.2.4 Methods

66.2.5 abs as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The absolute value of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.abs)
```

66.2.6 Add(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 66.2.7 Add(x as single) 13640

66.2.7 Add(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the given value to this complex number.
See also:

- 66.2.6 Add(c as ComplexSingleMBS) 13640

66.2.8 arg as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return phase angle of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.arg)
```

66.2.9 conj as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns complex conjugate.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim e as ComplexSingleMBS = c.conj
MsgBox e.str
```

66.2.10 Constructor(other as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the values from the given one.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(c)

d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 66.2.11 Constructor(x as single = 0.0, y as single = 0.0) 13641

66.2.11 Constructor(x as single = 0.0, y as single = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given values.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)+" "+str(c.Imag)
```

See also:

- 66.2.10 Constructor(other as ComplexSingleMBS) 13640

66.2.12 cos as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return cosine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.cos.str
```

66.2.13 cosh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic cosine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.cosh.str
```

66.2.14 Divide(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given complex number.
See also:

- 66.2.15 Divide(x as single) 13642

66.2.15 Divide(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides this complex number by the given value.
See also:

- 66.2.14 Divide(c as ComplexSingleMBS) 13642

66.2.16 exp as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return exponential of complex.
Notes:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.exp.str
```

66.2.17 log as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return natural logarith of complex.
Example:

```
dim c as new ComplexSingleMBS(10,10)
MsgBox c.log.str
```

66.2.18 log10 as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return common logarithm of complex.
Example:

```
dim c as new ComplexSingleMBS(10,0)
MsgBox c.log10.str
```

66.2.19 Multiply(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mulitplies this complex number with the given value.
See also:

- 66.2.20 Multiply(x as single) 13643

66.2.20 Multiply(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies this complex number with the given value.
See also:

- 66.2.19 Multiply(c as ComplexSingleMBS) 13643

66.2.21 norm as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return norm of complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.norm)
```

66.2.22 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+d
MsgBox e.str
```

See also:

- 66.2.23 Operator_Add(x as single) as ComplexSingleMBS 13644

66.2.23 Operator_Add(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to add a value to this complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+2
MsgBox e.str
```

See also:

- 66.2.22 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS 13644

66.2.24 Operator_Compare(c as ComplexSingleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(1,2)

if c = d then
MsgBox "equal"
else
MsgBox "not equal"
```

```
end if
```

66.2.25 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide one complex number by another.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/d
MsgBox e.str
```

See also:

- 66.2.26 Operator_Divide(x as single) as ComplexSingleMBS 13645

66.2.26 Operator_Divide(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to divide a complex number by the given value.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/2
MsgBox e.str
```

See also:

- 66.2.25 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS 13645

66.2.27 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
```

```
dim e as ComplexSingleMBS = c*d
MsgBox e.str
```

See also:

- 66.2.28 Operator_Multiply(x as single) as ComplexSingleMBS 13646

66.2.28 Operator_Multiply(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to multiply a single to a complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c*2
MsgBox e.str
```

See also:

- 66.2.27 Operator_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS 13645

66.2.29 Operator_Power(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to calculate the power of two complex numbers.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c^d
MsgBox e.str
```

66.2.30 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract one complex number from another.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-d
MsgBox e.str
```

See also:

- 66.2.31 Operator_Subtract(x as single) as ComplexSingleMBS 13647

66.2.31 Operator_Subtract(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This method is called by Xojo in order to subtract the given value from this complex number.
Example:

```
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-2
MsgBox e.str
```

See also:

- 66.2.30 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS 13646

66.2.32 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PI constant.
Example:

```
MsgBox str(ComplexSingleMBS.PI)
```

66.2.33 polar(rho as single, theta as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new complex number with the given polar coordinate.
Example:

```
MsgBox ComplexSingleMBS.polar(10, 0.5).str
```

66.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(2,0)
dim m as ComplexSingleMBS = c.pow(d)

MsgBox "c: "+c.str+EndOfLine+"d: "+d.str+EndOfLine+"c^d: "+m.str
```

See also:

- 66.2.35 pow(x as single) as ComplexSingleMBS 13648
- 66.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 13648

66.2.35 pow(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return complex power.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim m as ComplexSingleMBS = c.pow(2)

MsgBox "c: "+c.str+EndOfLine+"c^2: "+m.str
```

See also:

- 66.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS 13648
- 66.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS 13648

66.2.36 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the given values.
Example:

```
dim x as new ComplexSingleMBS(2,3)
dim c as ComplexSingleMBS = ComplexSingleMBS.pow(2, x)

MsgBox c.str
```

See also:

- 66.2.34 pow(x as ComplexSingleMBS) as ComplexSingleMBS 13648
- 66.2.35 pow(x as single) as ComplexSingleMBS 13648

66.2.37 sin as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sin.str
```

66.2.38 sinh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sinh.str
```

66.2.39 sqrt as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return square root of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
dim r as ComplexSingleMBS = c.sqrt
```

```
dim m as ComplexSingleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str
```

66.2.40 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows the number in an human readable format.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.str
```

Notes: The actual format can change.

66.2.41 Subtract(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given complex number from this complex number.
See also:

- 66.2.42 Subtract(x as single) 13650

66.2.42 Subtract(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts the given value from this complex number.
See also:

- 66.2.41 Subtract(c as ComplexSingleMBS) 13650

66.2.43 tan as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return tangent of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tan.str
```

66.2.44 tanh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return hyperbolic tangent of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tanh.str
```

66.2.45 Properties

66.2.46 Imag as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the imaginary part of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

66.2.47 Real as single

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the real part of the complex number.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)

66.3 Globals

66.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Performs a Fast Fourier Transformation and applies abs operation on result.
Notes:

Memoryblock contains DoubleValue values (8 byte each).
If N is not provided, the plugin chooses a value.
See also:

- 66.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double() 13652
- 66.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 13652

66.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:

- 66.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double() 13652
- 66.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 13652

66.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.

66.4 class IntegerHashSetIteratorMBS

66.4.1 class IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerHashSet class.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)
```

```
// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.4.2 Methods

66.4.3 isEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

66.4.4 isNotEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.4.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.4.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
```

```
i.MoveNext
wend
```

66.5 class IntegerHashSetMBS

66.5.1 class IntegerHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with integers.
Example:

```
dim s as new IntegerHashSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.5.2 Methods

66.5.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.5.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.5.5 Constructor(Keys() as Integer) 13659

66.5.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.

See also:

- 66.5.4 Constructor 13659

66.5.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.5.7 find(key as Integer) as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.5.8 first as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.5.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.5.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.5.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.5.12 last as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new IntegerHashSetMBS
```

```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.5.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.5.15 Remove(key as Integer) as Integer 13663
- 66.5.16 Remove(pos as IntegerHashSetIteratorMBS) 13663

66.5.15 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 13662
- 66.5.16 Remove(pos as IntegerHashSetIteratorMBS) 13663

66.5.16 Remove(pos as IntegerHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS) 13662
- 66.5.15 Remove(key as Integer) as Integer 13663

66.5.17 Properties

66.5.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerHashSetMBS

v.insert 1
v.insert 5

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.5.19 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

66.5.20 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.5.21 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.6 class IntegerOrderedSetIteratorMBS

66.6.1 class IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerOrderedSet class.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.6.2 Methods

66.6.3 isEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend
```

66.6.4 isNotEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.6.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.6.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.6.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.7 class IntegerOrderedSetMBS

66.7.1 class IntegerOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with integers.
Example:

```
dim s as new IntegerOrderedSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2
```

Notes: You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.7.2 Methods

66.7.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.7.4 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.7.5 Constructor(Keys() as Integer) 13668

66.7.5 Constructor(Keys() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.

See also:

- 66.7.4 Constructor 13668

66.7.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.7.7 find(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.7.8 first as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.7.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.7.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.7.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)

for each v as Integer in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.7.12 last as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new IntegerOrderedSetMBS
```

```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

66.7.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.7.14 LowerBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.7.16 Remove(key as Integer) as Integer 13672
- 66.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 13672

66.7.16 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 13672
- 66.7.17 Remove(pos as IntegerOrderedSetIteratorMBS) 13672

66.7.17 Remove(pos as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS) 13672
- 66.7.16 Remove(key as Integer) as Integer 13672

66.7.18 UpperBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.7.19 Properties

66.7.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

66.7.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.7.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.8 class IntegerToIntegerHashMapIteratorMBS

66.8.1 class IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerHashMap class.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.8.2 Methods

66.8.3 isEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.8.4 isNotEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.8.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.8.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.8.7 Properties

66.8.8 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.9 class IntegerToIntegerHashMapMBS

66.9.1 class IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and values.
Example:

```
dim s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.9.2 Methods

66.9.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.9.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.9.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.9.6 Clone as IntegerToIntegerHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.9.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.9.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.9.9 Constructor(dic as dictionary) 13678
- 66.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 13679

66.9.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.9.8 Constructor 13678
- 66.9.10 Constructor(other as IntegerToIntegerHashMapMBS) 13679

66.9.10 Constructor(other as IntegerToIntegerHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.9.8 Constructor 13678
- 66.9.9 Constructor(dic as dictionary) 13678

66.9.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.9.12 find(key as Integer) as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.9.13 first as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
```

```
i.MoveNext
wend
```

66.9.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.9.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.9.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.9.17 last as IntegerToIntegerHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.9.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToIntegerHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.9.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.9.21 Remove(key as Integer) as Integer 13682
- 66.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 13682

66.9.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 13682
- 66.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS) 13682

66.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS) 13682
- 66.9.21 Remove(key as Integer) as Integer 13682

66.9.23 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.9.24 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.9.25 Properties

66.9.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToIntegerHashMapMBS

v.value(1)=10
v.value(2)=20

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.9.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToIntegerHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

66.9.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.9.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.9.30 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.10 class IntegerToIntegerOrderedMapIteratorMBS

66.10.1 class IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToIntegerOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.10.2 Methods

66.10.3 isEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.10.4 isNotEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.10.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.10.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.10.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.10.8 Properties

66.10.9 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.11 class IntegerToIntegerOrderedMapMBS

66.11.1 class IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map for integers for keys and values.
Example:

```
dim s as new IntegerToIntegerHashMapMBS

s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.11.2 Methods

66.11.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.11.4 AddValues(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.11.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.11.6 Clone as IntegerToIntegerOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.11.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.11.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.11.9 Constructor(dic as dictionary) 13689
- 66.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 13690

66.11.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.11.8 Constructor 13689
- 66.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS) 13690

66.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.11.8 Constructor 13689
- 66.11.9 Constructor(dic as dictionary) 13689

66.11.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.11.12 find(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.11.13 first as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
```

```
i.MoveNext
wend
```

66.11.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.11.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.11.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.11.17 last as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.11.18 lookup(key as Integer, defaultvalue as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToIntegerOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.11.19 LowerBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.11.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.11.22 Remove(key as Integer) as Integer 13693
- 66.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 13693

66.11.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 13693
- 66.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS) 13693

66.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS) 13693
- 66.11.22 Remove(key as Integer) as Integer 13693

66.11.24 UpperBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.11.25 ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.11.26 Values as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.11.27 Properties

66.11.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToIntegerOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

66.11.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.11.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.11.31 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.12 class IntegerToStringHashMapIteratorMBS

66.12.1 class IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringHashMap class.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.12.2 Methods

66.12.3 isEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.12.4 isNotEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.12.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.12.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.12.7 Properties

66.12.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.13 class IntegerToStringHashMapMBS

66.13.1 class IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and strings as values.
Example:

```
dim s as new IntegerToStringHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.13.2 Methods

66.13.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.13.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.13.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.13.6 Clone as IntegerToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.13.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.13.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.13.9 Constructor(dic as dictionary) 13700
- 66.13.10 Constructor(other as IntegerToStringHashMapMBS) 13701

66.13.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.13.8 Constructor 13700
- 66.13.10 Constructor(other as IntegerToStringHashMapMBS) 13701

66.13.10 Constructor(other as IntegerToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.13.8 Constructor 13700
- 66.13.9 Constructor(dic as dictionary) 13700

66.13.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.13.12 find(key as Integer) as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.13.13 first as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

66.13.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.13.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.13.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.13.17 last as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.13.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.13.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.13.21 Remove(key as Integer) as Integer 13704
- 66.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 13704

66.13.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 13704
- 66.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 13704

66.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 13704
- 66.13.21 Remove(key as Integer) as Integer 13704

66.13.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.13.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.13.25 Properties

66.13.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToStringHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.13.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToStringHashMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.13.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.13.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.13.30 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.14 class IntegerToStringOrderedMapIteratorMBS

66.14.1 class IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToStringOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.14.2 Methods

66.14.3 isEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.14.4 isNotEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.14.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.14.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.14.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.14.8 Properties

66.14.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.15 class IntegerToStringOrderedMapMBS

66.15.1 class IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integer keys and string values.
Example:

```
dim s as new IntegerToStringOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.15.2 Methods

66.15.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.15.4 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.15.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.15.6 Clone as IntegerToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.15.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.15.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.15.9 Constructor(dic as dictionary) 13711
- 66.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 13712

66.15.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.15.8 Constructor 13711
- 66.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 13712

66.15.10 Constructor(other as IntegerToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.15.8 Constructor 13711
- 66.15.9 Constructor(dic as dictionary) 13711

66.15.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.15.12 find(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.15.13 first as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

66.15.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.15.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.15.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.15.17 last as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.15.18 lookup(key as Integer, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.15.19 LowerBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.15.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.15.22 Remove(key as Integer) as Integer 13715
- 66.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 13715

66.15.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 13715
- 66.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS) 13715

66.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS) 13715
- 66.15.22 Remove(key as Integer) as Integer 13715

66.15.24 UpperBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.15.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.15.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.15.27 Properties

66.15.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToStringOrderedMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.15.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.15.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.15.31 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.16 class IntegerToVariantHashMapIteratorMBS

66.16.1 class IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantHashMap class.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.16.2 Methods

66.16.3 isEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.16.4 isNotEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.16.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.16.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.16.7 Properties

66.16.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.17 class IntegerToVariantHashMapMBS

66.17.1 class IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with integers as keys and variants as values.
Example:

```
dim s as new IntegerToVariantHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.17.2 Methods

66.17.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.17.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.17.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.17.6 Clone as IntegerToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.17.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.17.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.17.9 Constructor(dic as dictionary) 13722
- 66.17.10 Constructor(other as IntegerToVariantHashMapMBS) 13723

66.17.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.17.8 Constructor 13722
- 66.17.10 Constructor(other as IntegerToVariantHashMapMBS) 13723

66.17.10 Constructor(other as IntegerToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.17.8 Constructor 13722
- 66.17.9 Constructor(dic as dictionary) 13722

66.17.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.17.12 find(key as Integer) as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.17.13 first as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

66.17.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.17.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.17.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.17.17 last as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.17.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToVariantHashMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.17.19 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.17.21 Remove(key as Integer) as Integer 13726
- 66.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 13726

66.17.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 13726
- 66.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS) 13726

66.17.22 Remove(pos as IntegerToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.17.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS) 13726
- 66.17.21 Remove(key as Integer) as Integer 13726

66.17.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.17.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new IntegerToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.17.25 Properties

66.17.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new IntegerToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.17.27 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToVariantHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

66.17.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.17.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.17.30 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.18 class IntegerToVariantOrderedMapIteratorMBS

66.18.1 class IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the IntegerToVariantOrderedMap class.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.18.2 Methods

66.18.3 isEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.18.4 isNotEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.18.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.18.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.18.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.18.8 Properties

66.18.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.19 class IntegerToVariantOrderedMapMBS

66.19.1 class IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with integers as keys and variants as values.
Example:

```
dim s as new IntegerToVariantOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" "+s.Value(2) // shows "Hello World"
```

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.19.2 Methods

66.19.3 AddKeys(targetArray() as Integer)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.19.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.19.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.19.6 Clone as IntegerToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.19.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.19.8 Constructor

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
See also:

- 66.19.9 Constructor(dic as dictionary) 13733
- 66.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 13734

66.19.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.19.8 Constructor 13733
- 66.19.10 Constructor(other as IntegerToVariantOrderedMapMBS) 13734

66.19.10 Constructor(other as IntegerToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.19.8 Constructor 13733
- 66.19.9 Constructor(dic as dictionary) 13733

66.19.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.19.12 find(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.19.13 first as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
```

```
i.MoveNext
wend
```

66.19.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.19.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.19.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.19.17 last as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.19.18 lookup(key as Integer, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new IntegerToVariantOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.19.19 LowerBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.19.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.19.22 Remove(key as Integer) as Integer 13737
- 66.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 13737

66.19.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 13737
- 66.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS) 13737

66.19.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.19.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS) 13737
- 66.19.22 Remove(key as Integer) as Integer 13737

66.19.24 UpperBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.19.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.19.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new IntegerToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.19.27 Properties

66.19.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new IntegerToVariantOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)

66.19.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.19.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.19.31 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.20 class StackDoubleMBS

66.20.1 class StackDoubleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of doubles.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

66.20.2 Methods

66.20.3 Bottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Bottom)
```

66.20.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

66.20.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.20.6 Contains(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given double value.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.20.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackDoubleMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
```

66.20.8 Pop as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

66.20.9 PopBottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.PopBottom)
```

66.20.10 Push(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackDoubleMBS

call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

66.20.11 Top as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

Notes: Returns 0 on any error.

66.20.12 Properties

66.20.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackDoubleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.21 class StackIntegerMBS

66.21.1 class StackIntegerMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of integers.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

66.21.2 Methods

66.21.3 Bottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.Bottom)
```

66.21.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

66.21.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.21.6 Contains(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given integer value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.21.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackIntegerMBS

MsgBox str(s.Deep)

call s.Push 5
```

```
MsgBox str(s.Deep)
```

66.21.8 Pop as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.pop)
```

Notes: Returns 0 on any error.

66.21.9 PopBottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.PopBottom)
```

66.21.10 Push(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackIntegerMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

66.21.11 Top as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

66.21.12 Properties

66.21.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackIntegerMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.22 class StackObjectMBS

66.22.1 class StackObjectMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of objects.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

66.22.2 Methods

66.22.3 Bottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.Bottom).title
```

66.22.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

66.22.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.22.6 Contains(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the object references on the stack is equal to the given object reference.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.22.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackObjectMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```

66.22.8 Pop as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.pop).title
```

Notes: Returns nil on any error.

66.22.9 PopBottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.PopBottom).title
```

66.22.10 Push(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
```

Notes:

Returns true if successfull.
May fail on low memory.
Does not push nil.

66.22.11 Top as object

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

Notes: Returns nil on any error.

66.22.12 Properties

66.22.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackObjectMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push window1

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.23 class StackSingleMBS

66.23.1 class StackSingleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of singles.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

66.23.2 Methods

66.23.3 Bottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Bottom)
```

66.23.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

66.23.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.23.6 Contains(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the items on the stack is equal to the given single value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

if s.Contains(5) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.23.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackSingleMBS

MsgBox str(s.Deep)

call s.Push 5
```

MsgBox str(s.Deep)

66.23.8 Pop as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Pop)
```

Notes: Returns 0 on any error.

66.23.9 PopBottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.PopBottom)
```

66.23.10 Push(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackSingleMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

66.23.11 Top as single

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

Notes: Returns 0 on any error.

66.23.12 Properties

66.23.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackSingleMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.24 class StackStringMBS

66.24.1 class StackStringMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of strings.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

66.24.2 Methods

66.24.3 Bottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.bottom
```

66.24.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackStringMBS

call s.Push "abc"

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```

66.24.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.24.6 Contains(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the string references on the stack is equal to the given double reference.
Example:

```
dim s as new StackStringMBS

call s.Push "Hello"

if s.Contains("Hello") then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.24.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackStringMBS

MsgBox str(s.Deep)

call s.Push "Hello"

MsgBox str(s.Deep)
```

66.24.8 Pop as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.pop
```

Notes: Returns "" on any error.

66.24.9 PopBottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.PopBottom
```

66.24.10 Push(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
```

Notes:

Returns true if successfull.
May fail on low memory.

66.24.11 Top as string

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Top
```

Notes: Returns "" on any error.

66.24.12 Properties

66.24.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackStringMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push "Hello"

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.25 class StackVariantMBS

66.25.1 class StackVariantMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a stack of variants.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

66.25.2 Methods

66.25.3 Bottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bottom item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.Bottom
```

66.25.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the stack.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

s.Clear
```

```
if s.IsEmpty then
MsgBox "OK"
end if
```

66.25.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

66.25.6 Contains(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if one of the variant references on the stack is equal to the given variant reference.
Example:

```
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
MsgBox "found. OK"
else
MsgBox "not found. Failed"
end if
```

66.25.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how much items are on the stack.
Example:

```
dim s as new StackVariantMBS

MsgBox str(s.Deep)

call s.Push window1
```

```
MsgBox str(s.Deep)
```

66.25.8 Pop as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the top item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.pop
```

Notes: Returns nil on any error.

66.25.9 PopBottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the bottom item of the stack and returns the value.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

66.25.10 Push(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pushs a value on the stack.
Example:

```
dim s as new StackVariantMBS
call s.Push 5
```

Notes:

Returns true if successfull.
May fail on low memory.

66.25.11 Top as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the top item on the stack.
Example:

```
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.top
```

Notes: Returns nil on any error.

66.25.12 Properties

66.25.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the stack is empty.
Example:

```
dim s as new StackVariantMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)

66.26 class StringHashSetIteratorMBS

66.26.1 class StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringHashSet class.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.26.2 Methods

66.26.3 isEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

66.26.4 isNotEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.26.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.26.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.27 class StringHashSetMBS

66.27.1 class StringHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with strings.
Example:

```
dim s as new StringHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.27.2 Methods

66.27.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.27.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.27.5 Constructor(Keys() as string)

66.27.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
dim s() as string = array("Hello", "World", "test")

dim set as new StringHashSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.27.4 Constructor(CaseSensitive as Boolean = true) 13770

66.27.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.27.7 find(key as string) as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.27.8 first as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
```

```
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.27.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.27.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.27.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.27.12 last as StringHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.27.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new StringHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.27.15 Remove(key as string) as Integer 13774
- 66.27.16 Remove(pos as StringHashSetIteratorMBS) 13774

66.27.15 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 13774
- 66.27.16 Remove(pos as StringHashSetIteratorMBS) 13774

66.27.16 Remove(pos as StringHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.27.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS) 13774
- 66.27.15 Remove(key as string) as Integer 13774

66.27.17 Properties

66.27.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.27.19 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringHashSetMBS(true)
dim s2 as new StringHashSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.27.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new StringHashSetMBS

set.insert "a"
set.insert "b"
```

MsgBox str(set.Count)

Notes: (Read only property)

66.27.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.27.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.28 class StringOrderedSetIteratorMBS

66.28.1 class StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringOrderedSet class.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.28.2 Methods

66.28.3 isEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

66.28.4 isNotEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.28.5 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.28.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.28.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.29 class StringOrderedSetMBS

66.29.1 class StringOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set of strings.
Example:

```
dim s as new StringOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.29.2 Methods

66.29.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.29.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.29.5 Constructor(Keys() as string)

66.29.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Example:

```
dim s() as string = array("Hello", "World", "test")

dim set as new StringOrderedSetMBS(s)

MsgBox str(set.Count)+" entries: "+Join(set.keys,", ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.29.4 Constructor(CaseSensitive as Boolean = true) 13780

66.29.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.29.7 find(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.29.8 first as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
```

```
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.29.9 insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.29.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.29.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.29.12 last as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.29.13 lookup(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new StringOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.29.14 LowerBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.29.16 Remove(key as string) as Integer 13784
- 66.29.17 Remove(pos as StringOrderedSetIteratorMBS) 13784

66.29.16 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 13784
- 66.29.17 Remove(pos as StringOrderedSetIteratorMBS) 13784

66.29.17 Remove(pos as StringOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.29.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS) 13784
- 66.29.16 Remove(key as string) as Integer 13784

66.29.18 UpperBound(key as string) as StringOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.29.19 Properties

66.29.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringOrderedSetMBS(true)
dim s2 as new StringOrderedSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.29.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new StringOrderedSetMBS

set.insert "a"
set.insert "b"

MsgBox str(set.Count)
```

Notes: (Read only property)

66.29.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.29.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.30 class StringToStringHashMapIteratorMBS

66.30.1 class StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringHashMap class.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.30.4 Methods

66.30.5 isEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.30.6 isNotEqual(other as StringToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.30.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.30.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.30.9 Properties

66.30.10 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.31 class StringToStringHashMapMBS

66.31.1 class StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and values.
Example:

```
dim s as new StringToStringHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.31.4 Methods

66.31.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

66.31.6 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.31.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.31.8 Clone as StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.31.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

66.31.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13792
- 66.31.12 Constructor(other as StringToStringHashMapMBS) 13792

66.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

See also:

- 66.31.10 Constructor(CaseSensitive as Boolean = true) 13792
- 66.31.12 Constructor(other as StringToStringHashMapMBS) 13792

66.31.12 Constructor(other as StringToStringHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"
```

```
// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as StringToStringHashMapMBS = m.Clone
MsgBox o.Value("Hello")
```

See also:

- 66.31.10 Constructor(CaseSensitive as Boolean = true) 13792
- 66.31.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13792

66.31.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.31.14 find(key as string) as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.31.15 first as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
```

```
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.31.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.31.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.31.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.31.19 last as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToStringHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.31.20 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToStringHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.31.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.
Example:

```
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as StringToStringHashMapMBS = d
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m
MsgBox o.Value("Hello")
```

66.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.31.23 Remove(key as string) as Integer 13796
- 66.31.24 Remove(pos as StringToStringHashMapIteratorMBS) 13796

66.31.23 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 13796
- 66.31.24 Remove(pos as StringToStringHashMapIteratorMBS) 13796

66.31.24 Remove(pos as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.31.22 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS) 13796
- 66.31.23 Remove(key as string) as Integer 13796

66.31.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.31.26 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.31.27 Properties

66.31.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringToStringHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

66.31.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToStringHashMapMBS(true)
dim s2 as new StringToStringHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.31.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToStringHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"
```

MsgBox str(map.Count)

Notes: (Read only property)

66.31.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.31.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.31.33 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.32 class StringToStringOrderedMapIteratorMBS

66.32.1 class StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToStringOrderedMap class.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.32.4 Methods

66.32.5 isEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.32.6 isNotEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.32.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.32.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.32.9 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.32.10 Properties

66.32.11 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.33 class StringToStringOrderedMapMBS

66.33.1 class StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings for keys and values.
Example:

```
dim s as new StringToStringOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.33.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

66.33.4 Methods

66.33.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

66.33.6 AddValues(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.33.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.33.8 Clone as StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.33.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.33.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13806
- 66.33.12 Constructor(other as StringToStringOrderedMapMBS) 13806

66.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.33.10 Constructor(CaseSensitive as Boolean = true) 13805
- 66.33.12 Constructor(other as StringToStringOrderedMapMBS) 13806

66.33.12 Constructor(other as StringToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.33.10 Constructor(CaseSensitive as Boolean = true) 13805
- 66.33.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13806

66.33.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.33.14 find(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.33.15 first as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS
```

```
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.33.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.33.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.33.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
```

```
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.33.19 last as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToStringOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.33.20 lookup(key as string, defaultvalue as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToStringOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"
```

```
MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.33.21 LowerBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.33.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.33.24 Remove(key as string) as Integer 13809
- 66.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS) 13810

66.33.24 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 13809
- 66.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS) 13810

66.33.25 Remove(pos as StringToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.33.23 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS) 13809
- 66.33.24 Remove(key as string) as Integer 13809

66.33.26 UpperBound(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.33.27 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.33.28 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.33.29 Properties

66.33.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToStringOrderedMapMBS(true)
dim s2 as new StringToStringOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.33.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToStringOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.33.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.33.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.33.34 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.34 class StringToVariantHashMapIteratorMBS

66.34.1 class StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantHashMap class.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.34.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

66.34.4 Methods

66.34.5 isEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.34.6 isNotEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.34.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.34.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.34.9 Properties

66.34.10 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.35 class StringToVariantHashMapMBS

66.35.1 class StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash map with strings as keys and variants as values.
Example:

```
dim s as new StringToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.35.4 Methods

66.35.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.35.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.35.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.35.8 Clone as StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.35.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.35.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13818

- 66.35.12 Constructor(other as StringToVariantHashMapMBS) 13818

66.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.35.10 Constructor(CaseSensitive as Boolean = true) 13817
- 66.35.12 Constructor(other as StringToVariantHashMapMBS) 13818

66.35.12 Constructor(other as StringToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.35.10 Constructor(CaseSensitive as Boolean = true) 13817
- 66.35.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13818

66.35.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.35.14 find(key as string) as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.35.15 first as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.35.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.35.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.35.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.35.19 last as StringToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.35.20 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.35.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.35.23 Remove(key as string) as Integer 13821
- 66.35.24 Remove(pos as StringToVariantHashMapIteratorMBS) 13822

66.35.23 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 13821
- 66.35.24 Remove(pos as StringToVariantHashMapIteratorMBS) 13822

66.35.24 Remove(pos as StringToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.35.22 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 13821
- 66.35.23 Remove(key as string) as Integer 13821

66.35.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.35.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToVariantHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.35.27 Properties

66.35.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new StringToVariantHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.35.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToVariantHashMapMBS(true)
dim s2 as new StringToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.35.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToVariantHashMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.35.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.35.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.35.33 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Example:

```
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": "+v.ValueAtIndex(0)
```

Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.36 class StringToVariantOrderedMapIteratorMBS

66.36.1 class StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the StringToVariantOrderedMap class.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

- MonkeyBread Software Releases the MBS Plugins 8.2

66.36.4 Methods

66.36.5 isEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.36.6 isNotEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.36.7 Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.36.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.36.9 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.36.10 Properties

66.36.11 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.37 class StringToVariantOrderedMapMBS

66.37.1 class StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with strings as keys and variants as values.
Example:

```
dim s as new StringToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.37.4 Methods

66.37.5 AddKeys(targetArray() as string)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys

function returns always nil.

66.37.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.37.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.37.8 Clone as StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.37.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.37.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13832
- 66.37.12 Constructor(other as StringToVariantOrderedMapMBS) 13832

66.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.37.10 Constructor(CaseSensitive as Boolean = true) 13831
- 66.37.12 Constructor(other as StringToVariantOrderedMapMBS) 13832

66.37.12 Constructor(other as StringToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.37.10 Constructor(CaseSensitive as Boolean = true) 13831
- 66.37.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13832

66.37.13 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.37.14 find(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.37.15 first as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS
```

```
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.37.16 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.37.17 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.37.18 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
```

```
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.37.19 last as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

66.37.20 lookup(key as string, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new StringToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"
```

```
MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.37.21 LowerBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.37.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.37.24 Remove(key as string) as Integer 13835
- 66.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS) 13836

66.37.24 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 13835
- 66.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS) 13836

66.37.25 Remove(pos as StringToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.37.23 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS) 13835
- 66.37.24 Remove(key as string) as Integer 13835

66.37.26 UpperBound(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.37.27 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.37.28 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
dim m as new StringToVariantOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.37.29 Properties

66.37.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new StringToVariantOrderedMapMBS(true)
dim s2 as new StringToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.37.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new StringToVariantOrderedMapMBS

map.Value("?")="?"
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.37.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.37.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.37.34 value(key as string) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.38 class VariantHashSetIteratorMBS

66.38.1 class VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantHashSet class.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.38.2 Methods

66.38.3 isEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

66.38.4 isNotEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.38.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.38.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.39 class VariantHashSetMBS

66.39.1 class VariantHashSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for a hash set with variants.
Example:

```
dim s as new VariantHashSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes:

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.39.2 Methods

66.39.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.39.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:

- 66.39.5 Constructor(Keys() as string) 13843
- 66.39.6 Constructor(Keys() as Variant) 13843

66.39.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.39.4 Constructor(CaseSensitive as Boolean = true) 13842
- 66.39.6 Constructor(Keys() as Variant) 13843

66.39.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.39.4 Constructor(CaseSensitive as Boolean = true) 13842
- 66.39.5 Constructor(Keys() as string) 13843

66.39.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.39.8 find(key as Variant) as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.39.9 first as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.39.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.39.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.39.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new VariantHashSetMBS

m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.39.13 last as VariantHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.39.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new VariantHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.39.16 Remove(key as Variant) as Integer 13846
- 66.39.17 Remove(pos as VariantHashSetIteratorMBS) 13846

66.39.16 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 13846
- 66.39.17 Remove(pos as VariantHashSetIteratorMBS) 13846

66.39.17 Remove(pos as VariantHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.39.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 13846

• 66.39.16 Remove(key as Variant) as Integer 13846

66.39.18 Properties

66.39.19 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new VariantHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.39.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantHashSetMBS(true)
dim s2 as new VariantHashSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.39.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new VariantHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

66.39.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.39.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.40 class VariantOrderedSetIteratorMBS

66.40.1 class VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantOrderedSet class.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.40.2 Methods

66.40.3 isEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend
```

66.40.4 isNotEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.40.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.40.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.40.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.41 class VariantOrderedSetMBS

66.41.1 class VariantOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered set with variants.
Example:

```
dim s as new VariantOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

Notes:

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

66.41.2 Methods

66.41.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.41.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:

- 66.41.5 Constructor(Keys() as string) 13853
- 66.41.6 Constructor(Keys() as Variant) 13853

66.41.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.41.4 Constructor(CaseSensitive as Boolean = true) 13852
- 66.41.6 Constructor(Keys() as Variant) 13853

66.41.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new set from the values in the array.
Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 66.41.4 Constructor(CaseSensitive as Boolean = true) 13852
- 66.41.5 Constructor(Keys() as string) 13853

66.41.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this set.

66.41.8 find(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.41.9 first as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the set.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.41.10 insert(key as Variant)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value to the set.

66.41.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.41.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
dim m as new VariantOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.41.13 last as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the set.
Example:

```
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

66.41.14 lookup(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether an element with the given key exists in this set.
Example:

```
dim set as new VariantOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

Notes: Returns true if yes and false if no.

66.41.15 LowerBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.41.17 Remove(key as Variant) as Integer 13856
- 66.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 13857

66.41.17 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 13856
- 66.41.18 Remove(pos as VariantOrderedSetIteratorMBS) 13857

66.41.18 Remove(pos as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.41.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS) 13856
- 66.41.17 Remove(key as Variant) as Integer 13856

66.41.19 UpperBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.41.20 Properties

66.41.21 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantOrderedSetMBS(true)
dim s2 as new VariantOrderedSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.41.22 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this set.
Example:

```
dim set as new VariantOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.Count)
```

Notes: (Read only property)

66.41.23 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.41.24 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this set.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.42 class VariantToVariantHashMapIteratorMBS

66.42.1 class VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantHashMap class.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.42.4 Methods

66.42.5 isEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.42.6 isNotEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.42.7 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.42.8 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.42.9 Properties

66.42.10 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.43 class VariantToVariantHashMapMBS

66.43.1 class VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an hash map with variants and keys and values.
Example:

```
dim s as new VariantToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

Think of this class like the reimplementation for dictionary class with being case sensitive.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.43.4 Methods

66.43.5 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.43.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.43.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.43.8 Clone as VariantToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.43.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.43.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13864
- 66.43.12 Constructor(other as VariantToVariantHashMapMBS) 13864

66.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.43.10 Constructor(CaseSensitive as Boolean = true) 13863
- 66.43.12 Constructor(other as VariantToVariantHashMapMBS) 13864

66.43.12 Constructor(other as VariantToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.43.10 Constructor(CaseSensitive as Boolean = true) 13863
- 66.43.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13864

66.43.13 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.43.14 find(key as Variant) as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.43.15 first as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.43.16 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.43.17 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.43.18 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.43.19 last as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.43.20 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new VariantToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.43.21 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.43.23 Remove(key as Variant) as Integer 13867
- 66.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS) 13868

66.43.23 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 13867
- 66.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS) 13868

66.43.24 Remove(pos as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.43.22 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS) 13867
- 66.43.23 Remove(key as Variant) as Integer 13867

66.43.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.43.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.43.27 Properties

66.43.28 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bins the hash table uses.
Example:

```
dim v as new VariantToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes:

This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

66.43.29 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantToVariantHashMapMBS(true)
dim s2 as new VariantToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.43.30 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new VariantToVariantHashMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.43.31 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.43.32 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.43.33 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

66.44 class VariantToVariantMapIteratorMBS

66.44.1 class VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The iterator for the VariantToVariantMap class.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.44.2 Methods

66.44.3 isEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are equal.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last
```

```
// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.44.4 isNotEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if both iterators are not equal.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.44.5 Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the current key.

66.44.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the next item.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.44.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to the previous item.

66.44.8 Properties

66.44.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)

66.45 class VariantToVariantOrderedMapMBS

66.45.1 class VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An alternative dictionary class for an ordered map with variants as keys and values.
Example:

```
dim s as new VariantToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

Notes:

Think of this class like the reimplementation for dictionary class with being case sensitive and with storing items ordered.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

66.45.2 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

66.45.3 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

66.45.4 Methods

66.45.5 AddKeys(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to keys, but adds keys to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.45.6 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to values, but adds values to the given array.
Notes: For older Xojo version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.

66.45.7 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all of the elements.

66.45.8 Clone as VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map.

66.45.9 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of this map as a dictionary.

66.45.10 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 66.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13876
- 66.45.12 Constructor(other as VariantToVariantOrderedMapMBS) 13876

66.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the dictionary.
See also:

- 66.45.10 Constructor(CaseSensitive as Boolean = true) 13875
- 66.45.12 Constructor(other as VariantToVariantOrderedMapMBS) 13876

66.45.12 Constructor(other as VariantToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new map with the keys and values from the existing map.
See also:

- 66.45.10 Constructor(CaseSensitive as Boolean = true) 13875
- 66.45.11 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 13876

66.45.13 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts how often a key is used in this map.

66.45.14 find(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the key and returns an interator.
Notes: Returns the same value as the last method if the item was not found.

66.45.15 first as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the beginning of the map.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.45.16 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

66.45.17 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.45.18 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the keys as an array.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
MsgBox v
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

66.45.19 last as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator pointing to the end of the map.
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend
```

66.45.20 lookup(key as Variant, defaultvalue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks up the passed value of Key.
Example:

```
dim map as new VariantToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!"

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

66.45.21 LowerBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is not less than k.

66.45.22 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the map as dictionary.

66.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases all elements in a range.
See also:

- 66.45.24 Remove(key as Variant) as Integer 13880
- 66.45.25 Remove(pos as VariantToVariantMapIteratorMBS) 13880

66.45.24 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element with the given key.
See also:

- 66.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 13879
- 66.45.25 Remove(pos as VariantToVariantMapIteratorMBS) 13880

66.45.25 Remove(pos as VariantToVariantMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Erases the element pointed to by the pos iterator.
See also:

- 66.45.23 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS) 13879
- 66.45.24 Remove(key as Variant) as Integer 13880

66.45.26 UpperBound(key as Variant) as VariantToVariantMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an iterator for the first element whose key is greater than k.

66.45.27 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

66.45.28 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all the values as an array
Example:

```
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

66.45.29 Properties

66.45.30 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether text/string comparison is case sensitive.
Example:

```
dim s1 as new VariantToVariantOrderedMapMBS(true)
dim s2 as new VariantToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

66.45.31 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of items in this map.
Example:

```
dim map as new VariantToVariantOrderedMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)
```

Notes: (Read only property)

66.45.32 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the size is zero.
Notes: (Read only property)

66.45.33 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the largest possible size for this map.
Notes:

Value is -1 if no limit is defined.
(Read only property)

66.45.34 value(key as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value associated with the given key.
Notes:

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)

Chapter 67

DDE

67.1 class DDEBinaryDataMBS

67.1.1 class DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binary Data for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

67.1.2 Methods

67.1.3 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a memoryblock.

67.1.4 size as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the size of this data object.

67.1.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data as a string.

67.1.6 Properties

67.1.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

67.1.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

67.2 class DDEContextInfoMBS

67.2.1 class DDEContextInfoMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Details for a connection.

67.2.2 Properties

67.2.3 Ansi as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Ansi strings (the normal ones).
Notes:

Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

67.2.4 CountryID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The country ID for this connection.
Notes:

Some Windows country constants:

(Read and Write property)

67.2.5 Flags as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for this connection.
Notes:

Currently not used by Windows.
(Read and Write property)

67.2.6 LangID as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language ID for this connection.
Notes:

Some Windows language constants:

(Read and Write property)

67.2.7 Security as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A user defined security code.
Notes:

A security value, which may be anything you need.
Maybe a code to verify that it is your app or the encryption code?
(Read and Write property)

67.2.8 Unicode as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the other side works with Unicode strings.
Notes:

Currently this DDEMBS Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.
(Read and Write property)

67.3 class DDEMBS

67.3.1 class DDEMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gives access to Windows DDE functions.
Notes: DDE on Windows is like AppleEvents on Mac OS, but not so comfortable.

67.3.2 Methods

67.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransaction with datatype=CF_TEXT and data=nil.
See also:

- 67.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 13889
- 67.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 13889

67.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Shortversion of ClientTransaction with datatype=CF_TEXT.
See also:

- 67.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 13889
- 67.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS 13889

67.3.5 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Example:

```
// List all Excel Topics

dim d as DDEMBS
dim s,topic as DDEStringMBS
dim g as DDEStringMBS
dim m as DDEBinaryDataMBS
dim t,enter,z as string
dim i,c as Integer

list.deleteAllRows
d=new DDEMBS
if d.InitClient then
s=d.newDDEString("Excel")
topic=d.newDDEString("System")
if topic<>nil and s<>nil and d.ConnectToServer(s,topic) then
g=d.newDDEString("Topics")
if g<>nil then
m=d.ClientTransaction(d.XTYP_REQUEST,g)
if m<>nil then
t=m.str
t=left(t,len(t)-1) // remove chr(0) at end
enter=chr(9)
c=countfields(t,Enter)
for i=1 to c
z=nthfield(t,enter,i)

list.addRow z
next
list.listindex=0
else
msgBox "Failed to transfer."
end if
else
msgBox "Fail to create second string."
end if
g=nil // must be released before close
else
msgBox "Fail to create connect."
end if
s=nil // must be released before close
d.close
else
msgBox "Fail to init for Client."
end if
```

Notes:

Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 67.3.3 clientTransaction(type as Integer,topic as DDEStringMBS) as DDEBinaryDataMBS 13889
- 67.3.4 clientTransaction(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS 13889

67.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with datatype=CF_TEXT and data=nil.
See also:

- 67.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 13891
- 67.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 13891

67.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes: Short version of ClientTransactionBoolean with Datatype=CF_TEXT.
See also:

- 67.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 13891
- 67.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean 13891

67.3.8 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a Transaction with the server.
Notes:

Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 67.3.6 clientTransactionBoolean(type as Integer,topic as DDEStringMBS) as Boolean 13891
- 67.3.7 clientTransactionBoolean(type as Integer,topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean 13891

67.3.9 close

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the running connection.
Example:

```
dim d as DDEMBS
// work with dde object

if d<>nil then
d.close
d=nil
end if
```

Notes: RB seems to crash, if the object is not destroyed before application is quit.

67.3.10 ConnectToServer(appname as DDEStringMBS, topic as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects to the application for the given topic.
Example:

```
dim a,b as DDEStringMBS
dim d as DDEMBS

d=new DDEMBS
if d.InitClient then
a=d.newDDEString("servicename")
b=d.newDDEString("topicname")
```

```
if a<>nil and b<>nil then
if d.ConnectToServer(a,b) then
msgBox "Connected."
return // ok, so leave before closing.
else
msgBox "Failed to connect."
end if
else
msgBox "Unable to make DDE Strings."
end if
d.close // failed

else
msgBox "Failed to initClient."
end if
```

Notes:

Using nil for appname or topic you can try to connect to anyone who accepts.
Renamed in v4.3 to ConnectToServer from Connect for better RB 6 compatibility.

67.3.11 InitClient as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE, but only for Client stuff.
Notes:

With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

67.3.12 InitServer as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Starts DDE for client and server stuff.
Notes:

With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

67.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
See also:

- 67.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 13894
- 67.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 13894

67.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: A short version of NewDDEBinaryData which takes the whole string.
See also:

- 67.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 13894
- 67.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS 13894

67.3.15 NewDDEBinaryData(name as DDEStringMBS,data as string,offset as Integer,length as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new binary data object.
Notes: The offset and length is optional.
See also:

- 67.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS 13894
- 67.3.14 NewDDEBinaryData(name as DDEStringMBS,data as string) as DDEBinaryDataMBS 13894

67.3.16 NewDDEString(ansistring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new ANSI DDE string.
Example:

```
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.newDDEString("servicename")
```

Notes: ANSI is the normal string encoding on Windows.

67.3.17 NewDDEStringUnicode(unicodestring as string) as DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Unicode DDE string.
Example:

```
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.NewDDEStringUnicode("servicename")
```

Notes: Currently this DDE Classes are only tested for ANSI Systems. And I'm not sure if Xojo itself does handle Unicode correctly on Windows.

67.3.18 RegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers a service name.
Example:

```
dim d as DDEMBS // your dde object
dim s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.registerService(s) then
msgBox "Registered."
else
msgBox "Register fails."
end if
else
```

```
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

67.3.19 UnRegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Unregisters a service name.
Example:

```
dim d as DDEMBS // your dde object
dim s as DDEStringMBS

if d<>nil then
s=d.newDDEString(editfield1.text)

if s<>nil then
if d.UnRegisterService(s) then
msgBox "Unregistered."
else
msgBox "Unregister fails."
end if
else
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object!?"
end if
```

67.3.20 Properties

67.3.21 LastError as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read only property)

67.3.22 Timeout as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Timeout in milliseconds.
Example:

```
dim d as DDEMBS // your DDE object
d.timeout=10000 // 10 Seconds
```

Notes:

Default is 1000.
(Read and Write property)

67.3.23 Events

67.3.24 AdviceData(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) client receives the AdviceData event after establishing an advise loop with a server. This transaction informs the client that the value of the data item has changed.

Return Values:
A DDE callback function should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

Remarks:
An application must copy the data associated with the DDEBinaryDataMBS object if the application must process the data after the callback function returns.

67.3.25 AdviceRequest(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer,remaincount as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

The system sends the AdviceRequest event to a server after the server calls the DdePostAdvise function. This transaction informs the server that an advise transaction is outstanding on the specified topic name and item name pair and that data corresponding to the topic name and item name pair has changed.

Return Values:
The server should first call the NewDDEBinaryData function to create a data object that identifies the changed data and then return this object. The server should return nil if it is unable to complete the transaction.

67.3.26 AdviceStart(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer) as Boolean

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A client uses this event to establish an advise loop with a server.

67.3.27 AdviceStop(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A client uses this event to end an advise loop with a server.

67.3.28 ConfirmConnect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: Your connection was accepted.

67.3.29 Connect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean,info as DDEContextInfoMBS) as Boolean

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: Return true if you accept this connection.

67.3.30 Disconnect(myself as Boolean)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: The connection was closed.

67.3.31 Error(errorcode as Integer)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) object receives the Error event when a critical error occurs.

Possible errors:

DMLERR_ADVACKTIMEOUT	& h4000	
DMLERR_BUSY	& h4001	
DMLERR_DATAACKTIMEOUT	& h4002	
DMLERR_DLL_NOT_INITIALIZED	& h4003	
DMLERR_DLL_USAGE	& h4004	
DMLERR_EXECACKTIMEOUT	& h4005	
DMLERR_INVALIDPARAMETER	& h4006	
DMLERR_LOW_MEMORY	& h4007	Memory is low; advise, poke, or execute data may be lost, or the system may fail.
DMLERR_MEMORY_ERROR	& h4008	
DMLERR_NOTPROCESSED	& h4009	
DMLERR_NO_CONV_ESTABLISHED	& h400a	
DMLERR_POKEACKTIMEOUT	& h400b	
DMLERR_POSTMSG_FAILED	& h400c	
DMLERR_REENTRANCY	& h400d	
DMLERR_SERVER_DIED	& h400e	
DMLERR_SYS_ERROR	& h400f	
DMLERR_UNADVACKTIMEOUT	& h4010	
DMLERR_UNFOUND_QUEUE_ID	& h4011	

67.3.32 Execute(topic as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

A dynamic data exchange (DDE) server object receives the Execute event when a client specifies XTYP_EXECUTE in the ClientTransaction function. A client uses this transaction to send a command string to the server.

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

The data property is only valid while inside the event.

67.3.33 Poke(topic as DDEStringMBS,item as DDEStringMBS,data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes:

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

67.3.34 Register(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A service is registered. You may add it to your own list.

67.3.35 Request(topic as DDEStringMBS,item as DDEStringMBS,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: The server should create a DDEBinaryDataMBS object that identifies the data and then return this object. The server should return nil if it is unable to complete the transaction. If the server returns nil, the client will receive a DDE_FNOTPROCESSED flag.

67.3.36 UnRegister(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A service was unregistered.

67.3.37 WildConnect(topic as DDEStringMBS,service as DDEStringMBS, myself as boolean,info as DDEContextInfoMBS) as DDEStringPairListMBS

MBS Win Plugin, Platform: Windows, Targets: .

Function: One of the DDE events.
Notes: A connection is tried to all available servers. Return true if you accept.

67.3.38 Constants

67.3.39 CF_BITMAP = 2

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies a Windows bitmap format

67.3.40 CF_DIB = 8

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Device Independent Bitmap (DIB) format.

67.3.41 CF_DIBV5 = 17

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Device Independent Bitmap (DIB) format of Windows 2000 and newer.

67.3.42 CF_DIF = 5

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows data interchange format.

67.3.43 CF_ENHMETAFILE = 14

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows enhanced metafile format.

67.3.44 CF_HDROP = 15

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows file drop format.

67.3.45 CF_LOCALE = 16

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows locale format.

67.3.46 CF_METAFILEPICT = 3

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows metafile format.

67.3.47 CF_OEMTEXT = 7

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard Windows original equipment manufacturer (OEM) text format.

67.3.48 CF_PALETTE = 9

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows Palette format.

67.3.49 CF_PENDATA = 10

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows pen data format.

67.3.50 CF_RIFF = 11

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Resource Interchange File Format (RIFF) audio format.

67.3.51 CF_SYLK = 4

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Windows symbolic link format.

67.3.52 CF_TEXT = 1

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard American National Standards Institute (ANSI) text format.

67.3.53 CF_TIFF = 6

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the Tagged Image File Format (TIFF).

67.3.54 CF_UNICODETEXT = 13

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the standard Windows Unicode text format.

67.3.55 CF_WAVE = 12

MBS Win Plugin.

Function: A constant for the format parameter.
Notes: Specifies the wave audio format.

67.3.56 DDE_FACK = & h8000

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FACK if everything was handled well.

67.3.57 DDE_FBUSY = & h4000

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FBUSY if your application is busy and can't currently handle the request.

67.3.58 DDE_FNOTPROCESSED = 0

MBS Win Plugin.

Function: A constant for the return parameter of some events.
Notes: Return DDE_FNOTPROCESSED if something went wrong will processing this event.

67.3.59 XTYP_EXECUTE = & h4050

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

67.3.60 XTYP_POKE = & h4090

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

67.3.61 XTYP_REQUEST = & h20B0

MBS Win Plugin.

Function: A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

67.4 class DDEStringMBS

67.4.1 class DDEStringMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string for DDEMBS conversation.
Notes: Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

67.4.2 Methods

67.4.3 Len as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the length of this string.

67.4.4 Mem as memoryblock

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo Memoryblock.

67.4.5 Str as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the content of this DDEMBS String as Xojo string.

67.4.6 Properties

67.4.7 Handle as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for this data.
Notes: (Read and Write property)

67.4.8 Release as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the destructor will release the data handle or not.
Notes: (Read and Write property)

67.5 class DDEStringPairListMBS

67.5.1 class DDEStringPairListMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A list of DDE string pairs.
Notes: Used for the wild connect event.

67.5.2 Methods

67.5.3 Append(item as DDEStringPairMBS)

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds another item to the list.

67.5.4 Count as Integer

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Counts the number of items in the list.

67.5.5 Item(index as Integer) as DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an item from this list.
Notes:

Returns nil on any error.
Index is from 0 to count-1.

67.6 class DDEStringPairMBS

67.6.1 class DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A pair of topic and service DDEString objects.
Notes: Used for the wild connect event.

67.6.2 Properties

67.6.3 Service as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The service of this pair.
Notes: (Read and Write property)

67.6.4 Topic as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The topic of this pair.
Notes: (Read and Write property)

Chapter 68

Declare

68.1 class BlockMBS

68.1.1 class BlockMBS

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: A class to use blocks on Mac OS X with declares.

68.1.2 Blog Entries

- Three new controls for iOS in Xojo
- MBS Xojo / Real Studio plug-ins version 16.2
- MBS Xojo / Real Studio Plugins, version 16.2pr6
- MBS Xojo / Real Studio Plugins, version 13.4pr4

68.1.6 Methods

68.1.7 Close

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Releases all blocks.

68.1.8 GetBlockB(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockB event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

68.1.9 GetBlockBI(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

68.1.10 GetBlockBII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

68.1.11 GetBlockBIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

68.1.12 GetBlockBIIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockBIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

68.1.13 GetBlockV(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.

Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockV event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

68.1.14 GetBlockVI(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

68.1.15 GetBlockVII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

68.1.16 GetBlockVIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

68.1.17 GetBlockVIIII(tag as Variant = nil) as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Returns the address of a block to pass to a declare.
Notes:

Tag is passed to the event.
Later when the block is invoked, the BlockVIIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

68.1.18 Properties

68.1.19 AsyncBoolResult as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The result for a boolean block called on a non main thread.
Notes:

If you use one of the BlockB methods to get a block and it's called on another thread but the main thread, we return the value of this property instead of the actual event result.
(Read only property)

68.1.20 Synchronous as Boolean

MBS MacFrameworks Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Whether to call events synchronously.
Notes:

If the block is called on another thread, the plugin calls the event on the main thread.
If Synchronous is true, we call the main thread synchronously, else asynchronously.
Default is asynchronously to avoid dead locks.
(Read and Write property)

68.1.21 Events

68.1.22 BlockB(Async_ as boolean, tag as Variant) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed

back AsyncBoolResult for you before this event is called.

68.1.23 BlockBI(Async_ as boolean, tag as Variant, value as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

68.1.24 BlockBII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

68.1.25 BlockBIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed

back AsyncBoolResult for you before this event is called.

68.1.26 BlockBIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

68.1.27 BlockV(Async_ as boolean, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.

68.1.28 BlockVI(Async_ as boolean, tag as Variant, value as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

68.1.29 BlockVII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

68.1.30 BlockVIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

68.1.31 BlockVIIII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: Called when block is invoked.
Notes:

Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

68.2 class SoftDeclareMBS

68.2.1 class SoftDeclareMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A way to do soft linking to libraries.
Example:

```
// Load the Stuffit Bundle on Mac OS X:
dim f as FolderItem
dim s as SoftDeclareMBS

f=FrameworksFolderMBS(-32765).Child("StuffIt.framework")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "ok"
end if
```

Notes:

Deprecated. Please move to newer DeclareLibraryMBS and DeclareFunctionMBS classes.

You can make a declare like this:

Declare Function SpeakString lib "SpeechLib" (SpeakString as pstring) as Integer

But what if the SpeechLib is not installed?
Simple, but your application won't even launch on this machine.
Now you can of course use this MBS Plugin using the SpeechMBS functions, which are all week linked.
But you can also use this class to weak link to the SpeechMBS library like this:

```
dim b as boolean, m,p as memoryblock, c as SoftDeclareMBS

c=new SoftDeclareMBS
p=newmemoryBlock(256) // make the string for the first parameter
p.pstring(0)="Hello World!"

m=newmemoryBlock(4) // make the memoryblock for the parameters
m.long(0)=p.Address(0) // set the first parameter to the address of the string buffer

if c.loadlibrary("SpeechLib") then // Load librarys
if c.loadfunction("SpeakString") then // Load function
```

```
b=c.Call(1,m)
end if
end if
```

This way your application will be loaded, you can call the function, but people who don't have the SpeechLib will also here it.

68.2.2 Blog Entries

68.2.6 Methods

68.2.7 CallFunction(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
dim c as SoftDeclareMBS
dim m,p,b as memoryBlock
dim f as folderItem
dim path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
```

```
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction("iii",m) then
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 68.2.8 CallFunction(paramcount as Integer,data as memoryblock) as boolean 13921

68.2.8 CallFunction(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function.
Example:

```
dim c as SoftDeclareMBS
dim m,p,b as memoryBlock
dim f as folderItem
dim path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.NativePath

MsgBox path

b=newmemoryBlock(1024)
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction(3,m) then
msgbox "Short path is: "+b.cstring(0)
else
msgbox "Failed to call function."
end if
else
msgbox "Loading of function "+c.FunctionName+" failed."
end if
else
msgbox "Loading of Kernel32 failed."
end if
```

Notes:

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin. You can even use only one memoryblock for all 3 parameters in the example like this:

m=newmemoryBlock(2100)
m.cstring(1024)=path
m.long(0)=m.address(20)
m.long(4)=m.address(1024)
m.long(8)=1024

First 12 bytes for the parameter table, the next 1000 bytes for the result buffer and finally a thousand bytes for the input string.

Before RB 3.1 this function was named "Call", but RB5 requires that the word "Call" is no longer valid for a function name.

Softdeclare is limited to only 6 parameters for plugin version 3.2. Plugin version 3.3 extends this to 8 parameters.
See also:

- 68.2.7 CallFunction(param as string,data as memoryblock) as boolean 13920

68.2.9 CallFunctionDouble(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 68.2.10 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean 13923

68.2.10 CallFunctionDouble(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns a double value.
Notes:

Fills the ResultDouble property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

- 68.2.9 CallFunctionDouble(param as string,data as memoryblock) as boolean 13923

68.2.11 CallFunctionInteger64(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 68.2.12 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean 13924

68.2.12 CallFunctionInteger64(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns an integer value.
Notes:

Fills the ResultInt64 property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:

- 68.2.11 CallFunctionInteger64(param as string,data as memoryblock) as boolean 13924

68.2.13 CallMethod(param as string,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 68.2.14 CallMethod(paramcount as Integer,data as memoryblock) as boolean 13925

68.2.14 CallMethod(paramcount as Integer,data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calls a function which returns no value.
Notes:

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
Returns true on success.
See also:

- 68.2.13 CallMethod(param as string,data as memoryblock) as boolean 13925

68.2.15 CopyLibrary(byref target as SoftDeclareMBS)

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the library handle to another softdeclare object.
Notes:

if target is nil, a new object is created.
The library handle in the target object is set to point to the same library as the original object.

68.2.16 FreeLibrary as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Releases the library.
Notes:

Only for Windows currently this function releases the handles and unloads the library. Windows internally has a reference counter for the library so memory is only released when the last reference is freed.
Lasterror is set.

68.2.17 LoadConstant(constname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a constant from inside the library.
Example:

```
dim c as SoftDeclareMBS
dim s as CFStringMBS
dim m as MemoryBlock
dim handle as Integer

// Test Mac OS X
// Load the constant kABFirstNameProperty from the Addressbook framework

c=new SoftDeclareMBS

if c.LoadFramework("Addressbook.framework") then
msgbox "Loaded "+c.libname+" to "+format(c.libhandle,"-0")+"."
if c.LoadConstant("kABFirstNameProperty") then
msgbox "Loaded constant "+c.ConstantName+" to "+format(c.ConstantPointer,"-0")+"."

m=NewMemoryBlockFromPtrMBS(c.ConstantPointer) // I hope it's not nil!

handle=m.Long(0)
if handle<>0 then
s=new CFStringMBS
s.Handle=handle

msgbox "Got value: "+s.str
end if
else
msgbox "Loading of constant "+c.ConstantName+" failed."
end if
else
msgbox "Loading of Addressbook.framework failed."
```

end if

Notes: Lasterror is set.

68.2.18 LoadDLL(libname as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: Windows, Targets: All.

Function: Loads a Windows DLL.
Notes:

Lasterror is set.
libname can be name (e.g. "KERNEL32"), filename (e.g. "KERNEL32.DLL") or path (e.g. "C:\WINDOWS\KERNEL32.DLL").

68.2.19 LoadDLLfromMemory(data as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platform: Windows, Targets: All.

Function: Loads a Windows DLL from a string.
Notes:

Some libraries don't like to be loaded from a string.
But else you can pass any DLL file content to this function.

The string is locked so it stays in memory.
On success the handle property is not zero and the function returns true.

68.2.20 LoadDylib(path as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a library in Mac OS X dylib format.
Notes: Lasterror and Liberror are set.

68.2.21 LoadFramework(frameworkfilename as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Loads a framework in Mac OS X.
Example:

```
// A user's question:
// I am trying to call this to Carbon.framework using the softdeclare function:

// UInt32 SwapQDTextFlags(UInt32 newFlags);

// flags are OR'd

// kQDUseDefaultTextRendering = 0
// kQDUseTrueTypeScalerGlyphs = (1 «0)
// kQDUseCGTextRendering = (1 «1)
// kQDUseCGTextMetrics = (1 «2)
// kQDDontChangeFlags = 0xFFFFFFFF

// The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTE-Field). How should I call this?

// The solution code:

dim s as SoftDeclareMBS
dim m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadFramework("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if

// Without any error checking!
```

Notes:

frameworkfilename is e.g. "Carbon.framework"
Lasterror is set.

68.2.22 LoadFrameworkFile(frameworkpath as folderitem) as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Loads on Mac OS X a framework from the given file specification.
Example:

```
dim f as FolderItem
dim s as SoftDeclareMBS

f=SpecialFolder.Desktop.Child("spellcheck.bundle")
s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
MsgBox "OK"
end if
```

Notes:

Returns true if successfull.
Lasterror is set.

68.2.23 LoadFunction(funcname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a function from inside the library.
Example:

```
dim s as SoftDeclareMBS
dim m as MemoryBlock

const flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadLibrary("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if
```

Notes:

A user's question:
I am trying to call this to Carbon.framework using the softdeclare function:

UInt32 SwapQDTextFlags(UInt32 newFlags);

flags are OR'd

kQDUseDefaultTextRendering = 0
kQDUseTrueTypeScalerGlyphs = (1 «0)
kQDUseCGTextRendering = (1 «1)
kQDUseCGTextMetrics = (1 «2)
kQDDontChangeFlags = 0xFFFFFFFF

The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTEField).
How should I call this?

The solution code is above without any error checking!

Lasterror is set.

68.2.24 LoadLibrary(libname as string) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes:

On Mac OS X e.g. "Carbon.framework" or "System.framework".
On Mac OS Carbon inside Classic e.g. "CarbonLib".
On Windows e.g. "KERNEL32" or "USER32".

Lasterror is set.

68.2.25 ParametersSupported(param as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether plugin supports the given parameter string.

Notes:

The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

Any new parameter string can be added. Please send an email to support to get a new combination added.

68.2.26 Properties

68.2.27 CallingMode as Integer

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What calling mode to use.
Notes:

0 = Pascal (default)
1 = C

The Windows API works with Pascal, but calls to QuickTime DLL use C.
(Read and Write property)

68.2.28 ConstantFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the constant loaded?
Notes:

Set by the LoadConstant function.
(Read and Write property)

68.2.29 ConstantName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the constant to load.
Notes:

Set by the LoadConstant function.
(Read and Write property)

68.2.30 ConstantPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the constant loaded.
Notes:

Set by the LoadConstant function.
(Read and Write property)

68.2.31 FunctionFound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the function loaded?
Notes:

Set by the LoadFunction function.
(Read only property)

68.2.32 FunctionName as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function to load.
Notes:

Set by the LoadFunction function.
(Read and Write property)

68.2.33 FunctionPointer as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer of the function loaded.
Notes:

Set by the LoadFunction function.
(Read and Write property)

68.2.34 Lasterror as Integer

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

LoadLibraryFile, LoadLibrary, LoadFunction, LoadConstant and FreeLibrary set this property.
(Read and Write property)

68.2.35 Liberror as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: An error message from loadlibrary.
Notes:

Set by the LoadLibrary function.
(Read and Write property)

68.2.36 Libfound as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Was the library loaded?
Notes:

Set by the LoadLibrary function.
(Read only property)

68.2.37 Libhandle as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle of the library loaded.
Notes:

Set by the LoadLibrary function.
On Mac OS Classic a CFragConnectionID.
On Mac OS X a CFBundleRef.
On Windows a HINSTANCE.
(Read and Write property)

68.2.38 Libname as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the library to load.
Notes:

Set by the LoadLibrary function.
(Read and Write property)

68.2.39 Result as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function.
Notes:

Set by the Call function.
(Read and Write property)

68.2.40 ResultDouble as Double

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionDouble.
Notes: (Read and Write property)

68.2.41 ResultInt64 as MemoryBlock

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The result of the call function CallFunctionInteger64.
Example:

```
dim s as SoftDeclareMBS
dim m as MemoryBlock

s=new SoftDeclareMBS
if s.LoadDLL("test64bit.dll") then
if s.LoadFunction("Get64bitNumber") then
if s.CallFunctionInteger64(0,nil) then
MsgBox hex(s.ResultInt64.long(4))+hex(s.ResultInt64.long(0))
end if
end if
end if

' DLL was created with a function like this:
' IMPEXP long long Get64bitNumber()
```

```
' {
' return 0x1122334455667788;
' }
```

Notes: (Read and Write property)

Chapter 69

DirectShow

69.1 class DirectShowAMCameraControlMBS

69.1.1 class DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface provides local or remote control over a camera.
Example:

```
dim srcFilter as DirectShowBaseFilterMBS // your device
dim a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
dim ZoomMin as integer
dim ZoomMax as integer
dim ZoomStep as integer
dim ZoomDefault as Integer
dim ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
dim ErrorCode as integer = a.Lasterror
dim ErrorText as string = a.LasterrorMessage

Break // check in debugger

// set a minimum value
a.Set(a.kPropertyZoom, (ZoomMax-ZoomMin)/2, 0)
ErrorCode = a.Lasterror
ErrorText = a.LasterrorMessage

Break // check in debugger
```

Notes:

Applications can use this interface to control camera settings such as zoom, pan, aperture adjustment, or shutter speed. To obtain this interface, query the filter that controls the camera.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.1.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Real Studio Plugins, version 12.4pr9

69.1.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr4
- MBS Real Studio Plugins, version 12.4pr9

69.1.4 Methods

69.1.5 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.1.6 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the current setting of a camera property.
Notes:

PropertySelector: A long value that specifies the property to retrieve, see kProperty* constants.
Value: receives the value of the property.
Flags: Receives a member of the CameraControlFlags enumeration. The returned value indicates whether the setting is controlled manually or automatically.

Lasterror is set.

69.1.7 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the range and default value of a specified camera property.
Example:

```
dim srcFilter as DirectShowBaseFilterMBS // your device
dim a as DirectShowAMCameraControlMBS = srcFilter.AMCameraControl

// query range for zoom
dim ZoomMin as integer
dim ZoomMax as integer
dim ZoomStep as integer
dim ZoomDefault as Integer
dim ZoomFlags as integer
a.GetRange(a.kPropertyZoom, ZoomMin, ZoomMax, ZoomStep, ZoomDefault, ZoomFlags)
dim ErrorCode as integer = a.Lasterror
dim ErrorText as string = a.LasterrorMessage

Break // check in debugger
```

Notes:

PropertySelector: A long value that specifies the property to query, see kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives an element of the CameraControlFlags enumeration, indicating whether the property is controlled automatically or manually.

Lasterror is set.

69.1.8 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method sets a specified property on the camera.
Notes:

PropertySelector: A long value that specifies the property to set, see kProperty* constants.

Value: A long value that specifes the new value of the property.
Flags: A long value that specifies the desired control setting. See kFlags* constants.

Lasterror is set.

69.1.9 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.1.10 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 13940

69.1.10 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.1.9 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 13940

69.1.11 Properties

69.1.12 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMCameraControl interface.
(Read and Write property)

69.1.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.1.14 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.1.15 Constants

69.1.16 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled automatically.

69.1.17 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled manually.

69.1.18 kPropertyExposure = 4

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes:

Identifies the exposure setting, in log base 2 seconds. In other words, for values less than zero, the exposure time is 1/2n seconds, and for values zero or above, the exposure time is 2n seconds. For example:

Value	Seconds
-3	1/8
-2	1/4
-1	1/2
0	1
1	2
2	4

69.1.19 kPropertyFocus = 6

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the camera's focus setting, as the distance to the optimally focused target, in millimeters. The range and default value are specific to the device.

69.1.20 kPropertyIris = 5

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the camera's iris setting, in units of fstop * 10.

69.1.21 kPropertyPan = 0

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's pan setting, in degrees. Values range from ,Äì180 to +180, with the default set to zero. Positive values are clockwise from the origin (the camera rotates clockwise when viewed from above), and negative values are counterclockwise from the origin.

69.1.22 kPropertyRoll = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's roll setting, in degrees. Values range from ,Äì180 to +180, with the default set to zero. Positive values cause a clockwise rotation of the camera along the image-viewing axis, and negative values cause a counterclockwise rotation of the camera.

69.1.23 kPropertyTilt = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's tilt setting, in degrees. Values range from ,Äì180 to +180, with the default set to zero. Positive values point the imaging plane up, and negative values point the imaging plane down.

69.1.24 kPropertyZoom = 3

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Identifies the camera's zoom setting, in millimeters. Values range from 10 to 600, and the default is specific to the device.

69.2 class DirectShowAMCrossbarMBS

69.2.1 class DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMCrossbar interface routes signals from an analog or digital source to a video capture filter.
Notes:

This interface is implemented by the Analog Video Crossbar Filter. The Analog Video Crossbar filter is modeled after a general switching matrix, with n inputs and m outputs. For example, a video card might have two external connectors: a coaxial connector for TV, and an S-video input. These would be represented as input pins on the filter. To select one of the inputs, an application would use the IAMCrossbar interface to "route" an input pin to the filter's output pin, by calling the Route method.

- MBS Xojo / Real Studio Plugins, version 14.1pr3
- MBS Real Studio Plugins, version 12.5pr1

69.2.4 Methods

69.2.5 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter for the crossbar.
Notes:

See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

69.2.6 CanRoute(OutputPinIndex as Integer, InputPinIndex as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The CanRoute method queries whether a specified input pin can be routed to a specified output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of input pin.
Lasterror is set.
Returns true if two pins can be routed.

To route the pins, call the Route method. Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

69.2.7 Constructor

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.2.8 GetCrossbarPinInfo(IsInputPin as boolean, PinIndex as Integer, byref PinIndexRelated as Integer, byref PhysicalType as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getCrossbarPinInfo method retrieves information about a specified pin.
Notes:

IsInputPin: Specifies the direction of the pin. Use one of the following values.

Value	Meaning
True	Input pin
False	Output pin

PinIndex: Specifies the index of the pin.
PinIndexRelated: Variable that receives the index of the related pin, or ,Äì1 if no pin is related to this pin.

The related pin is a pin on the same filter, with the same direction; it typically represents the same physical jack or connector. For example, a video tuner and an audio tuner might be related pins. Typically, if two pins are related, you should route them together.
PhysicalType: Variable that receives a member of the PhysicalConnectorType enumeration, indicating the pin's physical type.

Lasterror is set.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

69.2.9 GetPinCounts(byref OutputPinCount as Integer, byref InputPinCount as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The getPinCounts method retrieves the number of input and output pins on the crossbar filter.
Notes:

OutputPinCount: Variable that receives the number of output pins.
InputPinCount: Variable that receives the number of input pins.

Lasterror is set.

The other IAMCrossbar methods take parameters that specify pins by index number. For these methods, output pins and input pins are both indexed from zero. Use the getPinCounts method to determine the upper bounds for each.

69.2.10 IsRoutedTo(InputPinIndex as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsRoutedTo method retrieves the input pin that is currently routed to the specified output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Variable that receives the index of the input pin, or -1 if no input pin is routed to this output pin.

Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.
Lasterror is set.

69.2.11 PhysicalPinName(type as Integer) as string

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the name for a given type.
Notes: Just a convenience method to return english names for types.

69.2.12 Route(OutputPinIndex as Integer, InputPinIndex as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Route method routes an input pin to an output pin.
Notes:

OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of the input pin.

Lasterror is set.

Routing two pins causes the output pin to deliver data from that input pin. Only one input pin at a time can be routed to a given output pin.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

69.2.13 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.2.14 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 13948

69.2.14 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim srcfilter as DirectShowBaseFilterMBS // your source filter

Dim AMCrossbar As DirectShowAMCrossbarMBS = srcfilter.AMCrossbar
If AMCrossbar <>Nil Then
AMCrossbar.ShowPropertyDialog
MsgBox "Result: "+Str(AMCrossbar.Lasterror)+": "+AMCrossbar.LasterrorMessage
Else
MsgBox "No AMCrossbar."
End If
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.2.13 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 13947

69.2.15 Properties

69.2.16 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMCrossbar interface.
(Read and Write property)

69.2.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.2.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.2.19 Constants

69.2.20 PhysConn_Audio_1394 = 4103

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an IEEE 1394 pin for audio.

69.2.21 PhysConn_Audio_AESDigital = 4099

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AES/EBU (Audio Engineering Society/European Broadcast Union) digital pin for audio.

69.2.22 PhysConn_Audio_AudioDecoder = 4105

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an audio decoder pin.

69.2.23 PhysConn_Audio_AUX = 4102

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AUX pin for audio.

69.2.24 PhysConn_Audio_Line = 4097

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a line pin for audio.

69.2.25 PhysConn_Audio_Mic = 4098

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a microphone pin.

69.2.26 PhysConn_Audio_SCSI = 4101

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCSI pin for audio.

69.2.27 PhysConn_Audio_SPDIFDigital = 4100

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an S/PDIF (Sony/Philips Digital Interface Format) digital pin for audio.

69.2.28 PhysConn_Audio_Tuner = 4096

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a tuner pin for audio.

69.2.29 PhysConn_Audio_USB = 4104

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a USB pin for audio.

69.2.30 PhysConn_Video_1394 = 10

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an IEEE 1394 pin for video.

69.2.31 PhysConn_Video_AUX = 9

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an AUX (auxiliary) pin for video.

69.2.32 PhysConn_Video_Black = 15

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Not used.

69.2.33 PhysConn_Video_Composite = 2

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a composite pin for video.

69.2.34 PhysConn_Video_ParallelDigital = 7

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a parallel digital pin for video.

69.2.35 PhysConn_Video_RGB = 4

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an RGB pin for video.

69.2.36 PhysConn_Video_SCART = 14

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCART (Peritel) pin for video.

69.2.37 PhysConn_Video_SCSI = 8

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a SCSI (Small Computer System Interface) pin for video.

69.2.38 PhysConn_Video_SerialDigital = 6

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a serial digital pin for video.

69.2.39 PhysConn_Video_SVideo = 3

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies an S-Video (Y/C video) pin.

69.2.40 PhysConn_Video_Tuner = 1

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a tuner pin for video.

69.2.41 PhysConn_Video_USB = 11

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a USB (Universal Serial Bus) pin for video.

69.2.42 PhysConn_Video_VideoDecoder = 12

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a video decoder pin.

69.2.43 PhysConn_Video_VideoEncoder = 13

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a video encoder pin.

69.2.44 PhysConn_Video_YRYBY = 5

MBS Win Plugin, Plugin Version: 12.5.

Function: One of the constants to specify the physical type of pin (audio or video).
Notes: Specifies a YRYBY (Y, R,ÄìY, B,ÄìY) pin for video.

69.3 class DirectShowAMStreamConfigMBS

69.3.1 class DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMStreamConfig interface sets the output format on certain capture and compression filters, for both audio and video.
Notes:

Applications can use this interface to set format properties, such as the output dimensions and frame rate (for video) or the sample rate and number of channels (for audio).
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.3.2 Blog Entries

69.3.4 Methods

69.3.5 AudioCaps as DirectShowAudioStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the audio capabilities.
Notes:

Lasterror is set.
Returns empty array for video streams.

69.3.6 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.3.7 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries media types.
Notes:

Lasterror is set.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd319787(v=vs.85).aspx

69.3.8 NumberOfCapabilities as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of format capabilities that this pin supports.
Notes: Lasterror is set.

69.3.9 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.3.10 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

69.3.10 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim srcfilter as DirectShowBaseFilterMBS // your source filter

Dim AMStreamConfig2 As DirectShowAMStreamConfigMBS = capture.GetStreamConfig(False, srcfilter)
If AMStreamConfig2 <>Nil Then
AMStreamConfig2.ShowPropertyDialog

MsgBox "Result: "+Str(AMStreamConfig2.Lasterror)+": "+AMStreamConfig2.LasterrorMessage
Else
MsgBox "No AMStreamConfig with srcfilter."
End If
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.3.9 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 13955

69.3.11 VideoCaps as DirectShowVideoStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video capabilities.
Notes:

Lasterror is set.
Returns empty array for audio streams.

69.3.12 Properties

69.3.13 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

69.3.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.3.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.3.16 Format as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the preferred output format.
Notes:

Lasterror is set.

(Read and Write computed property)

69.4 class DirectShowAMVideoCompressionMBS

69.4.1 class DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoCompression interface sets and retrieves video compression properties.
Notes:

It is supported by some video compression filters, and also by some video capture filters that output compressed video. Filters that support this interface expose it through their output pins.
An application can use this interface to control how video is compressed, including characteristics such as the key-frame rate or the compression quality.
A filter that supports this interface might not support every method. Use the Capabilities property to determine which methods the filter supports.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.4.6 Methods

69.4.7 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the base filter.
Notes: Lasterror and LastErrorMessage are set.

69.4.8 Constructor

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.4.9 OverrideFrameSize(FrameNumber as Integer, Size as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The frame size of a specified frame.
Notes:

The first frame that the filter delivers is numbered zero.
If the filter supports this method, the CompressionCaps_CanCrunch flag is in the Capabilities property. However, this flag can also indicate that the filter supports setting the bit rate, so it does not guarantee that the OverrideFrameSize method is supported.

Lasterror and LastErrorMessage are set.

69.4.10 OverrideKeyFrame(FrameNumber as Integer)

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The filter to compress a particular frame as a key frame.
Notes:

The first frame that the filter delivers is numbered zero.
If the filter supports this method, you can use it to override the normal key-frame distribution for a particular frame. After the filter creates a key frame, it might reset its count to determine when the next key frame should occur. For example, if the key-frame rate is 10, and an application uses this method to force frame 5 as a key frame, the filter might wait another 10 frames (until frame 15) before it creates the next key frame.

Lasterror and LastErrorMessage are set.

69.4.11 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.4.12 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 13960

69.4.12 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows property dialog.
Example:

```
dim Capture as DirectShowCaptureGraphBuilderMBS // your capture graph
dim encoder as DirectShowBaseFilterMBS // your encoder filter

Dim AMVideoCompression As DirectShowAMVideoCompressionMBS = encoder.AMVideoCompression
If AMVideoCompression <>Nil Then
AMVideoCompression.ShowPropertyDialog
MsgBox "Result: "+Str(AMVideoCompression.Lasterror)+": "+AMVideoCompression.LasterrorMessage
Else
MsgBox "No AMVideoCompression."
end if
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.4.11 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 13960

69.4.13 Properties

69.4.14 Capabilities as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the compression capabilities, as a bitwise combination of zero or more CompressionCaps flags.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.15 DefaultKeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default key-frame rate.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.16 DefaultPFramesPerKey as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default rate of predicted (P) frames per key frame.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.17 DefaultQuality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives the default quality.
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.18 Description as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a description string, such as "My Video Compressor."
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.19 Handle as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

69.4.20 KeyFrameRate as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The key-frame rate.
Notes:

If the value is negative, the filter will use the default key-frame rate. If the value is zero, only the first frame will be a key frame.

To determine if the filter supports this method, call the Capabilities property and check for the CompressionCaps_CanKeyFrame flag.

Lasterror and LastErrorMessage are set.
(Read and Write property)

69.4.21 Lasterror as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.4.22 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.4.23 PFramesPerKeyFrame as Integer

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The rate of predicted (P) frames per key frame.
Notes:

If the value is negative, the filter will use the default rate.
To determine if the filter supports this method, check for the CompressionCaps_CanBFrame flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

69.4.24 Quality as Double

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The compression quality.
Notes:

Specifies the quality as a value between 0.0 and 1.0, where 1.0 indicates the best quality and 0.0 indicates the worst quality. If the value is negative, the filter will use the default quality.
To determine if the filter supports this method, check for the CompressionCaps_CanQuality flag in the Capabilities property.

Lasterror and LastErrorMessage are set.
(Read and Write property)

69.4.25 Version as String

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Receives a version string, such as "Version 2.1.0."
Notes:

Lasterror and LastErrorMessage are set.
(Read only property)

69.4.26 WindowSize as UInt64

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of frames over which the compressor must maintain an average data rate.
Notes:

For example, assuming a data rate of 100K/sec and a frame rate of 10 frames per second, if the window size is 1, then every frame will be 10K or less. If the window size is 5, then every five consecutive frames must average 10K per frame, but individual frames may exceed this size.
The window size, expressed as a number of frames.

Lasterror and LastErrorMessage are set.
(Read and Write property)

69.4.27 Constants

69.4.28 CompressionCapsCanBFrame = & h08

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the PFramesPerKeyFrame properties.

69.4.29 CompressionCapsCanCrunch = & h02

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor can compress video to a specified data rate. If the compressor has this capability then the output pins media type will contain the data rate in the VIDEOINFOHEADER structure's BitRate member. The only way to set the data rate is to set BitRate.

69.4.30 CompressionCapsCanKeyFrame = & h04

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the KeyFrameRate properties.

69.4.31 CompressionCapsCanQuality = & h01

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the Quality property.

69.4.32 CompressionCapsCanWindow = & h10

MBS Win Plugin, Plugin Version: 19.1.

Function: One of the video compression capabilities constants.
Notes: Video compressor supports the WindowSize properties.

69.5 class DirectShowAMVideoControlMBS

69.5.1 class DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IAMVideoControl interface controls certain video capture operations such as enumerating available frame rates and image orientation.
Notes:

For Windows Driver Model (WDM) devices, the WDM Video Capture Filter automatically exposes this interface if the WDM driver supports the PROPSETID_VIDCAP_VIDEOCONTROL property set. For more information, see the Windows Driver Kit (WDK) documentation.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.5.6 Methods

69.5.7 Caps(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCaps method retrieves the capabilities of the underlying hardware.
Notes:

Result is a combination of the flags from the VideoControl Flags, which specify the video control mode.

Possible capabilities include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

69.5.8 Constructor

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.5.9 CurrentActualFrameRate(pin as DirectShowPinMBS) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetCurrentActualFrameRate method retrieves the actual frame rate, expressed as a frame duration in 100-nanosecond units. USB (Universal Serial Bus) and IEEE 1394 cameras may provide lower frame rates than requested because of bandwidth availability. This is only available during video streaming.
Notes:

Pin: the pin to retrieve the frame rate from.

Lasterror is set.

69.5.10 FrameRateList(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64()

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetFrameRateList method retrieves a list of available frame rates.
Notes:

Pin: The pin to query for the list of frame rates.
Index: Index of the format to query for frame rates. This index corresponds to the order in which formats are enumerated by DirectShowVideoStreamConfigCapsMBS structures returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.

Returns an array of frame rates in 100-nanosecond units.

Lasterror is set.

69.5.11 MaxAvailableFrameRate(pin as DirectShowPinMBS, Index as Integer, Width as Integer, Height as Integer) as Int64

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxAvailableFrameRate method retrieves the maximum frame rate currently available, based on bus bandwidth usage for connections, such as USB and IEEE 1394, where the maximum frame rate may be limited by bandwidth availability.
Notes:

Pin: The pin to retrieve the maximum frame rate from.
Index: Index of the format to query for maximum frame rate. This index corresponds to the order in which formats are enumerated by GetStreamCaps. The value must range between zero and the number of supported DirectShowVideoStreamConfigCapsMBS returned by DirectShowAMStreamConfigMBS.NumberOfCapabilities) minus one.
Width and Height: Frame image size (width and height) in pixels.
MaxAvailableFrameRate: Pointer to the maximum available frame rate. The frame rate is expressed as frame duration in 100-nanosecond units.

Lasterror is set.

69.5.12 Mode(pin as DirectShowPinMBS) as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMode method retrieves the video control mode of operation.
Notes:

Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

69.5.13 SetMode(pin as DirectShowPinMBS, mode as Integer)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetMode method sets the video control mode of operation.
Example:

```
dim pin as DirectShowPinMBS // your till image pin
dim filter as DirectShowBaseFilterMBS
```

```
dim vc as DirectShowAMVideoControlMBS = filter.AMVideoControl
vc.SetMode(pin, vc.FlagExternalTriggerEnable + vc.FlagTrigger)
```

Notes:

Value specifying a combination of the flags from the VideoControl Flags to set the video control mode.

Possible modes of operation include one or more of the following: flipping the picture horizontally, flipping the picture vertically, enabling external triggers, and simulating external triggers.

Lasterror is set.

69.5.14 Properties

69.5.15 Handle as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMVideoControl interface.
(Read and Write property)

69.5.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.5.17 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.

Notes: (Read and Write property)

69.5.18 Constants

69.5.19 FlagExternalTriggerEnable = 2

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Sets up a stream to capture a trigger from an external source, for example, a push button on a camera. Buffers can be queued to the driver but will not be passed up from the WDM capture driver (for compression, display, or writing to a file) until the external event happens.

69.5.20 FlagFlipHorizontal = 0

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Specifies that the picture is flipped horizontally.

69.5.21 FlagFlipVertical = 1

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: Specifies that the picture is flipped vertically.

69.5.22 FlagTrigger = 3

MBS Win Plugin, Plugin Version: 21.1.

Function: One of the flags.
Notes: In software, simulates an external trigger when the stream has the VideoControlFlag_ExternalTriggerEnable flag set.

69.6 class DirectShowAMVideoProcAmpMBS

69.6.1 class DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AMVideoProcAmp interface adjusts the qualities of an incoming video signal, such as brightness, contrast, hue, saturation, gamma, and sharpness.
Notes:

The WDM Video Capture filter exposes this interface if the hardware supports image adjustment.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.6.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

69.6.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

69.6.4 Methods

69.6.5 Constructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.6.6 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets video quality for a specified property.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: Receives the value of the property.
Flags: Receives the flags. The returned value indicates whether the setting is controlled manually or automatically.
Lasterror is set.

69.6.7 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum, maximum, and default values for setting properties.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives a member of the VideoProcAmpFlags enumeration, indicating whether the property is controlled automatically or manually.
Lasterror is set.

69.6.8 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets video quality for a specified property.
Notes:

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: The new value of the property.
Flags: The desired control setting. See kFlags* constants.

Lasterror is set.

69.6.9 Properties

69.6.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IAMVideoProcAmp interface.
(Read and Write property)

69.6.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.6.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.6.13 Constants

69.6.14 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled automatically.

69.6.15 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of te flags for Get/Set.
Notes: The setting is controlled manually.

69.6.16 kPropertyBacklightCompensation = 8

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the backlight compensation setting. Possible values are 0 (off) and 1 (on).

69.6.17 kPropertyBrightness = 0

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the brightness, also called the black level. For NTSC, the value is expressed in IRE units * 100. For non-NTSC sources, the units are arbitrary, with zero representing blanking and 10,000 representing pure white. Values range from ,Äì10,000 to 10,000.

69.6.18 kPropertyColorEnable = 6

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the color enable setting. The possible values are 0 (off) and 1 (on).

69.6.19 kPropertyContrast = 1

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the contrast, expressed as gain factor * 100. Values range from zero to 10,000.

69.6.20 kPropertyGain = 9

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the gain adjustment. Zero is normal. Positive values are brighter and negative values are darker. The range of values depends on the device.

69.6.21 kPropertyGamma = 5

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the gamma, as gamma * 100. Values range from 1 to 500.

69.6.22 kPropertyHue = 2

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the hue, in degrees * 100. Values range from -180,000 to 180,000 (-180 to +180 degrees).

69.6.23 kPropertySaturation = 3

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the saturation. Values range from 0 to 10,000.

69.6.24 kPropertySharpness = 4

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the sharpness. Values range from 0 to 100.

69.6.25 kPropertyWhiteBalance = 7

MBS Win Plugin, Plugin Version: 12.4.

Function: One of the property selectors.
Notes: Specifies the white balance, as a color temperature in degrees Kelvin. The range of values depends on the device.

69.7 class DirectShowAudioStreamConfigCapsMBS

69.7.1 class DirectShowAudioStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of audio formats.
Notes:

Audio compression and capture filters use this structure to describe the formats they can produce.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.7.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.7.4 Methods

69.7.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.7.6 Properties

69.7.7 BitsPerSampleGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the bits per sample.
Notes:

For example, the filter might specify 8 bits per sample through 32 bits per sample, in steps of 8.
(Read only property)

69.7.8 ChannelsGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the channels.
Notes:

For example, the filter might specify channels 2 through 4, in steps of 2.
(Read only property)

69.7.9 MaximumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

69.7.10 MaximumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum number of channels.
Notes: (Read only property)

69.7.11 MaximumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum sample frequency.
Notes: (Read only property)

69.7.12 MinimumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum bits per sample.
Notes: (Read only property)

69.7.13 MinimumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum number of channels.
Notes: (Read only property)

69.7.14 MinimumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum sample frequency.
Notes: (Read only property)

69.7.15 SampleFrequencyGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the frequency.
Notes:

For example, the filter might specify 11025 Hz to 44100 Hz, in steps of 11025 Hz.
(Read only property)

69.8 class DirectShowBaseFilterMBS

69.8.1 class DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The BaseFilter interface is the primary interface for DirectShow filters.
Notes:

All DirectShow filters must expose this interface. The Filter Graph Manager uses this interface to control filters. Applications can use this interface to enumerate pins and query for filter information, but should not use it to change the state of a filter. Instead, use the MediaControl interface on the Filter Graph Manager.
Subclass of the DirectShowMediaFilterMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.8.2 Blog Entries

- News from the MBS Xojo Plugins Version 21.1

69.8.4 Methods

69.8.5 AMCameraControl as DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries camera control object.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim c as DirectShowAMCameraControlMBS = srcfilter.AMCameraControl
if c<>nil then

c.Get(c.kPropertyZoom, value, flags)
if c.Lasterror = 0 then
MsgBox "Zoom: "+str(value)
else
MsgBox "Zoom: "+c.LasterrorMessage
```

```
end if

c.Get(c.kPropertyFocus, value, flags)
if c.Lasterror = 0 then
MsgBox "Focus: "+str(value)
else
MsgBox "Focus: "+c.LasterrorMessage
end if

c.Get(c.kPropertyExposure, value, flags)
if c.Lasterror = 0 then
MsgBox "Exposure: "+str(value)
else
MsgBox "Exposure: "+c.LasterrorMessage
end if

end if
```

Notes:

Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

69.8.6 AMCrossbar as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the IAMCrossbar interface for this filter.
Notes: Returns nil if no such interface exists.

69.8.7 AMVideoCompression as DirectShowAMVideoCompressionMBS

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video compression settings for the filter.

69.8.8 AMVideoControl as DirectShowAMVideoControlMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video controls for this filter.
Notes:

Should work for capture filters.
Lasterror is set.

69.8.9 AMVideoProcAmp as DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries video properties object.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim v as DirectShowAMVideoProcAmpMBS = srcfilter.AMVideoProcAmp
if v<>nil then
v.Get(v.kPropertyHue, value, flags)
if v.Lasterror = 0 then
MsgBox "Hue: "+str(value)
else
MsgBox "Hue: "+v.LasterrorMessage
end if

v.Get(v.kPropertyBrightness, value, flags)
if v.Lasterror = 0 then
MsgBox "Brightness: "+str(value)
else
MsgBox "Brightness: "+v.LasterrorMessage
end if

end if
```

Notes:

Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

69.8.10 ConfigAviMux as DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config avimux object.

Notes:

Lasterorr is set.
Works only with filters which support this interface.

69.8.11 ConfigInterleaving as DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the config interleaving object.
Notes:

Lasterorr is set.
Works only with filters which support this interface.

69.8.12 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.8.13 EnumPins as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The EnumPins method enumerates the pins on this filter.
Example:

```
dim filter as DirectShowBaseFilterMBS // your device filter

dim pn as DirectShowEnumPinsMBS = srcfilter.EnumPins

// loop over them and show names of pins
dim p as DirectShowPinMBS = pn.NextObject
while p <>nil
dim name as string = p.Name

MsgBox name

p = pn.NextObject
wend
```

Notes: Lasterror is set.

69.8.14 FindPin(name as string) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves the pin with the specified identifier.
Notes:

name: string that identifies the pin.

Returns the pin object.
Lasterror is set.

This method supports graph persistence. Use the DirectShowPinMBS.QueryId method to save a pin's state, and use this method to restore the state. The pin's identifier string is defined by the filter implementation. The identifier must be unique within the filter.

69.8.15 Info as DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the filter.
Notes:

Lasterror is set.
Returns nil on error.

69.8.16 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog for the filter.
Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.8.17 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "") 13984

69.8.17 ShowPropertyDialog(parent as window = nil, x as integer = 0, y as integer = 0, title as string = "")

MBS Win Plugin, Plugin Version: 19.1, Platform: Windows, Targets: Desktop only.

Function: Shows properties dialog for the filter.
Example:

```
dim srcfilter as DirectShowBaseFilterMBS // your filter

srcfilter.ShowPropertyDialog
MsgBox "Result: "+Str(srcfilter.Lasterror)+": "+srcfilter.LasterrorMessage
```

Notes:

Parent: the parent window for the dialog.
X/Y: The offset of the dialog relative to the parent window.
Title: optional title for the dialog.

Sets lasterror property.
See also:

- 69.8.16 ShowPropertyDialog(parent as DesktopWindow, x as integer = 0, y as integer = 0, title as string = "") 13983

69.8.18 VendorInfo as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a string containing vendor information.
Notes:

Lasterror is set.
This method is optional; filters are not required to support it.

69.9 class DirectShowBindContextMBS

69.9.1 class DirectShowBindContextMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to a bind context, which is an object that stores information about a particular moniker binding operation.

69.9.4 Methods

69.9.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to create a new bind context.

69.9.6 Properties

69.9.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigAviMux interface.
(Read and Write property)

69.9.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.9.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.10 class DirectShowCaptureGraphBuilderMBS

69.10.1 class DirectShowCaptureGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds capture graphs and other custom filter graphs.
Notes:

69.10.6 Methods

69.10.7 AllocCapFile(FilePath as string, Size as UInt64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The AllocCapFile method preallocates a capture file to a specified size. For best results, always capture to a defragmented, preallocated capture file that is larger than the size of the capture data.
Notes:

FilePath: a string that contains the name of the file to create or resize.
Size: Size of the file to allocate, in bytes.

Lasterror is set.

This method fails if the file is read-only.
It is best to allocate as much space as possible,Äîideally, more than needed. However, this can result in a very large file that contains relatively little data. For example, a 1-gigabyte (GB) capture file might contain a few megabytes of captured video. Use the CopyCaptureFile method to copy the data into a new file. That method copies only the data and ignores the empty portion of the original file.
If you use this method to preallocate the file, call SetMode on the file-writer filter with the value zero. If the filter is set to AM_FILE_OVERWRITE, it will delete the preallocated file. Note that some file-writer filters do not support mode 0.

69.10.8 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

69.10.9 Crossbar(filter as DirectShowBaseFilterMBS) as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds a crossbar in the graph.
Notes:

See also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390991(v=vs.85).aspx

This function implements the FindInterface call with LOOK_UPSTREAM_ONLY and the filter you provide.

69.10.10 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes:

Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.
See also:

- 69.10.11 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 13990

69.10.11 FindPin(Source as DirectShowPinMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FindPin method retrieves a particular pin on a filter, or determines whether a given pin matches the specified criteria.
Notes:

Source: an interface on a filter, or to an interface on a pin.
PinDirection: Specifies the pin direction (input or output). See constants in DirectShowPinMBS class.
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil.
Type: A major type GUID that specifies the media type. Use nil to match any media type.
Unconnected: Boolean value that specifies whether the pin must be unconnected. If true, the pin must be unconnected. If false, the pin can be connected or unconnected.
num: Zero-based index of the pin to retrieve, from the set of matching pins. If Source is a filter, and more than one pin matches the search criteria, this parameter specifies which pin to retrieve. If Source is a pin, this parameter is ignored.

Returns the pin object.
Lasterror is set.

If Source is a filter, the method searches for the nth pin on that filter that matches the search criteria, where n is given by the num parameter. If the method finds a matching pin, it returns the pin.
If Source is a pin, the method tests that pin against the search criteria. If the pin matches the criteria, the method returns the pin. Otherwise, it returns nil.

Typically, an application will not need to use this method. It is provided for unusually complex tasks, when the RenderStream method cannot build the filter graph. Use this method to retrieve a desired pin from a capture filter, and then build the rest of the graph manually.
See also:

- 69.10.10 FindPin(Source as DirectShowBaseFilterMBS, PinDirection as Integer, Category as DirectShowGUIDMBS = nil, Type as DirectShowGUIDMBS = nil, Unconnected as boolean = false, Num as Integer = 0) as DirectShowPinMBS 13989

69.10.12 GetFiltergraph as DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the filter graph that the builder is using.
Notes: Sets lasterror.

69.10.13 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Example:

```
dim graph as DirectShowCaptureGraphBuilderMBS // your graph
dim filter as DirectShowBaseFilterMBS // your filter

dim StreamConfig as DirectShowAMStreamConfigMBS
StreamConfig = g.GetStreamConfig(DirectShowPinMBS.PIN_CATEGORY_STILL, filter)
```

Notes:

Lasterror is set.
e.g. pass PIN_CATEGORY_CAPTURE or PIN_CATEGORY_PREVIEW for category, as defined in PinMBS class.
See also:

- 69.10.14 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 13991

69.10.14 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the stream config object for this graph.
Notes:

Lasterror is set.

Preview: Pass true to get the preview pin or pass false for the capture pin instead.
See also:

- 69.10.13 GetStreamConfig(Category as DirectShowGUIDMBS, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS 13991

69.10.15 MEDIATYPE_Audio as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.

Notes: Audio.

69.10.16 MEDIATYPE_AUXLine21Data as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Line 21 data. Used by closed captions.

69.10.17 MEDIATYPE_Interleaved as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Interleaved audio and video. Used for Digital Video (DV).

69.10.18 MEDIATYPE_Midi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: MIDI format.

69.10.19 MEDIATYPE_ScriptCommand as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Data is a script command, used by closed captions.

69.10.20 MEDIATYPE_Stream as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Byte stream with no time stamps.

69.10.21 MEDIATYPE_Text as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Text.

69.10.22 MEDIATYPE_Timecode as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Timecode data. Note: DirectShow does not provide any filters that support this media type.

69.10.23 MEDIATYPE_Video as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the media type GUIDs.
Notes: Video.

69.10.24 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes:

Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method

uses a default renderer (see Remarks).

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd311924(v=vs.85).aspx
See also:

- 69.10.25 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil) 13994

69.10.25 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
Notes:

Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/dd311924(v=vs.85).aspx
See also:

- 69.10.24 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil) 13993

69.10.26 SetFiltergraph(graph as DirectShowGraphBuilderMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Tells the graph builder object which filter graph to use.
Notes:

Lasterror is set.

graph: specifies the filter graph to use for subsequent calls to the AddFilter method.

The graph builder will automatically create a filter graph if you don't call this method. If you call this method after the graph builder has created its own filter graph, the call will fail.

69.10.27 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes:

Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 69.10.28 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS) 13995

69.10.28 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes:

Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 69.10.27 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string) 13995

69.10.29 SetupHighestResolution(videoInputFilter as DirectShowBaseFilterMBS, preview as boolean = false)

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to query stream config and select the one with highest resolution.
Notes: Queries internally GetStreamConfig, walks over all VideoCaps, picks best and sets it as format.

69.10.30 Properties

69.10.31 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an ICaptureGraphBuilder interface.
(Read and Write property)

69.10.32 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.10.33 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.11 class DirectShowConfigAviMuxMBS

69.11.1 class DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class configures the AVI Mux filter.
Notes:

Applications can use this class to set the master stream and to create an AVI 1.0 index.

DirectShowConfigAviMuxMBS provides backward compatibility with older Video for Windows (VFW) Audio-Video Interleaved (AVI) index formats (idx1) as well as extended AVI 2.0 index formats (indx) to allow for file sizes greater than 1 gigabyte (GB). Set and retrieve the compatibility indexes by using the OutputCompatibilityIndex property.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.11.2 Methods

69.11.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.11.4 Properties

69.11.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigAviMux interface.
(Read and Write property)

69.11.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.11.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.11.8 MasterStream as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the master stream that will be used to synchronize the other streams in the file.
Notes:

Specifies the index of the stream, or ,Äì1 to indicate no master stream. The AVI Mux writes one stream for each connected input pin. Stream numbers are indexed from zero.
Lasterror is set.

If you are capturing audio and video from two different sources, use this method to synchronize the streams. Streams coming from separate capture sources may be captured at slightly different rates. If you specify a master stream, the AVI Mux adjusts the playback rates for the other streams, to compensate for any drift that might occur.
It is recommended to use the audio stream as the master stream, because minor adjustments to the video playback rate are less noticeable than changes to the audio playback rate. Also, modifying the audio playback rate will cause the audio to be resampled by the audio driver.
This method works by adjusting the dwScale and dwRate values in the AVISTREAMHEADER structure.
(Read and Write computed property)

69.11.9 OutputCompatibilityIndex as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the AVI index format.
Notes:

Lasterror is set.
True: Create an AVI 1.0 index, as well as an AVI 2.0 index.

False: Create an AVI 2.0 index, but not an AVI 1.0 index.

The AVI Mux filter always creates an AVI 2.0 index ('indx' format). If the value given in fOldIndex is TRUE, the AVI Mux also creates an AVI 1.0 index ('idx1' format), for backward compatibility with Video for Windows.
The AVI 2.0 index format allows for larger files, incremental growth of files, and minimized disk seeks.
(Read and Write computed property)

69.12 class DirectShowConfigInterleavingMBS

69.12.1 class DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConfigInterleaving interface controls how the AVI Mux filter interleaves audio and video samples.
Notes:

Video-authoring applications that handle capturing should use this interface when they need to control how audio samples and video frames will be saved on a disk.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.12.2 Methods

69.12.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.12.4 Properties

69.12.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IConfigInterleaving interface.
(Read and Write property)

69.12.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.

(Read and Write property)

69.12.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.12.8 Mode as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The interleaving quality setting.
Notes:

Lasterror is set.
See kInterleaving* constants.
(Read and Write computed property)

69.12.9 Constants

69.12.10 kInterleaveBuffered = 3

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Noninterleaved.
This mode is equivalent to kInterleaveNone but uses less file space and system overhead.

69.12.11 kInterleaveCapture = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Approximate interleaving with less overhead than kInterleaveFull.
This mode is suitable for video capture. The AVI Mux attempts to use unbuffered, overlapped write operations. Unless the interleaving parameters are configured properly, however, frames may be dropped if one

stream blocks while it waits for data from another stream. In particular, audio buffers should be less than .5 second, or else the video stream will block for excessive periods of time.

69.12.12 kInterleaveFull = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Full, precise interleaving of audio samples and video frames.
Streams will block indefinitely, waiting for equal amounts of data before interleaving. This mode is suitable for authoring and playback.

69.12.13 kInterleaveNone = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the interleaving mode constants.
Notes:

Noninterleaved.
Frames are written in the order they arrive. Files must be interleaved for playback at a later time. In this mode, the AVI Mux filter attempts to use unbuffered, overlapped write operations, to increase throughput.

69.13 class DirectShowDVInfoMBS

69.13.1 class DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a digital video (DV) stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.13.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.13.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.13.4 Methods

69.13.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.13.6 Properties

69.13.7 DVAAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control Pack for the first audio block.
Notes: (Read and Write property)

69.13.8 DVAAuxCtl1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source control pack for the second audio block.
Notes: (Read and Write property)

69.13.9 DVAAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the audio auxiliary (AAUX) source pack for the first audio block.
Notes: (Read and Write property)

69.13.10 DVAAuxSrc1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the AAUX source pack for the second audio block.
Notes: (Read and Write property)

69.13.11 DVVAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the VAUX source control pack.
Notes: (Read and Write property)

69.13.12 DVVAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the video auxiliary (VAUX) source pack.
Notes: (Read and Write property)

69.14 class DirectShowEnumMonikerMBS

69.14.1 class DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the monikers in a table of monikers.

69.14.2 Blog Entries

- MBS Xojo Plugins, version 21.5pr2

69.14.3 Blog Entries

- MBS Xojo Plugins, version 21.5pr2

69.14.4 Methods

69.14.5 Clone as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new enumerator that contains the same enumeration state as the current one.
Notes:

This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Returns nil on any error.
Lasterror is set.

69.14.6 CLSID_AudioCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Compressors

69.14.7 CLSID_AudioInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Capture Sources

69.14.8 CLSID_AudioRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Audio Renderers

69.14.9 CLSID_DeviceControlCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Device Control Filters

69.14.10 CLSID_DVDHWDecodersCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes:

WDM Stream Decompression Devices
This category contains hardware DVD decoders.

69.14.11 CLSID_LegacyAmFilterCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: DirectShow Filters

69.14.12 CLSID_MidiRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Midi Renderers

69.14.13 CLSID_TransmitCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: External Renderers

69.14.14 CLSID_VideoCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Compressors

69.14.15 CLSID_VideoInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow filter categories.
Notes: Video Capture Sources

69.14.16 Constructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor to find filters.
Notes:

Uses IFilterMapper2::EnumMatchingFilters to find installed filters in the registry.
Lasterror is set on failure.
See also:

- 69.14.17 Constructor(clsidDeviceClass as DirectShowGUIDMBS)

69.14.17 Constructor(clsidDeviceClass as DirectShowGUIDMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an enumerator for a specified device category.
Notes:

This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator.

Lasterror is set.
See also:

- 69.14.16 Constructor 14008

69.14.18 Destructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

69.14.19 NextObject as DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the next item in the enumeration sequence.
Notes:

Returns nil on any error.
Lasterror is set.

69.14.20 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the enumeration sequence to the beginning.
Notes:

Lasterror is set.
There is no guarantee that the same set of objects will be enumerated after the reset operation has completed. A static collection is reset to the beginning, but it can be too expensive for some collections, such as files in a directory, to guarantee this condition.

69.14.21 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Skips over the specified number of items in the enumeration sequence.
Notes: Lasterror is set.

69.14.22 Properties

69.14.23 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IEnumMoniker interface.
(Read and Write property)

69.14.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.14.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.15 class DirectShowEnumPinsMBS

69.15.1 class DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates pins on a filter.
Notes:

The BaseFilterMBS.EnumPins method returns this interface. It is based on the standard Component Object Model (COM) enumerators.
The filter graph manager uses this interface when it connects filters. Applications can use it to retrieve pins on a filter. For more information, see Enumerating Objects in a Filter Graph.
If the number of pins on the filter changes, some methods on this interface return VFW_E_ENUM_OUT_OF_SYNC. Call the Reset method to resynchronize the enumerator.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.15.2 Methods

69.15.3 Clone as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Clone method makes a copy of the enumerator with the same enumeration state.
Notes:

Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Clone method safely.

69.15.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.15.5 NextObject as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Next method retrieves the next pin in the enumeration sequence.
Notes:

Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Next method safely.

69.15.6 Reset

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Reset method resets the enumeration sequence to the beginning.
Notes: Lasterror is set.

69.15.7 Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Skip method skips over a specified number of pins.
Notes:

n: Number of pins to skip.

Lasterror is set.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Skip method safely.

69.15.8 Properties

69.15.9 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IEnumPins interface.
(Read and Write property)

69.15.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.15.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.16 class DirectShowFileSinkFilterMBS

69.16.1 class DirectShowFileSinkFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FileSinkFilter interface is implemented on filters that write media streams to a file.
Notes:

A file sink filter in a video capture filter graph, for instance, writes the output of the video compression filter to a file. Typically, the application running this filter graph should enable the user to enter the name of the file to be written to. This interface enables the communication of this information.
If a filter needs the name of an output file, it should expose this interface to allow an application to set the file name. Note that there is currently no base class implementation of this interface.
Any application that must set the name of the file into which the file sink filter will write should use this interface to get and set the file name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.16.2 Methods

69.16.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.16.4 MEDIASUBTYPE_Asf as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for ASF video files.

69.16.5 MEDIASUBTYPE_Avi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The media sub type for AVI video files.

69.16.6 Properties

69.16.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IFileSinkFilter interface.
(Read and Write property)

69.16.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.16.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.17 class DirectShowFilterGraphMBS

69.17.1 class DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods for building a filter graph.
Notes:

An application can use it to add filters to the graph, connect or disconnect filters, remove filters, and perform other basic operations. However, the DirectShowGraphBuilderMBS interface inherits from this interface and provides additional methods that are more sophisticated. Therefore, applications should use DirectShowGraphBuilderMBS rather than using DirectShowFilterGraphMBS directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.17.2 Methods

69.17.3 AddFilter(SourceFilter as DirectShowBaseFilterMBS, Name as string = "")

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a filter to the graph.
Notes:

Filter: The filter to add.
Name: name for filter.

Lasterror is set.

The name of the filter can be "", in which case the Filter Graph Manager generates a name. If the name is not "" and is not unique, this method will modify the name in an attempt to generate a new unique name. If this is successful, this method sets lasterror to VFW_S_DUPLICATE_NAME. If it cannot generate a unique name, it sets lasterror to VFW_E_DUPLICATE_NAME.
AddFilter calls the filter's JoinFilterGraph method to inform the filter that it has been added. AddFilter must be called before attempting to use the Connect, ConnectDirect, or Render method to connect or render pins belonging to the added filter.
The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

69.17.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.17.5 SetDefaultSyncSource

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the reference clock to the default clock.
Notes:

Lasterror is set.

This method instructs the Filter Graph Manager to choose a reference clock using its default algorithm. For more information about the algorithm that it uses, see Reference Clocks.
Usually you do not need to call this method, because the Filter Graph Manager automatically selects a clock. However, if you call SetSyncSource to override the clock, you can use SetDefaultSyncSource to restore the default clock.
This method fails if the filter graph is running or paused.

69.17.6 Properties

69.17.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IFilterGraph interface.
(Read and Write property)

69.17.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.17.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.18 class DirectShowFilterInfoMBS

69.18.1 class DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for information about a filter.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.18.2 Methods

69.18.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.18.4 Properties

69.18.5 Graph as DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns filter graph.
Notes:

If the filter is member of a filter graph, this is a reference to the filter graph's FilterGraph interface. If the filter is not a member of a filter graph, this value of this member is nil.
(Read and Write property)

69.18.6 Name as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the filter.
Notes: (Read and Write property)

69.19 class DirectShowGraphBuilderMBS

69.19.1 class DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class provides methods that enable an application to build a filter graph.
Notes:

The GraphBuilder interface inherits from the FilterGraph interface. FilterGraph provides basic operations, such as adding a filter to the graph or connecting two pins. GraphBuilder adds further methods that construct graphs from partial information. For example, the RenderFile method builds a graph for file playback, given the name of the file. The Render method renders data from an output pin by connecting new filters to the pin.

Using these methods, an application does not need to specify every filter and pin connection in the graph. Instead, the Filter Graph Manager selects filters that are registered on the user's system, adds them to the graph, and connects them.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd390085(v=vs.85).aspx
Subclass of the DirectShowFilterGraphMBS class.

69.19.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

69.19.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr8

69.19.4 Methods

69.19.5 Abort

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Abort method requests the Filter Graph Manager to halt its current task as quickly as possible.
Notes:

The current task may or may not fail to complete. Possibly the fastest option for the Filter Graph Manager is to complete the task.

Lasterror is set.

69.19.6 AddSourceFilter(FileName as string, FilterName as string) as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a source filter for a specified file to the filter graph.
Notes:

FileName: the name of the file to load.
FilterName: name for the source filter.

Lasterror is set.

This method searches for an installed filter that can read the specified file. If it finds one, the method adds it to the filter graph and returns a pointer to the filter's IBaseFilter interface. To determine the media type and compression scheme of the file, the Filter Graph Manager reads the first few bytes of the file, looking for specific patterns of bytes, as documented in the article Registering a Custom File Type.

The application is responsible for building the rest of the filter graph. To do so, call EnumPins to enumerate the output pins on the source filter. Then use either the Connect method or the Render method.

If the method succeeds, the BaseFilter interface has an outstanding reference count. The caller must release the interface.

To render a file for default playback, use the RenderFile method.

The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

69.19.7 Connect(pinOut as DirectShowPinMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects the two pins, using intermediates if necessary.
Notes:

pinOut: the output pin.
pinIn: the input pin.

Lasterror is set.

This method connects two pins directly or indirectly, adding intermediate filters if necessary. The method starts by attempting a direct connection. If that fails, it tries to use any filters that are already in the filter graph and have unconnected input pins. (It enumerates these in an arbitrary order.) If that fails, it searches for filters in the registry, and tries them in order of merit.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390088(v=vs.85).aspx

69.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect an output pin to a filter.
Notes: Lasterror is set.
See also:

- 69.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 14022
- 69.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 14023

69.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect two filters.
Notes: Lasterror is set.
See also:

- 69.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 14022
- 69.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 14023

69.19.10 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience function to connect a filter to an input pin.
Notes: Lasterror is set.
See also:

- 69.19.8 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 14022
- 69.19.9 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 14022

69.19.11 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

69.19.12 MediaControl as DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media control object.
Notes: Lasterror is set.

69.19.13 MediaEventEx as DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries related media event object.
Notes: Lasterror is set.

69.19.14 Render(pinOut as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Render method builds a filter graph that renders the data from a specified output pin.
Notes:

pinOut: an output pin.
Lasterror is set.

This method renders the data from a specified output pin, adding new filters to the graph as needed. Filters are tried in the same order as for the Connect method. For more information, see Intelligent Connect.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).

69.19.15 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes:

FilePath: string that contains the name of a media file.
Lasterror is set.

If the FilePath parameter specifies a media file, the method builds a filter graph for default playback. First it adds a source filter that can read the file, using the same process as the AddSourceFilter method. Then it renders the output pins on the source filter, adding intermediate filters if necessary. It tries filters in the same order as the Connect method.
During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (
textasciitilde).
Note that the RenderFile method does not remove any filters from the graph. If you call RenderFile twice, the second call simply adds more filters to the graph. When you run the graph, both sources will play at the same time.

69.19.16 SetLogFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetLogFile method sets the file for logging actions taken when attempting to perform an operation.
Notes:

This method is for use in debugging; it is intended to help you determine the cause of any failure to automatically build a filter graph.
Lasterror is set.

69.19.17 VideoWindow as DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the video window related tot this graph builder.
Notes: Lasterror is set.

69.20 class DirectShowGUIDMBS

69.20.1 class DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windows unique ID.
Notes: If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.

69.20.4 Methods

69.20.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a GUID with only zeros.
Example:

```
dim g as new DirectShowGUIDMBS

MsgBox g.DisplayString
```

See also:

- 69.20.6 Constructor(Value as String)

- 69.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer) 14027

69.20.6 Constructor(Value as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates GUID based on a text string.
Notes: Raises exception if text has wrong format.
See also:

- 69.20.5 Constructor 14026
- 69.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer) 14027

69.20.7 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new GUID with the given byte values.
Example:

```
dim g as new DirectShowGUIDMBS(& h14, & h3e, & h4e, & h83, & h64, & h97, & h11, & hd2, & ha2, & h31, & h00, & hc0, & h4f, & ha3, & h18, & h09)

MsgBox g.DisplayString
```

See also:

- 69.20.5 Constructor 14026
- 69.20.6 Constructor(Value as String) 14027

69.20.8 Equal(other as DirectShowGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether two GUIDs are equal.
Notes: Returns true if both items are equals.

69.20.9 Operator_Convert as String

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts GUID to text.
Notes: Same as DisplayName.
See also:

- 69.20.10 Operator_Convert(text as String) 14028

69.20.10 Operator_Convert(text as String)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Converts text to GUID.
Notes:

Same as Constructor.
Raises exception if text has wrong format.
See also:

- 69.20.9 Operator_Convert as String 14028

69.20.11 Parse(GUID as String) as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parses GUID string into a GUID object.

69.20.12 Properties

69.20.13 Data as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UID as binary string.
Notes: (Read and Write property)

69.20.14 DisplayString as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID well formatted.
Notes: (Read only property)

69.20.15 Memory as MemoryBlock

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set GUID with memory block.
Notes: (Read and Write property)

69.20.16 Ptr as Ptr

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw GUID data.
Notes: (Read only property)

69.20.17 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Read or write the byte value.
Example:

```
dim g as new DirectShowGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

Notes: (Read and Write computed property)

69.21 class DirectShowMediaControlMBS

69.21.1 class DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides methods for controlling the flow of data through the filter graph.
Notes:

It includes methods for running, pausing, and stopping the graph. The Filter Graph Manager implements this interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.21.2 Methods

69.21.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.21.4 GetState(msTimeout as Integer = -1) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the state of the filter graph,Äîpaused, running, or stopped.
Notes:

msTimeout: Duration of the time-out, in milliseconds, or INFINITE (-1) to specify an infinite time-out.

State transitions are not necessarily synchronous. Therefore, when you call this method, the filter graph might be in transition to a new state. In that case, the method blocks until the transition completes or until the specified time-out elapses.

Lasterror is set.

Applications can use this method to determine whether playback has started after a call to Run. Generally, applications should have their own mechanism for tracking which state they have put the filter graph into. Applications typically use the current state to determine which user interface controls are enabled or disabled. For example, once the graph goes into the running state, the application might disable a "Play" button and enable "Stop" and "Pause" buttons.
If the filter graph is in a transition to a new state, the returned state is the new state, not the previous state. This method returns an error if there is a call on another thread to change the state while this method is

blocked.
Avoid specifying a time-out of INFINITE, because threads cannot process messages while waiting in GetState. If you call GetState from the thread that processes Windows messages, specify small wait times on the call in order to remain responsive to user input. This is especially important when the source is streaming over a network or from the Internet because state transitions in these environments can take significantly more time to complete.

69.21.5 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses all the filters in the filter graph.
Notes:

Lasterror is set.

Pausing the filter graph cues the graph for immediate rendering when the graph is next run. While the graph is paused, filters process data but do not render it. Data is pushed through the graph and processed by transform filters as far as buffering permits, but renderer filters do not render the data. However, video renderers display a static poster frame of the first sample.

If the method returns S_FALSE, call the GetState method to wait for the state transition to complete, or to check if the transition has completed. When you call Pause to display the first frame of a video file, always follow it immediately with a call to GetState to ensure that the state transition has completed. Failure to do this can result in the video rectangle being painted black.
If the method fails, it stops the graph before returning.

69.21.6 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Builds a filter graph that renders the specified file.
Notes:

Lasterror is set.

filePath: Specifies the name of the file to load.

69.21.7 Run

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs all the filters in the filter graph.
Notes:

While the graph is running, data moves through the graph and is rendered.
Lasterror is set.

If the filter graph is stopped, this method pauses the graph before running. If the graph is already running, the method returns S_OK but has no effect.
The graph runs until the application calls the Pause or Stop method. When playback reaches the end of the stream, the graph continues to run, but the filters do not stream any more data. At that point, the application can pause or stop the graph. For information about the end-of-stream event, see Pause and EC_COMPLETE.
This method does not seek to the beginning of the stream. Therefore, if you run the graph, pause it, and then run it again, playback resumes from the paused position. If you run the graph after it has reached the end of the stream, nothing is rendered. To seek the graph, use the MediaSeeking interface.
If method returns S_FALSE, it means that the method returned before all of the filters switched to a running state. The filters will complete the transition after the method returns. Optionally, you can wait for the transition to complete by calling the GetState method with a timeout value. However, this is not required.
If the Run method returns an error code, it means that one or more filters failed to run. However, some filters might be in a running state. In a multistream graph, entire streams might be playing successfully. Typically the application would tear down the graph and report an error in this case.

69.21.8 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops all the filters in the graph.
Notes:

Lasterror is set.

If the graph is running, this method pauses the graph before stopping it. While paused, video renderers can copy the current frame to display as a poster frame.

This method does not seek to the beginning of the stream. If you call this method and then call the Run method, playback resumes from the stopped position. To seek, use the IMediaSeeking interface.

The Filter Graph Manager pauses all the filters in the graph, and then calls the Stop method on all filters, without waiting for the pause operations to complete. Therefore, some filters might have their Stop method called before they complete their pause operation. If you develop a custom rendering filter, you might need to handle this case by pausing the filter if it receives a stop command while in a running state. However, most filters do not need to take any special action in this regard.

69.21.9 StopWhenReady

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pauses the filter graph, allowing filters to queue data, and then stops the filter graph.
Notes:

Lasterror is set.

This method is useful if you want to seek the filter graph while the graph is stopped. As long as the filter graph is stopped, changes in the current position do not repaint the video window with a new frame. Therefore, calling SetPositions does not update the video window. To update the window after the seek operation, call StopWhenReady. This method transitions the graph to a paused state, waits for the pause operation to complete, and then transitions the graph back to stopped. The pause operation queues data in the graph, so that the video renderer receives and displays the new frame.

This method is asynchronous. It waits on a separate thread for the pause to complete. The calling thread does not block, which enables the application to respond to user input. When the method returns, the logical state of the graph is stopped, even before the pause operation completes. If you call the GetState method at this point, it returns State_Stopped.

If the application issues another state-change command (such as pause, run, or seek) before the pause operation completes, the new command cancels the pending stop command. The pause operation completes, but the graph does not stop.

69.21.10 Properties

69.21.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaControl interface.
(Read and Write property)

69.21.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.21.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.21.14 Constants

69.21.15 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Paused

69.21.16 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Running

69.21.17 kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the state constants.
Notes: Stopped.

69.22 class DirectShowMediaEventExMBS

69.22.1 class DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for extended options for media event handling.
Notes:

The DirectShowMediaEventExMBS interface inherits the DirectShowMediaEventMBS interface, which contains methods for retrieving event notifications and for overriding the filter graph's default handling of events. MediaEventEx adds methods that enable an application window to receive messages when events occur.
Subclass of the DirectShowMediaEventMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.22.2 Methods

69.22.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.22.4 Properties

69.22.5 NotifyFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables event notifications.
Notes:

Value indicating whether to enable or disable event notifications. Must be one of the following values: 0 = Enable event notifications or AM_MEDIAEVENT_NONOTIFY = Disable event notifications.

Lasterror is set.

By default, the Filter Graph Manager posts event notifications for the application. If the NotifyFlags parameter is AM_MEDIAEVENT_NONOTIFY, the Filter Graph Manager clears any pending event notifications from the queue, and does not post any new ones.
If event notifications are disabled, the handle returned by the GetEventHandle method is signaled at the end of each stream,Äîthat is, whenever the Filter Graph Manager receives an EC_COMPLETE event.
(Read and Write computed property)

69.22.6 Constants

69.22.7 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the notify flags constant.
Notes: Pass this value to NotifyFlags to disable event notification.

69.23 class DirectShowMediaEventMBS

69.23.1 class DirectShowMediaEventMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for media event handling.
Notes:

The MediaEvent interface contains methods for retrieving event notifications and for overriding the Filter Graph Manager's default handling of events. The MediaEventEx interface inherits this interface and extends it.

The Filter Graph Manager implements this interface. Applications can use it to respond to events that occur in the filter graph, such as the end of a stream or a rendering error. Filters post events to the filter graph using the IMediaEventSink interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.23.2 Methods

69.23.3 CancelDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cancels the Filter Graph Manager's default handling for a specified event.
Notes:

The event notification is passed to the application.
Lasterror is set.

To restore the default handling for an event, call the RestoreDefaultHandling method with the event code.

69.23.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.23.5 FreeEventParams(eventCode as Integer, Param1 as Integer, Param2 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Frees resources associated with the parameters of an event.
Notes:

EventCode: Event code.
Param1: First event parameter.
Param2: Second event parameter.

Lasterorr is set.
After you call the GetEvent method to retrieve an event notification, you must call FreeEventParams. This method frees any resources that were allocated for the event parameters. Pass in the same variables used for the GetEvent call.

69.23.6 RestoreDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the Filter Graph Manager's default handling for a specified event.
Notes:

Lasterror is set.
By default, the Filter Graph Manager handles some events (such as EC_REPAINT) without passing them to the application. If you call the CancelDefaultHandling method to override the default handling for an event, you can restore the default behavior by calling RestoreDefaultHandling with the same event code.

69.23.7 Properties

69.23.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaEvent interface.
(Read and Write property)

69.23.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.23.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.23.11 Constants

69.23.12 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the notify flags constant.
Notes: Pass this value to NotifyFlags to disable event notification.

69.24 class DirectShowMediaFilterMBS

69.24.1 class DirectShowMediaFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MediaFilter interface controls the streaming state of a filter.
Notes:

All DirectShow filters implement this interface. It provides methods for switching the filter between states (stopped, paused, and running); for retrieving the filter's current state; and for setting a reference clock. Applications should not call MediaFilter methods on filters.

The Filter Graph Manager also exposes this interface. Applications can use the SetSyncSource method to set the graph reference clock, and GetSyncSource to retrieve the clock. Applications should not call the other methods on this interface. Instead, use the corresponding methods on the MediaControl interface.
The BaseFilter interface inherits from MediaFilter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.24.2 Methods

69.24.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.24.4 Pause

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Pause method pauses the filter.
Notes:

Lasterror is set.

When a filter is paused, it can receive, process, and deliver samples. However, a renderer filter will only accept one sample while paused. Therefore, when the filter graph is paused, samples move through the graph until the first sample reaches the renderer. At that point, streaming is paused until the Run method is called. Video renderers display the first sample as a still frame.

Live capture filters do not deliver any samples while paused, only while running.

The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1. A renderer filter does not complete the transition to paused until either (1) it receives one sample, or (2) it receives an end-of-stream notification. While the state transition is pending, State gives lasterror VFW_S_STATE_INTERMEDIATE.

69.24.5 Run(StartTime as Int64)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Run method runs the filter.
Notes:

StartTime: Reference time corresponding to stream time 0.
Lasterror is set.

When a filter is running, it can receive, process, and deliver samples. Source filters generate new samples, and renderer filters render them.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
Stream time is calculated as the current reference time minus StartTime. To calculate when a media sample should be rendered, the renderer compares the time stamp with the current stream time. Thus, a media sample with a time stamp of zero should be rendered at time StartTime. For more information, see Time and Clocks in DirectShow.
When an application calls the Run method, the Filter Graph Manager calls Run on each filter. It sets the value of StartTime slightly in the future, to account for graph latency.

69.24.6 Stop

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Stop method stops the filter.
Notes:

Lasterror is set.
When a filter is stopped, it does not process or deliver any samples, and it rejects samples from upstream filters.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
This method always sets the filter's state to kStateStopped, even if the method returns an error code.

69.24.7 Properties

69.24.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMediaFilter interface.
(Read and Write property)

69.24.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.24.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.24.11 Constants

69.24.12 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Paused. The filter is processing data, but not rendering it.

69.24.13 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Running. The filter is processing and rendering data.

69.24.14 kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the filter state constants.
Notes: Stopped. The filter is not processing data.

69.25 class DirectShowMediaTypeMBS

69.25.1 class DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the format of a media sample.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd373477(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.25.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr4

69.25.3 Blog Entries

- MBS Xojo Plugins, version 18.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.25.4 Methods

69.25.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.25.6 SetHeight(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets height of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

69.25.7 SetWidth(value as integer) as boolean

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets width of video info header.
Notes: Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to set the value.

69.25.8 Properties

69.25.9 DVINFO as DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as DVInfo.
Notes:

Returns nil if format is not a DVInfo.
(Read only property)

69.25.10 FixedSizeSamples as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are of a fixed size.
Notes:

This field is informational only. For audio, it is generally set to true. For video, it is usually true for uncompressed video and false for compressed video.
(Read and Write property)

69.25.11 FormatType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the structure used for the format block.
Notes: (Read and Write property)

69.25.12 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

69.25.13 Height as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries height of video info header.
Notes:

Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

69.25.14 MajorType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Globally unique identifier (GUID) that specifies the major type of the media sample. F
Notes:

or a list of possible major types, see Media Types.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

69.25.15 SampleSize as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size of the sample in bytes. For compressed data, the value can be zero.
Notes: (Read and Write property)

69.25.16 SubType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: GUID that specifies the subtype of the media sample.
Notes:

For a list of possible subtypes, see Media Types. For some formats, the value might be MEDIASUB-TYPE_None, which means the format does not require a subtype.
http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx
(Read and Write property)

69.25.17 TemporalCompression as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If true, samples are compressed using temporal (interframe) compression.
Notes:

A value of true indicates that not all frames are key frames. This field is informational only.
(Read and Write property)

69.25.18 VideoInfoHeader as DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader.
Notes:

Returns nil if format is not a VideoInfoHeader.
(Read only property)

69.25.19 VideoInfoHeader2 as DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as VideoInfoHeader2.
Notes:

Returns nil if format is not a VideoInfoHeader2.
(Read only property)

69.25.20 WaveFormat as DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries format data as WaveFormat.
Notes:

Returns nil if format is not a WaveFormat.
(Read only property)

69.25.21 Width as Integer

MBS Win Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries width of video info header.
Notes:

Convenience function which works with VideoInfoHeader and VideoInfoHeader2 to query the value.
(Read only property)

69.26 class DirectShowMonikerMBS

69.26.1 class DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The moniker class to query information about devices.
Notes:

In this plugin we use monikers to enumerate filters and devices in order to connect with BindBaseFilter method.

Enables you to use a moniker object, which contains information that uniquely identifies a COM object. An object that has a pointer to the moniker object's IMoniker interface can locate, activate, and get access to the identified object without having any other specific information on where the object is actually located in a distributed system.
Monikers are used as the basis for linking in COM. A linked object contains a moniker that identifies its source. When the user activates the linked object to edit it, the moniker is bound; this loads the link source into memory.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms679705(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.26.4 Methods

69.26.5 BindBaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Binds moniker to a base filter.
Notes:

Lasterror is set.

This implements the primary function of a moniker, which is to locate the object identified by the moniker and return a pointer to one of its interfaces.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms691433(v=vs.85).aspx

69.26.6 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.26.7 DisplayName(BindContext as DirectShowBindContextMBS = nil) as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the display name for the moniker.
Notes:

BindContext: The DirectShowBindContextMBS interface on the bind context to be used in this operation. The bind context caches objects bound during the binding process, contains parameters that apply to all operations using the bind context, and provides the means by which the moniker implementation should retrieve information about its environment. If you provide nil, the plugin creates a temporary context.

GetDisplayName provides a string that is a displayable representation of the moniker. A display name is not a complete representation of a moniker's internal state; it is simply a form that can be read by users. As a result, it is possible (though rare) for two different monikers to have the same display name.

This is not a text to show to user.

69.26.8 EnumMonikers(forward as boolean) as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves enumerator for the components of a composite moniker.
Notes: Lasterror is set.

69.26.9 Hash as UInt32

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a hash value using the internal state of the moniker.
Notes: Lasterror is set.

69.26.10 IsEqual(other as DirectShowMonikerMBS) as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether this moniker is identical to the specified moniker.
Notes:

Returns true if both are identical.
Lasterror is set.

69.26.11 Properties(BindContext as DirectShowBindContextMBS = nil) as DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates property bag with properties of the moniker.
Notes: Lasterror is set.

69.26.12 Properties

69.26.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IMoniker interface.
(Read and Write property)

69.26.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.26.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.27 class DirectShowNullRendererMBS

69.27.1 class DirectShowNullRendererMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The null renderer filter.
Notes:

The Null Renderer filter is a renderer that discards every sample it receives, without displaying or rendering the sample data.

Use this filter when an output pin in the graph requires a downstream connection, but you do not wish to render the data from that pin. By connecting the output pin to the Null Renderer, you complete the connection without rendering the data.
Subclass of the DirectShowBaseFilterMBS class.

69.27.4 Methods

69.27.5 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new Null filter.
Notes: On success the handle property is not zero.

69.28 class DirectShowPinMBS

69.28.1 class DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This interface is exposed by all input and output pins.
Notes:

The filter graph manager uses this interface to connect pins and perform flushing operations. Applications can use this interface to query the pin for information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.28.6 Methods

69.28.7 Accept(Type as DirectShowMediaTypeMBS) as Boolean

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Accept method determines whether the pin accepts a specified media type.
Notes:

Lasterror is set.

A return value of true indicates that the pin will accept the media type, either on the next sample, or after a pin reconnection. The implementation should take into account the current state of the filter, including connections on other pins, and any properties that can be set on the filter.

Any other return value, including false, means that the pin rejects the media type. Therefore, test for true explicitly.

If the filter is running, a return value of true is ambiguous. The pin might accept a format change on the next media sample, without reconnecting; or it might need to reconnect. If the pin supports the IPinConnection interface, call the IPinConnection::DynamicQueryAccept method, which specifically tests whether the pin can accept the new type without reconnecting.

69.28.8 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries base filter.
Notes: Lasterror is set.

69.28.9 ConnectedTo as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectedTo method retrieves a pointer to the connected pin, if any.
Notes: Lasterror is set.

69.28.10 ConnectionMediaType as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ConnectionMediaType method retrieves the media type for the current pin connection, if any.
Notes:

Lasterror is set.
Returns nil if not connected.

69.28.11 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.28.12 Direction as Integer

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The QueryDirection method gets the direction of the pin (input or output).
Notes: Lasterror is set.

69.28.13 Disconnect

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Disconnect method breaks the current pin connection.
Notes:

The Filter Graph Manager calls this method when it disconnects two filters. Applications and filters should not call this method. Instead, call the DirectShowFilterGraphMBS.Disconnect method on the Filter Graph Manager.
Sets lasterror.

This method fails if the filter is paused or running. If the pin supports the PinConnection interface, call PinConnection DynamicDisconnect to disconnect the pin when the filter is paused or running.
This method does not disconnect the other pin in the pin connection.

69.28.14 Id as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Id method retrieves an identifier for the pin.
Notes:

Returns a string containing the pin identifier.
Lasterror is set.

69.28.15 MediaTypes as DirectShowMediaTypeMBS()

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the pin's preferred media types.
Notes: Lasterror is set.

69.28.16 Name as String

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of the pin.
Notes: Lasterror is set.

69.28.17 PIN_CATEGORY_ANALOGVIDEOIN as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Input pin of the capture filter that takes analog and digitizes it.

69.28.18 PIN_CATEGORY_CAPTURE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Capture pin.

69.28.19 PIN_CATEGORY_CC as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing closed captioning data from Line 21.

69.28.20 PIN_CATEGORY_EDS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing Extended Data Services (Line 21, even fields).

69.28.21 PIN_CATEGORY_NABTS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing North American Videotext Standard data.

69.28.22 PIN_CATEGORY_PREVIEW as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Preview pin.

69.28.23 PIN_CATEGORY_STILL as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin that provides a still image. The filter's capture pin must be connected before the still-image pin is connected.

69.28.24 PIN_CATEGORY_TELETEXT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing teletext (a closed captioning variant).

69.28.25 PIN_CATEGORY_TIMECODE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing timecode data.

69.28.26 PIN_CATEGORY_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin to be connected to the VBI Surface Allocator, the VBI surface allocator filter that is needed to allocate the correct video memory for things like closed captioning overlays in scenarios where a video port is being used. PCI, IEEE 1394, and USB scenarios do not use this filter.

69.28.27 PIN_CATEGORY_VIDEOPORT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Video output pin to be connected to input pin zero on the Overlay Mixer.

69.28.28 PIN_CATEGORY_VIDEOPORT_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: One of the DirectShow pin categories.
Notes: Pin providing vertical blanking interval data.

69.28.29 Properties

69.28.30 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IPin interface.
(Read and Write property)

69.28.31 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.28.32 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.28.33 Constants

69.28.34 kPinDirectionInput = 0

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the pin direction constants.
Notes: Input

69.28.35 kPinDirectionOutput = 1

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the pin direction constants.
Notes: Output

69.29 class DirectShowPropertyBagMBS

69.29.1 class DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides an object with a property bag in which the object can save its properties persistently.
Notes:

used for Monikers to store properties like description and user friendly name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.29.4 Methods

69.29.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.29.6 CountProperties as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the number of properties in the property bag.
Notes:

Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

69.29.7 Description as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read description.
Notes: Lasterror is set.

69.29.8 DevicePath as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read device path.
Notes: Lasterror is set.

69.29.9 FriendlyName as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Convenience method to read friendly name.
Notes: Lasterror is set.

69.29.10 PropertyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries name of a property.
Notes:

Sets lasterror.
This fails if the underlaying object doesn't implement the IPropertyBag2 protocol.

69.29.11 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads one of the properties into a variant.
Notes:

As we only need 3 properties for DirectShowMonikerMBS.Properties, we have direct accessors.
Lasterror is set.

69.29.12 Properties

69.29.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IPropertyBag interface.
(Read and Write property)

69.29.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.29.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.30 class DirectShowSampleGrabberMBS

69.30.1 class DirectShowSampleGrabberMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a sample grabber.
Notes:

The Sample Grabber filter provides a way to retrieve samples as they pass through the filter graph. It is a transform filter with one input pin and one output pin. It passes all samples downstream unchanged, so you can insert it into a filter graph without altering the data stream. Your application can then retrieve individual samples from the filter by calling methods on the ISampleGrabber interface.
If you want to retrieve samples without rendering the data, connect the Sample Grabber filter to the Null Renderer filter.

69.30.4 Methods

69.30.5 BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the filter for this grabber.
Notes: So you can add it to a graph builder.

69.30.6 ConnectedMediaType as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetConnectedMediaType method retrieves the media type for the connection on the input pin of the Sample Grabber.
Notes: Lasterror is set.

69.30.7 Constructor

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance of the sample grabber.

69.30.8 Current as Picture

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Queries current picture.
Notes:

This actually makes a copy of the internal buffer into a new picture object.
Lasterror is set.

69.30.9 Destructor

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

69.30.10 SetOneShot(OneShot as boolean)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetOneShot method specifies whether the Sample Grabber filter halts after the filter receives a sample.

69.30.11 Properties

69.30.12 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an ISampleGrabber interface.
(Read and Write property)

69.30.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.30.14 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.30.15 Events

69.30.16 NewFrame(Time as Double)

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: .

Function: The event for a new video frame.
Notes:

time is the starting time of the sample, in seconds.
Use the Current method to get the picture.

69.31 class DirectShowVideoInfoHeader2MBS

69.31.1 class DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image, including interlace, copy protection, and pixel aspect ratio information.
Notes:

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.31.6 Properties

69.31.7 AvgTimePerFrame as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The desired average display time of the video frames, in 100-nanosecond units.
Notes:

The actual time per frame may be longer.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx

(Read and Write property)

69.31.8 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

69.31.9 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

69.31.10 ControlFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Control flags.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

69.31.11 CopyProtectFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flag set with the AMCOPYPROTECT_RestrictDuplication value (0x00000001) to indicate that the duplication of the stream should be restricted.
Notes:

If undefined, specify zero or else the connection will be rejected.
(Read and Write property)

69.31.12 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

69.31.13 InterlaceFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags that specify how the video is interlaced.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407326(v=vs.85).aspx
(Read and Write property)

69.31.14 PictAspectRatioX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The X dimension of picture aspect ratio. For example, 16 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

69.31.15 PictAspectRatioY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y dimension of picture aspect ratio. For example, 9 for a 16-inch x 9-inch display.
Notes: (Read and Write property)

69.31.16 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.31.17 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.31.18 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.31.19 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.31.20 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.31.21 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.31.22 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.31.23 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.31.24 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

69.32 class DirectShowVideoInfoHeaderMBS

69.32.1 class DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes the bitmap and color information for a video image.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx
(Read and Write property)

69.32.8 BitCount as Integer

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap bit count value.
Notes:

The number of bits-per-pixel. Determines the number of bits that define each pixel and the maximum number of colors in the bitmap. This member must be one of the following values.
Can be 0 for PNG/JPEG images, 1 for B/W, 4 for 16 colors, 8 for 256 colors, 16 for thousands of colors, 24 for millions of colors or 32 for millions of colors with alpha.
(Read and Write property)

69.32.9 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Data error rate, in bit errors per second.
Notes: (Read and Write property)

69.32.10 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Approximate data rate of the video stream, in bits per second.
Notes: (Read and Write property)

69.32.11 BMIHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to BITMAPINFOHEADER structure.
Notes:

You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

69.32.12 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap height.
Notes: (Read and Write property)

69.32.13 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.32.14 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.32.15 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.32.16 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the rectangle defining the source video window.
Notes:

This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

69.32.17 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.32.18 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.32.19 TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.32.20 TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Part of the target rectangle for the destination video window.
Notes: (Read and Write property)

69.32.21 VideoInfoHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to VIDEOINFOHEADER structure.
Notes:

You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)

(Read only property)

69.32.22 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bitmap width.
Notes: (Read and Write property)

69.33 class DirectShowVideoStreamConfigCapsMBS

69.33.1 class DirectShowVideoStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Describes a range of video formats.
Notes:

Video compression and video capture filters use this structure to describe what formats they can produce.
Microsoft deprecated this strucutre some time ago in favor of DirectShowMediaTypeMBS class.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.33.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.33.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.33.4 Methods

69.33.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.33.6 Properties

69.33.7 CropAlignX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required horizontal alignment of the source rectangle.
Notes:

Deprecated.
(Read only property)

69.33.8 CropAlignY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required vertical alignment of the source rectangle.
Notes:

Deprecated.
(Read only property)

69.33.9 CropGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Horizontal granularity of the source rectangle.
Notes:

This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Deprecated.
(Read only property)

69.33.10 CropGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Vertical granularity of the source rectangle.
Notes:

This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize.
Note Deprecated.
(Read only property)

69.33.11 InputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes:

For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

69.33.12 InputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Native size of the incoming video signal.
Notes:

For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique.
Deprecated.
(Read only property)

69.33.13 MaxBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum data rate this pin can produce.
Notes:

Deprecated
(Read only property)

69.33.14 MaxCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes:

Deprecated.
(Read only property)

69.33.15 MaxCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Largest source rectangle allowed.
Notes:

Deprecated.
(Read only property)

69.33.16 MaxFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum frame duration, in 100-nanosecond units.
Notes:

This value applies only to capture filters.
(Read and Write property)

69.33.17 MaxOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes:

Deprecated.
(Read only property)

69.33.18 MaxOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum output size.
Notes:

Deprecated.
(Read only property)

69.33.19 MinBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum data rate this pin can produce.
Notes:

Deprecated.
(Read only property)

69.33.20 MinCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes:

The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

69.33.21 MinCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Smallest source rectangle allowed.
Notes:

The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)

69.33.22 MinFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum frame duration, in 100-nanosecond units. This value applies only to capture filters.
Notes: (Read and Write property)

69.33.23 MinOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes:

Deprecated.
(Read only property)

69.33.24 MinOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Minimum output size.
Notes:

Deprecated.
(Read only property)

69.33.25 OutputGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of the output width.
Notes:

This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

69.33.26 OutputGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Granularity of output height.
Notes:

This value specifies the increments that are valid between MinOutputSize and MaxOutputSize.
Deprecated.
(Read only property)

69.33.27 ShrinkTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image horizontally.
Notes:

Deprecated.

(Read only property)

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

69.33.28 ShrinkTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can shrink the image vertically.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

69.33.29 StretchTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image horizontally.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

69.33.30 StretchTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates how well the filter can stretch the image vertically.
Notes:

Deprecated.

Value	Meaning
0	Does not support stretching/shrinking.
1	Uses pixel doubling (stretching) or eliminates pixels (shrinking)
2	Uses interpolation (2 taps)
3 and higher	Uses interpolation (>2 taps)

(Read only property)

69.33.31 VideoStandard as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The analog video standard supported.
Notes:

The value is a bitwise combination of flags from the AnalogVideoStandard enumeration type, or zero.
(Read only property)

69.34 class DirectShowVideoWindowMBS

69.34.1 class DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The direct show class for a video window.
Notes:

The DirectShowVideoWindowMBS interface sets properties on the video window. Applications can use it to set the window owner, the position and dimensions of the window, and other properties.

The Video Renderer filter and the Filter Graph Manager both expose this interface. The Filter Graph Manager forwards all method calls to the Video Renderer. It also forwards certain window messages that the Video Renderer needs to receive, such as WM_DISPLAYCHANGE. Because the video window is usually a child of an application window, the filter would not otherwise receive these messages. Therefore it relies on the Filter Graph Manager to forward them.

In most cases, an application should query the Filter Graph Manager for this interface, and not call the filter directly, because of the messaging issue just described. However, if the filter graph has more than one Video Renderer, the Filter Graph Manager only communicates with one of them, selected arbitrarily. Therefore, if your application uses multiple video windows, use the DirectShowVideoWindowMBS interface directly on the filters. In that case, you must forward window messages to each Video Renderer instance, using the NotifyOwnerMessage method.

Properties set on a video renderer persist between successive connections and disconnections.

Error codes: If the video renderer filter is not connected to another filter, all methods return the error code VFW_E_NOT_CONNECTED. For the Filter Graph Manager's implementation, if the graph does not contain a video renderer filter, all methods return E_NOINTERFACE. Note that the Filter Graph Manager exposes the interface even when the graph does not contain a video renderer, so an application can query for the interface before it builds the graph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.34.4 Methods

69.34.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor to create a new video window.

69.34.6 GetMaxIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMaxIdealImageSize method retrieves the maximum ideal image size for the video image.
Notes:

Width: Receives the maximum ideal width, in pixels.
Height: Receives the maximum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

69.34.7 GetMinIdealImageSize(byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetMinIdealImageSize method retrieves the minimum ideal size for the video image.
Notes:

Width: Receives the minimum ideal width, in pixels.
Height: Receives the minimum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

69.34.8 GetRestorePosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetRestorePosition method retrieves the restored window position.
Notes:

Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.
Lasterror is set.

If the video window is minimized or maximized, you can use this method to get the window's restored position.

69.34.9 GetWindowPosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GetWindowPosition method retrieves the position of the video window.
Notes:

Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.

Lasterror is set.
This method has the same effect as querying left, top, width and height methods.

69.34.10 HideCursor(hide as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The HideCursor method shows or hides the cursor when the mouse is positioned over the video window.
Notes:

Hide: Whether to hide or show the cursor.
Lasterror is set.

69.34.11 IsCursorHidden as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IsCursorHidden method queries whether the cursor is hidden.
Notes: Lasterror is set.

69.34.12 SetWindowForeground(Focus as Boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowForeground method places the video window at the top of the Z order.
Notes:

Focus: whether to give the window focus.
Lasterror is set.

69.34.13 SetWindowPosition(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The SetWindowPosition method sets the position of the video window.
Notes:

Left: The x-coordinate, in pixels.
Top: The y-coordinate, in pixels.
Width: The width, in pixels.
Height: The height, in pixels.
Lasterror is set.

This method has the same effect as setting the Left, Top, Width, and Height methods.
If resizing the window to the specified dimensions is impossible, this method modifies the window's size and location to make the window fit. Call the GetWindowPosition method to determine the result.

69.34.14 Properties

69.34.15 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Points to an IVideoWindow interface.
(Read and Write property)

69.34.16 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

69.34.17 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The formatted error message for the last error.
Notes: (Read and Write property)

69.34.18 MessageDrain as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The window to receive mouse and keyboard messages from the video window.
Notes:

Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Window or DesktopWindow object.
(Read and Write property)

69.34.19 messageDrainControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The control to receive mouse and keyboard messages from the video window.
Notes:

Lasterror is set.
This method enables an application to respond to mouse and keyboard events generated within the video window.
If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use.

Can reference a Control or DesktopControl object.
(Read and Write property)

69.34.20 Owner as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

Function: The parent window for the video window.
Notes:

Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Window or DesktopWindow object.
(Read and Write property)

69.34.21 OwnerControl as Variant

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: The parent control for the video window.
Notes:

Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be sent to this window and errors will likely occur when the application is terminated.

Can reference a Control or DesktopControl object.
(Read and Write property)

69.34.22 AutoShow as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video renderer automatically shows the video window when it receives video data.
Notes:

Lasterror is set.
By default, when the filter graph changes state to paused or running, the video renderer shows the video window and moves it to the foreground. If the user closes the window, it will not automatically reappear.
(Read and Write computed property)

69.34.23 BackgroundPalette as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the video window realizes its palette in the background.
Notes:

Lasterror is set.
If BackgroundPalette is true and the video image requires a palette, the video renderer will realize that palette in the background. Any colors that the palette uses will change to their closest match in the display palette prior to drawing. This ensures that an application will not have its palette disturbed. However, it imposes severe performance penalties on the video.
(Read and Write computed property)

69.34.24 BorderColor as color

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The color that appears around the edges of the destination rectangle.
Notes:

Lasterror is set.
If the destination rectangle is smaller than the client area of the video window, a border is exposed around the edges of the video. The default color is black. Use this method to override the default color. If a palette is in use, a nonsystem color is converted to its closest match.
(Read and Write computed property)

69.34.25 Caption as string

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The video window caption.

Notes:

Lasterror is set.
(Read and Write computed property)

69.34.26 FullScreenMode as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables or disables full-screen video rendering.
Notes:

Set to true to switch to full-screen mode. Set to false to disable full-screen mode. (Default.)
Lasterror is set.

Depending on the video renderer, the switch to full-screen mode may not be visible until the application runs or pauses the graph. In full-screen mode, if the user switches away from the application (for example, using ALT + TAB), the Filter Graph Manager sends an EC_FULLSCREEN_LOST event.
The following remarks describe how the Filter Graph Manager implements full-screen mode. Application developers can probably ignore this information, but it may be useful if you are writing a custom video renderer.
When an application switches to full-screen mode, the Filter Graph Manager searches for a video renderer that will function most efficiently. In order of preference, these are:

- Any video renderer in the filter graph that natively supports full-screen mode.
- Any video renderer in the filter graph that can stretch the video to full-screen without a significant performance cost.
- The Full Screen Renderer filter.
- Any video renderer in the filter graph that supports DirectShowVideoWindowMBS.

For the first option, the Filter Graph Manager sets FullScreenMode on every video renderer in the graph. Most renderers return E_NOTIMPL, indicating the filter does not natively support full-screen mode. If any renderer returns a value not equal to E_NOTIMPL, the Filter Graph Manager uses that one.
For the second option, the Filter Graph Manager calls GetMaxIdealImageSize and GetMinIdealImageSize on every video renderer in the graph. If the size of the display falls within the filter's reported range, it indicates that the filter can stretch the video without a significant performance cost.
Note If the graph is stopped, the Filter Graph Manager pauses each renderer before calling these methods. This gives the renderer an opportunity to initialize any resources it needs, because many renderers cannot determine these values while they are stopped.
Except on older hardware, the second option will generally succeed. The third option is to use the Full Screen Renderer filter, adding it to the graph if necessary. The fourth option is simply to find the first renderer in the graph that supports DirectShowVideoWindowMBS, and stretch the video regardless of performance.
(Read and Write computed property)

69.34.27 Height as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

69.34.28 Left as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x-coordinate of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

69.34.29 Top as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y-coordinate of the video window.
Notes:

Lasterror is set.
(Read and Write computed property)

69.34.30 Visible as Boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows or hides the video window.
Notes:

Set to true to show the window or set to false to hide the window.
Lasterror is set.
(Read and Write computed property)

69.34.31 Width as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the video window.
Notes: (Read and Write computed property)

69.34.32 WindowState as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows, hides, minimizes, or maximizes the video window.
Notes:

Lasterror is set.

See MSDN page for ShowWindow for SW_* constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms633548(v=vs.85).aspx
(Read and Write computed property)

69.34.33 WindowStyle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window styles on the video window.
Notes:

Lasterror is set.
See MSDN for SetWindowLong for details on the WS_* constants.
(Read and Write computed property)

69.34.34 WindowStyleEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window extended styles on the video window.
Notes:

Lasterror is set.
See MSDN for SetWindowLong for details on the WS_EX_* constants.
(Read and Write computed property)

69.34.35 Constants

69.34.36 SW_FORCEMINIMIZE = 11

Function: One of the flags for WindowsStyleEx property.

69.34.65 WS_EX_LAYOUTRTL = & h00400000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.66 WS_EX_LEFT = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.67 WS_EX_LEFTSCROLLBAR = & h00004000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.68 WS_EX_LTRREADING = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.69 WS_EX_MDICHILD = & h00000040

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.70 WS_EX_NOACTIVATE = & h08000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.71 WS_EX_NOINHERITLAYOUT = & h00100000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.72 WS_EX_NOPARENTNOTIFY = & h00000004

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.73 WS_EX_OVERLAPPEDWINDOW = & h00000300

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.74 WS_EX_PALETTEWINDOW = & h00000188

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.75 WS_EX_RIGHT = & h00001000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.76 WS_EX_RIGHTSCROLLBAR = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.77 WS_EX_RTLREADING = & h00002000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.78 WS_EX_STATICEDGE = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.79 WS_EX_TOOLWINDOW = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.80 WS_EX_TOPMOST = & h00000008

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.81 WS_EX_TRANSPARENT = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.82 WS_EX_WINDOWEDGE = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyleEx property.

69.34.83 WS_GROUP = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.84 WS_HSCROLL = & h00100000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.85 WS_ICONIC = & h20000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.86 WS_MAXIMIZE = & h01000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.87 WS_MAXIMIZEBOX = & h00010000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.88 WS_MINIMIZE = & h20000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.89 WS_MINIMIZEBOX = & h00020000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.90 WS_OVERLAPPED = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.91 WS_OVERLAPPEDWINDOW = & h00CF0000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.92 WS_POPUP = & h80000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.93 WS_POPUPWINDOW = & h80880000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.94 WS_SIZEBOX = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.95 WS_SYSMENU = & h00080000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.96 WS_TABSTOP = & h00010000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.97 WS_THICKFRAME = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.98 WS_TILED = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.99 WS_TILEDWINDOW = & h00CF0000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.100 WS_VISIBLE = & h10000000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.34.101 WS_VSCROLL = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

Function: One of the flags for WindowsStyle property.

69.35 class DirectShowWaveFormatMBS

69.35.1 class DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Defines the format of waveform-audio data.
Notes:

Only format information common to all waveform-audio data formats is included in this structure. For formats that require additional information, this structure is included as the first member in another structure, along with the additional information.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

69.35.2 Blog Entries

69.35.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

69.35.4 Methods

69.35.5 Constructor

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

69.35.6 Properties

69.35.7 AvgBytesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Required average data-transfer rate, in bytes per second, for the format tag.
Notes:

If wFormatTag is WAVE_FORMAT_PCM, nAvgBytesPerSec must equal nSamplesPerSec x nBlockAlign. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.

(Read and Write property)

69.35.8 BitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bits per sample for the FormatTag format type.
Notes:

If wFormatTag is WAVE_FORMAT_PCM, then BitsPerSample should be equal to 8 or 16. For non-PCM formats, this member must be set according to the manufacturer's specification of the format tag. If FormatTag is WAVE_FORMAT_EXTENSIBLE, this value can be any integer multiple of 8.
Some compression schemes do not define a value for BitsPerSample, so this member can be zero.
(Read and Write property)

69.35.9 BlockAlign as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Block alignment, in bytes.
Notes:

The block alignment is the minimum atomic unit of data for the wFormatTag format type. If wFormatTag is WAVE_FORMAT_PCM, nBlockAlign must equal (nChannels √ó wBitsPerSample) / 8. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
Software must process a multiple of nBlockAlign bytes of data at a time. Data written to and read from a device must always start at the beginning of a block. For example, it is illegal to start playback of PCM data in the middle of a sample (that is, on a non-block-aligned boundary).
(Read and Write property)

69.35.10 Channels as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of channels in the waveform-audio data.
Notes:

Monaural data uses one channel and stereo data uses two channels.
(Read and Write property)

69.35.11 Data as Ptr

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Pointer to raw data of WAVEFORMATEX structure.
Notes: (Read only property)

69.35.12 FormatTag as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Waveform-audio format type.
Notes:

Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. For one- or two-channel Pulse Code Modulation (PCM) data, this value should be WAVE_FORMAT_PCM.

- If FormatTag equals WAVE_FORMAT_EXTENSIBLE, the structure is interpreted as a WAVEFORMATEXTENSIBLE structure.
- If FormatTag equals WAVE_FORMAT_MPEG, the structure is interpreted as an MPEG1WAVEFORMAT structure.
- If FormatTag equals WAVE_FORMAT_MPEGLAYER3, the structure is interpreted as an MPEGLAYER3WAVEFORMAT structure.

Before reinterpreting a WAVEFORMATEX structure as one of these extended structures, verify that the actual structure size is sufficiently large and that the cbSize member indicates a valid size.

Please contact MBS if you need the above structures as classes in Xojo.
(Read and Write property)

69.35.13 SamplesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sample rate, in samples per second (hertz).
Notes:

If FormatTag is WAVE_FORMAT_PCM, then common values for SamplesPerSec are 8.0 kHz, 11.025 kHz, 22.05 kHz, and 44.1 kHz. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.
(Read and Write property)

69.35.14 Size as Integer

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Size, in bytes, of extra format information appended to the end of the WAVEFORMATEX structure.
Notes:

This information can be used by non-PCM formats to store extra attributes for the wFormatTag. If no extra information is required by the wFormatTag, this member must be set to zero. For WAVE_FORMAT_PCM formats (and only WAVE_FORMAT_PCM formats), this member is ignored. However it is still recommended to set the value.
(Read and Write property)

Chapter 70

Disassembler

70.1 Globals

70.1.1 DisAssembleMBS

MBS Util Plugin, Plugin Version: 3.4, Platform: Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Disassembles all further instructions from the current method following this command.
Notes: The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function.

70.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

70.1.3 DisAssembleObjectMethodMBS(target as object, Declaration as string)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Disassembles all instructions from the given method inside the given object.
Notes:

The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function.
Requires Xojo 5.5 or newer.

70.1.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

70.1.5 GetDisAssembleMBS as string

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. **Function:** Returns a string with the disassembled text.

70.1.6 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

Chapter 71

DiscRecording

71.1 class DRBurnMBS

71.1.1 class DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class to perform and monitor the burning of a CD or DVD disc.
Notes:

Each time you want to burn to a disc, an instance of DRBurnMBS needs to be created.

When an instance is created, you pass in an instance of DRDevice to let the DRBurn object know what device to use. This object is retained for the life of the DRBurn instance. Before burning, you can set several options that control the behavior of the burn and the handling of the disc once the burn completes.

A DRBurn object will send out notifications through the DRNotificationCenter mechanism to broadcast the burn state to any interested observers. However, if for some reason you don't want to use notifications, you can poll the burn object at any time for the current status using the status properties. This is not recommended in any application using a run loop, because it involves polling.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

71.1.4 Methods

71.1.5 abort

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Stops the burn.
Notes:

When this method returns the burn might not actually be fully stopped but it has been cancelled and only cleanup is going on. If a burn has not completed writing data to disc, you just made a coaster.

Typically this method is only used as a result of the user hitting a cancel/stop button somewhere in the user interface.

71.1.6 burnForDevice(device as DRDeviceMBS) as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates an autoreleased burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

71.1.7 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

71.1.8 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the burn.
Notes: Returns nil on any error.

71.1.9 DRBurnAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will still be appendable after the burn. If this key is not present, the burn will default to a value of false and the disc will be marked as not appendable.

71.1.10 DRBurnCompletionActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction indicating that the burn object should eject the disc from the drive when the burn completes.

71.1.11 DRBurnCompletionActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a String containing one of the completion actions possible for the disc handling. If this key is not present, the burn will default to a value of DRBurnCompletionActionEject and the disc will be ejected.

71.1.12 DRBurnCompletionActionMount as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string value for the CompletionAction property indicating that the burn object should mount the disc on the desktop when the burn completes.

71.1.13 DRBurnDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property key whose value is an double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least 40000h per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.

71.1.14 DRBurnFailureActionEject as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should eject the disc from the drive if the burn fails.

71.1.15 DRBurnFailureActionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.

71.1.16 DRBurnFailureActionNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: An string constant for FailureAction indicating that the burn object should do nothing with the disc if the burn fails.

71.1.17 DRBurnOverwriteDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn. If this key is not present, the burn will default to a value of false and the disc will be appended.

71.1.18 DRBurnRequestedSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a number containing the speed at which the burn should run, expressed as a float value of kilobytes per second. If this key is not present, the speed will default to DRDeviceBurnSpeedMax.

71.1.19 DRBurnStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The notification name for a status update on a burn operation.
Notes: See the "DataBurn with Events and Notification" example project.

71.1.20 DRBurnStrategyBDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An string value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for BD (Blu-ray). This strategy applies only to BDs.

71.1.21 DRBurnStrategyCDSAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the SAO (session-at-once) burn strategy for CD.

71.1.22 DRBurnStrategyCDTAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the TAO (track-at-once) burn strategy for CD.

71.1.23 DRBurnStrategyDVDDAO as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for DVD. This strategy applies only to DVDs; it is invalid when burning to CD media.

71.1.24 DRBurnStrategyIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a BOOL indicating whether the burn strategy/strategies listed for DRBurnStrategyKey are the only strategies allowed. If this key is not present, the burn will default to a value of false.

If this value is set to true, and the device does not support the type(s) of burn requested, the burn will fail with kDRDeviceBurnStrategyNotAvailableErr .

If this value is set to false, and the device does not support the type(s) of burn requested, the engine will choose an alternate burn strategy automatically - one that will provide an equivalent disc.

71.1.25 DRBurnStrategyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a string, or array of strings, indicating the burn strategy or strategies that are suggested. If this key is not present, the burn engine picks an appropriate burn strategy automatically. Most clients will not need to specify a specific burn strategy.

When more than one strategy is suggested, the burn engine will attempt to use the first strategy in the list which is available. A burn strategy will never be used if it cannot write the required data: for example, TAO cannot be used to write CD-Text.

The presence of this key by itself is just a suggestion, and if the burn engine cannot fulfill the request it will burn using whatever strategy is available. To make the suggestion into a requirement, add DRBurnStrategyIsRequiredKey with a value of true.

71.1.26 DRBurnTestingKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a boolean indicating if the burn will run as a test burn.

When this is set and the burn object is sent writeLayout, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.

71.1.27 DRBurnUnderrunProtectionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a boolean indicating if burn underrun protection will be on or off for devices which support it.

For those devices which support it, burn underrun protection is enabled by default.

If the device supports burn underrun protection and this key is not present, the burn will default to a value of true and burn underrun protection will be enabled.

71.1.28 DRBurnVerifyDiscKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will be verified after being burned. If this key is not present, the burn will default to a value of true and the disc will be verified.

71.1.29 DRCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

This key points to a DRCDTextBlockMBS, or array of DRCDTextBlockMBS objects containing the CD-Text information for the disc. If this key is not present, the burn will not write CD-Text.

Before using this key, you should to make sure that the device supports CD-Text by checking the value of DRDeviceCanWriteCDTextKey in the device's write capabilities dictionary.

If this value is set to true, and the device does not support writing CD-Text, the burn will fail with kDRDeviceCantWriteCDTextErr.

71.1.30 DRErrorStatusAdditionalSenseStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC additional sense code and additional sense code qualifier pair returned by the device. If no sense is reported, this key will not be present.

71.1.31 DRErrorStatusErrorInfoStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing extended error information in a user appropriate manner.

71.1.32 DRErrorStatusErrorKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number containing the OS error code for the error.

71.1.33 DRErrorStatusErrorStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the error in a user appropriate manner.

71.1.34 DRErrorStatusKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: The key in the status dictionary for the error dictionary.

71.1.35 DRErrorStatusSenseCodeStringKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String describing the RBC sense code returned by the device. If no sense is reported, this key will not be present.

71.1.36 DRErrorStatusSenseKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String containing the raw RBC sense information structure reported by the device. If no sense is reported, this key will not be present.

71.1.37 DRMediaCatalogNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See ean-int.org and uc-council.org for more details on the UPC/EAN standard.

http://www.ean-int.org/
http://www.uc-council.org/

71.1.38 DRStatusCurrentSessionKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current session being burned.

71.1.39 DRStatusCurrentSpeedKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current burn speed.

71.1.40 DRStatusCurrentTrackKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current track being burned.

71.1.41 DRStatusEraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: String indicating the type of erase operation.

71.1.42 DRStatusPercentCompleteKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A key for the status dictionaries.
Number containing the percent complete of the operation expressed as a floating point number from 0 to 1.

71.1.43 DRStatusProgressCurrentKPS as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in kilobytes per second.
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a Number containing the write speed of the burn.

71.1.44 DRStatusProgressCurrentXFactor as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: The current burn speed in a media appropriate x-factor
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a number containing the appropriate x-factor for the media.

71.1.45 DRStatusProgressInfoKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A dictionary of extended progress information.
A key for the status dictionary. The value of this key is a reference to a Dictionary object containing extended progress information.

71.1.46 DRStatusStateDone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it succeeded.

71.1.47 DRStatusStateErasing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the erase status dictionary.
Notes: Indicates the erase is currently in progress.

71.1.48 DRStatusStateFailed as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it failed.

71.1.49 DRStatusStateFinishing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is finishing up (closing the last session, writing the TOC, etc).

71.1.50 DRStatusStateKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes:

A key for the status dictionaries.
String indicating the current state of the operation.

71.1.51 DRStatusStateNone as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation has not yet begun.

71.1.52 DRStatusStatePreparing as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is preparing to begin.

71.1.53 DRStatusStateSessionClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a session on disc. The exact session being closing is contained in DRStatusCurrentSessionKey.

71.1.54 DRStatusStateSessionOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a session on disc. The exact session being opened is contained in DRStatusCurrentSessionKey.

71.1.55 DRStatusStateTrackClose as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is closing a track on disc. The exact track being closed is contained in DRStatusCurrentTrackKey.

71.1.56 DRStatusStateTrackOpen as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is opening a track on disc. The exact track being opened is contained in DRStatusCurrentTrackKey.

71.1.57 DRStatusStateTrackWrite as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is writing a track on disc. The exact track being written is contained in DRStatusCurrentTrackKey.

71.1.58 DRStatusStateVerifying as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One possible value for DRStatusStateKey. Indicates the operation is verifying what it did.

71.1.59 DRStatusTotalSessionsKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of sessions being burned.

71.1.60 DRStatusTotalTracksKey as string

MBS MacControls Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop only.

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the total number of tracks in the current session being burned.

71.1.61 DRSynchronousBehaviorKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property key constants.
Notes:

The burn property whose value is a BOOL indicating if burn operations will behave synchronously. If this key is not present, it will default to a value of false and burn operations will behave asynchronously.

Synchronous operations do not post status notifications, and will not return until they are completed. Status can still be queried at any time, and will remain valid even after the burn operation has finished.

71.1.62 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary describing the status of the burn.
Notes: The same dictionary is returned through the DRBurnStatusChangedNotification notification.

71.1.63 writeImageFile(ImageFile as FolderItem) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes:

Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 71.1.64 writeImageFile(ImagePath as String) as boolean 14127

71.1.64 writeImageFile(ImagePath as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Writes the image tracks to the disc.
Notes:

Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:

- 71.1.63 writeImageFile(ImageFile as FolderItem) as boolean 14127

71.1.65 writeLayout(track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the track to the disc.
Notes: A single session disc will be created with the given track.
See also:

- 71.1.66 writeLayout(tracks() as DRTrackMBS) 14128

71.1.66 writeLayout(tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Writes the tracks to the disc.
Notes: A multi session disc will be created with the given tracks.
See also:

- 71.1.65 writeLayout(track as DRTrackMBS) 14128

71.1.67 Properties

71.1.68 appendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the burn is appendable.
Example:

```
dim b as DRBurnMBS // get a burn object
b.appendable=true
```

Notes:

When a burn completes, it can mark the disc so that no more data can be written to it. This creates a closed or non-appendable disc (which is the most compatible with audio CD players). If this method returns false, then the disc will be marked as closed and no data can be appended to it. A return value of true indicates further burns can be appended to the disc.
(Read and Write computed property)

71.1.69 BurnFailureAction as string

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: What to do on a failure.
Notes:

The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.
(Read and Write computed property)

71.1.70 completionAction as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The action to be performed at the end of the burn.
Notes:

Value must be DRBurnCompletionActionEject, DRBurnCompletionActionMount or empty for default.
(Read and Write computed property)

71.1.71 DoubleLayerL0DataZoneBlocks as Double

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.
Notes:

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).
The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least & h40000 per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.
(Read and Write computed property)

71.1.72 MediaCatalogNumber as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The media catalog number as a binary data string.
Notes:

The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See
http://www.ean-int.org/
and
http://www.uc-council.org/
for more details on the UPC/EAN standard.
(Read and Write computed property)

71.1.73 Overwrite as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn.
Notes:

If this key is not present, the burn will default to a value of false and the disc will be appended.
(Read and Write computed property)

71.1.74 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the burn.
Notes: (Read and Write computed property)

71.1.75 requestedBurnSpeed as single

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The speed at which this burn will attempt to write data.
Notes:

The actual speed also depends on the capabilities of the bus the device is on, the maximum speed of the device itself, and the media used.

Value is a float indicating the speed the burn should run at in kilobytes per second.
(Read and Write computed property)

71.1.76 Testing as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether the burn will run as a test burn.
Notes:

When this is set and the burn starts, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.
(Read and Write computed property)

71.1.77 UnderrunProtection as boolean

MBS MacControls Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating if burn underrun protection will be on or off for devices which support it.
Notes:

For those devices which support it, burn underrun protection is enabled by default.
If the device supports burn underrun protection and this key is not present, the burn will default to a value of trueand burn underrun protection will be enabled.
(Read and Write computed property)

71.1.78 verifyDisc as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the resulting disc will be verified.
Example:

```
dim b as DRBurnMBS // get a burn object
b.verifyDisc=true
```

Notes:

After data is written to disc, the data can be verified. The verification
process will read the data on the disc back into memory and compare it to the
data originally used to write to disc. The type of verification is determined
by a track property on a track-by-track basis. See the DRTrackMBS documentation for more information on verification types.
(Read and Write computed property)

71.2 class DRBurnProgressPanelMBS

71.2.1 class DRBurnProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Run and display progress while burning data to media.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

71.2.6 Methods

71.2.7 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 71.2.8 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS) 14134

71.2.8 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 71.2.7 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS) 14134

71.2.9 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 71.2.10 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean 14135

71.2.10 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the burn process.
Notes:

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 71.2.9 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean 14135

71.2.11 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 71.2.12 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS) 14136

71.2.12 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

- 71.2.11 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS) 14136

71.2.13 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 71.2.14 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean 14137

71.2.14 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:

- 71.2.13 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean 14136

71.2.15 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn progress panel.

71.2.16 DRBurnProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes:

Posted when the DRBurnProgressPanel has finished and is about to go away.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be closed.

71.2.17 DRBurnProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with a burn progress panel.
Notes:

Posted when the DRBurnProgressPanel is about to begin displaying progress.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be displayed.

71.2.18 stopBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's stop button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.2.19 Properties

71.2.20 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes:

If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the burn.
(Read and Write computed property)

71.2.21 VerboseProgressStatus as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The vebosity of the progress feedback.
Notes:

If verbose is true, the panel will update status for every change. If verbose is false, the panel will filter some status messages and only update for major changes. The default for the panel is filter the status messages.
(Read and Write computed property)

71.2.22 Events

71.2.23 burnProgressPanelBurnDidFinish(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to handle the end-of-burn feedback.
Notes: This method allows the delegate to handle or modify the end-of-burn feedback performed by the progress panel. Return true to indicate the delegate handled the burn completion and the standard feedback should be supressed. If this method returns false, the normal end-of-burn handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

71.2.24 burnProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel after ordering out.
Notes: If the delegate implements this method it will receive the message after the panel is removed from display.

71.2.25 burnProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel before display.
Notes: If the delegate implements this method it will receive the message immediately before the panel is displayed.

71.2.26 Screenshots

71.2.27 DiscRecording2.jpg

Function: The burn progress panel running.

71.3 class DRBurnSetupPanelMBS

71.3.1 class DRBurnSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an burn.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

This class supports choosing the the device to use, whether or not to verify the burned data and how to handle the burned disc when it completes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRSetupPanelMBS class.

71.3.6 Methods

71.3.7 appendable

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's appendable checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.3.8 burnObject as DRBurnMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRBurn object that's configured to write data to the currently selected device.
Notes:

The new DRBurn object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session because the burn object information is only updated just before the modal session ends.

Returns nil on any error.

71.3.9 burnSpeed

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's burn speed popup button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.3.10 completionAction

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks one of the panel's completion action radio buttons.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.3.11 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new burn setup panel.

71.3.12 DRBurnSetupPanelDefaultButtonDefaultTitle as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant to use for the build title so it is replaced by the real default title string.

71.3.13 expand

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's expand button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method

to trigger the same behavior as if the user clicked the control.

71.3.14 setCanSelectAppendableMedia(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to leave the disc appendable.
Notes:

This method controls whether the appendable checkbox is enabled.

If the data being writen to disc does not lend itself to having more data appended on to it, you can disable the ability of the user to leave the disc open.

This method must be called before the panel is displayed.

Set to yes to enable the appendable checkbox, false to disable.

71.3.15 setCanSelectTestBurn(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user can choose to make a test burn.
Notes:

This method controls whether a checkbox should be added to the receiver that allows the user to set the burn to be a test burn. By default, the test burn button is not displayed.

This method must be called before the panel is displayed.

Set to yes to show the test burn checkbox, false to hide it.

71.3.16 setDefaultButtonTitle(title as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Sets the title for the receiver's default button to title.
Example:

```
dim panel as new DRBurnSetupPanelMBS

panel.setDefaultButtonTitle "Do Burn"
```

Notes: Normally, the default button is "Burn".

71.3.17 testBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's test burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.3.18 verifyBurn

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's verify burn checkbox.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.3.19 Screenshots

71.3.20 DiscRecording1.jpg

Function: The burn setup panel running.

71.4 class DRCDTextBlockMBS

71.4.1 class DRCDTextBlockMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for a Text block.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.4.2 Methods

71.4.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

71.4.4 encoding as Integer

MBS MacControls Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: The text encoding to use.

71.4.5 language as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The language of this text block.

71.5 class DRDeviceMBS

71.5.1 class DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a physical CD/DVD drive connected to the computer.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.5.6 Methods

71.5.7 acquireExclusiveAccess as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Attempts to acquire an exclusive access session with the device.
Notes:

Acquiring exclusive access to the device prevents any process other than the one acquiring access from communicating with the device. So once exclusive access is granted, the device is unusable by any other process. Because of this all volumes mounted from media in the drive must be unmounted before exclusive access can be granted.

Exclusive access can be acquired multiple times. Each time this method is called, a call to releaseExclusiveAccess must be made at a later time, otherwise the process will never release its exclusive access.

Returns true if the exclusinve access is acquired and false if not.

71.5.8 acquireMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicate an interest in the blank media reservation.
Example:

```
dim d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes: Blank media participates in a reservation system thats allows applications to express their claim on blank media to other applications. Indicating an interest in the reservation isn't enough to assume its been acquired, as there are likely to be other applications in the system whom have also indicated an interest in the blank media reservation.

71.5.9 bsdName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the bsd /dev node name.

71.5.10 closeTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to close its tray.
Notes:

Does nothing if the device does not have a tray (slotload).
Returns true if the tray could be closed and false if not.

71.5.11 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

71.5.12 device(index as UInt32) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the device with the given index.
Notes:

Index from 0 to deviceCount-1.

Same as devices(), but if you only need one, this method is more efficient.

71.5.13 deviceCount as UInt32

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Queries the number of devices on this computer.

71.5.14 deviceForBSDName(bsdName as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device corresponding to the bsd /dev node.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

71.5.15 deviceForIORegistryEntryPath(path as string) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Obtains a DRDevice for the device at the path.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

71.5.16 devices as DRDeviceMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Obtains a static list of devices connected to the computer.
Example:

```
// shows all devices with their product names:
dim devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: Returns all CD/DVD devices connected to the computer at the time this method is called. Since devices can come and go at any time, the output of this method is simply a snapshot of the set of devices connected.

71.5.17 displayName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a string suitable for display in the user interface.

71.5.18 DRDeviceAppearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when a device is added to the system.

This notification is registered for only by name.

The object associated with this notification is the the device that has appeared. The userInfo is the same dictionary returned by info for that device.

71.5.19 DRDeviceBurnSpeedBD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4496.0 KB/sec.

71.5.20 DRDeviceBurnSpeedCD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 176.4 KB/sec.

71.5.21 DRDeviceBurnSpeedDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 1385.0 KB/sec.

71.5.22 DRDeviceBurnSpeedHDDVD1x as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: 4568.0 KB/sec.

71.5.23 DRDeviceBurnSpeedMax as single

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible burn speed values.
Notes: A value representing the maximum speed at which a device can burn. The actual speed will vary from device to device.

71.5.24 DRDeviceBurnSpeedsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing the possible burn speeds available to use. This key may not be present if no media is inserted.

71.5.25 DRDeviceCanTestWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Value for this key is a boolean value indicating whether the device can perform a test burn to CD media.

71.5.26 DRDeviceCanTestWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: A boolean value indicating whether the device can perform a test burn to DVD media.

71.5.27 DRDeviceCanUnderrunProtectCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to CD media.

71.5.28 DRDeviceCanUnderrunProtectDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to DVD media.

71.5.29 DRDeviceCanWriteBDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of BD (Blu-ray) based media.

71.5.30 DRDeviceCanWriteBDREKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-RE media.

71.5.31 DRDeviceCanWriteBDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to BD-R media.

71.5.32 DRDeviceCanWriteCDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of CD based media.

71.5.33 DRDeviceCanWriteCDRawKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a raw mode burn strategy for CD. Raw mode is sometimes incorrectly referred to as DAO (disc-at-once).

71.5.34 DRDeviceCanWriteCDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-R media.

71.5.35 DRDeviceCanWriteCDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-RW media.

71.5.36 DRDeviceCanWriteCDSAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a SAO (session-at-once) burn strategy for CD.

71.5.37 DRDeviceCanWriteCDTAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a TAO (track-at-once) burn strategy for CD.

71.5.38 DRDeviceCanWriteCDTextKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write CD-Text information to media.

71.5.39 DRDeviceCanWriteDVDDAOKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a DAO (disc-at-once) burn strategy on DVD media.

71.5.40 DRDeviceCanWriteDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of DVD based media.

71.5.41 DRDeviceCanWriteDVDPlusRDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R DL media.

71.5.42 DRDeviceCanWriteDVDPlusRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R media.

71.5.43 DRDeviceCanWriteDVDPlusRWDoubleLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW DL media.

71.5.44 DRDeviceCanWriteDVDPlusRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW media.

71.5.45 DRDeviceCanWriteDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RAM media.

71.5.46 DRDeviceCanWriteDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R DL media.

71.5.47 DRDeviceCanWriteDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R media.

71.5.48 DRDeviceCanWriteDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW DL media.

71.5.49 DRDeviceCanWriteDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RW media.

71.5.50 DRDeviceCanWriteHDDVDKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of HDDVD based media.

71.5.51 DRDeviceCanWriteHDDVDRAMKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RAM media.

71.5.52 DRDeviceCanWriteHDDVDRDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R DL media.

71.5.53 DRDeviceCanWriteHDDVDRKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-R media.

71.5.54 DRDeviceCanWriteHDDVDRWDualLayerKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW DL media.

71.5.55 DRDeviceCanWriteHDDVDRWKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to HD DVD-RW media.

71.5.56 DRDeviceCanWriteIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write index points to CD media.

71.5.57 DRDeviceCanWriteISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write ISRC to CD media.

71.5.58 DRDeviceCanWriteKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of media.

71.5.59 DRDeviceCurrentWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the current burning speed of this device.

71.5.60 DRDeviceDisappearedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when a device is removed from the system.

The object associated with this notification is the the device that has disappeared. The userInfo is the same dictionary returned by info for that device.

71.5.61 DRDeviceFirmwareRevisionKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the firmeware revision extracted from the device.

71.5.62 DRDeviceIORegistryEntryPathKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: String containing the path of the device in the IO Registry.
Notes: One of the keys in the dictionary returned by the info method.

71.5.63 DRDeviceIsBusyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device is busy or not.

71.5.64 DRDeviceIsTrayOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing a boolean value indicating whether the device's tray is open or not.

71.5.65 DRDeviceLoadingMechanismCanEjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can eject.

71.5.66 DRDeviceLoadingMechanismCanInjectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can inject.

71.5.67 DRDeviceLoadingMechanismCanOpenKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number describing if the loading mechanism of the drive can open.

71.5.68 DRDeviceMaximumWriteSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Number containing the maximum burning speed of this device.

71.5.69 DRDeviceMediaBlocksFreeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

71.5.70 DRDeviceMediaBlocksOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

Number containing the total amount of writable space available (in blocks) on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

71.5.71 DRDeviceMediaBlocksUsedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space currently used (in blocks) for exising data.

71.5.72 DRDeviceMediaBSDNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the BSD /dev node name assigned to the media in the device.

71.5.73 DRDeviceMediaClassBD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of BD (Blu-ray) based media.

71.5.74 DRDeviceMediaClassCD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of CD based media.

71.5.75 DRDeviceMediaClassDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of DVD based media.

71.5.76 DRDeviceMediaClassHDDVD as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of HD DVD based media.

71.5.77 DRDeviceMediaClassKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the class of media present in the drive.

71.5.78 DRDeviceMediaClassUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media class is unknown.

71.5.79 DRDeviceMediaDoubleLayerL0DataZoneBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on layer 0 of a double layer piece of media.

71.5.80 DRDeviceMediaFreeSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space available on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.

71.5.81 DRDeviceMediaInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary of information describing the media currently in the device. This key may not be present if no media is inserted.

71.5.82 DRDeviceMediaIsAppendableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that data can be appended to the exisiting data (if any).

71.5.83 DRDeviceMediaIsBlankKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether data has previously been written to the media.

71.5.84 DRDeviceMediaIsErasableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether this media can be erased.

71.5.85 DRDeviceMediaIsOverwritableKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

Number containing a boolean value indicating that the data on the disc (if any) can be overwritten. Rewritable media can always be erased, and then rewritten in its entirety, so it is always considered overwritable.

Write-once media, if its blank, can also be written in its entirety and is also considered overwritable.

Write-once media, that has been partially written, can never again enter a state where it is entirely writable and will have lost its overwritable designation.

71.5.86 DRDeviceMediaIsReservedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether the media is reserved for exclusive use by the current process.

71.5.87 DRDeviceMediaOverwritableSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes:

MSF value of the amount of writable space available on the media to be written to - if that media can be overwritten. Media that can be overwitten is designated through the DRDeviceMediaIsOverwritableKey .

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

71.5.88 DRDeviceMediaSessionCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the current number of sessions present on the media.

71.5.89 DRDeviceMediaStateInTransition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: The media is transitioning from one state to another (i.e., being spun up/down).

71.5.90 DRDeviceMediaStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: String describing the state of the media.

71.5.91 DRDeviceMediaStateMediaPresent as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: Device contains media of some type.

71.5.92 DRDeviceMediaStateNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values for the DRDeviceMediaStateKey.
Notes: No media is present in the device.

71.5.93 DRDeviceMediaTrackCountKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the number of tracks present on the media.

71.5.94 DRDeviceMediaTypeBDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-R.

71.5.95 DRDeviceMediaTypeBDRE as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-RE.

71.5.96 DRDeviceMediaTypeBDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a BD-ROM.

71.5.97 DRDeviceMediaTypeCDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-R.

71.5.98 DRDeviceMediaTypeCDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-ROM.

71.5.99 DRDeviceMediaTypeCDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a CD-RW.

71.5.100 DRDeviceMediaTypeDVDPlusR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R.

71.5.101 DRDeviceMediaTypeDVDPlusRDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+R Double Layer.

71.5.102 DRDeviceMediaTypeDVDPlusRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

71.5.103 DRDeviceMediaTypeDVDPlusRWDoubleLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW Double Layer.

71.5.104 DRDeviceMediaTypeDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD+RW.

71.5.105 DRDeviceMediaTypeDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RAM.

71.5.106 DRDeviceMediaTypeDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-R DL.

71.5.107 DRDeviceMediaTypeDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-ROM.

71.5.108 DRDeviceMediaTypeDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW.

71.5.109 DRDeviceMediaTypeDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a DVD-RW DL.

71.5.110 DRDeviceMediaTypeHDDVDR as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R.

71.5.111 DRDeviceMediaTypeHDDVDRAM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RAM.

71.5.112 DRDeviceMediaTypeHDDVDRDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-R DL.

71.5.113 DRDeviceMediaTypeHDDVDROM as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-ROM.

71.5.114 DRDeviceMediaTypeHDDVDRW as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW.

71.5.115 DRDeviceMediaTypeHDDVDRWDualLayer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW DL.

71.5.116 DRDeviceMediaTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the type of media inserted in the device.

71.5.117 DRDeviceMediaTypeUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: The type of the media cannot be determined.

71.5.118 DRDeviceMediaUsedSpaceKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space currently used for exising data.

71.5.119 DRDevicePhysicalInterconnectATAPI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on an ATAPI interface.

71.5.120 DRDevicePhysicalInterconnectFibreChannel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Fibre Channel interface.

71.5.121 DRDevicePhysicalInterconnectFireWire as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Firewire interface.

71.5.122 DRDevicePhysicalInterconnectKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the connection of the device to the computer.

71.5.123 DRDevicePhysicalInterconnectLocationExternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine externally.

71.5.124 DRDevicePhysicalInterconnectLocationInternal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine internally.

71.5.125 DRDevicePhysicalInterconnectLocationKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the location of the device (e.g. internal/external).

71.5.126 DRDevicePhysicalInterconnectLocationUnknown as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: It's not known how the device is connected.

71.5.127 DRDevicePhysicalInterconnectSCSI as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on a SCSI interface.

71.5.128 DRDevicePhysicalInterconnectUSB as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a USB interface.

71.5.129 DRDeviceProductNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Example:

```
// shows all devices with their product names:
dim devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next
```

Notes: String containing the product name extracted from the device.

71.5.130 DRDeviceStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when the media in a device changes state. This can include being ejected, inserted, becoming busy, etc.

The object for this notification is the device who's media is changing state. The userInfo for this notification is the same dictionary returned by status for that device.

71.5.131 DRDeviceSupportLevelAppleShipping as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is shipping in some Apple machine.

71.5.132 DRDeviceSupportLevelAppleSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by Apple for support.

71.5.133 DRDeviceSupportLevelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the support level the device enjoys from the engine.

71.5.134 DRDeviceSupportLevelNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is not supported.

71.5.135 DRDeviceSupportLevelUnsupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates the device is unsupported, but the engine will try to use it anyway.

71.5.136 DRDeviceSupportLevelVendorSupported as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by a third party for support.

71.5.137 DRDeviceTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary containing dictionaries describing the tracks. DRTracks from the DRDeviceTrackRefsKey are used as keys into this dictionary.

71.5.138 DRDeviceTrackRefsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing a list of DRTrack objects describing any tracks that are already on the disc.

71.5.139 DRDeviceVendorNameKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the vendor name extracted from the device.

71.5.140 DRDeviceWriteBufferSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Number containing the size of the write buffer of the device.

71.5.141 DRDeviceWriteCapabilitiesKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the keys in the dictionary returned by the info method.
Notes: Dictionary containing the capabilities of the device for writing different kinds of media.

71.5.142 ejectMedia as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to eject the media.
Notes:

This command first unmounts any volumes associated with the media and then eject the media from the drive. If the media could not be ejected, most likely this is because a volume associated with the media could not be unmounted.

Returns true if the media could be ejected and false if not.

71.5.143 info as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the device.
Notes: The information returned include the types of media the device can write to, how it's connected and its identifying information such as the vendor and product name.

71.5.144 ioRegistryEntryPath as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the path to the device in the IO Registry.

71.5.145 isEqualToDevice(value as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares the receiver to another device.
Notes: Returns true if the receiver is equal to otherDevice.

71.5.146 isValid as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns whether or not the device represented by the receiver is still attached to the computer.
Notes:

Because of the way some physical interconnects work, a device which is unplugged and replugged in does not necessarily look like the same device to the computer and would be invalid in that instance.

Returns true if the device is valid and false if not.

71.5.147 mediaIsAppendable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can have more data appended to any existing data.

71.5.148 mediaIsBlank as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true the media in the device is blank.

71.5.149 mediaIsBusy as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in use by some process - even the one making this call.

71.5.150 mediaIsErasable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media can be erased (i.e., CD-RW, DVD-RW, etc).

71.5.151 mediaIsOverwritable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media in the device can be fully (re)written.

71.5.152 mediaIsPresent as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the presence of the media.

71.5.153 mediaIsReserved as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the application calling this method currently holds the reservation on the media.

71.5.154 mediaIsTransitioning as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns true if the media is in transition (spinning up or down for example).

71.5.155 mediaSpaceFree as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of free space on the media.

71.5.156 mediaSpaceOverwritable as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of writable space on the media.

71.5.157 mediaSpaceUsed as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the amount of used space on the media.

71.5.158 mediaType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the type of media currently inserted into the device.

71.5.159 openTray as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Commands the device to open it's tray.
Notes:

Does nothing if the device does not have a tray (slotload). If there is media in the drive this method will do nothing and return false. In this case use ejectMedia to eject the media and open the tray.

Returns true if the tray could be opened and false if not.

71.5.160 PhysicalInterconnect as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The connection of the device to the computer.

71.5.161 PhysicalInterconnectLocation as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The location of the device (internal/external/unknown).
Notes: Use the DRDevicePhysicalInterconnectLocation* constants.

71.5.162 releaseExclusiveAccess

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases the latest exclusive access request for the device.
Notes: A call to this method must be made for every call to acquireExclusiveAccess, otherwise the process will never release its exclusive access.

71.5.163 releaseMediaReservation

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Releases any media reservation that might be in place for the device.
Notes: If media is inserted and reserved, then the reservation will be passed on to the next process with a reservation request.

71.5.164 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary of information describing the media in the device.
Notes: In addition to information about the media (type, space available/used, etc), the dictionary returned includes those pieces of information about the device itself which are in part determined by the media (i.e., maximum burn speed).

71.5.165 trayIsOpen as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the tray state of the device.
Notes: Returns true if the device has a tray and it is open.

71.5.166 writesCD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to CD-type media.
Notes: Returns true if the device has the ability to write to CD-R media.

71.5.167 writesDVD as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Reports the device's ability to burn to DVD-type media.
Notes: Returns true if the device has the ability to write to DVD-R media.

71.6 class DREraseMBS

71.6.1 class DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Perform and monitor the erasing a rewritable CD or DVD disc.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

71.6.4 Methods

71.6.5 Constructor(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Initializes an erase object.

71.6.6 device as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the device being used for the erase.

71.6.7 DREraseStatusChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names you can use to register notifications on the erase status.

71.6.8 DREraseTypeComplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a complete erase, erasing every byte on the disk. This operation is slow (on the order of 30 minutes) to complete.

71.6.9 DREraseTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property names in the properties dictionary of the erase object.

71.6.10 DREraseTypeQuick as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a quick erase, doing the minimal amount of work to make the disc appear blank. This operation typically takes only a minute or two.

71.6.11 eraseForDevice(device as DRDeviceMBS) as DREraseMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns an erase object.
Notes: Returns nil on any error.

71.6.12 start

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Begin the process of erasing media.
Notes: This method only kicks off the erase. Once the erasure starts, control returns to the caller.

71.6.13 status as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing the status of the erase.
Notes: The same dictionary is returned through the DREraseStatusChangedNotification notification.

71.6.14 Properties

71.6.15 eraseType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of erase to be performed.
Notes: (Read and Write computed property)

71.6.16 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the erase.
Notes: (Read and Write computed property)

71.7 class DREraseProgressPanelMBS

71.7.1 class DREraseProgressPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Panel to display progress while erasing media.
Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.

71.7.4 Methods

71.7.5 beginProgressPanelForErase(erase as DREraseMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel on screen and begins the erase process.
Notes: This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

71.7.6 beginProgressSheetForErase(erase as DREraseMBS, docWindow as NSWindowMBS)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Presents the progress panel as a sheet and begins the erase process.
Notes:

erase: The object performing the erase.
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

71.7.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor which creates the erase progress panel.

71.7.8 DREraseProgressPanelDidFinishNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes:

Posted when the DREraseProgressPanel has finished and is about to go away.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be closed.

71.7.9 DREraseProgressPanelWillBeginNotification as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the notification names for use with an erase progress panel.
Notes:

Posted when the DREraseProgressPanel is about to begin displaying progress.

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel thatwill be displayed.

71.7.10 Properties

71.7.11 Description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The description string displayed in the panel.
Notes:

If no description is explicitly set, this method will return the standard text string.

The panel's description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the erase.
(Read and Write computed property)

71.7.12 Events

71.7.13 eraseProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel after ordering out.

71.7.14 eraseProgressPanelEraseDidFinish(erase as DREraseMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to handle the end-of-erase feedback.
Notes: This method allows the delegate to handle or modify the end-of-erase feedback performed by the progress panel. Return true to indicate the delegate handled the erase completion and the standard feedback should be supressed. If this method returns false, the normal end-of-erase handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

71.7.15 eraseProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Notification sent by the panel before display.

71.8 class DREraseSetupPanelMBS

71.8.1 class DREraseSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Manages a panel that allows users to specify the parameters of an erase.
Notes:

This class supports choosing the device to use and what sort of erase to perform. When the panel is closed by the user choosing to erase the media in the device, the device is exclusively held by the application for its own use to prevent possible bad or corrupt media from causing problem for the rest of the system. This means that if the erase object obtained from the panel is not used to do an erase, the device will remain unavailable to other applications until the exclusive access is released.
Subclass of the DRSetupPanelMBS class.

71.8.2 Methods

71.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create the erase setup panel.
Example:

```
dim d as DREraseSetupPanelMBS

d=new DREraseSetupPanelMBS
call d.runSetupPanel
```

71.8.4 eraseObject as DREraseMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a new DRErase object that's configured to erase the disc in the currently selected device.
Notes:

The new DRErase object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session runSetupPanel because the erase object information is only updated just before the modal session ends.

Returns a new DRErase object.

71.9 class DRFileMBS

71.9.1 class DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Represents a file to be created on the disc.
Notes:

A file can be either a pointer to an exiting file (residing on a hard drive for example) or can be created at burn time from data passed into the file object as requested. DRFiles can only exist inside of DRFolder objects.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.

71.9.6 Methods

71.9.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.
See also:

- 71.9.8 Constructor(name as string) 14190
- 71.9.9 Constructor(name as string, data as memoryblock) 14190
- 71.9.10 Constructor(path as folderitem) 14191

71.9.8 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes:

This type of DRFile burns the data produced to the output disc, creating a file with the passed in name.

You need to subclass the DRFileMBS class and handle the events.
See also:

- 71.9.7 Constructor 14190
- 71.9.9 Constructor(name as string, data as memoryblock) 14190
- 71.9.10 Constructor(path as folderitem) 14191

71.9.9 Constructor(name as string, data as memoryblock)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.
See also:

- 71.9.7 Constructor 14190
- 71.9.8 Constructor(name as string) 14190
- 71.9.10 Constructor(path as folderitem) 14191

71.9.10 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a "real" file object
Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 71.9.7 Constructor 14190
- 71.9.8 Constructor(name as string) 14190
- 71.9.9 Constructor(name as string, data as memoryblock) 14190

71.9.11 DRLinkTypeFinderAlias as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a Finder alias.

71.9.12 DRLinkTypeHardLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a hard link.

71.9.13 DRLinkTypeSymbolicLink as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constant used with linkWithLinkType to create a symbolic link.

71.9.14 fileWithPath(path as folderitem) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/Fonts/Helvetica.dfont", FolderItem.PathTypeShell)
dim f as DRFileMBS = DRFileMBS.fileWithPath(file)
```

MsgBox f.baseName

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 71.9.15 fileWithPath(path as string) as DRFileMBS 14192

71.9.15 fileWithPath(path as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "real" file object.
Example:

```
dim f as DRFileMBS = DRFileMBS.fileWithPath("/System/Library/Fonts/Helvetica.dfont")

MsgBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 71.9.14 fileWithPath(path as folderitem) as DRFileMBS 14191

71.9.16 finderAliasPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a Finder alias to another file on the output disc.
Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to create an empty file only (no alias).

71.9.17 hardLinkPointingTo(original as DRFileMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a hard link to another file on the output disc.
Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to crash always.

71.9.18 linkWithLinkType(linkType as string, original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a file object to point to another file on the output disc.
Example:

```
dim SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
dim SymLink as DRFileMBS = DRFileMBS.linkWithLinkType(DRFileMBS.DRLinkTypeSymbolicLink, testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes:

linkType: The type of link that will be created.
original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

71.9.19 symLinkPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a symbolic link to another file on the output disc.
Example:

```
dim SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
dim SymLink as DRFileMBS = DRFileMBS.symLinkPointingTo(testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if
```

Notes:

original: The file to point he hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to work just fine.

71.9.20 virtualFileWithName(name as string, data as memoryblock) as DRFileMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" file object.
Example:

```
dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name

dim f as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

MsgBox f.baseName
```

Notes: This type of DRFile burns the data passed in to disc, creating a file with the passed in name.

71.9.21 Events

71.9.22 calculateSizeOfFile(fork as Integer, estimating as boolean) as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Calculates the size of a file's fork.
Notes:

This method may be sent at any time after the file object has been instantiated. Requests that the recevier calculate the file size of file fork (for instance data or resource).

If estimate is true, you are being asked for an estimate of the final fork size, perhaps to provide an estimate of the track size, and do not have to be exact. Estimates should err on the high side; it's better to overestimate than underestimate.

An estimate call may be made at any time.

If estimate is false, you are being asked for the actual fork size, to be used in the burn. This call is only made in the burn phase.

fork: The fork of the file whose size is to be calculated.
estimate: If the file size should be estimated or exact.

Return the length of the file's fork.

71.9.23 cleanupFileAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleanup the file once the burn is complete.
Notes: Sent to the receiver after the burn completes. This would be an appropriate place to close files, or do any other teardown work needed. This message will always be sent regardless of whether the burn succeeded or failed.

71.9.24 prepareFileForBurn as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the file object for burning.
Notes:

Sent to the recevier before the burn begins. This would be an appropriate method to open files, or do any other prep work needed. The disc's entire hierarchy is completely in place and can be queried if needed.

After this call, the burn's content is locked down, and you should be able to respond to the calculateSizeOfFile messages with exact values.

71.9.25 prepareFileForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the file object for verification.
Notes: Called during the burn (after production, before the cleanupFileAfterBurn event is called) to indicate that verification is about to begin. Now would be a good time to rewind to the start of the file, reset state machines, or do whatever else is needed to prepare to produce again.

71.9.26 produceFile(fork as Integer, buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Calculates the size of a file's fork.
Notes:

Sent during the burn (after the prepareFileForBurn message) requesting that the receiver produce the data fork contents.

The recevier should fill up the buffer passed in as full as possible and then return control to the caller. Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

You may be asked to produce twice, once during the actual burn and once during verification.

fork: The fork of the file to produce.
buffer: The buffer to produce data into.

bufferLength: The length of the buffer to produce data into
blockSize: The size of the track blocks

Return the number of bytes produced.

71.9.27 Constants

71.9.28 DRFileForkData = 0

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The constant which specifies which fork is currently needed.
Notes:

The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

71.9.29 DRFileForkResource = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The constant which specifies which fork is currently needed.
Notes:

The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

71.10 class DRFolderMBS

71.10.1 class DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for folder objects used in filesystem creation.
Notes:

A DRFile object is a subclass of DRFSObject and represents a folder on the finished disc. DRFolders can be either a pointer to an existing folder (residing on a hard drive for example) or can be a "virtual" folder which existsonly on the resulting burned disc. A DRFolder pointing to an existing folder ("real" folder) cannot have it's contents changed - only those files/folders which are children of the actual folder on disk will be included on the resulting disc. "Virtual" folders are entirely created programatically and any virtual folder structure can exist and be burned to disc. It is possible to convert a "real" folder to a "virtual" folder using the makeVirtual method.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DRFSObjectMBS class.

71.10.2 Xojo Developer Magazine

71.10.4 Methods

71.10.5 addChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot

have children.

71.10.6 children as DRFSObjectMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns an array containing the children of a virtual folder.
Notes: The order of children in the array is arbitrary – since the various filesystems being generated may have different sorting requirements, there is no one true way to sort the children. The ordering will change only when children are added or removed. You should sort the children according to the needs of your display, and in a consistent manner. This function only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

71.10.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 71.10.8 Constructor(name as string) 14199
- 71.10.9 Constructor(path as folderitem) 14199

71.10.8 Constructor(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.
See also:

- 71.10.7 Constructor 14199
- 71.10.9 Constructor(path as folderitem) 14199

71.10.9 Constructor(path as folderitem)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 71.10.7 Constructor 14199

- 71.10.8 Constructor(name as string) 14199

71.10.10 count as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of children of a virtual folder.
Notes: This method returns a "shallow" count of only those children that are immediately contained within the virtual folder. This method only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

71.10.11 folderWithPath(path as folderitem) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 71.10.12 folderWithPath(path as string) as DRFolderMBS 14200

71.10.12 folderWithPath(path as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.
See also:

- 71.10.11 folderWithPath(path as folderitem) as DRFolderMBS 14200

71.10.13 makeVirtual

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Changes the real DRFolder object into a "virtual" DRFolder object.
Notes: The virtual folder created in this way is a snapshot of the on-disk folder at the moment of the call. The newly created virtual folder will contain real folder and file objects corresponding to the on-disk children of the original on-disk folder. If the on-disk folder is modified (eg, if the folder attributes change, or if children are added to or removed from the on-disk tree): during this call, the virtual folder may or may not reflect the changes. If modified after this call, the virtual folder will not reflect the changes.

71.10.14 removeChild(child as DRFSObjectMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Removes an object reference (either a file or folder) as a child of a virtual folder object.
Notes: This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

71.10.15 virtualFolderWithName(name as string) as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a "virtual" folder object with a name.

71.11 class DRFSObjectMBS

71.11.1 class DRFSObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class which defines common features of all filesystem content objects.
Notes:

Please read Apples documentation for more details.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.11.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

71.11.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

71.11.4 Methods

71.11.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

71.11.6 DRAccessDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's last-accessed date.

71.11.7 DRAllFilesystems as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the name or properties for the file in all filesystems together.
Notes: When this key is used to refer to a name, it refers to the base name (which has no naming restrictions).

71.11.8 DRAttributeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's attribute modification date.

71.11.9 DRBackupDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's backup date.

71.11.10 DRContentModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's content modification date.

71.11.11 DRCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's creation date.

71.11.12 DREffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's effective date.

71.11.13 DRExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's expiration date.

71.11.14 DRHFSPlus as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the HFS+ name/properties for the file.
Notes: HFS+ names can be up to 255 decomposed unicode characters long.

71.11.15 DRHFSPlusCatalogNodeID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing item's catalog node ID (HFS+ only). Currently, this value if set is only a suggestion. The burn engine will attempt to use this node ID, but may use another value if it needs to resolve conflicts. Default behavior is to allocate node IDs incrementally from kHFSFirstUserCatalogNodeID.

71.11.16 DRHFSPlusTextEncodingHint as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes:

Number containing the item's text encoding hint (HFS+ only).

This value is used by the MacOS to help when converting the natively UTF-16 filename into an 8-bit-per-character representation (such as MacRoman, Shift-JIS, or UTF8). If not set, default behavior is to call CFStringGetMostCompatibleMacStringEncoding (CFStringGetSmallestEncoding()).

71.11.17 DRInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Boolean indicating whether the item is invisibile or not.

71.11.18 DRISO9660 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 properties for the file.
Notes: This key cannot be used to refer to the name of the file; it is ambiguous, since the name may be in either level 1 or level 2 format.

71.11.19 DRISO9660LevelOne as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 1 name for the file.
Notes:

This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 1. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 1 names are in the form typically known as 8.3 - eight characters of name and three characters of extension (if it's a file; directories can't have extensions). Character set is limited to A-Z, 0-9, and _.

71.11.20 DRISO9660LevelTwo as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the ISO-9660 level 2 name for the file.
Notes:

This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 2. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.

ISO9660 level 2 names can be 32 chars long, are limited to a subset of the 7-bit ASCII chars (capital letters, numbers, space, punctuation), and are only allowed one "." character.

71.11.21 DRISO9660VersionNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the ISO9660 version number for the object. Default value is 1.

71.11.22 DRJoliet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the Joliet name/properties for the file.
Notes: Joliet names can be 64 precomposed unicode characters long, but are only allowed one "." character and many punctuation characters are illegal.

71.11.23 DRMacExtendedFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's extended Finder flags (MacOS only).

71.11.24 DRMacFileCreator as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file creator (MacOS only).

71.11.25 DRMacFileType as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing the OSType for the file type (MacOS only).

71.11.26 DRMacFinderFlags as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's Finder flags (MacOS only). The invisible bit is ignored - use DRInvisible instead.

71.11.27 DRMacFinderHideExtension as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A boolean indicating whether the extension should be hidden in the Finder or not. The default is false and only applies to files.

71.11.28 DRMacIconLocation as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: A binary string containing a Point (not NSPoint) for the item's icon location in its parent folder (MacOS only).

71.11.29 DRMacScrollPosition as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Point (not NSPoint) for the folder's scroll position (MacOS only).

71.11.30 DRMacWindowBounds as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Binary string containing a Rect (not NSRect) for the window bounds for a folder (MacOS only).

71.11.31 DRMacWindowView as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the folder's window view type (MacOS only).

71.11.32 DRPosixFileMode as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX file mode.

71.11.33 DRPosixGID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX GID.

71.11.34 DRPosixUID as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number containing the item's POSIX UID.

71.11.35 DRRecordingDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Date containing the item's recording date.

71.11.36 DRUDF as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The key for accessing the UDF name/properties for the file.

71.11.37 DRUDFApplicationIdentifierSuffix as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Binary string of up to 8 bytes in length, for application use. The presence of this key requires the DRApplicationIdentifier key.

71.11.38 DRUDFExtendedFilePermissions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes:

Number indicating the extended UDF file permissions of this file.

Bit 0: Change attributes for others (low order bit) Bit 1: Delete permissions for others Bit 2: Change attributes for group Bit 3: Delete permissions for group Bit 4: Change attributes for owner Bit 5: Delete permissions for owner Bit 6 & 7: Reserved If this key is not present, DRPosixFileMode will be used with the above bits being set to the corresponding write bit for owner, group, and others. If DRPosixFileMode is not present, the file mode from the file on disc will be used, again using the write bit for these permissions.

71.11.39 DRUDFInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume interchange level. See the UDF specs for details.

71.11.40 DRUDFMaxInterchangeLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume interchange level number. See the UDF specs for details.

71.11.41 DRUDFMaxVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the maximum volume sequence number. See the UDF specs for

details.

71.11.42 DRUDFPrimaryVolumeDescriptorNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the primary volume sequence number. See the UDF specs for details.

71.11.43 DRUDFRealTimeFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Number indicating whether the file is a UDF Real-Time file.

71.11.44 DRUDFVersion102 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

71.11.45 DRUDFVersion150 as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: This value is used in DRUDFWriteVersion.

71.11.46 DRUDFVolumeSequenceNumber as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. Number containing the volume sequence number. See the UDF specs for details.

71.11.47 DRUDFVolumeSetIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. The Volume Set Identifier for the UDF volume set. If this key is not present, DRVolumeSet will be used if present. The Volume Set Identifier is composed of the Volume Set Timestamp, the Implementation Use, and a the string contained in this property.

71.11.48 DRUDFVolumeSetImplementationUse as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A binary string (8 bytes in length) for implementation use data. See the UDF specs for details.

71.11.49 DRUDFVolumeSetTimestamp as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. A date object for the volume set timestamp. See the UDF specs for details.

71.11.50 DRUDFWriteVersion as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: Optional key. This property key defines the version for the UDF structures written to disk. Values are definde in UDF Version types.

71.11.51 effectiveFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The effective filesystem mask set for the reciever.

71.11.52 isVirtual as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Indicates whether the receiver is real or virtual.
Notes:

True if the receiver is virtual and false if real.

71.11.53 mangledNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single mangled filesystem-specific name for this fsobject.
Notes: Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAllFilesystems for the filesystem parameter.

71.11.54 mangledNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a dictionary containing all of the filesystem-specific names for the receiver, each one mangled for uniqueness.
Notes: The dictionary will return only the names which are indicated by the receiver's effective mask. If the receiver's effective mask is zero, an empty dictionary is returned.

71.11.55 parent as DRFolderMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The parent object.

71.11.56 propertiesForFilesystem(filesystem as string, mergeWithOtherFilesystems as boolean) as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns all the filesystem properties set for the specified filesystem.
Notes:

filesystem: The filesystem to look in.
merge: If true, also look for properties in the umbrella DRAllFilesystems .

Normally you would call this method with merge set to true since you are interested in the set of properties that will be used when writing the object to disc. But if you have a need to determine what properties are set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if filesystem is set to DRHFSPlus and merge is false then the properties dictionary contains the values set for the HFS+ filesytem only. If no properties have been directly set for HFS+ yet, then this properties dictionary will be empty.

71.11.57 propertyForKey(key as string, filesystem as string, mergeWithOther-Filesystems as boolean) as Variant

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Returns a file/folder property specified by key for the specified filesystem.
Notes:

key: The property to return.
filesystem: The filesystem to look in.
merge: If true, also look for the property in the umbrella DRAllFilesystems .

Returs the value associated with the property.

Normally you would call this method with merge set to true since you are interested in the property that will be used when writing the object to disc. But if you have a need to determine what property is set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if DRHFSPlus is passed in for filesystem and merge is false then the property returned is the value set for the HFS+ filesytem only. If that property has not been directly set for HFS+ yet, then the returned value will be nil.

71.11.58 setProperties(Value as dictionary, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of all the receiver's properties specified by the keys in properties for the specific filesystem.
Notes:

properties: The value of the property.
filesystem: The filesystem to set the property in.

The properties are set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case he umbrella property affecting all filesystems at once will be set. Setting properties for DRAllFilesystems does not preclude setting a filesystem specific property.

71.11.59 setProperty(Value as Variant, key as string, filesystem as string)

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Sets the value of the receiver's property specified by key for the specific filesystem.
Notes:

property: The value of the property.
key: The property key.
filesystem: The filesystem to set the property in.

The property is set only in the filesystem dictionary specified by filesystem. DRAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting a property for DRAllFilesystems does not preclude setting a filesystem specific property.

71.11.60 sourcePath as string

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The source path.

71.11.61 Properties

71.11.62 baseName as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the base name for the receiver.
Notes:

The base name is the name from which any necessary filesystem-specific names are automatically generated.

Because the content creation API is able to generate multiple filesystems which require multiple varied naming conventions, a sensible system for naming is required. Thus each file has a "base name" which corresponds to its default name in any filesystem.

Whenever possible, the "base name" will be used in the generated filesystem without modification. If the name cannot be used as-is (if, for example, it contains illegal characters, exceeds the length requirements, doesn't meet the required format, or a name collision is detected) then an acceptable name that meets the filesystem's criteria will be generated automatically from the base name.

The default base name for a real file or folder is the actual on-disk name of the item.
(Read and Write computed property)

71.11.63 explicitFilesystemMask as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The explicit filesystem mask set for the reciever.
Notes: (Read and Write computed property)

71.11.64 specificNameForFilesystem(filesystem as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A single filesystem-specific name for this fsobject.
Notes:

Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAllFilesystems for the filesystem parameter.
(Read and Write computed property)

71.11.65 specificNames as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The names used for the receiver in the different filesystems all at once.
Notes:

An Dictionary of filesystem keys with corresponding name strings as their values for each specific filesystem name that should be set.

Every effort will be made to use the names passed in. However, if a name is illegal, it will be modified to fit the rules for that filesystem's names. Because of this, you should always call specificNames after setSpecificNames: to ensure that you are always displaying the most current names to the user.
(Read and Write computed property)

71.11.66 Constants

71.11.67 DRFilesystemInclusionMaskHFSPlus = 8

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the HFS+ filesytem.

71.11.68 DRFilesystemInclusionMaskISO9660 = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the ISO9660 filesytem.

71.11.69 DRFilesystemInclusionMaskJoliet = 2

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the Joliet filesytem.

71.11.70 DRFilesystemInclusionMaskUDF = 4

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value which indicates the object should be included in the UDF filesytem.

71.12 class DRMSFMBS

71.12.1 class DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Minutes/Seconds/Frames handling.
Notes:

On CDs, minutes/seconds/frames are used to identify positioning on a disc (which is most useful on an audio disc), but applies to any position on a disc no matter what type of data is present.

A frame is equivalent to a sector or block in normal disk parlance. 75 frames make up one second, so a 2 second pause (typical pregap size) is 150 frames.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

71.12.2 Methods

71.12.3 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The dummy constructor.
See also:

- 71.12.4 Constructor(frames as Integer) 14217
- 71.12.5 Constructor(s as string) 14218

71.12.4 Constructor(frames as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
See also:

- 71.12.3 Constructor 14217
- 71.12.5 Constructor(s as string) 14218

71.12.5 Constructor(s as string)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string
See also:

- 71.12.3 Constructor 14217
- 71.12.4 Constructor(frames as Integer) 14217

71.12.6 description as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation.

71.12.7 descriptionWithFormat(format as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns a textual representation of the receiver.
Notes:

The format string is very similar to
A printf-style format string with % -escaped formatting characters.

% %	A "% " character
% m	Minutes as a decimal number
% s	Seconds as a decimal number
% f	Frames as a decimal number

In addition to these formatting characters an optional length specifier can come between then % and the formatting character. This length specifier will force the field in question to be at least that wide. For example a format specifier of "% 02m:% 02s" will cause a DRMSF object representing 3 minutes 9 seconds to be formatted as "03:09".

A formatter is aware of and respects rounding. If a bit of the msf is no zero, but the format does not display that value, the next higher value will be increased by one to reflect that. Extending our example above, an DRMSF with a value of 3 minutes, 9 seconds, 15 frames using a format specfier of "% 02m:% 02s", will be formatted as "03:10" since the 15 frames rounds up the seconds to the next value

Returns a string containing a textual representation of the object utilizing the specified format.

71.12.8 frames as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of frames represented by the receiver.
Notes: This method differs from sectors in that it returns to the caller the number of frames remaining in the current second. For example an DRMSF value of 5:30:72 will return 72 from frames.

71.12.9 isEqualToMSF(value as DRMSFMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Compares on emsf to another.
Notes: True if the two object are equal, false otherwise.

71.12.10 minutes as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of minutes represented by the receiver.
Notes: If the receiver represents a non integral number of minutes, only the whole minute value is returned. For example an DRMSF value of 5:30:72 will return 5 from a minutes.

71.12.11 msf as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object with no length/time.
Notes: Returns nil on any error.

71.12.12 msfByAdding(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Adds an msf to the receiver.
Notes: Returns nil on any error.

71.12.13 msfBySubtracting(value as DRMSFMBS) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Subtracts an msf to the receiver.
Notes: Returns nil on any error.

71.12.14 msfWithFrames(frames as Integer) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object whose length is frames.
Notes: Returns nil on any error.

71.12.15 msfWithString(s as string) as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an msf object initialized to the value represented by string.
Notes: Returns nil on any error.

71.12.16 seconds as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the number of seconds represented by the receiver.
Notes: If the receiver represents a non integral number of seconds, only the whole second value is returned. For example an DRMSF value of 5:30:72 will return 30 from seconds.

71.12.17 sectors as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the total number of frames/sectors represented by the receiver.
Notes:

This method differs from frames in that it returns to the caller the total number of frames/sectors represented by the object.
For example an DRMSF value of 5:30:72 will return 24822 from sectors.

71.13 class DRNotificationCenterMBS

71.13.1 class DRNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: A class for notifications.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

71.13.2 Methods

71.13.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes:

observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

71.13.4 Constructor

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes:

A DRNotificationCenter object (or simply, notification center) is essentially a notification dispatch table. It notifies all observers of notifications meeting specific criteria. This information is encapsulated in NSNotification objects, also known as notifications. Client objects register themselves with the notification center as observers of specific notifications posted by DiscRecording. When an event occurs, DiscRecording posts an appropriate notification to the notification center. The notification center dispatches a message to each registered observer, passing the notification as the sole argument.

There are two main differences between a DRNotificationCenter and the NSNotificationCenter from Foundation. First is that only Disc Recording posts notifications received through this mechanism. You use this to obtain device plug/unplug events, burn status, etc. Second, there can be multple notification centers active at once. Each run loop of your application will have it's own notification center and notifications from that notification center will be posted to the runloop it was created on.

71.13.5 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Removes matching entries from the receiver's dispatch table.
Notes:

notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.

71.14 class DRSetupPanelMBS

71.14.1 class DRSetupPanelMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Base class for the DiscRecordingUI setup panels.
Notes:

Provides a base framework for handling device selection, media ejection and confirming or cancelling the panel.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.14.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

71.14.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr7

71.14.4 Methods

71.14.5 cancel

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's cancel button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.14.6 close

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's close button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.14.7 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

71.14.8 eject

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's eject button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.14.9 ok

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's default button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.14.10 open

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Invoked when the user clicks the panel's open button.
Notes: If you overwrite this method in Xojo, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

71.14.11 runSetupPanel as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop.
Notes: Returns NSOKButton (if the user clicks the default button) or NSCancelButton (if the user clicks

the Cancel button).

71.14.12 Events

71.14.13 determineBestDevice(deviceA as DRDeviceMBS, deviceB as DRDeviceMBS) as DRDeviceMBS

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: .

Function: Called to let you decide which device is better to use.
Notes: Default returns device A.

71.14.14 DeviceContainsSuitableMedia(device as DRDeviceMBS, byref prompt as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: This delegate method allows the delegate to determine if the media inserted in the device is suitable for whatever operation is to be performed.
Notes:

device:	The device that contains the media being asked about.
prompt:	Pass back a string object describing the media state.

Return false to disable the default button.

71.14.15 DeviceCouldBeTarget(device as DRDeviceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Allows the delegate to determine if device can be used as a target.
Notes:

This method is used to limit the menu to only those devices that you want to appear. For example, a DVD burning application might use this to limit the menu to only devices that are capable of writing DVD-Rs.

device: The candidate device.
Returns true if the device is acceptable, false if not.

71.14.16 DeviceSelectionChanged(device as DRDeviceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Sent by the default notification center when the device selection in the panel has changed.

71.14.17 SetupPanelShouldHandleMediaReservations as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: This event allows the delegate to control how media reservations are handled.
Notes: Return false to indicate the delegate will handle media reservations. Return true to indicate the setupPanel should handle media reservations itself.

71.14.18 Constants

71.14.19 NSCancelButton = 0

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value runSetupPanel returns if the Cancel button is clicked.

71.14.20 NSOKButton = 1

MBS MacControls Plugin, Plugin Version: 7.4.

Function: The value runSetupPanel returns if the OK button is clicked.

71.15 class DRTrackMBS

71.15.1 class DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The DRTrack class represents a track on the burned disc.
Example:

```
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

// set a few options
bsp.setCanSelectAppendableMedia true
bsp.setCanSelectTestBurn true

if bsp.runSetupPanel=bsp.NSOKButton then
bpp=new DRBurnProgressPanelMBS

// And start off the burn itself. This will put up the progress dialog
// and do all the nice pretty things that a happy app does.
bpp.beginProgressPanelForBurn bsp.burnObject, track

else
MsgBox "You pressed cancel."
end if
end if
```

Notes:

A DRTrack provides data to the for the burn and contains a description of the track on disc (length, block type, data format, etc). Data is provided for the burn in a real-time thread. It is up to the track to provide this data in a timely manner, otherwise a burn underrun can occur and ruin a disc.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

71.15.6 Methods

71.15.7 Constructor

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Dummy constructor.

71.15.8 DRAbstractFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS object pointing to the abstract file for ISO and Joliet volumes. The file must be in the root directory.

71.15.9 DRApplicationIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the application identifier for ISO, Joliet and UDF volumes.

71.15.10 DRAudioFourChannelKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD-DA audio tracks only. This key points to a boolean value indicating whether the track data has four channels, as opposed to the two channels of normal stereo. If this key is not present, the engine will use a default value of false and standard two-channel stereo is assumed.

Note that while four-channel is technically allowed in the Red Book, it never caught on and is probably being replaced by SACD, so you probably shouldn't attempt to use it.

On the media, this key corresponds to bit 3 of the control field in sub-channel Q.

71.15.11 DRAudioPreEmphasisKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track includes pre-emphasis of 50/15us. If this key is not present, the engine will use a default value of false. On the media, this key corresponds to bit 0 of the control field in sub-channel Q.

71.15.12 DRBibliographicFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFile pointing to the bibliographic file for ISO and Joliet volumes. The file must be in the root directory.

71.15.13 DRBlockSize as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number indicating the block size of the track. Currently always 2048. Do not change.

71.15.14 DRBlockSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the size in bytes of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

71.15.15 DRBlockTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the type of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

71.15.16 DRCopyrightFile as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS pointing to the copyright file for ISO and Joliet volumes. The file must be in the root directory.

71.15.17 DRDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the data form of each block in the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

71.15.18 DRDataPreparer as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the data preparer for ISO and Joliet volumes.

71.15.19 DRDefaultDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the default date to use for any unspecified dates in the filesystem. The current date and time is used if unspecified.

71.15.20 DRDVDCopyrightInfoKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. A binary string containing the DVD copyright info structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

71.15.21 DRDVDTimestampKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. Binary string containing the DVD timestamp structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

71.15.22 DRFreeBlocksKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the length, in blocks, which is still available in a writable track.

71.15.23 DRIndexPointsKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. This key points to an NSArray of NSNumbers, indicating the index points inside the track. Each index point is specified as a number of blocks (frames) relative to the start of the track. There are 75 blocks in one second of CD audio. No more than 98 index points may be specified for a track.

Not all drives are capable of writing index points, and not all consumer CD players report or use them. If this key is present in any track and the drive cannot write index points, the burn will fail with kDRDeviceCantWriteIndexPointsErr.

71.15.24 DRISOLevel as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the ISO level of the ISO-9660 filesystem on the track. Currently should be 1 or 2.

71.15.25 DRISOMacExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have Mac extensions.

71.15.26 DRISORockRidgeExtensions as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have RockRidge (POSIX) extensions.

71.15.27 DRMaxBurnSpeedKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.

Notes: Number containing the maximum burn speed at which data can be produced. The speed is represented in KB/s (1 KB = 1000 bytes). This key can only be used to limit the speed at which the burn runs.

71.15.28 DRNextWritableAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the next writable address in the track. This key is not present in closed tracks.

71.15.29 DRPreGapIsRequiredKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. Number indicating whether the pregap listed for the track is required. If this key is not present, the track will behave as though the key were false.

If this key's value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr .

If this key's value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

71.15.30 DRPreGapLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. Number containing the length of silence or data at the beginning of the track. This defaults to 2 seconds of silence. If this key is present, the track producer will be asked for the pregap data first. If the producer implements the proper selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.

71.15.31 DRPublisher as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the publisher for ISO and Joliet volumes.

71.15.32 DRSCMSCopyrightFree as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track has no copying restrictions. Copies of this track should also be copyright free.

71.15.33 DRSCMSCopyrightProtectedCopy as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is a first-generation copy of an original that was subject to copy protection. No further digital copying should be allowed.

71.15.34 DRSCMSCopyrightProtectedOriginal as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is an original subject to copyright protection. Digital copying of this track should be allowed, but copies should be marked with SCMS.

71.15.35 DRSerialCopyManagementStateKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD tracks only. This key points to a string value indicating the SCMS state of the track. If this key is not present, no SCMS data is written.

Not all drives are capable of writing SCMS. If this key is present in any track and the drive cannot write SCMS, the burn will fail with kDRDeviceCantWriteSCMSErr.

71.15.36 DRSessionFormatKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the session format of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

71.15.37 DRSessionNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the physical session number of a track.

71.15.38 DRSubchannelDataFormKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

The property whose value is the data mode of the subchannel data sent to the drive. If this key is not present, the track will default to a value of DRSubchannelDataFormNone and no subchannel information will be requested from the producer.

Subchannel data is returned from the producer in the same production method that produces normal user data. Normally a producer returns user data in chunks of DRBlockSizeKey size. When subchannel data is also produced, the producer is expected to return user data of DRBlockSizeKey in length with an additonal 96 bytes of subchannel data. Depending on the data form specified in this key, the format of this 96 bytes is either in raw or pack format. When subchannel data is requested from the producer, the DRFlagSubchannelDataRequested flag is set in the flags parameter of producePreGapForTrack or produceDataForTrack and blockSize is increased by 96 bytes.

71.15.39 DRSubchannelDataFormNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: A value for DRSubchannelDataFormKey indicating that the subchannel data will not be provided by the producer.

71.15.40 DRSubchannelDataFormPack as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide pack format subchannel data for the track. If this form is selected, the drive will perform P and Q parity calculations on each pack and interleave the packs before writing them to disc. This corresponds to a subchannel data form of 0xC0.

71.15.41 DRSubchannelDataFormRaw as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: A value for DRSubchannelDataFormKey indicating that the producer will be asked to provide raw format subchannel data for the track. If this form is selected, the producer must have performed P and Q parity calculations for each pack and done proper interleaving of the subchannel data. The drive will fill in the P-Q subchannel information and write the R-W subchannel data as is to the disc. This corresponds to a subchannel data form of & h40.

71.15.42 DRSuppressMacSpecificFiles as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should suppress Mac-specific files from non-HFS filesystems.

71.15.43 DRSystemIdentifier as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the system identifier for ISO and Joliet volumes.

71.15.44 DRTrackIsEmptyKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing a boolean value and indicates whether the track is empty.

71.15.45 DRTrackISRCKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes:

For CD-DA audio tracks only. This key points to an memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. More details:
http://www.ifpi.org/isrc/

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

71.15.46 DRTrackLengthKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number representing the length of the track.

71.15.47 DRTrackModeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the track mode of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

71.15.48 DRTrackNumberKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.

Notes: Number containing the physical track number of a track.

71.15.49 DRTrackPacketSizeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the number of blocks per packet for the disc. It will only be present if the disc contains fixed packets. This key will contain 16 for DVD media, and typically contains either 16 or 32 for CD media.

71.15.50 DRTrackPacketTypeFixed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is writen with fixed sized packets. When this value is present the DRPacketSizeKey will also be present.

71.15.51 DRTrackPacketTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the kind of packets being written.

71.15.52 DRTrackPacketTypeVariable as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with sequential variable sized packets. The presence of this value indicates the lack of the DRPacketSizeKey.

71.15.53 DRTrackStartAddressKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the start address for the track.

71.15.54 DRTrackTypeClosed as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track has been written and is closed.

71.15.55 DRTrackTypeIncomplete as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: If this is the value of the DRTrackTypeKey then the track is not invisible or reserved and is available for writing.

71.15.56 DRTrackTypeInvisible as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is invisible and available to writing. If it is packet written and not closed, DRPacketTypeKey will be present, along with DRTrackPacketType and DRTrackPacketSize keys.

71.15.57 DRTrackTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of track. Possible values are: DRTrackTypeInvisible , DRTrackTypeIncomplete , DRTrackTypeReserved or DRTrackTypeClosed.

71.15.58 DRTrackTypeReserved as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: If this is the value of the DRTrackTypeKey then the track is reserved for writing.

71.15.59 DRVerificationTypeChecksum as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType.
Notes: The engine will verify the track data with an internally calculated checksum.

71.15.60 DRVerificationTypeKey as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the type of verification to be performed. If this is not present, the track will not be verified.

71.15.61 DRVerificationTypeNone as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: No verification is desired, so verification will be skipped.

71.15.62 DRVerificationTypeProduceAgain as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will simply begin another production cycle and start calling produceDataForTrack again.

71.15.63 DRVerificationTypeReceiveData as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the possible values of the VerificationType property.
Notes: The engine will begin reading data from the disc and calling verifyDataForTrack.

71.15.64 DRVolumeCheckedDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume-checked date for HFS+ volumes. DRDefaultDate is used if unspecified.

71.15.65 DRVolumeCreationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume creation date. DRDefaultDate is used if unspecified.

71.15.66 DRVolumeEffectiveDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the date and time at which the volume is effective for ISO and Joliet volumes.

71.15.67 DRVolumeExpirationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume expiration date for ISO and Joliet volumes.

71.15.68 DRVolumeModificationDate as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume modification date. DRDefaultDate is used if unspecified.

71.15.69 DRVolumeSet as string

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: One of the key constants for the properties dictionary.
Notes: String indicating the volume set name for ISO and Joliet volumes.

71.15.70 estimateLength as UInt64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Asks the track producer for a size estimate.
Notes:

This method calls the track producer to ask it to estimate the size needed for its data.

For some types of track, this call may be very expensive. For example, a DRFilesystemTrack may need to iterate folders on disk to provide an accurate estimate, which (if a large number of files and folders are involved) can cause this call to take 30 seconds or more. Since your main thread should not be allowed to block for this long, you may wish to call this function on a separate thread.

Requires Mac OS X 10.3.

71.15.71 testProductionSpeedForInterval(seconds as Double) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified interval.
Notes:

Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer for the specified time interval.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed

71.15.72 testProductionSpeedForLength(length as Integer) as Double

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Tests the production speed for a specified byte count.
Notes:

Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it's producer's produceDataIntoBuffer:length:atAddress:blockSize:ioFlags: until the specified length number of bytes have been produced.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be

used when setting up a burn to limit the burn speed

Length: length of test in seconds.

71.15.73 trackForAudioFile(path as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Example:

```
dim f as FolderItem
f=SelectFolder
if f<>nil then
// Create tracks for the audio files
dim tracks(-1) as DRTrackMBS
dim c as Integer=f.Count
for i as Integer=1 to c
dim g as FolderItem=f.Item(i)
if g<>nil and g.visible then
dim track as DRTrackMBS=DRTrackMBS.trackForAudioFile(g)
if track<>nil then
tracks.Append track
end if
end if
next

// display gui
if UBound(tracks)>=0 then
dim bsp as DRBurnSetupPanelMBS=new DRBurnSetupPanelMBS // you may want to use your own sub-
class to catch events
if bsp.runSetupPanel=bsp.NSOKButton then
dim bpp as new DRBurnProgressPanelMBS // you may want to use your own subclass to catch events
bpp.beginProgressPanelForBurn(bsp.burnObject, tracks)
end if
end if
end if
```

Notes:

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 71.15.74 trackForAudioFile(path as string) as DRTrackMBS 14244

71.15.74 trackForAudioFile(path as string) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates an audio track capable of burning RedBook CD audio from a file.
Notes:

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.
See also:

- 71.15.73 trackForAudioFile(path as folderitem) as DRTrackMBS 14243

71.15.75 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 71.15.76 trackForRootFolder(folder as folderitem) as DRTrackMBS 14244

71.15.76 trackForRootFolder(folder as folderitem) as DRTrackMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 71.15.75 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS 14244

71.15.77 Properties

71.15.78 BlockSize as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The size in bytes of each track block.
Notes: (Read and Write computed property)

71.15.79 BlockType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of each track block.
Notes: (Read and Write computed property)

71.15.80 DataForm as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The data form of each block in the track.
Notes: (Read and Write computed property)

71.15.81 length as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Returns the length of the track data.
Notes:

The length returned does not include the length of the pregap. Only the length of the track data itself is returned.
(Read and Write computed property)

71.15.82 MaxBurnSpeed as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the maximum burn speed at which data can be produced.
Notes:

The speed is represented in KB/s (1 KB = 1000 bytes). This value can only be used to limit the speed at which the burn runs.
(Read and Write computed property)

71.15.83 preGap as DRMSFMBS

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The length of the pre gap.
Notes: (Read and Write computed property)

71.15.84 PreGapIsRequired as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A boolean indicating whether the pregap listed for the track is required.
Notes:

For CD tracks only.
If this value is not set, the track will behave as though the value were false.

If this value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.

If this value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

(Read and Write computed property)

71.15.85 PreGapLength as Double

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: A number containing the length of silence or data at the beginning of the track.
Notes:

For CD tracks only.
This defaults to 2 seconds of silence. If this value is set, the track producer will be asked for the pregap data first.
If the producer implements the proper event, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.
(Read and Write computed property)

71.15.86 properties as dictionary

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: The properties dictionary of the track
Notes: (Read and Write computed property)

71.15.87 SessionFormat as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The session format of the track.
Notes: (Read and Write computed property)

71.15.88 TrackISRC as memoryblock

MBS MacControls Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: The property for the tracks ISRC data.
Notes:

For CD-DA audio tracks only. This key points to a memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. See http://www.ifpi.org/isrc/ for more details on the ISRC standard.

Not all drives are capable of the write modes necessary to write the ISRC.
If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.
(Read and Write computed property)

71.15.89 TrackMode as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The track mode of the track.
Notes: (Read and Write computed property)

71.15.90 VerificationType as string

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The type of verification requested.
Notes:

Value should be DRVerificationTypeReceiveData, DRVerificationTypeProduceAgain, DRVerificationTypeNone or DRVerificationTypeChecksum.
(Read and Write computed property)

71.15.91 Events

71.15.92 cleanupTrackAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the burn completes.
Notes:

Called after burning is complete. Typically you'll clean up what was setup is prepareTrackForBurn. Since this method is called after the laser is turned off and the burn is finished, this method can perform time consuming tasks.

True to indicate that the burn should proceed and false to indicate a failure occurred.

71.15.93 cleanupTrackAfterVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the verification completes.
Notes:

Once the verification phase is complete, this method is called. The class implementing the method has a chance to do anything up to and including failing the verification.

Return true to indicate success, false to indicate failure.

71.15.94 estimateLengthOfTrack as uint64

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Estimates the size of the track to be burned.
Notes:

This message is sent outside of a burn cycle in response to a -estimateLength message sent to the track.

Returns the number of blocks of data that the track will occupy. The estimate should be reasonably accurate, and no smaller than the actual size that will be needed.

Only on Mac OS X 10.3 and newer.

71.15.95 prepareTrack(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepares the track for burning.
Notes:

Called before any burning starts. Do any sort of setup that needs to be performed (such as opening files). This method can calculate and update the exact track length that will be burned.

Since this method is called before the laser is turned on, this method can perform time consuming tasks.

burn: The burn object controlling the burn

Return true to indicate that the burn should proceed and false to indicate a failure occurred.

71.15.96 prepareTrackForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Prepare the track to be verified.
Notes:

This method is called after the burn complets writing data to disc and before verification phase starts. Now would be a good time to prepare to produce data again by rewinding to the start of files, etc.

Return true to indicate that the verification should proceed and false to indicate a failure occurred.

71.15.97 produceDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Produces the track data.
Notes:

This method is called many times over the course of a burn to obtain data for the track. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not yet used.

Return the number of bytes produced.

71.15.98 producePreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Produces the pregap data.
Notes:

This method is called to obtain data for the track's pregap. If the DRPreGapLengthKey key is present in the track properties, the track producer will be asked for the pregap data first. If the producer implements this selector, then it's the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by DiscRecording.

The buffer passed in will be a multiple of blockSize (bufferLength = blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive's buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the

buffer or 0 to indicate that there was an error producing the data..

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags (not used).

Return the number of bytes produced.

71.15.99 verifyDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Cleans up the track after the burn completes.
Notes:

If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the data again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. Not used.

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

71.15.100 verifyPreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Platform: macOS, Targets: .

Function: Checks the integrity track pregap after a burn.
Notes:

If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It's up to the class to reproduce the pregap again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize *

N, where N >1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It's best to return a multiple of this size.
flags: Some flags. (not used)

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

71.15.101 Constants

71.15.102 DRFlagSubchannelDataRequested = 2

MBS MacControls Plugin, Plugin Version: 10.4.

Function: A flag passed to producePreGapForTrack or produceDataForTrack.
Notes:

Indicates that the blockSize passed in includes room for subchannel data.
Data producers should check this flag and perform subchannel data production in addition to user fata production. Each block requested from the producer in this case will be formatted as [user data (as specified in track properties)] [subchannel data(96 bytes)] .

For example an audio producer callback should repeatedly produce 2352 bytes of audio data into bytes 0-2351 of the block and an additional 96 bytes of subchannel data into bytes 2352-2447.

71.15.103 kDRBlockSizeAudio = 2352

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Audio data.

71.15.104 kDRBlockSizeDVDData = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: DVD data.

71.15.105 kDRBlockSizeMode1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 1 data.

71.15.106 kDRBlockSizeMode2Data = 2332

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

71.15.107 kDRBlockSizeMode2Form1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 Form 1 data.

71.15.108 kDRBlockSizeMode2Form2Data = 2324

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block size constants.
Notes: Mode 2 Form 2 data.

71.15.109 kDRBlockTypeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Audio data.

71.15.110 kDRBlockTypeDVDData = 8

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: DVD data.

71.15.111 kDRBlockTypeMode1Data = 8

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 1 data.

71.15.112 kDRBlockTypeMode2Data = 13

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

71.15.113 kDRBlockTypeMode2Form1Data = 10

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 Form 1 data.

71.15.114 kDRBlockTypeMode2Form2Data = 12

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the block type constants.
Notes: Mode 2 Form 2 data.

71.15.115 kDRDataFormAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Audio data.

71.15.116 kDRDataFormDVDData = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: DVD data.

71.15.117 kDRDataFormMode1Data = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 1 data.

71.15.118 kDRDataFormMode2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

71.15.119 kDRDataFormMode2Form1Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 Form 1 data.

71.15.120 kDRDataFormMode2Form2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the data form constants.
Notes: Mode 2 Form 2 data.

71.15.121 kDRSessionFormatAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: Audio data.

71.15.122 kDRSessionFormatCDI = 16

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: CD-I disc.

71.15.123 kDRSessionFormatCDXA = 32

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: CD-ROM XA disc.

71.15.124 kDRSessionFormatDVDData = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: DVD data.

71.15.125 kDRSessionFormatMode1Data = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the constants for the session format.
Notes: Mode 1 data.

71.15.126 kDRTrackMode1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 1 data.

71.15.127 kDRTrackMode2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 data. Photo CD and CD-i use this.

71.15.128 kDRTrackMode2Form1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 Form 1 data.

71.15.129 kDRTrackMode2Form2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Mode 2 Form 2 data.

71.15.130 kDRTrackModeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: Audio data.

71.15.131 kDRTrackModeDVDData = 5

MBS MacControls Plugin, Plugin Version: 10.3.

Function: One of the track mode constants.
Notes: DVD data.

71.16 class WindowsBurnMBS

71.16.1 class WindowsBurnMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Exposes methods that determine whether a system has hardware for writing to CD, the drive letter of a CD writer device, and programmatically initiate a CD writing session.

71.16.2 Methods

71.16.3 CDBurn

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes:

The staging area has a default location of % userprofile% \Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 71.16.4 CDBurn(hostwindow as DesktopWindow) 14258
- 71.16.5 CDBurn(hostwindow as window) 14259

71.16.4 CDBurn(hostwindow as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes:

Hostwindow: parent window of the user interface (UI)

The staging area has a default location of % userprofile% \Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

- 71.16.3 CDBurn 14258

• 71.16.5 CDBurn(hostwindow as window) 14259

71.16.5 CDBurn(hostwindow as window)

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop only.

Function: Instructs data to be copied from the staging area to a writable CD.
Notes:

Hostwindow: parent window of the user interface (UI)

The staging area has a default location of % userprofile% \Local Settings\Application Data\Microsoft\CD Burning. Its actual path can be retrieved through WindowsBurnAreaFolderMBS.

This method returns when the CD is done or thre user cancelled.
See also:

• 71.16.3 CDBurn 14258

• 71.16.4 CDBurn(hostwindow as DesktopWindow) 14258

71.16.6 HasRecordableDrive as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Scans the system for a CD drive with write-capability, returning true if one is found.
Notes: This search does not rely on the state of the Enable cd writing on this drive option found on the drive's property sheet. Instead, the determination is based on IMAPI.

71.16.7 RecorderDriveLetter as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the drive letter of a CD drive that has been marked as write-enabled.
Notes:

The drive whose letter designation is returned by this method is the drive that has the Enable cd writing on this drive option selected. This option is found on the drive's property sheet. Only one drive on a system can have this option selected.

If a recordable CD drive is present but that option has been deselected, the method will return ane empty string.

71.16.8 Properties

71.16.9 Available as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the Shell extension on Windows for CD Burning is available.
Notes:

Available should be true on Windows XP and newer.
(Read only property)

71.16.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported by one of the methods.
Notes: (Read and Write property)

Chapter 72

DNS

72.1 class DNSAddressRecordMBS

72.1.1 class DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an address record.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

72.1.2 Properties

72.1.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv4 address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
MsgBox d.A.address
end if
next
end if
```

Notes: (Read and Write property)

72.2 class DNSAFSDBRecordMBS

72.2.1 class DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an AFSDB record.

72.2.2 Properties

72.2.3 hostname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The hostname.
Notes: (Read and Write property)

72.2.4 subtype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The sub type.
Notes: (Read and Write property)

72.3 class DNSDomainNameRecordMBS

72.3.1 class DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a domain name record.

72.3.2 Properties

72.3.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The queried name.
Notes: (Read and Write property)

72.4 class DNSHeaderMBS

72.4.1 class DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a header of a DNS query.

72.4.2 Properties

72.4.3 AdditionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional items.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AdditionalCount: "+str(r.Header.AdditionalCount)
end if
```

Notes: (Read and Write property)

72.4.4 AnswerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answers in this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AnswerCount: "+str(r.Header.AnswerCount)
end if
```

Notes: (Read and Write property)

72.4.5 AuthorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "AuthorityCount: "+str(r.Header.AuthorityCount)
end if
```

Notes: (Read and Write property)

72.4.6 Flags as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The flags.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Flags: "+str(r.Header.Flags)
end if
```

Notes: (Read and Write property)

72.4.7 QuestionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions in this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
```

```
MsgBox "QuestionCount: "+str(r.Header.QuestionCount)
end if
```

Notes: (Read and Write property)

72.4.8 xid as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The xid value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "xid: "+str(r.Header.xid)
end if
```

Notes: (Read and Write property)

72.5 class DNSHINFORecordMBS

72.5.1 class DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for the host information record.

72.5.2 Properties

72.5.3 CPU as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The CPU information string.
Notes: (Read and Write property)

72.5.4 OS as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The operation system name.
Notes: (Read and Write property)

72.6 class DNSIN6AddressRecordMBS

72.6.1 class DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an IPv6 address record.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

72.6.2 Properties

72.6.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The IPv6 address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)

if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
MsgBox d.AAAA.address
end if
next
end if
```

Notes: (Read and Write property)

72.6.4 rawaddress as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw address as a memoryblock.
Notes: (Read and Write property)

72.7 class DNSISDNRecordMBS

72.7.1 class DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for an ISDN record.

72.7.2 Properties

72.7.3 isdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The ISDN address.
Notes: (Read and Write property)

72.7.4 subAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The subaddress.
Notes: (Read and Write property)

72.8 class DNSLocRecordMBS

72.8.1 class DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The location record class.

72.8.2 Properties

72.8.3 altitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The altitude value.
Notes: (Read and Write property)

72.8.4 horizontalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The horizontal precision value.
Notes: (Read and Write property)

72.8.5 latitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The latitude value.
Notes: (Read and Write property)

72.8.6 longitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The longitude value.
Notes: (Read and Write property)

72.8.7 size as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The size value.
Notes: (Read and Write property)

72.8.8 version as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The version value.
Notes: (Read and Write property)

72.8.9 verticalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The vertical precision value.
Notes: (Read and Write property)

72.9 class DNSMINFORecordMBS

72.9.1 class DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The MINFO record class.

72.9.2 Properties

72.9.3 emailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The emailbx value.
Notes: (Read and Write property)

72.9.4 rmailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The rmailbx value.
Notes: (Read and Write property)

72.10 class DNSMXRecordMBS

72.10.1 class DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a mx (mailbox) record.

72.10.2 Properties

72.10.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name of this email server.
Notes: (Read and Write property)

72.10.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value for this email server.
Notes: (Read and Write property)

72.11 class DNSQuestionMBS

72.11.1 class DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query question.

72.11.2 Properties

72.11.3 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes:

See the Class* constants in DNSUtilMBS module.
(Read and Write property)

72.11.4 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes:

See the Type* constants in DNSUtilMBS module.
(Read and Write property)

72.11.5 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The query in the question.
Notes: (Read and Write property)

72.12 class DNSRawResourceRecordMBS

72.12.1 class DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a raw resource record.

72.12.2 Properties

72.12.3 data as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The data as a string with no encoding set.
Notes:

Just the raw bytes as string.
(Read and Write property)

72.12.4 length as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The length of the data.
Notes: (Read and Write property)

72.13 class DNSReplyMBS

72.13.1 class DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a DNS query reply.

72.13.2 Methods

72.13.3 Additional(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the additional record with the given index.
Notes: index is zero based.

72.13.4 Additionals as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the additional records.

72.13.5 Answer(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the answer with the given index.
Notes: index is zero based.

72.13.6 Answers as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the answer records.

72.13.7 Authority(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the authority with the given index.
Notes: index is zero based.

72.13.8 Authoritys as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the authority records.

72.13.9 Question(index as Integer) as DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The question with the given index.
Notes: index is zero based.

72.13.10 Questions as DNSQuestionMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns an array with the question records.

72.13.11 Properties

72.13.12 additionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of additional records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "additionalCount: "+str(r.additionalCount)
end if
```

Notes: (Read and Write property)

72.13.13 answerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of answer records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "answerCount: "+str(r.answerCount)
end if
```

Notes: (Read and Write property)

72.13.14 authorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of authority records.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "authorityCount: "+str(r.authorityCount)
end if
```

Notes: (Read and Write property)

72.13.15 Header as DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The header values for this query.
Notes: (Read and Write property)

72.13.16 questionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of questions.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "questionCount: "+str(r.questionCount)
end if
```

Notes: (Read and Write property)

72.13.17 Server as DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The server details from this query.
Notes: (Read and Write property)

72.13.18 Status as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The status of this query.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Status: "+str(r.Status)
end if
```

Notes:

See the Status* constants.
(Read and Write property)

72.13.19 Constants

72.13.20 StatusBadHandle = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.21 StatusConnectionFailed = 6

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.22 StatusMalformedQuery = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.23 StatusOK = 0

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.24 StatusReceiveFailed = 5

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.25 StatusSendFailed = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.26 StatusTimeout = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.27 StatusWrongQuestion = 9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.28 StatusWrongServer = 7

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.13.29 StatusWrongXID = 8

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the status constants for the status property.

72.14 class DNSResourceRecordMBS

72.14.1 class DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a resource record.
Notes: Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

72.14.2 Properties

72.14.3 A as DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.4 AAAA as DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.5 AFSDB as DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.6 CNAME as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.7 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS class value.
Notes:

See the Class* constants in DNSUtilMBS module.
(Read and Write property)

72.14.8 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS type value.
Notes:

See the Type* constants in DNSUtilMBS module.
(Read and Write property)

72.14.9 HINFO as DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.10 ISDN as DNSISDNRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.11 LOC as DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.12 MB as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.13 MD as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.14 MF as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.15 MG as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.16 MINFO as DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.17 MR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.18 MX as DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.19 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name.
Notes: (Read and Write property)

72.14.20 NS as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.21 PTR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.22 RAW as DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes:

Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

(Read and Write property)

72.14.23 Record as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content as a variant.
Notes:

Each resource record contains only one subrecord. So this record property has a reference to it and the corresponding property.
(Read and Write property)

72.14.24 RP as DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.25 RT as DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.26 SOA as DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.27 SRV as DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.28 ttl as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The time to live value.
Notes: (Read and Write property)

72.14.29 TXT as DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.30 WKS as DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.14.31 X25 as DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The record content.
Notes: (Read and Write property)

72.15 class DNSRPRecordMBS

72.15.1 class DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RP record.

72.15.2 Properties

72.15.3 mailbox as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mailbox value.
Notes: (Read and Write property)

72.15.4 txtdname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The txtdname value.
Notes: (Read and Write property)

72.16 class DNSRTRecordMBS

72.16.1 class DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RT record.

72.16.2 Properties

72.16.3 intermediate as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The intermediate value.
Notes: (Read and Write property)

72.16.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The preference value.
Notes: (Read and Write property)

72.17 class DNSServiceQueryRecordMBS

72.17.1 class DNSServiceQueryRecordMBS

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: The class to query for an arbitrary DNS record.
Notes: Subclass of the DNSServiceBaseMBS class.

72.17.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

72.17.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1

72.17.4 Methods

72.17.5 QueryRecord(InterfaceIndex as Integer, FullName as string, rrType as Integer, rrClass as Integer, Flags as Integer = 0) as boolean

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: All.

Function: Query for an arbitrary DNS record.
Notes:

Flags: kFlagsForceMulticast or kFlagsLongLivedQuery. Pass kFlagsLongLivedQuery to create a "long-lived" unicast query to a unicast DNS server that implements the protocol. This flag has no effect on link-local multicast queries.
interfaceIndex: If non-zero, specifies the interface on which to issue the query (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the name to be queried for on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record to be queried for.
rrtype: The numerical type of the resource record to be queried for (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).

Lasterror is set: Returns kErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred.
Returns false in case of error or true in case of success.

You can use DNSServiceBaseMBS.ConstructFullName to build the full name.

72.17.6 Events

72.17.7 ServiceQueryRecord(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, rrType as Integer, rrClass as Integer, Length as Integer, Data as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: .

Function: The event called when data is received for DNS query.
Notes:

flags: Possible values are kFlagsMoreComing and kFlagsAdd. The Add flag is NOT set for PTR records with a ttl of 0, i.e. "Remove" events.
InterfaceIndex: The interface on which the query was resolved.
errorCode: Will be kErr_NoError on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.
fullname: The resource record's full domain name.
rrtype: The resource record's type (e.g. kType_PTR, kType_SRV, etc)
rrclass: The class of the resource record (usually kClass_IN).
Length: The length, in bytes, of the resource record rdata.
Data: The raw record data of the resource record.
ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.

72.18 class DNSSOARecordMBS

72.18.1 class DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The SOA record class.
Notes: The Start of Authority (SOA) record contains information about the zone.

72.18.2 Properties

72.18.3 expire as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The expire value.
Notes: (Read and Write property)

72.18.4 minimum as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The minimum value.
Notes: (Read and Write property)

72.18.5 mname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The mname value.
Notes: (Read and Write property)

72.18.6 refresh as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The refresh delay in seconds before the slave contacts the master.
Notes: (Read and Write property)

72.18.7 retry as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The retry delay in seconds before the slave contacts the master again.
Notes: (Read and Write property)

72.18.8 rname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The name value.
Notes: (Read and Write property)

72.18.9 serial as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The serial value.
Notes: (Read and Write property)

72.19 class DNSSocketAddressMBS

72.19.1 class DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The DNS socket address class.

72.19.2 Properties

72.19.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.address: "+r.Server.address
end if
```

Notes:

This is IPv4 or IPv6.
(Read and Write property)

72.19.4 data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The raw data of this socket address.
Notes: (Read and Write property)

72.19.5 Family as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The family value.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.Family: "+str(r.Server.Family)
end if
```

Notes: (Read and Write property)

72.19.6 Port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port for this socket address.
Example:

```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
MsgBox "Server.Port: "+str(r.Server.Port)
end if
```

Notes: (Read and Write property)

72.20 class DNSSRVRecordMBS

72.20.1 class DNSSRVRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a RV record.

72.20.2 Properties

72.20.3 port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The port value.
Notes: (Read and Write property)

72.20.4 priority as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The priority value.
Notes: (Read and Write property)

72.20.5 target as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The target value.
Notes: (Read and Write property)

72.20.6 weight as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The weight value.
Notes: (Read and Write property)

72.21 class DNSTXTRecordMBS

72.21.1 class DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a text record.

72.21.2 Methods

72.21.3 Strings(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The strings by index.
Notes: Index is zero based.

72.21.4 Properties

72.21.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of strings in this text record.
Notes: (Read only property)

72.22 module DNSUtilMBS

72.22.1 module DNSUtilMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The module for DNS queries.

72.22.4 Methods

72.22.5 ClassNumber(dnsClass as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS class constants.
Example:

```
dim n as Integer

if DNSUtilMBS.ClassNumber("CH", n) then
```

```
MsgBox str(n) // shows 3
end if
```

Notes: Returns true on success.

72.22.6 ClassString(dnsclass as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this class value.
Example:

```
MsgBox DNSUtilMBS.ClassString(DNSUtilMBS.ClassCHAOS) // shows "CH"
```

72.22.7 Lookup(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Example:

```
// lookup MX record for email sending
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MsgBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

72.22.8 LookupMT(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 10.5, Platform: macOS, Targets: All.

Function: Performs a DNS query.
Notes:

Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

72.22.9 TypeNumber(dnsType as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: One of the DNS type constants.
Example:

```
dim n as Integer

if DNSUtilMBS.TypeNumber("AAAA", n) then
MsgBox str(n) // shows 28
end if
```

Notes: Returns true on success.

72.22.10 TypeString(dnstype as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the string name of this type value.
Example:

```
MsgBox DNSUtilMBS.TypeString(DNSUtilMBS.TypeMD) // shows "MD"
```

72.22.11 Constants

72.22.12 ClassALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.13 ClassANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.14 ClassCHAOS = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.15 ClassCSNET = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.16 ClassHESIOD = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.17 ClassINTERNET = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.18 ClassNONE = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS class constants.

72.22.19 TypeA = 1

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.20 TypeAAAA = & h1c

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.21 TypeAFSDB = & h12

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.22 TypeALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.23 TypeANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.24 TypeATMA = & h22

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.25 TypeAXFR = & hfc

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.26 TypeCNAME = 5

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.27 TypeGPOS = & h1b

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.28 TypeHINFO = & h0d

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.29 TypeISDN = & h14

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.30 TypeIXFR = & hfb

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.31 TypeKEY = & h19

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.32 TypeLOC = & h1d

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.33 TypeMAILA = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.34 TypeMAILB = & hfd

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.35 TypeMB = 7

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.36 TypeMD = 3

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.37 TypeMF = 4

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.38 TypeMG = 8

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.39 TypeMINFO = & h0e

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.40 TypeMR = 9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.41 TypeMX = & h0f

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.
Example:

```
// lookup MX record for email sending
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <>nil then
MsgBox "macsw.de ->"+r.Answer(0).MX.name
end if
```

72.22.42 TypeNS = 2

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.43 TypeNSAP = & h16

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.44 TypeNSAPPTR = & h17

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.45 TypeNULL = & h0a

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.46 TypeNXT = & h1e

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.47 TypePTR = & h0c

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.48 TypePX = & h1a

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.49 TypeRP = & h11

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.50 TypeRT = & h15

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.51 TypeSIG = & h18

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.52 TypeSOA = 6

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.53 TypeSRV = & h21

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.54 TypeTEXT = & h10

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.55 TypeTKEY = & hf9

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.56 TypeTSIG = & hfa

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.57 TypeWKS = & h0b

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.22.58 TypeX25 = & h13

MBS MacOSX Plugin, Plugin Version: 9.7.

Function: One of the DNS type constants.

72.23 class DNSWKSRecordMBS

72.23.1 class DNSWKSRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a WKS record.

72.23.2 Methods

72.23.3 Map(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The map values.
Notes: Index is zero based.

72.23.4 Properties

72.23.5 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The address.
Notes: (Read and Write property)

72.23.6 maplength as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The number of items in the map array.
Notes: (Read and Write property)

72.23.7 protocol as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The protocol.
Notes: (Read and Write property)

72.24 class DNSX25RecordMBS

72.24.1 class DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The class for a X25 record.

72.24.2 Properties

72.24.3 psdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The psdn address.
Notes: (Read and Write property)

Chapter 73

Dongle

73.1 class HASPHLDMBS

73.1.1 class HASPHLDMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for accessing HASP HL or Sentinel dongles.
Example:

```
// Load your vendor library or the demo one
dim LibFile as FolderItem = GetFolderItem("hasp_darwin_12345.dylib")

if HASPHLDMBS.LoadLibrary(LibFile) then
'MsgBox "OK"
else
MsgBox "Failed to load library."
Return
end if

// init dongle
' This method runs the actual tests on the given program number
dim blob as MemoryBlock // container for data for en-/decryption

dim FeatureID = HASPHLDMBS.HASP_DEFAULT_FID
dim VendorCode = "123456" // your vendor code here, some big Base64 encoded block

dim hasp as new HASPHLDMBS(FeatureID, VendorCode)
Select case hasp.Lasterror
case HASPHLDMBS.HASP_STATUS_OK
// ok
```

```
case HASPHLDMBS.HASP_HASP_NOT_FOUND
MsgBox "Dongle not found."
return
case HASPHLDMBS.HASP_INV_VCODE
MsgBox "Invalid vendor code"
Return
else
MsgBox "Error: "+str(hasp.Lasterror)
return
end Select

// read a file ID
dim fileid as Integer = 65524
dim size as Integer = hasp.GetSize( fileid )

if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then // ONLY IF FILE IS SUPPORTED

// read to memoryblock
blob = hasp.ReadMemory( fileid, 0, size )
if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then
// show in MsgBox
s = Blob.stringvalue(0,blob.size)
MsgBox DefineEncoding(s,Encodings.UTF8)
end if
end if
```

Notes:

Please use HASP Master Wizard Suite to generate your own runtime libraries. Than you get a couple of DLLs which you can load with this class. For the demo keys, you can use the demo DLLs.
The demo DLL for example is named "hasp_windows_x64_demo.dll" or including your vendor code "hasp_windows_x64_12345.dll" (64bit). 32bit Windows DLL is named hasp_windows_12345.dll, hasp_windows_demo.dll or haspvlib_12345.dll.

Now when you have the platform dependent libraries, you can use LoadLibrary() function in this class to load the right one.

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

73.1.6 Methods

73.1.7 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library was loaded.
Notes: Returns true if library was loaded successfully or we use internal library.

73.1.8 Close

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs out from a context or session.
Notes:

Called automatically for you by the destructor.

Use this function to end a connection to an API session object. Once logged out from a session, all memory allocated for the session is released.

Lasterror is set.

73.1.9 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature to establish a session, according to predefined search parameters.
Notes:

This function is used to specify conditions that describe where login information is to searched for.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

This function does not work with legacy HASP Features.

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
Scope: Definition of the search parameters for this Feature ID. See the additional HASP API Reference documentation for more information about Scope XML Tags.
VendorCode: the vendor code

Lasterror is set. This calls SDK function hasp_login_scope.
See also:

- 73.1.10 Constructor(FeatureID as Integer, VendorCode as string) 14316

73.1.10 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logs into a Feature and thereby establishes a session context.
Notes:

This function establishes a context to a Sentinel HASP protection key containing a license for the requested Feature ID.
The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

Legacy HASP Remarks
For local prognum Features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network "prognum" features continue to use the old HASP LM login logic, with its inherent limitations.

There is only support for concurrent usage of one server (global server address).

With "Program Number" features (see HASP_FEATURETYPE_MASK), 8 bits are reserved for legacy options (see HASP_PROGNUM_OPT_MASK, currently 5 bits are used):

- only local
- only remote
- login is counted per process ID
- disable terminal server check
- enable access to old (HASP3/HASP4) keys

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
VendorCode: the Vendor Code

Lasterror is set. This calls SDK function hasp_login.
See also:

- 73.1.9 Constructor(FeatureID as Integer, scope as string, VendorCode as string) 14316

73.1.11 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a date and time value to hasptime (the number of elapsed seconds since January 1 1970).
Notes:

Time values are in UTC.
Memoryblock has 8 bytes.

73.1.12 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes:

Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_decrypt.

73.1.13 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypts a buffer.
Notes:

Decrypts data using the decryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
Returns the decrypted data.
Lasterror is set. This calls SDK function hasp_decrypt.

73.1.14 Detach(detachAction as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detaches or cancels an attached license, according to customizable parameters
Notes:

You do not need to be logged in to a Sentinel HASP Feature in order to use this function.
This function is used to detach a license for a Product (i.e. all Sentinel HASP Features and Memory files which belong to this Product) from a HASP SL Protection key. The function returns a H2R file which must then be applied on the recipient machine using hasp_update() or the ACC.
This function only works with HASP SL Protection Keys; HASP HL Protection Keys are ignored.
This function can also be used on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to NULL. For cancelling, the function returns a R2H file which must be applied on the host machine using hasp_update() or the ACC. If the detached Product is already expired, no R2H file will be returned.
The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

Parameter	Description
detachAction:	Parameters for the operation, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
scope:	Search parameters for the Product that is to be detached
VendorCode:	The Vendor Code.
recipient:	Definition in XML format of the recipient computer, on which the detached Product will be installed. This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier HASP_RECIPIENT. Set to "" if an attached protection key is cancelled.
info:	The information that is retrieved, in XML format. This information is a V2C, which can then be installed on the recipient computer via Update.

73.1.15 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes:

Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails,

Return code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_INV_DETACH_ACTION	Invalid XML "detach_action" parameter
HASP_INV_RECIPIENT	Invalid XML "recipient" parameter
HASP_TOO_MANY_PRODUCTS	Scope for Detach does not specify a unique Parameter
HASP_TOO_MANY_USERS	Too many users currently connected, or: at least one detachable Feature does not have enough network seats available
HASP_ACCESS_DENIED	Request cannot be processed due to ACC restrictions
HASP_FEATURE_EXPIRED	All detachable Features are expired
HASP_INV_PRODUCT	Invalid Product information
HASP_INV_DURATION	In the case of a new detachable license, duration exceeds maximum allowed OR, in the case of a detachable license extension, expiration date earlier than original date or too short (if an existing detached Product is extended, and the new expiration date is earlier than the original expiration date)
HASP_INSUF_MEM	Out of memory
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key,USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager

the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_encrypt.

73.1.16 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts a buffer.
Notes:

Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt. (16 bytes minimum)

Returns encrypted string.

Lasterror is set. This calls SDK function hasp_encrypt.

73.1.17 GetInfo(scope as string, format as string, VendorCode as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about system components, according to customizable search parameters, and presents it according to customizable formats.
Notes:

You do not need to be logged in to a Sentinel HASP Feature in order to use this function.

This function is used to specify conditions about where to search for information. In addition, it enables you to specify conditions about the format in which the retrieved information is presented. If retrieved information is appropriately formatted, it can be used as a template in the Constructor.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

This function cannot be used to retrieve legacy HASP Features.

scope: Definition of the data that is to be searched, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation
format: Definition of the format in which the data is to be displayed, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.
VendorCode: the Vendor Code
info: The information that is retrieved, in XML format

Return Code	Description
HASP_STATUS_OK	Request was successfully completed
HASP_SCOPE_RESULTS_EMPTY	Unable to locate a Feature matching the scope
HASP_INSUF_MEM	Out of memory
HASP_INV_VCODE	Invalid Vendor Code
HASP_UNKNOWN_VCODE	Vendor Code not recognized
HASP_INVALID_PARAMETER	Scope or format string too long (max. length 32 kb)
HASP_DEVICE_ERR	Input/Output error in HASP SL secure storage, OR in case of a HASP HL key, USB communication error
HASP_LOCAL_COMM_ERR	Communication error between API and local HASP License Manager
HASP_REMOTE_COMM_ERR	Communication error between local and remote HASP License Manager
HASP_INV_FORMAT	Unrecognized format string
HASP_INV_SCOPE	Unrecognized scope string
HASP_BROKEN_SESSION	Session has been interrupted

73.1.18 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the current time.
Notes:

Only HASP HL keys with a Real-time clock (rtc) and HASP SL keys can provide the current time.
Primarily used to obtain reliable timestamps that are independent from the system clock.
Time values are returned as the number of seconds that have elapsed since Jan-01-1970 0:00:00 UTC.
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME.
Returns time as a 8 byte memoryblock.
Lasterror is set.

73.1.19 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves information regarding a session context.
Notes:

format: Definition for the type of output data structure, in XML format.
There are three format options:

- HASP_KEYINFO For retrieving information on the Sentinel HASP protection key
- HASP_SESSIONINFO For retrieving information on the login session
- HASP_UPDATEINFO For retrieving information on a license update usually contained in a C2V file. The retrieved information includes the current state of the key, including update counters, license availability and memory images

Returns answer. Lasterror is set.

HASP_KEYINFO is ”<haspformat format=””keyinfo””/>”
HASP_SESSIONINFO is ”<haspformat format=””sessioninfo””/>”
HASP_UPDATEINFO is ”<haspformat format=””updateinfo””/>”

73.1.20 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves the byte size of a memory file from a HASP protection key.
Notes:

This function is used to determine the file size of a HASP memory file.
FileID: Identifier for the file that is to be queried.
Returns file size. Lasterror is set.

Possible File ID constants: HASP_FILEID_LICENSE, HASP_FILEID_MAIN, HASP_FILEID_RO or HASP_FILEID_RW.

73.1.21 GetVersion(byref MajorVersion as Integer, byref MinorVersion as Integer, byref BuildServer as Integer, byref BuildNumber as Integer, VendorCode as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieves version and build number of the HASP library.
Notes: Returns error code.

73.1.22 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Converts a time value (elapsed seconds since January 1 1970) into a date and time
Notes:

Memoryblock has 8 bytes.
Time values are in UTC.

73.1.23 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are decrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to decrypt.
Size: Size of the data in the memoryblock to decrypt.

Lasterror is set.

73.1.24 LegacyDecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible decryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

73.1.25 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are encrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to encrypt.
Size: Size of the data in the memoryblock to encrypt.

Lasterror is set.

73.1.26 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Legacy HASP4 compatible encryption function.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

Lasterror is set.

73.1.27 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the LM idle time.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

time: The idle time in minutes.

Lasterror is set.

73.1.28 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to HASP4-compatible real-time clock.
Notes:

This object must have been created by calling Constructor() with a "prognum" Feature ID.

This request is only supported on locally accessed keys. Attempting to set the time on a remotely accessed key will return HASP_NO_TIME.

time: The new time value (8 byte Memoryblock)

Lasterror is set.

73.1.29 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 73.1.30 LoadLibrary(path as string) as boolean 14326

73.1.30 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the HASPHL shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 73.1.29 LoadLibrary(file as folderitem) as boolean 14326

73.1.31 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes:

Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

73.1.32 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the memory of a Sentinel HASP protection key.
Notes:

Valid File IDs are HASP_FILEID_RW and HASP_FILEID_RO.

Legacy HASP Remarks
Valid File IDs are HASP_FILEID_LICENSE and HASP_FILEID_MAIN.

FileID: Identifier for the file that is to be read
Offset: Byte offset in the file
Size: Number of bytes to read.

Lasterror is set.

73.1.33 Transfer(action as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Performs a transfer operation.
Notes:

Sentinel Licensing API Usage Notes
You do not need to be logged in to a Sentinel Feature in order to use this function.

This function is used to perform the following task as per its
"action" parameter.
for "detach" action: detach a license for a Product (i.e. all Sentinel Features and Memory files which belong to this Product) from a Sentinel SL/SL-AdminMode/SL-UserMode key. The function returns a bufferwhich should be saved as H2R file.

for "cancel" action: This action runs on the recipient machine to cancel an attached license. In this case, the
recipient parameter is ignored and should be set to "". For cancelling, the function returns a buffer which must be applied on the host machine using Update() or ACC If the detached Product is already expired, no buffer will be returned.

for "rehost" action: create a tranferable a license for given container (i.e. all Sentinel Features and Memory files
which belong to this container) from SL-AdminMode/SL-UserMode Protection key. The function returns buffer on success which must be saved as V2C file. Update() or ACC is used to apply this on destination machine.

This function only works with Sentinel SL/SL-AdminMode/SL-UserMode Protection Keys; Sentinel HL Protection Keys are ignored.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

action: Parameters for the operation, in XML format. For more information, see the accompanying Sentinel Licensing API help documentation.
scope: Search parameters for the conatiner-id that is to be re-hosted. For more information, see the accompanying
Sentinel Licensing API help documentation.
VendorCode: The Vendor Code
recipient: Definition in XML format of the recipient computer, on which the detached Product will be installed.

This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier

info: String for the information that is retrieved, in XML format. This information is a V2C, which can then be installed on the destination computer via Update.

73.1.34 Update(data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a Sentinel HASP protection key.
Notes:

This function writes update information. Note that the Sentinel HASP protection key must be locally connected.

The update code contains all necessary data to perform the update on a deployed Sentinel HASP protection key including:

- The Sentinel HASP protection key on which the updated information is to be written
- The necessary Vendor Code that is required to access the Sentinel HASP key
- The actual update information

Depending on the update data, the function returns an acknowledgement code that is signed/encrypted by the key. The code is evidence that an update has been applied to a license.

data: The update data.
Returns the acknowledge data.

Lasterror is set.

73.1.35 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes:

Valid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock.

Lasterror is set.

73.1.36 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes to the memory of a Sentinel HASP protection key.
Notes:

alid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data

Lasterror is set.

73.1.37 Properties

73.1.38 Handle as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal handle for the session.
Notes: (Read and Write property)

73.1.39 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error value.
Notes: (Read and Write property)

73.1.40 Constants

73.1.41 HASP_ACCESS_DENIED = 5

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Access to Feature, HASP protection key or functionality denied.

73.1.42 HASP_ALREADY_LOGGED_IN = 502

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Logging in twice to the same object.

73.1.43 HASP_ALREADY_LOGGED_OUT = 503

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Logging out twice of the same object

73.1.44 HASP_BROKEN_SESSION = 39

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Session been interrupted.

73.1.45 HASP_CANNOT_READ_FILE = 72

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: File not found or access denied.

73.1.46 HASP_CLONE_DETECTED = 64

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Cloned HASP SL secure storage detected.

73.1.47 HASP_CONTAINER_NOT_FOUND = 7

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Deprecated - use HASP_HASP_NOT_FOUND.

73.1.48 HASP_DEFAULT_FID = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: The HASP default Feature ID.
Notes: Available in every HASP key.

73.1.49 HASP_DETACHED_LICENSE_FOUND = 76

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Format SL-AdminMode or migrate SL-Legacy to SL-AdminMode not allowed as container has detached license.

73.1.50 HASP_DETACH_DISABLED = 74

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Detach of license not allowed as product.
contains VM disabled feature and host machine is a virtual machine.

73.1.51 HASP_DEVICE_ERR = 43

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Input/Output error occurred in secure storage area of HASP SL key OR a USB error occurred when communicating with a HASP HL key

73.1.52 HASP_DUPLICATE_HOSTNAME = 79

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Duplicate Hostname found while key contains Hostname Fingerprinting.

73.1.53 HASP_ENC_NOT_SUPP = 23

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP protection key does not support encryption type.

73.1.54 HASP_EXTENSION_NOT_ALLOWED = 73

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Extension of license not allowed as number of detached.
licenses is greater than current concurrency count.

73.1.55 HASP_FEATURETYPE_MASK = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Feature Type" mask.
Notes: AND-mask used to identify Feature type.

73.1.56 HASP_FEATURE_EXPIRED = 41

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Feature expired.

73.1.57 HASP_FEATURE_NOT_FOUND = 31

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested Feature not available.

73.1.58 HASP_FEATURE_TYPE_NOT_IMPL = 28

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested Feature type not implemented.

73.1.59 HASP_FILEID_DYNAMIC_FIRST = 1

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Sentinel dynamic memory file ID avaliable range
File ID lower limit for Sentinel dynamic memory file.

73.1.60 HASP_FILEID_DYNAMIC_LAST = & hffbf

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Sentinel dynamic memory file ID avaliable range
File ID upper limit for Sentinel dynamic memory file.

73.1.61 HASP_FILEID_LICENSE = & hfff2

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Legacy HASP HL Run-time API: HASP4 FAS memory file
(Dummy) File ID for the license data area of memory contents.

73.1.62 HASP_FILEID_MAIN = & hfff0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Legacy HASP HL Run-time API: HASP4 memory file
File ID for HASP4-compatible memory contents w/o FAS.

73.1.63 HASP_FILEID_RO = & hfff5

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Sentinel HASP secure read only memory file.
File ID for HASP Sentinel HASP read only memory.

73.1.64 HASP_FILEID_RW = & hfff4

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the Memory File ID constants
Notes:

Sentinel HASP secure writable memory file
File ID for Sentinel HASP secure writable memory.

73.1.65 HASP_FIRST_HASP_ACT = 3001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Reserved for HASP Activation API

73.1.66 HASP_FIRST_HELPER = 2001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Reserved for HASP helper libraries.

73.1.67 HASP_HARDWARE_MODIFIED = 52

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: HASP SL key incompatible with machine hardware; HASP SL key is locked to different hardware. OR: In the case of a V2C file, conflict between HASP SL key data and machine hardware data; HASP SL key locked to different hardware

73.1.68 HASP_HASP_INACTIVE = 66

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Specified Hasp Id is in Inactive state

73.1.69 HASP_HASP_NOT_FOUND = 7

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP protection key not available.

73.1.70 HASP_INCOMPAT_FEATURE = 6

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Legacy decryption function cannot work on Feature.

73.1.71 HASP_INSUF_MEM = 3

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: System is out of memory.

73.1.72 HASP_INT_ERR = 699

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal error occurred in API.

73.1.73 HASP_INVALID_HANDLE_VALUE = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Invalid handle value for Handle property.

73.1.74 HASP_INVALID_OBJECT = 500

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: C++ API: Object incorrectly initialized.

73.1.75 HASP_INVALID_PARAMETER = 501

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid function parameter.

73.1.76 HASP_INV_ACTION = 59

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Invalid XML ”action” parameter

73.1.77 HASP_INV_API_DYLIB = 401

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: API dispatcher: Unable to load API; DLL possibly corrupt?

73.1.78 HASP_INV_DETACH_ACTION = 59

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML "action" parameter.

73.1.79 HASP_INV_DURATION = 63

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid duration.

73.1.80 HASP_INV_FILEID = 10

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Specified File ID not recognized by API.

73.1.81 HASP_INV_FORMAT = 15

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML format.

73.1.82 HASP_INV_HND = 9

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid login handle passed to function.

73.1.83 HASP_INV_PORT = 651

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: invalid port value.

73.1.84 HASP_INV_PORT_TYPE = 650

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: invalid port type.

73.1.85 HASP_INV_PRODUCT = 61

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid Product information.

73.1.86 HASP_INV_PROGNUM_OPT = 2

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Legacy HASP HL Run-time API: Unknown/Invalid Feature ID option.

73.1.87 HASP_INV_RECIPIENT = 58

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML ”recipient” parameter.

73.1.88 HASP_INV_SCOPE = 36

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML scope.

73.1.89 HASP_INV_SIG = 30

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Signature verification operation failed.

73.1.90 HASP_INV_SPEC = 35

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid XML specification.

73.1.91 HASP_INV_TIME = 24

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Passed time value outside supported value range.

73.1.92 HASP_INV_UPDATE_CNTR = 21

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update counter set incorrectly.

73.1.93 HASP_INV_UPDATE_DATA = 19

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Required XML tags not found; Contents in binary data are missing or invalid

73.1.94 HASP_INV_UPDATE_NOTSUPP = 20

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update request not supported by Sentinel HASP protection key.

73.1.95 HASP_INV_UPDATE_OBJ = 17

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Binary data passed to function does not contain valid update.

73.1.96 HASP_INV_VCODE = 22

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Invalid Vendor Code passed.

73.1.97 HASP_INV_VLIB = 49

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to load Vendor library.

73.1.98 HASP_KEYID_NOT_FOUND = 18

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: HASP protection key not found.

73.1.99 HASP_LICENSE_REHOSTED = 70

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: License is rehosted to other machine

73.1.100 HASP_LOCAL_COMM_ERR = 33

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error between API and local Sentinel HASP License Manager.

73.1.101 HASP_MEM_RANGE = 1

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Request exceeds memory range of a HASP file.

73.1.102 HASP_MIN_BLOCK_SIZE = 16

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Minimum block size for encrypt and decrypt functions.

73.1.103 HASP_MIN_BLOCK_SIZE_LEGACY = 8

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Minimum block size for legacy encrypt and legacy decrypt functions.

73.1.104 HASP_MISSING_LM = 80

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: The Sentinel License Manager is required for this operation

73.1.105 HASP_NET_DLL_BROKEN = 652

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Dot-Net DLL found broken

73.1.106 HASP_NEXT_FREE_VALUES = 5001

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Next free error code.

73.1.107 HASP_NOT_IMPL = 698

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Requested function not implemented.

73.1.108 HASP_NO_ACK_SPACE = 26

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Acknowledge data requested by update, but ack_data parameter is NULL.

73.1.109 HASP_NO_API_DYLIB = 400

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: API dispatcher: API for this Vendor Code was not found.

73.1.110 HASP_NO_BATTERY_POWER = 25

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Real-time clock battery out of power.

73.1.111 HASP_NO_DETACHABLE_FEATURE = 67

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: No detachable feature exists.

73.1.112 HASP_NO_DRIVER = 14

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Required driver not installed.

73.1.113 HASP_NO_EXTBLOCK = 600

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Internal use: no classic memory extension block available.

73.1.114 HASP_NO_LOG = 32

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Access log not enabled.

73.1.115 HASP_NO_TIME = 12

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Real-time clock (rtc) not available.

73.1.116 HASP_NO_VLIB = 48

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to find Vendor library.

73.1.117 HASP_OLD_DRIVER = 11

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Installed driver or daemon too old to execute function.

73.1.118 HASP_OLD_LM = 42

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Sentinel HASP License Manager version too old.

73.1.119 HASP_OLD_VLIB = 56

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Vendor library version too old.

73.1.120 HASP_OPERATION_FAILED = 525

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: .NET API: Incorrect use of system or platform

73.1.121 HASP_PROGNUM_DEFAULT_FID = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: The HASP default Feature ID
Notes: Available in every legacy HASP hardware key.

73.1.122 HASP_PROGNUM_FEATURETYPE = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Feature" type
Notes: After AND-ing with HASP_FEATURETYPE_MASK the Feature type contain this value.

73.1.123 HASP_PROGNUM_MASK = & h000000ff

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Mask"
Notes: AND-mask used to extract the Program Number from a "prognum" Feature ID.

73.1.124 HASP_PROGNUM_OPT_CLASSIC = & h00001000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Enables the API to access "classic" (HASP4 or earlier) keys.

73.1.125 HASP_PROGNUM_OPT_MASK = & h0000ff00

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number Options" mask.
Notes:

AND-mask used to identify Program Number options:

- HASP_PROGNUM_OPT_NO_LOCAL
- HASP_PROGNUM_OPT_NO_REMOTE
- HASP_PROGNUM_OPT_PROCESS
- HASP_PROGNUM_OPT_CLASSIC
- HASP_PROGNUM_OPT_TS

3 bits of the mask are reserved for future extensions and currently unused.
Initialize them with zero.

73.1.126 HASP_PROGNUM_OPT_NO_LOCAL = & h00008000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Disables the search for local licenses.

73.1.127 HASP_PROGNUM_OPT_NO_REMOTE = & h00004000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Disables the search for network licenses.

73.1.128 HASP_PROGNUM_OPT_PROCESS = & h00002000

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Sets session count of network licenses to "per-process".

73.1.129 HASP_PROGNUM_OPT_TS = & h00000800

MBS Dongle Plugin, Plugin Version: 11.1.

Function: Legacy HASP HL Run-time API: "Program Number" option
Notes: Ignores the presence of terminal servers.

73.1.130 HASP_RDP_DETECTED = 27

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Program running on a Remote Desktop

73.1.131 HASP_RECIPIENT_OLD_LM = 77

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Recipient of the requested operation is older than expected.

73.1.132 HASP_REHOST_ALREADY_APPLIED = 71

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Old rehost license try to apply

73.1.133 HASP_REHOST_DISABLED = 75

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes:

Rehost of license not allowed as container
contains VM disabled feature and host machine is a virtual machine

73.1.134 HASP_REHOST_NOT_ALLOWED = 69

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Rehost is not allowed for any license

73.1.135 HASP_REMOTE_COMM_ERR = 40

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error between local and remote Sentinel HASP License Managers.

73.1.136 HASP_REQ_NOT_SUPP = 16

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to execute function in this context; the requested functionality is not implemented.

73.1.137 HASP_SCHAN_ERR = 46

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Communication error occurred in secure channel.

73.1.138 HASP_SCOPE_RESULTS_EMPTY = 50

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unable to locate any Feature matching scope.

73.1.139 HASP_SECURE_STORE_ID_MISMATCH = 78

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Secure storage ID mismatch

73.1.140 HASP_STATUS_OK = 0

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Request successfully completed

73.1.141 HASP_STORAGE_CORRUPT = 47

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Corrupt data exists in secure storage area of HASP SL protection key.

73.1.142 HASP_SYS_ERR = 13

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Generic error from host system call.

73.1.143 HASP_TIME_ERR = 45

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: System time has been tampered with.

73.1.144 HASP_TMOF = 4

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many open Features/login sessions.

73.1.145 HASP_TOO_MANY_HOSTS = 68

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Scope does not specify a unique host

73.1.146 HASP_TOO_MANY_KEYS = 37

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many Sentinel HASP protection keys currently connected.

73.1.147 HASP_TOO_MANY_PRODUCTS = 60

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Scope does not specify a unique Product.

73.1.148 HASP_TOO_MANY_USERS = 38

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Too many concurrent user sessions currently connected.

73.1.149 HASP_TOO_SHORT = 8

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Encrypted/decrypted data length too short to execute function call.

73.1.150 HASP_TS_DETECTED = 27

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Program running on a terminal server.

73.1.151 HASP_UNKNOWN_ALG = 29

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unknown algorithm used in H2R/V2C file.

73.1.152 HASP_UNKNOWN_RECIPIENT = 62

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Unknown Recipient; update can only be applied to the Recipient specified in hasp_detach(), and not to this computer.

73.1.153 HASP_UNKNOWN_VCODE = 34

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Vendor Code not recognized by API.

73.1.154 HASP_UPDATE_ALREADY_ADDED = 65

MBS Dongle Plugin, Plugin Version: 15.4.

Function: One of the HASP error codes.
Notes: Specified V2C update already installed in the LLM

73.1.155 HASP_UPDATE_BLOCKED = 44

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Update installation not permitted; This update was already applied.

73.1.156 HASP_UPDATE_TOO_NEW = 55

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Trying to install a V2C file with an update counter that is out of sequence with update counter in the Sentinel HASP protection key. The first value in the V2C file is greater than the value in the Sentinel HASP protection key.

73.1.157 HASP_UPDATE_TOO_OLD = 54

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Trying to install a V2C file with an update counter that is out of sequence with the update counter on the Sentinel HASP protection key. The update counter value in the V2C file is lower than the value in sentinel HASP protection key.

73.1.158 HASP_UPLOAD_ERROR = 57

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Upload via ACC failed, e.g. because of illegal format.

73.1.159 HASP_USER_DENIED = 53

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Login denied because of user restrictions.

73.1.160 HASP_VM_DETECTED = 51

MBS Dongle Plugin, Plugin Version: 11.1.

Function: One of the HASP error codes.
Notes: Program running on a virtual machine

73.2 class Rockey4NDMBS

73.2.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to handle calls to the Rockey4ND Dongle API.
Notes:

Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

73.2.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

73.2.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

73.2.4 Methods

73.2.5 Available as Boolean

MBS Dongle Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether the class is available
Example:

```
if Rockey4NDMBS.Available then

// check dongle

else

// can't check dongle

end if
```

Notes:

Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

73.2.6 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the Rockey Dongle API.
Example:

```
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

Notes:

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present

73.2.7 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Same as Rockey but a different name for compatibility.
Notes: The original Rockey dongle calls the function RockeyCall.

73.2.8 Properties

73.2.9 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A one KB big buffer.
Notes: (Read and Write property)

73.2.10 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The 16bit handle value.
Notes: (Read and Write property)

73.2.11 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 32bit parameter for the rockey function.
Notes: (Read and Write property)

73.2.12 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 32bit parameter for the rockey function.
Notes: (Read and Write property)

73.2.13 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The first 16bit parameter for the rockey function.
Notes: (Read and Write property)

73.2.14 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

73.2.15 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

73.2.16 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The forth 16bit parameter for the rockey function.
Notes: (Read and Write property)

73.3 module SGLockMBS

73.3.1 module SGLockMBS

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MBS Module for using SG-Lock dongles in Xojo.
Notes:

See website:
https://www.sg-lock.com

Please read manual from SG Intec for details.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.

73.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

73.3.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

73.3.4 Methods

73.3.5 Authenticate(AuthentCode as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes:

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 73.3.6 Authenticate(AuthentCode() as UInt32) 14360

73.3.6 Authenticate(AuthentCode() as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Authentication of SG-Lock library to the protected application and vice versa.
Notes:

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 73.3.5 Authenticate(AuthentCode as MemoryBlock) 14359

73.3.7 CloseLibrary

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unloads and closes DLL.

73.3.8 CryptLock(ProductId as UInt32, KeyNum as UInt32, CryptMode as UInt32, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypts or decrypts data on the dongle.
Notes:

En- or decrypts one or more 64-bit data blocks with 128-bit key. The crypto- graphic algorithm is TEA.

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of key to use 0 to 1 - SG-Lock U3 0 to 15 - SG-Lock U4
CryptMode: Working mode. kCryptModeEncrypt = 0 for Encrypt, kCryptModeDecrypt = 1 for Decrypt.
Data: Input data. Should be multiply of 4 in length.

Returns the output data.

Lasterror property is set.

73.3.9 LoadLibraryFile(File as folderItem) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes:

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

73.3.10 LoadLibraryPath(Path as String) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the dll/dylib/so file at the give path.
Notes:

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

73.3.11 ReadConfig(ProductId as UInt32, Category as UInt32 = 0) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads configuration information about SG-Lock.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Category: Type of requested information. currently only 0 for Information about SG-Lock modul.

Returns memoryblock with an array of 8 integers of 32-bit. The meaning of the single values are:

Index 0: Type
Index 1: Interface
Index 2: Software Version
Index 3: Hardware Version
Index 4: Serial number
Index 5: Memory size in Dwords
Index 6: Number of counters
Index 7: Number of 128-Bit Keys

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

Lasterror is set.

73.3.12 ReadCounter(ProductId as UInt32, CntNum as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads a 32-bit count value from the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 15 - SG-Lock U3 0 to 63 - SG-Lock U4

Returns the value read.
Lasterror property is set.

Counters are simple 32 bit data values in the SG-Lock memory. If desired, they can also be used for everything a 32 bit read/write variable is suitable for. By doing so you can extend the general purpose memory

over the indicated size.

73.3.13 ReadData(ProductId as UInt32, Address as UInt32, LongCount as UInt32) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read 32-bit data from the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Address: Startadress of data value block 0 to 63 - SG-Lock U3 or 0 to 255 - SG-Lock U4
Count: Number of data values to read, each 4 bytes.

Returns memoryblock with data values.
Lasterror property is set.

73.3.14 ReadProductId as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the 16-bit ProductId from the SG-Lock.
Notes:

Lasterror property is set.

The ProductId is an identifier that eases to distinguish between different protected applications of SG-Lock users. For example company X protects its application A and B with SG-Lock and gives all keys for application A the ProductId 1 and the keys for application B the ProductId 2, then all keys of application B are ,Äùhidden,Äú for application A and vice versa. This simple mechanism offers an effective way to prevent confusion between keys of different applications. Setting of the ProductId should be integrated into the initial- ization process of the SG-Locks before distributing with the protected software.

Returns the ProductId assigned to dongle.
Lasterror is set.

73.3.15 ReadSerialNumber(ProductId as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the for every SG-Lock unique serial number.
Notes:

ProductId: Indicates the ProductId of the SG-Lock

Returns the serial number will be given back to the calling application

Lasterror property is set.

Every SG-Lock has a serial number that is unique, which is also not depending on type and interface.

73.3.16 SearchLock(ProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Searches for a SG-Lock device.
Notes:

ProductId: Indicates the ProductId of the SG-Lock looked for

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

73.3.17 SignData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Signs the data.
Notes:

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.

Returns signature as memoryblock.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

73.3.18 TeaDecipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt data.
Notes:

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

73.3.19 TeaEncipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt data.
Notes:

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

73.3.20 VerifyData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock, Signature as MemoryBlock) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Verifies the signature with the data.
Notes:

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.
Signature: The signature as memory block.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

73.3.21 WriteCounter(ProductId as UInt32, CntNum as UInt32, Data as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 32-bit count value to the SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 63 - SG-Lock U3 0 to 255 - SG-Lock U4
Data: Counter value to be written

Lasterror property is set.

73.3.22 WriteData(ProductId as UInt32, Address as UInt32, Data as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes 32-bit data values to SG-Lock memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
Address: Startaddress of data value block 0 to 63 - SG-Lock U3, 0 to 255 - SG-Lock U4
Count: Number of data values
Data: Memoryblock, where data values be copied from. (size is multiply of 4)

Lasterror property is set.

73.3.23 WriteKey(ProductId as UInt32, Address as UInt32, Key as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a 128-bit key to the SG-Lock key memory.
Notes:

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of the key to be written 0 to 1 - SG-Lock U3, 0 to 15 - SG-Lock U4
Key: 128-bit Key to be written. Pointer to data array of 4 integer values of 32-bit, that form the 128-bit key

Lasterror property is set.
The 128-bit key of the U2 is read only and not changeable.

73.3.24 WriteProductId(OldProductId as UInt32, NewProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a new 16-bit ProductId to the SG-Lock.
Notes:

OldProductId: Indicates the actual ProductId of the SG-Lock
NewProductId: Indicates the new ProductId of the SG-Lock

Returns true on success or false on failure.

Lasterror property is set.

73.3.25 Properties

73.3.26 Available as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library has been loaded and functions are available.
Notes:

Returns true if you can call functions without getting a FunctionNotFoundException.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
(Read only property)

73.3.27 CounterCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of counters.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.28 HardwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hardware version number.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.29 InterfaceType as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of interface.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.30 KeyCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of 128-bit keys.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.31 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code returned by a function.
Notes: (Read and Write property)

73.3.32 LibraryError as String

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error message from loading the library.
Notes: (Read only property)

73.3.33 MemorySize as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in data words.
Notes:

MemorySizeBytes = 4 * MemorySize
Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.34 MemorySizeBytes as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory size in bytes.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.35 SerialNumber as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the dongle.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.36 SoftwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The software version.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.37 Type as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The type of dongle.
Notes:

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

73.3.38 Constants

73.3.39 kConfigLockSeries2 = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 2

73.3.40 kConfigLockSeries3 = 2

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 3

73.3.41 kConfigLockSeries4 = 3

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the device types.
Notes: Series 4

73.3.42 kCryptModeDecrypt = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the crypto modes.
Notes: Decrypt it

73.3.43 kCryptModeEncrypt = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the crypto modes.
Notes: Encrypt it

73.3.44 kErrorAuthenticationFailed = 6

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Authentification with Authenticate failed.

73.3.45 kErrorAuthenticationRequired = 5

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Authentication with Authenticate function not or not error free processed.

73.3.46 kErrorDongleNotFound = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Dongle not found.

73.3.47 kErrorFunctionNotSupported = 7

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The called function is not supported by the found SG-Lock.

73.3.48 kErrorLPTBusy = 2

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The LPT (printer port) is busy.

73.3.49 kErrorLPTOpenError = 3

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: The LPT (printer port) could not be opened.

73.3.50 kErrorNoLPTPortFound = 4

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes:

The LPT (printer port) was not found.

73.3.51 kErrorParameterInvalid = 8

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Parameter of the called function is out of the vaild value range.

73.3.52 kErrorSignatureInvalid = 9

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Signature invalid.

73.3.53 kErrorSuccess = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: All okay.

73.3.54 kErrorUSBBusy = 10

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the error codes.
Notes: Another application is claming the SG-Lock for more than 5 seconds.

73.3.55 kInterfaceLPT = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the interface types.
Notes: Printer port connection.

73.3.56 kInterfaceUSB = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the interface types.
Notes: USB connection.

73.3.57 kSignModeSign = 0

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the sign modes.
Notes: Sign the data.

73.3.58 kSignModeVerify = 1

MBS Dongle Plugin, Plugin Version: 18.5.

Function: One of the sign modes.
Notes: Verify the signature.

73.4 class UnikeyMBS

73.4.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to enable Xojo to use Unikey dongles.
Notes:

Website:
http://www.esecutech.com

Available for:

- MacOS 64-bit on Intel
- MacOS 32-bit on Intel
- Linux 32-bit on ARM
- Linux 32-bit on Intel
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel

Unavailable for:

- iOS
- Windows 64-bit on ARM
- Linux 64-bit on ARM
- MacOS 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

73.4.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

73.4.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

73.4.4 Methods

73.4.5 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate1 function.
Returns error code.

73.4.6 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate2 function.
Returns error code.

73.4.7 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
Notes:

See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

73.4.8 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey license module.
Notes:

See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

73.4.9 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

73.4.10 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module now.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.

73.4.11 CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the attributes of a specific UniKey Time license module Now PC.
Notes:

See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

73.4.12 Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrypt an amount of memory with a key.
Notes:

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

73.4.13 Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encrypt an amount of memory with a key.
Notes:

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

73.4.14 EraseTimeModule(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Erase/Reset a real time module, and all the info in the module will be erased including start,

end or duration.
Notes:

See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.

73.4.15 Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if a specific UniKey is attached to the USB port.
Notes:

This is the first API to start a UniKey session.
Sets handle property.

See Unikey API Reference for details on UniKey_Find function.

73.4.16 FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if another UniKey is attached to the USB port.
Notes:

Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

73.4.17 GenerateKey(KeyNumber as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage.
Notes:

See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

73.4.18 GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new key in the specific key storage via seed.
Notes:

See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function.
Returns error code.

73.4.19 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password.
Notes:

See Unikey API Reference for details on UniKey_Generate_New_Password function.
Returns error code.

73.4.20 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the UniKey client number.
Notes:

See Unikey API Reference for details on UniKey_Get_Cli_Num function.
Returns error code.

73.4.21 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the Server IP, if it is local, return 127.0.0.1.
Notes:

See Unikey API Reference for details on UniKey_Get_Dongle_Location function.
Returns error code.

73.4.22 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the maximum client number.
Notes:

See Unikey API Reference for details on UniKey_Get_Max_Num function.
Returns error code.

73.4.23 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a value from a specific UniKey license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module function.
Returns error code.

73.4.24 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the end time of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module_End_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

73.4.25 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Reads the start time of a specific UniKey Time license module.
Notes:

See Unikey API Reference for details on UniKey_Get_Module_Start_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

73.4.26 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get UniKey Time,Äôs real time clock,Äôs time.
Notes:

See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

73.4.27 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GetType can help you get the type of the UniKey dongle.
Notes:

The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

73.4.28 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current UniKey library version.
Notes:

See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

73.4.29 Lock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Locks the unikey.

73.4.30 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logoff a UniKey dongle with a specific handle.
Notes:

This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

73.4.31 MD5(BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Make an MD5 digest for a mount of content or data.
Notes:

See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

73.4.32 ModuleDecrease(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decrease the value in a specified UniKey license module by ,Äú1,Äù.
Notes:

See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

73.4.33 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Generate a random number from the dongle.
Notes:

See Unikey API Reference for details on UniKey_Random function.
Returns error code.

73.4.34 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the contents of the Memory.
Notes:

This API needs to be called after logon of a UniKey dongle.
See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

73.4.35 ReadSoftID(byref SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the user defined SoftID.
Notes:

See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

73.4.36 ReadUpdateTag(byref UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read UpdateTag from a specific dongle.
Notes:

See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

73.4.37 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get return codes from the input of a seed code.
Notes:

This API return for values which are related to Seed and UniKey dongle,Äôs password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

73.4.38 SetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the maximum client number.
Notes:

See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.

Not supported for Mac PPC.

73.4.39 SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: To write a value to a specific UniKey license module and set the Decrement attribute.
Notes:

See Unikey API Reference for details on UniKey_Set_Module function.
Returns error code.

73.4.40 SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets ini location.
Notes:

See Unikey API Reference for details on UniKey_SetNETINILocation function.
Returns error code.

73.4.41 SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time function.
Returns error code.
Year is 10 for 2010.

73.4.42 SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours.

Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

73.4.43 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs end time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

73.4.44 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

73.4.45 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in UniKey dongle,Äôs clock.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

73.4.46 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a real time module,Äôs start time as the now time in host computer.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.

73.4.47 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set UniKey Time,Äôs real time clock,Äôs time by the host computer,Äôs clock.
Notes:

See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

73.4.48 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calls the unikey function with the values from this object.
Notes: See the unikey documentation for what values to use.

73.4.49 UnLock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unlocks the unikey.

73.4.50 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle with specified passwords.
Notes:

This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

73.4.51 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Logon a UniKey dongle in vendor mode with specified passwords.
Notes:

This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendor,Äôs usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
Returns error code.

Not supported on Linux.

73.4.52 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write user-defined mathematical algorithms.
Notes:

See Unikey API Reference for details on UniKey_Write_Arithmetic function.
Returns error code.

73.4.53 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write data into the memory.
Notes:

This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function.
Returns error code.

73.4.54 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write the vendor defined SoftID.
Notes:

See Unikey API Reference for details on UniKey_Write_SoftID function.
Returns error code.

73.4.55 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write UpdateTag into a specific dongle.
Notes:

See Unikey API Reference for details on UniKey_Write_UpdateTag function.
Returns error code.

73.4.56 Properties

73.4.57 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memoryblock to use when calling the unikey function.
Notes: (Read and Write property)

73.4.58 Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the dongle.
Notes: (Read and Write property)

73.4.59 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP1.
Notes: (Read and Write property)

73.4.60 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parameter LP2.
Notes: (Read and Write property)

73.4.61 P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p1.
Notes: (Read and Write property)

73.4.62 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p2.
Notes: (Read and Write property)

73.4.63 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p3.
Notes: (Read and Write property)

73.4.64 P4 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value for the parameter p4.
Notes: (Read and Write property)

73.4.65 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The result of the last function call.
Notes: (Read and Write property)

73.4.66 Constants

73.4.67 CBC_MODE = 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: CBC Mode

73.4.68 DES1 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES1

73.4.69 DES2 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES2

73.4.70 DES3 3

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES3

73.4.71 DES_KEY = 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES Key

73.4.72 DES_KEY_LEN = 24

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: DES Key Len

73.4.73 ECB_MODE = 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: ECB Mode

73.4.74 ERROR_KEY_INDEX = 259

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with key index.

73.4.75 ERROR_MAX_KEYS = 258

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with max keys.

73.4.76 ERROR_MAX_USERS = 257

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Error with max users.

73.4.77 ERROR_UNIKEY_ALREADY_LOCKED = 236

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Locked (When Lock Twice Or Open After Lock)

73.4.78 ERROR_UNIKEY_AR_BAD_COMMAND = 217

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Arithmetic Instruction Error

73.4.79 ERROR_UNIKEY_AR_UNKNOWN_OPCODE = 218

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Arithmetic Operator Error

73.4.80 ERROR_UNIKEY_AR_VALUE_OVERFLOW = 221

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number >63

73.4.81 ERROR_UNIKEY_AR_WRONG_BEGIN = 219

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number Can't Use On First Arithmetic Instruction

73.4.82 ERROR_UNIKEY_AR_WRONG_END = 220

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Const Number Can't Use On Last Arithmetic Instruction

73.4.83 ERROR_UNIKEY_CALCULATE = 211

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Calculate Failed

73.4.84 ERROR_UNIKEY_COMPARE_TIME_MODULE = 233

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Specific Time Is Before The Module's Start Time

73.4.85 ERROR_UNIKEY_DECRYPT_FAILED = 229

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Decrypt Data Failed

73.4.86 ERROR_UNIKEY_ENCRYPT_FAILED = 228

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Encrypt Data Failed

73.4.87 ERROR_UNIKEY_FILE_LOCK_CLOSE = 261

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: close lock file error

73.4.88 ERROR_UNIKEY_FILE_LOCK_OPEN = 260

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: open lock file error

73.4.89 ERROR_UNIKEY_FS_ERR_OPEN_FILE = 247

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Can't Open File

73.4.90 ERROR_UNIKEY_FS_ERR_SYS_UNINIT = 246

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: File Sys Is Not Initialized

73.4.91 ERROR_UNIKEY_FS_FILE_EXIST = 245

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: File Already Existed

73.4.92 ERROR_UNIKEY_FS_FILE_NAME = 240

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Or Invalid File Name

73.4.93 ERROR_UNIKEY_FS_FILE_OFFSET = 242

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Offset Of File Error

73.4.94 ERROR_UNIKEY_FS_NO_FILE = 241

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Such File Name

73.4.95 ERROR_UNIKEY_FS_NO_MEMORY = 244

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Not Enough Free Memory

73.4.96 ERROR_UNIKEY_FS_UNKONW = 243

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Unknown Error

73.4.97 ERROR_UNIKEY_GENERATE_NEW_PASSWORD = 225

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Generate New Password Failed

73.4.98 ERROR_UNIKEY_GET_TYPE = 256

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Failed to get type of dongle.

73.4.99 ERROR_UNIKEY_INVALID_ADDR_OR_SIZE = 204

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read/Write Address Or Length Is Wrong

73.4.100 ERROR_UNIKEY_INVALID_KEY = 222

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Key In The Key Storage Is Wrong

73.4.101 ERROR_UNIKEY_INVALID_KEY_STORE = 224

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Key Storage Number

73.4.102 ERROR_UNIKEY_INVALID_PASSWORD = 201

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Found UniKey Dongle, But Basic Password Is Wrong

73.4.103 ERROR_UNIKEY_INVALID_PASSWORD_OR_ID = 202

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Wrong Password Or UniKey HID

73.4.104 ERROR_UNIKEY_KEY_INDEX = 239

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Over Keyindex, No Key To Delete

73.4.105 ERROR_UNIKEY_LOGOUT = 251

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Logout error?

73.4.106 ERROR_UNIKEY_MAX_KEYS = 238

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Max Keys, Need To Delete And The Regenerate

73.4.107 ERROR_UNIKEY_MAX_USERS = 237

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Already Max Users Logoned

73.4.108 ERROR_UNIKEY_MODULE = 216

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: License Module Error

73.4.109 ERROR_UNIKEY_NEED_FIND = 215

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Find Before FindNext

73.4.110 ERROR_UNIKEY_NEED_OPEN = 212

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Need Open Dongle Before Operating Dongle

73.4.111 ERROR_UNIKEY_NOMORE = 214

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No More Dongle

73.4.112 ERROR_UNIKEY_NOTBELEVEL3 206

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Internal Error

73.4.113 ERROR_UNIKEY_NOT_FOUND = 200

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No UniKey Dongle

73.4.114 ERROR_UNIKEY_NO_ENCYYPT = 248

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Secure Drive

73.4.115 ERROR_UNIKEY_OPEN_OVERFLOW = 213

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Too Many Open Dongles (>16)

73.4.116 ERROR_UNIKEY_PARAMETER = 254

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Some parameter is wrong.

73.4.117 ERROR_UNIKEY_PASSWORD = 249

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Password Error

73.4.118 ERROR_UNIKEY_RANDOM = 209

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Random Number Failed

73.4.119 ERROR_UNIKEY_READ_MEMORY = 207

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read Memory Failed

73.4.120 ERROR_UNIKEY_READ_TIME = 230

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Get UniKey Time Failed

73.4.121 ERROR_UNIKEY_READ_UPDATETAG = 226

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Read UpdateTag Failed

73.4.122 ERROR_UNIKEY_SEED = 210

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Get Seed Code Failed

73.4.123 ERROR_UNIKEY_SET_SOFTID_FAILED = 203

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Set UniKey ID Failed

73.4.124 ERROR_UNIKEY_TIME_MODULE_NOT_NULL = 234

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Real Time Module Is Not Null, This Error is returned when write once flag is set

73.4.125 ERROR_UNIKEY_TIME_MODULE_OVERDUR = 235

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: The Specific Time Is Later Than The Module's End Time, Or The Module Is Expired

73.4.126 ERROR_UNIKEY_TOO_MUCH_THREAD = 255

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Too many (>100) threads in the single process open the dongle

73.4.127 ERROR_UNIKEY_UNKNOW = 252

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Unknown error

73.4.128 ERROR_UNIKEY_UNKNOWN_COMMAND = 205

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: No Such Command

73.4.129 ERROR_UNIKEY_USERLOCK = 250

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: User Has Been Locked

73.4.130 ERROR_UNIKEY_VERIFY_ADV_PASSWORD = 223

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Advanced Passwords (Password3 and Passowrd4) Not Verified

73.4.131 ERROR_UNIKEY_WRITE_ARITHMETIC = 253

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Dongle Write Arithmetic is ERROR

73.4.132 ERROR_UNIKEY_WRITE_MEMORY = 208

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Write Memory Failed

73.4.133 ERROR_UNIKEY_WRITE_TIME = 231

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Set UniKey Time Failed

73.4.134 ERROR_UNIKEY_WRITE_TIME_MODULE = 232

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Write Time Module Error

73.4.135 ERROR_UNIKEY_WRITE_UPDATETAG = 227

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Write UpdateTag Failed

73.4.136 NET_UNIKEY_AREADY_START = 111

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Server Has Already Started

73.4.137 NET_UNIKEY_CLIENT_EXSIT = 106

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Client Already Exists, Per This Mode

73.4.138 NET_UNIKEY_DISCARD_BY_SERVER = 118

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Client Is Discarded By The Server

73.4.139 NET_UNIKEY_ERROR_BASE = 100

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: NetUniKey Error Base

73.4.140 NET_UNIKEY_GET_NUM_CLIENT = 226

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: get the number of client for netunikey

73.4.141 NET_UNIKEY_INIFILE_NOT_EXISTS = 120

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: ZhaoHJ: 2015-08-13, INI file not exists

73.4.142 NET_UNIKEY_IN_BLACKLIST = 108

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Client Is In The Black List

73.4.143 NET_UNIKEY_MEMORY_ERROR = 101

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Memory Allocation Error

73.4.144 NET_UNIKEY_MESSAGE_CHANGE = 110

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Message Packet Was Changed

73.4.145 NET_UNIKEY_MESSAGE_WRONG = 104

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Communication Message Is Modified

73.4.146 NET_UNIKEY_NOT_WORKING = 117

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes:

Cannot Connect Remote Netunikey Server

73.4.147 NET_UNIKEY_OUT_WHITELIST = 109

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Client Is Not In The White List

73.4.148 NET_UNIKEY_RECEIVE_ERROR = 103

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Receive Error

73.4.149 NET_UNIKEY_SEND_ERROR = 102

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Send Error

73.4.150 NET_UNIKEY_SERVER_RESOURCE_INADEQUACY = 119

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: by lzm

73.4.151 NET_UNIKEY_SETUP_SOCKET_ERROR = 105

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Setup Socket Error

73.4.152 NET_UNIKEY_SET_NUM_CLIENT = 225

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: set the number of client for netunikey

73.4.153 NET_UNIKEY_SOCKET_BIND_FAILED = 113

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Cannot Bind The Port With The Socket

73.4.154 NET_UNIKEY_SOCKET_INIT_FAILED = 112

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Cannot Initialize The Socket

73.4.155 NET_UNIKEY_SOCKET_LISTEN_FAILED = 114

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Cannot Start Listening With The Socket

73.4.156 NET_UNIKEY_START_UDP_SERVER_FAILED = 115

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Start Udp Server Failed

73.4.157 NET_UNIKEY_TOO_LONG_MESSAGE = 116

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: Too Long Message

73.4.158 NET_UNIKEY_TOO_MANY_CLIENT = 107

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the NetUniKey Error Codes.
Notes: The Number Of Client Reach The Limitation

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: RSA

73.4.160 RSA_KEY = 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: RSA Key

73.4.161 RSA_KEY_1024 3

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: RSA Key 1024 bit.

73.4.162 RSA_KEY_2048 4

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: RSA Key 2048 bit.

73.4.163 RSA_KEY_LEN = 1408

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the encryption modes.
Notes: RSA Key Len

73.4.164 SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the error codes.
Notes: Success

73.4.165 UNIKEY_CALCULATE1 = 14

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Calculate 1

73.4.166 UNIKEY_CALCULATE2 = 15

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Calculate 2

73.4.167 UNIKEY_CALCULATE3 = 16

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.

73.4.168 UNIKEY_CHECK_MODULE = 12

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Check Module

73.4.169 UNIKEY_CHECK_TIME_MODULE = 35

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: check if a time >START_TIME and the time <END_TIME(or START_TIME+DURATION) (p1,p2,p3,p4 = year,month,day,hour)

73.4.170 UNIKEY_CHECK_TIME_MODULE_NOW = 36

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: check if now >START_TIME and now <END_TIME(or START_TIME+DURATION) use dongle time (lp1 = module index)

73.4.171 UNIKEY_CHECK_TIME_MODULE_NOW_PC = 37

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: check if now >START_TIME and now <END_TIME(or START_TIME+DURATION) use host time (lp1 = module index)

73.4.172 UNIKEY_DECRYPT = 21

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Decrypt the Buffer with a Specific Key

73.4.173 UNIKEY_ENCRYPT = 20

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Encrypt the Buffer with a Specific Key

73.4.174 UNIKEY_ERASE_TIME_MODULE = 29

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: ERASE TIME MODULE to NULL. (lp1 = module index)

73.4.175 UNIKEY_FIND = 1

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Find UniKey

73.4.176 UNIKEY_FIND_NEXT = 2

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Find next UniKey

73.4.177 UNIKEY_GENERATE_KEY = 19

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Generate a New Key in specific Key Store

73.4.178 UNIKEY_GET_MODULE = 25

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Get Module. p1 [in] Number [p3] out Value

73.4.179 UNIKEY_GET_MODULE_END_TIME = 39

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: get module end time (lp1 = module index)

73.4.180 UNIKEY_GET_MODULE_START_TIME = 38

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: get module start time (lp1 = module index)

73.4.181 UNIKEY_GET_TIME = 26

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: read rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

73.4.182 UNIKEY_GET_TYPE = 100

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: get the Unikey type

73.4.183 UNIKEY_LOCK = 41

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey functions codes.
Notes: Lock

73.4.184 UNIKEY_LOGOFF = 4

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Close UniKey

73.4.185 UNIKEY_LOGON = 3

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Open UniKey

73.4.186 UNIKEY_MD5 = 22

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Make an MD5 Digest for a Certain Content

73.4.187 UNIKEY_MODULE_DECREASE = 17

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Decrease Module Unit

73.4.188 UNIKEY_RANDOM = 7

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Generate Random Number

73.4.189 UNIKEY_READ_MEMORY = 5

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read UniKey

73.4.190 UNIKEY_READ_SOFTID = 10

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read Software ID

73.4.191 UNIKEY_READ_UPDATETAG = 23

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Read UpdateTag from a Specific Key

73.4.192 UNIKEY_SEED = 8

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Generate Seed Code

73.4.193 UNIKEY_SET_KEY = 222

MBS Dongle Plugin, Plugin Version: 19.0.

Function: One of the unikey functions codes.

73.4.194 UNIKEY_SET_MODULE = 11

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Set Module

73.4.195 UNIKEY_SET_NEW_PASSWORD = 18

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Set New Password via a New Seed

73.4.196 UNIKEY_SET_TIME = 27

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

73.4.197 UNIKEY_SET_TIME_MODULE_DURATION = 34

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module duration (lp2,p1 = day,hour)=24*day+hour

73.4.198 UNIKEY_SET_TIME_MODULE_END_TIME = 33

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module end time (p1,p2,p3,p4 = year,month,day,hour)

73.4.199 UNIKEY_SET_TIME_MODULE_START_TIME = 30

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time(p1,p2,p3,p4 = year,month,day,hour)

73.4.200 UNIKEY_SET_TIME_MODULE_START_TIME_NOW = 31

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time use dongle time (lp1 = module index)

73.4.201 UNIKEY_SET_TIME_MODULE_START_TIME_NOW_PC = 32

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time module start time use host time (lp1 = module index)

73.4.202 UNIKEY_SET_TIME_NOW = 28

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey Real Time Clock Functions codes.
Notes: write rtc time use host time (lp1 = module index)

73.4.203 UNIKEY_TYPE_PRO = 102

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Pro Unikey

73.4.204 UNIKEY_TYPE_STD = 103

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Standard Unikey

73.4.205 UNIKEY_TYPE_TIME = 101

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the dongle types.
Notes: Time Unikey

73.4.206 UNIKEY_UNLOCK = 42

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey functions codes.
Notes: Unlock

73.4.207 UNIKEY_WRITE_ARITHMETIC = 13

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write Arithmetic

73.4.208 UNIKEY_WRITE_MEMORY = 6

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write UniKey

73.4.209 UNIKEY_WRITE_SOFTID = 9

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write Software ID

73.4.210 UNIKEY_WRITE_UPDATETAG = 24

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Write UpdateTag to a Specific Key

73.4.211 UNKEY_GET_CLI_NUM = 101

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Get client number now.

73.4.212 UNKEY_GET_MAX_NUM = 226

MBS Dongle Plugin, Plugin Version: 16.4.

Function: One of the unikey function codes.
Notes: Get Max number.

Chapter 74

Drag & Drop

74.1 class DragItem

74.1.1 class DragItem

Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The dragitem class from Xojo framework.

74.1.2 Methods

74.1.3 NSDraggingInfoMBS as NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Provides the NSDraggingInfo object for the DragItem.

74.2 class NSDraggingImageComponentMBS

74.2.1 class NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingImageComponent class represents a single object in a dragging item.
Notes: An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.

74.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

74.2.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

74.2.4 Methods

74.2.5 Constructor(key as string)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging image component with the specified key.
Notes:

key: The key.
Available in OS X v10.7 and later.

74.2.6 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Creates and returns a dragging image component with the specified key.
Notes: Available in OS X v10.7 and later.

74.2.7 NSDraggingImageComponentIconKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes:

Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.

74.2.8 NSDraggingImageComponentLabelKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: One of the keys for Constructor.
Notes:

Key with a corresponding value that represents a textual label associate with the item, for example, a file name.
Available in OS X v10.7 and later.

74.2.9 Properties

74.2.10 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object handle.
Notes: (Read and Write property)

74.2.11 contents as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: An object providing the image contents of the component.
Notes:

Typically you set an NSImage instance as content.
Available in OS X v10.7 and later.
(Read and Write computed property)

74.2.12 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The coordinate space is the bounds of the parent dragging item.
Notes:

The frame is { { 0,0 } , { draggingFrame.size.width, draggingFrame.size.height } } .

The coordinate space is the bounds of the parent NSDraggingItem instance's draggingFrame.
Available in OS X v10.7 and later.
(Read and Write computed property)

74.2.13 key as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The unique name of this image component instance.
Notes:

The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component's image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)

74.3 class NSDraggingInfoMBS

74.3.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingInfo protocol declares methods that supply information about a dragging session.
Notes: NSDraggingInfo protocol methods are designed to be invoked from within a class's implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.

74.3.2 Blog Entries

74.3.4 Methods

74.3.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.
See also:

- 74.3.6 Constructor(Handle as Integer) 14425

74.3.6 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to build an NSDraggingInfo object with a handle.
Notes: Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol.
See also:

• 74.3.5 Constructor 14425

74.3.7 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the names of the files that the receiver promises to create there.
Notes:

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

74.3.8 promisedFilesDroppedAtDestination(dropDestination as FolderItem) as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the drop location for promised files and returns the files that the receiver promises to create there.
Notes:

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of folderitems for the files.
The files may not yet exist.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

74.3.9 slideDraggedImageTo(screenPoint as NSPointMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Slides the image to a specified location.
Notes:

screenPoint: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination's implementation of prepareForDragOperation, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

74.3.10 Properties

74.3.11 animatesToDestination as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Whether the dragging formation animates while the drag is over this destination.
Notes:

During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item's draggingFrame to the correct destinations.

Available in OS X v10.7 and later.
(Read and Write property)

74.3.12 draggedImage as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the image being dragged.
Notes:

Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still

cannot get the current drag image.
(Read only property)

74.3.13 draggedImageLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the dragged image's origin.
Notes:

Returns the dragged image's origin, in the base coordinate system of the destination object's window.
The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.
(Read only property)

74.3.14 draggingDestinationWindow as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the destination window for the dragging operation.
Notes:

Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.

Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

74.3.15 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging formation while the drag is over this destination.
Notes:

Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.

The default value is the current drag formation.

Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class's method enumerateDraggingItemsWithOptions not inside the enumeration Block.

Available in OS X v10.7 and later.
(Read and Write property)

74.3.16 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the current location of the mouse pointer in the base coordinate system of the destination object's window.
Notes: (Read only property)

74.3.17 draggingPasteboard as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that holds the data being dragged.
Notes:

Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

74.3.18 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session.
Notes: (Read only property)

74.3.19 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the source, or owner, of the dragged data.
Notes:

This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

74.3.20 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the dragging operation mask of the dragging source.
Notes:

The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.

The modifier keys are associated with the dragging operation options shown below:

Modifier Key	Dragging Operation
Control	NSDragOperationLink
Option	NSDragOperationCopy
Command	NSDragOperationGeneric

(Read only property)

74.3.21 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

74.3.22 numberOfValidItemsForDrop as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Specifies the number of valid items for a drop operation.

Notes:

During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later.
(Read and Write property)

74.3.23 Constants

74.3.24 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

The system determined formation.
Available in OS X v10.7 and later.

74.3.25 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

74.3.26 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

74.3.27 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

74.3.28 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

74.3.29 NSDragOperationAll_Obsolete = 15

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.

74.3.30 NSDragOperationCopy = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data represented by the image can be copied.

74.3.31 NSDragOperationDelete = 32

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data can be deleted.

74.3.32 NSDragOperationEvery = -1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: All of the above.

74.3.33 NSDragOperationGeneric = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The operation can be defined by the destination.

74.3.34 NSDragOperationLink = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.

74.3.35 NSDragOperationMove = 16

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The data can be moved.

74.3.36 NSDragOperationNone = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: No drag operations are allowed.

74.3.37 NSDragOperationPrivate = 8

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the drag operation constants.
Notes: The operation is negotiated privately between the source and the destination.

74.4 class NSDraggingItemMBS

74.4.1 class NSDraggingItemMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.
Notes:

See NSDraggingSessionMBS Class Reference for more information

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.

74.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

74.4.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

74.4.4 Methods

74.4.5 Constructor(item as NSPasteboardItemMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Initializes a dragging item using the specified content.
Notes:

item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

74.4.6 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)
Notes: When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.

74.4.7 setDraggingFrame(frame as NSRectMBS, contents as Variant)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Sets the item's dragging frame and contents.
Notes:

frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImageComponent instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties.
Available in OS X v10.7 and later.

74.4.8 Properties

74.4.9 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

74.4.10 draggingFrame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The frame of the dragging item.
Notes:

The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance implantation of enumerateDraggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)

74.5 class NSDraggingSessionMBS

74.5.1 class NSDraggingSessionMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The NSDraggingSession class encompases a drag and drop action and allows modification of the drag while in progress.
Notes:

You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MBS Real Studio Plugins, version 13.1pr9

74.5.4 Methods

74.5.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The private constructor.

74.5.6 draggingLeaderIndex as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The index of the dragging item under the cursor.
Notes:

The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

74.5.7 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The current cursor location of the drag in screen coordinates. (read-only)
Notes: Available in OS X v10.7 and later.

74.5.8 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns the pasteboard object that contains the data being dragged. (read-only)
Notes: Available in OS X v10.7 and later.

74.5.9 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Returns a number that uniquely identifies the dragging session. (read-only)
Notes: Available in OS X v10.7 and later.

74.5.10 Properties

74.5.11 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

74.5.12 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.
Notes:

This property should be set immediately after creating the dragging session.

The default value is true.
Available in OS X v10.7 and later.
(Read and Write computed property)

74.5.13 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Controls the dragging formation when the drag is not over the source or a valid destination.
Notes:

Setting this value causes the dragging formation to change immediately, provided a valid destination has not overriden the behavior. If the dragging session hasn't started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.
Available in OS X v10.7 and later.
(Read and Write computed property)

74.5.14 Constants

74.5.15 NSDraggingContextOutsideApplication = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: Whether a drag terminates within or outside the application.
Notes:

The dragging terminates outside the application.
Available in OS X v10.7 and later.

74.5.16 NSDraggingContextWithinApplication = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: Whether a drag terminates within or outside the application.
Notes:

The dragging terminates within the application.
Available in OS X v10.7 and later.

74.5.17 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

The system determined formation.
Available in OS X v10.7 and later.

74.5.18 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

74.5.19 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

74.5.20 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

74.5.21 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

Function: One of the constants to control the visual format of multiple items being dragged.
Notes:

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

74.6 Globals

74.6.1 InstallDragImageMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Install drag image patch.
Notes:

This allows you to use retina NSImage for drag image with using Xojo's built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.

74.6.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.1
- MBS Xojo Plugins, version 21.1pr5

74.6.3 SetNextDragImageMBS(Img as NSImageMBS, DragItemCount as Integer = 1)

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

Function: Sets which image to use for next drag.
Notes:

Once image has been replaced for Xojo's drag, the image reference is freed by plugin.

Please call setSize on the NSImageMBS to set the size to use.
e.g. half the pixels, so the picture is sharp on a retina screen.

Added DragItemCount parameter for version 23.0 to define how many drag items you have, so all can get the new picture.

74.6.4 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

74.7 class WinDataObjectMBS

74.7.1 class WinDataObjectMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a data object for Drag and Drop.
Example:

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

Notes: While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

74.7.6 Methods

74.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes:

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it's mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.
See also:

- 74.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color) 14446

74.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a drag image to the data object.
Notes:

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.
See also:

- 74.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer) 14445

74.7.9 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file references in the format the explorer can understand them.
See also:

- 74.7.10 AddFiles(pathes() as string) 14446

74.7.10 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds file pathes in the format the explorer can understand them.
Notes: Folder pathes should have no backslash on the end.
See also:

- 74.7.9 AddFiles(files() as folderitem) 14446

74.7.11 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Adds a picture to the data object.

74.7.12 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds raw data to the data object.
Notes: Depending of the format you may need to add chr(0) on the end.

74.7.13 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds the text to the data object.

74.7.14 Constructor

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an empty data object.
See also:

- 74.7.15 Constructor(files() as folderitem) 14447
- 74.7.16 Constructor(pic as picture) 14448
- 74.7.17 Constructor(text as string) 14448

74.7.15 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a data object and adds the files.
See also:

- 74.7.14 Constructor 14447
- 74.7.16 Constructor(pic as picture) 14448
- 74.7.17 Constructor(text as string) 14448

74.7.16 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Creates a new data object and adds the given picture.
Example:

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

See also:

- 74.7.14 Constructor 14447
- 74.7.15 Constructor(files() as folderitem) 14447
- 74.7.17 Constructor(text as string) 14448

74.7.17 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new data object and adds the given text.
Example:

```
// create data object with text
dim w as new WinDataObjectMBS("Hello World")
```

See also:

- 74.7.14 Constructor 14447
- 74.7.15 Constructor(files() as folderitem) 14447
- 74.7.16 Constructor(pic as picture) 14448

74.7.18 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of formats in the data object.
Notes: Helps for debugging to see what is inside.

74.7.19 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes:

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

Only accepts data provided as blob.
See also:

- 74.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string 14449

74.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file content for the file with the given index.
Notes:

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

IsPath is set to true, when the returned data is a file path instead of data itself.
See also:

- 74.7.19 GetFileContents(index as Integer) as string 14449

74.7.21 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries file descriptors.
Example:

```
dim dataObject as WinDataObjectMBS // your data object

dim des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
// we got file descriptions. Some metadata and the data. No path.
dim data as string = dataObject.GetFileContents(0)
msgbox "File """+d.FileName+""" with "+str(lenb(data))+" bytes data."
next
```

Notes: Result array is empty on any error.

74.7.22 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries filename from data object.
Notes:

Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

74.7.23 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Example:

```
dim dataObject as WinDataObjectMBS // your data object

dim files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
// we got a file you can use like any other file (e.g. copy)
```

```
listbox1.AddRow "Path """+f.NativePath+""""
next
```

Notes: Checks for a CF_HDROP type. May return one or more folderitems.

74.7.24 GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the paths in the data object.
Notes: Checks for a CF_HDROP type. May return one or more folderitems.

74.7.25 GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Queries the picture from the data object.
Notes: Supports CF_BITMAP/TYMED_GDI.

74.7.26 GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the raw data for the given type.

74.7.27 GetText as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the text from the data object.
Notes: Returns unicode or ANSI text depending on what is available. Unicode is preferred.

74.7.28 HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file descriptors.
Notes:

Returns true if a path is found.
Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.

74.7.29 HasFileName as boolean

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks to see if a filename entry is in the data object.

74.7.30 HasPaths as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains file paths.
Notes:

Returns true if a path is found.
Checks for CF_HDROP.

74.7.31 HasPicture as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks if a picture is part of this data object.
Notes:

Returns true if a picture is found.
Checks for CF_BITMAP.

74.7.32 HasRaw(format as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains data in the given format.

74.7.33 HasText as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether this data object contains Text or UnicodeText.
Notes:

Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.

74.7.34 Properties

74.7.35 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drag image.
Notes:

Used to show user what he is dragging.
(Read only property)

74.7.36 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

74.7.37 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal helper object to handle the drag image.
Notes:

This value is not zero if the AddDragImage call was successful.
(Read and Write property)

74.7.38 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

74.7.39 Constants

74.7.40 CF_BITMAP = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.41 CF_DIB = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.42 CF_DIBV5 = 17

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.43 CF_DIF = 5

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.44 CF_ENHMETAFILE = 14

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.45 CF_HDROP = 15

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.46 CF_LOCALE = 16

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.47 CF_METAFILEPICT = 3

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.48 CF_OEMTEXT = 7

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.49 CF_PALETTE = 9

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.50 CF_PENDATA = 10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.51 CF_RIFF = 11

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.52 CF_SYLK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.53 CF_TEXT = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.54 CF_TIFF = 6

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.55 CF_UNICODETEXT = 13

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.7.56 CF_WAVE = 12

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the constants for the data types.

74.8 class WindowsDragSourceMBS

74.8.1 class WindowsDragSourceMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Drag and Drop on Windows to create a drag source.
Notes:

The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user's selection.
- Initiating the drag-and-drop operation based on the user's mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user's mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

When To Implement

Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

When To Use

You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDragDrop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

74.8.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

74.8.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

74.8.4 Methods

74.8.5 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Carries out an OLE drag and drop operation.
Notes:

Parameters:

dataObject: The WinDataObjectMBS data object that contains the data being dragged.
OKEffects: Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
Effect: Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

Remarks

Return code	Description
DRAGDROP_S_DROP	The OLE drag-and-drop operation was successful.
DRAGDROP_S_CANCEL	The OLE drag-and-drop operation was canceled.
E_UNSPEC	Unexpected error occurred.

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting as the data source must also implement WindowsDragSourceMBS, while the target application must implement WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.Give-

Feedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse's position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.

74.8.6 Properties

74.8.7 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

74.8.8 Events

74.8.9 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Enables a source application to give visual feedback to the end user during a drag-and-drop operation by providing the DoDragDrop function with an enumeration value specifying the visual effect.
Notes:

Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, WindowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful completion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the DoDragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target window.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the drag-scrolling variation of the appropriate pointer.

Notes to Implementers

This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

74.8.10 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.
Notes:

The OLE DoDragDrop function calls this method during a drag-and-drop operation.

EscapePressed: Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

Return code	Description
S_OK	The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected.
DRAGDROP_S_DROP	The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released.
DRAGDROP_S_CANCEL	The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed.

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.

74.8.11 Constants

74.8.12 DRAGDROP_S_CANCEL = & H00040101

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: Drag and Drop was cancelled.

74.8.13 DRAGDROP_S_DROP = & h00040100

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: Do the drop operation.

74.8.14 DRAGDROP_S_USEDEFAULTCURSORS = & h00040102

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

74.8.15 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes:

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

74.8.16 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should create a link to the original data.

74.8.17 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should remove the data.

74.8.18 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drop target cannot accept the data.

74.8.19 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

74.8.20 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The CTRL key is down.

74.8.21 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The left mouse button is down.

74.8.22 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The middle mouse button is down.

74.8.23 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The right mouse button is down.

74.8.24 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The SHIFT key is down.

74.8.25 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The first X button is down.

74.8.26 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The second X button is down.

74.8.27 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

74.8.28 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

74.9 class WindowsDropTargetMBS

74.9.1 class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application.
Notes:

It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow functions.

When To Implement

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

When To Use

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally

occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

74.9.2 Blog Entries

74.9.4 Methods

74.9.5 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes:

This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.
See also:

- 74.9.6 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer 14468

74.9.6 AttachToControl(ctl as DesktopControl, showDragImage as boolean = true) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the control.
Notes:

This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

- 74.9.8 AttachToWindow(win as window, showDragImage as boolean = true) as Integer 14470

74.9.8 AttachToWindow(win as window, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

Function: Attached the drop target to the window.
Notes:

This method unregistered any existing drop target on the window (including the one from Xojo).

Registers the specified window as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

Win: The window that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

Return code	Description
DRAGDROP_E_INVALIDHWND	Invalid handle returned in the hwnd parameter.
DRAGDROP_E_ALREADYREGISTERED	The specified window has already been registered as a drop target.
E_OUTOFMEMORY	Insufficient memory for the operation.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToWindow function. Do this whenever one of your application windows is available as a potential

drop target, i.e., when the window appears unobscured on the screen.

AttachToWindow must be called on the main thread of your application.

The AttachToWindow function only registers one window at a time, so you must call it for each application window capable of accepting dropped objects. For each window, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target window during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current window. When a drop operation actually occurs in a given window, the DoDragDrop function calls WindowsDropTargetMBS.Drop.
See also:

- 74.9.7 AttachToWindow(win as DesktopWindow, showDragImage as boolean = true) as integer 14469

74.9.9 Properties

74.9.10 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle.
Notes: (Read and Write property)

74.9.11 Helper as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference to the helper object.
Notes: (Read and Write property)

74.9.12 Events

74.9.13 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Indicates whether a drop can be accepted, and, if so, the effect of the drop.
Notes:

dataObject: This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

x and y: A point containing the current cursor coordinates in screen coordinates.

effect: The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect parameter is NULL on input.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.

To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

74.9.14 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Removes target feedback and releases the data object.
Notes:

Return S_OK on success. Other possible values include the following.

Return code	Description
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

74.9.15 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Provides target feedback to the user and communicates the drop's effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.
Notes:

KeyState: The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON,

MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The Effect value is not valid.
E_OUTOFMEMORY	There was insufficient memory available for this operation.

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by examining the FORMATETC defining the data object's formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

Key Combination	User-Visible Feedback	Drop Effect
CTRL + SHIFT	=	DROPEFFECT_LINK
CTRL	+	DROPEFFECT_COPY
No keys or SHIFT	None	DROPEFFECT_MOVE

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial

WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.

74.9.16 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

Function: Incorporates the source data into the target window, removes target feedback, and releases the data object.
Notes:

dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

Return code	Description
E_UNEXPECTED	An unexpected error has occurred.
E_INVALIDARG	The pdwEffect parameter is not valid.
E_OUTOFMEMORY	There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.

74.9.17 Constants

74.9.18 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes:

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

74.9.19 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should create a link to the original data.

74.9.20 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drag source should remove the data.

74.9.21 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Drop target cannot accept the data.

74.9.22 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the drop effect constants.
Notes: Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

74.9.23 E_INVALIDARG = & h80070057

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: An invalid argument was passed.

74.9.24 E_OUTOFMEMORY = & h80000002

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: There was insufficient memory available for this operation.

74.9.25 E_UNEXPECTED = & h8000FFFF

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.
Notes: An unexpected error has occurred.

74.9.26 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The CTRL key is down.

74.9.27 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The left mouse button is down.

74.9.28 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The middle mouse button is down.

74.9.29 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The right mouse button is down.

74.9.30 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The SHIFT key is down.

74.9.31 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The first X button is down.

74.9.32 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the key state constants.
Notes: The second X button is down.

74.9.33 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

74.9.34 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

Function: One of the OLE error codes.

74.10 class WindowsFileDescriptorMBS

74.10.1 class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a file description.s

74.10.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

74.10.4 Properties

74.10.5 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file type identifier.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

Notes:

Only valid if FD_CLSID is set in the flags.
(Read and Write property)

74.10.6 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of file creation.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

74.10.7 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: File attribute flags.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEM-
PORARY then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

Notes:

This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

74.10.8 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the file.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

MsgBox d.FileName
```

Notes: (Read and Write property)

74.10.9 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size, in bytes.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

Notes:

Only valid if FD_FILESIZE is set in flags.
(Read and Write property)

74.10.10 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of flags that indicate which of the other structure members contain valid data.
Notes:

A combination of the FD_* constants.
(Read and Write property)

74.10.11 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the file icon.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

74.10.12 IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the file icon.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

74.10.13 Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of the file descriptor.
Notes:

Use this entry for GetFileContent call.
(Read and Write property)

74.10.14 LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time that the file was last accessed.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

74.10.15 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the last write operation.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

Notes:

Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

74.10.16 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x screen coordinate of the file object.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

74.10.17 PointY as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The y screen coordinate of the file object.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

Notes:

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

74.10.18 Constants

74.10.19 FD_ACCESSTIME = & h0010

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

Notes: The LastAccessTime member is valid.

74.10.20 FD_ATTRIBUTES = 4

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY)<>0 then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

Notes: The FileAttributes member is valid.

74.10.21 FD_CLSID = 1

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

Notes: The ClassID member is valid.

74.10.22 FD_CREATETIME = 8

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

Notes: The CreationTime member is valid.

74.10.23 FD_FILESIZE = & h0040

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

Notes: Whether the FileSize member is valid.

74.10.24 FD_LINKUI = & h8000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.

Notes: Treat the operation as a shortcut.

74.10.25 FD_PROGRESSUI = & h4000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Notes: A progress indicator is shown with drag-and-drop operations.

74.10.26 FD_SIZEPOINT = 2

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+strR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

Notes: The Icon* and point* members are valid.

74.10.27 FD_WRITESTIME = & h0020

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the flag constants.
Example:

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

Notes: Whether the LastWriteTime property is valid.

74.10.28 FILE_ATTRIBUTE_ARCHIVE = & h00000020

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that is an archive file or directory. Applications typically use this attribute to mark files for backup or removal .

74.10.29 FILE_ATTRIBUTE_ATOMIC_WRITE = & h00000200

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.

74.10.30 FILE_ATTRIBUTE_COMPRESSED = & h00000800

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that is compressed. For a file, all of the data in the file is compressed. For a directory, compression is the default for newly created files and subdirectories.

74.10.31 FILE_ATTRIBUTE_DIRECTORY = & h00000010

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The handle that identifies a directory.

74.10.32 FILE_ATTRIBUTE_HIDDEN = & h00000002

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The file or directory is hidden. It is not included in an ordinary directory listing.

74.10.33 FILE_ATTRIBUTE_NORMAL = & h00000080

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that does not have other attributes set. This attribute is valid only when used alone.

74.10.34 FILE_ATTRIBUTE_OFFLINE = & h00001000

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: The data of a file is not available immediately. This attribute indicates that the file data is physically moved to offline storage. This attribute is used by Remote Storage, which is the hierarchical storage management software. Applications should not arbitrarily change this attribute.

74.10.35 FILE_ATTRIBUTE_READONLY = & h00000001

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that is read-only. Applications can read the file, but cannot write to it or delete it.

74.10.36 FILE_ATTRIBUTE_SYSTEM = & h00000004

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file or directory that the operating system uses a part of, or uses exclusively.

74.10.37 FILE_ATTRIBUTE_TEMPORARY = & h00000100

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.
Notes: A file that is being used for temporary storage. File systems avoid writing data back to mass storage if sufficient cache memory is available, because typically, an application deletes a temporary file after the handle is closed. In that scenario, the system can entirely avoid writing the data. Otherwise, the data is written after the handle is closed.

74.10.38 FILE_ATTRIBUTE_XACTION_WRITE = & h00000400

MBS Win Plugin, Plugin Version: 11.2.

Function: One of the file attribute constants.

Chapter 75

DVD Playback

75.1 class DVDPlaybackMBS

75.1.1 class DVDPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: A class for DVD Playback on Mac OS X 10.3
Notes:

Requires Mac OS X 10.3 or newer.

The DVD Playback application programming interface (API) gives you access to the DVDPlayback framework, allowing you to offer DVD playback functionality from within your application.

During a playback "session," the application must perform specific minimum operations, as follows:

1. Initialize the playback framework with calling Open. The DVDPlayback framework can only be opened by one process at a time. If a second process attempts to initialize it, an error will be returned.

2. Set the playback window with SetPlayWindow.
4. Set the video bounds with SetVideoBounds. This is the bounds within the window and is in port coordinates.
5. Open the media with OpenMediaVolume (DVD disc) or OpenMediaFile (VIDEO_TS folder).
6. Play the media.
7. When finished or switching media, close with the appropriate call (CloseMediaVolume or CloseMediaFile)
8. When quitting or finishing session, tear down the DVDPlayback framework with calling close.

75.1.2 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

75.1.3 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

75.1.4 Methods

75.1.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the DVD playback is installed on this Mac.
Notes: Requires Mac OS X 10.3 or newer.

75.1.6 ClearLastPlayBookmark

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position to the beginning of the disc.
Notes:

This function sets the video playback position to the beginning of the disc, but does not begin playing the media. Calling this function is equivalent to calling the function DVDStop twice in succession. Before calling this function, media needs to be open.
Available in Mac OS X v10.4 and later.
Lasterror is set.

75.1.7 close

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when completely done with playback. Usually when the application is quitting.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.8 CloseMediaFile

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened VIDEO_TS folder.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.9 CloseMediaVolume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Closes a previously opened DVD disc.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.10 DisplaySubPicture(value as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Turns the display of subpictures on or off.
Notes:

value: A Boolean value that specifies whether to display subpictures in the current title. To display subpictures, specify TRUE. To hide subpictures, specify FALSE.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started. You can use this function to display or hide additional bitmap graphic elements such as subtitles.

Available in Mac OS X v10.3 and later.

75.1.11 DoButtonActivate(inIndex as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects and activates a menu button by index.
Notes:

InIndex: The 1-based index of the menu button the user has selected.

If the index coincides with an active button, this function executes the action corresponding to the button.

Available in Mac OS X v10.4 and later.

75.1.12 DoMenuCGClick(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be selected.
Notes:

Requires Mac OS X 10.5.
Lasterror is set.

75.1.13 DoMenuCGMouseOver(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in window root view coordinates) coincides with a menu button, it will be hightlighted.
Notes:

Requires Mac OS X 10.5.
Lasterror is set.

75.1.14 DoMenuClick(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be selected.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.15 DoMenuMouseOver(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If the point (in port coordinates) coincides with a menu button, it will be hightlighted and it's index returned in outIndex.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.16 DoUserNavigation(navigation as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the user to navigate between menu buttons.
Notes:

This is usually done using keyboard keys (arrow keys to move and Enter key to choose a menu item).
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

kDVDUserNavigationMoveUp	1
kDVDUserNavigationMoveDown	2
kDVDUserNavigationMoveLeft	3
kDVDUserNavigationMoveRight	4
kDVDUserNavigationEnter	5

75.1.17 EnableWebAccess(enable as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Turns DVD@ccess support on or off.
Notes:

Lasterror is set.
Requires Mac OS X 10.3 or newer.

75.1.18 GetAngle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the camera angle displayed.
Notes:

Returnsthe integer contains the 1-based index of the current camera angle.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

75.1.19 GetAspectRatio as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the aspect ratio of the current title or menu.
Notes:

Returns the variable specifies the aspect ratio of the current title. For a list of possible aspect ratios see the aspect ration constants.

Lasterror is set.

The aspect ratio of the video can change whenever a different title or menu is displayed. You can use this function together with GetNativeVideoSize to calculate the bounds of the video area in a window.

Available in Mac OS X v10.3 and later.

75.1.20 GetAudioLanguageCode(byref DVDLanguageCode as string, byref DVD-SubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio language code and extension.
Notes:

DVDLanguageCode: On return, the variable contains the language code for the current audio stream. For a list of possible values, see the Language Codes constants.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the current audio stream. For a list of possible values, see Audio Extension Codes constants.

Lasterror is set.

Available in Mac OS X v10.3 and later.

75.1.21 GetAudioLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio language code and extension for a specified stream.
Notes:

StreamIndex: An integer in the range 1 to 8 that specifies an audio stream in the current title.

DVDLanguageCode: On return, the variable contains the language code for the specified audio stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the specified audio stream. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

75.1.22 GetAudioOutputMode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio mode setting.
Notes: Lasterror is set.

75.1.23 GetAudioOutputModeCapabilities as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current possible audio output mode possibilities.
Notes: Lasterror is set.

75.1.24 GetAudioStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio stream currently being used.
Notes:

Returns the number of the current audio stream, or 0 if the current title has no audio streams.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

75.1.25 GetAudioStreamFormat(byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current audio format (AC3,for example).
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDAudioStreamFormat constants - The different possible audio stream formats.

kDVDAudioUnknownFormat	0
kDVDAudioAC3Format	1
kDVDAudioMPEG1Format	2
kDVDAudioMPEG2Format	3
kDVDAudioPCMFormat	4
kDVDAudioDTSFormat	5
kDVDAudioSDDSFormat	6

75.1.26 GetAudioStreamFormatByStream(index as Integer, byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the audio format for a specified stream.
Notes:

index: An integer that specifies an audio stream in the current title.

outFormat: On return, the variable contains the audio format of the audio stream for the current title. For a list of possible formats, see "Audio Stream Formats."

outBitsPerSample: On return, the integer contains the number of bits per sample in the current audio stream.

outSamplesPerSecond: On return, the integer contains the number of samples per second in the current audio stream.

outChannels: On return, the integer contains the number of audio channels in the current audio stream.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.4 and later.

75.1.27 GetAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback audio volume setting (0 - 255).
Notes:

Returns the current playback volume in the range 0 to 255.

Lasterror is set.

This function passes back the current playback audio volume setting. For more information, see DVDSetAudioVolume.

Available in Mac OS X v10.3 and later.

75.1.28 GetBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the current play position.

Notes:

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open and playing. This function passes back a bookmark to the current play position in the current DVD-Video playback session.

For information about requesting a bookmark when the media is not playing, see GetLastPlayBookmark.

The result is a binary string!

Available in Mac OS X v10.4 and later.

75.1.29 GetButtoninfo(byref numberOfButtons as Integer, byref selectedButton as Integer, byref forcedActivateButton as Integer, byref userButtonOffset as Integer, byref numberOfUserButtons as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets information about all available menu buttons in the current title, domain, or content.
Notes:

numberOfButtons: On return, the integer contains the number of buttons in the current menu.

selectedButton: On return, the integer contains the 1-based index of the selected button.

forcedActivateButton: On return, the integer contains the index of the button whose action is performed when a specified period of time elapses after the menu is first displayed.

userButtonOffset: On return, the integer contains the index of the first user-selectable button. If the number of user-selectable buttons in a menu is smaller than the total number of buttons, this index may be greater than zero.

numberOfUserButtons: On return, the integer contains the number of user-selectable buttons in the current menu.

Lasterror is set.

Available in Mac OS X v10.4 and later.

75.1.30 GetButtonPosition(index as Integer, byref x as Double, byref y as Double, byref w as Double, byref h as Double, byref autoAction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the position and default action of a menu button.
Notes:

index: The zero-based index of a menu button. If your button index is 1-based, you should decrement the index before you pass it to this function.

x,y,w,h: On return, the rectangle contains the position and dimensions of the specified button in window local coordinates.

autoAction: On return, a value of 1 indicates the button is a forced activate button,Äîthat is, the button's action is executed immediately when the button is selected. A value of 0 indicates the button is not a forced activate button.

Lasterror is set.

Available in Mac OS X v10.4 and later.

75.1.31 GetChapter as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current chapter.
Notes: Lasterror is set.

75.1.32 GetCurrentAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current video playback volume.
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

75.1.33 GetDiscRegionCode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the region codes available on a DVD-Video disc.
Notes:

Returns a bitfield that specifies one or more region codes. For more information about region codes, see Region Codes.

Lasterror is set.

This function passes back the region codes assigned to the DVD-Video disc that's currently in use. Before calling this function, you need to call the function DVDOpenMediaVolume to open the media folder on the disc.

To test whether a disc is authorized for playback in region n, you need to compute the bitwise AND of outCode with region code n. If the result is equal to region code n, the disc is authorized for playback in region n.

Available in Mac OS X v10.3 and later.

75.1.34 GetDriveRegionCode(byref regioncode as Integer, byref NumberChangesLeft as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the region code the drive is set to and how many changes are left.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

Region Codes:
The drive region code must match the DVD disc region code. These calls allow getting the disc region code and getting or setting the drive region code.

NOTE: The drive region code is stored in the drive and can only be set a total of 5 times.

On the last time, the drive will be permanently locked to that region code.

75.1.35 GetFormatStandard as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the video broadcast format of current DVD-Video media.
Notes:

Returns the video broadcast format of the current media. For a list of possible values, see Video Broadcast Formats.

Lasterror is set.

This function determines which video broadcast format (NTSC or PAL) is used in the current media. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

75.1.36 GetGPRMValue(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current value of a general parameter (GPRM) register.
Notes:

index: An integer index that specifies the desired GPRM register. The valid range is 1 to 16.

Returns the current value of the specified GPRM register.

Lasterror is set.

Available in Mac OS X v10.4 and later.

75.1.37 GetLastPlayBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Requests a bookmark to the last play position.
Notes:

Returnns a binary string!

Lasterror is set.

Available in Mac OS X v10.4 and later.

75.1.38 GetMaxAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum video playback volume
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

75.1.39 GetMediaUniqueID as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets a unique identifier for a media folder.
Notes:

Returns the unique identifier of the current media.

This function passes back a 64-bit identifier that can help you distinguish between different media folders. While the identifiers generated by this function are not guaranteed to be unique (see below), duplicate identifiers are extremely rare.

There are two known limitations of this function:

Two copies of the same DVD that are produced at different times do not necessarily have the same identifier. This can happen when the two media folders have minor differences.
Two different DVDs with similar content,Äîcollections of episodes from a television series, for example,Äîdo not always have different identifiers. This can happen when the two media folders are identical.

Available in Mac OS X v10.4 and later.

75.1.40 GetMediaVolumeName as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the volume name of the current media.
Notes:

This function passes back the media volume name as a string. This is the name seen on the desktop when Mac OS X mounts a DVD-Video disc.

Available in Mac OS X v10.4 and later.

75.1.41 GetMenuLanguageCode as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the menu language code for the current title.
Notes:

Returns the menu language code for the current title. For a list of possible values, see Language Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

75.1.42 GetMinAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the minimum video playback volume.
Notes:

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

75.1.43 GetNativeVideoHeight as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native height of the current title.
Notes:

Available in Mac OS X v10.3 and later.
Lasterror is set.

75.1.44 GetNativeVideoSize(byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The native video size.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.45 GetNativeVideoWidth as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the native width of the current title.
Notes:

Available in Mac OS X v10.3 and later.
Lasterror is set.

75.1.46 GetNumberOfAngles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of camera angles currently available.
Notes:

Returns the number of different camera angles in the current title. DVD-Video media supports up to 9 camera angles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

75.1.47 GetNumberOfAudioStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of audio streams currently available.
Notes:

Returns the number of audio streams available in the current title.
Lasterror is set.
Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

75.1.48 GetNumberOfChapters(title as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of chapters in the specified title.
Notes:

title: An integer in the range 1 to 99 that specifies a title on the current media.
Returns the number of chapters in the specified title.
Lasterror is set.
If the specified chapter does not exist, this function does nothing and returns an error.
Available in Mac OS X v10.3 and later.

75.1.49 GetNumberOfSubPictureStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of subpicture streams currently available.
Notes:

Returns the number of subpicture streams available in the current title. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

75.1.50 GetNumberOfTitles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of titles available on the media.
Notes:

Returns the number of titles on the current media in the range 0 to 99.
Lasterror is set.
Available in Mac OS X v10.3 and later.

75.1.51 GetScanRate(byref scanrate as Integer, byref direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current scan direction and rate.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.52 GetSPDIFDataOutDevice as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the selected SPDIF capable audio device.
Notes: Lasterror is set.

75.1.53 GetSPDIFDataOutDeviceCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of SPDIF capable audio devices.
Notes: Lasterror is set.

75.1.54 GetSPDIFDataOutDeviceName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the name of a SPDIF capable audio device
Notes: Lasterror is set.

75.1.55 GetState as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns the current play state of the DVDPlayback framework.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The current play state of the framework.

Constants:

kDVDStateUnknown	0	
kDVDStatePlaying	1	playing 1x or less (slow mo)
kDVDStatePlayingStill	2	
kDVDStatePaused	3	pause and step frame
kDVDStateStopped	4	
kDVDStateScanning	5	playing greater than 1x
kDVDStateIdle	6	

75.1.56 GetSubPictureLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for the current subpicture stream.
Notes:

DVDLanguageCode: On return, the variable contains the language code for the current subpicture. For a list of possible values, see Language Codes.
DVDSubpictureExtensionCode: On return, the variable contains the extension code for the current subpicture. For a list of possible values, see Subpicture Extension Codes.

If subpictures are not available, this function does nothing and lasterror is set to 0.
Lasterror is set.

Available in Mac OS X v10.3 and later.

75.1.57 GetSubPictureLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the subpicture language code and extension for a specified subpicture stream.
Notes:

StreamIndex: A subpicture stream number in the current title. Subpicture stream numbers range from 1 to 32.

DVDLanguageCode: On return, the variable contains the language code for the subpicture stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the extension code for the subpicture stream. For a list of possible values, see Subpicture Extension Codes.

Lasterror is set.

If subpictures are not available, this function does nothing and lasterror is not 0.

Available in Mac OS X v10.3 and later.

75.1.58 GetSubPictureStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current subpicture stream.
Notes:

Returns the identifier of the current subpicture stream, or 0 if the current title has no subpictures. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

75.1.59 GetTime(timecode as Integer, byref time as Integer, byref frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the current playback position in the current title in seconds relative to the requested time code (elapsed,remaining).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

kDVDTimeCodeUninitialized	0	
kDVDTimeCodeElapsedSeconds	1	
kDVDTimeCodeRemainingSeconds	2	
kDVDTimeCodeTitleDurationSeconds	3	only useable for GetTime
kDVDTimeCodeChapterElapsedSeconds	4	only useable for GetTime
kDVDTimeCodeChapterRemainingSeconds	5	only useable for GetTime
kDVDTimeCodeChapterDurationSeconds	6	only useable for GetTime

75.1.60 GetTimeEventRate as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the rate of the time event.
Notes:

Returns the current interval between time events in milliseconds.

Lasterror is set.
Available in Mac OS X v10.3 and later.

75.1.61 GetTitle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the number of the current title.
Notes:

Returns the current title number, or 0 if a menu is active. DVD-Video media can contain up to 99 titles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

75.1.62 GetVideoBounds(byref x as Integer, byref y as Integer, byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns (in port coordinates) the rect used to play video.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

75.1.63 GetVideoDisplay as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the graphics display for the current DVD-Video playback session.
Notes:

Returns the display ID is set to the current video playback display.

Lasterror is set.

Before calling this function, you need to set the video playback display using SetVideoDisplay or SwitchToDisplay.

Available in Mac OS X v10.3 and later.

75.1.64 GetVideoKeyColor as color

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the key color used by the video driver.
Notes:

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

This function does nothing and returns the color black.

75.1.65 GetVideoWindowID as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Gets the window ID of the Cocoa window in use for DVD-Video playback.
Notes:

Returns the window ID of the Cocoa window currently in use for DVD-Video playback, or zero if there is no Cocoa window.

Lasterror is set.
Available in Mac OS X v10.3 and later.

75.1.66 GoBackOneLevel

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: If a submenu is active, moves up one level in the same domain.
Notes:

Lasterror is set.

This function is used to navigate one level up in a hierarchical structure in the same domain,Äîfor example, from a scene selection menu back to the main menu. This action is comparable to navigating upwards in the directory or folder hierarchy of a file system.

Available in Mac OS X v10.3 and later.

75.1.67 GotoBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark, and resumes play.
Notes:

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, and begins playing the media.

Bookmark ist a binary string. Make sure you did not destroy it by an encoding conversion!

Requires Mac OS X 10.4 or newer.
Lasterror is set.

75.1.68 GoToMenu(menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Jump to a particular menu (Root Menu,Sub Picture Menu, etc.).
Notes:

Requires Mac OS X 10.3 or newer.

Lasterror is set.

75.1.69 HasMedia as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the playback framework has media to play and the framework had received an Open call on the media.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.70 HasMenu(menu as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns if input menu type is available.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.71 HasNextChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter after the current chapter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.72 HasPreviousChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if there is a chapter before the current chapter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.73 Idle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Allows the framework to get a consistent time to process at. (Might be removed in the future).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.74 IsDisplayingSubPicture as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if subpictures are currently being displayed.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.75 IsMuted as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes:

Returns true if the playback volume is currently muted.
Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.76 IsOnMenu(byref OnMenu as boolean, byref menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Are we currently on a menu, and if so, which one.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.77 IsPaused as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is paused.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.78 IsPlaying as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the framework has media and is playing (even if paused).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.79 IsSupportedDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: True if the display is supported.
Notes:

Lasterror is set.
Requires Mac OS X 10.3 or newer.
You can use the handle from a CGDisplayMBS object.

75.1.80 IsValidMedia(folder as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the folderitem points to a valid media layout.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.81 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The last error code reported.
Notes:

Requires Mac OS X 10.3 or newer.

kDVDErrorUnknown	-70001	Catch all error
kDVDErrorInitializingLib	-70002	There was an error initializing the playback framework
kDVDErrorUninitializedLib	-70003	The playback framework has not been initialized.
kDVDErrorNotAllowedDuringPlayback	-70004	action is not allowed during playback
kDVDErrorUnassignedGrafPort	-70005	A grafport was not set.
kDVDErrorAlreadyPlaying	-70006	Media is already being played.
kDVDErrorNoFatalErrCallBack	-70007	The application did not install a callback routine for fatal errors returned by the framework.
kDVDErrorIsAlreadySleeping	-70008	The framework has already been notified to sleep.
kDVDErrorDontNeedWakeup	-70009	DVDWakeUp was called when the framework was not asleep.
kDVDErrorTimeOutOfRange	-70010	Time code is outside the valid range for the current title.
kDVDErrorUserActionNoOp	-70011	The operation was not allowed by the media at this time.
kDVDErrorMissingDrive	-70012	The DVD drive is not available.
kDVDErrorNotSupportedConfiguration	-70013	The current system configuration is not supported.
kDVDErrorNotSupportedFunction	-70014	The operation is not supported. For example, trying to slow mo backwards.
kDVDErrorNoValidMedia	-70015	The media was not valid for playback.
kDVDErrorWrongParam	-70016	The invalid parameter was passed.
kDVDErrorMissingGraphicsDevice	-70017	A valid graphics device is not available.
kDVDErrorGraphicsDevice	-70018	A graphics device error was encountered.
kDVDErrorPlaybackOpen	-70019	The framework is already open (probably by another process).
kDVDErrorInvalidRegionCode	-70020	The region code was not valid.
kDVDErrorRgnMgrInstall	-70021	The region manager was not properly installed or missing from the system.
kDVDErrorMismatchedRegionCode	-70022	The disc region code and the drive region code do not match.
kDVDErrorNoMoreRegionSets	-70023	The drive does not have any region changes left.
kDVDErrordRegionCodeUninitialized	-70024	The drive region code was not initialized.
kDVDErrorAuthentification	-70025	The user attempting to change the region code could not be authenticated.
kDVDErrorOutOfVideoMemory	-70026	The video driver does not have enough video memory available to playback the media.
kDVDErrorNoAudioOutputDevice	-70027	An appropriate audio output device could not be found.
kDVDErrorSystem	-70028	A system error was encountered.
kDVDErrorNavigation	-70029	The user has made a selection not supported in the current menu.

75.1.82 LastErrorString as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns an error message for the lasterror code.
Notes: Requires Mac OS X 10.3 or newer.

75.1.83 Mute(mute as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Toggles the mute setting on or off.
Notes:

mute: a boolean value that specifies whether to turn the mute setting on or off. To mute the video playback volume, pass TRUE. To restore the previous volume setting, pass FALSE.

Lasterror is set.

Available in Mac OS X v10.3 and later.

75.1.84 NextChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the next chapter on the current title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.85 Open

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

Function: Call when preparing for playback. Usually when the application is initializing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Returns an error of kDVDErrorPlaybackOpen if the playback framework is already being used.

75.1.86 OpenMediaFile(folder as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a VIDEO_TS folder (can be on a hard drive or a dvd disc).
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.87 OpenMediaVolume(disc as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Opens a DVD disc for playback.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.88 Pause

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Pauses the media if currently playing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.89 Play

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing the media.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.90 PreviousChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets to the previous chapter on the current title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.91 Resume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Starts playing if currently paused.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.92 ReturnToTitle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Returns from the menu back to the current position within the title.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.93 SetAngle(angle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the camera angle to display.
Notes:

angle: A 1-based index that specifies the camera angle to display. The angle number of the main angle is 1. DVD-Video media supports up to nine camera angles.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started. The DVD-Video author decides how many camera angles are used. If the specified angle does not exist, this function does nothing.

Available in Mac OS X v10.3 and later.

75.1.94 SetAspectRatio(AspectRatio as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the aspect ratio for the current title.
Notes:

AspectRatio: A constant that specifies the desired aspect ratio for the current title. For a list of possible values, see Aspect Ratios.

Lasterror is set.
This function does nothing and returns noErr.

Available in Mac OS X v10.3 and later.

75.1.95 SetAudioOutputMode(Mode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Set the audio mode.
Notes: Lasterror is set.

75.1.96 SetAudioStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the audio stream to use.
Notes:

index: An integer from 1 to 8 that specifies an audio stream in the current title. DVD-Video media supports up to 8 audio streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

75.1.97 SetAudioVolume(Volume as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the playback audio volume setting (0 - 255).
Notes:

Volume: An integer in the range 0 to 255 that specifies the new video playback volume setting. Larger values are clamped to 255.

Lasterror is set.

This function changes the current playback audio volume setting, not the system audio volume setting. The actual audio volume experienced by the user is a function of these two settings:

Actual audio volume = system volume * playback audio volume / 255

For example, if you set the playback volume to 127, the actual volume is approximately one-half the current system volume.

Available in Mac OS X v10.3 and later.

75.1.98 SetChapter(Chapter as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the chapter to play.
Notes:

Chapter: An integer that specifies the chapter to play.

Lasterror is set.
This function defines the specified chapter to be the current video playback chapter. If video playback is paused, this function starts playing the chapter immediately. Note that some discs do not allow jumping directly to a chapter.

Available in Mac OS X v10.3 and later.

75.1.99 SetDefaultAudioLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default audio language code and extension.
Notes:

DVDLanguageCode: A constant that specifies the default audio language for the specified audio extension.. For a list of possible values, see Language Codes. If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default audio language is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies an audio extension. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

This function selects an audio language other than the DVD's default language for a specified audio extension. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

75.1.100 SetDefaultMenuLanguageCode(Code as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default menu language code.
Notes:

Code: An integer code that specifies the default menu language for the current title. For a list of possible values, see "Language Codes." If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default menu language is matched to the language setting in the International Preferences Panel.

Lasterror is set.

This function selects a language other than the DVD's default language for menus in the current title. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

75.1.101 SetDefaultSubPictureLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the default subpicture language and extension when subpictures are enabled.
Notes:

DVDLanguageCode: A constant that specifies the default language for the specified subpicture extension. For a list of possible values, see "Language Codes." If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default subpicture language code is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies a subpicture extension. For a list of possible values, see "Subpicture Extension Codes."

Lasterror is set.
If the current title is playing, this function does nothing and lasterror is set to kDVDErrorAlreadyPlaying.

This function is used to select a subpicture language other than the system default language. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

75.1.102 SetDriveRegionCode(regioncode as Integer, AuthorizationHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the drive region code (requires user authentication).
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDRegionCode constants - The different possible region codes (used for both the disc and the drive):

kDVDRegionCodeUninitialized	& hff
kDVDRegionCode1	& hfe
kDVDRegionCode2	& hfd
kDVDRegionCode3	& hfb
kDVDRegionCode4	& hf7
kDVDRegionCode5	& hef
kDVDRegionCode6	& hdf
kDVDRegionCode7	& hbf
kDVDRegionCode8	& h7f

75.1.103 SetLastPlayBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the video playback position using a bookmark.
Notes:

Lasterror is set.

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, but does not begin playing the media. See also GotoBookmark.

Available in Mac OS X v10.4 and later.

75.1.104 SetScanRate(scanrate as Integer, direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Fast forwards or rewinds depending on the direction parameter at the speed specified in the scanrate parameter.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The rate at which to scan:

kDVDScanRateOneEigth	-8
kDVDScanRateOneFourth	-4
kDVDScanRateOneHalf	-2
kDVDScanRate1x	1
kDVDScanRate2x	2
kDVDScanRate4x	4
kDVDScanRate8x	8
kDVDScanRate16x	16
kDVDScanRate32x	32

Direction constants:

kDVDScanDirectionForward	0
kDVDScanDirectionBackward	1

75.1.105 SetSPDIFDataOutDevice(Device as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Selects a SPDIF capable audio device.
Notes: Lasterror is set.

75.1.106 SetSubPictureStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current subpicture stream.
Notes:

index: A positive integer that specifies the subpicture stream to display. Subpicture stream numbers range from 1 to 32.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

75.1.107 SetTime(timecode as Integer, time as Integer, frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the current playback position in the current title based on a time position in seconds relative to the time code (elapsed,remaining).
Notes:

timecode: A time code constant. You must specify one of two values: kDVDTimeCodeElapsedSeconds or kDVDTimeCodeRemainingSeconds.

time: An integer that specifies the position in seconds.

frames: An integer that specifies the frame number. For the NTSC video format, the range of frame numbers is 0 to 29. For the PAL format, the range is 0 to 24.

his function sets the video playback position in the current title. Not all titles permit this operation, so it's important to check the result code returned by this function.

Before calling this function, DVD-Video media needs to be open and video playback started.

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.108 SetTimeEventRate(rate as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the rate of the DVD Playback time event.
Notes:

The new interval between time events, specified in milliseconds.

Lasterror is set.

The default interval between DVD Playback time events is 900 milliseconds. You can use this function to lengthen or shorten the interval between time events. This function is relevant when you have used the function DVDRegisterEventCallBack to register a callback for one or both of the time events: kDVDEvent-TitleTime and kDVDEventChapterTime . Time event callbacks are typically used for tasks such as updating the elapsed time or remaining time displayed in your user interface.

Available in Mac OS X v10.3 and later.

75.1.109 SetTitle(Title as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the title to play.
Notes:

Title: An integer in the range 1 to 99 that specifies the title to play.

Lasterror is set.
If the specified title exists on the current media and the media permits this operation, this function begins playing the title.

Available in Mac OS X v10.3 and later.

75.1.110 SetVideoBounds(x as Integer, y as Integer, w as Integer, h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the bounds in which to display the video.
Notes:

x,y,w,h: A rectangle that contains the desired bounds in window local coordinates.

Lasterror is set.

This function is used to set the area inside the current window in which to display the video. The video area is not required to fill the entire window. Generally you should set the video area to be smaller than the window whenever the aspect ratio of the current title and window are different. To find the aspect ratio of the current title, use the function GetAspectRatio.

Because the aspect ratios of the titles in a DVD-Video media folder are not always the same, you may need to call this function repeatedly to reset the video area as the user makes different viewing choices.

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

75.1.111 SetVideoDisplay(CGVideoDisplayHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Sets the graphics display for the current DVD-Video playback session.
Notes:

The Quartz display ID for the graphics display you want to use for video playback. For information about how to get a display ID, see Quartz Display Services Reference. (or CGDisplayMBS class)

Lasterror is set.

You need to call this function or DVDSetVideoDevice each time you move the video playback window to a new graphics display. To avoid degrading video performance, you should not attempt to draw a video playback window that spans two different displays.

Available in Mac OS X v10.3 and later.

75.1.112 SetVideoWindowID(WindowID as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Enables or disables DVD-Video playback in a Cocoa window.
Notes:

WindowID: The window ID associated with a Cocoa window, or NULL. For information about when to pass 0, see the Discussion below.

Lasterror is set.

If you're using a Cocoa window for DVD-Video playback, you need to use this function in two different situations:

Immediately after calling the constructor to start a new DVD-Video playback session, you should call this function and pass the window ID associated with the Cocoa window.

When video is not playing and you want to draw into the area of the window you set by calling the function SetVideoBounds, you should call this function and pass 0 in the inVidWindowID parameter.

To learn how to obtain the window number for a Cocoa window, see the description of the windowNumber method in the NSWindow class.

Availability
Available in Mac OS X v10.3 and later.

75.1.113 Sleep

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is putting machine to sleep so playback information can be saved.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

75.1.114 StepFrame(direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Steps one frame in the direction specified in DVDScanDirection.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Currently only supports kDVDScanDirectionForward.

75.1.115 Stop

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Stops if playing.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.116 SwitchToDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Switches the output to the given display.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
You can use the handle from a CGDisplayMBS object.

75.1.117 UpdateVideo

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Forces the video to be updated.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.

75.1.118 WakeUp

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: Call when system is waking up so playback information can be reset.
Notes:

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

75.1.119 Events

75.1.120 DVDEvent(eventcode as Integer, value1 as Integer, value2 as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

Function: A DVD event.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

DVDEventCode constants - The different event a client can register for to get notified (return value: UInt32)

kDVDEventTitle	1	value1: Title
kDVDEventPTT	2	value1: Chapter
kDVDEventValidUOP	3	value1: UOP code mask (DVDUOPCode)
kDVDEventAngle	4	value1: StreamID
kDVDEventAudioStream	5	value1: StreamID
kDVDEventSubpictureStream	6	value1: streamID / (value2 ! 0): visible
kDVDEventDisplayMode	7	value1: DVDAspectRatio
kDVDEventDomain	8	value1: DVDDomainCode
kDVDEventBitrate	9	value1: Bits / sec
kDVDEventStill	10	value1: On (1) - Off (0)
kDVDEventPlayback	11	value1: DVDState
kDVDEventVideoStandard	12	value1: DVDFormat
kDVDEventStreams	13	value1: None (trigger for general stream change)
kDVDEventScanSpeed	14	value1: Speed (1x,2x,3x,...)
kDVDEventMenuCalled	15	value1: DVDMenu
kDVDEventParental	16	value1: parental level number
kDVDEventPGC	17	value1: PGC number
kDVDEventGPRM	18	value1: GPRM index / value2: data
kDVDEventRegionMismatch	19	value1: disc region
kDVDEventTitleTime	20	value1: elapsed time / value2: duration of title [ms]
kDVDEventSubpictureStreamNumbers	21	value1: number of subpicture streams in title
kDVDEventAudioStreamNumbers	22	value1: number of audio streams in title
kDVDEventAngleNumbers	23	value1: number of angles in title
kDVDEventError	24	value1: DVDErrorCode
kDVDEventCCInfo	25	value1: cc event opcode, value2: cc event data
kDVDEventChapterTime	26	value1: elapsed time / value2: duration of current chapter [ms]

75.1.121 FatalError(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

Function: A fatal error. Quit the application as soon as possible.
Notes:

Lasterror is set.
Requires Mac OS X 10.3.

75.1.122 Constants

75.1.123 kDVDAMGMDomain = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Audio Manager Menu domain (DVD-Audio only, not used).

75.1.124 kDVDAspectRatio16x9 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 16:9 video frame on a screen with the same aspect ratio.

75.1.125 kDVDAspectRatio4x3 = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 4:3 video frame on a screen with the same aspect ratio.

75.1.126 kDVDAspectRatio4x3PanAndScan = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of choosing a sample area of a 16:9 video frame for display on a 4:3 screen, using center-of-interest information stored on the DVD.

75.1.127 kDVDAspectRatioLetterBox = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying the entire 16:9 video frame on a 4:3 screen by shrinking the frame and adding mattes or black bars above and below the frame.

75.1.128 kDVDAspectRatioUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the current aspect ratio.
Notes: Available in Mac OS X v10.3 and later.

75.1.129 kDVDAudioAC3Format = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Dolby Digital AC-3 format.

75.1.130 kDVDAudioDDPlusFormat = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.131 kDVDAudioDTSFormat = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Digital Theater Systems (DTS) format. This format is not supported.

75.1.132 kDVDAudioDTSHDFormat = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.133 kDVDAudioExtensionCodeDirectorsComment1 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: First audio channel for the artistic director's comments.

75.1.134 kDVDAudioExtensionCodeDirectorsComment2 = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Second audio channel for the artistic director's comments.

75.1.135 kDVDAudioExtensionCodeNormalCaptions = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio channel for extended information about the title.

75.1.136 kDVDAudioExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio extension not specified.

75.1.137 kDVDAudioExtensionCodeNVisualImpaired = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of an audio channel.
Notes: Audio channel for the visually impaired.

75.1.138 kDVDAudioMLPFormat = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.139 kDVDAudioModeProLogic = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.140 kDVDAudioModeSPDIF = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.141 kDVDAudioModeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies an audio mode.

75.1.142 kDVDAudioMPEG1Format = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The MPEG-1 Layer II digital format.

75.1.143 kDVDAudioMPEG2Format = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The MPEG-2 digital format.

75.1.144 kDVDAudioPCMFormat = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The linear pulse-code modulation (PCM) format used on CDs.

75.1.145 kDVDAudioSDDSFormat = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: The Sony Dynamic Digital Sound (SDDS) format. This format is not supported.

75.1.146 kDVDAudioUnknownFormat = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the audio stream format.
Notes: An unspecified audio format.

75.1.147 kDVDButtonIndexNone = -1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant for an index of the selected menu button.

75.1.148 kDVDErrorAlreadyPlaying = -70006

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: See kDVDErrorNotAllowedDuringPlayback.

75.1.149 kDVDErrorAuthentification = -70025

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An attempt to change the DVD drive region code could not be authenticated.

75.1.150 kDVDErrorDontNeedWakeup = -70009

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVDWakeUp was called without first calling Sleep.

75.1.151 kDVDErrorGraphicsDevice = -70018

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics device error was encountered.

75.1.152 kDVDErrorInitializingLib = -70002

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An error occurred while initializing a DVD-Video playback session. DVD Playback Services is probably being used in another process.

75.1.153 kDVDErrorInvalidBookmarkForMedia = -70032

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

75.1.154 kDVDErrorInvalidBookmarkSize = -70031

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

75.1.155 kDVDErrorInvalidBookmarkVersion = -70030

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

75.1.156 kDVDErrorInvalidRegionCode = -70020

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Region code is not valid.

75.1.157 kDVDErrorIsAlreadySleeping = -70008

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVDSleep was called twice without an intervening call to WakeUp.

75.1.158 kDVDErrorMismatchedRegionCode = -70022

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVD-Video disc region code does not match the region code currently assigned to the DVD drive.

75.1.159 kDVDErrorMissingDrive = -70012

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A DVD drive is not available.

75.1.160 kDVDErrorMissingGraphicsDevice = -70017

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics device is not available.

75.1.161 kDVDErrorNavigation = -70029

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The user has made a selection not supported in the current menu.

75.1.162 kDVDErrorNoAudioOutputDevice = -70027

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An appropriate audio output device could not be found.

75.1.163 kDVDErrorNoFatalErrCallBack = -70007

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: No callback has been registered to handle unrecoverable errors during playback.

75.1.164 kDVDErrorNoMoreRegionSets = -70023

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Changing the region code assigned to the DVD drive is no longer permitted.

75.1.165 kDVDErrorNotAllowedDuringPlayback = -70004

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The operation is not permitted while DVD-Video media is playing.

75.1.166 kDVDErrorNotSupportedConfiguration = -70013

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The current system configuration does not support DVD-Video playback.

75.1.167 kDVDErrorNotSupportedFunction = -70014

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: DVD Playback Services does not support this operation.

75.1.168 kDVDErrorNoValidBookmarkForLastPlay = -70033

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.

75.1.169 kDVDErrorNoValidMedia = -70015

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A VIDEO_TS media folder is not open for playback.

75.1.170 kDVDErrorOutOfVideoMemory = -70026

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The video driver does not have enough video memory available for playback.

75.1.171 kDVDErrorPlaybackOpen = -70019

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A VIDEO_TS media folder is already open for playback.

75.1.172 kDVDErrorRegionCodeUninitialized = -70024

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: No region code has been assigned to the DVD drive.

75.1.173 kDVDErrorRgnMgrInstall = -70021

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Not used.

75.1.174 kDVDErrorSystem = -70028

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A system error occurred.

75.1.175 kDVDErrorTimeOutOfRange = -70010

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The time code is outside the valid range for the current title.

75.1.176 kDVDErrorUnassignedGrafPort = -70005

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A graphics port for DVD-Video playback has not been set.

75.1.177 kDVDErrorUninitializedLib = -70003

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: A DVD-Video playback session has not been initialized. Any function except DVDInitialize could return this value.

75.1.178 kDVDErrorUnknown = -70001

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: Unspecified error.

75.1.179 kDVDErrorUserActionNoOp = -70011

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: The operation is not permitted at this time.

75.1.180 kDVDErrorWrongParam = -70016

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the result codes defined for DVD Playback.
Notes: An argument is invalid.

75.1.181 kDVDEventAngle = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Camera angle has changed.

75.1.182 kDVDEventAngleNumbers = 23

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of angles has changed.

75.1.183 kDVDEventAudioStream = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Audio stream has changed.

75.1.184 kDVDEventAudioStreamNumbers = 22

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of audio streams has changed.

75.1.185 kDVDEventBitrate = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Bit rate has changed.

75.1.186 kDVDEventCCInfo = 25

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Closed caption has changed.

75.1.187 kDVDEventChapterTime = 26

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Chapter time has changed.

75.1.188 kDVDEventDisplayMode = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Display mode has changed.

75.1.189 kDVDEventDomain = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Domain has changed.

75.1.190 kDVDEventError = 24

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Hardware error.

75.1.191 kDVDEventGPRM = 18

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: GPRM data has changed.

75.1.192 kDVDEventMenuCalled = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Menu has changed.

75.1.193 kDVDEventParental = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Parental level has changed.

75.1.194 kDVDEventPGC = 17

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Program chain has changed.

75.1.195 kDVDEventPlayback = 11

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Playback state has changed.

75.1.196 kDVDEventPTT = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Chapter has changed.

75.1.197 kDVDEventRegionMismatch = 19

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Region mismatch between disc and playback device.

75.1.198 kDVDEventScanSpeed = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Scan rate has changed.

75.1.199 kDVDEventStill = 10

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Still picture on or off.

75.1.200 kDVDEventStreams = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Stream has changed (audio, subpicture, or angle).

75.1.201 kDVDEventSubpictureStream = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Subpicture has changed.

75.1.202 kDVDEventSubpictureStreamNumbers = 21

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: The number of subpicture streams has changed.

75.1.203 kDVDEventTitle = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Title has changed.

75.1.204 kDVDEventTitleTime = 20

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Title time has changed.

75.1.205 kDVDEventValidUOP = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: User operations that are disabled.

75.1.206 kDVDEventVideoStandard = 12

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify the event ID used in the DVDEvent event.
Notes: Video format has changed

75.1.207 kDVDFormatNTSC = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: National Television Standards Committee (NTSC) video format used in North America and Japan.

75.1.208 kDVDFormatNTSC_HDTV = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.

75.1.209 kDVDFormatPAL = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: Phase Alternating Line (PAL) video format widely used in Europe, South Asia, Africa, and South America.

75.1.210 kDVDFormatPAL_HDTV = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.

75.1.211 kDVDFormatUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies video broadcast formats used in DVD media.
Notes: An unspecified video format.

75.1.212 kDVDFPDomain = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: First Play domain.

75.1.213 kDVDLanguageCodeAbkhazian = "ab "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.337 kDVDLanguageCodeTurkmen = "tk "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.338 kDVDLanguageCodeTwi = "tw "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.339 kDVDLanguageCodeUkranian = "uk "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.340 kDVDLanguageCodeUninitialized = "?? "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.341 kDVDLanguageCodeUrdu = "ur "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.342 kDVDLanguageCodeUzbek = "uz "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.343 kDVDLanguageCodeVietnamese = "vi "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.344 kDVDLanguageCodeVolapuk = "vo "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.345 kDVDLanguageCodeWelsh = "cy "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.346 kDVDLanguageCodeWolof = "wo "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.347 kDVDLanguageCodeXhosa = "xh "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.348 kDVDLanguageCodeYiddish = "ji "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.349 kDVDLanguageCodeYoruba = "yo "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.350 kDVDLanguageCodeZulu = "zu "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.351 kDVDLanguageNoPreference = "** "

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a language used in subpictures, audio, and menus.

75.1.352 kDVDMenuAngle = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: A viewing angle menu.

75.1.353 kDVDMenuAudio = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: An audio menu.

75.1.354 kDVDMenuNone = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: Menu not defined.

75.1.355 kDVDMenuPTT = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: A part-of-title (PTT) or chapter menu.

75.1.356 kDVDMenuRoot = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: A root menu.

75.1.357 kDVDMenuSubPicture = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: A menu used to select subpictures.

75.1.358 kDVDMenuTitle = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specify input menus for a DVD-Video volume.
Notes: A title or top menu.

75.1.359 kDVDRegionCode1 = 254

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 1: North America.

75.1.360 kDVDRegionCode2 = 253

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 2: Japan, Europe, South Africa.

75.1.361 kDVDRegionCode3 = 251

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 3: Southeast Asia.

75.1.362 kDVDRegionCode4 = 247

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 4: Australia, New Zealand, Central & South America.

75.1.363 kDVDRegionCode5 = 239

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 5: Northwest Asia and North Africa.

75.1.364 kDVDRegionCode6 = 223

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 6: China.

75.1.365 kDVDRegionCode7 = 191

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 7: Unassigned.

75.1.366 kDVDRegionCode8 = 127

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: Region 8: Special venues (airplanes, hotels, cruise ships).

75.1.367 kDVDRegionCodeUninitialized = 255

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies marketing regions for DVD discs and playback devices.
Notes: The default region code for an uninitialized DVD drive.

75.1.368 kDVDScanDirectionBackward = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the direction of play.
Notes: Scan in the reverse direction.

75.1.369 kDVDScanDirectionForward = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the direction of play.
Notes: Scan in the forward direction.

75.1.370 kDVDScanRate16x = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.371 kDVDScanRate1x = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.372 kDVDScanRate2x = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.373 kDVDScanRate32x = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.374 kDVDScanRate4x = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.375 kDVDScanRate8x = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.376 kDVDScanRateOneEigth = -8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.377 kDVDScanRateOneFourth = -4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.378 kDVDScanRateOneHalf = -2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the rate at which to scan.
Notes: These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

75.1.379 kDVDStateIdle = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: Not used.

75.1.380 kDVDStatePaused = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and paused or frame-stepping.

75.1.381 kDVDStatePlaying = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing at normal rate (1x scan rate).

75.1.382 kDVDStatePlayingSlow = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes:

DVD-Video media is open and playing in slow motion (less than 1x scan rate).
Available in Mac OS X v10.4 and later.

75.1.383 kDVDStatePlayingStill = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing a single frame.

75.1.384 kDVDStateScanning = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and playing in fast motion (greater than 1x scan rate).

75.1.385 kDVDStateStopped = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: DVD-Video media is open and stopped (not playing).

75.1.386 kDVDStateUnknown = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constants that specify the current play state.
Notes: The initial state of a new DVD-Video playback session.

75.1.387 kDVDSTOPDomain = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Stop State domain.

75.1.388 kDVDSubpictureExtensionCodeCaption4Children = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A language-caption subpicture for children.

75.1.389 kDVDSubpictureExtensionCodeCaptionBiggerSize = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large language-caption subpicture.

75.1.390 kDVDSubpictureExtensionCodeCaptionNormalSize = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A language-caption subpicture.

75.1.391 kDVDSubpictureExtensionCodeClosedCaption4Children = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A closed-caption subpicture for children.

75.1.392 kDVDSubpictureExtensionCodeClosedCaptionBiggerSize = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large closed-caption subpicture.

75.1.393 kDVDSubpictureExtensionCodeClosedCaptionNormalSize = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A closed-caption subpicture.

75.1.394 kDVDSubpictureExtensionCodeForcedCaption = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A subpicture which is always visible, regardless of the viewer's preferences.

75.1.395 kDVDSubpictureExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: Subpicture not specified.

75.1.396 kDVDSubpictureExtensionDirectorsComment4Children = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A subpicture for director's comments for children.

75.1.397 kDVDSubpictureExtensionDirectorsCommentBiggerSize = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A large subpicture for director's comments.

75.1.398 kDVDSubpictureExtensionDirectorsCommentNormalSize = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies the purpose of a subpicture stream.
Notes: A normal subpicture for director's comments.

75.1.399 kDVDTimeCodeChapterDurationSeconds = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds in the current chapter.

75.1.400 kDVDTimeCodeChapterElapsedSeconds = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds elapsed since the beginning of the current chapter.

75.1.401 kDVDTimeCodeChapterRemainingSeconds = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds remaining before the end of the current chapter.

75.1.402 kDVDTimeCodeElapsedSeconds = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds after a specified position.

75.1.403 kDVDTimeCodeRemainingSeconds = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds before a specified position.

75.1.404 kDVDTimeCodeTitleDurationSeconds = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Number of seconds in the current title.

75.1.405 kDVDTimeCodeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies a temporal location in the video stream of the current title or chapter.
Notes: Not used.

75.1.406 kDVDTTDomain = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Title domain.

75.1.407 kDVDTTGRDomain = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Title Group domain (DVD-Audio only, not used).

75.1.408 kDVDUOPAngleChange = 4194304

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAngle is disabled.

75.1.409 kDVDUOPAudioStreamChange = 1048576

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAudioStream is disabled.

75.1.410 kDVDUOPBackwardScan = 512

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Scan in the backward direction is disabled.

75.1.411 kDVDUOPButton = 131072

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The functions DoMenuClick, DoMenuMouseOver, and DoUserNavigation are disabled.

75.1.412 kDVDUOPForwardScan = 256

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Scan in the forward direction is disabled.

75.1.413 kDVDUOPGoUp = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoBackOneLevel is disabled.

75.1.414 kDVDUOPKaraokeModeChange = 8388608

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

75.1.415 kDVDUOPMenuCallAngle = 16384

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for an angle menu is disabled.

75.1.416 kDVDUOPMenuCallAudio = 8192

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for an audio menu is disabled.

75.1.417 kDVDUOPMenuCallPTT = 32768

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a chapter menu is disabled.

75.1.418 kDVDUOPMenuCallRoot = 2048

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a root menu is disabled.

75.1.419 kDVDUOPMenuCallSubPicture = 4096

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a subpicture menu is disabled.

75.1.420 kDVDUOPMenuCallTitle = 1024

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function GoToMenu for a title menu is disabled.

75.1.421 kDVDUOPNextPGSearch = 128

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function NextChapter is disabled.

75.1.422 kDVDUOPPauseOff = 67108864

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Resume is disabled.

75.1.423 kDVDUOPPauseOn = 524288

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Pause is disabled.

75.1.424 kDVDUOPPrevTopPGSearch = 64

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function PreviousChapter is disabled.

75.1.425 kDVDUOPPTTPlaySearch = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

75.1.426 kDVDUOPResume = 65536

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

75.1.427 kDVDUOPScanOff = 33554432

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

75.1.428 kDVDUOPStillOff = 262144

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

75.1.429 kDVDUOPStop = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function Stop is disabled.

75.1.430 kDVDUOPSubPictureStreamChange = 2097152

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetAudioStream is disabled.

75.1.431 kDVDUOPTimePlaySearch = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function SetTime is disabled.

75.1.432 kDVDUOPTimePTTSearch = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The function DVDSetChapter is disabled.

75.1.433 kDVDUOPTitlePlay = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: The functions ReturnToTitle, SetTitle, and SetChapter are disabled.

75.1.434 kDVDUOPVideoModeChange = 16777216

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies user operations (UOP) which are currently disabled.
Notes: Not used.

75.1.435 kDVDUserNavigationEnter = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Execute the action of the selected button.

75.1.436 kDVDUserNavigationMoveDown = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button above the current location.

75.1.437 kDVDUserNavigationMoveLeft = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button to the left of the current location.

75.1.438 kDVDUserNavigationMoveRight = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button to the right of the current location.

75.1.439 kDVDUserNavigationMoveUp = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
Notes: Move to and select the button above the current location.

75.1.440 kDVDVMGMDomain = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Video Manager Menu domain.

75.1.441 kDVDVTSMDomain = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Video Title Set Menu domain.

75.2 class DVDPlaybackMissingFunctionExceptionMBS

75.2.1 class DVDPlaybackMissingFunctionExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised if a DVDPlayback function is not available on this Mac OS X version.
Notes:

Check the message property.
Subclass of the RuntimeException class.

75.3 class DVDPlaybackNotInitializedExceptionMBS

75.3.1 class DVDPlaybackNotInitializedExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

Function: The exception raised when you use a method on the DVDPlaybackMBS class without initializing it.
Notes: Subclass of the RuntimeException class.

Chapter 76

DynamicDeclares

76.1 class DeclareCallBackMBS

76.1.1 class DeclareCallBackMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a callback for use in declares.
Notes:

Allows you to dynamically create callback functions.
Pass the function pointer to a C function which later calls back your callback.

Please make sure this callback object stays alive, e.g. stored in a global property. When the object is released and the callback later invoked, the application will crash.

When you code sign on macOS, you may need to use the entitlement for just-in-time compiler and for unsigned executable memory, e.g. the com.apple.security.cs.allow-unsigned-executable-memory entitlement.

76.1.6 Methods

76.1.7 Constructor(Signature as String)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new callback object.
Notes:

Please pass a valid signature, e.g. "(pi)v" for a function taking one pointer, one integer and return nothing (void).
If the signature doesn't match the values put on the stack, the app may crash.

76.1.8 ParameterType(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries type of a parameter.
Notes: Index in range from 0 to ParameterCount-1.

76.1.9 Properties

76.1.10 AllowAsync as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the callbacks are allowed to go asynchronously.
Notes:

For MacOS/iOS only.

Asynchronous callbacks have no chance to return a value as the call to the Xojo event happens later and the C function returns before the Xojo event is started.
Synchronous callbacks would let the callback wait for the Xojo main thread to react to the event and then return the result back.

AllowAsync is set to true automatically for callbacks with void as return automatically.
(Read and Write property)

76.1.11 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes:

We call how often the callback is called.
(Read only property)

76.1.12 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function pointer for the callback.
Notes:

Pass this to the C functions to pass a callback function pointer.
(Read only property)

76.1.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the callback.
Notes:

You can set this to later read value in debugging.
(Read and Write property)

76.1.14 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes:

We currently limit this to 32 parameters.
(Read only property)

76.1.15 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

76.1.16 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

76.1.17 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

76.1.18 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

Store whatever you need to keep referenced.
(Read and Write property)

76.1.19 ParameterCFRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via CFRetain() call.
Notes:

If the callback is within Apple's frameworks passing a CoreFoundation object, you can set this property to true, so we call CFRetain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with CoreFoundation objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

76.1.20 ParameterCopyString(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be copied as a zero terminated string.
Notes:

If the callback receives a C string, you can set this property to true, so we copy it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with strings passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer or string.
(Read and Write computed property)

76.1.21 ParameterNSRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether a parameter needs to be retained via [NSObject retain] call.
Notes:

If the callback is within Apple's frameworks passing a Objective-C object, you can set this property to true, so we call retain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with NSObject objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

76.1.22 Events

76.1.23 Callback(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The callback event.
Notes:

Parameters are converted to variants and passed as array.
The result is converted to the required data type and returned.

76.1.24 Constants

76.1.25 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C ellipsis function call

76.1.26 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows GCC fast call

76.1.27 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft fast call

76.1.28 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: The character to indicate that next character in the signature is a calling convention prefix.

76.1.29 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows standard call

76.1.30 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft this call

76.1.31 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: bool

76.1.32 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: char, 8 bit signed byte

76.1.33 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Double, 64-bit and 8 bytes big.

76.1.34 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: end of arguments symbol.

76.1.35 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Single, 32-bit and 4 bytes big.

76.1.36 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit signed integer.

76.1.37 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit signed integer.

76.1.38 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

76.1.39 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Pointer. Maybe a reference to an object or array.

76.1.40 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit signed integer.

76.1.41 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: C String with zero byte as terminator.

76.1.42 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Structure

76.1.43 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 8 bit unsigned byte

76.1.44 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit unsigned integer.

76.1.45 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit unsigned integer.

76.1.46 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

76.1.47 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit unsigned integer.

76.1.48 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Nothing to return.

76.2 class DeclareFunctionMBS

76.2.1 class DeclareFunctionMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C function call.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes:

Compared to built-in declares in Xojo, those functions allow a much more dynamic calling of functions with various calling conventions.

We have

- more dynamic
- the possibility to define declares at runtime
- more calling conventions
- support for variable arguments in C (dots in argument list)
- thread safe callbacks with DeclareCallBackMBS class.

76.2.2 Blog Entries

76.2.3 Blog Entries

- News from the MBS Xojo Plugins Version 20.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.3
- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

76.2.4 Methods

76.2.5 ClearParameters

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters.
Notes: Sets them all to zero/nil.

76.2.6 Constructor(Signature as String, FunctionPtr as Ptr)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes:

Pass the signature and function pointer from a C function.
If signature is incorrect, the application will probably crash with stack corruption.

76.2.7 Invoke as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

See also:

- 76.2.8 Invoke(Parameters() as Variant) as Variant 14606

76.2.8 Invoke(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Invokes the function.
Notes:

First calls SetParameters with the given array to set parameters.
Then invokes the function.
See also:

- 76.2.7 Invoke as Variant 14606

76.2.9 SetParameters(paramArray Parameters as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set all parameters together with passing arguments to this function.
Example:

```
// We try to run sysctlbyname on macOS

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")
```

```
// int sysctlbyname(const char *name, void *oldp, size_t *oldlenp, void *newp, size_t newlen);

Dim p As ptr = d.Symbol("sysctlbyname")

'const char* ->CString for name ->Z
'void* ->pointer to data ->p
'size_t * ->pointer to 32/64 bit integer for length ->p
'void* ->pointer to data ->p
'size_t ->32/64bit unsigned int ->L in 64-bit

Dim f As New DeclareFunctionMBS("(ZpppL)i", p)

Dim mData As New MemoryBlock(8)
Dim mLen As New MemoryBlock(8)
Dim pData As ptr = mData
dim pLen as ptr = mLen

mLen.UInt64Value(0) = mData.Size

f.SetParameters "hw.ncpu", pData, pLen, Nil, 0
Dim n As Integer = f.Invoke
// result is zero on result or -1 on failure

Dim CPUCount As Integer = mData.UInt32Value(0)

If n = 0 Then
MsgBox "CPU count: "+Str(CPUCount)
Else
MsgBox "Failed."
End If

Break // see in debugger
```

See also:

- 76.2.10 SetParameters(Parameters() as Variant) 14607

76.2.10 SetParameters(Parameters() as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets all arguments by passing an array of values.
See also:

- 76.2.9 SetParameters(paramArray Parameters as Variant) 14606

76.2.11 Properties

76.2.12 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The call counter.
Notes:

We call how often the function is called.
(Read only property)

76.2.13 CallMode as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The calling convention mode to use.
Notes:

Default is to use default mode for the given platform.
(Read and Write property)

76.2.14 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The pointer for the C function.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")

// call via delegate
' define delgate like this:
' Public Function zlibVersionDelegate() As CString

Dim z As New zlibVersionDelegate(p)
Dim v As String = z.Invoke
MsgBox "zlibVersion: "+v
```

Notes: (Read and Write property)

76.2.15 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the function.
Notes: (Read and Write property)

76.2.16 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of parameters.
Notes:

We currently limit this to 32 parameters.
(Read only property)

76.2.17 Parameters as Dictionary

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all parameters.
Notes:

Mainly to inspect parameters in debugger.
Keys are indexes and values are the parameter values.
(Read only property)

76.2.18 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature used to initialize this object.
Notes: (Read only property)

76.2.19 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the parameters.
Notes: (Read only property)

76.2.20 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature part for the return value.
Notes: (Read only property)

76.2.21 StackSize as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stack size to use.
Notes:

Defaults to 4096 bytes.
(Read and Write property)

76.2.22 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

Store whatever you need to keep referenced.
(Read and Write property)

76.2.23 ParameterBoolean(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as boolean.
Notes:

You can get and set value here.
(Read and Write computed property)

76.2.24 ParameterDouble(Index as Integer) as Double

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter value as double.
Notes:

You can get and set value here.
(Read and Write computed property)

76.2.25 ParameterInteger(Index as Integer) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as integer value.
Notes:

You can get and set value here.
(Read and Write computed property)

76.2.26 ParameterPointer(Index as Integer) as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as pointer value.
Notes:

You can get and set value here.
(Read and Write computed property)

76.2.27 ParameterSingle(Index as Integer) as Single

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as single value.
Notes:

You can get and set value here.
(Read and Write computed property)

76.2.28 ParameterString(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter as string value.
Example:

```
// We try to run strstr on C Library on macOS to find string in string with strstr as example:

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// char *strstr(Const char *__big, Const char *__little);

Dim p As ptr = d.Symbol("strstr")
Dim f As New DeclareFunctionMBS("(ZZ)Z", p)

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "World"

Dim n1 As String = f.Invoke
// gives back World! as that was found

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "xxx"

Dim n2 As String = f.Invoke
// gives empty string as not found

Break // see in debugger
```

Notes:

To avoid crashes, we only read strings from parameters with type string or pointer.
But you can assign a string value to all types, which may not make sense for numbers.
You can get and set value here.
(Read and Write computed property)

76.2.29 ParameterValue(Index as Integer) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the value as variant.
Notes:

We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.
You can get and set value here.
(Read and Write computed property)

76.2.30 Constants

76.2.31 kCallModeCArm64 = 22

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C arm64 call (AArch64)

76.2.32 kCallModeCArmArmhf = 30

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C arm call (arm hardÔ¨Çoat - e.g. raspberry pi)

76.2.33 kCallModeCDefault = 0

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C default function call for current platform

76.2.34 kCallModeCEllipsis = 100

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C ellipsis function call (named arguments (before ,Äô...,Äô))

76.2.35 kCallModeCEllipsisVarargs = 101

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))

76.2.36 kCallModeCX64Win64 = 7

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x64 Windows standard call

76.2.37 kCallModeCX86Cdecl = 1

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 platforms standard call

76.2.38 kCallModeCX86Win32FastGnu = 4

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows GCC fast call

76.2.39 kCallModeCX86Win32FastMs = 3

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows Microsoft fast call

76.2.40 kCallModeCX86Win32Std = 2

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows standard call

76.2.41 kCallModeCX86Win32ThisGnu = 6

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows GCC this call

76.2.42 kCallModeCX86Win32ThisMs = 5

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C x86 Windows Microsoft this call

76.2.43 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C ellipsis function call

76.2.44 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows GCC fast call

76.2.45 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft fast call

76.2.46 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: The character to indicate that next character in the signature is a calling convention prefix.

76.2.47 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows standard call

76.2.48 kCallModeSysDefault = 200

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C default syscall for current platform

76.2.49 kCallModeSysX64SyscallSysV = 204

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x64 System V platforms

76.2.50 kCallModeSysX86Int80HBSD = 202

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x86 BSD platforms

76.2.51 kCallModeSysX86Int80HLinux = 201

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the call modes constants.
Notes: C syscall for x86 Linux

76.2.52 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the Calling Conventions constants.
Notes: C x86 Windows Microsoft this call

76.2.53 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: bool

76.2.54 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: char, 8 bit signed byte

76.2.55 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Double, 64-bit and 8 bytes big.

76.2.56 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: end of arguments symbol.

76.2.57 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Single, 32-bit and 4 bytes big.

76.2.58 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit signed integer.

76.2.59 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit signed integer.

76.2.60 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

76.2.61 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Pointer. Maybe a reference to an object or array.

76.2.62 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit signed integer.

76.2.63 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: C String with zero byte as terminator.

76.2.64 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Structure

76.2.65 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 8 bit unsigned byte

76.2.66 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 32-bit unsigned integer.

76.2.67 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 64-bit unsigned integer.

76.2.68 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes:

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

76.2.69 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: 16-bit unsigned integer.

76.2.70 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

Function: One of the parameter/return type codes.
Notes: Nothing to return.

76.3 class DeclareLibraryMBS

76.3.1 class DeclareLibraryMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a C library loaded into Xojo.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: Allows you to load a DLL on Windows, dylib on MacOS and shared object (so) on Linux and inspect the available functions and load functions by name.

76.3.4 Methods

76.3.5 Constructor(LibFile as folderItem)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Notes:

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 76.3.6 Constructor(LibPath as string) 14622

76.3.6 Constructor(LibPath as string)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a library.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes:

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 76.3.5 Constructor(LibFile as folderItem) 14621

76.3.7 Symbol(name as string) as ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries function or data pointer for a symbol.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)
```

```
Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

Notes: Returns nil if not found.

76.3.8 SymbolName(index as Integer) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol.
Notes: Index is in range from 0 to SymbolCount-1.
See also:

- 76.3.9 SymbolName(p as Ptr) as string 14623

76.3.9 SymbolName(p as Ptr) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of a symbol from the ptr.
Notes:

Looks up the symbol table to find the entry with the right pointer and returns the name.
Returns "" if not found.
See also:

- 76.3.8 SymbolName(index as Integer) as string 14623

76.3.10 SymbolNames as string()

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of symbols of a library.
Example:

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

Notes: This may show more symbols as defined in public C headers.

76.3.11 Properties

76.3.12 Handle as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object handle.
Notes: (Read only property)

76.3.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of the library.
Notes: (Read only property)

76.3.14 Path as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries path of the library.
Notes:

May return the path used to load the library.
(Read only property)

76.3.15 SymbolCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of symbols in the library.
Notes: (Read only property)

Chapter 77

DynaPDF

77.1 class DynaPDFAnnotationExMBS

77.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended annotation information.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS REALbasic Plugins, version 11.1pr5
- MBS REALbasic Plugins, version 11.1pr4

77.1.4 Methods

77.1.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.1.6 DashPattern(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dash pattern.
Notes: If BorderStyle is kbsDashed.

77.1.7 InkList(index as UInt32) as Single()

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ink list.
Notes:

Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

77.1.8 Operator_Convert as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to older DynaPDFAnnotationMBS.
Example:

```
Dim d As New DynaPDFMBS

// create a new annotation
Call d.CreateNewPDF
Call d.append
Dim n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Dim a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Dim a2 As DynaPDFAnnotationExMBS = a1

// now query as new class and convert to old class
Dim e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Dim e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are lost in the conversion.

77.1.9 QuadPoints(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a quad point value.
Notes:

Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

77.1.10 Vertices(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertices array.
Notes: Line, PolyLine, and Polygon annotations only.

77.1.11 Properties

77.1.12 AnnotFlags as UInt32

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for this annotation.
Notes:

You can use this constants:

```
kafNone        = & h0000000
kafInvisible   = & h0000001
kafHidden      = & h0000002
kafPrint       = & h0000004
kafNoZoom      = & h0000008
kafNoRotate    = & h0000010
kafNoView      = & h0000020
kafReadOnly    = & h0000040
```

(Read only property)

77.1.13 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.1.14 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

77.1.15 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

77.1.16 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

77.1.17 BorderEffect as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The border effect.
Notes:

Circle, Square, FreeText, and Polygon annotations.
(Read only property)

77.1.18 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

77.1.19 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

77.1.20 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation string Content is used as caption.
Notes:

The string is shown in a PopUp annotation otherwise.
(Read only property)

77.1.21 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal offset of the caption from its normal position.
Notes: (Read only property)

77.1.22 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical offset of the caption from its normal position.
Notes: (Read only property)

77.1.23 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position where the caption should be drawn if present.
Notes: (Read only property)

77.1.24 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.1.25 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation Date ->Optional
Notes: (Read only property)

77.1.26 DashPatternCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the array.
Notes: (Read only property)

77.1.27 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

77.1.28 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Notes:

For File link or web link annotations.

(Read only property)

77.1.29 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination page.
Notes:

For Page link annotations only.

(Read only property)

77.1.30 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination position.
Notes:

For Page link annotations only.

(Read only property)

77.1.31 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination type.
Notes:

For Page link annotations only.

(Read only property)

77.1.32 EmbeddedFileHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The handle for the embedded file.
Notes:

For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.
(Read only property)

77.1.33 Grouped as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only if Parent <>-1 and Type <>katPopUp.
Notes:

If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.
(Read only property)

77.1.34 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

77.1.35 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes: (Read only property)

77.1.36 Icon as Integer

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The icon type for this annotation.
Notes:

The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp).
For any other annotion type this value is not set (-1).
(Read only property)

77.1.37 InkListCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of ink arrays.
Notes: (Read only property)

77.1.38 Intent as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Markup annotations only.
Notes:

The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.
(Read only property)

77.1.39 LE1 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the start point ->Line and PolyLine annotations only.
Notes: (Read only property)

77.1.40 LE2 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Style of the end point ->Line and PolyLine annotations only.
Notes: (Read only property)

77.1.41 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional leader line extend beyond the leader line.
Notes: (Read only property)

77.1.42 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the leader lines (positive or negative)
Notes: (Read only property)

77.1.43 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Amount of space between the endpoints of the annotation and the leader lines.
Notes: (Read only property)

77.1.44 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the annotation is a markup annotation.
Notes:

Markup annotations can be flattened separately, see FlattenAnnots function.
(Read only property)

77.1.45 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification Date ->Optional
Notes: (Read only property)

77.1.46 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.1.47 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1 if not set.
Notes:

Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was

set, check whether the value is smaller & h40000000.
(Read only property)

77.1.48 Opacity as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The annotation's opacity.
Notes:

Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

77.1.49 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Meaningful only for annotations which have a corresponding PopUp annotation.
Notes: (Read only property)

77.1.50 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The page index is used to sort form fields.
Notes:

See SortFieldsByIndex().
(Read only property)

77.1.51 PageNum as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

77.1.52 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.
Notes:

In this case, the annotation type is always atText and only the following members should be considered:

State	The current state
StateModel	Marked, Review, and so on
CreateDate	Creation Date
ModDate	Modification Date
Author	The user who has set the state
Content	Not displayed in Adobe's Acrobat...
Subject	Not displayed in Adobe's Acrobat...

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

77.1.53 PopUp as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of the corresponding PopUp annotation if any.
Notes: (Read only property)

77.1.54 QuadPointsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of quad points.
Notes:

Highlight, Link, and Redact annotations only.
(Read only property)

77.1.55 RD as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rectangular difference between the annotations bounding box and the content area.
Notes:

Caret, Circle, Square, and FreeText annotations.
(Read only property)

77.1.56 RichStyle as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default style string.
Notes:

For FreeText annotations.
(Read only property)

77.1.57 RichText as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional rich text string (RC key).
Notes:

For Markup annotations.
(Read only property)

77.1.58 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rotation for caret annotations.
Notes:

Caret annotations only. Must be zero or a multiple of 90. This key is not documented in the specs.
(Read only property)

77.1.59 StampName as String

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stamp name.
Notes:

Set only, if Icon property is rsUserDefined.
(Read only property)

77.1.60 State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state of the annotation.
Notes: (Read only property)

77.1.61 StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The state model (Marked, Review, and so on).
Notes: (Read only property)

77.1.62 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.1.63 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The subtype.
Notes:

Set only, if Type = katUnknownAnnot.
(Read only property)

77.1.64 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes:

See at* constants.
(Read only property)

77.1.65 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of values in the vertices array.
Notes:

This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)

77.2 class DynaPDFAnnotationMBS

77.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for annotation information.
Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.2.2 Blog Entries

- MBS Xojo Plugins, version 23.5pr1
- MBS Xojo / Real Studio Plugins, version 14.5pr4

77.2.3 Blog Entries

- MBS Xojo Plugins, version 23.5pr1
- MBS Xojo / Real Studio Plugins, version 14.5pr4

77.2.4 Methods

77.2.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.2.6 Operator_Convert as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 23.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts this annotation object to newer DynaPDFAnnotationExMBS.
Example:

```
Dim d As New DynaPDFMBS

// create a new annotation
Call d.CreateNewPDF
Call d.append
Dim n As Integer = d.WebLink(0, 0, 100, 100, "about:blank")

// now query as old class and convert to new class
Dim a1 As DynaPDFAnnotationMBS = d.GetAnnot(n)
Dim a2 As DynaPDFAnnotationExMBS = a1

// now query as new class and convert to old class
Dim e1 As DynaPDFAnnotationExMBS = d.GetAnnotEx(n)
Dim e2 As DynaPDFAnnotationMBS = e1

// please update all your code to move to DynaPDFAnnotationExMBS
Break
```

Notes: The fields not supported by DynaPDFAnnotationMBS are all zero.

77.2.7 Properties

77.2.8 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's author.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.2.9 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

77.2.10 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box in bottom-up coordinates.
Notes: (Read only property)

77.2.11 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

77.2.12 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border style.
Notes: (Read only property)

77.2.13 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width.
Notes: (Read only property)

77.2.14 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's contents.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.2.15 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this annotation marked as deleted?
Notes: (Read only property)

77.2.16 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation handle.
Notes: (Read only property)

77.2.17 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Visual effect.
Notes:

See hm* constants.
(Read only property)

77.2.18 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's name.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.2.19 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the annotation appears.
Notes: (Read only property)

77.2.20 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation's subject.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

77.2.21 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Annotation type.
Notes:

See at* constants.
(Read only property)

77.3 class DynaPDFBarcode2MBS

77.3.1 class DynaPDFBarcode2MBS

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for barcode creation parameters.

77.3.6 Properties

77.3.7 BarcodeType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of barcode that should be created.
Notes:

See kbct* constants.
(Read and Write property)

77.3.8 BgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes:

Default: NO_COLOR (transparent)
(Read and Write property)

77.3.9 BorderWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border width
Notes:

Default is zero.
(Read and Write property)

77.3.10 Data as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data in the barcode.
Notes: (Read and Write property)

77.3.11 DataType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Data type and escape flag.
Notes:

Default is kbcdtBinary.
See kbcdt* constants.
(Read and Write property)

77.3.12 DotSize as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Dotty mode only.
Notes:

Default is 4.0/5.0.
(Read and Write property)

77.3.13 Eci as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended Channel Interpretation mode.
Notes:

Default 0.
(Read and Write property)

77.3.14 FgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: RGB Foreground color
Notes: (Read and Write property)

77.3.15 FSizeFactor as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size correction factor.
Notes:

Default 0.7.
(Read and Write property)

77.3.16 Option1 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is -1.

For QRCode:
Option1 is the ECC Level with values from 1 = low, 2 = middle, 3 = better, 4 high. Default is low.
Option2 is version code from 1 to 40. Default is 0 to auto select.
For MicroQR you can use ECC Level 1 to 3 as 4 is not supported.

For Data Matrix:
Option2 size from 1 to 30. 0 is auto. See table in zint manual pdf.
Option3 can be 100 to force square size.

For Code 39:
You can set Option2 to 1 to add module 43 checksum.

For MaxiCode:
Option 1 is the mode.

For PDF 417:
Option 1 is a number between 0 and 8 where the number of codewords used for check information is determined by 2^(value + 1).
Option 2 is the number of columns between 1 and 30.
(Read and Write property)

77.3.17 Option2 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is 0.
(Read and Write property)

77.3.18 Option3 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Various options, depends on barcode type.
Notes:

Default value is 0.
(Read and Write property)

77.3.19 Options as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output options.
Notes:

See kbco* constants.
(Read and Write property)

77.3.20 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of the barcode.
Notes:

Supported values: 0, 90, -90, 180, -180, 270, -270.
(Read and Write property)

77.3.21 OuterBorder as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional border around the scaled barcode measured in user space.
Notes:

The member OuterBorder can be used to extend the background rectangle. Each side of OuterBorder specifies the line width of the corresponding side of the rectangle. OuterBorder is measured in user space whereas BorderWidth is measured in pixels of the reference grid.

Note that the background rectangle is drawn only if BgColor is set to another value than NO_COLOR (default).
(Read and Write property)

77.3.22 Primary as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Primary data message (max 127 bytes).
Notes:

Composite codes only.
Image based barcodes only.
(Read and Write property)

77.3.23 Scale as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image based barcodes only.
Notes:

Default value is 1.0.
(Read and Write property)

77.3.24 ShowText as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Show human readable text?
Notes:

Default is true.
(Read and Write property)

77.3.25 SpaceWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whitespace width in pixels
Notes:

Default value is 0 (auto).
(Read and Write property)

77.3.26 SymbHeight as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Symbol height
Notes:

Default is 50.
(Read and Write property)

77.3.27 TextOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Offset to correct the y-coordinate of text.
Notes:

The default value is zero.
(Read and Write property)

77.3.28 Constants

77.3.29 kbcdtBinary = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Binary data.

77.3.30 kbcdtEscapeMode = 8

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Scan input data for escape sequences. This is a flag that can be combined with the other constants, e.g. pass EscapeMode and Unicode.

77.3.31 kbcdtGS1Mode = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: Encodes GS1 data using FNC1 characters.

77.3.32 kbcdtUnicode = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the data type flags.
Notes: UTF-8.

77.3.33 kbcoBind = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Boundary bars above and below the symbol and between rows if stacking multiple symbols.

77.3.34 kbcoBoldText = 64

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Embolden human readable text.

77.3.35 kbcoBox = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Add a box surrounding the symbol and whitespace.

77.3.36 kbcoDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use default settings.

77.3.37 kbcoDottyMode = & h00000100

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Plot a matrix symbol using dots rather than squares.

77.3.38 kbcoGS1_GS_Separator = & h00000200

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use GS instead FNC1 as GS1 separator.

77.3.39 kbcoImageOutput = & h01000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Draw the barcode as an image. Images are usually larger than vectors and require more processing time.

77.3.40 kbcoNoASCII = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Consider non-ASCII characters when creating the barcode.

77.3.41 kbcoReaderInit = 16

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Add a reader initialisation symbol to the data before encoding.

77.3.42 kbcoSmallText = 32

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Use a smaller font for human readable text.

77.3.43 kbcoUseActiveFont = & h02000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the output flags.
Notes: Vector output only. If set, text is output with the active font. Helvetica is used otherwise.

77.3.44 kbctAustraliaPost = 63

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Standard Customer

77.3.45 kbctAustraliaRedir = 68

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Redirection

77.3.46 kbctAustraliaReply = 66

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Reply Paid

77.3.47 kbctAustraliaRout = 67

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Australia Post Routing

77.3.48 kbctAztec = 92

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Aztec Code

77.3.49 kbctAztecRunes = & h00000080

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Aztec Runes

77.3.50 kbctC2Of5IATA = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 IATA

77.3.51 kbctC2Of5Industrial = 7

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 Industrial

77.3.52 kbctC2Of5Interleaved = 3

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Interleaved 2 of 5

77.3.53 kbctC2Of5Logic = 6

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Code 2 of 5 Data Logic

77.3.54 kbctC2Of5Matrix = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: USPS OneCode

77.3.137 kbctVIN = 73

MBS DynaPDF Plugin, Plugin Version: 20.5.

Function: One of the barcode types.
Notes: Vehicle Identification Number (America)

77.4 class DynaPDFBarcodeMBS

77.4.1 class DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for detail information on barcode fields.

77.4.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.4.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.4.4 Properties

77.4.5 Caption as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional, the caption.
Notes: (Read and Write property)

77.4.6 ECC as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error correction code.
Notes:

0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

77.4.7 Height as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Height in inches.
Notes: (Read and Write property)

77.4.8 nCodeWordCol as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode coloumn.
Notes:

Required for PDF417.
(Read and Write property)

77.4.9 nCodeWordRow as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of codewords per barcode row.
Notes:

Required for PDF417.
(Read and Write property)

77.4.10 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The resolution.
Notes:

Required. Should be 300.
(Read and Write property)

77.4.11 Symbology as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The symbology.
Notes:

PDF417, QRCode, or DataMatrix.
(Read and Write property)

77.4.12 Version as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of this object.
Notes:

Should be 1
(Read and Write property)

77.4.13 Width as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width in inches.
Notes: (Read and Write property)

77.4.14 XSymHeight as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical distance between two barcode modules, measured in pixels.
Notes:

Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

77.4.15 XSymWidth as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Required. The horizontal distance, in pixels, between two barcode modules.
Notes: (Read and Write property)

77.5 class DynaPDFBitmapMBS

77.5.1 class DynaPDFBitmapMBS

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap in DynaPDF.
Notes:

Currently only used for RenderAnnotOrField function.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.5.2 Methods

77.5.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.5.4 Properties

77.5.5 Buffer as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raw image buffer.
Notes:

To avoid problems, this is a copy of the image data.
(Read and Write property)

77.5.6 BufSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

77.5.7 DestX as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: x-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

77.5.8 DestY as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: y-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

77.5.9 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image height in pixels.
Notes: (Read and Write property)

77.5.10 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanline length in bytes.
Notes: (Read and Write property)

77.5.11 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image width.
Notes: (Read and Write property)

77.6 class DynaPDFBookmarkMBS

77.6.1 class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for bookmark information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.6.4 Methods

77.6.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.6.6 Properties

77.6.7 ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bookmark color (PDF 1.4).
Notes: (Read and Write property)

77.6.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination page.
Notes: (Read and Write property)

77.6.9 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination position.
Notes: (Read and Write property)

77.6.10 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Destination type.
Notes: (Read and Write property)

77.6.11 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bookmark handle.
Notes:

Index from 0 to GetBookmarkCount-1.
(Read and Write property)

77.6.12 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if the bookmark appears open.
Notes: (Read and Write property)

77.6.13 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent bookmark if any or -1.
Notes: (Read and Write property)

77.6.14 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text style (PDF 1.4).
Notes: (Read and Write property)

77.6.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title string.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

77.6.16 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title length.
Notes: (Read and Write property)

77.7 class DynaPDFChoiceValueMBS

77.7.1 class DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for choice values in a PDF.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.7.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.7.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.7.4 Methods

77.7.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.7.6 Properties

77.7.7 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ExpValue.
Notes: (Read and Write property)

77.7.8 Selected as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the choice value is selected.
Notes: (Read and Write property)

77.7.9 Value as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value.
Notes: (Read and Write property)

77.8 class DynaPDFCIDMetricMBS

77.8.1 class DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CID Metric.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.8.2 Methods

77.8.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.8.4 Properties

77.8.5 Width as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width value.
Notes: (Read and Write property)

77.8.6 x as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value.
Notes: (Read and Write property)

77.8.7 y as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value.
Notes: (Read and Write property)

77.9 class DynaPDFCMapMBS

77.9.1 class DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a character map in DynaPDF.
Notes:

This class contains several duplicate fields because CMap files contain usually a DSC comment section which provides Postscript specific initialization code. With exception of DSCResName the strings in the DSC section should not differ from their CMap counterparts. The Identity mapping of a character collection should contain the DSC comment "% % BeginResource: CMap (Identity)". Otherwise the string should be set to the CMap name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.9.2 Methods

77.9.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.9.4 Properties

77.9.5 BaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If set, this base cmap is required when loading the cmap.
Notes: (Read only property)

77.9.6 CIDCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ID count.
Notes:

0 if not set.
(Read only property)

77.9.7 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap name.
Notes: (Read only property)

77.9.8 CMapType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap type.
Notes:

Should be 1!
(Read only property)

77.9.9 CMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap version.
Notes: (Read only property)

77.9.10 DSCBaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes: (Read only property)

77.9.11 DSCCMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC CMap version.
Notes: (Read only property)

77.9.12 DSCResName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: DSC comment.
Notes:

If the CMap uses an Identity mapping this string should be set to Identity.
(Read only property)

77.9.13 DSCTitle as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The DSC title.
Notes:

DSC comment ->DSC CMap name + Registry + Ordering + Supplement, e.g. "GB-EUC-H Adobe GB1 0"
(Read only property)

77.9.14 FileName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes:

The file name and CMap name should be identical!
(Read only property)

77.9.15 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path.
Notes: (Read only property)

77.9.16 Ordering as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ordering.
Notes:

CIDSystemInfo ->The Character Collection, e.g. Japan1.
(Read only property)

77.9.17 Registry as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The registry string.
Notes:

CIDSystemInfo ->The registrant of the Character Collection is usually Adobe.
(Read only property)

77.9.18 Supplement as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Supplement number.
Notes:

CIDSystemInfo ->The Supplement number should be supported in the used PDF Version.
(Read only property)

77.9.19 WritingMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The writing mode.
Notes:

0 == Horizontal, 1 == Vertical
(Read only property)

77.10 class DynaPDFColorProfilesExMBS

77.10.1 class DynaPDFColorProfilesExMBS

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes:

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

77.10.2 Properties

77.10.3 DefInCMYK as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes:

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

77.10.4 DefInGray as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes:

Optional
(Read and Write property)

77.10.5 DefInRGB as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes:

Optional, sRGB is the default.
(Read and Write property)

77.10.6 DeviceProfile as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes:

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

77.10.7 SoftProof as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes:

Optional but very important. This profile emulates the output device.
(Read and Write property)

77.11 class DynaPDFColorProfilesMBS

77.11.1 class DynaPDFColorProfilesMBS

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A set of ICC profiles for color management.
Notes:

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

77.11.4 Properties

77.11.5 DefInCMYK as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK Profile.
Notes:

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

77.11.6 DefInGray as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray profile.
Notes:

Optional
(Read and Write property)

77.11.7 DefInRGB as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB profile.
Notes:

Optional, sRGB is the default.
(Read and Write property)

77.11.8 DeviceProfile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output device profile.
Notes:

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

77.11.9 SoftProof as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The proofing profile.
Notes:

Optional but very important. This profile emulates the output device.
(Read and Write property)

77.12 class DynaPDFColorSpaceMBS

77.12.1 class DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space class.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.12.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr6

77.12.4 Methods

77.12.5 BlackPoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE blackpoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

77.12.6 Colorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorant names (Separation, DeviceN, and NChannel only).
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Dim MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

Notes:

This array contains ColorantsCount strings.
The plugin marks the string as UTF-8 and it should contain UTF-8. Be we saw PDF files form other applications which put here WindowsANSI or MacRoman strings.

77.12.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.12.8 Gamma(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gamma values.
Notes: If set, one value per component.

77.12.9 Matrix(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: XYZ matrix.
Notes: If set, the array contains exactly 9 values.

77.12.10 Range(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The range values.
Notes: min/max for each component or for the .a and .b components of a Lab color space. Index is zero based.

77.12.11 WhitePoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIE whitepoint.
Notes: If set, the array contains exactly 3 values. (index 0 to 2)

77.12.12 Properties

77.12.13 Alternate as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alternative color space.
Notes:

Only set if the color space contains an alternate or base color space.
(Read only property)

77.12.14 AlternateType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Alternate color space or base space of an Indexed or Pattern color space.
Notes: (Read only property)

77.12.15 Buffer as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Contains either an ICC profile or the color table of an Indexed color space.
Notes: (Read only property)

77.12.16 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The buffer length in bytes.
Notes: (Read only property)

77.12.17 ColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colorants in the array.
Example:

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
```

```
Dim MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

// next
MyY = MyY+20
Next
End Sub
```

Notes: (Read only property)

77.12.18 Description as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

77.12.19 DeviceNAttributes as DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional attributes of DeviceN or NChannel color spaces.
Notes: (Read only property)

77.12.20 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle for this color space object.
Notes:

An IColorSpaceObj reference.
(Read only property)

77.12.21 HasBlackPoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the black point array has values.
Notes: (Read only property)

77.12.22 HasGamma as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the gamma array has values.
Notes: (Read only property)

77.12.23 HasMatrix as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the matrix array has values.
Notes: (Read only property)

77.12.24 HasRange as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the range array has values.
Notes: (Read only property)

77.12.25 HasWhitePoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the white point array has values.
Notes: (Read only property)

77.12.26 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The index in the color space list for current document.
Notes:

Can be -1 if not known by plugin.
In that case you would need to get list of all colorspaces and compare handle values to see which entry you got.
(Read only property)

77.12.27 Manufacturer as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

77.12.28 MetaData as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream ->ICCBased only.
Notes: (Read only property)

77.12.29 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Metadata length in bytes.
Notes: (Read only property)

77.12.30 Model as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model text for color space.
Notes:

For color spaces with valid ICC profile only.
(Read only property)

77.12.31 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the color space.
Notes:

For color spaces with valid ICC profile only.
The plugin picks name from Model, Description and Manufacturer properties.
(Read only property)

77.12.32 NumColors as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of colors in this color space.
Notes:

HiVal + 1 as specified in the color space. Indexed color space only.
(Read only property)

77.12.33 NumInComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of input components.
Notes: (Read only property)

77.12.34 NumOutComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of output components.
Notes: (Read only property)

77.12.35 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this color space.
Notes: (Read only property)

77.12.36 TypeString as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type as string for viewing in debugger.
Notes: (Read only property)

77.13 class DynaPDFDeviceNAttributesMBS

77.13.1 class DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for information about a Device N.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.13.4 Methods

77.13.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.13.6 ProcessColorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns process colorants with the given index.
Notes:

Raises out of bounds exceptions on bad index or if object does not have such an array.
Index is zero based.

77.13.7 Separations(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional array of separation color spaces.
Notes:

Raises out of bounds exceptions if used with wrong index parameter.
Index is zero based.

77.13.8 Properties

77.13.9 ProcessColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of process colorants in the array or zero if not set.
Notes: (Read and Write property)

77.13.10 ProcessColorSpace as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The process color space.
Notes: (Read and Write property)

77.13.11 SeparationsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of color spaces in the Separations array.
Notes: (Read and Write property)

77.14 class DynaPDFEditTextMBS

77.14.1 class DynaPDFEditTextMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text editor.
Notes:

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

77.14.6 Methods

77.14.7 Constructor(PDF as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the edit text class with the given PDF instance.

77.14.8 Destructor

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

77.14.9 FindPattern(text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches the text on the current PDF page for the given text.
Notes:

Returns the number of occurrences.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

77.14.10 ReplacePattern(NewText as string)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the text with a new one or deletes it if the new string is an empty string.
Notes:

Use the PrepareWrite event.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

77.14.11 Properties

77.14.12 Parent as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference of the DynaPDFMBS object.
Notes: (Read only property)

77.14.13 Events

77.14.14 PrepareWrite(M as DynaPDFMatrixMBS, text as string, FillCS as Integer, FillColor as UInt32, StrokeCS as Integer, StrokeColor as UInt32, FontSize as Double, x as Double, y as Double, w as Double, h as Double, font as DynaPDFFontMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called before replace function writes.
Notes:

Changed font, text size or color here.
If you return true, the text is not written.
Like if you draw it yourself or delete it.

Add new parameters for fill color, stroke color, font size, rectangle and font information in version 17.0.

77.15 class DynaPDFEmbFileNodeMBS

77.15.1 class DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an embedded file node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.15.2 Methods

77.15.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.15.4 Properties

77.15.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Embedded file.
Notes: (Read only property)

77.15.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name.
Notes:

UTF-8 encoded name. This key contains usually a 7 bit ASCII string.
(Read only property)

77.15.7 NextObject as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Next node if any.
Notes: (Read only property)

77.16 class DynaPDFErrorExceptionMBS

77.16.1 class DynaPDFErrorExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception.
Notes:

We report errors as exceptions if Error event is not implemented or you return kErrorEventRaise there.
Subclass of the RuntimeException class.

77.17.4 Methods

77.17.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.17.6 Properties

77.17.7 ErrCode as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code.
Notes:

ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

77.17.8 ErrType as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error type.
Notes:

ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

77.17.9 Message as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message
Notes: (Read and Write property)

77.17.10 ObjNum as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Object Number.
Notes:

-1 if not available
(Read and Write property)

77.17.11 Offset as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset.
Notes:

-1 if not available
(Read and Write property)

77.17.12 SrcFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Notes: (Read and Write property)

77.17.13 SrcLine as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Source Line.
Notes: (Read and Write property)

77.18 class DynaPDFExtGState2MBS

77.18.1 class DynaPDFExtGState2MBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.

77.18.2 Methods

77.18.3 BlendMode(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend modes.
Notes: See bm* constants.

77.18.4 Properties

77.18.5 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.18.6 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.18.7 BlackGen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

77.18.8 BlackGen2 as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The function handle or 0.
Notes: (Read and Write property)

77.18.9 BlendModeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode count.
Notes: (Read and Write property)

77.18.10 FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes:

-1.0 if not set.
(Read and Write property)

77.18.11 FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

77.18.12 Halftone as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The halftone handle or 0.
Notes: (Read and Write property)

77.18.13 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.18.14 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.18.15 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.18.16 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes:

riNone if not set
(Read and Write property)

77.18.17 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

77.18.18 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Soft mask handle.
Notes: (Read and Write property)

77.18.19 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the softmask must be disabled.
Notes: (Read and Write property)

77.18.20 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes:

-1.0 if not set.
(Read and Write property)

77.18.21 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19 class DynaPDFExtGStateMBS

77.19.1 class DynaPDFExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extended graphics state class.

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AlphaIsShape property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19.6 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The AutoStrokeAdjust property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19.7 BlendMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blend mode.
Notes:

See bm* constants.
Default bmNotSet.
(Read and Write property)

77.19.8 FillAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill alpha.
Notes:

-1.0 if not set.
(Read and Write property)

77.19.9 FlatnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FlatnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

77.19.10 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintFill property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19.11 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintMode property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19.12 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The OverPrintStroke property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.19.13 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The rendering intent.
Notes:

riNone if not set
(Read and Write property)

77.19.14 SmoothnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SmoothnessTol property.
Notes:

-1.0 if not set.
(Read and Write property)

77.19.15 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Soft mask pointer or nil. See CreateSoftMask for further information.
Notes: (Read and Write property)

77.19.16 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Disables the active soft mask.
Notes: (Read and Write property)

77.19.17 StrokeAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The stoke alpha value.
Notes:

-1.0 if not set.
(Read and Write property)

77.19.18 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TextKnockout property.
Notes:

PDF_MAX_INT if not set.
(Read and Write property)

77.20 class DynaPDFFieldExMBS

77.20.1 class DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for extended field information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.20.4 Methods

77.20.5 Close

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: You can call close to release all values now or simply let it go automatically later.

77.20.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.20.7 Kids(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of child fields.

77.20.8 Properties

77.20.9 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Action handle or -1 if not set.
Notes:

This action is executed when the field is activated.
(Read only property)

77.20.10 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of action.
Notes:

See kat* constants.
Meaningful only, if Action >= 0.
(Read only property)

77.20.11 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

77.20.12 BackColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the background color.
Notes: (Read only property)

77.20.13 Barcode as DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If present, this field is a barcode field.
Notes:

The field type is set to kftText since barcode fields are extended text fields.
(Read only property)

77.20.14 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bounding box of the field in bottom-up coordinates.
Notes: (Read only property)

77.20.15 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border color.
Notes: (Read only property)

77.20.16 BorderColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the border color.
Notes: (Read only property)

77.20.17 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border style.
Notes: (Read only property)

77.20.18 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Border width.
Notes: (Read only property)

77.20.19 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Where to position the caption.
Notes:

Use constants kbcpCaptionAbove, kbcpCaptionBelow, kbcpCaptionLeft, kbcpCaptionOnly, kbcpCaptionOver, kbcpCaptionRight or kbcpImageOnly.
(Read only property)

77.20.20 CharSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The char spacing.
Notes:

Text fields only.
(Read only property)

77.20.21 CheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ZapfDingbats character that is used to display the on state.
Notes: (Read only property)

77.20.22 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The check value.
Notes:

Check boxes only
(Read only property)

77.20.23 DefState as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default state.
Notes:

Check boxes only
(Read only property)

77.20.24 DefValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional default value.
Notes: (Read only property)

77.20.25 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was marked as deleted by DeleteField().
Notes: (Read only property)

77.20.26 DownCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the down state.
Notes: (Read only property)

77.20.27 DownImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the down state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

77.20.28 EditFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the editing font.
Notes: (Read only property)

77.20.29 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The events for this fields.
Notes: (Read only property)

77.20.30 ExpValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combo and list boxes only.
Notes:

The values can be accessed with GetFieldExpValueEx().
(Read only property)

77.20.31 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exp value.
Notes:

Check boxes only.
(Read only property)

77.20.32 FieldFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field flags.
Notes: (Read only property)

77.20.33 FieldFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Postscript name of the font.
Notes: (Read only property)

77.20.34 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field name.
Notes:

Note that children of a field group or radio button have no name.
(Read only property)

77.20.35 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type.
Notes: (Read only property)

77.20.36 FmtText as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The formatted field value.
Notes:

Text fields only.
The formatted field value if the field contains an OnFormat Javascript action.

(Read only property)

77.20.37 FmtTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text color for formatting.
Notes:

Text fields only.
Zero if not set. Usually RGB red otherwise.
(Read only property)

77.20.38 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size. 0.0 means auto font size.
Notes: (Read only property)

77.20.39 GroupType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If GroupType <>FieldType the field is a terminal field of a field group.
Notes: (Read only property)

77.20.40 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field handle.
Notes: (Read only property)

77.20.41 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Highlight mode.
Notes: (Read only property)

77.20.42 IEditFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

77.20.43 IEditFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The edit font info object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

77.20.44 IFieldFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

77.20.45 IFieldFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The field font info object.
Notes:

The object is created on demand the first time you access and cached.
(Read only property)

77.20.46 IsCalcField as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the OnCalc event of the field is connected with a JavaScript action.
Notes: (Read only property)

77.20.47 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of fields in the Kids array.
Notes: (Read only property)

77.20.48 MapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique mapping name of the field.
Notes: (Read only property)

77.20.49 MaxLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum text length.
Notes:

Text fields only ->zero means not restricted.
(Read only property)

77.20.50 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date.
Notes: (Read only property)

77.20.51 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Handle of an OCG or OCMD or -1.
Notes:

Fields can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

77.20.52 PageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array index to change the tab order.
Notes:

see SortFieldsByIndex().
(Read only property)

77.20.53 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Page on which the field is used or -1.
Notes: (Read only property)

77.20.54 RollCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the roll over state.
Notes: (Read only property)

77.20.55 RollImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the roll over state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

77.20.56 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotation angle in degrees.
Notes: (Read only property)

77.20.57 Signature as DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The signature details.
Notes:

Signature fields only. Present only for imported signature fields which which have a value. That means the file was digitally signed. -
Signed signature fields are always marked as deleted!
(Read only property)

77.20.58 TextAlign as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text align.
Notes:

Text fields only.
(Read only property)

77.20.59 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

77.20.60 TextColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of the field's text.
Notes: (Read only property)

77.20.61 TextScaling as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text scaling.
Notes:

Text fields only.
(Read only property)

77.20.62 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tooltip text.
Notes:

Optional tool tip.
(Read only property)

77.20.63 UniqueName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional unique name (NM key).
Notes: (Read only property)

77.20.64 UpCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Caption of the up state.
Notes: (Read only property)

77.20.65 UpImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Image handle of the up state.
Notes:

You can use this image handle with GetImageObj to get the image.
(Read only property)

77.20.66 Value as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the field.
Notes: (Read only property)

77.20.67 WordSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The word spacing.
Notes:

Text fields only.
(Read only property)

77.21 class DynaPDFFieldMBS

77.21.1 class DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Deprecated: This item is deprecated and should no longer be used. You can use DynaPDFFieldExMBS instead. **Function:** The class for field information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.21.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.21.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.21.4 Methods

77.21.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.21.6 Properties

77.21.7 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Background color.
Notes: (Read only property)

77.21.8 BackCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of background / border color
Notes: (Read only property)

77.21.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bounding box.
Notes: (Read only property)

77.21.10 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Border color.
Notes: (Read only property)

77.21.11 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Only set if the field is a check box.
Notes: (Read only property)

77.21.12 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the field was deleted.
Notes: (Read only property)

77.21.13 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field name.
Notes:

May be unicode or ASCII encoded.
(Read only property)

77.21.14 FieldNameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field name length in characters.
Notes: (Read only property)

77.21.15 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field type (see ft* constants)
Notes: (Read only property)

77.21.16 Font as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used font by the field (PostScript name).
Notes: (Read only property)

77.21.17 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font size.
Notes: (Read only property)

77.21.18 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Field handle.
Notes: (Read only property)

77.21.19 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Greater zero if the field has childs.
Notes: (Read only property)

77.21.20 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parent field handle if any.
Notes: (Read only property)

77.21.21 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text color.
Notes: (Read only property)

77.21.22 TextCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Color space of text color.
Notes: (Read only property)

77.21.23 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tool tip if any.
Notes:

Unicode or ASCII encoded.
(Read only property)

77.21.24 Value as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Field value.
Notes:

Unicode or ASCII encoded.
(Read only property)

77.22 class DynaPDFFileSpecExMBS

77.22.1 class DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an extended file specification.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.22.2 Methods

77.22.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.22.4 Properties

77.22.5 AFRelationship as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The relationship.
Notes:

PDF 2.0
(Read and Write property)

77.22.6 ColItem as Ptr

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If <>nil the embedded file contains a collection item with user defined data.
Notes:

This entry can occur in PDF Collections only (PDF 1.7). See "PDF Collections" in the help file for further information.
(Read and Write property)

77.22.7 Description as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional description string.
Notes: (Read and Write property)

77.22.8 DOS as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional DOS file name.
Notes: (Read and Write property)

77.22.9 EmbFileNode as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The embedded file node for embedded file.
Notes: (Read and Write property)

77.22.10 FileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

77.22.11 FileNameIsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

77.22.12 ID1 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes:

Meaningful only if FileName points to a PDF file.
(Read and Write property)

77.22.13 ID2 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional file ID.
Notes:

Meaningful only if FileName points to a PDF file.
(Read and Write property)

77.22.14 IsVolatile as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, the file changes frequently with time.
Notes: (Read and Write property)

77.22.15 Mac as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Mac file name.
Notes: (Read and Write property)

77.22.16 Thumb as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional thumb nail image.
Notes: (Read and Write property)

77.22.17 UFileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file name.
Notes:

PDF 1.7. Same as FileName but Unicode is allowed.
(Read and Write property)

77.22.18 Unix as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Unix file name.
Notes: (Read and Write property)

77.23 class DynaPDFFileSpecMBS

77.23.1 class DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for information about an embedded file.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.23.2 Methods

77.23.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.23.4 Properties

77.23.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer of an embedded file.
Notes: (Read and Write property)

77.23.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Buffer size in bytes.
Notes: (Read and Write property)

77.23.7 Checksum as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: 16 byte MD5 digest if set.
Notes: (Read and Write property)

77.23.8 ColItem as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Pointer to user defined collection item.
Notes: (Read and Write property)

77.23.9 Compressed as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Should be false if Decompress was true.
Notes: (Read and Write property)

77.23.10 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creation date as string.
Notes: (Read and Write property)

77.23.11 Description as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Description.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

77.23.12 FileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

77.23.13 FileSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompressed stream size or zero if not known.
Notes: (Read and Write property)

77.23.14 IsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

77.23.15 MIMEType as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: MIME media type name (RFC 2046).
Notes:

See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

77.23.16 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modification date as string.
Notes: (Read and Write property)

77.23.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the file specification in the name tree.
Notes:

This string is either an unicode encoded string or an ASCII encoded string.
This value is always present.
(Read and Write property)

77.23.18 UnicodeFileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as FileName but Unicode is allowed.
Notes:

PDF 1.7.
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

77.24 class DynaPDFFontInfoMBS

77.24.1 class DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for DynaPDF font info.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.24.4 Methods

77.24.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.24.6 HorzWidths(index as UInt32) as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Horizontal glyph widths.
Notes: Index from 0 ot HorzWidthsCount -1.

77.24.7 VertWidths(index as UInt32) as DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Vertical glyph widths array.

77.24.8 Properties

77.24.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent (optional).
Notes: (Read only property)

77.24.10 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width (optional).
Notes: (Read only property)

77.24.11 BaseEncoding as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The base encoding.
Notes:

Valid only if HaveEncoding is true.
Can be kbeWinAnsi, kbeStandard, kbeMacRoman or kbeMacExpert.
(Read only property)

77.24.12 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read only property)

77.24.13 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height (optional).
Notes: (Read only property)

77.24.14 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The charset describes which glyphs are present in the font.
Notes: (Read only property)

77.24.15 CharSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CharSet in bytes.
Notes: (Read only property)

77.24.16 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Character collection.
Notes: (Read only property)

77.24.17 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: SystemInfo ->Issuer of the character collection.
Notes: (Read only property)

77.24.18 CIDSet as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only.
Notes:

This is a table of bits indexed by CIDs.
(Read only property)

77.24.19 CIDSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDSet in bytes.
Notes: (Read only property)

77.24.20 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CIDSystemInfo ->Supplement number.
Notes: (Read only property)

77.24.21 CIDToGIDMap as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allowed for embedded TrueType based CID fonts only.
Notes: (Read only property)

77.24.22 CIDToGIDMapSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the CIDToGIDMap in bytes.
Notes: (Read only property)

77.24.23 CMapBuf as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMap data.
Notes:

Only available if the CMap was embedded.
(Read only property)

77.24.24 CMapBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CMAP Buffer size in bytes.
Notes: (Read only property)

77.24.25 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: CID fonts only external CMap name or encoding.
Notes: (Read only property)

77.24.26 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent (optional).
Notes: (Read only property)

77.24.27 Encoding as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255.
Notes:

not available for CID fonts.
(Read only property)

77.24.28 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char (simple fonts only).
Notes: (Read only property)

77.24.29 Flags as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes:

See DynaPDF manual.

The font flags describe certain properties of the font. The most important flags are the following:

Flag	Description
1	Fixed pitch font
2	Serif style
4	Symbol font
8	Script style
& h20	Non-symbolic font
& h40	Italic style
& h40000	Force Bold (Type1 fonts only)

The full set of available flags can be found in the PDF Reference.
(Read only property)

77.24.30 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the size of the largest glyph in this font.
Notes: (Read only property)

77.24.31 FontBuffer as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font data.
Notes:

Available if the font was embedded or loaded from a buffer.
(Read only property)

77.24.32 FontBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file size in bytes..
Notes: (Read only property)

77.24.33 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes: (Read only property)

77.24.34 FontFilePath as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file path.
Notes:

Only available for system fonts.
(Read only property)

77.24.35 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file type.
Notes:

Can be:
kffsType1C, kffsOpenTypeC, kffsOpenType, kffsNoSubtype, kffsCIDFontType2 or kffsCIDFontType0C.
(Read only property)

77.24.36 FontName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font name (should be the same as BaseFont).
Notes: (Read only property)

77.24.37 FontStretch as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font stretch.
Notes:

Optional ->Condensed, and so on.
(Read only property)

77.24.38 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes:

If ftType0 the font is a CID font.
(Read only property)

77.24.39 FontWeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight (optional).
Notes: (Read only property)

77.24.40 FullName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The full name.
Notes:

System fonts only.
(Read only property)

77.24.41 HaveEncoding as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether encoding is known.
Notes:

If true, BaseEncoding was set from the font's encoding.
(Read only property)

77.24.42 HorzWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of horizontal widths in the array.
Notes: (Read only property)

77.24.43 Imported as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether font is imported.
Notes:

If true, the font was imported from an external PDF file.
(Read only property)

77.24.44 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read only property)

77.24.45 Lang as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional language code defined by BCP 47.
Notes: (Read only property)

77.24.46 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char (simple fonts only).
Notes: (Read only property)

77.24.47 Leading as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Leading (optional).
Notes: (Read only property)

77.24.48 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of a Type1 font.
Notes: (Read only property)

77.24.49 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of a Type1 font program.
Notes: (Read only property)

77.24.50 Length3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of a Type1 font program.
Notes: (Read only property)

77.24.51 MaxWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum glyph width (optional).
Notes: (Read only property)

77.24.52 Metadata as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional XMP metadata stream about the font file.
Notes: (Read only property)

77.24.53 MetadataSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: MetaData size in bytes.
Notes: (Read only property)

77.24.54 MisWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Missing width (default = 0.0).
Notes: (Read only property)

77.24.55 Panose as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional 12 bytes long Panose string.
Notes:

CID fonts only.
(Read only property)

77.24.56 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: System fonts only.
Notes: (Read only property)

77.24.57 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units.
Notes:

A default value is set if the font contains no space character.
(Read only property)

77.24.58 StemH as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of horizontal stems.
Notes: (Read only property)

77.24.59 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The thickness of vertical stems.
Notes: (Read only property)

77.24.60 ToUnicode as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap.
Notes:

Only available for imported fonts.
(Read only property)

77.24.61 ToUnicodeSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: ToUnicode CMap size in bytes.
Notes: (Read only property)

77.24.62 VertDefPos as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default vertical displacement vector.
Notes: (Read only property)

77.24.63 VertWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of vertical widths in the array.
Notes: (Read only property)

77.24.64 WMode as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writing Mode.
Notes:

0: Horizontal
1: Vertical.
(Read only property)

77.24.65 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of lowercase letters measured from the baseline.
Notes: (Read only property)

77.25 class DynaPDFFontMBS

77.25.1 class DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for pdf font information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.25.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.25.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

77.25.4 Methods

77.25.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.25.6 Encoding(Index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unicode mapping 0..255 if set.
Notes: Index from 0 to 255.

77.25.7 Widths(Index as Integer) as single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Glyph widths.
Notes: Index from 0 to WidthsCount-1.

77.25.8 Properties

77.25.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ascent of this font.
Notes: (Read and Write property)

77.25.10 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: PostScript Name or Family Name.
Notes: (Read and Write property)

77.25.11 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Cap height.
Notes: (Read and Write property)

77.25.12 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default character widths ->CID fonts only.
Notes: (Read and Write property)

77.25.13 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Descent.
Notes: (Read and Write property)

77.25.14 FirstChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first character.
Notes: (Read and Write property)

77.25.15 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font flags.
Notes: (Read and Write property)

77.25.16 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optional Font Family (Family Name).
Notes:

Unicode or ASCII encoded.
(Read and Write property)

77.25.17 FontFile as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font file buffer.
Notes:

Only imported fonts are returned.
(Read and Write property)

77.25.18 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font file subtype.
Notes:

See kffs* constants like those:

Name	Value	Description
kffsType1C	0	CFF based Type1 font
kffsCIDFontType0C	1	CFF based Type1 CID font
kffsOpenType	2	TrueType based OpenType font
kffsOpenTypeC	3	CFF based OpenType font
kffsCIDFontType2	4	TrueType based CID Font
kffsNoSubtype	9	The font file is in the format of FontType

(Read and Write property)

77.25.19 FontName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Font name.
Notes: (Read and Write property)

77.25.20 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The font type.
Notes:

If ftType0 the font is a CID font.
(Read and Write property)

77.25.21 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle.
Notes: (Read and Write property)

77.25.22 LastChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Last char.
Notes: (Read and Write property)

77.25.23 Length1 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the clear text portion of the Type1 font, or the length of the entire font program if FontType <>kffType1.
Notes: (Read and Write property)

77.25.24 Length2 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the encrypted portion of the Type1 font program (Type1 fonts only).
Notes: (Read and Write property)

77.25.25 Length3 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Length of the fixed-content portion of the Type1 font program or zero if not present.
Notes: (Read and Write property)

77.25.26 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Space width in font units or default value.
Notes: (Read and Write property)

77.25.27 WidthsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of widths in the array.
Notes: (Read and Write property)

77.25.28 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x-height.
Notes: (Read and Write property)

77.26 class DynaPDFFontMetricsMBS

77.26.1 class DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for font metrics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

77.26.2 Blog Entries

77.26.4 Methods

77.26.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

77.26.6 Properties

77.26.7 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Ascent.
Notes: (Read and Write property)

77.26.8 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Average character width.
Notes: (Read and Write property)

77.26.9 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cap height.
Notes: (Read and Write property)

77.26.10 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Default width.
Notes: (Read and Write property)

77.26.11 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Descent.
Notes: (Read and Write property)

77.26.12 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: First char.
Notes: (Read and Write property)

77.26.13 FixedWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of all glyphs in a fixed pitch font.
Notes: (Read and Write property)

77.26.14 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font's bounding box.
Notes: (Read and Write property)

77.26.15 FontStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font style with which the font was loaded.
Example:

```
dim pdf as DynaPDFMBS // your instance

// set font
call pdf.SetFont("Helvetica", pdf.kfsNone, 12)

// and check whether it is bold
dim m as DynaPDFFontMetricsMBS = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if

// set bold font
call pdf.SetFont("Helvetica", pdf.kfsBold, 12)

// and check whether it is bold
m = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if
```

Notes:

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

77.26.16 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this a fixed pitch font?
Notes: (Read and Write property)

77.26.17 IsStdFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a standard font?
Notes: (Read and Write property)

77.26.18 IsSymbolFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is this is a symbolic font?
Notes: (Read and Write property)

77.26.19 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Italic angle of italic fonts.
Notes: (Read and Write property)

77.26.20 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last char.
Notes: (Read and Write property)

77.26.21 LineGap as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic line gap.
Notes: (Read and Write property)

77.26.22 MacStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: macOS style flags.
Notes: (Read and Write property)

77.26.23 RealStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the real style of the font (bold and italic styles are maybe emulated)
Notes:

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

77.26.24 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of vertical stems.
Notes: (Read and Write property)

77.26.25 StrikeoutPos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strikeout position.
Notes: (Read and Write property)

77.26.26 StrikeoutWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the strikeout line.
Notes: (Read and Write property)

77.26.27 TypoAscender as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: sTypoAscender of the OS/2 table of TrueType and OpenType fonts.
Notes: (Read and Write property)

77.26.28 TypoLeading as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Typographic leading or line height of the font. T
Notes:

This is TypoAscender - Descent + LineGap.
If typographic metrics are not available then TypoAscender is set to Ascent.
(Read and Write property)

77.26.29 UnderlinePos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Underline position.
Notes: (Read and Write property)

77.26.30 UnderlineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width of the underline.
Notes: (Read and Write property)

77.26.31 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

77.26.32 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

77.26.33 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

77.26.34 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Bitset for unicode ranges.
Notes: (Read and Write property)

77.26.35 Weight as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Font weight.
Notes: (Read and Write property)

77.26.36 WidthClass as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Width class of the font.
Notes: (Read and Write property)

77.26.37 WinDescent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: usWinDescent of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

77.26.38 WinStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: fsSelection of the OS/2 table of TrueType and OpenType fonts
Notes: (Read and Write property)

77.26.39 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: X-height.
Notes: (Read and Write property)
