FileOffset: Byte start in the file.
Data: The data to be written to the file.
DataOffset: The byte offset inside the memoryblock.
Size: The number of bytes to be written.

| | | |
|---|---|---|
| const HASP_FILEID_MAIN | = & hfff0 | File id for HASP4 compatible memory contents w/o FAS |
| const HASP_FILEID_LICENSE | = & hfff2 | (Dummy) file id for license data area of memory contents |

### 73.3.26 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Write to key memory.
**Notes:**

Lasterror is set.
FileOffset: Byte start in the file.
Data: The data to be written to the file.

| | | |
|---|---|---|
| const HASP_FILEID_MAIN | = & hfff0 | File id for HASP4 compatible memory contents w/o FAS |
| const HASP_FILEID_LICENSE | = & hfff2 | (Dummy) file id for license data area of memory contents |

### 73.3.27 Properties

### 73.3.28 Handle as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The handle of the current session.
**Notes:** (Read and Write property)

### 73.3.29 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Last error code reported from one of the functions.
**Notes:**

| | |
|---|---|
| HASP_STATUS_OK = 0 | no error occurred |
| HASP_MEM_RANGE = 1 | invalid memory address |
| HASP_INV_PROGNUM_OPT = 2 | unknown/invalid feature id option |
| HASP_INSUF_MEM = 3 | memory allocation failed |
| HASP_TMOF = 4 | too many open features |
| HASP_ACCESS_DENIED = 5 | feature access denied |
| HASP_INCOMPAT_FEATURE = 6 | incompatible feature |
| HASP_CONTAINER_NOT_FOUND = 7 | license container not found |
| HASP_TOO_SHORT = 8 | en-/decryption length too short |
| HASP_INV_HND = 9 | invalid handle |
| HASP_INV_FILEID = 10 | invalid file id / memory descriptor |
| HASP_OLD_DRIVER = 11 | driver or support daemon version too old |
| HASP_NO_TIME = 12 | real time support not available |
| HASP_SYS_ERR = 13 | generic error from host system call |
| HASP_NO_DRIVER = 14 | hardware key driver not found |
| HASP_INV_FORMAT = 15 | unrecognized info format |
| HASP_REQ_NOT_SUPP = 16 | request not supported |
| HASP_INV_UPDATE_OBJ = 17 | invalid update object |
| HASP_KEYID_NOT_FOUND = 18 | key with requested id was not found |
| HASP_INV_UPDATE_DATA = 19 | update data consistency check failed |
| HASP_INV_UPDATE_NOTSUPP = 20 | update not supported by this key |
| HASP_INV_UPDATE_CNTR = 21 | update counter mismatch |
| HASP_INV_VCODE = 22 | invalid vendor code |
| HASP_ENC_NOT_SUPP = 23 | requested encryption algorithm not supported |
| HASP_INV_TIME = 24 | invalid date / time |
| HASP_NO_BATTERY_POWER = 25 | clock has no power |
| HASP_NO_ACK_SPACE = 26 | update requested acknowledgement, but no area to return it |
| HASP_TS_DETECTED = 27 | terminal services (remote terminal) detected |
| HASP_FEATURE_TYPE_NOT_IMPL = 28 | feature type not implemented |
| HASP_UNKNOWN_ALG = 29 | unknown algorithm |
| HASP_INV_SIG = 30 | signature check failed |
| HASP_FEATURE_NOT_FOUND = 31 | feature not found |
| HASP_NO_LOG = 32 | trace log is not enabled |

(Read and Write property)

## 73.4 module MatrixDongleMBS

### 73.4.1 module MatrixDongleMBS

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This module implements methods to access the matrix lock dongles from Technodata Interware. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Note: You will find the newest versions of the API and tools available for download at www.tdi-matrix.com

The plugin is from MBS. The library code it is using is based on work from tdi, so if you have trouble, ask both of us.

Available for:

- Windows 32-bit on Intel
- macOS 32-bit
- Linux 32-bit on Intel

Not available for:

- iOS
- Linux 64-bit on Intel
- Linux on ARM
- Windows 64-bit
- macOS 64-bit

### 73.4.2 Blog Entries

- MBS Xojo Plugins, version 20.4pr2
- MBS REALbasic plug-ins version 9.4

### 73.4.3 Blog Entries

- MBS Xojo Plugins, version 20.4pr2
- MBS REALbasic plug-ins version 9.4

### 73.4.4 Methods

### 73.4.5 DongleCount(PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the number of dongles available at the specified LPT or USB interface.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.6 DongleDecryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmit a 8 bytes encrypted data block to the dongle. This is returned decrypted as clear data.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.7 DongleEncryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmit a 8 bytes clear data block to the dongle. This is returned in XTEA-encrypted form.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.8 DongleExit as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Exits the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.9 DongleFind as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Searches for the dongle and returns the LPT/USB interface at which it was found.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.10 DongleFindEx(byref LPTNr1 as Integer, byref LPTAdr1 as Integer, byref DNGCnt1 as Integer, byref LPTNr2 as Integer, byref LPTAdr2 as Integer, byref DNGCnt2 as Integer, byref LPTNr3 as Integer, byref LPTAdr3 as Integer, byref DNGCnt3 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Searches for all LPT ports and dongles and stores this information in a data buffer.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.11 DongleGetKeyFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether a 128-bit XTEA key different to zero is available in the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.12 DongleMemSize(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the memory size of the dongle in Bytes.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.13 DongleModel(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the model n umber of the hardware from the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.14 DongleReadData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the data from the Matrix-dongle beginning from the first memory field.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.15 DongleReadDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the data from the Matrix-dongle beginning from the specifyed memory field.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.16 DongleReadSerNr(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the unique serial number which is assigned to each Matrix-dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.17 DongleSetLedFlag(a as Integer, b as Integer, c as Integer, d as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

**Function:** Sets the LED flag.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.18 DongleVersion(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the version number of the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.19 DongleWriteData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes data into the Matrix-dongle beginning from the first memory field.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.20 DongleWriteDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes data into the Matrix-dongle beginning from the specifyed memory field.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.21 DongleWriteKey(UserCode as Integer, KeyData as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Saves the 128-bit XTEA key in the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.22 GetConfigMatrixNet(Category as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns from Server-File parameters configured with the MxNet server program.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.23 GetDriverFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the current USB operating mode of the dongle "HID-Mode" or "Driver-Mode".
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.24 GetPortAdr(LptNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the address of the LPT port.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.25 GetVersionAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the version number of the Matrix-API.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.26 GetVersionDRV as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the version number of the LPT driver.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.27 GetVersionDRV_USB as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the version number of the USB driver.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.28 InitMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Starts the Matrix API.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.29 LogInMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Logs on the network client and acquires/ refreshes the user slot in the server file.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.30 LogOutMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Logs off the network client and releases the UserSlot in the server file again.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.31 PausePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Stops the Windows print-spooler. (under Win9.x / Win-NT / 2000 only)
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.32 ReleaseMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Close the Matrix API.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.33 ResumePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Releases the Windows print-spooler again. (under Win9.x / Win-NT / 2000 only)
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.34 SetConfigMatrixNet(Access as Integer, File as string) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Activates or deactivates network access.
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.35 SetDriverFlag(UserCode as Integer, DriverFlag as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the dongle to the desired USB operating mode "HID-Mode" or "Driver-Mode".
**Notes:** Please check the documentation of the dongle API for more details.

### 73.4.36 SetW95Access(mode as Integer)

MBS Dongle Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Win95/98 with or without VXD driver.
**Notes:**

Can have the value 1 or 2 or the predefined values: IW_DRIVER / IW_NODRIVER

1 Communication takes place via the VXD driver.
2 Communication takes place without the VXD driver.

Please check the documentation of the dongle API for more details.

## 73.5 class Rockey2MBS

### 73.5.1 class Rockey2MBS

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class to use Rockey 2 dongles in Xojo.
**Deprecated:** This item is deprecated and should no longer be used. You can use Rockey4NDMBS instead.
**Notes:**

Available for:

- Linux 32-bit on Intel
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel
- macOS 32-bit on Intel
- macOS 64-bit on Intel

Unavailable for:

- Windows 64-bit on ARM
- Linux 32-bit on ARM
- Linux 64-bit on ARM
- macOS 64-bit on ARM
- iOS

We may add more targets once we get newer SDK versions with new libraries.

### 73.5.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr6
- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins, version 17.2pr1
- MBS Xojo / Real Studio Plugins, version 15.4pr5
- MBS REALbasic plug-in 9.6

### 73.5.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr6
- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins, version 17.2pr1
- MBS Xojo / Real Studio Plugins, version 15.4pr5
- MBS REALbasic plug-in 9.6

### 73.5.4 Methods

### 73.5.5 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether library was loaded.
**Notes:**

Returns true if library was loaded successfully or we use internal library.

Available for:

- Linux 32-bit on Intel
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel
- macOS 32-bit on Intel
- macOS 64-bit on Intel

Unavailable for:

- Windows 64-bit on ARM
- Linux 32-bit on ARM
- Linux 64-bit on ARM
- macOS 64-bit on ARM
- iOS

### 73.5.6 Close

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes the dongle.
**Notes:**

Lasterror is set.
This is called automatically by the destructor.

### 73.5.7 Find as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Searches for Rockey 2 dongles on the computer.
**Notes:**

Lasterror is set.
Returns the number of attached Rockey 2 dongles.

### 73.5.8 GenUID(byref uid as UInt32, seed as string, isProtect as boolean) as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Generates an user ID.
**Notes:**

UID: the generated user id.
seed: Seed to generate UID. It is a character string with the maximum length of 64 bytes.
isProtect: Sets write protection. 0=dongle not write protected, 1=dongle write protected.

Lasterror is set.

### 73.5.9 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Rockey2 shared library.
**Notes:**

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
See also:

- 73.5.10 LoadLibrary(path as string) as boolean 14261

### 73.5.10 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Rockey2 shared library.
**Notes:**

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
See also:

- 73.5.9 LoadLibrary(file as folderitem) as boolean 14260

### 73.5.11 Open(mode as Int32, uid as UInt32, byref hid as UInt32)

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a specific rockey 2 dongle.
**Notes:**

mode:
This parameter indicates the way to open the dongle
mode = 0, open the first found ROCKEY2 dongle
mode >0, open the dongle according to the UID. The mode value is thedongle number, for example: uid=12345678, mode=2, this means it willopen the second dongle with UID 12345678
mode = -1, open the dongle according to the HID, and *hid can not be 0We defined two constants: AUTO_MODE=0 and HID_MODE=-1

uid(UserID): You need to specify the dongle UID and this UID is generated withRY2_GenUID
hid(HardwareID): Open dongle with HID of hid. The dongle HID will be returned to hid regardless of how the dongle was opened.

Sets the handle and lasterror properties.

### 73.5.12 Read(BlockIndex as Int32) as string

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read dongle content.
**Notes:**

BlockIndex: Block index. Specify the block to write. The value range is 0-4
Returns 512 bytes on success.
Lasterror is set.

### 73.5.13 Transform(data as string) as string

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

**Function:** Transforms data.

### 73.5.14 Write(BlockIndex as Int32, data as string)

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes data to the dongle.
**Notes:**

Blockindex: Specify the block to write. The value range is 0-4.
Lasterror is set.
If you pass less than 512 bytes, the remaining space is filled with zeros.

### 73.5.15 Properties

### 73.5.16 Handle as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle for dongle communication.
**Notes:** (Read and Write property)

### 73.5.17 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 73.5.18 Constants

### 73.5.19 AUTO_MODE = 0

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** A constant for use in the Open method.

### 73.5.20 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** A constant for use in the Open method.

### 73.5.21 R2_MINOR = 16

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** The maximum number of dongles the plugin can handle.

### 73.5.22 ROCKEY2_DISABLE_WRITE_PROTECT = false

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the constants for the GenUID function.

### 73.5.23 ROCKEY2_ENSABLE_WRITE_PROTECT = true

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the constants for the GenUID function.

### 73.5.24 RY2ERR_FLUSH_QUEUE = & hA010000F

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.25 RY2ERR_FREE_PREPARSED_DATA = & hA010000E

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.26 RY2ERR_GETCAPS = & hA010000D

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.27 RY2ERR_GET_ATTRIBUTES = & hA010000B

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.28 RY2ERR_GET_PREPARSED_DATA = & hA010000C

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.29 RY2ERR_GET_SERIAL = & hA0100011

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.30 RY2ERR_NOT_OPENED_DEVICE = & hA0100002

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Need to call RY2_Open first to open the dongle, then call this function (operation error)

### 73.5.31 RY2ERR_NO_SUCH_DEVICE = & hA0100001

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Specified dongle is not found (parameter error)

### 73.5.32 RY2ERR_OPEN_DEVICE = & hA0100007

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Open device error (Windows error)

### 73.5.33 RY2ERR_READ_REPORT = & hA0100008

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Read record error(Windows error)

### 73.5.34 RY2ERR_SETUP_DI_CLASS_DEVS = & hA0100010

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.35 RY2ERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA010000A

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error (Windows error)

### 73.5.36 RY2ERR_SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Success

### 73.5.37 RY2ERR_TOO_LONG_DEVICE_DETAIL = & hA0100012

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Internal error

### 73.5.38 RY2ERR_TOO_LONG_SEED = & hA0100005

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Seed character string is longer than 64 bytes when calling GenUID (parameter error)

### 73.5.39 RY2ERR_UNKNOWN_DEVICE = & hA0100020

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Unknown device.

### 73.5.40 RY2ERR_UNKNOWN_ERROR = & hA010FFFF

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Unknown error(hardware error)

### 73.5.41 RY2ERR_VERIFY = & hA0100014

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Verification error(hardware error)

### 73.5.42 RY2ERR_WRITE_PROTECT = & hA0100006

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Tried to write to write-protected dongle(operation error)

### 73.5.43 RY2ERR_WRITE_REPORT = & hA0100009

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Write record error(Windows error)

### 73.5.44 RY2ERR_WRONG_INDEX = & hA0100004

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Block index error (parameter error)

### 73.5.45 RY2ERR_WRONG_REPORT_LENGTH = & hA0100013

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Wrong report length.

### 73.5.46 RY2ERR_WRONG_UID = & hA0100003

MBS Dongle Plugin, Plugin Version: 9.6.

**Function:** One of the error constants.
**Notes:** Wrong UID(parameter error)

## 73.6 class Rockey4NDMBS

### 73.6.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class to handle calls to the Rockey4ND Dongle API.
**Notes:**

Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

### 73.6.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

### 73.6.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4
- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr2
- MBS Xojo Plugins, version 18.3pr1

### 73.6.4 Methods

### 73.6.5 Available as Boolean

MBS Dongle Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether the class is available
**Example:**

```
if Rockey4NDMBS.Available then

// check dongle

else

// can't check dongle

end if
```

**Notes:**

Available for:

- macOS
- Linux on Intel
- Linux 64-bit on ARM
- Windows on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Windows 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

### 73.6.6 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calls the Rockey Dongle API.
**Example:**

```
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

**Notes:**

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present

### 73.6.7 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Same as Rockey but a different name for compatibility.
**Notes:** The original Rockey dongle calls the function RockeyCall.

### 73.6.8 Properties

### 73.6.9 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A one KB big buffer.
**Notes:** (Read and Write property)

### 73.6.10 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The 16bit handle value.
**Notes:** (Read and Write property)

### 73.6.11 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The first 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.6.12 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The second 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.6.13 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The first 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.6.14 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The second 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.6.15 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The third 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.6.16 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The forth 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

## 73.7 class RockeyMBS

### 73.7.1 class RockeyMBS

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class to handle calls to the Rockey Dongle API.
**Deprecated:** This item is deprecated and should no longer be used. You can use Rockey4NDMBS instead.
**Notes:**

Available for:

- Linux 32-bit on Intel
- macOS 32-bit on Intel
- Windows 32-bit on Intel

Unavailable for:

- iOS
- Linux 32-bit on ARM
- Linux 64-bit on ARM
- Linux 64-bit on Intel
- macOS 64-bit
- Windows 64-bit on ARM
- Windows 64-bit on Intel

### 73.7.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 73.7.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 73.7.4 Methods

### 73.7.5 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calls the Rockey Dongle API.
**Example:**

```
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
MsgBox "Found dongle: "+hex(r.lp1)
else
MsgBox "Error: "+str(e)
end if
```

**Notes:**

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present (always on Linux)

### 73.7.6 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Same as Rockey but a different name for compatibility.
**Notes:** The original Rockey dongle calls the function RockeyCall.

### 73.7.7 Properties

### 73.7.8 Buffer as memoryblock

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A one KB big buffer.
**Notes:** (Read and Write property)

### 73.7.9 Handle as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The 16bit handle value.
**Notes:** (Read and Write property)

### 73.7.10 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The first 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.7.11 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The second 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.7.12 P1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The first 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.7.13 P2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The second 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.7.14 P3 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The third 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

### 73.7.15 P4 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The forth 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

## 73.8 module SecureDongleXMBS

### 73.8.1 module SecureDongleXMBS

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This module implements an interface to the SecureDongleX products from SecureMetric Technology Sdn. Bhd.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

For more details see the website:
http://www.securemetric.com/

Please order there your evaluation SDK as well as further dongles.

Not available for:

- iOS
- Windows 64-bit
- Linux 64-bit
- Linux 32-bit ARM
- macOS 64-bit

Available for:

- Windows 32-bit on Intel
- Linux 32-bit on Intel
- macOS 32-bit

### 73.8.2 Blog Entries

- MBS Xojo Plugins, version 23.0pr6
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr3

### 73.8.3 Blog Entries

- MBS Xojo Plugins, version 23.0pr6
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr3

### 73.8.4 Methods

### 73.8.5 Close(handle as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Close specified SecureDongle X
**Notes:** Pass the handle you got returned from Open method.

### 73.8.6 Find as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Find dongles attached to the computer
**Notes:**

See SDK Developer Guide for details.
Returns number of dongles or negative error code.

### 73.8.7 GetVersion(handle as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get SecureDongle X hardware version
**Notes:**

See SDK Developer Guide for details.
Returns positive version number or nega

### 73.8.8 Open(mode as Integer, uid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Open specified SecureDongle X
**Notes:**

Convenience method where hid parameter is left away.
The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 73.8.9 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer 14280

### 73.8.9 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Open specified SecureDongle X
**Notes:**

The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 73.8.8 Open(mode as Integer, uid as UInt32) as Integer 14279

### 73.8.10 Read(handle as Integer, BlockIndex as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read SecureDongle X content
**Notes:**

handle: SDX handle. It is the handle returned from Open
block_index: The block index. Specify the block to read. The value range is 0-4
data: Read buffer. Here you receive a string with 512 bytes.

Returns an error code.

See SDK Developer Guide for details.

### 73.8.11 RSADecrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read SecureDongle X content and Decrypt with RSA.
**Notes:** See SDK Developer Guide for details.

### 73.8.12 RSAEncrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypt with RSA and write to SecureDongle X.
**Notes:** See SDK Developer Guide for details.

### 73.8.13 Transform(handle as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Data hashing function.
**Notes:**

On input data contains a string to transform (maximum 32 bytes) and on return the hash value.

See SDK Developer Guide for details.

### 73.8.14 Write(handle as Integer, BlockIndex as Integer, data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write to SecureDongle X
**Notes:**

handle: SDX handle. It is the handle returned from Open
block_index: The Block index. Specify the block to write. The value range is 0-4
data: Write buffer. The buffer can be at maximum 512 bytes to accommodate the 512-byte block size. The

plugin will fill the rest with zeros.

Returns error code.

See SDK Developer Guide for details.

### 73.8.15 Constants

### 73.8.16 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** The constant for default HID mode.

### 73.8.17 SDXERR_FAILED_DECRYPTION = & hA010000E

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Failed Decrypt string (Cryptography error)

### 73.8.18 SDXERR_FAILED_ENCRYPTION = & hA010000C

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Failed encrypt string (cryptography error)

### 73.8.19 SDXERR_FAILED_WRITE_KEY = & hA010000D

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Failed write key (cryptography error)

### 73.8.20 SDXERR_FLUSH_QUEUE = & hA0100017

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.21 SDXERR_FREE_PREPARSED_DATA = & hA0100016

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.22 SDXERR_GENERATE_KEY = & hA010000A

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Generate key error (cryptography error)

### 73.8.23 SDXERR_GETCAPS = & hA0100015

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.24 SDXERR_GET_ATTRIBUTES = & hA0100013

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.25 SDXERR_GET_PREPARSED_DATA = & hA0100014

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.26 SDXERR_GET_SERIAL = & hA0100019

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.27 SDXERR_INVALID_KEY = & hA010000B

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Invalid key (cryptography error)

### 73.8.28 SDXERR_INVALID_LEN = & hA0100008

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Invalid length (parameter error)

### 73.8.29 SDXERR_NOT_OPENED_DEVICE = & hA0100002

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Need to call SDX_Open first to open the SDX, then call this function (operation error)

### 73.8.30 SDXERR_NO_SUCH_DEVICE = & hA0100001

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Specified SDX is not found (parameter error)

### 73.8.31 SDXERR_OPEN_DEVICE = & hA010000F

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Open device error (Windows error)

### 73.8.32 SDXERR_READ_REPORT = & hA0100010

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Read record error (Windows error)

### 73.8.33 SDXERR_SETUP_DI_CLASS_DEVS = & hA0100018

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.34 SDXERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA0100012

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

### 73.8.35 SDXERR_SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Success

### 73.8.36 SDXERR_TOO_LONG_DEVICE_DETAIL = & hA010001B

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error

### 73.8.37 SDXERR_TOO_LONG_ENCRYPTION_DATA = & hA0100009

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Cipher text length is to long (cryptography error)

### 73.8.38 SDXERR_TOO_LONG_SEED = & hA0100005

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Seed character string is longer than 64 bytes when calling GenUID (parameter error)

### 73.8.39 SDXERR_UNKNOWN_DEVICE = & hA0100020

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown device.

### 73.8.40 SDXERR_UNKNOWN_ERROR = & hA010FFFF

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown error (hardware error)

### 73.8.41 SDXERR_VERIFY = & hA0100021

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Verification error (hardware error)

### 73.8.42 SDXERR_WRITE_PROTECT = & hA0100006

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Tried to write to write-protected SDX (operation error)

### 73.8.43 SDXERR_WRITE_REPORT = & hA0100011

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Write record error (Windows error)

### 73.8.44 SDXERR_WRONG_INDEX = & hA0100004

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Block index error (parameter error)

### 73.8.45 SDXERR_WRONG_REPORT_LENGTH = & hA010001A

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown device (hardware error)

### 73.8.46 SDXERR_WRONG_START_INDEX = & hA0100007

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Start index error (parameter error)

### 73.8.47 SDXERR_WRONG_UID = & hA0100003

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** One of the possible error codes for functions in this module.
**Notes:** Wrong UID (parameter error)

### 73.8.48 SDX_MINOR = 16

MBS Dongle Plugin, Plugin Version: 11.1.

**Function:** The maximum number of sdx devices.

## 73.9 module SGLockMBS

### 73.9.1 module SGLockMBS

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The MBS Module for using SG-Lock dongles in Xojo.
**Notes:**

See website:
https://www.sg-lock.com

Please read manual from SG Intec for details.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.

### 73.9.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

### 73.9.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr8

### 73.9.4 Methods

### 73.9.5 Authenticate(AuthentCode as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Authentication of SG-Lock library to the protected application and vice versa.
**Notes:**

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 73.9.6 Authenticate(AuthentCode() as UInt32) 14290

### 73.9.6 Authenticate(AuthentCode() as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Authentication of SG-Lock library to the protected application and vice versa.
**Notes:**

This function of the SG-Lock API has to be called once first and successfully to enable all other API functions. In the case of dynamic linking the authentication is required after every link procedure (LoadLibrary call).

Every customer get his unique Authentcode when purchasing SG-Lock (non Demo) the first time. Demo kits have an own authentication code (see example source code files).

AuthentCode: 48 byte sequence, that is unique to every SG-Lock customer. As array, it's 12 values in the array.

Lasterror is set to kErrorSuccess on success and an error code otherwise.
See also:

- 73.9.5 Authenticate(AuthentCode as MemoryBlock) 14289

### 73.9.7 CloseLibrary

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Unloads and closes DLL.

### 73.9.8 CryptLock(ProductId as UInt32, KeyNum as UInt32, CryptMode as UInt32, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypts or decrypts data on the dongle.
**Notes:**

En- or decrypts one or more 64-bit data blocks with 128-bit key. The crypto- graphic algorithm is TEA.

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of key to use 0 to 1 - SG-Lock U3 0 to 15 - SG-Lock U4
CryptMode: Working mode. kCryptModeEncrypt = 0 for Encrypt, kCryptModeDecrypt = 1 for Decrypt.
Data: Input data. Should be multiply of 4 in length.

Returns the output data.

Lasterror property is set.

### 73.9.9 LoadLibraryFile(File as folderItem) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the dll/dylib/so file at the give path.
**Notes:**

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

### 73.9.10 LoadLibraryPath(Path as String) as boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the dll/dylib/so file at the give path.
**Notes:**

Returns true on success or false on failure.
Please call once on app startup to load library.
Sets LibraryError property in case of error.

### 73.9.11 ReadConfig(ProductId as UInt32, Category as UInt32 = 0) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads configuration information about SG-Lock.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
Category: Type of requested information. currently only 0 for Information about SG-Lock modul.

Returns memoryblock with an array of 8 integers of 32-bit. The meaning of the single values are:

Index 0: Type
Index 1: Interface
Index 2: Software Version
Index 3: Hardware Version
Index 4: Serial number
Index 5: Memory size in Dwords
Index 6: Number of counters
Index 7: Number of 128-Bit Keys

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

Lasterror is set.

### 73.9.12 ReadCounter(ProductId as UInt32, CntNum as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads a 32-bit count value from the SG-Lock memory.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 15 - SG-Lock U3 0 to 63 - SG-Lock U4

Returns the value read.
Lasterror property is set.

Counters are simple 32 bit data values in the SG-Lock memory. If desired, they can also be used for everything a 32 bit read/write variable is suitable for. By doing so you can extend the general purpose memory

over the indicated size.

### 73.9.13 ReadData(ProductId as UInt32, Address as UInt32, LongCount as UInt32) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read 32-bit data from the SG-Lock memory.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
Address: Startadress of data value block 0 to 63 - SG-Lock U3 or 0 to 255 - SG-Lock U4
Count: Number of data values to read, each 4 bytes.

Returns memoryblock with data values.
Lasterror property is set.

### 73.9.14 ReadProductId as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the 16-bit ProductId from the SG-Lock.
**Notes:**

Lasterror property is set.

The ProductId is an identifier that eases to distinguish between different protected applications of SG-Lock users. For example company X protects its application A and B with SG-Lock and gives all keys for application A the ProductId 1 and the keys for application B the ProductId 2, then all keys of application B are ,Äùhidden,Äú for application A and vice versa. This simple mechanism offers an effective way to prevent confusion between keys of different applications. Setting of the ProductId should be integrated into the initial- ization process of the SG-Locks before distributing with the protected software.

Returns the ProductId assigned to dongle.
Lasterror is set.

### 73.9.15 ReadSerialNumber(ProductId as UInt32) as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the for every SG-Lock unique serial number.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock

Returns the serial number will be given back to the calling application

Lasterror property is set.

Every SG-Lock has a serial number that is unique, which is also not depending on type and interface.

### 73.9.16 SearchLock(ProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Searches for a SG-Lock device.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock looked for

Updates HardwareVersion, CounterCount, KeyCount, MemorySize, MemorySizeBytes, SerialNumber, SoftwareVersion, Type and InterfaceType properties.

### 73.9.17 SignData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Signs the data.
**Notes:**

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.

Returns signature as memoryblock.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

### 73.9.18 TeaDecipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decrypt data.
**Notes:**

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

### 73.9.19 TeaEncipher(data as MemoryBlock, Key as MemoryBlock) as MemoryBlock

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypt data.
**Notes:**

Encryption happens in plugin using sample code from SG.
Data is memoryblock with 8 bytes of data.
Key is memoryblock with 16 bytes in size.

Lasterror property is set.

### 73.9.20 VerifyData(ProductId as UInt32, AppSignKey as MemoryBlock, LockSignKeyNum as UInt32, LockSignInterval as UInt32 = 0, Data as MemoryBlock, Signature as MemoryBlock) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Verifies the signature with the data.
**Notes:**

The task will will be processed by the SG-Lock and if desired also by the application (PC-CPU) to accelerate the signing process (combined mode). Important condition for combined mode: Both keys (application and SG-Lock internal) have to be different, to ensure highest security! The signature is 64-bit long.

ProductId: Indicates the ProductId of the SG-Lock
AppSignKey: The 128-bit key used by the application for sign- ing and verification. Pointer to an array of 4 in- teger values of 32-bit. Only needed in combined mode otherwise set 0.
LockSignKeyNum: Number of 128-bit key in SG-Lock for signing and verification.
LockSignInterval: Indicates the partitioning of computing power between SG-Lock and application (PC-CPU). 0 is SG-Lock only. If >0 the value is used as the power of 2, where the result of that determines which block index is signed or verified by the SG-Lock. E.g. value= 8, 28ÀÜ=256, that means the first and after that every 256th block is processed by the SG-Lock and all others by the application (PC-CPU). That means 1/256= 0.4% of the task is done by the SG-Lock and 99.6% by the PC- CPU. The result is a very high acceleration of the process.
Data: Pointer to the memoryblock with of 32-bit values to sign or verify.
Signature: The signature as memory block.

Lasterror property is set.

The same value for the parameter LockSignInterval has to be used for signing and verifying a certain data block, when using different 128-bit keys in the SG-Lock and application (highly recommended for highest security). The reasons is, that the 128-bit key in the application is less safe than the 128-bit key in the SG-Lock. When a hacker succeeds to investigate the 128-bit key in the application (which is in principle possible), then he will try that also first for the SG-Lock. That will fail, if a differnt 128-bit key is used in the SG-Lock. For a deeper understanding of the function, please take a look into the SG-Lock include/header file for your programming language. You will find the source code of the function in it.

### 73.9.21 WriteCounter(ProductId as UInt32, CntNum as UInt32, Data as UInt32)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a 32-bit count value to the SG-Lock memory.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
CntNum: Number of counter, 0 to 63 - SG-Lock U3 0 to 255 - SG-Lock U4
Data: Counter value to be written

Lasterror property is set.

### 73.9.22 WriteData(ProductId as UInt32, Address as UInt32, Data as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes 32-bit data values to SG-Lock memory.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
Address: Startaddress of data value block 0 to 63 - SG-Lock U3, 0 to 255 - SG-Lock U4
Count: Number of data values
Data: Memoryblock, where data values be copied from. (size is multiply of 4)

Lasterror property is set.

### 73.9.23 WriteKey(ProductId as UInt32, Address as UInt32, Key as MemoryBlock)

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a 128-bit key to the SG-Lock key memory.
**Notes:**

ProductId: Indicates the ProductId of the SG-Lock
KeyNum: Number of the key to be written 0 to 1 - SG-Lock U3, 0 to 15 - SG-Lock U4
Key: 128-bit Key to be written. Pointer to data array of 4 integer values of 32-bit, that form the 128-bit key

Lasterror property is set.
The 128-bit key of the U2 is read only and not changeable.

### 73.9.24 WriteProductId(OldProductId as UInt32, NewProductId as UInt32) as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a new 16-bit ProductId to the SG-Lock.
**Notes:**

OldProductId: Indicates the actual ProductId of the SG-Lock
NewProductId: Indicates the new ProductId of the SG-Lock

Returns true on success or false on failure.

Lasterror property is set.

### 73.9.25 Properties

### 73.9.26 Available as Boolean

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether library has been loaded and functions are available.
**Notes:**

Returns true if you can call functions without getting a FunctionNotFoundException.

Works on all platforms (except iOS) in case you have a matching dylib/dll/so file.
(Read only property)

### 73.9.27 CounterCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of counters.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.28 HardwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The hardware version number.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.29 InterfaceType as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The type of interface.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.30 KeyCount as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of 128-bit keys.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.31 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code returned by a function.
**Notes:** (Read and Write property)

### 73.9.32 LibraryError as String

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The error message from loading the library.
**Notes:** (Read only property)

### 73.9.33 MemorySize as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The memory size in data words.
**Notes:**

MemorySizeBytes = 4 * MemorySize
Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.34 MemorySizeBytes as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The memory size in bytes.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.35 SerialNumber as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The serial number of the dongle.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.36 SoftwareVersion as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The software version.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.37 Type as UInt32

MBS Dongle Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The type of dongle.
**Notes:**

Updated by plugin when you call SearchLock or ReadConfig methods.
(Read only property)

### 73.9.38 Constants

### 73.9.39 kConfigLockSeries2 = 1

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the device types.
**Notes:** Series 2

### 73.9.40 kConfigLockSeries3 = 2

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the device types.
**Notes:** Series 3

### 73.9.41 kConfigLockSeries4 = 3

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the device types.
**Notes:** Series 4

### 73.9.42 kCryptModeDecrypt = 1

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the crypto modes.
**Notes:** Decrypt it

### 73.9.43 kCryptModeEncrypt = 0

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the crypto modes.
**Notes:** Encrypt it

### 73.9.44 kErrorAuthenticationFailed = 6

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Authentification with Authenticate failed.

### 73.9.45 kErrorAuthenticationRequired = 5

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Authentication with Authenticate function not or not error free processed.

### 73.9.46 kErrorDongleNotFound = 1

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Dongle not found.

### 73.9.47 kErrorFunctionNotSupported = 7

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** The called function is not supported by the found SG-Lock.

### 73.9.48 kErrorLPTBusy = 2

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** The LPT (printer port) is busy.

### 73.9.49 kErrorLPTOpenError = 3

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** The LPT (printer port) could not be opened.

### 73.9.50 kErrorNoLPTPortFound = 4

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:**

The LPT (printer port) was not found.

### 73.9.51 kErrorParameterInvalid = 8

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Parameter of the called function is out of the vaild value range.

### 73.9.52 kErrorSignatureInvalid = 9

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Signature invalid.

### 73.9.53 kErrorSuccess = 0

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** All okay.

### 73.9.54 kErrorUSBBusy = 10

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the error codes.
**Notes:** Another application is claming the SG-Lock for more than 5 seconds.

### 73.9.55 kInterfaceLPT = 1

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the interface types.
**Notes:** Printer port connection.

### 73.9.56 kInterfaceUSB = 0

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the interface types.
**Notes:** USB connection.

### 73.9.57 kSignModeSign = 0

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the sign modes.
**Notes:** Sign the data.

### 73.9.58 kSignModeVerify = 1

MBS Dongle Plugin, Plugin Version: 18.5.

**Function:** One of the sign modes.
**Notes:** Verify the signature.

## 73.10 class UnikeyMBS

### 73.10.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class to enable Xojo to use Unikey dongles.
**Notes:**

Website:
http://www.esecutech.com

Available for:

- MacOS 64-bit on Intel
- MacOS 32-bit on Intel
- Linux 32-bit on ARM
- Linux 32-bit on Intel
- Linux 64-bit on Intel
- Windows 32-bit on Intel
- Windows 64-bit on Intel

Unavailable for:

- iOS
- Windows 64-bit on ARM
- Linux 64-bit on ARM
- MacOS 64-bit on ARM

We may add more targets once we get newer SDK versions with new libraries.

### 73.10.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

### 73.10.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

### 73.10.4 Methods

### 73.10.5 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.
**Notes:**

See Unikey API Reference for details on UniKey_Calculate1 function.
Returns error code.

### 73.10.6 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.
**Notes:**

See Unikey API Reference for details on UniKey_Calculate2 function.
Returns error code.

### 73.10.7 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
**Notes:**

See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

### 73.10.8 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the attributes of a specific UniKey license module.
**Notes:**

See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

### 73.10.9 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the attributes of a specific UniKey Time license module.
**Notes:**

See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

### 73.10.10 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the attributes of a specific UniKey Time license module now.
**Notes:**

See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.

### 73.10.11 CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the attributes of a specific UniKey Time license module Now PC.
**Notes:**

See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

### 73.10.12 Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decrypt an amount of memory with a key.
**Notes:**

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

### 73.10.13 Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypt an amount of memory with a key.
**Notes:**

The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

### 73.10.14 EraseTimeModule(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Erase/Reset a real time module, and all the info in the module will be erased including start,

end or duration.
**Notes:**

See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.

### 73.10.15 Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Check if a specific UniKey is attached to the USB port.
**Notes:**

This is the first API to start a UniKey session.
Sets handle property.

See Unikey API Reference for details on UniKey_Find function.

### 73.10.16 FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Check if another UniKey is attached to the USB port.
**Notes:**

Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

### 73.10.17 GenerateKey(KeyNumber as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Generate a new key in the specific key storage.
**Notes:**

See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

### 73.10.18 GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Generate a new key in the specific key storage via seed.
**Notes:**

See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function.
Returns error code.

### 73.10.19 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password.
**Notes:**

See Unikey API Reference for details on UniKey_Generate_New_Password function.
Returns error code.

### 73.10.20 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the UniKey client number.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Cli_Num function.
Returns error code.

### 73.10.21 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the Server IP, if it is local, return 127.0.0.1.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Dongle_Location function.
Returns error code.

### 73.10.22 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the maximum client number.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Max_Num function.
Returns error code.

### 73.10.23 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get a value from a specific UniKey license module.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Module function.
Returns error code.

### 73.10.24 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the end time of a specific UniKey Time license module.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Module_End_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

### 73.10.25 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Reads the start time of a specific UniKey Time license module.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Module_Start_Time function.
Returns error code.

Not supported for 64-bit Linux and Mac PPC.

### 73.10.26 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get UniKey Time,Äôs real time clock,Äôs time.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

### 73.10.27 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GetType can help you get the type of the UniKey dongle.
**Notes:**

The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

### 73.10.28 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get the current UniKey library version.
**Notes:**

See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

### 73.10.29 Lock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Locks the unikey.

### 73.10.30 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Logoff a UniKey dongle with a specific handle.
**Notes:**

This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

### 73.10.31 MD5(BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Make an MD5 digest for a mount of content or data.
**Notes:**

See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

### 73.10.32 ModuleDecrease(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decrease the value in a specified UniKey license module by ,Äú1,Äù.
**Notes:**

See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

### 73.10.33 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Generate a random number from the dongle.
**Notes:**

See Unikey API Reference for details on UniKey_Random function.
Returns error code.

### 73.10.34 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the contents of the Memory.
**Notes:**

This API needs to be called after logon of a UniKey dongle.
See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

### 73.10.35 ReadSoftID(byref SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read the user defined SoftID.
**Notes:**

See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

### 73.10.36 ReadUpdateTag(byref UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read UpdateTag from a specific dongle.
**Notes:**

See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

### 73.10.37 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Get return codes from the input of a seed code.
**Notes:**

This API return for values which are related to Seed and UniKey dongle,Äôs password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

### 73.10.38 SetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set the maximum client number.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.

Not supported for Mac PPC.

### 73.10.39 SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** To write a value to a specific UniKey license module and set the Decrement attribute.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Module function.
Returns error code.

### 73.10.40 SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets ini location.
**Notes:**

See Unikey API Reference for details on UniKey_SetNETINILocation function.
Returns error code.

### 73.10.41 SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set UniKey Time,Äôs real time clock,Äôs time.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time function.
Returns error code.
Year is 10 for 2010.

### 73.10.42 SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours.

**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

### 73.10.43 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set a real time module,Äôs end time.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

### 73.10.44 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set a real time module,Äôs start time.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

### 73.10.45 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set a real time module,Äôs start time as the now time in UniKey dongle,Äôs clock.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

### 73.10.46 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set a real time module,Äôs start time as the now time in host computer.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.

### 73.10.47 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set UniKey Time,Äôs real time clock,Äôs time by the host computer,Äôs clock.
**Notes:**

See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

### 73.10.48 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calls the unikey function with the values from this object.
**Notes:** See the unikey documentation for what values to use.

### 73.10.49 UnLock as integer

MBS Dongle Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Unlocks the unikey.

### 73.10.50 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Logon a UniKey dongle with specified passwords.
**Notes:**

This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

### 73.10.51 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Logon a UniKey dongle in vendor mode with specified passwords.
**Notes:**

This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendor,Äôs usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
Returns error code.

Not supported on Linux.

### 73.10.52 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write user-defined mathematical algorithms.
**Notes:**

See Unikey API Reference for details on UniKey_Write_Arithmetic function.
Returns error code.

### 73.10.53 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write data into the memory.
**Notes:**

This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function.
Returns error code.

### 73.10.54 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write the vendor defined SoftID.
**Notes:**

See Unikey API Reference for details on UniKey_Write_SoftID function.
Returns error code.

### 73.10.55 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write UpdateTag into a specific dongle.
**Notes:**

See Unikey API Reference for details on UniKey_Write_UpdateTag function.
Returns error code.

### 73.10.56 Properties

### 73.10.57 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The memoryblock to use when calling the unikey function.
**Notes:** (Read and Write property)

### 73.10.58 Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the dongle.
**Notes:** (Read and Write property)

### 73.10.59 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The parameter LP1.
**Notes:** (Read and Write property)

### 73.10.60 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The parameter LP2.
**Notes:** (Read and Write property)

### 73.10.61 P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value for the parameter p1.
**Notes:** (Read and Write property)

### 73.10.62 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value for the parameter p2.
**Notes:** (Read and Write property)

### 73.10.63 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value for the parameter p3.
**Notes:** (Read and Write property)

### 73.10.64 P4 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value for the parameter p4.
**Notes:** (Read and Write property)

### 73.10.65 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The result of the last function call.
**Notes:** (Read and Write property)

### 73.10.66 Constants

### 73.10.67 CBC_MODE = 2

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** CBC Mode

### 73.10.68 DES1 1

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** DES1

### 73.10.69 DES2 2

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** DES2

### 73.10.70 DES3 3

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** DES3

### 73.10.71 DES_KEY = 2

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** DES Key

### 73.10.72 DES_KEY_LEN = 24

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** DES Key Len

### 73.10.73 ECB_MODE = 1

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** ECB Mode

### 73.10.74 ERROR_KEY_INDEX = 259

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Error with key index.

### 73.10.75 ERROR_MAX_KEYS = 258

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Error with max keys.

### 73.10.76 ERROR_MAX_USERS = 257

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Error with max users.

### 73.10.77 ERROR_UNIKEY_ALREADY_LOCKED = 236

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Dongle Already Locked (When Lock Twice Or Open After Lock)

### 73.10.78 ERROR_UNIKEY_AR_BAD_COMMAND = 217

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Arithmetic Instruction Error

### 73.10.79 ERROR_UNIKEY_AR_UNKNOWN_OPCODE = 218

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Arithmetic Operator Error

### 73.10.80 ERROR_UNIKEY_AR_VALUE_OVERFLOW = 221

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Const Number >63

### 73.10.81 ERROR_UNIKEY_AR_WRONG_BEGIN = 219

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Const Number Can't Use On First Arithmetic Instruction

### 73.10.82 ERROR_UNIKEY_AR_WRONG_END = 220

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Const Number Can't Use On Last Arithmetic Instruction

### 73.10.83 ERROR_UNIKEY_CALCULATE = 211

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Calculate Failed

### 73.10.84 ERROR_UNIKEY_COMPARE_TIME_MODULE = 233

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** The Specific Time Is Before The Module's Start Time

### 73.10.85 ERROR_UNIKEY_DECRYPT_FAILED = 229

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Decrypt Data Failed

### 73.10.86 ERROR_UNIKEY_ENCRYPT_FAILED = 228

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Encrypt Data Failed

### 73.10.87 ERROR_UNIKEY_FILE_LOCK_CLOSE = 261

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** close lock file error

### 73.10.88 ERROR_UNIKEY_FILE_LOCK_OPEN = 260

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** open lock file error

### 73.10.89 ERROR_UNIKEY_FS_ERR_OPEN_FILE = 247

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Can't Open File

### 73.10.90 ERROR_UNIKEY_FS_ERR_SYS_UNINIT = 246

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** File Sys Is Not Initialized

### 73.10.91 ERROR_UNIKEY_FS_FILE_EXIST = 245

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** File Already Existed

### 73.10.92 ERROR_UNIKEY_FS_FILE_NAME = 240

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Wrong Or Invalid File Name

### 73.10.93 ERROR_UNIKEY_FS_FILE_OFFSET = 242

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Offset Of File Error

### 73.10.94 ERROR_UNIKEY_FS_NO_FILE = 241

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No Such File Name

### 73.10.95 ERROR_UNIKEY_FS_NO_MEMORY = 244

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Not Enough Free Memory

### 73.10.96 ERROR_UNIKEY_FS_UNKONW = 243

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Unknown Error

### 73.10.97 ERROR_UNIKEY_GENERATE_NEW_PASSWORD = 225

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Generate New Password Failed

### 73.10.98 ERROR_UNIKEY_GET_TYPE = 256

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Failed to get type of dongle.

### 73.10.99 ERROR_UNIKEY_INVALID_ADDR_OR_SIZE = 204

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Read/Write Address Or Length Is Wrong

### 73.10.100 ERROR_UNIKEY_INVALID_KEY = 222

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** The Key In The Key Storage Is Wrong

### 73.10.101 ERROR_UNIKEY_INVALID_KEY_STORE = 224

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Wrong Key Storage Number

### 73.10.102 ERROR_UNIKEY_INVALID_PASSWORD = 201

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Found UniKey Dongle, But Basic Password Is Wrong

### 73.10.103 ERROR_UNIKEY_INVALID_PASSWORD_OR_ID = 202

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Wrong Password Or UniKey HID

### 73.10.104 ERROR_UNIKEY_KEY_INDEX = 239

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Dongle Over Keyindex, No Key To Delete

### 73.10.105 ERROR_UNIKEY_LOGOUT = 251

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Logout error?

### 73.10.106 ERROR_UNIKEY_MAX_KEYS = 238

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Dongle Already Max Keys, Need To Delete And The Regenerate

### 73.10.107 ERROR_UNIKEY_MAX_USERS = 237

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Dongle Already Max Users Logoned

### 73.10.108 ERROR_UNIKEY_MODULE = 216

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** License Module Error

### 73.10.109 ERROR_UNIKEY_NEED_FIND = 215

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No Find Before FindNext

### 73.10.110 ERROR_UNIKEY_NEED_OPEN = 212

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Need Open Dongle Before Operating Dongle

### 73.10.111 ERROR_UNIKEY_NOMORE = 214

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No More Dongle

### 73.10.112 ERROR_UNIKEY_NOTBELEVEL3 206

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Internal Error

### 73.10.113 ERROR_UNIKEY_NOT_FOUND = 200

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No UniKey Dongle

### 73.10.114 ERROR_UNIKEY_NO_ENCYYPT = 248

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No Secure Drive

### 73.10.115 ERROR_UNIKEY_OPEN_OVERFLOW = 213

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Too Many Open Dongles (>16)

### 73.10.116 ERROR_UNIKEY_PARAMETER = 254

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Some parameter is wrong.

### 73.10.117 ERROR_UNIKEY_PASSWORD = 249

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Password Error

### 73.10.118 ERROR_UNIKEY_RANDOM = 209

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Random Number Failed

### 73.10.119 ERROR_UNIKEY_READ_MEMORY = 207

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Read Memory Failed

### 73.10.120 ERROR_UNIKEY_READ_TIME = 230

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Get UniKey Time Failed

### 73.10.121 ERROR_UNIKEY_READ_UPDATETAG = 226

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Read UpdateTag Failed

### 73.10.122 ERROR_UNIKEY_SEED = 210

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Get Seed Code Failed

### 73.10.123 ERROR_UNIKEY_SET_SOFTID_FAILED = 203

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Set UniKey ID Failed

### 73.10.124 ERROR_UNIKEY_TIME_MODULE_NOT_NULL = 234

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** The Real Time Module Is Not Null, This Error is returned when write once flag is set

### 73.10.125 ERROR_UNIKEY_TIME_MODULE_OVERDUR = 235

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** The Specific Time Is Later Than The Module's End Time, Or The Module Is Expired

### 73.10.126 ERROR_UNIKEY_TOO_MUCH_THREAD = 255

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Too many (>100) threads in the single process open the dongle

### 73.10.127 ERROR_UNIKEY_UNKNOW = 252

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Unknown error

### 73.10.128 ERROR_UNIKEY_UNKNOWN_COMMAND = 205

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** No Such Command

### 73.10.129 ERROR_UNIKEY_USERLOCK = 250

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** User Has Been Locked

### 73.10.130 ERROR_UNIKEY_VERIFY_ADV_PASSWORD = 223

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Advanced Passwords (Password3 and Passowrd4) Not Verified

### 73.10.131 ERROR_UNIKEY_WRITE_ARITHMETIC = 253

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Dongle Write Arithmetic is ERROR

### 73.10.132 ERROR_UNIKEY_WRITE_MEMORY = 208

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Write Memory Failed

### 73.10.133 ERROR_UNIKEY_WRITE_TIME = 231

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Set UniKey Time Failed

### 73.10.134 ERROR_UNIKEY_WRITE_TIME_MODULE = 232

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Write Time Module Error

### 73.10.135 ERROR_UNIKEY_WRITE_UPDATETAG = 227

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Write UpdateTag Failed

### 73.10.136 NET_UNIKEY_AREADY_START = 111

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Server Has Already Started

### 73.10.137 NET_UNIKEY_CLIENT_EXSIT = 106

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Client Already Exists, Per This Mode

### 73.10.138 NET_UNIKEY_DISCARD_BY_SERVER = 118

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Client Is Discarded By The Server

### 73.10.139 NET_UNIKEY_ERROR_BASE = 100

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** NetUniKey Error Base

### 73.10.140 NET_UNIKEY_GET_NUM_CLIENT = 226

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** get the number of client for netunikey

### 73.10.141 NET_UNIKEY_INIFILE_NOT_EXISTS = 120

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** ZhaoHJ: 2015-08-13, INI file not exists

### 73.10.142 NET_UNIKEY_IN_BLACKLIST = 108

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Client Is In The Black List

### 73.10.143 NET_UNIKEY_MEMORY_ERROR = 101

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Memory Allocation Error

### 73.10.144 NET_UNIKEY_MESSAGE_CHANGE = 110

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Message Packet Was Changed

### 73.10.145 NET_UNIKEY_MESSAGE_WRONG = 104

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Communication Message Is Modified

### 73.10.146 NET_UNIKEY_NOT_WORKING = 117

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:**

Cannot Connect Remote Netunikey Server

### 73.10.147 NET_UNIKEY_OUT_WHITELIST = 109

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Client Is Not In The White List

### 73.10.148 NET_UNIKEY_RECEIVE_ERROR = 103

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Receive Error

### 73.10.149 NET_UNIKEY_SEND_ERROR = 102

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Send Error

### 73.10.150 NET_UNIKEY_SERVER_RESOURCE_INADEQUACY = 119

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** by lzm

### 73.10.151 NET_UNIKEY_SETUP_SOCKET_ERROR = 105

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Setup Socket Error

### 73.10.152 NET_UNIKEY_SET_NUM_CLIENT = 225

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** set the number of client for netunikey

### 73.10.153 NET_UNIKEY_SOCKET_BIND_FAILED = 113

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Cannot Bind The Port With The Socket

### 73.10.154 NET_UNIKEY_SOCKET_INIT_FAILED = 112

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Cannot Initialize The Socket

### 73.10.155 NET_UNIKEY_SOCKET_LISTEN_FAILED = 114

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Cannot Start Listening With The Socket

### 73.10.156 NET_UNIKEY_START_UDP_SERVER_FAILED = 115

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Start Udp Server Failed

### 73.10.157 NET_UNIKEY_TOO_LONG_MESSAGE = 116

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** Too Long Message

### 73.10.158 NET_UNIKEY_TOO_MANY_CLIENT = 107

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the NetUniKey Error Codes.
**Notes:** The Number Of Client Reach The Limitation

### 73.10.159 RSA = 4

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** RSA

### 73.10.160 RSA_KEY = 1

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** RSA Key

### 73.10.161 RSA_KEY_1024 3

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** RSA Key 1024 bit.

### 73.10.162 RSA_KEY_2048 4

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** RSA Key 2048 bit.

### 73.10.163 RSA_KEY_LEN = 1408

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the encryption modes.
**Notes:** RSA Key Len

### 73.10.164 SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the error codes.
**Notes:** Success

### 73.10.165 UNIKEY_CALCULATE1 = 14

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Calculate 1

### 73.10.166 UNIKEY_CALCULATE2 = 15

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Calculate 2

### 73.10.167 UNIKEY_CALCULATE3 = 16

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.

### 73.10.168 UNIKEY_CHECK_MODULE = 12

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Check Module

### 73.10.169 UNIKEY_CHECK_TIME_MODULE = 35

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** check if a time >START_TIME and the time <END_TIME(or START_TIME+DURATION) (p1,p2,p3,p4 = year,month,day,hour)

### 73.10.170 UNIKEY_CHECK_TIME_MODULE_NOW = 36

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** check if now >START_TIME and now <END_TIME(or START_TIME+DURATION) use dongle time (lp1 = module index)

### 73.10.171 UNIKEY_CHECK_TIME_MODULE_NOW_PC = 37

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** check if now >START_TIME and now <END_TIME(or START_TIME+DURATION) use host time (lp1 = module index)

### 73.10.172 UNIKEY_DECRYPT = 21

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Decrypt the Buffer with a Specific Key

### 73.10.173 UNIKEY_ENCRYPT = 20

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Encrypt the Buffer with a Specific Key

### 73.10.174 UNIKEY_ERASE_TIME_MODULE = 29

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** ERASE TIME MODULE to NULL. (lp1 = module index)

### 73.10.175 UNIKEY_FIND = 1

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Find UniKey

### 73.10.176 UNIKEY_FIND_NEXT = 2

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Find next UniKey

### 73.10.177 UNIKEY_GENERATE_KEY = 19

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Generate a New Key in specific Key Store

### 73.10.178 UNIKEY_GET_MODULE = 25

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Get Module. p1 [ in ] Number [ p3 ] out Value

### 73.10.179 UNIKEY_GET_MODULE_END_TIME = 39

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** get module end time (lp1 = module index)

### 73.10.180 UNIKEY_GET_MODULE_START_TIME = 38

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** get module start time (lp1 = module index)

### 73.10.181 UNIKEY_GET_TIME = 26

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** read rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

### 73.10.182 UNIKEY_GET_TYPE = 100

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** get the Unikey type

### 73.10.183 UNIKEY_LOCK = 41

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey functions codes.
**Notes:** Lock

### 73.10.184 UNIKEY_LOGOFF = 4

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Close UniKey

### 73.10.185 UNIKEY_LOGON = 3

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Open UniKey

### 73.10.186 UNIKEY_MD5 = 22

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Make an MD5 Digest for a Certain Content

### 73.10.187 UNIKEY_MODULE_DECREASE = 17

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Decrease Module Unit

### 73.10.188 UNIKEY_RANDOM = 7

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Generate Random Number

### 73.10.189 UNIKEY_READ_MEMORY = 5

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Read UniKey

### 73.10.190 UNIKEY_READ_SOFTID = 10

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Read Software ID

### 73.10.191 UNIKEY_READ_UPDATETAG = 23

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Read UpdateTag from a Specific Key

### 73.10.192 UNIKEY_SEED = 8

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Generate Seed Code

### 73.10.193 UNIKEY_SET_KEY = 222

MBS Dongle Plugin, Plugin Version: 19.0.

**Function:** One of the unikey functions codes.

### 73.10.194 UNIKEY_SET_MODULE = 11

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Set Module

### 73.10.195 UNIKEY_SET_NEW_PASSWORD = 18

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Set New Password via a New Seed

### 73.10.196 UNIKEY_SET_TIME = 27

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time (lp1,lp2,p1,p2,p3,p4 = year,month,day,hour,minute,second)

### 73.10.197 UNIKEY_SET_TIME_MODULE_DURATION = 34

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time module duration (lp2,p1 = day,hour)=24*day+hour

### 73.10.198 UNIKEY_SET_TIME_MODULE_END_TIME = 33

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time module end time (p1,p2,p3,p4 = year,month,day,hour)

### 73.10.199 UNIKEY_SET_TIME_MODULE_START_TIME = 30

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time module start time(p1,p2,p3,p4 = year,month,day,hour)

### 73.10.200 UNIKEY_SET_TIME_MODULE_START_TIME_NOW = 31

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time module start time use dongle time (lp1 = module index)

### 73.10.201 UNIKEY_SET_TIME_MODULE_START_TIME_NOW_PC = 32

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time module start time use host time (lp1 = module index)

### 73.10.202 UNIKEY_SET_TIME_NOW = 28

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey Real Time Clock Functions codes.
**Notes:** write rtc time use host time (lp1 = module index)

### 73.10.203 UNIKEY_TYPE_PRO = 102

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the dongle types.
**Notes:** Pro Unikey

### 73.10.204 UNIKEY_TYPE_STD = 103

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the dongle types.
**Notes:** Standard Unikey

### 73.10.205 UNIKEY_TYPE_TIME = 101

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the dongle types.
**Notes:** Time Unikey

### 73.10.206 UNIKEY_UNLOCK = 42

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey functions codes.
**Notes:** Unlock

### 73.10.207 UNIKEY_WRITE_ARITHMETIC = 13

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Write Arithmetic

### 73.10.208 UNIKEY_WRITE_MEMORY = 6

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Write UniKey

### 73.10.209 UNIKEY_WRITE_SOFTID = 9

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Write Software ID

### 73.10.210 UNIKEY_WRITE_UPDATETAG = 24

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Write UpdateTag to a Specific Key

### 73.10.211 UNKEY_GET_CLI_NUM = 101

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Get client number now.

### 73.10.212 UNKEY_GET_MAX_NUM = 226

MBS Dongle Plugin, Plugin Version: 16.4.

**Function:** One of the unikey function codes.
**Notes:** Get Max number.

# Chapter 74

# Drag & Drop

## 74.1 class DragItem

### 74.1.1 class DragItem

Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The dragitem class from Xojo framework.

### 74.1.2 Methods

### 74.1.3 NSDraggingInfoMBS as NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Provides the NSDraggingInfo object for the DragItem.

## 74.2 class NSDraggingImageComponentMBS

### 74.2.1 class NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The NSDraggingImageComponent class represents a single object in a dragging item.
**Notes:** An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.

### 74.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

### 74.2.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

### 74.2.4 Methods

### 74.2.5 Constructor(key as string)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Initializes a dragging image component with the specified key.
**Notes:**

key: The key.
Available in OS X v10.7 and later.

### 74.2.6 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates and returns a dragging image component with the specified key.
**Notes:** Available in OS X v10.7 and later.

### 74.2.7 NSDraggingImageComponentIconKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for Constructor.
**Notes:**

Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.

### 74.2.8 NSDraggingImageComponentLabelKey as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the keys for Constructor.
**Notes:**

Key with a corresponding value that represents a textual label associate with the item, for example, a file name.
Available in OS X v10.7 and later.

### 74.2.9 Properties

### 74.2.10 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The internal object handle.
**Notes:** (Read and Write property)

### 74.2.11 contents as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** An object providing the image contents of the component.
**Notes:**

Typically you set an NSImage instance as content.
Available in OS X v10.7 and later.
(Read and Write computed property)

### 74.2.12 frame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The coordinate space is the bounds of the parent dragging item.
**Notes:**

The frame is { { 0,0 } , { draggingFrame.size.width, draggingFrame.size.height } } .

The coordinate space is the bounds of the parent NSDraggingItem instance's draggingFrame.
Available in OS X v10.7 and later.
(Read and Write computed property)

### 74.2.13 key as string

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The unique name of this image component instance.
**Notes:**

The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component's image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)

## 74.3 class NSDraggingInfoMBS

### 74.3.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The NSDraggingInfo protocol declares methods that supply information about a dragging session.
**Notes:** NSDraggingInfo protocol methods are designed to be invoked from within a class's implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.

### 74.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr7
- MBS Real Studio Plugins, version 13.1pr9

### 74.3.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr7
- MBS Real Studio Plugins, version 13.1pr9

### 74.3.4 Methods

### 74.3.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.
See also:

- 74.3.6 Constructor(Handle as Integer) 14355

### 74.3.6 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor to build an NSDraggingInfo object with a handle.
**Notes:** Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol.
See also:

• 74.3.5 Constructor 14355

### 74.3.7 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Sets the drop location for promised files and returns the names of the files that the receiver promises to create there.
**Notes:**

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

### 74.3.8 promisedFilesDroppedAtDestination(dropDestination as FolderItem) as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

**Function:** Sets the drop location for promised files and returns the files that the receiver promises to create there.
**Notes:**

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of folderitems for the files.
The files may not yet exist.

Drag destinations should invoke this method within their performDragOperation method. The source may or may not have created the files by the time this method returns.

### 74.3.9 slideDraggedImageTo(screenPoint as NSPointMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Slides the image to a specified location.
**Notes:**

screenPoint: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination's implementation of prepareForDragOperation, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

### 74.3.10 Properties

### 74.3.11 animatesToDestination as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether the dragging formation animates while the drag is over this destination.
**Notes:**

During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item's draggingFrame to the correct destinations.

Available in OS X v10.7 and later.
(Read and Write property)

### 74.3.12 draggedImage as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the image being dragged.
**Notes:**

Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still

cannot get the current drag image.
(Read only property)

### 74.3.13 draggedImageLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current location of the dragged image's origin.
**Notes:**

Returns the dragged image's origin, in the base coordinate system of the destination object's window.
The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.
(Read only property)

### 74.3.14 draggingDestinationWindow as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the destination window for the dragging operation.
**Notes:**

Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.

Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

### 74.3.15 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the dragging formation while the drag is over this destination.
**Notes:**

Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.

The default value is the current drag formation.

Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class's method enumerateDraggingItemsWithOptions not inside the enumeration Block.

Available in OS X v10.7 and later.
(Read and Write property)

### 74.3.16 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current location of the mouse pointer in the base coordinate system of the destination object's window.
**Notes:** (Read only property)

### 74.3.17 draggingPasteboard as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the pasteboard object that holds the data being dragged.
**Notes:**

Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

### 74.3.18 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a number that uniquely identifies the dragging session.
**Notes:** (Read only property)

### 74.3.19 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the source, or owner, of the dragged data.
**Notes:**

This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

### 74.3.20 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the dragging operation mask of the dragging source.
**Notes:**

The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.

The modifier keys are associated with the dragging operation options shown below:

| Modifier Key | Dragging Operation |
|---|---|
| Control | NSDragOperationLink |
| Option | NSDragOperationCopy |
| Command | NSDragOperationGeneric |

(Read only property)

### 74.3.21 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 74.3.22 numberOfValidItemsForDrop as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the number of valid items for a drop operation.

**Notes:**

During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later.
(Read and Write property)

### 74.3.23 Constants

### 74.3.24 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

The system determined formation.
Available in OS X v10.7 and later.

### 74.3.25 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

### 74.3.26 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

### 74.3.27 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

### 74.3.28 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

### 74.3.29 NSDragOperationAll_Obsolete = 15

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.

### 74.3.30 NSDragOperationCopy = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The data represented by the image can be copied.

### 74.3.31 NSDragOperationDelete = 32

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The data can be deleted.

### 74.3.32 NSDragOperationEvery = -1

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** All of the above.

### 74.3.33 NSDragOperationGeneric = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The operation can be defined by the destination.

### 74.3.34 NSDragOperationLink = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.

### 74.3.35 NSDragOperationMove = 16

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The data can be moved.

### 74.3.36 NSDragOperationNone = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** No drag operations are allowed.

### 74.3.37 NSDragOperationPrivate = 8

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the drag operation constants.
**Notes:** The operation is negotiated privately between the source and the destination.

## 74.4 class NSDraggingItemMBS

### 74.4.1 class NSDraggingItemMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.
**Notes:**

See NSDraggingSessionMBS Class Reference for more information

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.

### 74.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

### 74.4.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr11

### 74.4.4 Methods

### 74.4.5 Constructor(item as NSPasteboardItemMBS)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Initializes a dragging item using the specified content.
**Notes:**

item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

### 74.4.6 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)
**Notes:** When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.

### 74.4.7 setDraggingFrame(frame as NSRectMBS, contents as Variant)

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the item's dragging frame and contents.
**Notes:**

frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImageComponent instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties.
Available in OS X v10.7 and later.

### 74.4.8 Properties

### 74.4.9 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 74.4.10 draggingFrame as NSRectMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The frame of the dragging item.
**Notes:**

The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance implantation of enumerateDraggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)

## 74.5 class NSDraggingSessionMBS

### 74.5.1 class NSDraggingSessionMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The NSDraggingSession class encompases a drag and drop action and allows modification of the drag while in progress.
**Notes:**

You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 74.5.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MBS Real Studio Plugins, version 13.1pr9

### 74.5.3 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MBS Real Studio Plugins, version 13.1pr9

### 74.5.4 Methods

### 74.5.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The private constructor.

### 74.5.6 draggingLeaderIndex as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The index of the dragging item under the cursor.
**Notes:**

The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

### 74.5.7 draggingLocation as NSPointMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The current cursor location of the drag in screen coordinates. (read-only)
**Notes:** Available in OS X v10.7 and later.

### 74.5.8 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the pasteboard object that contains the data being dragged. (read-only)
**Notes:** Available in OS X v10.7 and later.

### 74.5.9 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a number that uniquely identifies the dragging session. (read-only)
**Notes:** Available in OS X v10.7 and later.

### 74.5.10 Properties

### 74.5.11 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 74.5.12 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.
**Notes:**

This property should be set immediately after creating the dragging session.

The default value is true.
Available in OS X v10.7 and later.
(Read and Write computed property)

### 74.5.13 draggingFormation as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** Controls the dragging formation when the drag is not over the source or a valid destination.
**Notes:**

Setting this value causes the dragging formation to change immediately, provided a valid destination has not overriden the behavior. If the dragging session hasn't started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.
Available in OS X v10.7 and later.
(Read and Write computed property)

### 74.5.14 Constants

### 74.5.15 NSDraggingContextOutsideApplication = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** Whether a drag terminates within or outside the application.
**Notes:**

The dragging terminates outside the application.
Available in OS X v10.7 and later.

### 74.5.16 NSDraggingContextWithinApplication = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** Whether a drag terminates within or outside the application.
**Notes:**

The dragging terminates within the application.
Available in OS X v10.7 and later.

### 74.5.17 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

The system determined formation.
Available in OS X v10.7 and later.

### 74.5.18 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

### 74.5.19 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

### 74.5.20 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

### 74.5.21 NSDraggingFormationStack = 4

MBS MacCocoa Plugin, Plugin Version: 13.1.

**Function:** One of the constants to control the visual format of multiple items being dragged.
**Notes:**

Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.

## 74.6 Globals

### 74.6.1 InstallDragImageMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Install drag image patch.
**Notes:**

This allows you to use retina NSImage for drag image with using Xojo's built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.

### 74.6.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.1
- MBS Xojo Plugins, version 21.1pr5

### 74.6.3 SetNextDragImageMBS(Img as NSImageMBS, DragItemCount as Integer = 1)

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets which image to use for next drag.
**Notes:**

Once image has been replaced for Xojo's drag, the image reference is freed by plugin.

Please call setSize on the NSImageMBS to set the size to use.
e.g. half the pixels, so the picture is sharp on a retina screen.

Added DragItemCount parameter for version 23.0 to define how many drag items you have, so all can get the new picture.

### 74.6.4 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

## 74.7 class WinDataObjectMBS

### 74.7.1 class WinDataObjectMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a data object for Drag and Drop.
**Example:**

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

**Notes:** While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

### 74.7.6 Methods

### 74.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

**Function:** Adds a drag image to the data object.
**Notes:**

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it's mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.
See also:

- 74.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color) 14376

### 74.7.8 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

**Function:** Adds a drag image to the data object.
**Notes:**

pic: the picture to use.
width and height: The size of the picture.
x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.
See also:

- 74.7.7 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer) 14375

### 74.7.9 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds file references in the format the explorer can understand them.
See also:

- 74.7.10 AddFiles(pathes() as string) 14376

### 74.7.10 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds file pathes in the format the explorer can understand them.
**Notes:** Folder pathes should have no backslash on the end.
See also:

- 74.7.9 AddFiles(files() as folderitem) 14376

### 74.7.11 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

**Function:** Adds a picture to the data object.

### 74.7.12 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds raw data to the data object.
**Notes:** Depending of the format you may need to add chr(0) on the end.

### 74.7.13 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds the text to the data object.

### 74.7.14 Constructor

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates an empty data object.
See also:

- 74.7.15 Constructor(files() as folderitem) 14377
- 74.7.16 Constructor(pic as picture) 14378
- 74.7.17 Constructor(text as string) 14378

### 74.7.15 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a data object and adds the files.
See also:

- 74.7.14 Constructor 14377
- 74.7.16 Constructor(pic as picture) 14378
- 74.7.17 Constructor(text as string) 14378

### 74.7.16 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

**Function:** Creates a new data object and adds the given picture.
**Example:**

```
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

See also:

- 74.7.14 Constructor 14377
- 74.7.15 Constructor(files() as folderitem) 14377
- 74.7.17 Constructor(text as string) 14378

### 74.7.17 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new data object and adds the given text.
**Example:**

```
// create data object with text
dim w as new WinDataObjectMBS("Hello World")
```

See also:

- 74.7.14 Constructor 14377
- 74.7.15 Constructor(files() as folderitem) 14377
- 74.7.16 Constructor(pic as picture) 14378

### 74.7.18 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries list of formats in the data object.
**Notes:** Helps for debugging to see what is inside.

### 74.7.19 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries file content for the file with the given index.
**Notes:**

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

Only accepts data provided as blob.
See also:

- 74.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string 14379

### 74.7.20 GetFileContents(index as integer, byref IsPath as boolean) as string

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries file content for the file with the given index.
**Notes:**

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

IsPath is set to true, when the returned data is a file path instead of data itself.
See also:

- 74.7.19 GetFileContents(index as Integer) as string 14379

### 74.7.21 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries file descriptors.
**Example:**

```
dim dataObject as WinDataObjectMBS // your data object

dim des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
// we got file descriptions. Some metadata and the data. No path.
dim data as string = dataObject.GetFileContents(0)
msgbox "File """+d.FileName+""" with "+str(lenb(data))+" bytes data."
next
```

**Notes:** Result array is empty on any error.

### 74.7.22 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries filename from data object.
**Notes:**

Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

### 74.7.23 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the paths in the data object.
**Example:**

```
dim dataObject as WinDataObjectMBS // your data object

dim files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
// we got a file you can use like any other file (e.g. copy)
```

```
listbox1.AddRow "Path """+f.NativePath+""""
next
```

**Notes:** Checks for a CF_HDROP type. May return one or more folderitems.

### 74.7.24 GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the paths in the data object.
**Notes:** Checks for a CF_HDROP type. May return one or more folderitems.

### 74.7.25 GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

**Function:** Queries the picture from the data object.
**Notes:** Supports CF_BITMAP/TYMED_GDI.

### 74.7.26 GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the raw data for the given type.

### 74.7.27 GetText as string

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the text from the data object.
**Notes:** Returns unicode or ANSI text depending on what is available. Unicode is preferred.

### 74.7.28 HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether this data object contains file descriptors.
**Notes:**

Returns true if a path is found.
Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.

### 74.7.29 HasFileName as boolean

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks to see if a filename entry is in the data object.

### 74.7.30 HasPaths as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether this data object contains file paths.
**Notes:**

Returns true if a path is found.
Checks for CF_HDROP.

### 74.7.31 HasPicture as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks if a picture is part of this data object.
**Notes:**

Returns true if a picture is found.
Checks for CF_BITMAP.

### 74.7.32 HasRaw(format as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether this data object contains data in the given format.

### 74.7.33 HasText as boolean

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether this data object contains Text or UnicodeText.
**Notes:**

Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.

### 74.7.34 Properties

### 74.7.35 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The drag image.
**Notes:**

Used to show user what he is dragging.
(Read only property)

### 74.7.36 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle.
**Notes:** (Read and Write property)

### 74.7.37 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal helper object to handle the drag image.
**Notes:**

This value is not zero if the AddDragImage call was successful.
(Read and Write property)

### 74.7.38 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 74.7.39 Constants

### 74.7.40 CF_BITMAP = 2

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.41 CF_DIB = 8

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.42 CF_DIBV5 = 17

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.43 CF_DIF = 5

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.44 CF_ENHMETAFILE = 14

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.45 CF_HDROP = 15

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.46 CF_LOCALE = 16

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.47 CF_METAFILEPICT = 3

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.48 CF_OEMTEXT = 7

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.49 CF_PALETTE = 9

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.50 CF_PENDATA = 10

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.51 CF_RIFF = 11

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.52 CF_SYLK = 4

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.53 CF_TEXT = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.54 CF_TIFF = 6

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.55 CF_UNICODETEXT = 13

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

### 74.7.56 CF_WAVE = 12

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the constants for the data types.

## 74.8 class WindowsDragSourceMBS

### 74.8.1 class WindowsDragSourceMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for Drag and Drop on Windows to create a drag source.
**Notes:**

The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user's selection.
- Initiating the drag-and-drop operation based on the user's mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user's mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

When To Implement

Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

When To Use

You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDragDrop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

### 74.8.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

### 74.8.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr5

### 74.8.4 Methods

### 74.8.5 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Carries out an OLE drag and drop operation.
**Notes:**

Parameters:

dataObject: The WinDataObjectMBS data object that contains the data being dragged.
OKEffects: Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
Effect: Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

Remarks

| Return code | Description |
|---|---|
| DRAGDROP_S_DROP | The OLE drag-and-drop operation was successful. |
| DRAGDROP_S_CANCEL | The OLE drag-and-drop operation was canceled. |
| E_UNSPEC | Unexpected error occurred. |

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting as the data source must also implement WindowsDragSourceMBS, while the target application must implement WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.Give-

Feedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse's position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.

### 74.8.6 Properties

### 74.8.7 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle.
**Notes:** (Read and Write property)

### 74.8.8 Events

### 74.8.9 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Enables a source application to give visual feedback to the end user during a drag-and-drop operation by providing the DoDragDrop function with an enumeration value specifying the visual effect.
**Notes:**

Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, WindowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful completion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the DoDragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target window.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then, DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the drag-scrolling variation of the appropriate pointer.

Notes to Implementers

This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

### 74.8.10 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.
**Notes:**

The OLE DoDragDrop function calls this method during a drag-and-drop operation.

EscapePressed: Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

| Return code | Description |
|---|---|
| S_OK | The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected. |
| DRAGDROP_S_DROP | The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released. |
| DRAGDROP_S_CANCEL | The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed. |

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.

### 74.8.11 Constants

### 74.8.12 DRAGDROP_S_CANCEL = & H00040101

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.
**Notes:** Drag and Drop was cancelled.

### 74.8.13 DRAGDROP_S_DROP = & h00040100

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.
**Notes:** Do the drop operation.

### 74.8.14 DRAGDROP_S_USEDEFAULTCURSORS = & h00040102

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.

### 74.8.15 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:**

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

### 74.8.16 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drag source should create a link to the original data.

### 74.8.17 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drag source should remove the data.

### 74.8.18 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drop target cannot accept the data.

### 74.8.19 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

### 74.8.20 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The CTRL key is down.

### 74.8.21 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The left mouse button is down.

### 74.8.22 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The middle mouse button is down.

### 74.8.23 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The right mouse button is down.

### 74.8.24 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The SHIFT key is down.

### 74.8.25 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The first X button is down.

### 74.8.26 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The second X button is down.

### 74.8.27 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.

### 74.8.28 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.

## 74.9 class WindowsDropTargetMBS

### 74.9.1 class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application.
**Notes:**

It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow functions.

When To Implement

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

When To Use

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally

occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

### 74.9.4 Methods

### 74.9.5 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop only.

**Function:** Attached the drop target to the control.
**Notes:**

This method unregistered any existing drop target on the control (including the one from Xojo).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

ctl: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential

| Return code | Description |
|---|---|
| DRAGDROP_E_INVALIDHWND | Invalid handle returned in the hwnd parameter. |
| DRAGDROP_E_ALREADYREGISTERED | The specified window has already been registered as a drop target. |
| E_OUTOFMEMORY | Insufficient memory for the operation. |

drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

- 74.9.8 AttachToWindow(win as window, showDragImage as boolean = true) as Integer 14400

### 74.9.8 AttachToWindow(win as window, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop only.

**Function:** Attached the drop target to the window.
**Notes:**

This method unregistered any existing drop target on the window (including the one from Xojo).

Registers the specified window as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

Win: The window that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

| Return code | Description |
|---|---|
| DRAGDROP_E_INVALIDHWND | Invalid handle returned in the hwnd parameter. |
| DRAGDROP_E_ALREADYREGISTERED | The specified window has already been registered as a drop target. |
| E_OUTOFMEMORY | Insufficient memory for the operation. |

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToWindow function. Do this whenever one of your application windows is available as a potential

drop target, i.e., when the window appears unobscured on the screen.

AttachToWindow must be called on the main thread of your application.

The AttachToWindow function only registers one window at a time, so you must call it for each application window capable of accepting dropped objects. For each window, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target window during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current window. When a drop operation actually occurs in a given window, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

- 74.9.7 AttachToWindow(win as DesktopWindow, showDragImage as boolean = true) as integer 14399

### 74.9.9 Properties

### 74.9.10 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle.
**Notes:** (Read and Write property)

### 74.9.11 Helper as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal reference to the helper object.
**Notes:** (Read and Write property)

### 74.9.12 Events

### 74.9.13 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Indicates whether a drop can be accepted, and, if so, the effect of the drop.
**Notes:**

dataObject: This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

x and y: A point containing the current cursor coordinates in screen coordinates.

effect: The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

| Return code | Description |
|---|---|
| E_UNEXPECTED | An unexpected error has occurred. |
| E_INVALIDARG | The Effect parameter is NULL on input. |
| E_OUTOFMEMORY | There was insufficient memory available for this operation. |

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.

To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect

| Key Combination | User-Visible Feedback | Drop Effect |
|---|---|---|
| CTRL + SHIFT | = | DROPEFFECT_LINK |
| CTRL | + | DROPEFFECT_COPY |
| No keys or SHIFT | None | DROPEFFECT_MOVE |

of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

### 74.9.14 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Removes target feedback and releases the data object.
**Notes:**

Return S_OK on success. Other possible values include the following.

| Return code | Description |
|---|---|
| E_OUTOFMEMORY | There is insufficient memory available for this operation. |

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

### 74.9.15 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Provides target feedback to the user and communicates the drop's effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.
**Notes:**

KeyState: The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON,

MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

| Return code | Description |
|---|---|
| E_UNEXPECTED | An unexpected error has occurred. |
| E_INVALIDARG | The Effect value is not valid. |
| E_OUTOFMEMORY | There was insufficient memory available for this operation. |

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by examining the FORMATETC defining the data object's formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

| Key Combination | User-Visible Feedback | Drop Effect |
|---|---|---|
| CTRL + SHIFT | = | DROPEFFECT_LINK |
| CTRL | + | DROPEFFECT_COPY |
| No keys or SHIFT | None | DROPEFFECT_MOVE |

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial

WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.

### 74.9.16 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Platform: Windows, Targets: .

**Function:** Incorporates the source data into the target window, removes target feedback, and releases the data object.
**Notes:**

dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

| Return code | Description |
|---|---|
| E_UNEXPECTED | An unexpected error has occurred. |
| E_INVALIDARG | The pdwEffect parameter is not valid. |
| E_OUTOFMEMORY | There is insufficient memory available for this operation. |

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.

### 74.9.17 Constants

### 74.9.18 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:**

Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

### 74.9.19 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drag source should create a link to the original data.

### 74.9.20 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drag source should remove the data.

### 74.9.21 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Drop target cannot accept the data.

### 74.9.22 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the drop effect constants.
**Notes:** Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

### 74.9.23 E_INVALIDARG = & h80070057

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.
**Notes:** An invalid argument was passed.

### 74.9.24 E_OUTOFMEMORY = & h80000002

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.
**Notes:** There was insufficient memory available for this operation.

### 74.9.25 E_UNEXPECTED = & h8000FFFF

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.
**Notes:** An unexpected error has occurred.

### 74.9.26 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The CTRL key is down.

### 74.9.27 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The left mouse button is down.

### 74.9.28 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The middle mouse button is down.

### 74.9.29 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The right mouse button is down.

### 74.9.30 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The SHIFT key is down.

### 74.9.31 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The first X button is down.

### 74.9.32 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the key state constants.
**Notes:** The second X button is down.

### 74.9.33 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.

### 74.9.34 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5.

**Function:** One of the OLE error codes.

## 74.10 class WindowsFileDescriptorMBS

### 74.10.1 class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a file description.s

### 74.10.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

### 74.10.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr4

### 74.10.4 Properties

### 74.10.5 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The file type identifier.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

**Notes:**

Only valid if FD_CLSID is set in the flags.
(Read and Write property)

### 74.10.6 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time of file creation.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

**Notes:**

Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

### 74.10.7 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** File attribute flags.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEM-
PORARY then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

**Notes:**

This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

### 74.10.8 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that contains the name of the file.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

MsgBox d.FileName
```

**Notes:** (Read and Write property)

### 74.10.9 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The file size, in bytes.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

**Notes:**

Only valid if FD_FILESIZE is set in flags.
(Read and Write property)

### 74.10.10 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** An array of flags that indicate which of the other structure members contain valid data.
**Notes:**

A combination of the FD_* constants.
(Read and Write property)

### 74.10.11 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The height of the file icon.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

### 74.10.12 IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The width of the file icon.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.IconHeight)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

### 74.10.13 Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The index of the file descriptor.
**Notes:**

Use this entry for GetFileContent call.
(Read and Write property)

### 74.10.14 LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time that the file was last accessed.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

**Notes:**

Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

### 74.10.15 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time of the last write operation.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

**Notes:**

Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

### 74.10.16 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The x screen coordinate of the file object.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

### 74.10.17 PointY as Integer

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The y screen coordinate of the file object.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+stR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.
(Read and Write property)

### 74.10.18 Constants

### 74.10.19 FD_ACCESSTIME = & h0010

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastAccessTime
MsgBox da.LongDate
end if
```

**Notes:** The LastAccessTime member is valid.

### 74.10.20 FD_ATTRIBUTES = 4

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <>0 then
if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY)<>0 then
MsgBox "temp file"
else
MsgBox "no temp file"
end if
end if
```

**Notes:** The FileAttributes member is valid.

### 74.10.21 FD_CLSID = 1

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CLSID) <>0 then
MsgBox d.ClassID
end if
```

**Notes:** The ClassID member is valid.

### 74.10.22 FD_CREATETIME = 8

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_CREATETIME) <>0 then
dim da as new date
da.TotalSeconds = d.CreationTime
MsgBox da.LongDate
end if
```

**Notes:** The CreationTime member is valid.

### 74.10.23 FD_FILESIZE = & h0040

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
MsgBox str(d.FileSize)
end if
```

**Notes:** Whether the FileSize member is valid.

### 74.10.24 FD_LINKUI = & h8000

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.

**Notes:** Treat the operation as a shortcut.

### 74.10.25 FD_PROGRESSUI = & h4000

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Notes:** A progress indicator is shown with drag-and-drop operations.

### 74.10.26 FD_SIZEPOINT = 2

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
MsgBox "file object at "+strR(d.Pointx)+"/"+str(d.Pointy)+" with size "+str(d.IconWidth)+"/"+str(d.Icon-
Height)
end if
```

**Notes:** The Icon* and point* members are valid.

### 74.10.27 FD_WRITESTIME = & h0020

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the flag constants.
**Example:**

```
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <>0 then
dim da as new date
da.TotalSeconds = d.LastWriteTime
MsgBox da.LongDate
end if
```

**Notes:** Whether the LastWriteTime property is valid.

### 74.10.28 FILE_ATTRIBUTE_ARCHIVE = & h00000020

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file or directory that is an archive file or directory. Applications typically use this attribute to mark files for backup or removal .

### 74.10.29 FILE_ATTRIBUTE_ATOMIC_WRITE = & h00000200

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.

### 74.10.30 FILE_ATTRIBUTE_COMPRESSED = & h00000800

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file or directory that is compressed. For a file, all of the data in the file is compressed. For a directory, compression is the default for newly created files and subdirectories.

### 74.10.31 FILE_ATTRIBUTE_DIRECTORY = & h00000010

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** The handle that identifies a directory.

### 74.10.32 FILE_ATTRIBUTE_HIDDEN = & h00000002

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** The file or directory is hidden. It is not included in an ordinary directory listing.

### 74.10.33 FILE_ATTRIBUTE_NORMAL = & h00000080

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file that does not have other attributes set. This attribute is valid only when used alone.

### 74.10.34 FILE_ATTRIBUTE_OFFLINE = & h00001000

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** The data of a file is not available immediately. This attribute indicates that the file data is physically moved to offline storage. This attribute is used by Remote Storage, which is the hierarchical storage management software. Applications should not arbitrarily change this attribute.

### 74.10.35 FILE_ATTRIBUTE_READONLY = & h00000001

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file that is read-only. Applications can read the file, but cannot write to it or delete it.

### 74.10.36 FILE_ATTRIBUTE_SYSTEM = & h00000004

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file or directory that the operating system uses a part of, or uses exclusively.

### 74.10.37 FILE_ATTRIBUTE_TEMPORARY = & h00000100

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.
**Notes:** A file that is being used for temporary storage. File systems avoid writing data back to mass storage if sufficient cache memory is available, because typically, an application deletes a temporary file after the handle is closed. In that scenario, the system can entirely avoid writing the data. Otherwise, the data is written after the handle is closed.

### 74.10.38 FILE_ATTRIBUTE_XACTION_WRITE = & h00000400

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the file attribute constants.

# Chapter 75

# DVD Playback

## 75.1 class DVDPlaybackMBS

### 75.1.1 class DVDPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** A class for DVD Playback on Mac OS X 10.3
**Notes:**

Requires Mac OS X 10.3 or newer.

The DVD Playback application programming interface (API) gives you access to the DVDPlayback framework, allowing you to offer DVD playback functionality from within your application.

During a playback "session," the application must perform specific minimum operations, as follows:

1. Initialize the playback framework with calling Open. The DVDPlayback framework can only be opened by one process at a time. If a second process attempts to initialize it, an error will be returned.

2. Set the playback window with SetPlayWindow.
4. Set the video bounds with SetVideoBounds. This is the bounds within the window and is in port coordinates.
5. Open the media with OpenMediaVolume (DVD disc) or OpenMediaFile (VIDEO_TS folder).
6. Play the media.
7. When finished or switching media, close with the appropriate call (CloseMediaVolume or CloseMediaFile)
8. When quitting or finishing session, tear down the DVDPlayback framework with calling close.

### 75.1.2 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

### 75.1.3 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- Removing 32-bit Carbon GUI classes

### 75.1.4 Methods

### 75.1.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** True if the DVD playback is installed on this Mac.
**Notes:** Requires Mac OS X 10.3 or newer.

### 75.1.6 ClearLastPlayBookmark

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the video playback position to the beginning of the disc.
**Notes:**

This function sets the video playback position to the beginning of the disc, but does not begin playing the media. Calling this function is equivalent to calling the function DVDStop twice in succession. Before calling this function, media needs to be open.
Available in Mac OS X v10.4 and later.
Lasterror is set.

### 75.1.7 close

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** Call when completely done with playback. Usually when the application is quitting.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.8 CloseMediaFile

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Closes a previously opened VIDEO_TS folder.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.9 CloseMediaVolume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Closes a previously opened DVD disc.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.10 DisplaySubPicture(value as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Turns the display of subpictures on or off.
**Notes:**

value: A Boolean value that specifies whether to display subpictures in the current title. To display subpictures, specify TRUE. To hide subpictures, specify FALSE.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started. You can use this function to display or hide additional bitmap graphic elements such as subtitles.

Available in Mac OS X v10.3 and later.

### 75.1.11 DoButtonActivate(inIndex as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Selects and activates a menu button by index.
**Notes:**

InIndex: The 1-based index of the menu button the user has selected.

If the index coincides with an active button, this function executes the action corresponding to the button.

Available in Mac OS X v10.4 and later.

### 75.1.12 DoMenuCGClick(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If the point (in window root view coordinates) coincides with a menu button, it will be selected.
**Notes:**

Requires Mac OS X 10.5.
Lasterror is set.

### 75.1.13 DoMenuCGMouseOver(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If the point (in window root view coordinates) coincides with a menu button, it will be hightlighted.
**Notes:**

Requires Mac OS X 10.5.
Lasterror is set.

### 75.1.14 DoMenuClick(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If the point (in port coordinates) coincides with a menu button, it will be selected.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.15 DoMenuMouseOver(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If the point (in port coordinates) coincides with a menu button, it will be hightlighted and it's index returned in outIndex.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.16 DoUserNavigation(navigation as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Allows the user to navigate between menu buttons.
**Notes:**

This is usually done using keyboard keys (arrow keys to move and Enter key to choose a menu item).
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

| | |
|---|---|
| kDVDUserNavigationMoveUp | 1 |
| kDVDUserNavigationMoveDown | 2 |
| kDVDUserNavigationMoveLeft | 3 |
| kDVDUserNavigationMoveRight | 4 |
| kDVDUserNavigationEnter | 5 |

### 75.1.17 EnableWebAccess(enable as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Turns DVD@ccess support on or off.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3 or newer.

### 75.1.18 GetAngle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the camera angle displayed.
**Notes:**

Returnsthe integer contains the 1-based index of the current camera angle.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 75.1.19 GetAspectRatio as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the aspect ratio of the current title or menu.
**Notes:**

Returns the variable specifies the aspect ratio of the current title. For a list of possible aspect ratios see the aspect ration constants.

Lasterror is set.

The aspect ratio of the video can change whenever a different title or menu is displayed. You can use this function together with GetNativeVideoSize to calculate the bounds of the video area in a window.

Available in Mac OS X v10.3 and later.

### 75.1.20 GetAudioLanguageCode(byref DVDLanguageCode as string, byref DVD-SubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current audio language code and extension.
**Notes:**

DVDLanguageCode: On return, the variable contains the language code for the current audio stream. For a list of possible values, see the Language Codes constants.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the current audio stream. For a list of possible values, see Audio Extension Codes constants.

Lasterror is set.

Available in Mac OS X v10.3 and later.

### 75.1.21 GetAudioLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the audio language code and extension for a specified stream.
**Notes:**

StreamIndex: An integer in the range 1 to 8 that specifies an audio stream in the current title.

DVDLanguageCode: On return, the variable contains the language code for the specified audio stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the specified audio stream. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

### 75.1.22 GetAudioOutputMode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current audio mode setting.
**Notes:** Lasterror is set.

### 75.1.23 GetAudioOutputModeCapabilities as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current possible audio output mode possibilities.
**Notes:** Lasterror is set.

### 75.1.24 GetAudioStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the audio stream currently being used.
**Notes:**

Returns the number of the current audio stream, or 0 if the current title has no audio streams.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

### 75.1.25 GetAudioStreamFormat(byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current audio format (AC3,for example).
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

DVDAudioStreamFormat constants - The different possible audio stream formats.

| | |
|---|---|
| kDVDAudioUnknownFormat | 0 |
| kDVDAudioAC3Format | 1 |
| kDVDAudioMPEG1Format | 2 |
| kDVDAudioMPEG2Format | 3 |
| kDVDAudioPCMFormat | 4 |
| kDVDAudioDTSFormat | 5 |
| kDVDAudioSDDSFormat | 6 |

### 75.1.26 GetAudioStreamFormatByStream(index as Integer, byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the audio format for a specified stream.
**Notes:**

index: An integer that specifies an audio stream in the current title.

outFormat: On return, the variable contains the audio format of the audio stream for the current title. For a list of possible formats, see "Audio Stream Formats."

outBitsPerSample: On return, the integer contains the number of bits per sample in the current audio stream.

outSamplesPerSecond: On return, the integer contains the number of samples per second in the current audio stream.

outChannels: On return, the integer contains the number of audio channels in the current audio stream.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.4 and later.

### 75.1.27 GetAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current playback audio volume setting (0 - 255).
**Notes:**

Returns the current playback volume in the range 0 to 255.

Lasterror is set.

This function passes back the current playback audio volume setting. For more information, see DVDSetAudioVolume.

Available in Mac OS X v10.3 and later.

### 75.1.28 GetBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Requests a bookmark to the current play position.

**Notes:**

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open and playing. This function passes back a bookmark to the current play position in the current DVD-Video playback session.

For information about requesting a bookmark when the media is not playing, see GetLastPlayBookmark.

The result is a binary string!

Available in Mac OS X v10.4 and later.

### 75.1.29 GetButtoninfo(byref numberOfButtons as Integer, byref selectedButton as Integer, byref forcedActivateButton as Integer, byref userButtonOffset as Integer, byref numberOfUserButtons as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets information about all available menu buttons in the current title, domain, or content.
**Notes:**

numberOfButtons: On return, the integer contains the number of buttons in the current menu.

selectedButton: On return, the integer contains the 1-based index of the selected button.

forcedActivateButton: On return, the integer contains the index of the button whose action is performed when a specified period of time elapses after the menu is first displayed.

userButtonOffset: On return, the integer contains the index of the first user-selectable button. If the number of user-selectable buttons in a menu is smaller than the total number of buttons, this index may be greater than zero.

numberOfUserButtons: On return, the integer contains the number of user-selectable buttons in the current menu.

Lasterror is set.

Available in Mac OS X v10.4 and later.

### 75.1.30 GetButtonPosition(index as Integer, byref x as Double, byref y as Double, byref w as Double, byref h as Double, byref autoAction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the position and default action of a menu button.
**Notes:**

index: The zero-based index of a menu button. If your button index is 1-based, you should decrement the index before you pass it to this function.

x,y,w,h: On return, the rectangle contains the position and dimensions of the specified button in window local coordinates.

autoAction: On return, a value of 1 indicates the button is a forced activate button,Äîthat is, the button's action is executed immediately when the button is selected. A value of 0 indicates the button is not a forced activate button.

Lasterror is set.

Available in Mac OS X v10.4 and later.

### 75.1.31 GetChapter as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current chapter.
**Notes:** Lasterror is set.

### 75.1.32 GetCurrentAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current video playback volume.
**Notes:**

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

### 75.1.33 GetDiscRegionCode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the region codes available on a DVD-Video disc.
**Notes:**

Returns a bitfield that specifies one or more region codes. For more information about region codes, see Region Codes.

Lasterror is set.

This function passes back the region codes assigned to the DVD-Video disc that's currently in use. Before calling this function, you need to call the function DVDOpenMediaVolume to open the media folder on the disc.

To test whether a disc is authorized for playback in region n, you need to compute the bitwise AND of outCode with region code n. If the result is equal to region code n, the disc is authorized for playback in region n.

Available in Mac OS X v10.3 and later.

### 75.1.34 GetDriveRegionCode(byref regioncode as Integer, byref NumberChangesLeft as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the region code the drive is set to and how many changes are left.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

Region Codes:
The drive region code must match the DVD disc region code. These calls allow getting the disc region code and getting or setting the drive region code.

NOTE: The drive region code is stored in the drive and can only be set a total of 5 times.

On the last time, the drive will be permanently locked to that region code.

### 75.1.35 GetFormatStandard as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the video broadcast format of current DVD-Video media.
**Notes:**

Returns the video broadcast format of the current media. For a list of possible values, see Video Broadcast Formats.

Lasterror is set.

This function determines which video broadcast format (NTSC or PAL) is used in the current media. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

### 75.1.36 GetGPRMValue(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current value of a general parameter (GPRM) register.
**Notes:**

index: An integer index that specifies the desired GPRM register. The valid range is 1 to 16.

Returns the current value of the specified GPRM register.

Lasterror is set.

Available in Mac OS X v10.4 and later.

### 75.1.37 GetLastPlayBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Requests a bookmark to the last play position.
**Notes:**

Returnns a binary string!

Lasterror is set.

Available in Mac OS X v10.4 and later.

### 75.1.38 GetMaxAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the maximum video playback volume
**Notes:**

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

### 75.1.39 GetMediaUniqueID as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets a unique identifier for a media folder.
**Notes:**

Returns the unique identifier of the current media.

This function passes back a 64-bit identifier that can help you distinguish between different media folders. While the identifiers generated by this function are not guaranteed to be unique (see below), duplicate identifiers are extremely rare.

There are two known limitations of this function:

Two copies of the same DVD that are produced at different times do not necessarily have the same identifier. This can happen when the two media folders have minor differences.
Two different DVDs with similar content,Äîcollections of episodes from a television series, for example,Äîdo not always have different identifiers. This can happen when the two media folders are identical.

Available in Mac OS X v10.4 and later.

### 75.1.40 GetMediaVolumeName as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the volume name of the current media.
**Notes:**

This function passes back the media volume name as a string. This is the name seen on the desktop when Mac OS X mounts a DVD-Video disc.

Available in Mac OS X v10.4 and later.

### 75.1.41 GetMenuLanguageCode as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the menu language code for the current title.
**Notes:**

Returns the menu language code for the current title. For a list of possible values, see Language Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.

### 75.1.42 GetMinAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the minimum video playback volume.
**Notes:**

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

### 75.1.43 GetNativeVideoHeight as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the native height of the current title.
**Notes:**

Available in Mac OS X v10.3 and later.
Lasterror is set.

### 75.1.44 GetNativeVideoSize(byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** The native video size.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.45 GetNativeVideoWidth as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the native width of the current title.
**Notes:**

Available in Mac OS X v10.3 and later.
Lasterror is set.

### 75.1.46 GetNumberOfAngles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of camera angles currently available.
**Notes:**

Returns the number of different camera angles in the current title. DVD-Video media supports up to 9 camera angles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

### 75.1.47 GetNumberOfAudioStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of audio streams currently available.
**Notes:**

Returns the number of audio streams available in the current title.
Lasterror is set.
Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

### 75.1.48 GetNumberOfChapters(title as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of chapters in the specified title.
**Notes:**

title: An integer in the range 1 to 99 that specifies a title on the current media.
Returns the number of chapters in the specified title.
Lasterror is set.
If the specified chapter does not exist, this function does nothing and returns an error.
Available in Mac OS X v10.3 and later.

### 75.1.49 GetNumberOfSubPictureStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of subpicture streams currently available.
**Notes:**

Returns the number of subpicture streams available in the current title. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 75.1.50 GetNumberOfTitles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of titles available on the media.
**Notes:**

Returns the number of titles on the current media in the range 0 to 99.
Lasterror is set.
Available in Mac OS X v10.3 and later.

### 75.1.51 GetScanRate(byref scanrate as Integer, byref direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current scan direction and rate.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.52 GetSPDIFDataOutDevice as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the selected SPDIF capable audio device.
**Notes:** Lasterror is set.

### 75.1.53 GetSPDIFDataOutDeviceCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of SPDIF capable audio devices.
**Notes:** Lasterror is set.

### 75.1.54 GetSPDIFDataOutDeviceName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the name of a SPDIF capable audio device
**Notes:** Lasterror is set.

### 75.1.55 GetState as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current play state of the DVDPlayback framework.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The current play state of the framework.

Constants:

| | | |
|---|---|---|
| kDVDStateUnknown | 0 | |
| kDVDStatePlaying | 1 | playing 1x or less (slow mo) |
| kDVDStatePlayingStill | 2 | |
| kDVDStatePaused | 3 | pause and step frame |
| kDVDStateStopped | 4 | |
| kDVDStateScanning | 5 | playing greater than 1x |
| kDVDStateIdle | 6 | |

### 75.1.56 GetSubPictureLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the subpicture language code and extension for the current subpicture stream.
**Notes:**

DVDLanguageCode: On return, the variable contains the language code for the current subpicture. For a list of possible values, see Language Codes.
DVDSubpictureExtensionCode: On return, the variable contains the extension code for the current subpicture. For a list of possible values, see Subpicture Extension Codes.

If subpictures are not available, this function does nothing and lasterror is set to 0.
Lasterror is set.

Available in Mac OS X v10.3 and later.

### 75.1.57 GetSubPictureLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the subpicture language code and extension for a specified subpicture stream.
**Notes:**

StreamIndex: A subpicture stream number in the current title. Subpicture stream numbers range from 1 to 32.

DVDLanguageCode: On return, the variable contains the language code for the subpicture stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the extension code for the subpicture stream. For a list of possible values, see Subpicture Extension Codes.

Lasterror is set.

If subpictures are not available, this function does nothing and lasterror is not 0.

Available in Mac OS X v10.3 and later.

### 75.1.58 GetSubPictureStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current subpicture stream.
**Notes:**

Returns the identifier of the current subpicture stream, or 0 if the current title has no subpictures. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 75.1.59 GetTime(timecode as Integer, byref time as Integer, byref frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the current playback position in the current title in seconds relative to the requested time code (elapsed,remaining).
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

| | | |
|---|---|---|
| kDVDTimeCodeUninitialized | 0 | |
| kDVDTimeCodeElapsedSeconds | 1 | |
| kDVDTimeCodeRemainingSeconds | 2 | |
| kDVDTimeCodeTitleDurationSeconds | 3 | only useable for GetTime |
| kDVDTimeCodeChapterElapsedSeconds | 4 | only useable for GetTime |
| kDVDTimeCodeChapterRemainingSeconds | 5 | only useable for GetTime |
| kDVDTimeCodeChapterDurationSeconds | 6 | only useable for GetTime |

### 75.1.60 GetTimeEventRate as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the rate of the time event.
**Notes:**

Returns the current interval between time events in milliseconds.

Lasterror is set.
Available in Mac OS X v10.3 and later.

### 75.1.61 GetTitle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the number of the current title.
**Notes:**

Returns the current title number, or 0 if a menu is active. DVD-Video media can contain up to 99 titles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

### 75.1.62 GetVideoBounds(byref x as Integer, byref y as Integer, byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns (in port coordinates) the rect used to play video.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

### 75.1.63 GetVideoDisplay as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the graphics display for the current DVD-Video playback session.
**Notes:**

Returns the display ID is set to the current video playback display.

Lasterror is set.

Before calling this function, you need to set the video playback display using SetVideoDisplay or SwitchToDisplay.

Available in Mac OS X v10.3 and later.

### 75.1.64 GetVideoKeyColor as color

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the key color used by the video driver.
**Notes:**

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

This function does nothing and returns the color black.

### 75.1.65 GetVideoWindowID as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Gets the window ID of the Cocoa window in use for DVD-Video playback.
**Notes:**

Returns the window ID of the Cocoa window currently in use for DVD-Video playback, or zero if there is no Cocoa window.

Lasterror is set.
Available in Mac OS X v10.3 and later.

### 75.1.66 GoBackOneLevel

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If a submenu is active, moves up one level in the same domain.
**Notes:**

Lasterror is set.

This function is used to navigate one level up in a hierarchical structure in the same domain,Äîfor example, from a scene selection menu back to the main menu. This action is comparable to navigating upwards in the directory or folder hierarchy of a file system.

Available in Mac OS X v10.3 and later.

### 75.1.67 GotoBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the video playback position using a bookmark, and resumes play.
**Notes:**

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, and begins playing the media.

Bookmark ist a binary string. Make sure you did not destroy it by an encoding conversion!

Requires Mac OS X 10.4 or newer.
Lasterror is set.

### 75.1.68 GoToMenu(menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Jump to a particular menu (Root Menu,Sub Picture Menu, etc.).
**Notes:**

Requires Mac OS X 10.3 or newer.

Lasterror is set.

### 75.1.69 HasMedia as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the playback framework has media to play and the framework had received an Open call on the media.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.70 HasMenu(menu as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns if input menu type is available.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.71 HasNextChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if there is a chapter after the current chapter.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.72 HasPreviousChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if there is a chapter before the current chapter.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.73 Idle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Allows the framework to get a consistent time to process at. (Might be removed in the future).
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.74 IsDisplayingSubPicture as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if subpictures are currently being displayed.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.75 IsMuted as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Toggles the mute setting on or off.
**Notes:**

Returns true if the playback volume is currently muted.
Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.76 IsOnMenu(byref OnMenu as boolean, byref menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Are we currently on a menu, and if so, which one.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.77 IsPaused as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the framework has media and is paused.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.78 IsPlaying as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the framework has media and is playing (even if paused).
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.79 IsSupportedDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** True if the display is supported.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3 or newer.
You can use the handle from a CGDisplayMBS object.

### 75.1.80 IsValidMedia(folder as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the folderitem points to a valid media layout.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.81 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** The last error code reported.
**Notes:**

Requires Mac OS X 10.3 or newer.

| | | |
|---|---|---|
| kDVDErrorUnknown | -70001 | Catch all error |
| kDVDErrorInitializingLib | -70002 | There was an error initializing the playback framework |
| kDVDErrorUninitializedLib | -70003 | The playback framework has not been initialized. |
| kDVDErrorNotAllowedDuringPlayback | -70004 | action is not allowed during playback |
| kDVDErrorUnassignedGrafPort | -70005 | A grafport was not set. |
| kDVDErrorAlreadyPlaying | -70006 | Media is already being played. |
| kDVDErrorNoFatalErrCallBack | -70007 | The application did not install a callback routine for fatal errors returned by the framework. |
| kDVDErrorIsAlreadySleeping | -70008 | The framework has already been notified to sleep. |
| kDVDErrorDontNeedWakeup | -70009 | DVDWakeUp was called when the framework was not asleep. |
| kDVDErrorTimeOutOfRange | -70010 | Time code is outside the valid range for the current title. |
| kDVDErrorUserActionNoOp | -70011 | The operation was not allowed by the media at this time. |
| kDVDErrorMissingDrive | -70012 | The DVD drive is not available. |
| kDVDErrorNotSupportedConfiguration | -70013 | The current system configuration is not supported. |
| kDVDErrorNotSupportedFunction | -70014 | The operation is not supported. For example, trying to slow mo backwards. |
| kDVDErrorNoValidMedia | -70015 | The media was not valid for playback. |
| kDVDErrorWrongParam | -70016 | The invalid parameter was passed. |
| kDVDErrorMissingGraphicsDevice | -70017 | A valid graphics device is not available. |
| kDVDErrorGraphicsDevice | -70018 | A graphics device error was encountered. |
| kDVDErrorPlaybackOpen | -70019 | The framework is already open (probably by another process). |
| kDVDErrorInvalidRegionCode | -70020 | The region code was not valid. |
| kDVDErrorRgnMgrInstall | -70021 | The region manager was not properly installed or missing from the system. |
| kDVDErrorMismatchedRegionCode | -70022 | The disc region code and the drive region code do not match. |
| kDVDErrorNoMoreRegionSets | -70023 | The drive does not have any region changes left. |
| kDVDErrordRegionCodeUninitialized | -70024 | The drive region code was not initialized. |
| kDVDErrorAuthentification | -70025 | The user attempting to change the region code could not be authenticated. |
| kDVDErrorOutOfVideoMemory | -70026 | The video driver does not have enough video memory available to playback the media. |
| kDVDErrorNoAudioOutputDevice | -70027 | An appropriate audio output device could not be found. |
| kDVDErrorSystem | -70028 | A system error was encountered. |
| kDVDErrorNavigation | -70029 | The user has made a selection not supported in the current menu. |

### 75.1.82 LastErrorString as string

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns an error message for the lasterror code.
**Notes:** Requires Mac OS X 10.3 or newer.

### 75.1.83 Mute(mute as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Toggles the mute setting on or off.
**Notes:**

mute: a boolean value that specifies whether to turn the mute setting on or off. To mute the video playback volume, pass TRUE. To restore the previous volume setting, pass FALSE.

Lasterror is set.

Available in Mac OS X v10.3 and later.

### 75.1.84 NextChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets to the next chapter on the current title.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.85 Open

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: Desktop only.

**Function:** Call when preparing for playback. Usually when the application is initializing.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Returns an error of kDVDErrorPlaybackOpen if the playback framework is already being used.

### 75.1.86 OpenMediaFile(folder as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Opens a VIDEO_TS folder (can be on a hard drive or a dvd disc).
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.87 OpenMediaVolume(disc as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Opens a DVD disc for playback.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.88 Pause

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Pauses the media if currently playing.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.89 Play

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Starts playing the media.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.90 PreviousChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets to the previous chapter on the current title.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.91 Resume

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Starts playing if currently paused.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.92 ReturnToTitle

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns from the menu back to the current position within the title.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.93 SetAngle(angle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the camera angle to display.
**Notes:**

angle: A 1-based index that specifies the camera angle to display. The angle number of the main angle is 1. DVD-Video media supports up to nine camera angles.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started. The DVD-Video author decides how many camera angles are used. If the specified angle does not exist, this function does nothing.

Available in Mac OS X v10.3 and later.

### 75.1.94 SetAspectRatio(AspectRatio as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the aspect ratio for the current title.
**Notes:**

AspectRatio: A constant that specifies the desired aspect ratio for the current title. For a list of possible values, see Aspect Ratios.

Lasterror is set.
This function does nothing and returns noErr.

Available in Mac OS X v10.3 and later.

### 75.1.95 SetAudioOutputMode(Mode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Set the audio mode.
**Notes:** Lasterror is set.

### 75.1.96 SetAudioStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the audio stream to use.
**Notes:**

index: An integer from 1 to 8 that specifies an audio stream in the current title. DVD-Video media supports up to 8 audio streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 75.1.97 SetAudioVolume(Volume as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the playback audio volume setting (0 - 255).
**Notes:**

Volume: An integer in the range 0 to 255 that specifies the new video playback volume setting. Larger values are clamped to 255.

Lasterror is set.

This function changes the current playback audio volume setting, not the system audio volume setting. The actual audio volume experienced by the user is a function of these two settings:

Actual audio volume = system volume * playback audio volume / 255

For example, if you set the playback volume to 127, the actual volume is approximately one-half the current system volume.

Available in Mac OS X v10.3 and later.

### 75.1.98 SetChapter(Chapter as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the chapter to play.
**Notes:**

Chapter: An integer that specifies the chapter to play.

Lasterror is set.
This function defines the specified chapter to be the current video playback chapter. If video playback is paused, this function starts playing the chapter immediately. Note that some discs do not allow jumping directly to a chapter.

Available in Mac OS X v10.3 and later.

### 75.1.99 SetDefaultAudioLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the default audio language code and extension.
**Notes:**

DVDLanguageCode: A constant that specifies the default audio language for the specified audio extension.. For a list of possible values, see Language Codes. If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default audio language is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies an audio extension. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

This function selects an audio language other than the DVD's default language for a specified audio extension. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

### 75.1.100 SetDefaultMenuLanguageCode(Code as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the default menu language code.
**Notes:**

Code: An integer code that specifies the default menu language for the current title. For a list of possible values, see "Language Codes." If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default menu language is matched to the language setting in the International Preferences Panel.

Lasterror is set.

This function selects a language other than the DVD's default language for menus in the current title. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

### 75.1.101 SetDefaultSubPictureLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the default subpicture language and extension when subpictures are enabled.
**Notes:**

DVDLanguageCode: A constant that specifies the default language for the specified subpicture extension. For a list of possible values, see "Language Codes." If no language is specified,Äîthat is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone,Äîthe default subpicture language code is matched to the language setting in the International Preferences Panel.

DVDSubpictureExtensionCode: A constant that specifies a subpicture extension. For a list of possible values, see "Subpicture Extension Codes."

Lasterror is set.
If the current title is playing, this function does nothing and lasterror is set to kDVDErrorAlreadyPlaying.

This function is used to select a subpicture language other than the system default language. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

### 75.1.102 SetDriveRegionCode(regioncode as Integer, AuthorizationHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the drive region code (requires user authentication).
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

DVDRegionCode constants - The different possible region codes (used for both the disc and the drive):

| | |
|---|---|
| kDVDRegionCodeUninitialized | & hff |
| kDVDRegionCode1 | & hfe |
| kDVDRegionCode2 | & hfd |
| kDVDRegionCode3 | & hfb |
| kDVDRegionCode4 | & hf7 |
| kDVDRegionCode5 | & hef |
| kDVDRegionCode6 | & hdf |
| kDVDRegionCode7 | & hbf |
| kDVDRegionCode8 | & h7f |

### 75.1.103 SetLastPlayBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the video playback position using a bookmark.
**Notes:**

Lasterror is set.

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, but does not begin playing the media. See also GotoBookmark.

Available in Mac OS X v10.4 and later.

### 75.1.104 SetScanRate(scanrate as Integer, direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Fast forwards or rewinds depending on the direction parameter at the speed specified in the scanrate parameter.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

The rate at which to scan:

| | |
|---|---|
| kDVDScanRateOneEigth | -8 |
| kDVDScanRateOneFourth | -4 |
| kDVDScanRateOneHalf | -2 |
| kDVDScanRate1x | 1 |
| kDVDScanRate2x | 2 |
| kDVDScanRate4x | 4 |
| kDVDScanRate8x | 8 |
| kDVDScanRate16x | 16 |
| kDVDScanRate32x | 32 |

Direction constants:

| | |
|---|---|
| kDVDScanDirectionForward | 0 |
| kDVDScanDirectionBackward | 1 |

### 75.1.105 SetSPDIFDataOutDevice(Device as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Selects a SPDIF capable audio device.
**Notes:** Lasterror is set.

### 75.1.106 SetSubPictureStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the current subpicture stream.
**Notes:**

index: A positive integer that specifies the subpicture stream to display. Subpicture stream numbers range from 1 to 32.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 75.1.107 SetTime(timecode as Integer, time as Integer, frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the current playback position in the current title based on a time position in seconds relative to the time code (elapsed,remaining).
**Notes:**

timecode: A time code constant. You must specify one of two values: kDVDTimeCodeElapsedSeconds or kDVDTimeCodeRemainingSeconds.

time: An integer that specifies the position in seconds.

frames: An integer that specifies the frame number. For the NTSC video format, the range of frame numbers is 0 to 29. For the PAL format, the range is 0 to 24.

his function sets the video playback position in the current title. Not all titles permit this operation, so it's important to check the result code returned by this function.

Before calling this function, DVD-Video media needs to be open and video playback started.

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.108 SetTimeEventRate(rate as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the rate of the DVD Playback time event.
**Notes:**

The new interval between time events, specified in milliseconds.

Lasterror is set.

The default interval between DVD Playback time events is 900 milliseconds. You can use this function to lengthen or shorten the interval between time events. This function is relevant when you have used the function DVDRegisterEventCallBack to register a callback for one or both of the time events: kDVDEvent-TitleTime and kDVDEventChapterTime . Time event callbacks are typically used for tasks such as updating the elapsed time or remaining time displayed in your user interface.

Available in Mac OS X v10.3 and later.

### 75.1.109 SetTitle(Title as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the title to play.
**Notes:**

Title: An integer in the range 1 to 99 that specifies the title to play.

Lasterror is set.
If the specified title exists on the current media and the media permits this operation, this function begins playing the title.

Available in Mac OS X v10.3 and later.

### 75.1.110 SetVideoBounds(x as Integer, y as Integer, w as Integer, h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the bounds in which to display the video.
**Notes:**

x,y,w,h: A rectangle that contains the desired bounds in window local coordinates.

Lasterror is set.

This function is used to set the area inside the current window in which to display the video. The video area is not required to fill the entire window. Generally you should set the video area to be smaller than the window whenever the aspect ratio of the current title and window are different. To find the aspect ratio of the current title, use the function GetAspectRatio.

Because the aspect ratios of the titles in a DVD-Video media folder are not always the same, you may need to call this function repeatedly to reset the video area as the user makes different viewing choices.

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

### 75.1.111 SetVideoDisplay(CGVideoDisplayHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the graphics display for the current DVD-Video playback session.
**Notes:**

The Quartz display ID for the graphics display you want to use for video playback. For information about how to get a display ID, see Quartz Display Services Reference. (or CGDisplayMBS class)

Lasterror is set.

You need to call this function or DVDSetVideoDevice each time you move the video playback window to a new graphics display. To avoid degrading video performance, you should not attempt to draw a video playback window that spans two different displays.

Available in Mac OS X v10.3 and later.

### 75.1.112 SetVideoWindowID(WindowID as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Enables or disables DVD-Video playback in a Cocoa window.
**Notes:**

WindowID: The window ID associated with a Cocoa window, or NULL. For information about when to pass 0, see the Discussion below.

Lasterror is set.

If you're using a Cocoa window for DVD-Video playback, you need to use this function in two different situations:

Immediately after calling the constructor to start a new DVD-Video playback session, you should call this function and pass the window ID associated with the Cocoa window.

When video is not playing and you want to draw into the area of the window you set by calling the function SetVideoBounds, you should call this function and pass 0 in the inVidWindowID parameter.

To learn how to obtain the window number for a Cocoa window, see the description of the windowNumber method in the NSWindow class.

Availability
Available in Mac OS X v10.3 and later.

### 75.1.113 Sleep

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Call when system is putting machine to sleep so playback information can be saved.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

### 75.1.114 StepFrame(direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Steps one frame in the direction specified in DVDScanDirection.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.
Currently only supports kDVDScanDirectionForward.

### 75.1.115 Stop

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Stops if playing.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.116 SwitchToDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Switches the output to the given display.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.
You can use the handle from a CGDisplayMBS object.

### 75.1.117 UpdateVideo

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Forces the video to be updated.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 75.1.118 WakeUp

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Call when system is waking up so playback information can be reset.
**Notes:**

Requires Mac OS X 10.3 or newer.
Lasterror is set.
The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

### 75.1.119 Events

### 75.1.120 DVDEvent(eventcode as Integer, value1 as Integer, value2 as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

**Function:** A DVD event.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

DVDEventCode constants - The different event a client can register for to get notified (return value: UInt32)

| | | |
|---|---|---|
| kDVDEventTitle | 1 | value1: Title |
| kDVDEventPTT | 2 | value1: Chapter |
| kDVDEventValidUOP | 3 | value1: UOP code mask (DVDUOPCode) |
| kDVDEventAngle | 4 | value1: StreamID |
| kDVDEventAudioStream | 5 | value1: StreamID |
| kDVDEventSubpictureStream | 6 | value1: streamID / (value2 ! 0): visible |
| kDVDEventDisplayMode | 7 | value1: DVDAspectRatio |
| kDVDEventDomain | 8 | value1: DVDDomainCode |
| kDVDEventBitrate | 9 | value1: Bits / sec |
| kDVDEventStill | 10 | value1: On (1) - Off (0) |
| kDVDEventPlayback | 11 | value1: DVDState |
| kDVDEventVideoStandard | 12 | value1: DVDFormat |
| kDVDEventStreams | 13 | value1: None (trigger for general stream change) |
| kDVDEventScanSpeed | 14 | value1: Speed (1x,2x,3x,...) |

### 75.1.121 FatalError(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

**Function:** A fatal error. Quit the application as soon as possible.
**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

### 75.1.122 Constants

### 75.1.123 kDVDAMGMDomain = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Audio Manager Menu domain (DVD-Audio only, not used).

### 75.1.124 kDVDAspectRatio16x9 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the current aspect ratio.
**Notes:** The process of displaying a 16:9 video frame on a screen with the same aspect ratio.

### 75.1.125 kDVDAspectRatio4x3 = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the current aspect ratio.
**Notes:** The process of displaying a 4:3 video frame on a screen with the same aspect ratio.

### 75.1.126 kDVDAspectRatio4x3PanAndScan = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the current aspect ratio.
**Notes:** The process of choosing a sample area of a 16:9 video frame for display on a 4:3 screen, using center-of-interest information stored on the DVD.

### 75.1.127 kDVDAspectRatioLetterBox = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the current aspect ratio.
**Notes:** The process of displaying the entire 16:9 video frame on a 4:3 screen by shrinking the frame and adding mattes or black bars above and below the frame.

### 75.1.128 kDVDAspectRatioUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the current aspect ratio.
**Notes:** Available in Mac OS X v10.3 and later.

### 75.1.129 kDVDAudioAC3Format = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The Dolby Digital AC-3 format.

### 75.1.130 kDVDAudioDDPlusFormat = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.131 kDVDAudioDTSFormat = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The Digital Theater Systems (DTS) format. This format is not supported.

### 75.1.132 kDVDAudioDTSHDFormat = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.133 kDVDAudioExtensionCodeDirectorsComment1 = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of an audio channel.
**Notes:** First audio channel for the artistic director's comments.

### 75.1.134 kDVDAudioExtensionCodeDirectorsComment2 = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Second audio channel for the artistic director's comments.

### 75.1.135 kDVDAudioExtensionCodeNormalCaptions = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio channel for extended information about the title.

### 75.1.136 kDVDAudioExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio extension not specified.

### 75.1.137 kDVDAudioExtensionCodeNVisualImpaired = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio channel for the visually impaired.

### 75.1.138 kDVDAudioMLPFormat = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.139 kDVDAudioModeProLogic = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.140 kDVDAudioModeSPDIF = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.141 kDVDAudioModeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies an audio mode.

### 75.1.142 kDVDAudioMPEG1Format = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The MPEG-1 Layer II digital format.

### 75.1.143 kDVDAudioMPEG2Format = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The MPEG-2 digital format.

### 75.1.144 kDVDAudioPCMFormat = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The linear pulse-code modulation (PCM) format used on CDs.

### 75.1.145 kDVDAudioSDDSFormat = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** The Sony Dynamic Digital Sound (SDDS) format. This format is not supported.

### 75.1.146 kDVDAudioUnknownFormat = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the audio stream format.
**Notes:** An unspecified audio format.

### 75.1.147 kDVDButtonIndexNone = -1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant for an index of the selected menu button.

### 75.1.148 kDVDErrorAlreadyPlaying = -70006

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** See kDVDErrorNotAllowedDuringPlayback.

### 75.1.149 kDVDErrorAuthentification = -70025

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** An attempt to change the DVD drive region code could not be authenticated.

### 75.1.150 kDVDErrorDontNeedWakeup = -70009

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** DVDWakeUp was called without first calling Sleep.

### 75.1.151 kDVDErrorGraphicsDevice = -70018

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A graphics device error was encountered.

### 75.1.152 kDVDErrorInitializingLib = -70002

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** An error occurred while initializing a DVD-Video playback session. DVD Playback Services is probably being used in another process.

### 75.1.153 kDVDErrorInvalidBookmarkForMedia = -70032

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.

### 75.1.154 kDVDErrorInvalidBookmarkSize = -70031

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.

### 75.1.155 kDVDErrorInvalidBookmarkVersion = -70030

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.

### 75.1.156 kDVDErrorInvalidRegionCode = -70020

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** Region code is not valid.

### 75.1.157 kDVDErrorIsAlreadySleeping = -70008

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** DVDSleep was called twice without an intervening call to WakeUp.

### 75.1.158 kDVDErrorMismatchedRegionCode = -70022

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** DVD-Video disc region code does not match the region code currently assigned to the DVD drive.

### 75.1.159 kDVDErrorMissingDrive = -70012

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A DVD drive is not available.

### 75.1.160 kDVDErrorMissingGraphicsDevice = -70017

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A graphics device is not available.

### 75.1.161 kDVDErrorNavigation = -70029

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The user has made a selection not supported in the current menu.

### 75.1.162 kDVDErrorNoAudioOutputDevice = -70027

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** An appropriate audio output device could not be found.

### 75.1.163 kDVDErrorNoFatalErrCallBack = -70007

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** No callback has been registered to handle unrecoverable errors during playback.

### 75.1.164 kDVDErrorNoMoreRegionSets = -70023

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** Changing the region code assigned to the DVD drive is no longer permitted.

### 75.1.165 kDVDErrorNotAllowedDuringPlayback = -70004

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The operation is not permitted while DVD-Video media is playing.

### 75.1.166 kDVDErrorNotSupportedConfiguration = -70013

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The current system configuration does not support DVD-Video playback.

### 75.1.167 kDVDErrorNotSupportedFunction = -70014

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** DVD Playback Services does not support this operation.

### 75.1.168 kDVDErrorNoValidBookmarkForLastPlay = -70033

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.

### 75.1.169 kDVDErrorNoValidMedia = -70015

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A VIDEO_TS media folder is not open for playback.

### 75.1.170 kDVDErrorOutOfVideoMemory = -70026

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The video driver does not have enough video memory available for playback.

### 75.1.171 kDVDErrorPlaybackOpen = -70019

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A VIDEO_TS media folder is already open for playback.

### 75.1.172 kDVDErrorRegionCodeUninitialized = -70024

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** No region code has been assigned to the DVD drive.

### 75.1.173 kDVDErrorRgnMgrInstall = -70021

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** Not used.

### 75.1.174 kDVDErrorSystem = -70028

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A system error occurred.

### 75.1.175 kDVDErrorTimeOutOfRange = -70010

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The time code is outside the valid range for the current title.

### 75.1.176 kDVDErrorUnassignedGrafPort = -70005

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A graphics port for DVD-Video playback has not been set.

### 75.1.177 kDVDErrorUninitializedLib = -70003

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** A DVD-Video playback session has not been initialized. Any function except DVDInitialize could return this value.

### 75.1.178 kDVDErrorUnknown = -70001

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** Unspecified error.

### 75.1.179 kDVDErrorUserActionNoOp = -70011

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** The operation is not permitted at this time.

### 75.1.180 kDVDErrorWrongParam = -70016

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the result codes defined for DVD Playback.
**Notes:** An argument is invalid.

### 75.1.181 kDVDEventAngle = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Camera angle has changed.

### 75.1.182 kDVDEventAngleNumbers = 23

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** The number of angles has changed.

### 75.1.183 kDVDEventAudioStream = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Audio stream has changed.

### 75.1.184 kDVDEventAudioStreamNumbers = 22

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** The number of audio streams has changed.

### 75.1.185 kDVDEventBitrate = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Bit rate has changed.

### 75.1.186 kDVDEventCCInfo = 25

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Closed caption has changed.

### 75.1.187 kDVDEventChapterTime = 26

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Chapter time has changed.

### 75.1.188 kDVDEventDisplayMode = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Display mode has changed.

### 75.1.189 kDVDEventDomain = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Domain has changed.

### 75.1.190 kDVDEventError = 24

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Hardware error.

### 75.1.191 kDVDEventGPRM = 18

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** GPRM data has changed.

### 75.1.192 kDVDEventMenuCalled = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Menu has changed.

### 75.1.193 kDVDEventParental = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Parental level has changed.

### 75.1.194 kDVDEventPGC = 17

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Program chain has changed.

### 75.1.195 kDVDEventPlayback = 11

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Playback state has changed.

### 75.1.196 kDVDEventPTT = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Chapter has changed.

### 75.1.197 kDVDEventRegionMismatch = 19

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Region mismatch between disc and playback device.

### 75.1.198 kDVDEventScanSpeed = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Scan rate has changed.

### 75.1.199 kDVDEventStill = 10

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Still picture on or off.

### 75.1.200 kDVDEventStreams = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Stream has changed (audio, subpicture, or angle).

### 75.1.201 kDVDEventSubpictureStream = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Subpicture has changed.

### 75.1.202 kDVDEventSubpictureStreamNumbers = 21

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** The number of subpicture streams has changed.

### 75.1.203 kDVDEventTitle = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Title has changed.

### 75.1.204 kDVDEventTitleTime = 20

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Title time has changed.

### 75.1.205 kDVDEventValidUOP = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** User operations that are disabled.

### 75.1.206 kDVDEventVideoStandard = 12

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify the event ID used in the DVDEvent event.
**Notes:** Video format has changed

### 75.1.207 kDVDFormatNTSC = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies video broadcast formats used in DVD media.
**Notes:** National Television Standards Committee (NTSC) video format used in North America and Japan.

### 75.1.208 kDVDFormatNTSC_HDTV = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies video broadcast formats used in DVD media.

### 75.1.209 kDVDFormatPAL = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies video broadcast formats used in DVD media.
**Notes:** Phase Alternating Line (PAL) video format widely used in Europe, South Asia, Africa, and South America.

### 75.1.210 kDVDFormatPAL_HDTV = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies video broadcast formats used in DVD media.

### 75.1.211 kDVDFormatUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies video broadcast formats used in DVD media.
**Notes:** An unspecified video format.

### 75.1.212 kDVDFPDomain = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** First Play domain.

### 75.1.213 kDVDLanguageCodeAbkhazian = "ab "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.214 kDVDLanguageCodeAfar = "aa "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.215 kDVDLanguageCodeAfrikaans = "af "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.216 kDVDLanguageCodeAlbanian = "sq "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.217 kDVDLanguageCodeAmharic = "am "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.218 kDVDLanguageCodeArabic = "ar "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.219 kDVDLanguageCodeArmenian = "hy "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.220 kDVDLanguageCodeAssamese = "as "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.221 kDVDLanguageCodeAymara = "ay "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.222 kDVDLanguageCodeAzerbaijani = "az "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.223 kDVDLanguageCodeBashkir = "ba "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.224 kDVDLanguageCodeBasque = "eu "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.225 kDVDLanguageCodeBengali = "bn "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.226 kDVDLanguageCodeBhutani = "dz "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.227 kDVDLanguageCodeBihari = "bh "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.228 kDVDLanguageCodeBislama = "bi "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.229 kDVDLanguageCodeBreton = "br "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.230 kDVDLanguageCodeBulgarian = "bg "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.231 kDVDLanguageCodeBurmese = "my "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.232 kDVDLanguageCodeByelorussian = "be "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.233 kDVDLanguageCodeCambodian = "km "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.234 kDVDLanguageCodeCatalan = "ca "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.235 kDVDLanguageCodeChinese = "zh "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.236 kDVDLanguageCodeCorsican = "co "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.237 kDVDLanguageCodeCroatian = "hr "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.238 kDVDLanguageCodeCzech = "cs "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.239 kDVDLanguageCodeDanish = "da "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.240 kDVDLanguageCodeDutch = "nl "

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a language used in subpictures, audio, and menus.

### 75.1.352 kDVDMenuAngle = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** A viewing angle menu.

### 75.1.353 kDVDMenuAudio = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** An audio menu.

### 75.1.354 kDVDMenuNone = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** Menu not defined.

### 75.1.355 kDVDMenuPTT = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** A part-of-title (PTT) or chapter menu.

### 75.1.356 kDVDMenuRoot = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** A root menu.

### 75.1.357 kDVDMenuSubPicture = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** A menu used to select subpictures.

### 75.1.358 kDVDMenuTitle = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specify input menus for a DVD-Video volume.
**Notes:** A title or top menu.

### 75.1.359 kDVDRegionCode1 = 254

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 1: North America.

### 75.1.360 kDVDRegionCode2 = 253

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 2: Japan, Europe, South Africa.

### 75.1.361 kDVDRegionCode3 = 251

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 3: Southeast Asia.

### 75.1.362 kDVDRegionCode4 = 247

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 4: Australia, New Zealand, Central & South America.

### 75.1.363 kDVDRegionCode5 = 239

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 5: Northwest Asia and North Africa.

### 75.1.364 kDVDRegionCode6 = 223

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 6: China.

### 75.1.365 kDVDRegionCode7 = 191

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 7: Unassigned.

### 75.1.366 kDVDRegionCode8 = 127

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** Region 8: Special venues (airplanes, hotels, cruise ships).

### 75.1.367 kDVDRegionCodeUninitialized = 255

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies marketing regions for DVD discs and playback devices.
**Notes:** The default region code for an uninitialized DVD drive.

### 75.1.368 kDVDScanDirectionBackward = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the direction of play.
**Notes:** Scan in the reverse direction.

### 75.1.369 kDVDScanDirectionForward = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the direction of play.
**Notes:** Scan in the forward direction.

### 75.1.370 kDVDScanRate16x = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.371 kDVDScanRate1x = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.372 kDVDScanRate2x = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.373 kDVDScanRate32x = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.374 kDVDScanRate4x = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.375 kDVDScanRate8x = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.376 kDVDScanRateOneEigth = -8

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.377 kDVDScanRateOneFourth = -4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.378 kDVDScanRateOneHalf = -2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the rate at which to scan.
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

### 75.1.379 kDVDStateIdle = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** Not used.

### 75.1.380 kDVDStatePaused = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** DVD-Video media is open and paused or frame-stepping.

### 75.1.381 kDVDStatePlaying = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** DVD-Video media is open and playing at normal rate (1x scan rate).

### 75.1.382 kDVDStatePlayingSlow = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:**

DVD-Video media is open and playing in slow motion (less than 1x scan rate).
Available in Mac OS X v10.4 and later.

### 75.1.383 kDVDStatePlayingStill = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** DVD-Video media is open and playing a single frame.

### 75.1.384 kDVDStateScanning = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** DVD-Video media is open and playing in fast motion (greater than 1x scan rate).

### 75.1.385 kDVDStateStopped = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** DVD-Video media is open and stopped (not playing).

### 75.1.386 kDVDStateUnknown = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constants that specify the current play state.
**Notes:** The initial state of a new DVD-Video playback session.

### 75.1.387 kDVDSTOPDomain = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Stop State domain.

### 75.1.388 kDVDSubpictureExtensionCodeCaption4Children = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A language-caption subpicture for children.

### 75.1.389 kDVDSubpictureExtensionCodeCaptionBiggerSize = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A large language-caption subpicture.

### 75.1.390 kDVDSubpictureExtensionCodeCaptionNormalSize = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A language-caption subpicture.

### 75.1.391 kDVDSubpictureExtensionCodeClosedCaption4Children = 7

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A closed-caption subpicture for children.

### 75.1.392 kDVDSubpictureExtensionCodeClosedCaptionBiggerSize = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A large closed-caption subpicture.

### 75.1.393 kDVDSubpictureExtensionCodeClosedCaptionNormalSize = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A closed-caption subpicture.

### 75.1.394 kDVDSubpictureExtensionCodeForcedCaption = 9

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A subpicture which is always visible, regardless of the viewer's preferences.

### 75.1.395 kDVDSubpictureExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** Subpicture not specified.

### 75.1.396 kDVDSubpictureExtensionDirectorsComment4Children = 15

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A subpicture for director's comments for children.

### 75.1.397 kDVDSubpictureExtensionDirectorsCommentBiggerSize = 14

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A large subpicture for director's comments.

### 75.1.398 kDVDSubpictureExtensionDirectorsCommentNormalSize = 13

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A normal subpicture for director's comments.

### 75.1.399 kDVDTimeCodeChapterDurationSeconds = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds in the current chapter.

### 75.1.400 kDVDTimeCodeChapterElapsedSeconds = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds elapsed since the beginning of the current chapter.

### 75.1.401 kDVDTimeCodeChapterRemainingSeconds = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds remaining before the end of the current chapter.

### 75.1.402 kDVDTimeCodeElapsedSeconds = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds after a specified position.

### 75.1.403 kDVDTimeCodeRemainingSeconds = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds before a specified position.

### 75.1.404 kDVDTimeCodeTitleDurationSeconds = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds in the current title.

### 75.1.405 kDVDTimeCodeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Not used.

### 75.1.406 kDVDTTDomain = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Title domain.

### 75.1.407 kDVDTTGRDomain = 6

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Title Group domain (DVD-Audio only, not used).

### 75.1.408 kDVDUOPAngleChange = 4194304

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAngle is disabled.

### 75.1.409 kDVDUOPAudioStreamChange = 1048576

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAudioStream is disabled.

### 75.1.410 kDVDUOPBackwardScan = 512

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Scan in the backward direction is disabled.

### 75.1.411 kDVDUOPButton = 131072

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The functions DoMenuClick, DoMenuMouseOver, and DoUserNavigation are disabled.

### 75.1.412 kDVDUOPForwardScan = 256

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Scan in the forward direction is disabled.

### 75.1.413 kDVDUOPGoUp = 16

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoBackOneLevel is disabled.

### 75.1.414 kDVDUOPKaraokeModeChange = 8388608

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

### 75.1.415 kDVDUOPMenuCallAngle = 16384

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for an angle menu is disabled.

### 75.1.416 kDVDUOPMenuCallAudio = 8192

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for an audio menu is disabled.

### 75.1.417 kDVDUOPMenuCallPTT = 32768

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a chapter menu is disabled.

### 75.1.418 kDVDUOPMenuCallRoot = 2048

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a root menu is disabled.

### 75.1.419 kDVDUOPMenuCallSubPicture = 4096

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a subpicture menu is disabled.

### 75.1.420 kDVDUOPMenuCallTitle = 1024

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a title menu is disabled.

### 75.1.421 kDVDUOPNextPGSearch = 128

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function NextChapter is disabled.

### 75.1.422 kDVDUOPPauseOff = 67108864

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Resume is disabled.

### 75.1.423 kDVDUOPPauseOn = 524288

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Pause is disabled.

### 75.1.424 kDVDUOPPrevTopPGSearch = 64

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function PreviousChapter is disabled.

### 75.1.425 kDVDUOPPTTPlaySearch = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.

### 75.1.426 kDVDUOPResume = 65536

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.

### 75.1.427 kDVDUOPScanOff = 33554432

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

### 75.1.428 kDVDUOPStillOff = 262144

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

### 75.1.429 kDVDUOPStop = 8

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Stop is disabled.

### 75.1.430 kDVDUOPSubPictureStreamChange = 2097152

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAudioStream is disabled.

### 75.1.431 kDVDUOPTimePlaySearch = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.

### 75.1.432 kDVDUOPTimePTTSearch = 32

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function DVDSetChapter is disabled.

### 75.1.433 kDVDUOPTitlePlay = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The functions ReturnToTitle, SetTitle, and SetChapter are disabled.

### 75.1.434 kDVDUOPVideoModeChange = 16777216

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

### 75.1.435 kDVDUserNavigationEnter = 5

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
**Notes:** Execute the action of the selected button.

### 75.1.436 kDVDUserNavigationMoveDown = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
**Notes:** Move to and select the button above the current location.

### 75.1.437 kDVDUserNavigationMoveLeft = 3

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
**Notes:** Move to and select the button to the left of the current location.

### 75.1.438 kDVDUserNavigationMoveRight = 4

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
**Notes:** Move to and select the button to the right of the current location.

### 75.1.439 kDVDUserNavigationMoveUp = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.
**Notes:** Move to and select the button above the current location.

### 75.1.440 kDVDVMGMDomain = 1

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Video Manager Menu domain.

### 75.1.441 kDVDVTSMDomain = 2

MBS MacOSX Plugin, Plugin Version: 9.2.

**Function:** A constant that specifies playback domains or modes that define a set of possible actions.
**Notes:** Video Title Set Menu domain.

## 75.2 class DVDPlaybackMissingFunctionExceptionMBS

### 75.2.1 class DVDPlaybackMissingFunctionExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** The exception raised if a DVDPlayback function is not available on this Mac OS X version.
**Notes:**

Check the message property.
Subclass of the RuntimeException class.

## 75.3 class DVDPlaybackNotInitializedExceptionMBS

### 75.3.1 class DVDPlaybackNotInitializedExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** The exception raised when you use a method on the DVDPlaybackMBS class without initializing it.
**Notes:** Subclass of the RuntimeException class.

# Chapter 76

# DynamicDeclares

## 76.1 class DeclareCallBackMBS

### 76.1.1 class DeclareCallBackMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a callback for use in declares.
**Notes:**

Allows you to dynamically create callback functions.
Pass the function pointer to a C function which later calls back your callback.

Please make sure this callback object stays alive, e.g. stored in a global property. When the object is released and the callback later invoked, the application will crash.

When you code sign on macOS, you may need to use the entitlement for just-in-time compiler and for unsigned executable memory, e.g. the com.apple.security.cs.allow-unsigned-executable-memory entitlement.

- 21.1, page 28
- 19.3, page 10: News

### 76.1.6 Methods

### 76.1.7 Constructor(Signature as String)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new callback object.
**Notes:**

Please pass a valid signature, e.g. "(pi)v" for a function taking one pointer, one integer and return nothing (void).
If the signature doesn't match the values put on the stack, the app may crash.

### 76.1.8 ParameterType(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries type of a parameter.
**Notes:** Index in range from 0 to ParameterCount-1.

### 76.1.9 Properties

### 76.1.10 AllowAsync as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the callbacks are allowed to go asynchronously.
**Notes:**

For MacOS/iOS only.

Asynchronous callbacks have no chance to return a value as the call to the Xojo event happens later and the C function returns before the Xojo event is started.
Synchronous callbacks would let the callback wait for the Xojo main thread to react to the event and then return the result back.

AllowAsync is set to true automatically for callbacks with void as return automatically.
(Read and Write property)

### 76.1.11 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The call counter.
**Notes:**

We call how often the callback is called.
(Read only property)

### 76.1.12 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function pointer for the callback.
**Notes:**

Pass this to the C functions to pass a callback function pointer.
(Read only property)

### 76.1.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the callback.
**Notes:**

You can set this to later read value in debugging.
(Read and Write property)

### 76.1.14 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of parameters.
**Notes:**

We currently limit this to 32 parameters.
(Read only property)

### 76.1.15 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature used to initialize this object.
**Notes:** (Read only property)

### 76.1.16 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature part for the parameters.
**Notes:** (Read only property)

### 76.1.17 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature part for the return value.
**Notes:** (Read only property)

### 76.1.18 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag value.
**Notes:**

Store whatever you need to keep referenced.
(Read and Write property)

### 76.1.19 ParameterCFRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets whether a parameter needs to be retained via CFRetain() call.
**Notes:**

If the callback is within Apple's frameworks passing a CoreFoundation object, you can set this property to true, so we call CFRetain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with CoreFoundation objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

### 76.1.20 ParameterCopyString(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets whether a parameter needs to be copied as a zero terminated string.
**Notes:**

If the callback receives a C string, you can set this property to true, so we copy it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with strings passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer or string.
(Read and Write computed property)

### 76.1.21 ParameterNSRetain(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets whether a parameter needs to be retained via [ NSObject retain ] call.
**Notes:**

If the callback is within Apple's frameworks passing a Objective-C object, you can set this property to true, so we call retain method on it in the callback and later release when the Xojo event was called.
This allows to avoid crashes with NSObject objects passed from one thread to another thread for multi threaded callbacks.

Parameter must be of type pointer.
(Read and Write computed property)

### 76.1.22 Events

### 76.1.23 Callback(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The callback event.
**Notes:**

Parameters are converted to variants and passed as array.
The result is converted to the required data type and returned.

### 76.1.24 Constants

### 76.1.25 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C ellipsis function call

### 76.1.26 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows GCC fast call

### 76.1.27 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows Microsoft fast call

### 76.1.28 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** The character to indicate that next character in the signature is a calling convention prefix.

### 76.1.29 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows standard call

### 76.1.30 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows Microsoft this call

### 76.1.31 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** bool

### 76.1.32 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** char, 8 bit signed byte

### 76.1.33 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Double, 64-bit and 8 bytes big.

### 76.1.34 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** end of arguments symbol.

### 76.1.35 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Single, 32-bit and 4 bytes big.

### 76.1.36 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 32-bit signed integer.

### 76.1.37 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 64-bit signed integer.

### 76.1.38 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:**

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

### 76.1.39 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Pointer. Maybe a reference to an object or array.

### 76.1.40 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 16-bit signed integer.

### 76.1.41 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** C String with zero byte as terminator.

### 76.1.42 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Structure

### 76.1.43 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 8 bit unsigned byte

### 76.1.44 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 32-bit unsigned integer.

### 76.1.45 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 64-bit unsigned integer.

### 76.1.46 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:**

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

### 76.1.47 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 16-bit unsigned integer.

### 76.1.48 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Nothing to return.

## 76.2 class DeclareFunctionMBS

### 76.2.1 class DeclareFunctionMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a C function call.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

**Notes:**

Compared to built-in declares in Xojo, those functions allow a much more dynamic calling of functions with various calling conventions.

We have

- more dynamic
- the possibility to define declares at runtime
- more calling conventions
- support for variable arguments in C (dots in argument list)
- thread safe callbacks with DeclareCallBackMBS class.

### 76.2.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.3
- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

### 76.2.3 Blog Entries

- News from the MBS Xojo Plugins Version 20.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.3
- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

### 76.2.4 Methods

### 76.2.5 ClearParameters

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears all parameters.
**Notes:** Sets them all to zero/nil.

### 76.2.6 Constructor(Signature as String, FunctionPtr as Ptr)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

**Notes:**

Pass the signature and function pointer from a C function.
If signature is incorrect, the application will probably crash with stack corruption.

### 76.2.7 Invoke as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Invokes the function.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)

Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

See also:

- 76.2.8 Invoke(Parameters() as Variant) as Variant 14536

### 76.2.8 Invoke(Parameters() as Variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Invokes the function.
**Notes:**

First calls SetParameters with the given array to set parameters.
Then invokes the function.
See also:

- 76.2.7 Invoke as Variant 14536

### 76.2.9 SetParameters(paramArray Parameters as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set all parameters together with passing arguments to this function.
**Example:**

```
// We try to run sysctlbyname on macOS

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")
```

```
// int sysctlbyname(const char *name, void *oldp, size_t *oldlenp, void *newp, size_t newlen);

Dim p As ptr = d.Symbol("sysctlbyname")

'const char* ->CString for name ->Z
'void* ->pointer to data ->p
'size_t * ->pointer to 32/64 bit integer for length ->p
'void* ->pointer to data ->p
'size_t ->32/64bit unsigned int ->L in 64-bit

Dim f As New DeclareFunctionMBS("(ZpppL)i", p)

Dim mData As New MemoryBlock(8)
Dim mLen As New MemoryBlock(8)
Dim pData As ptr = mData
dim pLen as ptr = mLen

mLen.UInt64Value(0) = mData.Size

f.SetParameters "hw.ncpu", pData, pLen, Nil, 0
Dim n As Integer = f.Invoke
// result is zero on result or -1 on failure

Dim CPUCount As Integer = mData.UInt32Value(0)

If n = 0 Then
MsgBox "CPU count: "+Str(CPUCount)
Else
MsgBox "Failed."
End If

Break // see in debugger
```

See also:

- 76.2.10 SetParameters(Parameters() as Variant) 14537

### 76.2.10 SetParameters(Parameters() as Variant)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets all arguments by passing an array of values.
See also:

- 76.2.9 SetParameters(paramArray Parameters as Variant) 14536

### 76.2.11 Properties

### 76.2.12 CallCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The call counter.
**Notes:**

We call how often the function is called.
(Read only property)

### 76.2.13 CallMode as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The calling convention mode to use.
**Notes:**

Default is to use default mode for the given platform.
(Read and Write property)

### 76.2.14 FunctionPtr as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The pointer for the C function.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")

// call via delegate
' define delgate like this:
' Public Function zlibVersionDelegate() As CString

Dim z As New zlibVersionDelegate(p)
Dim v As String = z.Invoke
MsgBox "zlibVersion: "+v
```

**Notes:** (Read and Write property)

### 76.2.15 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the function.
**Notes:** (Read and Write property)

### 76.2.16 ParameterCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of parameters.
**Notes:**

We currently limit this to 32 parameters.
(Read only property)

### 76.2.17 Parameters as Dictionary

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all parameters.
**Notes:**

Mainly to inspect parameters in debugger.
Keys are indexes and values are the parameter values.
(Read only property)

### 76.2.18 Signature as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature used to initialize this object.
**Notes:** (Read only property)

### 76.2.19 SignatureParameters as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature part for the parameters.
**Notes:** (Read only property)

### 76.2.20 SignatureReturn as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature part for the return value.
**Notes:** (Read only property)

### 76.2.21 StackSize as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stack size to use.
**Notes:**

Defaults to 4096 bytes.
(Read and Write property)

### 76.2.22 Tag as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag value.
**Notes:**

Store whatever you need to keep referenced.
(Read and Write property)

### 76.2.23 ParameterBoolean(Index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter as boolean.
**Notes:**

You can get and set value here.
(Read and Write computed property)

### 76.2.24 ParameterDouble(Index as Integer) as Double

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter value as double.
**Notes:**

You can get and set value here.
(Read and Write computed property)

### 76.2.25 ParameterInteger(Index as Integer) as Int64

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter as integer value.
**Notes:**

You can get and set value here.
(Read and Write computed property)

### 76.2.26 ParameterPointer(Index as Integer) as Ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter as pointer value.
**Notes:**

You can get and set value here.
(Read and Write computed property)

### 76.2.27 ParameterSingle(Index as Integer) as Single

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter as single value.
**Notes:**

You can get and set value here.
(Read and Write computed property)

### 76.2.28 ParameterString(Index as Integer) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parameter as string value.
**Example:**

```
// We try to run strstr on C Library on macOS to find string in string with strstr as example:

Dim d As New DeclareLibraryMBS("/usr/lib/libc.dylib")

// char *strstr(Const char *__big, Const char *__little);

Dim p As ptr = d.Symbol("strstr")
Dim f As New DeclareFunctionMBS("(ZZ)Z", p)

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "World"

Dim n1 As String = f.Invoke
// gives back World! as that was found

f.ParameterString(0) = "Hello World!"
f.ParameterString(1) = "xxx"

Dim n2 As String = f.Invoke
// gives empty string as not found

Break // see in debugger
```

**Notes:**

To avoid crashes, we only read strings from parameters with type string or pointer.
But you can assign a string value to all types, which may not make sense for numbers.
You can get and set value here.
(Read and Write computed property)

### 76.2.29 ParameterValue(Index as Integer) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set the value as variant.
**Notes:**

We automatically convert values based on the parameter type.
The class stores reference to the variant when setting to make sure strings and MemoryBlocks are not freed too early.
You can get and set value here.
(Read and Write computed property)

### 76.2.30 Constants

### 76.2.31 kCallModeCArm64 = 22

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C arm64 call (AArch64)

### 76.2.32 kCallModeCArmArmhf = 30

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C arm call (arm hardÔ¨Çoat - e.g. raspberry pi)

### 76.2.33 kCallModeCDefault = 0

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C default function call for current platform

### 76.2.34 kCallModeCEllipsis = 100

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C ellipsis function call (named arguments (before ,Äô...,Äô))

### 76.2.35 kCallModeCEllipsisVarargs = 101

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C ellipsis function call (variable/unnamed arguments (after ,Äô...,Äô))

### 76.2.36 kCallModeCX64Win64 = 7

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x64 Windows standard call

### 76.2.37 kCallModeCX86Cdecl = 1

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 platforms standard call

### 76.2.38 kCallModeCX86Win32FastGnu = 4

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 Windows GCC fast call

### 76.2.39 kCallModeCX86Win32FastMs = 3

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 Windows Microsoft fast call

### 76.2.40 kCallModeCX86Win32Std = 2

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 Windows standard call

### 76.2.41 kCallModeCX86Win32ThisGnu = 6

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 Windows GCC this call

### 76.2.42 kCallModeCX86Win32ThisMs = 5

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C x86 Windows Microsoft this call

### 76.2.43 kCallModeEllipsis = "e"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C ellipsis function call

### 76.2.44 kCallModeFastCallGNU = "f"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows GCC fast call

### 76.2.45 kCallModeFastCallMS = "F"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows Microsoft fast call

### 76.2.46 kCallModePrefix = "_"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** The character to indicate that next character in the signature is a calling convention prefix.

### 76.2.47 kCallModeStdCall = "s"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows standard call

### 76.2.48 kCallModeSysDefault = 200

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C default syscall for current platform

### 76.2.49 kCallModeSysX64SyscallSysV = 204

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C syscall for x64 System V platforms

### 76.2.50 kCallModeSysX86Int80HBSD = 202

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C syscall for x86 BSD platforms

### 76.2.51 kCallModeSysX86Int80HLinux = 201

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the call modes constants.
**Notes:** C syscall for x86 Linux

### 76.2.52 kCallModeThisCallMS = "+"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the Calling Conventions constants.
**Notes:** C x86 Windows Microsoft this call

### 76.2.53 kTypeBool = "B"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** bool

### 76.2.54 kTypeChar = "c"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** char, 8 bit signed byte

### 76.2.55 kTypeDouble = "d"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Double, 64-bit and 8 bytes big.

### 76.2.56 kTypeEndArg = ")"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** end of arguments symbol.

### 76.2.57 kTypeFloat = "f"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Single, 32-bit and 4 bytes big.

### 76.2.58 kTypeInt = "i"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 32-bit signed integer.

### 76.2.59 kTypeInt64 = "l"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 64-bit signed integer.

### 76.2.60 kTypeLong = "j"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:**

32/64-bit signed integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

### 76.2.61 kTypePtr = "p"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Pointer. Maybe a reference to an object or array.

### 76.2.62 kTypeShort = "s"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 16-bit signed integer.

### 76.2.63 kTypeString = "Z"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** C String with zero byte as terminator.

### 76.2.64 kTypeStruct = "T"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Structure

### 76.2.65 kTypeUnsignedChar = "C"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 8 bit unsigned byte

### 76.2.66 kTypeUnsignedInt = "I"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 32-bit unsigned integer.

### 76.2.67 kTypeUnsignedInt64 = "L"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 64-bit unsigned integer.

### 76.2.68 kTypeUnsignedLong = "J"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:**

32/64-bit unsigned integer.
64-bit only for MacOS and Linux in 64-bit application.
Always 32-bit on Windows.

### 76.2.69 kTypeUnsignedShort = "S"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** 16-bit unsigned integer.

### 76.2.70 kTypeVoid = "v"

MBS Util Plugin, Plugin Version: 20.3.

**Function:** One of the parameter/return type codes.
**Notes:** Nothing to return.

## 76.3 class DeclareLibraryMBS

### 76.3.1 class DeclareLibraryMBS

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a C library loaded into Xojo.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

**Notes:** Allows you to load a DLL on Windows, dylib on MacOS and shared object (so) on Linux and inspect the available functions and load functions by name.

### 76.3.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.3
- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

### 76.3.3 Blog Entries

- News from the MBS Xojo Plugins Version 20.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.3
- Dynamic Declare for Xojo
- MBS Xojo Plugins, version 20.3pr1

### 76.3.4 Methods

### 76.3.5 Constructor(LibFile as folderItem)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads a library.
**Notes:**

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 76.3.6 Constructor(LibPath as string) 14552

### 76.3.6 Constructor(LibPath as string)

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads a library.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

**Notes:**

Pass path to DLL on Windows, dylib on MacOS or so file on Linux.
Raises exception in case of problems.
See also:

- 76.3.5 Constructor(LibFile as folderItem) 14551

### 76.3.7 Symbol(name as string) as ptr

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries function or data pointer for a symbol.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

// zlibVersion
// ZEXTERN Const char * ZEXPORT zlibVersion Of((void));

Dim p As ptr = d.Symbol("zlibVersion")
Dim f As New DeclareFunctionMBS("()Z", p)
```

```
Dim n As String = f.Invoke
MsgBox "zlibVersion: "+n
```

**Notes:** Returns nil if not found.

### 76.3.8 SymbolName(index as Integer) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of a symbol.
**Notes:** Index is in range from 0 to SymbolCount-1.
See also:

- 76.3.9 SymbolName(p as Ptr) as string 14553

### 76.3.9 SymbolName(p as Ptr) as string

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of a symbol from the ptr.
**Notes:**

Looks up the symbol table to find the entry with the right pointer and returns the name.
Returns "" if not found.
See also:

- 76.3.8 SymbolName(index as Integer) as string 14553

### 76.3.10 SymbolNames as string()

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of symbols of a library.
**Example:**

```
// change path if you like to try this on Windows or Linux
Dim d As New DeclareLibraryMBS("/usr/lib/libz.1.dylib")

Dim lines() As String = d.SymbolNames
Break // look in list of functions
```

**Notes:** This may show more symbols as defined in public C headers.

### 76.3.11 Properties

### 76.3.12 Handle as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object handle.
**Notes:** (Read only property)

### 76.3.13 Name as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries name of the library.
**Notes:** (Read only property)

### 76.3.14 Path as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries path of the library.
**Notes:**

May return the path used to load the library.
(Read only property)

### 76.3.15 SymbolCount as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of symbols in the library.
**Notes:** (Read only property)

# Chapter 77

# DynaPDF

## 77.1 class DynaPDFAnnotationExMBS

### 77.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for extended annotation information.
**Example:**

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.1.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.1.4 Methods

### 77.1.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.1.6 DashPattern(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The dash pattern.
**Notes:** If BorderStyle is kbsDashed.

### 77.1.7 InkList(index as UInt32) as Single()

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ink list.
**Notes:**

Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

### 77.1.8 QuadPoints(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets a quad point value.
**Notes:**

Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

### 77.1.9 Vertices(index as UInt32) as single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The vertices array.
**Notes:** Line, PolyLine, and Polygon annotations only.

### 77.1.10 Properties

### 77.1.11 AnnotFlags as UInt32

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags for this annotation.
**Notes:**

You can use this constants:

```
kafNone        = & h0000000
kafInvisible   = & h0000001
kafHidden      = & h0000002
kafPrint       = & h0000004
kafNoZoom      = & h0000008
kafNoRotate    = & h0000010
kafNoView      = & h0000020
kafReadOnly    = & h0000040
```

(Read only property)

### 77.1.12 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's author.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.1.13 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Background color.
**Notes:** (Read only property)

### 77.1.14 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bounding box in bottom-up coordinates.
**Notes:** (Read only property)

### 77.1.15 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border color.
**Notes:** (Read only property)

### 77.1.16 BorderEffect as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The border effect.
**Notes:**

Circle, Square, FreeText, and Polygon annotations.
(Read only property)

### 77.1.17 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border style.
**Notes:** (Read only property)

### 77.1.18 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border width.
**Notes:** (Read only property)

### 77.1.19 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the annotation string Content is used as caption.
**Notes:**

The string is shown in a PopUp annotation otherwise.
(Read only property)

### 77.1.20 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Horizontal offset of the caption from its normal position.
**Notes:** (Read only property)

### 77.1.21 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Vertical offset of the caption from its normal position.
**Notes:** (Read only property)

### 77.1.22 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position where the caption should be drawn if present.
**Notes:** (Read only property)

### 77.1.23 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's contents.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.1.24 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creation Date ->Optional
**Notes:** (Read only property)

### 77.1.25 DashPatternCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the array.
**Notes:** (Read only property)

### 77.1.26 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is this annotation marked as deleted?
**Notes:** (Read only property)

### 77.1.27 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination file.
**Notes:**

For File link or web link annotations.

(Read only property)

### 77.1.28 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination page.
**Notes:**

For Page link annotations only.

(Read only property)

### 77.1.29 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination position.
**Notes:**

For Page link annotations only.

(Read only property)

### 77.1.30 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination type.
**Notes:**

For Page link annotations only.

(Read only property)

### 77.1.31 EmbeddedFileHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle for the embedded file.
**Notes:**

For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.
(Read only property)

### 77.1.32 Grouped as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Meaningful only if Parent <>-1 and Type <>katPopUp.
**Notes:**

If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.
(Read only property)

### 77.1.33 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 77.1.34 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Visual effect.
**Notes:** (Read only property)

### 77.1.35 Icon as Integer

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The icon type for this annotation.
**Notes:**

The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp).
For any other annotion type this value is not set (-1).
(Read only property)

### 77.1.36 InkListCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of ink arrays.
**Notes:** (Read only property)

### 77.1.37 Intent as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Markup annotations only.
**Notes:**

The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.
(Read only property)

### 77.1.38 LE1 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Style of the start point ->Line and PolyLine annotations only.
**Notes:** (Read only property)

### 77.1.39 LE2 as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Style of the end point ->Line and PolyLine annotations only.
**Notes:** (Read only property)

### 77.1.40 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional leader line extend beyond the leader line.
**Notes:** (Read only property)

### 77.1.41 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the leader lines (positive or negative)
**Notes:** (Read only property)

### 77.1.42 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Amount of space between the endpoints of the annotation and the leader lines.
**Notes:** (Read only property)

### 77.1.43 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the annotation is a markup annotation.
**Notes:**

Markup annotations can be flattened separately, see FlattenAnnots function.
(Read only property)

### 77.1.44 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modification Date ->Optional
**Notes:** (Read only property)

### 77.1.45 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's name.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.1.46 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Handle of an OCG or OCMD or -1 if not set.
**Notes:**

Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

### 77.1.47 Opacity as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The annotation's opacity.
**Notes:**

Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

### 77.1.48 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Meaningful only for annotations which have a corresponding PopUp annotation.
**Notes:** (Read only property)

### 77.1.49 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The page index is used to sort form fields.
**Notes:**

See SortFieldsByIndex().
(Read only property)

### 77.1.50 PageNum as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Page on which the annotation appears.
**Notes:** (Read only property)

### 77.1.51 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.
**Notes:**

In this case, the annotation type is always atText and only the following members should be considered:

| | |
|---|---|
| State | The current state |
| StateModel | Marked, Review, and so on |
| CreateDate | Creation Date |
| ModDate | Modification Date |
| Author | The user who has set the state |
| Content | Not displayed in Adobe's Acrobat... |
| Subject | Not displayed in Adobe's Acrobat... |

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

### 77.1.52 PopUp as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Handle of the corresponding PopUp annotation if any.
**Notes:** (Read only property)

### 77.1.53 QuadPointsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of quad points.
**Notes:**

Highlight, Link, and Redact annotations only.
(Read only property)

### 77.1.54 RD as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The rectangular difference between the annotations bounding box and the content area.
**Notes:**

Caret, Circle, Square, and FreeText annotations.
(Read only property)

### 77.1.55 RichStyle as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional default style string.
**Notes:**

For FreeText annotations.
(Read only property)

### 77.1.56 RichText as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional rich text string (RC key).
**Notes:**

For Markup annotations.
(Read only property)

### 77.1.57 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The rotation for caret annotations.
**Notes:**

Caret annotations only. Must be zero or a multiple of 90. This key is not documented in the specs.
(Read only property)

### 77.1.58 StampName as String

MBS DynaPDF Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stamp name.
**Notes:**

Set only, if Icon property is rsUserDefined.
(Read only property)

### 77.1.59 State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The state of the annotation.
**Notes:** (Read only property)

### 77.1.60 StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The state model (Marked, Review, and so on).
**Notes:** (Read only property)

### 77.1.61 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's subject.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.1.62 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The subtype.
**Notes:**

Set only, if Type = katUnknownAnnot.
(Read only property)

### 77.1.63 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation type.
**Notes:**

See at* constants.
(Read only property)

### 77.1.64 VerticesCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the vertices array.
**Notes:**

This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)

## 77.2 class DynaPDFAnnotationMBS

### 77.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for annotation information.
**Example:**

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

### 77.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

### 77.2.4 Methods

### 77.2.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.2.6 Properties

### 77.2.7 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's author.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.2.8 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Background color.
**Notes:** (Read only property)

### 77.2.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bounding box in bottom-up coordinates.
**Notes:** (Read only property)

### 77.2.10 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border color.
**Notes:** (Read only property)

### 77.2.11 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border style.
**Notes:** (Read only property)

### 77.2.12 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border width.
**Notes:** (Read only property)

### 77.2.13 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's contents.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.2.14 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is this annotation marked as deleted?
**Notes:** (Read only property)

### 77.2.15 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation handle.
**Notes:** (Read only property)

### 77.2.16 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Visual effect.
**Notes:**

See hm* constants.
(Read only property)

### 77.2.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's name.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.2.18 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Page on which the annotation appears.
**Notes:** (Read only property)

### 77.2.19 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation's subject.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.2.20 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Annotation type.
**Notes:**

See at* constants.
(Read only property)

## 77.3 class DynaPDFBarcode2MBS

### 77.3.1 class DynaPDFBarcode2MBS

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for barcode creation parameters.

### 77.3.2 Blog Entries

### 77.3.5 Xojo Developer Magazine

- 19.2, pages 30 to 31: Getting Started with DynaPDF, If you've never tried DynaPDF, you don't know how easy it is! by Stefanie Juchmes

### 77.3.6 Properties

### 77.3.7 BarcodeType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of barcode that should be created.
**Notes:**

See kbct* constants.
(Read and Write property)

### 77.3.8 BgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Background color.
**Notes:**

Default: NO_COLOR (transparent)
(Read and Write property)

### 77.3.9 BorderWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border width
**Notes:**

Default is zero.
(Read and Write property)

### 77.3.10 Data as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data in the barcode.
**Notes:** (Read and Write property)

### 77.3.11 DataType as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Data type and escape flag.
**Notes:**

Default is kbcdtBinary.
See kbcdt* constants.
(Read and Write property)

### 77.3.12 DotSize as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Dotty mode only.
**Notes:**

Default is 4.0/5.0.
(Read and Write property)

### 77.3.13 Eci as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extended Channel Interpretation mode.
**Notes:**

Default 0.
(Read and Write property)

### 77.3.14 FgColor as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** RGB Foreground color
**Notes:** (Read and Write property)

### 77.3.15 FSizeFactor as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font size correction factor.
**Notes:**

Default 0.7.
(Read and Write property)

### 77.3.16 Option1 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Various options, depends on barcode type.
**Notes:**

Default value is -1.

For QRCode:
Option1 is the ECC Level with values from 1 = low, 2 = middle, 3 = better, 4 high. Default is low.
Option2 is version code from 1 to 40. Default is 0 to auto select.
For MicroQR you can use ECC Level 1 to 3 as 4 is not supported.

For Data Matrix:
Option2 size from 1 to 30. 0 is auto. See table in zint manual pdf.
Option3 can be 100 to force square size.

For Code 39:
You can set Option2 to 1 to add module 43 checksum.

For MaxiCode:
Option 1 is the mode.

For PDF 417:
Option 1 is a number between 0 and 8 where the number of codewords used for check information is determined by 2^(value + 1).
Option 2 is the number of columns between 1 and 30.
(Read and Write property)

### 77.3.17 Option2 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Various options, depends on barcode type.
**Notes:**

Default value is 0.
(Read and Write property)

### 77.3.18 Option3 as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Various options, depends on barcode type.
**Notes:**

Default value is 0.
(Read and Write property)

### 77.3.19 Options as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Output options.
**Notes:**

See kbco* constants.
(Read and Write property)

### 77.3.20 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The orientation of the barcode.
**Notes:**

Supported values: 0, 90, -90, 180, -180, 270, -270.
(Read and Write property)

### 77.3.21 OuterBorder as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional border around the scaled barcode measured in user space.
**Notes:**

The member OuterBorder can be used to extend the background rectangle. Each side of OuterBorder specifies the line width of the corresponding side of the rectangle. OuterBorder is measured in user space whereas BorderWidth is measured in pixels of the reference grid.

Note that the background rectangle is drawn only if BgColor is set to another value than NO_COLOR (default).
(Read and Write property)

### 77.3.22 Primary as String

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Primary data message (max 127 bytes).
**Notes:**

Composite codes only.
Image based barcodes only.
(Read and Write property)

### 77.3.23 Scale as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image based barcodes only.
**Notes:**

Default value is 1.0.
(Read and Write property)

### 77.3.24 ShowText as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Show human readable text?
**Notes:**

Default is true.
(Read and Write property)

### 77.3.25 SpaceWidth as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whitespace width in pixels
**Notes:**

Default value is 0 (auto).
(Read and Write property)

### 77.3.26 SymbHeight as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Symbol height
**Notes:**

Default is 50.
(Read and Write property)

### 77.3.27 TextOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Offset to correct the y-coordinate of text.
**Notes:**

The default value is zero.
(Read and Write property)

### 77.3.28 Constants

### 77.3.29 kbcdtBinary = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the data type flags.
**Notes:** Binary data.

### 77.3.30 kbcdtEscapeMode = 8

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the data type flags.
**Notes:** Scan input data for escape sequences. This is a flag that can be combined with the other constants, e.g. pass EscapeMode and Unicode.

### 77.3.31 kbcdtGS1Mode = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the data type flags.
**Notes:** Encodes GS1 data using FNC1 characters.

### 77.3.32 kbcdtUnicode = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the data type flags.
**Notes:** UTF-8.

### 77.3.33 kbcoBind = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Boundary bars above and below the symbol and between rows if stacking multiple symbols.

### 77.3.34 kbcoBoldText = 64

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Embolden human readable text.

### 77.3.35 kbcoBox = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Add a box surrounding the symbol and whitespace.

### 77.3.36 kbcoDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Use default settings.

### 77.3.37 kbcoDottyMode = & h00000100

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Plot a matrix symbol using dots rather than squares.

### 77.3.38 kbcoGS1_GS_Separator = & h00000200

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Use GS instead FNC1 as GS1 separator.

### 77.3.39 kbcoImageOutput = & h01000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Draw the barcode as an image. Images are usually larger than vectors and require more processing time.

### 77.3.40 kbcoNoASCII = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Consider non-ASCII characters when creating the barcode.

### 77.3.41 kbcoReaderInit = 16

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Add a reader initialisation symbol to the data before encoding.

### 77.3.42 kbcoSmallText = 32

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Use a smaller font for human readable text.

### 77.3.43 kbcoUseActiveFont = & h02000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the output flags.
**Notes:** Vector output only. If set, text is output with the active font. Helvetica is used otherwise.

### 77.3.44 kbctAustraliaPost = 63

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Australia Post Standard Customer

### 77.3.45 kbctAustraliaRedir = 68

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Australia Post Redirection

### 77.3.46 kbctAustraliaReply = 66

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Australia Post Reply Paid

### 77.3.47 kbctAustraliaRout = 67

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Australia Post Routing

### 77.3.48 kbctAztec = 92

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Aztec Code

### 77.3.49 kbctAztecRunes = & h00000080

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Aztec Runes

### 77.3.50 kbctC2Of5IATA = 4

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 2 of 5 IATA

### 77.3.51 kbctC2Of5Industrial = 7

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 2 of 5 Industrial

### 77.3.52 kbctC2Of5Interleaved = 3

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Interleaved 2 of 5

### 77.3.53 kbctC2Of5Logic = 6

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 2 of 5 Data Logic

### 77.3.54 kbctC2Of5Matrix = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Standard Code 2 of 5

### 77.3.55 kbctChannelCode = & h0000008C

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Channel Code

### 77.3.56 kbctCodabar = 18

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Codabar

### 77.3.57 kbctCodablockF = 74

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Codablock-F

### 77.3.58 kbctCode11 = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 11

### 77.3.59 kbctCode128 = 20

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 128 (automatic subset switching)

### 77.3.60 kbctCode128B = 60

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 128 (Subset B)

### 77.3.61 kbctCode16K = 23

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 16K

### 77.3.62 kbctCode32 = & h00000081

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 32

### 77.3.63 kbctCode39 = 8

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 3 of 9 (Code 39)

### 77.3.64 kbctCode49 = 24

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 49

### 77.3.65 kbctCode93 = 25

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code 93

### 77.3.66 kbctCodeOne = & h0000008D

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Code One

### 77.3.67 kbctDAFT = 93

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** DAFT Code

### 77.3.68 kbctDataBarExpanded = 31

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar Expanded / RSS_EXP

### 77.3.69 kbctDataBarExpStacked = 81

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar Expanded Stacked

### 77.3.70 kbctDataBarLimited = 30

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar Limited / RSS_LTD

### 77.3.71 kbctDataBarOmniTrunc = 29

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar-14 Omnidirectional and truncated / RSS14

### 77.3.72 kbctDataBarStacked = 79

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar-14 Stacked

### 77.3.73 kbctDataBarStackedO = 80

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1 DataBar-14 Stacked Omnidirectional

### 77.3.74 kbctDataMatrix = 71

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Data Matrix ECC200

### 77.3.75 kbctDotCode = & h00000073

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** DotCode

### 77.3.76 kbctDPD = 96

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** DPD code

### 77.3.77 kbctDPIdentCode = 22

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Deutsche Post Identcode

### 77.3.78 kbctDPLeitcode = 21

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Deutsche Post Leitcode

### 77.3.79 kbctEAN128 = 16

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** GS1-128 (UCC.EAN-128)

### 77.3.80 kbctEAN128_CC = & h00000083

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1-128 linear component

### 77.3.81 kbctEAN14 = 72

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** EAN-14

### 77.3.82 kbctEANX = 13

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** EAN in various sizes.

### 77.3.83 kbctEANXCheck = 14

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** EAN + Check Digit

### 77.3.84 kbctEANX_CC = & h00000082

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with EAN linear component

### 77.3.85 kbctExtCode39 = 9

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Extended Code 3 of 9 (Code 39+)

### 77.3.86 kbctFIM = 49

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** FIM

### 77.3.87 kbctFlattermarken = 28

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Flattermarken

### 77.3.88 kbctHIBC_Aztec = & h00000070

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC Aztec Code

### 77.3.89 kbctHIBC_CodablockF = & h0000006E

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC Codablock-F

### 77.3.90 kbctHIBC_Code128 = 98

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC Code 128

### 77.3.91 kbctHIBC_Code39 = 99

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC Code 39

### 77.3.92 kbctHIBC_DataMatrix = & h00000066

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC Data Matrix ECC200

### 77.3.93 kbctHIBC_MicroPDF417 = & h0000006C

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC MicroPDF417

### 77.3.94 kbctHIBC_PDF417 = & h0000006A

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC PDF417

### 77.3.95 kbctHIBC_QR = & h00000068

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** HIBC QR Code

### 77.3.96 kbctISBNX = 69

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** ISBN (EAN-13 with verification stage)

### 77.3.97 kbctITF14 = 89

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** ITF-14

### 77.3.98 kbctJapanPost = 76

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Japanese Postal Code

### 77.3.99 kbctKIX = 90

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Dutch Post KIX Code

### 77.3.100 kbctKoreaPost = 77

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Korea Post

### 77.3.101 kbctLOGMARS = 50

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** LOGMARS

### 77.3.102 kbctMailmark = & h00000079

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Royal Mail 4-State Mailmark

### 77.3.103 kbctMaxicode = 57

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Maxicode

### 77.3.104 kbctMicroPDF417 = 84

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Micro PDF417

### 77.3.105 kbctMicroQR = 97

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Micro QR Code

### 77.3.106 kbctMSIPlessey = 71

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** MSI Plessey

### 77.3.107 kbctNotInitialized = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Not initialized.

### 77.3.108 kbctNVE18 = 75

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** NVE-18

### 77.3.109 kbctPDF417 = 55

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** PDF417

### 77.3.110 kbctPDF417Truncated = 56

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** PDF417 Truncated

### 77.3.111 kbctPharmaOneTrack = 51

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Pharmacode One-Track

### 77.3.112 kbctPharmaTwoTrack = 53

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Pharmacode Two-Track

### 77.3.113 kbctPLANET = 82

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** PLANET

### 77.3.114 kbctPlessey = 86

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Plessey

### 77.3.115 kbctPostNet = 40

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** PostNet

### 77.3.116 kbctPZN = 52

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** PZN

### 77.3.117 kbctQRCode = 58

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** QR Code

### 77.3.118 kbctRMQR = & h00000091

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Rectangular Micro QR Code (rMQR)

### 77.3.119 kbctRoyalMail4State = 70

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Royal Mail 4 State (RM4SCC)

### 77.3.120 kbctRSS14Stacked_CC = & h00000089

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar-14 Stacked component

### 77.3.121 kbctRSS14StackOMNI_CC = & h0000008A

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar-14 Stacked Omnidirectional component

### 77.3.122 kbctRSS14_CC = & h00000084

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar-14 linear component

### 77.3.123 kbctRSS_EXPSTACK_CC = & h0000008B

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar Expanded Stacked component

### 77.3.124 kbctRSS_EXP_CC = & h00000086

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar Extended component

### 77.3.125 kbctRSS_LTD_CC = & h00000085

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with GS1 DataBar Limited component

### 77.3.126 kbctTelepen = 32

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Telepen Alpha

### 77.3.127 kbctTelepenNumeric = 87

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Telepen Numeric

### 77.3.128 kbctUltracode = & h00000090

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Ultracode

### 77.3.129 kbctUPCA = 34

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** UPC A

### 77.3.130 kbctUPCACheckDigit = 35

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** UPC A + Check Digit

### 77.3.131 kbctUPCA_CC = & h00000087

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with UPC A linear component

### 77.3.132 kbctUPCE = 37

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** UCP E

### 77.3.133 kbctUPCECheckDigit = 38

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** UPC E + Check Digit

### 77.3.134 kbctUPCE_CC = & h00000088

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Composite Symbol with UPC E linear component

### 77.3.135 kbctUPNQR = & h0000008F

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** UPNQR (Univerzalni Placilni Nalog QR)

### 77.3.136 kbctUSPSOneCode = 85

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** USPS OneCode

### 77.3.137 kbctVIN = 73

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the barcode types.
**Notes:** Vehicle Identification Number (America)

## 77.4 class DynaPDFBarcodeMBS

### 77.4.1 class DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for detail information on barcode fields.

### 77.4.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.4.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.4.4 Properties

### 77.4.5 Caption as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, the caption.
**Notes:** (Read and Write property)

### 77.4.6 ECC as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error correction code.
**Notes:**

0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

### 77.4.7 Height as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Height in inches.
**Notes:** (Read and Write property)

### 77.4.8 nCodeWordCol as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of codewords per barcode coloumn.
**Notes:**

Required for PDF417.
(Read and Write property)

### 77.4.9 nCodeWordRow as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of codewords per barcode row.
**Notes:**

Required for PDF417.
(Read and Write property)

### 77.4.10 Resolution as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The resolution.
**Notes:**

Required. Should be 300.
(Read and Write property)

### 77.4.11 Symbology as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The symbology.
**Notes:**

PDF417, QRCode, or DataMatrix.
(Read and Write property)

### 77.4.12 Version as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of this object.
**Notes:**

Should be 1
(Read and Write property)

### 77.4.13 Width as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width in inches.
**Notes:** (Read and Write property)

### 77.4.14 XSymHeight as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The vertical distance between two barcode modules, measured in pixels.
**Notes:**

Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

### 77.4.15 XSymWidth as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Required. The horizontal distance, in pixels, between two barcode modules.
**Notes:** (Read and Write property)

## 77.5 class DynaPDFBitmapMBS

### 77.5.1 class DynaPDFBitmapMBS

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a bitmap in DynaPDF.
**Notes:**

Currently only used for RenderAnnotOrField function.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.5.2 Methods

### 77.5.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.5.4 Properties

### 77.5.5 Buffer as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raw image buffer.
**Notes:**

To avoid problems, this is a copy of the image data.
(Read and Write property)

### 77.5.6 BufSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Buffer size in bytes.
**Notes:** (Read and Write property)

### 77.5.7 DestX as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** x-coordinate in the main image (the rendered page)
**Notes:** (Read and Write property)

### 77.5.8 DestY as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** y-coordinate in the main image (the rendered page)
**Notes:** (Read and Write property)

### 77.5.9 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image height in pixels.
**Notes:** (Read and Write property)

### 77.5.10 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Scanline length in bytes.
**Notes:** (Read and Write property)

### 77.5.11 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image width.
**Notes:** (Read and Write property)

## 77.6 class DynaPDFBookmarkMBS

### 77.6.1 class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for bookmark information.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.6.2 Blog Entries

- MBS Xojo Plugins, version 23.1pr1
- MBS Xojo Plugins, version 18.0pr9
- MBS Real Studio Plugins, version 11.3pr13

### 77.6.3 Blog Entries

- MBS Xojo Plugins, version 23.1pr1
- MBS Xojo Plugins, version 18.0pr9
- MBS Real Studio Plugins, version 11.3pr13

### 77.6.4 Methods

### 77.6.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.6.6 Properties

### 77.6.7 ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bookmark color (PDF 1.4).
**Notes:** (Read and Write property)

### 77.6.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination page.
**Notes:** (Read and Write property)

### 77.6.9 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination position.
**Notes:** (Read and Write property)

### 77.6.10 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination type.
**Notes:** (Read and Write property)

### 77.6.11 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bookmark handle.
**Notes:**

Index from 0 to GetBookmarkCount-1.
(Read and Write property)

### 77.6.12 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** True if the bookmark appears open.
**Notes:** (Read and Write property)

### 77.6.13 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parent bookmark if any or -1.
**Notes:** (Read and Write property)

### 77.6.14 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text style (PDF 1.4).
**Notes:** (Read and Write property)

### 77.6.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The title string.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

### 77.6.16 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The title length.
**Notes:** (Read and Write property)

## 77.7 class DynaPDFChoiceValueMBS

### 77.7.1 class DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for choice values in a PDF.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.7.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.7.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.7.4 Methods

### 77.7.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.7.6 Properties

### 77.7.7 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ExpValue.
**Notes:** (Read and Write property)

### 77.7.8 Selected as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the choice value is selected.
**Notes:** (Read and Write property)

### 77.7.9 Value as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value.
**Notes:** (Read and Write property)

## 77.8 class DynaPDFCIDMetricMBS

### 77.8.1 class DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a CID Metric.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.8.2 Methods

### 77.8.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.8.4 Properties

### 77.8.5 Width as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width value.
**Notes:** (Read and Write property)

### 77.8.6 x as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** X value.
**Notes:** (Read and Write property)

### 77.8.7 y as Double

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Y value.
**Notes:** (Read and Write property)

## 77.9 class DynaPDFCMapMBS

### 77.9.1 class DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a character map in DynaPDF.
**Notes:**

This class contains several duplicate fields because CMap files contain usually a DSC comment section which provides Postscript specific initialization code. With exception of DSCResName the strings in the DSC section should not differ from their CMap counterparts. The Identity mapping of a character collection should contain the DSC comment "% % BeginResource: CMap (Identity)". Otherwise the string should be set to the CMap name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.9.2 Methods

### 77.9.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.9.4 Properties

### 77.9.5 BaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If set, this base cmap is required when loading the cmap.
**Notes:** (Read only property)

### 77.9.6 CIDCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ID count.
**Notes:**

0 if not set.
(Read only property)

### 77.9.7 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMap name.
**Notes:** (Read only property)

### 77.9.8 CMapType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMap type.
**Notes:**

Should be 1!
(Read only property)

### 77.9.9 CMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMap version.
**Notes:** (Read only property)

### 77.9.10 DSCBaseCMap as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** DSC comment.
**Notes:** (Read only property)

### 77.9.11 DSCCMapVersion as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The DSC CMap version.
**Notes:** (Read only property)

### 77.9.12 DSCResName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** DSC comment.
**Notes:**

If the CMap uses an Identity mapping this string should be set to Identity.
(Read only property)

### 77.9.13 DSCTitle as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The DSC title.
**Notes:**

DSC comment ->DSC CMap name + Registry + Ordering + Supplement, e.g. "GB-EUC-H Adobe GB1 0"
(Read only property)

### 77.9.14 FileName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file name.
**Notes:**

The file name and CMap name should be identical!
(Read only property)

### 77.9.15 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file path.
**Notes:** (Read only property)

### 77.9.16 Ordering as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ordering.
**Notes:**

CIDSystemInfo ->The Character Collection, e.g. Japan1.
(Read only property)

### 77.9.17 Registry as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The registry string.
**Notes:**

CIDSystemInfo ->The registrant of the Character Collection is usually Adobe.
(Read only property)

### 77.9.18 Supplement as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Supplement number.
**Notes:**

CIDSystemInfo ->The Supplement number should be supported in the used PDF Version.
(Read only property)

### 77.9.19 WritingMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The writing mode.
**Notes:**

0 == Horizontal, 1 == Vertical
(Read only property)

## 77.10 class DynaPDFColorProfilesExMBS

### 77.10.1 class DynaPDFColorProfilesExMBS

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A set of ICC profiles for color management.
**Notes:**

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

### 77.10.2 Properties

### 77.10.3 DefInCMYK as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMYK Profile.
**Notes:**

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

### 77.10.4 DefInGray as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The gray profile.
**Notes:**

Optional
(Read and Write property)

### 77.10.5 DefInRGB as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The RGB profile.
**Notes:**

Optional, sRGB is the default.
(Read and Write property)

### 77.10.6 DeviceProfile as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output device profile.
**Notes:**

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

### 77.10.7 SoftProof as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The proofing profile.
**Notes:**

Optional but very important. This profile emulates the output device.
(Read and Write property)

## 77.11 class DynaPDFColorProfilesMBS

### 77.11.1 class DynaPDFColorProfilesMBS

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A set of ICC profiles for color management.
**Notes:**

In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

### 77.11.2 Blog Entries

- DynaPDF Basics
- MBS Real Studio Plugins, version 11.3pr9

### 77.11.3 Blog Entries

- DynaPDF Basics
- MBS Real Studio Plugins, version 11.3pr9

### 77.11.4 Properties

### 77.11.5 DefInCMYK as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMYK Profile.
**Notes:**

Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

### 77.11.6 DefInGray as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The gray profile.
**Notes:**

Optional
(Read and Write property)

### 77.11.7 DefInRGB as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The RGB profile.
**Notes:**

Optional, sRGB is the default.
(Read and Write property)

### 77.11.8 DeviceProfile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output device profile.
**Notes:**

Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

### 77.11.9 SoftProof as FolderItem

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The proofing profile.
**Notes:**

Optional but very important. This profile emulates the output device.
(Read and Write property)

## 77.12 class DynaPDFColorSpaceMBS

### 77.12.1 class DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color space class.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.12.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr6
- MBS REALbasic Plugins, version 11.1pr4

### 77.12.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr6
- MBS REALbasic Plugins, version 11.1pr4

### 77.12.4 Methods

### 77.12.5 BlackPoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CIE blackpoint.
**Notes:** If set, the array contains exactly 3 values. (index 0 to 2)

### 77.12.6 Colorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Colorant names (Separation, DeviceN, and NChannel only).
**Example:**

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Dim MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

**Notes:**

This array contains ColorantsCount strings.
The plugin marks the string as UTF-8 and it should contain UTF-8. Be we saw PDF files form other applications which put here WindowsANSI or MacRoman strings.

### 77.12.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.12.8 Gamma(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The gamma values.
**Notes:** If set, one value per component.

### 77.12.9 Matrix(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** XYZ matrix.
**Notes:** If set, the array contains exactly 9 values.

### 77.12.10 Range(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The range values.
**Notes:** min/max for each component or for the .a and .b components of a Lab color space. Index is zero based.

### 77.12.11 WhitePoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CIE whitepoint.
**Notes:** If set, the array contains exactly 3 values. (index 0 to 2)

### 77.12.12 Properties

### 77.12.13 Alternate as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The alternative color space.
**Notes:**

Only set if the color space contains an alternate or base color space.
(Read only property)

### 77.12.14 AlternateType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Alternate color space or base space of an Indexed or Pattern color space.
**Notes:** (Read only property)

### 77.12.15 Buffer as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Contains either an ICC profile or the color table of an Indexed color space.
**Notes:** (Read only property)

### 77.12.16 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The buffer length in bytes.
**Notes:** (Read only property)

### 77.12.17 ColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of colorants in the array.
**Example:**

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
```

```
Dim MyX, MyY as Double

MyX = 10
MyY = 100

// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

**Notes:** (Read only property)

### 77.12.18 Description as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The description text for color space.
**Notes:**

For color spaces with valid ICC profile only.
(Read only property)

### 77.12.19 DeviceNAttributes as DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional attributes of DeviceN or NChannel color spaces.
**Notes:** (Read only property)

### 77.12.20 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal handle for this color space object.
**Notes:**

An IColorSpaceObj reference.
(Read only property)

### 77.12.21 HasBlackPoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the black point array has values.
**Notes:** (Read only property)

### 77.12.22 HasGamma as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the gamma array has values.
**Notes:** (Read only property)

### 77.12.23 HasMatrix as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the matrix array has values.
**Notes:** (Read only property)

### 77.12.24 HasRange as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the range array has values.
**Notes:** (Read only property)

### 77.12.25 HasWhitePoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the white point array has values.
**Notes:** (Read only property)

### 77.12.26 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index in the color space list for current document.
**Notes:**

Can be -1 if not known by plugin.
In that case you would need to get list of all colorspaces and compare handle values to see which entry you got.
(Read only property)

### 77.12.27 Manufacturer as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The manufacturer text for color space.
**Notes:**

For color spaces with valid ICC profile only.
(Read only property)

### 77.12.28 MetaData as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional XMP metadata stream ->ICCBased only.
**Notes:** (Read only property)

### 77.12.29 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Metadata length in bytes.
**Notes:** (Read only property)

### 77.12.30 Model as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The model text for color space.
**Notes:**

For color spaces with valid ICC profile only.
(Read only property)

### 77.12.31 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the color space.
**Notes:**

For color spaces with valid ICC profile only.
The plugin picks name from Model, Description and Manufacturer properties.
(Read only property)

### 77.12.32 NumColors as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of colors in this color space.
**Notes:**

HiVal + 1 as specified in the color space. Indexed color space only.
(Read only property)

### 77.12.33 NumInComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of input components.
**Notes:** (Read only property)

### 77.12.34 NumOutComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of output components.
**Notes:** (Read only property)

### 77.12.35 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of this color space.
**Notes:** (Read only property)

### 77.12.36 TypeString as String

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type as string for viewing in debugger.
**Notes:** (Read only property)

## 77.13 class DynaPDFDeviceNAttributesMBS

### 77.13.1 class DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for information about a Device N.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.13.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.13.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.13.4 Methods

### 77.13.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.13.6 ProcessColorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns process colorants with the given index.
**Notes:**

Raises out of bounds exceptions on bad index or if object does not have such an array.
Index is zero based.

### 77.13.7 Separations(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional array of separation color spaces.
**Notes:**

Raises out of bounds exceptions if used with wrong index parameter.
Index is zero based.

### 77.13.8 Properties

### 77.13.9 ProcessColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of process colorants in the array or zero if not set.
**Notes:** (Read and Write property)

### 77.13.10 ProcessColorSpace as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The process color space.
**Notes:** (Read and Write property)

### 77.13.11 SeparationsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of color spaces in the Separations array.
**Notes:** (Read and Write property)

## 77.14 class DynaPDFEditTextMBS

### 77.14.1 class DynaPDFEditTextMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text editor.
**Notes:**

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

- 15.2, page 9: News
- 11.1, page 9: News

### 77.14.6 Methods

### 77.14.7 Constructor(PDF as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the edit text class with the given PDF instance.

### 77.14.8 Destructor

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 77.14.9 FindPattern(text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Searches the text on the current PDF page for the given text.
**Notes:**

Returns the number of occurrences.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

### 77.14.10 ReplacePattern(NewText as string)

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces the text with a new one or deletes it if the new string is an empty string.
**Notes:**

Use the PrepareWrite event.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

FindPattern needs at least Lite license and ReplacePattern needs a Pro license.

### 77.14.11 Properties

### 77.14.12 Parent as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference of the DynaPDFMBS object.
**Notes:** (Read only property)

### 77.14.13 Events

### 77.14.14 PrepareWrite(M as DynaPDFMatrixMBS, text as string, FillCS as Integer, FillColor as UInt32, StrokeCS as Integer, StrokeColor as UInt32, FontSize as Double, x as Double, y as Double, w as Double, h as Double, font as DynaPDFFontMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called before replace function writes.
**Notes:**

Changed font, text size or color here.
If you return true, the text is not written.
Like if you draw it yourself or delete it.

Add new parameters for fill color, stroke color, font size, rectangle and font information in version 17.0.

## 77.15 class DynaPDFEmbFileNodeMBS

### 77.15.1 class DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an embedded file node.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.15.2 Methods

### 77.15.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.15.4 Properties

### 77.15.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Embedded file.
**Notes:** (Read only property)

### 77.15.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name.
**Notes:**

UTF-8 encoded name. This key contains usually a 7 bit ASCII string.
(Read only property)

### 77.15.7 NextObject as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Next node if any.
**Notes:** (Read only property)

## 77.16 class DynaPDFErrorExceptionMBS

### 77.16.1 class DynaPDFErrorExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error exception.
**Notes:**

We report errors as exceptions if Error event is not implemented or you return kErrorEventRaise there.
Subclass of the RuntimeException class.

## 77.17.4 Methods

## 77.17.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.17.6 Properties

## 77.17.7 ErrCode as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error code.
**Notes:**

ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

### 77.17.8 ErrType as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error type.
**Notes:**

ErrCode and ErrType are set if the error mode was set to kemUseErrLog.
See SetErrorMode() for further information.
(Read and Write property)

### 77.17.9 Message as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error message
**Notes:** (Read and Write property)

### 77.17.10 ObjNum as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Object Number.
**Notes:**

-1 if not available
(Read and Write property)

### 77.17.11 Offset as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The offset.
**Notes:**

-1 if not available
(Read and Write property)

### 77.17.12 SrcFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source file.
**Notes:** (Read and Write property)

### 77.17.13 SrcLine as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Source Line.
**Notes:** (Read and Write property)

## 77.18 class DynaPDFExtGState2MBS

### 77.18.1 class DynaPDFExtGState2MBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The extended graphics state class.

### 77.18.2 Methods

### 77.18.3 BlendMode(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The blend modes.
**Notes:** See bm* constants.

### 77.18.4 Properties

### 77.18.5 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The AlphaIsShape property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.18.6 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The AutoStrokeAdjust property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.18.7 BlackGen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function handle or 0.
**Notes:** (Read and Write property)

### 77.18.8 BlackGen2 as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function handle or 0.
**Notes:** (Read and Write property)

### 77.18.9 BlendModeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The blend mode count.
**Notes:** (Read and Write property)

### 77.18.10 FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The fill alpha.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.18.11 FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The FlatnessTol property.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.18.12 Halftone as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The halftone handle or 0.
**Notes:** (Read and Write property)

### 77.18.13 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintFill property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.18.14 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintMode property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.18.15 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintStroke property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.18.16 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The rendering intent.
**Notes:**

riNone if not set
(Read and Write property)

### 77.18.17 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SmoothnessTol property.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.18.18 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Soft mask handle.
**Notes:** (Read and Write property)

### 77.18.19 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the softmask must be disabled.
**Notes:** (Read and Write property)

### 77.18.20 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stoke alpha value.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.18.21 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The TextKnockout property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

# 77.19 class DynaPDFExtGStateMBS

## 77.19.1 class DynaPDFExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The extended graphics state class.

## 77.19.2 Blog Entries

- DynaPDF with gradients in DeviceN colorspace

## 77.19.3 Blog Entries

- DynaPDF with gradients in DeviceN colorspace

## 77.19.4 Properties

## 77.19.5 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The AlphaIsShape property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

## 77.19.6 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The AutoStrokeAdjust property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

## 77.19.7 BlendMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The blend mode.
**Notes:**

See bm* constants.
Default bmNotSet.
(Read and Write property)

### 77.19.8 FillAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The fill alpha.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.19.9 FlatnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The FlatnessTol property.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.19.10 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintFill property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.19.11 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintMode property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.19.12 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OverPrintStroke property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

### 77.19.13 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The rendering intent.
**Notes:**

riNone if not set
(Read and Write property)

### 77.19.14 SmoothnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SmoothnessTol property.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.19.15 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Soft mask pointer or nil. See CreateSoftMask for further information.
**Notes:** (Read and Write property)

### 77.19.16 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Disables the active soft mask.
**Notes:** (Read and Write property)

### 77.19.17 StrokeAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stoke alpha value.
**Notes:**

-1.0 if not set.
(Read and Write property)

### 77.19.18 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The TextKnockout property.
**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

# 77.20 class DynaPDFFieldExMBS

## 77.20.1 class DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for extended field information.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.20.4 Methods

## 77.20.5 Close

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** You can call close to release all values now or simply let it go automatically later.

### 77.20.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.20.7 Kids(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array of child fields.

### 77.20.8 Properties

### 77.20.9 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Action handle or -1 if not set.
**Notes:**

This action is executed when the field is activated.
(Read only property)

### 77.20.10 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of action.
**Notes:**

See kat* constants.
Meaningful only, if Action >= 0.
(Read only property)

### 77.20.11 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Background color.
**Notes:** (Read only property)

### 77.20.12 BackColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space of the background color.
**Notes:** (Read only property)

### 77.20.13 Barcode as DynaPDFBarcodeMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If present, this field is a barcode field.
**Notes:**

The field type is set to kftText since barcode fields are extended text fields.
(Read only property)

### 77.20.14 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bounding box of the field in bottom-up coordinates.
**Notes:** (Read only property)

### 77.20.15 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Border color.
**Notes:** (Read only property)

### 77.20.16 BorderColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space of the border color.
**Notes:** (Read only property)

### 77.20.17 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Border style.
**Notes:** (Read only property)

### 77.20.18 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Border width.
**Notes:** (Read only property)

### 77.20.19 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Where to position the caption.
**Notes:**

Use constants kbcpCaptionAbove, kbcpCaptionBelow, kbcpCaptionLeft, kbcpCaptionOnly, kbcpCaptionOver, kbcpCaptionRight or kbcpImageOnly.
(Read only property)

### 77.20.20 CharSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The char spacing.
**Notes:**

Text fields only.
(Read only property)

### 77.20.21 CheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ZapfDingbats character that is used to display the on state.
**Notes:** (Read only property)

### 77.20.22 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The check value.
**Notes:**

Check boxes only
(Read only property)

### 77.20.23 DefState as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The default state.
**Notes:**

Check boxes only
(Read only property)

### 77.20.24 DefValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional default value.
**Notes:** (Read only property)

### 77.20.25 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the field was marked as deleted by DeleteField().
**Notes:** (Read only property)

### 77.20.26 DownCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Caption of the down state.
**Notes:** (Read only property)

### 77.20.27 DownImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image handle of the down state.
**Notes:**

You can use this image handle with GetImageObj to get the image.
(Read only property)

### 77.20.28 EditFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Postscript name of the editing font.
**Notes:** (Read only property)

### 77.20.29 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The events for this fields.
**Notes:** (Read only property)

### 77.20.30 ExpValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combo and list boxes only.
**Notes:**

The values can be accessed with GetFieldExpValueEx().
(Read only property)

### 77.20.31 ExpValue as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exp value.
**Notes:**

Check boxes only.
(Read only property)

### 77.20.32 FieldFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field flags.
**Notes:** (Read only property)

### 77.20.33 FieldFont as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Postscript name of the font.
**Notes:** (Read only property)

### 77.20.34 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field name.
**Notes:**

Note that children of a field group or radio button have no name.
(Read only property)

### 77.20.35 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field type.
**Notes:** (Read only property)

### 77.20.36 FmtText as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The formatted field value.
**Notes:**

Text fields only.
The formatted field value if the field contains an OnFormat Javascript action.

(Read only property)

### 77.20.37 FmtTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text color for formatting.
**Notes:**

Text fields only.
Zero if not set. Usually RGB red otherwise.
(Read only property)

### 77.20.38 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font size. 0.0 means auto font size.
**Notes:** (Read only property)

### 77.20.39 GroupType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If GroupType <>FieldType the field is a terminal field of a field group.
**Notes:** (Read only property)

### 77.20.40 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field handle.
**Notes:** (Read only property)

### 77.20.41 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Highlight mode.
**Notes:** (Read only property)

### 77.20.42 IEditFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The edit font object.
**Notes:**

The object is created on demand the first time you access and cached.
(Read only property)

### 77.20.43 IEditFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The edit font info object.
**Notes:**

The object is created on demand the first time you access and cached.
(Read only property)

### 77.20.44 IFieldFont as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field font object.
**Notes:**

The object is created on demand the first time you access and cached.
(Read only property)

### 77.20.45 IFieldFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field font info object.
**Notes:**

The object is created on demand the first time you access and cached.
(Read only property)

### 77.20.46 IsCalcField as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the OnCalc event of the field is connected with a JavaScript action.
**Notes:** (Read only property)

### 77.20.47 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of fields in the Kids array.
**Notes:** (Read only property)

### 77.20.48 MapName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional unique mapping name of the field.
**Notes:** (Read only property)

### 77.20.49 MaxLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum text length.
**Notes:**

Text fields only ->zero means not restricted.
(Read only property)

### 77.20.50 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modification date.
**Notes:** (Read only property)

### 77.20.51 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Handle of an OCG or OCMD or -1.
**Notes:**

Fields can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

### 77.20.52 PageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array index to change the tab order.
**Notes:**

see SortFieldsByIndex().
(Read only property)

### 77.20.53 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Page on which the field is used or -1.
**Notes:** (Read only property)

### 77.20.54 RollCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Caption of the roll over state.
**Notes:** (Read only property)

### 77.20.55 RollImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image handle of the roll over state.
**Notes:**

You can use this image handle with GetImageObj to get the image.
(Read only property)

### 77.20.56 Rotate as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Rotation angle in degrees.
**Notes:** (Read only property)

### 77.20.57 Signature as DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature details.
**Notes:**

Signature fields only. Present only for imported signature fields which which have a value. That means the file was digitally signed. -
Signed signature fields are always marked as deleted!
(Read only property)

### 77.20.58 TextAlign as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text align.
**Notes:**

Text fields only.
(Read only property)

### 77.20.59 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text color.
**Notes:** (Read only property)

### 77.20.60 TextColorSP as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space of the field's text.
**Notes:** (Read only property)

### 77.20.61 TextScaling as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text scaling.
**Notes:**

Text fields only.
(Read only property)

### 77.20.62 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tooltip text.
**Notes:**

Optional tool tip.
(Read only property)

### 77.20.63 UniqueName as String

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional unique name (NM key).
**Notes:** (Read only property)

### 77.20.64 UpCaption as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Caption of the up state.
**Notes:** (Read only property)

### 77.20.65 UpImage as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image handle of the up state.
**Notes:**

You can use this image handle with GetImageObj to get the image.
(Read only property)

### 77.20.66 Value as String

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value of the field.
**Notes:** (Read only property)

### 77.20.67 WordSpacing as Single

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The word spacing.
**Notes:**

Text fields only.
(Read only property)

# 77.21 class DynaPDFFieldMBS

## 77.21.1 class DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for field information.
**Deprecated:** This item is deprecated and should no longer be used. You can use DynaPDFFieldExMBS instead. **Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.21.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.21.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.21.4 Methods

## 77.21.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.21.6 Properties

## 77.21.7 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Background color.
**Notes:** (Read only property)

## 77.21.8 BackCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space of background / border color
**Notes:** (Read only property)

### 77.21.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Bounding box.
**Notes:** (Read only property)

### 77.21.10 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Border color.
**Notes:** (Read only property)

### 77.21.11 Checked as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Only set if the field is a check box.
**Notes:** (Read only property)

### 77.21.12 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the field was deleted.
**Notes:** (Read only property)

### 77.21.13 FieldName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field name.
**Notes:**

May be unicode or ASCII encoded.
(Read only property)

### 77.21.14 FieldNameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Field name length in characters.
**Notes:** (Read only property)

### 77.21.15 FieldType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field type (see ft* constants)
**Notes:** (Read only property)

### 77.21.16 Font as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Used font by the field (PostScript name).
**Notes:** (Read only property)

### 77.21.17 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font size.
**Notes:** (Read only property)

### 77.21.18 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Field handle.
**Notes:** (Read only property)

### 77.21.19 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Greater zero if the field has childs.
**Notes:** (Read only property)

### 77.21.20 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parent field handle if any.
**Notes:** (Read only property)

### 77.21.21 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text color.
**Notes:** (Read only property)

### 77.21.22 TextCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space of text color.
**Notes:** (Read only property)

### 77.21.23 ToolTip as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tool tip if any.
**Notes:**

Unicode or ASCII encoded.
(Read only property)

### 77.21.24 Value as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Field value.
**Notes:**

Unicode or ASCII encoded.
(Read only property)

## 77.22 class DynaPDFFileSpecExMBS

### 77.22.1 class DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an extended file specification.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.22.2 Methods

### 77.22.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.22.4 Properties

### 77.22.5 AFRelationship as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The relationship.
**Notes:**

PDF 2.0
(Read and Write property)

### 77.22.6 ColItem as Ptr

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If <>nil the embedded file contains a collection item with user defined data.
**Notes:**

This entry can occur in PDF Collections only (PDF 1.7). See "PDF Collections" in the help file for further information.
(Read and Write property)

### 77.22.7 Description as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional description string.
**Notes:** (Read and Write property)

### 77.22.8 DOS as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional DOS file name.
**Notes:** (Read and Write property)

### 77.22.9 EmbFileNode as DynaPDFEmbFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The embedded file node for embedded file.
**Notes:** (Read and Write property)

### 77.22.10 FileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** File name as 7 bit ASCII string.
**Notes:** (Read and Write property)

### 77.22.11 FileNameIsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, FileName contains a URL.
**Notes:** (Read and Write property)

### 77.22.12 ID1 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional file ID.
**Notes:**

Meaningful only if FileName points to a PDF file.
(Read and Write property)

### 77.22.13 ID2 as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional file ID.
**Notes:**

Meaningful only if FileName points to a PDF file.
(Read and Write property)

### 77.22.14 IsVolatile as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the file changes frequently with time.
**Notes:** (Read and Write property)

### 77.22.15 Mac as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional Mac file name.
**Notes:** (Read and Write property)

### 77.22.16 Thumb as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional thumb nail image.
**Notes:** (Read and Write property)

### 77.22.17 UFileName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file name.
**Notes:**

PDF 1.7. Same as FileName but Unicode is allowed.
(Read and Write property)

### 77.22.18 Unix as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional Unix file name.
**Notes:** (Read and Write property)

## 77.23 class DynaPDFFileSpecMBS

### 77.23.1 class DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for information about an embedded file.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.23.2 Methods

### 77.23.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.23.4 Properties

### 77.23.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Buffer of an embedded file.
**Notes:** (Read and Write property)

### 77.23.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Buffer size in bytes.
**Notes:** (Read and Write property)

### 77.23.7 Checksum as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** 16 byte MD5 digest if set.
**Notes:** (Read and Write property)

### 77.23.8 ColItem as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Pointer to user defined collection item.
**Notes:** (Read and Write property)

### 77.23.9 Compressed as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Should be false if Decompress was true.
**Notes:** (Read and Write property)

### 77.23.10 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creation date as string.
**Notes:** (Read and Write property)

### 77.23.11 Description as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Description.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

### 77.23.12 FileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** File name as 7 bit ASCII string.
**Notes:** (Read and Write property)

### 77.23.13 FileSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decompressed stream size or zero if not known.
**Notes:** (Read and Write property)

### 77.23.14 IsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, FileName contains a URL.
**Notes:** (Read and Write property)

### 77.23.15 MIMEType as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** MIME media type name (RFC 2046).
**Notes:**

See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

### 77.23.16 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modification date as string.
**Notes:** (Read and Write property)

### 77.23.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of the file specification in the name tree.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
This value is always present.
(Read and Write property)

### 77.23.18 UnicodeFileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Same as FileName but Unicode is allowed.
**Notes:**

PDF 1.7.
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

## 77.24 class DynaPDFFontInfoMBS

### 77.24.1 class DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for DynaPDF font info.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.24.2 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 18.1pr3

### 77.24.3 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 18.1pr3

### 77.24.4 Methods

### 77.24.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.24.6 HorzWidths(index as UInt32) as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Horizontal glyph widths.
**Notes:** Index from 0 ot HorzWidthsCount -1.

### 77.24.7 VertWidths(index as UInt32) as DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Vertical glyph widths array.

### 77.24.8 Properties

### 77.24.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Ascent (optional).
**Notes:** (Read only property)

### 77.24.10 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Average character width (optional).
**Notes:** (Read only property)

### 77.24.11 BaseEncoding as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The base encoding.
**Notes:**

Valid only if HaveEncoding is true.
Can be kbeWinAnsi, kbeStandard, kbeMacRoman or kbeMacExpert.
(Read only property)

### 77.24.12 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** PostScript Name or Family Name.
**Notes:** (Read only property)

### 77.24.13 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cap height (optional).
**Notes:** (Read only property)

### 77.24.14 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The charset describes which glyphs are present in the font.
**Notes:** (Read only property)

### 77.24.15 CharSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the CharSet in bytes.
**Notes:** (Read only property)

### 77.24.16 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SystemInfo ->Character collection.
**Notes:** (Read only property)

### 77.24.17 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SystemInfo ->Issuer of the character collection.
**Notes:** (Read only property)

### 77.24.18 CIDSet as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CID fonts only.
**Notes:**

This is a table of bits indexed by CIDs.
(Read only property)

### 77.24.19 CIDSetSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the CIDSet in bytes.
**Notes:** (Read only property)

### 77.24.20 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CIDSystemInfo ->Supplement number.
**Notes:** (Read only property)

### 77.24.21 CIDToGIDMap as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allowed for embedded TrueType based CID fonts only.
**Notes:** (Read only property)

### 77.24.22 CIDToGIDMapSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the CIDToGIDMap in bytes.
**Notes:** (Read only property)

### 77.24.23 CMapBuf as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CMap data.
**Notes:**

Only available if the CMap was embedded.
(Read only property)

### 77.24.24 CMapBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CMAP Buffer size in bytes.
**Notes:** (Read only property)

### 77.24.25 CMapName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CID fonts only external CMap name or encoding.
**Notes:** (Read only property)

### 77.24.26 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Descent (optional).
**Notes:** (Read only property)

### 77.24.27 Encoding as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unicode mapping 0..255.
**Notes:**

not available for CID fonts.
(Read only property)

### 77.24.28 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** First char (simple fonts only).
**Notes:** (Read only property)

### 77.24.29 Flags as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font flags.
**Notes:**

See DynaPDF manual.

The font flags describe certain properties of the font. The most important flags are the following:

| Flag | Description |
|---|---|
| 1 | Fixed pitch font |
| 2 | Serif style |
| 4 | Symbol font |
| 8 | Script style |
| & h20 | Non-symbolic font |
| & h40 | Italic style |
| & h40000 | Force Bold (Type1 fonts only) |

The full set of available flags can be found in the PDF Reference.
(Read only property)

### 77.24.30 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is the size of the largest glyph in this font.
**Notes:** (Read only property)

### 77.24.31 FontBuffer as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font data.
**Notes:**

Available if the font was embedded or loaded from a buffer.
(Read only property)

### 77.24.32 FontBufSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font file size in bytes..
**Notes:** (Read only property)

### 77.24.33 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional Font Family (Family Name).
**Notes:** (Read only property)

### 77.24.34 FontFilePath as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font file path.
**Notes:**

Only available for system fonts.
(Read only property)

### 77.24.35 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font file type.
**Notes:**

Can be:
kffsType1C, kffsOpenTypeC, kffsOpenType, kffsNoSubtype, kffsCIDFontType2 or kffsCIDFontType0C.
(Read only property)

### 77.24.36 FontName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font name (should be the same as BaseFont).
**Notes:** (Read only property)

### 77.24.37 FontStretch as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font stretch.
**Notes:**

Optional ->Condensed, and so on.
(Read only property)

### 77.24.38 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font type.
**Notes:**

If ftType0 the font is a CID font.
(Read only property)

### 77.24.39 FontWeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font weight (optional).
**Notes:** (Read only property)

### 77.24.40 FullName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The full name.
**Notes:**

System fonts only.
(Read only property)

### 77.24.41 HaveEncoding as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether encoding is known.
**Notes:**

If true, BaseEncoding was set from the font's encoding.
(Read only property)

### 77.24.42 HorzWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of horizontal widths in the array.
**Notes:** (Read only property)

### 77.24.43 Imported as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether font is imported.
**Notes:**

If true, the font was imported from an external PDF file.
(Read only property)

### 77.24.44 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Italic angle.
**Notes:** (Read only property)

### 77.24.45 Lang as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional language code defined by BCP 47.
**Notes:** (Read only property)

### 77.24.46 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Last char (simple fonts only).
**Notes:** (Read only property)

### 77.24.47 Leading as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Leading (optional).
**Notes:** (Read only property)

### 77.24.48 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the clear text portion of a Type1 font.
**Notes:** (Read only property)

### 77.24.49 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the encrypted portion of a Type1 font program.
**Notes:** (Read only property)

### 77.24.50 Length3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the fixed-content portion of a Type1 font program.
**Notes:** (Read only property)

### 77.24.51 MaxWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum glyph width (optional).
**Notes:** (Read only property)

### 77.24.52 Metadata as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional XMP metadata stream about the font file.
**Notes:** (Read only property)

### 77.24.53 MetadataSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** MetaData size in bytes.
**Notes:** (Read only property)

### 77.24.54 MisWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Missing width (default = 0.0).
**Notes:** (Read only property)

### 77.24.55 Panose as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional 12 bytes long Panose string.
**Notes:**

CID fonts only.
(Read only property)

### 77.24.56 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** System fonts only.
**Notes:** (Read only property)

### 77.24.57 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Space width in font units.
**Notes:**

A default value is set if the font contains no space character.
(Read only property)

### 77.24.58 StemH as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The thickness of horizontal stems.
**Notes:** (Read only property)

### 77.24.59 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The thickness of vertical stems.
**Notes:** (Read only property)

### 77.24.60 ToUnicode as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** ToUnicode CMap.
**Notes:**

Only available for imported fonts.
(Read only property)

### 77.24.61 ToUnicodeSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** ToUnicode CMap size in bytes.
**Notes:** (Read only property)

### 77.24.62 VertDefPos as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default vertical displacement vector.
**Notes:** (Read only property)

### 77.24.63 VertWidthsCount as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of vertical widths in the array.
**Notes:** (Read only property)

### 77.24.64 WMode as UInt32

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writing Mode.
**Notes:**

0: Horizontal
1: Vertical.
(Read only property)

### 77.24.65 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of lowercase letters measured from the baseline.
**Notes:** (Read only property)

## 77.25 class DynaPDFFontMBS

### 77.25.1 class DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for pdf font information.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.25.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.25.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

### 77.25.4 Methods

### 77.25.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.25.6 Encoding(Index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unicode mapping 0..255 if set.
**Notes:** Index from 0 to 255.

### 77.25.7 Widths(Index as Integer) as single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Glyph widths.
**Notes:** Index from 0 to WidthsCount-1.

### 77.25.8 Properties

### 77.25.9 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ascent of this font.
**Notes:** (Read and Write property)

### 77.25.10 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** PostScript Name or Family Name.
**Notes:** (Read and Write property)

### 77.25.11 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Cap height.
**Notes:** (Read and Write property)

### 77.25.12 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default character widths ->CID fonts only.
**Notes:** (Read and Write property)

### 77.25.13 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Descent.
**Notes:** (Read and Write property)

### 77.25.14 FirstChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first character.
**Notes:** (Read and Write property)

### 77.25.15 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font flags.
**Notes:** (Read and Write property)

### 77.25.16 FontFamily as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional Font Family (Family Name).
**Notes:**

Unicode or ASCII encoded.
(Read and Write property)

### 77.25.17 FontFile as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font file buffer.
**Notes:**

Only imported fonts are returned.
(Read and Write property)

### 77.25.18 FontFileType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font file subtype.
**Notes:**

See kffs* constants like those:

| Name | Value | Description |
|---|---|---|
| kffsType1C | 0 | CFF based Type1 font |
| kffsCIDFontType0C | 1 | CFF based Type1 CID font |
| kffsOpenType | 2 | TrueType based OpenType font |
| kffsOpenTypeC | 3 | CFF based OpenType font |
| kffsCIDFontType2 | 4 | TrueType based CID Font |
| kffsNoSubtype | 9 | The font file is in the format of FontType |

(Read and Write property)

### 77.25.19 FontName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Font name.
**Notes:** (Read and Write property)

### 77.25.20 FontType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font type.
**Notes:**

If ftType0 the font is a CID font.
(Read and Write property)

### 77.25.21 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Italic angle.
**Notes:** (Read and Write property)

### 77.25.22 LastChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Last char.
**Notes:** (Read and Write property)

### 77.25.23 Length1 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the clear text portion of the Type1 font, or the length of the entire font program if FontType <>kffType1.
**Notes:** (Read and Write property)

### 77.25.24 Length2 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the encrypted portion of the Type1 font program (Type1 fonts only).
**Notes:** (Read and Write property)

### 77.25.25 Length3 as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the fixed-content portion of the Type1 font program or zero if not present.
**Notes:** (Read and Write property)

### 77.25.26 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Space width in font units or default value.
**Notes:** (Read and Write property)

### 77.25.27 WidthsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of widths in the array.
**Notes:** (Read and Write property)

### 77.25.28 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The x-height.
**Notes:** (Read and Write property)

## 77.26 class DynaPDFFontMetricsMBS

### 77.26.1 class DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for font metrics.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.26.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr2

### 77.26.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr2

### 77.26.4 Methods

### 77.26.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.26.6 Properties

### 77.26.7 Ascent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Ascent.
**Notes:** (Read and Write property)

### 77.26.8 AvgWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Average character width.
**Notes:** (Read and Write property)

### 77.26.9 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cap height.
**Notes:** (Read and Write property)

### 77.26.10 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Default width.
**Notes:** (Read and Write property)

### 77.26.11 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Descent.
**Notes:** (Read and Write property)

### 77.26.12 FirstChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** First char.
**Notes:** (Read and Write property)

### 77.26.13 FixedWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width of all glyphs in a fixed pitch font.
**Notes:** (Read and Write property)

### 77.26.14 FontBBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font's bounding box.
**Notes:** (Read and Write property)

### 77.26.15 FontStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font style with which the font was loaded.
**Example:**

```
dim pdf as DynaPDFMBS // your instance

// set font
call pdf.SetFont("Helvetica", pdf.kfsNone, 12)

// and check whether it is bold
dim m as DynaPDFFontMetricsMBS = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if

// set bold font
call pdf.SetFont("Helvetica", pdf.kfsBold, 12)

// and check whether it is bold
m = pdf.GetFontMetrics(pdf.GetActiveFont)
if BitwiseAnd(m.FontStyle, pdf.kfsBold) = pdf.kfsBold then
MessageBox "is bold"
else
MessageBox "is not bold"
end if
```

**Notes:**

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

### 77.26.16 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is this a fixed pitch font?
**Notes:** (Read and Write property)

### 77.26.17 IsStdFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is this is a standard font?
**Notes:** (Read and Write property)

### 77.26.18 IsSymbolFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Is this is a symbolic font?
**Notes:** (Read and Write property)

### 77.26.19 ItalicAngle as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Italic angle of italic fonts.
**Notes:** (Read and Write property)

### 77.26.20 LastChar as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Last char.
**Notes:** (Read and Write property)

### 77.26.21 LineGap as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Typographic line gap.
**Notes:** (Read and Write property)

### 77.26.22 MacStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** macOS style flags.
**Notes:** (Read and Write property)

### 77.26.23 RealStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is the real style of the font (bold and italic styles are maybe emulated)
**Notes:**

See kfs* constants in DynaPDFMBS class.
(Read and Write property)

### 77.26.24 StemV as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width of vertical stems.
**Notes:** (Read and Write property)

### 77.26.25 StrikeoutPos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Strikeout position.
**Notes:** (Read and Write property)

### 77.26.26 StrikeoutWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width of the strikeout line.
**Notes:** (Read and Write property)

### 77.26.27 TypoAscender as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** sTypoAscender of the OS/2 table of TrueType and OpenType fonts.
**Notes:** (Read and Write property)

### 77.26.28 TypoLeading as Single

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Typographic leading or line height of the font. T
**Notes:**

This is TypoAscender - Descent + LineGap.
If typographic metrics are not available then TypoAscender is set to Ascent.
(Read and Write property)

### 77.26.29 UnderlinePos as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Underline position.
**Notes:** (Read and Write property)

### 77.26.30 UnderlineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width of the underline.
**Notes:** (Read and Write property)

### 77.26.31 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitset for unicode ranges.
**Notes:** (Read and Write property)

### 77.26.32 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitset for unicode ranges.
**Notes:** (Read and Write property)

### 77.26.33 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitset for unicode ranges.
**Notes:** (Read and Write property)

### 77.26.34 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitset for unicode ranges.
**Notes:** (Read and Write property)

### 77.26.35 Weight as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font weight.
**Notes:** (Read and Write property)

### 77.26.36 WidthClass as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width class of the font.
**Notes:** (Read and Write property)

### 77.26.37 WinDescent as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** usWinDescent of the OS/2 table of TrueType and OpenType fonts
**Notes:** (Read and Write property)

### 77.26.38 WinStyle as UInt32

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** fsSelection of the OS/2 table of TrueType and OpenType fonts
**Notes:** (Read and Write property)

### 77.26.39 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** X-height.
**Notes:** (Read and Write property)

### 77.26.40 Constants

### 77.26.41 kurAlphabeticPresentationForms = & h40000000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.42 kurAncientGreekNumbers = 64

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.43 kurAncientSymbols = & h00800000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.44 kurArabic = & h00002000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.45 kurArabicPresentationFormsA = & h80000000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.46 kurArabicPresentationFormsB = 8

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the unicode range constants.

### 77.26.47 kurArmenian = & h00000400

## 77.27 class DynaPDFGlyphOutlineMBS

### 77.27.1 class DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for glyph outline.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.27.2 Methods

### 77.27.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.27.4 Outline(index as Integer) as DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries point with given index.
**Notes:** Index from 0 to OutlineCount-1.

### 77.27.5 Outlines as DynaPDFPointMBS()

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries array with all points.

### 77.27.6 Properties

### 77.27.7 AdvanceX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Glyph width in horizontal writing mode.
**Notes:** (Read only property)

### 77.27.8 AdvanceY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Glyph height in vertical writing mode.
**Notes:** (Read only property)

### 77.27.9 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bounding box of the glyph outline.
**Notes:** (Read and Write property)

### 77.27.10 HaveBBox as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, BBox was computed.
**Notes:** (Read and Write property)

### 77.27.11 Lsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Left side bearing (already applied, info only).
**Notes:** (Read and Write property)

### 77.27.12 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Placement vector (vertical writing mode only).
**Notes:** (Read only property)

### 77.27.13 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Placement vector (vertical writing mode only).
**Notes:** (Read only property)

### 77.27.14 OutlineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of points.
**Notes:** (Read and Write property)

### 77.27.15 Tsb as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Top side bearing (already applied, info only).
**Notes:** (Read and Write property)

## 77.28 class DynaPDFGoToActionMBS

### 77.28.1 class DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for details on a GoTo action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.28.2 Methods

### 77.28.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.28.4 DestPos(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination position.
**Notes:**

Array of 4 floating point values if set.
Index from 0 to 3.

### 77.28.5 Properties

### 77.28.6 DestFile as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination file.
**Notes:** (Read only property)

### 77.28.7 DestName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional named destination that shall be loaded when opening the file.
**Notes:** (Read only property)

### 77.28.8 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination page (the first page is denoted by 1).
**Notes:** (Read only property)

### 77.28.9 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination type.
**Notes:** (Read only property)

### 77.28.10 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to open a new window.
**Notes:**

Meaningful only if the destination file points to a PDF file.
-1 = viewer default, 0 = false, 1 = true.
(Read only property)

### 77.28.11 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index of the action.
**Notes:**

-1 or next action handle to be executed if any.
(Read only property)

### 77.28.12 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

## 77.29 class DynapdfGraphicsPathItemMBS

### 77.29.1 class DynapdfGraphicsPathItemMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a path item.
**Notes:** MBS Plugin needs to collect what path items you added, so we can later draw them to the PDF.

### 77.29.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr1

### 77.29.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr1

### 77.29.4 Properties

### 77.29.5 clockwise as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The clockwise parameter.
**Notes:**

For drawing arcs.
(Read only property)

### 77.29.6 cornerHeight as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The corner height.
**Notes:**

for round rectangle.
(Read and Write property)

### 77.29.7 cornerWidth as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The corner width.
**Notes:**

for round rectangle.
(Read and Write property)

### 77.29.8 cp1X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** First control point X coordinate.
**Notes:** (Read and Write property)

### 77.29.9 cp1Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** First control point Y coordinate.
**Notes:** (Read and Write property)

### 77.29.10 cp2X as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Second control point X coordinate.
**Notes:** (Read and Write property)

### 77.29.11 cp2Y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Second control point Y coordinate.
**Notes:** (Read and Write property)

### 77.29.12 cpX as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Control point X coordinate.
**Notes:** (Read and Write property)

### 77.29.13 cpY as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Control point Y coordinate.
**Notes:** (Read and Write property)

### 77.29.14 endRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The radian for the end angle.
**Notes:** (Read and Write property)

### 77.29.15 height as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height parameter.
**Notes:** (Read and Write property)

### 77.29.16 radius as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The radius for an arc.
**Notes:** (Read and Write property)

### 77.29.17 startRadian as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The radian for the start angle.
**Notes:** (Read and Write property)

### 77.29.18 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of path item.
**Notes:**

See type constants.
(Read only property)

### 77.29.19 width as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width parameter.
**Notes:** (Read and Write property)

### 77.29.20 x as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** X coordinate.
**Notes:** (Read and Write property)

### 77.29.21 y as Double

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Y coordinate.
**Notes:** (Read and Write property)

### 77.29.22 Constants

### 77.29.23 TypeAddArc = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add arc

### 77.29.24 TypeAddCurveToPoint = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add curve to point

### 77.29.25 TypeAddLineToPoint = 3

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add line to point

### 77.29.26 TypeAddQuadraticCurveToPoint = 4

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add quadratic curve to point

### 77.29.27 TypeAddRectangle = 5

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add rectangle

### 77.29.28 TypeAddRoundRectangle = 6

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Add round rectangle

### 77.29.29 TypeMoveToPoint = 7

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Move to point

### 77.29.30 TypeUnknown = 0

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the item type constants.
**Notes:** Unknown type. Only for an uninitialized object.

## 77.30 class DynapdfGraphicsPathMBS

### 77.30.1 class DynapdfGraphicsPathMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a path.
**Notes:**

We subclass the GraphicsPath class in Xojo 2019r2 and newer to be able to record what methods you call.
Subclass of the GraphicsPath class.

- MBS Xojo Plugins, version 20.2pr1

### 77.30.4 Methods

### 77.30.5 AddArc(x As Double, y As Double, radius As Double, startRadian As Double, endRadian As Double, clockwise As Boolean)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds an arc to the path.

### 77.30.6 AddCurveToPoint(cp1X As Double, cp1Y As Double, cp2X As Double, cp2Y As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a cubic B√©zier curve to the point in the path.

### 77.30.7 AddLineToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Draws a line from the Point to the specified point.

### 77.30.8 AddQuadraticCurveToPoint(cpX As Double, cpY As Double, x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a quadratic B√©zier curve to the point in the path.

### 77.30.9 AddRectangle(x As Double, y As Double, width As Double, height As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a rectangle to the path.

### 77.30.10 AddRoundRectangle(x As Double, y As Double, width As Double, height As Double, cornerWidth As Double, cornerHeight As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a rounded rectangle to the path.

### 77.30.11 MoveToPoint(x As Double, y As Double)

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves to the point without drawing anything.

### 77.30.12 PathItems as DynapdfGraphicsPathItemMBS()

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries array of path items.

### 77.30.13 Properties

### 77.30.14 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries count of items.
**Notes:** (Read only property)

# 77.31 class DynaPDFHideActionMBS

## 77.31.1 class DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a hide action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.31.2 Methods

## 77.31.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.31.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array of fields.

## 77.31.5 Properties

## 77.31.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of fields in the array.
**Notes:** (Read only property)

## 77.31.7 Hide as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A flag indicating whether to hide or show the fields in the array.
**Notes:** (Read only property)

### 77.31.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle of the next action to use.
**Notes:**

-1 or next action handle to be executed if any.
(Read only property)

### 77.31.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

# 77.32 class DynaPDFImageMBS

## 77.32.1 class DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for dynapdf for passing image data.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.32.5 Xojo Developer Magazine

- 19.6, page 14: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

### 77.32.6 Methods

### 77.32.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.32.8 Decode as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The decode array.
**Notes:**

If set, samples must be decoded. The array contains 2 * NumComponents values.
The decode array is never set if the image is returned decompressed since it is already applied during decompression.

### 77.32.9 MaskImage(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the image details on the soft mask for this image.
**Notes:**

If set, a 1 bit image is used as a transparency mask.
Plugin calls GetImageObjEx with the given flags to decode the image.

### 77.32.10 PictureData(ImageFormat as Integer = 0, ImageFilter as Integer = 0) as String

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Requests images in the given format.
**Notes:**

Default for ImageFormat is Tiff (kifmTIFF is zero) and default Image Filter is flate (kcfFlate is zero).
You can pass different constants.
If you request JPEG or JPEG 2000 and the image is already in that format, we pass through.
Else we recompress image.

### 77.32.11 SoftMask(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the image details on the soft mask for this image.
**Notes:**

If set, a grayscale image is used as alpha channel.
Plugin calls GetImageObjEx with the given flags to decode the image.

### 77.32.12 Properties

### 77.32.13 BitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bit depth of the image buffer.
**Notes:**

Possible values are 1, 2, 4, 8, 24, 32, and 64.

(Read only property)

### 77.32.14 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The buffer for the image data as a string.
**Notes:**

Each scanline is aligned to a full byte.
(Read only property)

### 77.32.15 BufferPtr as Ptr

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The buffer for the image data.
**Notes:**

Each scanline is aligned to a full byte.
(Read only property)

### 77.32.16 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the image buffer in bytes.
**Notes:** (Read only property)

### 77.32.17 ColorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of colors in the color table.
**Notes:** (Read only property)

### 77.32.18 ColorMask as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Pointer to color mask.
**Notes:**

The array contains ranges in the form min/max (2 values per component) for each component before decoding.
(Read only property)

### 77.32.19 ColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color space refers either to the image buffer or to the color table if set.
**Notes:**

Note that 1 bit images can occur with and without a color table.

(Read only property)

### 77.32.20 ColorSpaceObject as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The original color space.
**Notes:** (Read only property)

### 77.32.21 ColorTable as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color table or nil.
**Notes:** (Read only property)

### 77.32.22 DestHeight as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination height (can be negative).
**Notes:** (Read only property)

### 77.32.23 DestWidth as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destination width (can be negative).
**Notes:** (Read only property)

### 77.32.24 DestX1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The X1 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.25 DestX2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The X2 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.26 DestX3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The X3 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.27 DestX4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The X4 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.28 DestY1 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Y1 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.29 DestY2 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Y2 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.30 DestY3 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Y3 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.31 DestY4 as Single

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Y4 coordinate of the parallelogram into which the image is drawn.
**Notes:** (Read only property)

### 77.32.32 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current fill color.
**Notes:**

An image mask is drawn with the current fill color.
(Read only property)

### 77.32.33 FillColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color space in which FillColor is defined.
**Notes:** (Read only property)

### 77.32.34 Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Required decode filter if the image is compressed.
**Notes:**

Required decode filter if the image is compressed.
Possible values are dfDCTDecode (JPEG), dfJPXDecode (JPEG2000), and dfJBIG2Decode. Other filters are already removed by DynaPDF since a conversion to a native file format is then always required.

(Read only property)

### 77.32.35 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image height in pixel.
**Notes:** (Read only property)

### 77.32.36 ImageHandle as Ptr

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The image handle if known.
**Notes:** (Read only property)

### 77.32.37 ImageIndex as Integer

MBS DynaPDF Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The image index if known.
**Notes:** (Read only property)

### 77.32.38 IMaskImageHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index of the mask image.
**Notes:**

This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

### 77.32.39 InlineImage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the image is an inline image.
**Notes:** (Read only property)

### 77.32.40 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The rendering intent.
**Notes:**

Default riNone.
(Read only property)

### 77.32.41 Interpolate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, image interpolation should be performed.
**Notes:** (Read and Write property)

### 77.32.42 ISoftMaskHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index of the soft mask image.
**Notes:**

This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

### 77.32.43 JBIG2Globals as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional global page 0 segment (kdfJBIG2Decode filter only).
**Notes:** (Read only property)

### 77.32.44 JBIG2GlobalsSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the bit stream in bytes.
**Notes:** (Read only property)

### 77.32.45 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional measure dictionary.
**Notes:** (Read only property)

### 77.32.46 Metadata as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional XML Metadata stream.
**Notes:** (Read only property)

### 77.32.47 MetadataSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of Metadata in bytes.
**Notes:** (Read only property)

### 77.32.48 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the colors of 1 bit images are reversed.
**Notes:** (Read only property)

### 77.32.49 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of components stored in the image buffer.
**Notes:** (Read only property)

### 77.32.50 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Handle of an OCG or OCMD or -1.
**Notes:**

Images can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

### 77.32.51 OrgFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The image was compressed with this filter in the PDF file.
**Notes:**

This info is useful to determine which compression filter should be used when creating a new image file from the image buffer.

(Read only property)

### 77.32.52 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference to the parent DynaPDF object.
**Notes:** (Read and Write property)

### 77.32.53 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Point Data dictionary.
**Notes:** (Read only property)

### 77.32.54 ResolutionX as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image resolution on the x-axis.
**Notes:** (Read only property)

### 77.32.55 ResolutionY as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image resolution on the y-axis.
**Notes:** (Read only property)

### 77.32.56 ScanLineLength as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of a scanline in bytes.
**Notes:** (Read only property)

### 77.32.57 SMaskInData as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The SMaskInData value.
**Notes:**

JPXDecode only, PDF_MAX_INT if not set. See PDF Reference for further information.

(Read only property)

### 77.32.58 Transparent as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The transparent mode.
**Notes:**

The meaning is different depending on the bit depth and whether a color table is available. If the image is a 1 bit image and if no color table is available, black pixels must be drawn with the current fill color. If the image contains a color table ColorMask contains the range of indexes in the form min/max index which appears transparent. If no color table is present ColorMask contains the transparent ranges in the form min/max for each component.

(Read only property)

### 77.32.59 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image width in pixel.
**Notes:** (Read only property)

# 77.33 class DynaPDFImportDataActionMBS

## 77.33.1 class DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an import data action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.33.2 Methods

## 77.33.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.33.4 Properties

## 77.33.5 Data as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data or file to be loaded.
**Notes:** (Read only property)

## 77.33.6 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

## 77.33.7 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

# 77.34 class DynaPDFJavaScriptActionMBS

## 77.34.1 class DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a javascript action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.34.2 Methods

## 77.34.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.34.4 Properties

## 77.34.5 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

## 77.34.6 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

### 77.34.7 Script as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The script.
**Notes:** (Read only property)

# 77.35 class DynaPDFLaunchActionMBS

## 77.35.1 class DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for details on a launch action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.35.2 Methods

## 77.35.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.35.4 Properties

## 77.35.5 AppName as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional. The name of the application that should be launched.
**Notes:** (Read only property)

## 77.35.6 DefDir as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional default directory.
**Notes:** (Read only property)

## 77.35.7 File as DynaPDFFileSpecExMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file specification for the launch.
**Notes:** (Read only property)

### 77.35.8 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to launch in new window.
**Notes:**

-1 = viewer default, 0 = false, 1 = true.
(Read only property)

### 77.35.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

### 77.35.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

### 77.35.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional string specifying the operation to perform (open or print).
**Notes:** (Read only property)

### 77.35.12 Parameter as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional parameter string that shall be passed to the application (AppName).
**Notes:** (Read only property)

## 77.36 class DynaPDFLayerGroupMBS

### 77.36.1 class DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a DynaPDF Layer Group.
**Notes:**

Used to link layers in hierarchies.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.36.2 Methods

### 77.36.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.36.4 Properties

### 77.36.5 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 77.36.6 Owner as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The link to the parent DynaPDF object.
**Notes:** (Read only property)

# 77.37 class DynaPDFLineAnnotParameterMBS

## 77.37.1 class DynaPDFLineAnnotParameterMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for line annotation parameters.

## 77.37.2 Properties

## 77.37.3 Caption as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line.
**Notes:** (Read and Write property)

## 77.37.4 CaptionOffsetX as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Horizontal offset of the caption from its normal position.
**Notes:** (Read and Write property)

## 77.37.5 CaptionOffsetY as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Vertical offset of the caption from its normal position.
**Notes:** (Read and Write property)

## 77.37.6 CaptionPos as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position where the caption should be drawn if present.
**Notes:** (Read and Write property)

### 77.37.7 LeaderLineExtend as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional leader line extend beyond the leader line (must be a positive value or zero).
**Notes:** (Read and Write property)

### 77.37.8 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the leader lines (positive or negative).
**Notes:** (Read and Write property)

### 77.37.9 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Amount of space between the endpoints of the annotation and the leader lines (must be a positive value or zero)
**Notes:** (Read and Write property)

# 77.38 class DynaPDFMatrixMBS

## 77.38.1 class DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a DynaPDF matrix structure.
**Notes:** in the documentation known as TCTM struct.

## 77.38.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2
- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 11.1pr8

## 77.38.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr2
- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 11.1pr8

## 77.38.4 Methods

## 77.38.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new matrix and sets it to identity.
**Example:**

```
dim m as new DynaPDFMatrixMBS
MsgBox m
```

See also:

- 77.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 14766
- 77.38.7 Constructor(other as DynaPDFMatrixMBS) 14766

### 77.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with setting values to the given parameters.
**Example:**

```
dim m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
MsgBox m
```

See also:

- 77.38.5 Constructor 14765
- 77.38.7 Constructor(other as DynaPDFMatrixMBS) 14766

### 77.38.7 Constructor(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a matrix object with copying the values.
**Example:**

```
dim m as new DynaPDFMatrixMBS(1,2,3,4,5,6)
dim n as new DynaPDFMatrixMBS(m)
MsgBox n
```

See also:

- 77.38.5 Constructor 14765
- 77.38.6 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 14766

### 77.38.8 Identity as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates new object with identity matrix.
**Example:**

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

### 77.38.9 Invert

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverts the matrix.
**Example:**

```
dim m as new DynaPDFMatrixMBS

m.Invert

MsgBox m // shows [ 1.000000 -0.000000 -0.000000 1.000000 0.000000 0.000000 ]
```

### 77.38.10 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the left side.
See also:

- 77.38.11 LeftMultiply(other as DynaPDFMatrixMBS) 14767

### 77.38.11 LeftMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the left side.
**Example:**

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0
```

```
dim m3 as new DynaPDFMatrixMBS(m1)
m3.LeftMultiply(m2)

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

See also:

- 77.38.10 LeftMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 14767

### 77.38.12 Operator_Compare(other as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two matrix objects whether they have same values.
**Example:**

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

if m1 = m2 then
MsgBox "Equal, same values."
else
MsgBox "Not equal ->Bug in Plugin."
end if

if m1 is m2 then
MsgBox "Equal ->Bug in Xojo."
else
MsgBox "Not equal, different objects."
end if
```

### 77.38.13 Operator_Convert as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts matrix into a string for displaying in log files.
**Example:**

```
dim m as new DynaPDFMatrixMBS
MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

**Notes:** Added for debugging.

### 77.38.14 Operator_Multiply(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the left side.
**Example:**

```
dim m1 as new DynaPDFMatrixMBS
dim m2 as new DynaPDFMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0

dim m3 as DynaPDFMatrixMBS = m1*m2

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

### 77.38.15 Operator_MultiplyRight(other as DynaPDFMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the right side.

### 77.38.16 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the right side.
See also:

- 77.38.17 RightMultiply(other as DynaPDFMatrixMBS) 14769

### 77.38.17 RightMultiply(other as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies both matrix where self is on the right side.
See also:

- 77.38.16 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 14769

### 77.38.18 Rotate(angle as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Rotates matrix with the given angle.
**Example:**

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265

dim angle as Double = 30.0/180.0*pi

m.Rotate(angle)

MsgBox m // shows [ 0.866025 0.500000 -0.500000 0.866025 0.000000 0.000000 ]
```

**Notes:** Angle in radians: 2*pi = 360 degree

### 77.38.19 Scale(sx as Double, sy as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Scales the matrix.
**Example:**

```
dim m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0

MsgBox m // [ 2.000000 0.000000 0.000000 3.000000 0.000000 0.000000 ]
```

### 77.38.20 SetIdentity

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets values back to the identity matrix.
**Example:**

```
dim m as new DynaPDFMatrixMBS

m.Scale 2.0, 3.0 // modify values
m.SetIdentity // and reset

MsgBox m // [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

### 77.38.21 SetValues(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets all the values in one method
**Example:**

```
dim m as new DynaPDFMatrixMBS

m.SetValues 1,2,3,4,5,6

MsgBox m
```

### 77.38.22 Transform(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies the matrix to the given point.
**Example:**

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265
dim angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0

dim x as Double = 100.0
dim y as Double = 100.0

m.Transform x,y

MsgBox str(x)+" "+str(y) // 36.83459 140.2006
```

### 77.38.23 TransformInv(byref x as Double, byref y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies the matrix to the given point in inverse mode.
**Example:**

```
dim m as new DynaPDFMatrixMBS

const pi = 3.14159265
dim angle as Double = 30.0/180.0*pi
m.Rotate(angle)
m.Translate 2.0, 3.0

dim x as Double = 100.0
dim y as Double = 100.0

// transform
m.Transform x,y

MsgBox str(x)+" "+str(y) // 36.83459 140.2006

// transform back
m.TransformInv x,y

MsgBox str(x)+" "+str(y) // 100 100#
```

**Notes:** Like you have a point and want to know whether it was before the matrix was applied.

### 77.38.24 Translate(x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translates matrix by given values.
**Example:**

```
dim m as new DynaPDFMatrixMBS

m.Translate 2,3

MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 2.000000 3.000000 ]
```

### 77.38.25 Properties

### 77.38.26 a as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

### 77.38.27 b as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

### 77.38.28 c as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

### 77.38.29 d as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

### 77.38.30 IsIdentity as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether matrix is the identity matrix.
**Example:**

```
dim m as new DynaPDFMatrixMBS
```

```
MsgBox str(m.IsIdentity)

m.a = 3.0

MsgBox str(m.IsIdentity)
```

**Notes:**

Returns true if a = 1, b = 0, c = 0, d = 1, x = 0 and y = 0.
(Read only property)

### 77.38.31 RotationAngle as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the rotate angle.
**Example:**

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Rotate 0.1

MsgBox str(m.GetRotationAngle) // shows 0.1
```

**Notes:**

In radians from -pi to pi.
Used to be named GetRotationAngle before.
(Read only property)

### 77.38.32 ScaleFactor as Double

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the scale factor.
**Example:**

```
dim m as DynaPDFMatrixMBS = DynapdfMatrixMBS.Identity

m.Scale 3.0, 4.0

MsgBox str(m.GetScaleFactor) // shows 3.535534
```

**Notes:**

Used to be named GetScaleFactor before.
(Read only property)

### 77.38.33 StringValue as string

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts matrix into a string for displaying in log files.
**Example:**

```
dim m as new DynaPDFMatrixMBS
MsgBox m.Str // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

**Notes:**

Added for debugging.
Used to be named Str.
(Read only property)

### 77.38.34 x as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

### 77.38.35 y as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the matrix properties.
**Notes:** (Read and Write property)

## 77.39 class DynaPDFMBS

### 77.39.1 class DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The dynapdf class.
**Notes:**

A pdf library to create, modify, import pdf files.
You need a separate dynapdf license key for this class.

Please note that all constants have the prefix k. In the dynapdf_help.pdf file, the constants don't have a k prefix. And the C functions there have IPDF parameters which the plugin automatically passes for you. So

SI32 pdfSetPageCoords(const void* IDPF, TPageCoord PageCoords)

translates in Xojo to

function SetPageCoords(PageCoords as Integer) as Integer

and you call it like this:

call pdf.SetPageCoords pdf.kpcTopDown

where in this sample the DynaPDF object is named pdf.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent

- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.

### 77.39.8 Methods

### 77.39.9 ActivateAltFontList(FontListHandle as Integer, EnableSysFonts as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Activates or deactivates an alternate font list that was created by CreateAltFontList().
**Notes:**

An alternate font list represents a list of fallback fonts which are tested if one or more required glyphs were not found in the current font.
If no compatible font was found in the list, then system fonts are tested if EnableSysFonts was set to true. Although EnableSysFonts should be set to true in most cases, it is sometimes useful to disable system fonts, e.g. to restrict the number of fonts which can be embeded.
In order to disable the current alternate font list set the parameter Handle to -1. The value of EnableSysFonts is ignored this case. To fully deactivate font substitution disable system fonts with SetUseSystemFonts() before calling a text function.
Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().
See also ActivateAltFontList function in DynaPDF manual.

### 77.39.10 AddActionToObj(ObjType as Integer, theEvent as Integer, ActHandle as Integer, ObjHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds an action to a PDF object.
See also AddActionToObj function in DynaPDF manual.

### 77.39.11 AddAnnotToPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds an annotation to a page.
**Notes:**

With exception of PopUp annotations all annotation types can be drawn on multiple pages. Watermark or Stamp annotations are typical annotations which can be placed on multiple pages.
Returns true on success.
See also AddAnnotToPage function in DynaPDF manual.

### 77.39.12 AddArticle(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a new article and adds it to the currently open article thread that must be created with CreateArticleThread() beforehand.
See also AddArticle function in DynaPDF manual.

### 77.39.13 AddBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Notes:** The title parameter is converted to unicode.
See also AddBookmark function in DynaPDF manual.

### 77.39.14 AddBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also AddBookmark function in DynaPDF manual.

### 77.39.15 AddBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Notes:** The title parameter is converted to unicode.
See also AddBookmarkEx function in DynaPDF manual.

### 77.39.16 AddBookmarkEx2(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Notes:** If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

### 77.39.17 AddBookmarkEx2Ansi(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

### 77.39.18 AddBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a bookmark to the global outline tree of the document.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also AddBookmarkEx function in DynaPDF manual.

### 77.39.19 AddButtonImage(BtnHandle as Integer, State as Integer, Caption as string, ImgFile as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds an image to a push button to one or more of the three different states of a button.
See also AddButtonImage function in DynaPDF manual.

### 77.39.20 AddButtonImageEx(BtnHandle as Integer, State as Integer, Caption as string, hbitmap as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds a memory bitmap to a push button in the same ways as AddButtonImage() but accepts a HBITMAP handle as input image.
See also AddButtonImageEx function in DynaPDF manual.

### 77.39.21 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as MemoryBlock) as boolean

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds image to a button.
**Notes:**

The function adds an image to a push button in the same way as AddButtonImage(), but accepts an image buffer as input.
The function supports all image formats that InsertImageEx() supports, e.g. JPEG or PNG.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AddButtonImageEx2 function in DynaPDF manual.
See also:

- 77.39.22 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as String) as boolean 14783

### 77.39.22 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData as String) as boolean

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds image to a button.
**Notes:**

The function adds an image to a push button in the same way as AddButtonImage(), but accepts an image buffer as input.
The function supports all image formats that InsertImageEx() supports, e.g. JPEG or PNG.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AddButtonImageEx2 function in DynaPDF manual.
See also:

- 77.39.21 AddButtonImageEx2(BtnHandle as integer, State as integer, Caption as string, ImageData

as MemoryBlock) as boolean 14783

### 77.39.23 AddContinueText(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function prints a single text line and adds a line feed.
**Notes:** The text string is converted to Unicode.
See also AddContinueText function in DynaPDF manual.

### 77.39.24 AddContinueTextAnsi(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function prints a single text line and adds a line feed.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text string is converted to ANSI.
See also AddContinueText function in DynaPDF manual.

### 77.39.25 AddDeviceNProcessColorants(DeviceNCS as Integer, Colorants() as string, ProcessCS as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds DeviceN process colorants.
**Notes:** Returns true on success and false on failure.
See also AddDeviceNProcessColorants function in DynaPDF manual.

### 77.39.26 AddDeviceNSeparations(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds device N seperations.
**Notes:**

Same as AddDeviceNSeparationsAnsi, but here the Xojo colorant strings are converted to UTF-8 encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

### 77.39.27 AddDeviceNSeparationsAnsi(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds device N seperations.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

Same as AddDeviceNSeparations, but here the Xojo colorant strings are converted to ANSI encoding before they are passed to the DynaPDF library.

ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.
See also AddDeviceNSeparations function in DynaPDF manual.

### 77.39.28 AddFieldToFormAction(Action as Integer, Field as Integer, Include as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a field to a form action.
See also AddFieldToFormAction function in DynaPDF manual.

### 77.39.29 AddFieldToHideAction(HideAct as Integer, Field as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a field to a hide action.
See also AddFieldToHideAction function in DynaPDF manual.

### 77.39.30 AddFileComment(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds one or more comments to the end of the PDF file.
**Notes:** The text parameter is converted to unicode.
See also AddFileComment function in DynaPDF manual.

### 77.39.31 AddFileCommentAnsi(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds one or more comments to the end of the PDF file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also AddFileComment function in DynaPDF manual.

### 77.39.32 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a search path to the list of available font search paths.
**Example:**

```
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

**Notes:**

This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the % Windows% /Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts
- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 77.39.33 AddFontSearchPath(path as string, recursive as boolean = true) as Integer 14787

### 77.39.33 AddFontSearchPath(path as string, recursive as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a search path to the list of available font search paths.
**Example:**

```
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

**Notes:**

This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

This function is implemented in an ANSI and Unicode compatible version. However, Unicode file paths are converted back to ANSI on Windows. On non-Windows operating systems the path is converted to UTF-8 and passed to the ANSI version of the function.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the % Windows% /Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  textasciitilde /Library/Fonts
- /Library/Fonts
- /System/Library/Fonts

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 77.39.32 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer 14786

### 77.39.34 AddImage(Filter as Integer, Flags as Integer, Image as DynaPDFImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds an image to the current image file.
**Notes:**

For the filter you use one of the kcf* constants.
For the flags you use either kicNone of kicUseCCITT4.

TIFF is the only format that supports different compression filters. The Filter parameter of the function AddImage() is ignored if the image format supports only one specific compression filter.
Note that images are automatically converted to the nearest supported color space if the image format does not support the color space of the image.
See also AddImage function in DynaPDF manual.

### 77.39.35 AddInkList(InkAnnot as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds an array of points or path to an Ink Annotation.
**Notes:**

The function must be called within an open page.
An ink annotation can contain an arbitrary number of paths. The points will be connected by curves to achieve a smooth transition between points. The coordinates are treated in current user space. Any transformation that was applied on the coordinate system will be taken into account.
If the number of points is zero then all paths will be deleted from the annotation.

Returns true on success.
See also AddInkList function in DynaPDF manual.

### 77.39.36 AddJavaScript(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds a global JavaScript to the PDF file.
**Notes:** The script parameter is converted to unicode.
See also AddJavaScript function in DynaPDF manual.

### 77.39.37 AddJavaScriptAnsi(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds a global JavaScript to the PDF file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The script parameter is converted to ANSI.
See also AddJavaScript function in DynaPDF manual.

### 77.39.38 AddLayerToDisplTree(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a layer to the display tree.
See also AddLayerToDisplTree function in DynaPDF manual.

### 77.39.39 AddLayerToDisplTreeAnsi(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a layer to the display tree.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also AddLayerToDisplTree function in DynaPDF manual.

### 77.39.40 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds an image mask to a base image.
**Notes:**

Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 77.39.41 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 14790

### 77.39.41 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds an image mask to a base image.
**Notes:**

Please note that this function can be called with Ptr or Memoryblock.
See also AddMaskImage function in dynapdf_help.pdf manual.
See also AddMaskImage function in DynaPDF manual.
See also:

- 77.39.40 AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean 14790

### 77.39.42 AddObjectToLayer(OCG as UInt32, ObjType as Integer, Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds an object to an Optional Content Group (OCG) or Optional Content Membership dictionary (OCMD).
**Notes:**

If the function succeeds the return value is true. If the function fails the return value is false.

For ObjectType use the constants: kooAnnotation, kooField, kooImage and kooTemplate.
See also AddObjectToLayer function in DynaPDF manual.

### 77.39.43 AddOCGToAppEvent(Handle as UInt32, Events as Integer, Categories as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds an Optional Content Group (OCG) to an application event.
**Notes:** See dynapdf_help.pdf manual for details.
See also AddOCGToAppEvent function in DynaPDF manual.

### 77.39.44 AddOutputIntent(ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
**Notes:**

This function was named AddRenderingIntent before.
Requires DynaPDF Lite license.
See also AddOutputIntent function in DynaPDF manual.

### 77.39.45 AddOutputIntentEx(buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
**Notes:**

This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 77.39.46 AddOutputIntentEx(buffer as string) as Integer 14792

### 77.39.46 AddOutputIntentEx(buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds an ICC color profile to the PDF file that should be used to render device dependent colors.
**Notes:**

This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:

- 77.39.45 AddOutputIntentEx(buffer as Memoryblock) as Integer 14791

### 77.39.47 AddPageLabel(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a page label object.
**Notes:** The Value string is converted to Unicode internally.
See also AddPageLabel function in DynaPDF manual.

### 77.39.48 AddPageLabelAnsi(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a page label object.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Value string is converted to Windows ANSI internally.
See also AddPageLabel function in DynaPDF manual.

### 77.39.49 AddValToChoiceField(Field as Integer, ExpValue as string, Value as string, Selected as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function adds a value to a choice field.
**Notes:** The Value string is converted to Unicode.
See also AddValToChoiceField function in DynaPDF manual.

### 77.39.50 AofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns A of a LAB color value.
**Example:**

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.AofLAB(lab)) // shows 2
```

### 77.39.51 Append as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function appends an empty page to the document.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Create a new page
bBool=pdf.Append
```

See also Append function in DynaPDF manual.

### 77.39.52 AppendTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a trace file with appending.
**Notes:**

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, this method can append to it.

### 77.39.53 ApplyAppEvent(TOCAppEvent as Integer, SaveResult as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The visibility state of optional content groups (OCGs) can be dynamically changed in application events like Export, View, or Print.
**Notes:**

DynaPDF loads the view state when rendering PDF pages by default.
The function can be used to apply the visibility state of another event if necessary. The result can optionally be stored in the PDF file but note that this has only an effect in PDF viewers which support layers but no application events since the events will not be deleted from the PDF file. It is also possible to delete the events with DeleteAppEvents().

If the function succeeds the return value is true. If the function fails the return value is false.

See also ApplyAppEvent function in DynaPDF manual.

### 77.39.54 ApplyPattern(PattHandle as Integer, ColorMode as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function sets a tiling pattern as current fill, stroke or fill, and stroke color.
See also ApplyPattern function in DynaPDF manual.

### 77.39.55 ApplyShading(ShadHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function applies a shading to the current clipping path, or if no clipping is active, to the entire page.

See also ApplyShading function in DynaPDF manual.

### 77.39.56 AssociateEmbFile(DestObject as Integer, DestHandle as Integer, Relationship as Integer, EmbFile as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function associates an embedded file with a PDF object.
**Notes:**

The parameter DestHandle must be a valid handle of a PDF object. If destination object type is a page, then the page number must be used as handle. The first page is denoted by one. If the destination object is the documents catalog then the parameter DestHandle is ignored. Set the parameter to zero or -1 in this case.
The parameter EmbFile must be a valid handle of an embedded file. See AttachFile() or AttachFileEx() for further information.

Associated files are supported since PDF 2.0 and in PDF/A 3 files. In PDF/A 3 files all embedded files must be associated with a PDF object.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AssociateEmbFile function in DynaPDF manual.

### 77.39.57 AttachFile(File as folderitem, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function attaches a file to the document.
**Notes:** On Windows, the description parameter is converted to unicode.
See also AttachFile function in DynaPDF manual.

### 77.39.58 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
See also AttachFileEx function in DynaPDF manual.
See also:

- 77.39.59 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer 14796

### 77.39.59 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf object

// add embedded file to PDF
const Compressed = true
call pdf.AttachFileEx("This is hidden text in an attached file.", "attachment.txt", "", Compressed)
```

See also AttachFileEx function in DynaPDF manual.
See also:

- 77.39.58 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer 14795

### 77.39.60 AutoTemplate(Templ as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** To insert a template automatically on newly created pages, use the function AutoTemplate().
See also AutoTemplate function in DynaPDF manual.

### 77.39.61 BeginContinueText(PosX as Double, PosY as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function prepares the output of multiple text lines which use the graphics state parameter Leading as line height, or the font size if Leading is not set.
See also BeginContinueText function in DynaPDF manual.

### 77.39.62 BeginLayer(OCG as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function opens a layer in the current open page or template.
**Notes:**

If the function succeeds the return value is true. If the function fails the return value is false.

See also BeginLayer function in DynaPDF manual.

### 77.39.63 BeginPageTemplate(Name as String, UseAutoTemplates as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new page template with given name.
**Notes:**

This function creates or opens a page template for editing. Page templates are hidden pages which can be added to the document or overlaid on existing pages via JavaScript.

The usage of the function is like Append() or EditPage(). If the template does already exist then it will be opened for editing. Page templates support form fields and annotations but it is not allowed to add article beads to them.
See also BeginPageTemplate function in DynaPDF manual.

### 77.39.64 BeginPattern(PatternType as Integer, TilingType as Integer, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a new tiling pattern.
See also BeginPattern function in DynaPDF manual.

### 77.39.65 BeginTemplate(Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Begins a new template
See also BeginTemplate function in DynaPDF manual.

### 77.39.66 BeginTemplateEx(BBox as DynaPDFRectMBS, Matrix as DynaPDF-MatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Begins a new template
**Notes:** The plugin passes nil to the library for the bbox or the matrix parameter if they are nil.

### 77.39.67 BeginTransparencyGroup(x1 as Double, y1 as Double, x2 as Double, y2 as Double, Isolated as Boolean, Knockout as Boolean, CS as Integer, CSHandle as Int32) as Int32

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Begins a new transparency group.
**Notes:**

CS: color space, pass kes* constants.

Requires DynaPDF Pro license.
See also BeginTransparencyGroup function in DynaPDF manual.

### 77.39.68 Bezier_1_2_3(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a bezier path to the pdf.
See also Bezier_1_2_3 function in DynaPDF manual.

### 77.39.69 Bezier_1_3(x1 as Double, y1 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a bezier path to the pdf.
See also Bezier_1_3 function in DynaPDF manual.

### 77.39.70 Bezier_2_3(x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a bezier path to the pdf.
See also Bezier_2_3 function in DynaPDF manual.

### 77.39.71 BofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns B of a LAB color value.
**Example:**

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.BofLAB(lab)) // shows 3
```

### 77.39.72 BofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns B of a RGB color value.
**Example:**

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.BofRGB(rgb)) // shows 3
```

### 77.39.73 BuildFamilyNameAndStyle(IFont as Integer, byref name as string, byref style as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Builds a family name and style from a font object.
See also BuildFamilyNameAndStyle function in DynaPDF manual.

### 77.39.74 CalcWidthHeight(OrgWidth as Double, OrgHeight as Double, ScaledWidth as Double, ScaledHeight as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function calculates the scaled width or height of a given size in the same way as InsertImage() or PlaceTemplate().
See also CalcWidthHeight function in DynaPDF manual.

### 77.39.75 CaretAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a caret annotation.
**Notes:**

This type of annotation is typically used to mark a position on a page where a user should add or edit text. If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

### 77.39.76 CaretAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a caret annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

This type of annotation is typically used to mark a position on a page where a user should add or edit text. If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also CaretAnnot function in DynaPDF manual.

### 77.39.77 ChangeAnnotName(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes or deletes the optional name of an annotation.
**Notes:** The Name parameter is converted to unicode.
See also ChangeAnnotName function in DynaPDF manual.

### 77.39.78 ChangeAnnotNameAnsi(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes or deletes the optional name of an annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name parameter is converted to ANSI.
See also ChangeAnnotName function in DynaPDF manual.

### 77.39.79 ChangeAnnotPos(Handle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the position and size of an annotation.
See also ChangeAnnotPos function in DynaPDF manual.

### 77.39.80 ChangeBookmark(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes an existing bookmark.
**Notes:** The text parameter is converted to unicode.
See also ChangeBookmark function in DynaPDF manual.

### 77.39.81 ChangeBookmarkAnsi(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes an existing bookmark.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeBookmark function in DynaPDF manual.

### 77.39.82 ChangeFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes or sets the font to the one defined by the parameter AHandle.
See also ChangeFont function in DynaPDF manual.

### 77.39.83 ChangeFontEx(Handle as integer, FontSize as double, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes or sets the font to the one of the parameter Handle.
**Notes:**

Handle must be a valid font handle that was returned by SetFont(), SetFontEx(), SetCIDFont(), or LoadFont().
The style flags should be the same as in the initial SetFont() call with exception of the flags fsUnderline or fsStriked which can be used to underline or strikeout text.
The parameter FontSize must be greater zero.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ChangeFontEx function in DynaPDF manual.

### 77.39.84 ChangeFontSize(size as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the font size of the current font.
See also ChangeFontSize function in DynaPDF manual.

### 77.39.85 ChangeFontStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the style of the current font.
See also ChangeFontStyle function in DynaPDF manual.

### 77.39.86 ChangeFontStyleEx(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the font style of a font like ChangeFontStyle() but it accepts also the font styles fsBold and fsItalic.
See also ChangeFontStyleEx function in DynaPDF manual.

### 77.39.87 ChangeJavaScript(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces a global JavaScript with a new one.
**Notes:** The text parameter is converted to unicode.
See also ChangeJavaScript function in DynaPDF manual.

### 77.39.88 ChangeJavaScriptAction(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces the script of a JavaScript action with a new one.
**Notes:** The text parameter is converted to unicode.
See also ChangeJavaScriptAction function in DynaPDF manual.

### 77.39.89 ChangeJavaScriptActionAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces the script of a JavaScript action with a new one.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeJavaScriptAction function in DynaPDF manual.

### 77.39.90 ChangeJavaScriptAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces a global JavaScript with a new one.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeJavaScript function in DynaPDF manual.

### 77.39.91 ChangeJavaScriptName(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the name of a global JavaScript.
**Notes:** The text parameter is converted to unicode.
See also ChangeJavaScriptName function in DynaPDF manual.

### 77.39.92 ChangeJavaScriptNameAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the name of a global JavaScript.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also ChangeJavaScriptName function in DynaPDF manual.

### 77.39.93 ChangeLinkAnnot(Handle as Integer, URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the link of a file link or web link annotation.
See also ChangeLinkAnnot function in DynaPDF manual.

### 77.39.94 ChangeNamedDest(ObjType as Integer, Handle as Integer, Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the name of a named destination.
**Notes:**

ObjType: Object type to which the handle belongs like kotAction, kotAnnotation, kotBookmark or kotPageLink.
Handle: Object handle
Name: New destination name

Named destinations can be accessed by link annotations, bookmarks, and actions. For link annotations the object type otPageLink or otAnnotation can be used.

If the function succeeds the return value is true. If the function fails the return value is false.

### 77.39.95 ChangeOCGName(Handle as Integer, Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the name of an Optional Content Group (OCG).
**Notes:** Returns true on success and false in case of error.
See also ChangeOCGName function in DynaPDF manual.

### 77.39.96 ChangeSeparationColor(CSHandle as UInt32, NewColor as UInt32, AlternateExtColorSpace as Integer, AltHandle as Integer = -1) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the color of a separation color space.
**Example:**

```
// your instance
dim pdf as DynaPDFMBS

// Create new separation color
dim ColorSpaceHandle as Integer = pdf.CreateSeparationCS("test",DynaPDFMBS.kcsDeviceCMYK,-1,DynapdfMBS.CMYK
call pdf.SetExtColorSpace(ColorSpaceHandle)

// draw something
call pdf.SetfillColor(255) // 100% of the separation color test
call pdf.DrawCircle(193,389,66, pdf.kfmFill)

// change it to red
call pdf.ChangeSeparationColor(ColorSpaceHandle, 255, DynaPDFMBS.kcsDeviceRGB, -1)
```

**Notes:**

The new color value must be defined in the alternate color space. The alternate color space can be any device or ICC based color space including Lab. If a non-device color space is used, the parameter AltHandle must be set to the color space handle of the alternate color space.

Returns true on success or false on failure.
CSHandle is the index in the colorspace table, not the reference to the C++ object. So do not pass handle property from DynaPDFColorSpaceMBS, but the Index property.
See also ChangeSeparationColor function in DynaPDF manual.

### 77.39.97 CheckCollection as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

The function checks whether user defined data fields in embedded files are consistently defined with collection fields.
See also CheckCollection function in DynaPDF manual.

### 77.39.98 CheckConformance(ConformanceType as Integer, CheckOptions as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The functions checks whether the PDF file is compatible to a specific PDF standard or PDF version depending the parameter Type and modifies anything that is required to get the file compatible to the standard depending on the check options.
See also CheckConformance function in DynaPDF manual.

### 77.39.99 CheckFieldNames as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function checks all currently defined interactive form fields for invalid duplicate field names.
See also CheckFieldNames function in DynaPDF manual.

### 77.39.100 CircleAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a circle annotation on the current open page.
**Notes:**

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

### 77.39.101 CircleAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a circle annotation on the current open page.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also CircleAnnot function in DynaPDF manual.

### 77.39.102 ClearAutoTemplates as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes the array of templates which are automatically added to newly created pages.
See also ClearAutoTemplates function in DynaPDF manual.

### 77.39.103 ClearErrorLog

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the error log.
See also ClearErrorLog function in DynaPDF manual.

### 77.39.104 ClearHostFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes the array of fonts included in all currently defined font search paths.
See also ClearHostFonts function in DynaPDF manual.

### 77.39.105 ClearPageGraphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the page graphics objects.
**Notes:**

This method clears graphics object.

As the graphics object keeps a reference to DynaPDFMBS object and the DynaPDF object references the graphics object, this call may be required to make sure the circular reference is cleared.

Automatically called in Append, EndPage, CloseFile, ImportPDFFile, ImportPDFPage and CloseFileEx.

### 77.39.106 ClipPath(ClipMode as Integer, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function marks the current path as clipping path.
See also ClipPath function in DynaPDF manual.

### 77.39.107 CloseAndSignFile(CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function finishes the PDF file, digitally signs it, and frees all used resources if the file was not created in memory.
**Notes:** Only for 1024 bit keys. For longer keys, check our custom signature example.
See also CloseAndSignFile function in DynaPDF manual.

### 77.39.108 CloseAndSignFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer, CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function finishes the PDF file, encrypts it, digitally signs it, and frees all used resources if the file was not created in memory.
**Notes:** If you need more than 1024 bit keys, please check our custom signatur example, which shows how to signatures with 2048 or 4096 bit keys and the CloseAndSignFileExt function.
See also CloseAndSignFileEx function in DynaPDF manual.

### 77.39.109 CloseAndSignFileExt(SigParams as DynaPDFSigParmsMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function closes the PDF file and returns either the file hash or the byte ranges to be signed by an external signature handler.
See also CloseAndSignFileExt function in DynaPDF manual.

### 77.39.110 CloseAndSignPDFFile(OutputFile as FolderItem, CertificateData as String, Password as String, ContactInfo as String = """, Location as String = """, Reason as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Closes and signs file.
**Notes:**

This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.
Returns true on success and false on failure.

Loads certificate from provided certificate file data.

Version 15.1 allows OutputFile to be nil.

If you need more than 1024 bit keys, please check our custom signatur example, which shows how to signatures with 2048 or 4096 bit keys and the CloseAndSignFileExt function.

### 77.39.111 CloseAndSignPDFFileWithDialog(OutputFile as FolderItem, StoreName as String = "MY", ContactInfo as String = """, Location as String = """, Reason as String = """) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platform: Windows, Targets: All.

**Function:** Closes and signs file.
**Notes:**

Picks a certificate from the given certificate store on Windows.

This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows.
Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature.

Returns true on success and false on failure.

Version 15.1 allows OutputFile to be nil.

### 77.39.112 CloseFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function finishes the PDF file and frees all used resources if the file was not created in memory.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseFile
```

See also CloseFile function in DynaPDF manual.

### 77.39.113 CloseFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function finishes the PDF file, encrypts it, and frees all used resources if the file was not created in memory.
**Notes:** Requires DynaPDF Lite license.
See also CloseFileEx function in DynaPDF manual.

### 77.39.114 CloseImage as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the current open image.
See also CloseImage function in DynaPDF manual.

### 77.39.115 CloseImportFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function closes an open import file that was be opened by OpenImportFile() or OpenImportBuffer().
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseImportFile
```

See also CloseImportFile function in DynaPDF manual.

### 77.39.116 CloseImportFileEx(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function closes a specific import file and deletes the corresponding parser instance.
**Notes:**

The parameter Handle must be a valid file handle that was returned by OpenImportFile() or OpenImportBuffer(). See OpenImportFile() for further information in dynapdf_help.pdf.
If the function succeeds the return value is true. If the function fails the return value is false.
See also CloseImportFileEx function in DynaPDF manual.

### 77.39.117 ClosePath(FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the current path.
See also ClosePath function in DynaPDF manual.

### 77.39.118 CloseTag as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes an open tag.
See also CloseTag function in DynaPDF manual.

### 77.39.119 CMYK(C as Integer, M as Integer, Y as Integer, K as Integer) as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Builds a CMYK color value based on the given component values.
**Example:**

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox hex(cmyk)
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 77.39.120 CofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns C of a CMYK color value.
**Example:**

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.CofCMYK(cmyk)) // shows 1
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 77.39.121 ComputeBBox(Flags as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Computes the bounding box.
See also ComputeBBox function in DynaPDF manual.

### 77.39.122 ConvColor(Colors() as Double, SourceColorSpaceHandle as Integer, DestColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a color from one ColorSpace to another.
**Example:**

```
// setup Environment
```

```
dim dy as new DynaPDFMBS
call dy.CreateNewPDF(nil)

// create a simple RGB colorspace
dim whitePoint as MemoryBlock = NewMemoryBlock(12)
whitePoint.SingleValue(0)=1.0
whitePoint.SingleValue(4)=1.0
whitePoint.SingleValue(8)=1.0

dim BlackPoint as MemoryBlock = nil // default
dim Gamma as MemoryBlock = nil // default
dim Matrix as MemoryBlock = nil // default

dim h as Integer = dy.CreateCIEColorSpace(dy.kesCalRGB, WhitePoint, BlackPoint, Gamma, Matrix)

// do we have one?
if dy.GetColorSpaceCount=0 then
MsgBox "No color space!"
Return
else
MsgBox str(dy.GetColorSpaceCount)+" Colorspace defined"
end if

// Now get the colorspace information including the Object reference:
dim c as DynaPDFColorSpaceMBS = dy.GetColorSpaceObj(h)

dim d(-1) as Double = array(0.3,0.5,0.7)
dim IColorSpace as Integer = c.Handle
dim DestCS as Integer = DynaPDFMBS.kesDeviceCMYK

// convert a color
dim n as Integer = dy.ConvColor(d, IColorSpace, DestCS)

MsgBox hex(n)
```

**Notes:**

Colors: The array of color values. 3 values for RGB, 4 values for CMYK and one value for Gray.
IColorSpaceSource: The source color space object reference.
DestCS: The destination color space. One of the kes* constants.
See also ConvColor function in DynaPDF manual.

### 77.39.123 ConvertColors(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts the colors.
**Notes:** Requires DynaPDF Pro license.
See also ConvertColors function in DynaPDF manual.

### 77.39.124 ConvertEMFSpool(File as folderitem, LeftMargin as Double, TopMargin as Double, Flags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an EMF spool file to PDF.
**Notes:**

See dynapdf_help.pdf file.
Pass kspc* flags.
Requires DynaPDF Lite license.
See also ConvertEMFSpool function in DynaPDF manual.

### 77.39.125 ConvertStyledText(StyledText as StyledText, LeadingFactor as double = -1) as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Converts styled text to formatting commands.
**Example:**

```
Public Function Convert(s as StyledText) as string
dim d as new DynaPDFMBS

// create dummy in memory pdf
call d.CreateNewPDF(nil)

// create dummy page
call d.Append

// convert
Return d.ConvertStyledText(s)

// destructor will cleanup
End Function
```

**Notes:**

You can use the result with WriteFText, WriteFTextEx or DynaPDFTableMBS.SetCellText functions.

Needs an open page as it loads fonts for you. May cause error events if fonts are not found.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2

### 77.39.126 CopyChoiceValues(Source as UInt32, Dest as UInt32, Share as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the list items, default value, and value of the source field to the destination field.
**Notes:**

The source and destination field can be combo and list boxes. It is allowed to copy the list items of a list box to a combo box or vice versa.
If Share is true, the function adds just a reference to the list item so that both fields share the same list items. This is still the case if more list items will be added to such a field. If Share is false, the list items will be copied to the destination field. Both fields contain independent list items in this case.
Already existing list items of the destination field will be deleted.
See also CopyChoiceValues function in DynaPDF manual.

### 77.39.127 Create3DAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Name as string, U3DFile as string, Image as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a 3D annotation from a U3D file.
See also Create3DAnnot function in DynaPDF manual.

### 77.39.128 Create3DAnnotAnsi(PosX as double, PosY as double, Width as double, Height as double, Author as string, Name as string, U3DFile as string, Image as string) as integer

MBS DynaPDF Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a 3D annotation from a U3D file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also Create3DAnnot function in DynaPDF manual.

### 77.39.129 Create3DBackground(IView as Integer, BackColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a background dictionary for a 3D annotation that is used to change the annotation's background color.
See also Create3DBackground function in DynaPDF manual.

### 77.39.130 Create3DGotoViewAction(Base3DAnnot as Integer, IView as Integer, Named as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A go to 3D view action can be used to dynamically change the view of a 3D annotation.
See also Create3DGotoViewAction function in DynaPDF manual.

### 77.39.131 Create3DProjection(IView as Integer, ProjType as Integer, ScaleType as Integer, Diameter as Double, FOV as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a projection dictionary for a 3D annotation.
See also Create3DProjection function in DynaPDF manual.

### 77.39.132 Create3DView(Base3DAnnot as Integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as Double, RenderingMode as Integer, LightingSheme as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a 3D view for a 3D annotation.
**Notes:**

The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the unicode version and you should prefer it.
See also Create3DView function in DynaPDF manual.

### 77.39.133 Create3DViewAnsi(Base3DAnnot as integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as double, RenderingMode as integer, LightingSheme as integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a 3D view for a 3D annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The plugin passes nil for the matrix if the matrix memoryblock parameter is nil.
This is the older ANSI version of the function.
See also Create3DView function in DynaPDF manual.

### 77.39.134 CreateAltFontList as Integer

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an alternate font list, that can be filled with data by SetAltFonts().
**Notes:**

It is possible to create an arbitrary number of alternate font lists. Multiple lists can be created because different fonts and languages require different fallback fonts. For example, one could create one list for proportional fonts and another one for fixed pitch fonts, or different lists for different languages.
Each list can be activated or deactivated with ActivateAltFontList() arbitrary often. Changing the active alternate font list is very fast and causes no overhead.
Once a font list was created it can be filled with data with SetAltFonts(). A font list that is no longer needed can be deleted with DeleteAltFontList().
Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().

If the function succeeds the return value is the handle of the font list, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateAltFontList function in DynaPDF manual.

### 77.39.135 CreateAnnotAP(annot as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an annotation appereance stream.
**Notes:**

Returns the new annotation handle.
You can draw to this template directly.
You must close it with EndTemplate.

This method helps you to create a custom stamp or change different annotation appearance.
See also CreateAnnotAP function in DynaPDF manual.

### 77.39.136 CreateArticleThread(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a new article thread.
**Notes:** ThreadName string is converted to Unicode.
See also CreateArticleThread function in DynaPDF manual.

### 77.39.137 CreateArticleThreadAnsi(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a new article thread.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** ThreadName string is converted to ANSI.
See also CreateArticleThread function in DynaPDF manual.

### 77.39.138 CreateAxialShading(sX as Double, sY as Double, eX as Double, eY as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as Boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Axial shadings define a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis.
**Notes:** Useful to draw gradients.
See also CreateAxialShading function in DynaPDF manual.

### 77.39.139 CreateBarcodeField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Barcode as DynaPDFBarcodeMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a barcode field.
**Notes:**

Note that users require either the full version of Adobe's Acrobat or a separate license of Adobe's Barcodes Paper Forms Solutions to enable the usage of barcode fields in Adobe's Reader.
See also CreateBarcodeField function in DynaPDF manual.

### 77.39.140 CreateButton(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a push button.
**Notes:** The Caption parameter is converted to unicode.
See also CreateButton function in DynaPDF manual.

### 77.39.141 CreateButtonAnsi(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a push button.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Caption parameter is converted to ANSI.
See also CreateButton function in DynaPDF manual.

### 77.39.142 CreateCheckBox(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a check box.
See also CreateCheckBox function in DynaPDF manual.

### 77.39.143 CreateCIEColorSpace(Base as Integer, WhitePoint as memoryblock, BlackPoint as memoryblock, Gamma as memoryblock, Matrix as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a CIE based color space.
See also CreateCIEColorSpace function in DynaPDF manual.

### 77.39.144 CreateColItemDate(EmbFile as Integer, Key as string, Value as Integer, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection item which accepts a date time value.
See also CreateColItemDate function in DynaPDF manual.

### 77.39.145 CreateColItemNumber(EmbFile as Integer, Key as string, Value as Double, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection item which accepts an arbitrary number as value.
See also CreateColItemNumber function in DynaPDF manual.

### 77.39.146 CreateColItemString(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection item which accepts an arbitrary string as value.
**Notes:** The value and prefix parameters are converted to unicode.
See also CreateColItemString function in DynaPDF manual.

### 77.39.147 CreateColItemStringAnsi(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection item which accepts an arbitrary string as value.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value and prefix parameters are converted to ANSI.
See also CreateColItemString function in DynaPDF manual.

### 77.39.148 CreateCollection(View as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function marks the current PDF file in memory as PDF collection, also known as PDF Package.
**Notes:** Requires DynaPDF Lite license.
See also CreateCollection function in DynaPDF manual.

### 77.39.149 CreateCollectionField(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection field.
**Notes:** The name parameter is converted to unicode.
See also CreateCollectionField function in DynaPDF manual.

### 77.39.150 CreateCollectionFieldAnsi(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a user defined collection field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The name parameter is converted to ANSI.
See also CreateCollectionField function in DynaPDF manual.

### 77.39.151 CreateComboBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a combo box.
See also CreateComboBox function in DynaPDF manual.

### 77.39.152 CreateDeviceNColorSpace(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new colorspace using the given color names.
**Notes:**

Strings are passed as UTF-8 Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

### 77.39.153 CreateDeviceNColorSpaceAnsi(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new colorspace using the given color names.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

Strings are passed as Windows ANSI Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

### 77.39.154 CreateExtGState(e as DynaPDFExtGStateMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an extended graphics state dictionary from the structure e.
**Example:**

```
dim h as Integer // handle
dim pdf as DynaPDFMBS
dim state as new DynaPDFExtGStateMBS

' get pdf, set state properties

h=pdf.CreateExtGState(state)

call pdf.SetExtGState(h)
```

**Notes:** Requires DynaPDF Lite license.

See also CreateExtGState function in DynaPDF manual.

### 77.39.155 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A go-to action changes the view to a specific destination (page, location, and magnification factor).
See also CreateGoToAction function in DynaPDF manual.
See also:

- 77.39.156 CreateGoToAction(NamedDest as Integer) as Integer 14824

### 77.39.156 CreateGoToAction(NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a go√Ö ] to action which uses a named destination to open the target page.
See also CreateGoToAction function in DynaPDF manual.
See also:

- 77.39.155 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer 14824

### 77.39.157 CreateGoToEAction(Location as Integer, Source as string, SrcPage as Integer, Target as string, DestName as string, DestPage as Integer, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an embedded GoTo action.
**Notes:** See also CreateGoToEAction function in dynapdf_help.pdf manual.
See also CreateGoToEAction function in DynaPDF manual.

### 77.39.158 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

• 77.39.159 CreateGoToRAction(FilePath as String, PageNum as integer) as integer 14825

### 77.39.159 CreateGoToRAction(FilePath as String, PageNum as integer) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a go to remote action.
See also CreateGoToRAction function in DynaPDF manual.
See also:

• 77.39.158 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer 14824

### 77.39.160 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

• 77.39.161 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer 14825

### 77.39.161 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also CreateGoToRActionEx function in DynaPDF manual.
See also:

• 77.39.160 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer 14825

### 77.39.162 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 77.39.163 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer 14826

### 77.39.163 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.
See also:

- 77.39.162 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer 14825

### 77.39.164 CreateGroupField(Name as string, Parent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a group field.
See also CreateGroupField function in DynaPDF manual.

### 77.39.165 CreateHideAction(Field as Integer, Hide as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A hide action hides or shows one or more interactive form fields on screen by setting or clearing their hidden flags.
See also CreateHideAction function in DynaPDF manual.

### 77.39.166 CreateICCBasedColorSpace(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an ICC based color space.
**Notes:** Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

• 77.39.167 CreateICCBasedColorSpace(Path as String) as Integer 14827

### 77.39.167 CreateICCBasedColorSpace(Path as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an ICC based color space.
**Notes:** Use the value returned for the SetExtColorSpace method.
See also CreateICCBasedColorSpace function in DynaPDF manual.
See also:

• 77.39.166 CreateICCBasedColorSpace(File as folderitem) as Integer 14826

### 77.39.168 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new ICC based color space from ICC file content in a string buffer.
**Notes:** Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

• 77.39.169 CreateICCBasedColorSpaceEx(Buffer as string) as Integer 14827

### 77.39.169 CreateICCBasedColorSpaceEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new ICC based color space from ICC file content in a string buffer.
**Notes:** Returns the color space handle.
See also CreateICCBasedColorSpaceEx function in DynaPDF manual.
See also:

• 77.39.168 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer 14827

### 77.39.170 CreateImage(file as folderitem, format as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an image file with the given image format.
**Notes:**

For the format parameter use the kifm* constants.

If file parameter is nil for CreateImage, you create image in memory and can pick it up with GetImageBuffer function later after you closed it.
See also CreateImage function in DynaPDF manual.

### 77.39.171 CreateImpDataAction(DataFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An import data action imports FDF data into the document s interactive form.
**Notes:** Also check the dynapdf manual on the pdfCreateImpDataActionA function (pdfCreateImpDataActionW on Windows).

### 77.39.172 CreateIndexedColorSpace(Base as Integer, Handle as Integer, ColorTable as memoryblock, NumColors as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an indexed color space which can be used for vector graphics and text output.
**Notes:** Use the value returned for the SetExtColorSpace method.
See also CreateIndexedColorSpace function in DynaPDF manual.

### 77.39.173 CreateJSAction(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a JavaScript action.
**Notes:** The script parameter is converted to unicode.
See also CreateJSAction function in DynaPDF manual.

### 77.39.174 CreateJSActionAnsi(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a JavaScript action.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The script parameter is converted to ANSI.
See also CreateJSAction function in DynaPDF manual.

### 77.39.175 CreateLaunchAction(OP as Integer, FileName as folderitem, DefDir as string, Param as string, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A launch action launches an application or opens or prints a document.
See also CreateLaunchAction function in DynaPDF manual.

### 77.39.176 CreateLaunchActionEx(FileName as folderitem, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a launch link.
See also CreateLaunchActionEx function in DynaPDF manual.

### 77.39.177 CreateListBox(Name as string, Sort as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a list box.
See also CreateListBox function in DynaPDF manual.

### 77.39.178 CreateNamedAction(Action as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a named action.
See also CreateNamedAction function in DynaPDF manual.

### 77.39.179 CreateNamedDest(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a named destination that can be accessed from external PDF files.
**Notes:** The name parameter is converted to unicode.

See also CreateNamedDest function in DynaPDF manual.

### 77.39.180 CreateNamedDestAnsi(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a named destination that can be accessed from external PDF files.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The name parameter is converted to ANSI.
See also CreateNamedDest function in DynaPDF manual.

### 77.39.181 CreateNewPDF(OutPDF as folderitem = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a new PDF file.
**Example:**

```
dim dest as folderitem // where to save?
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// create new pdf
bBool=pdf.CreateNewPDF(dest)
if bBool=False then
MsgBox "Failed to create pdf file "+dest.NativePath
Return
end if
```

See also CreateNewPDF function in DynaPDF manual.

### 77.39.182 CreateOCG(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an Optional Content Group (OCG).
**Notes:** CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.

See also CreateOCG function in DynaPDF manual.

### 77.39.183 CreateOCGAnsi(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an Optional Content Group (OCG).
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

### 77.39.184 CreateOCMD(Visibility as Integer, OCGs() as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an Optional Content Membership Dictionary (OCMD).
**Notes:** For Visibility use the constants kovAllOff, kovAllOn, kovAnyOff, kovAnyOn and kovNotSet.
See also CreateOCMD function in DynaPDF manual.

### 77.39.185 CreateRadialShading(sX as Double, sY as Double, R1 as Double, eX as Double, eY as Double, R2 as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Radial shadings define a color blend that varies between two circles.
**Notes:** Useful to draw gradients.
See also CreateRadialShading function in DynaPDF manual.

### 77.39.186 CreateRadioButton(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A radio button field is a set of related toggle controls (check boxes), at most one of which may be on at any given time; selecting any one of the button automatically deselects all others.

See also CreateRadioButton function in DynaPDF manual.

### 77.39.187 CreateRectilinearMeasure(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a rectilinear measure dictionary.
**Notes:**

This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateRectilinearMeasure function in DynaPDF manual.

### 77.39.188 CreateRectilinearMeasureAnsi(ViewPort as Integer, Scale as Double, UnitDescription as String, LabelDistance as String, LabelArea as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a rectilinear measure dictionary.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

This kind of measure dictionary can be used to convert PDF units to an arbitrary other unit like millimeters, meters, feets, and so on.
A measure dictionary is used by the measure tool of Adobe's Acrobat and by other PDF viewers which contain a PDF compatible measure tool.
The parameter Viewport must be a viewport handle that was returned by CreateViewport(). Scale is the required scaling factor to convert a PDF unit (1/72 inch) to the wished destination unit. The parameters UnitDescription, LabelDistance, and LabelArea are all required and cannot be NULL.
UnitDescription is a description of the coordinate conversion, e.g. "Inch to mm". LabelDistance is the label

for the distance tool, e.g. "mm".
LabelArea is the label for the area tool, e.g. "mm2".

If the function succeds the return value is a measure handle, a value greater or equal zero. If the function fails the return value is a negative error code.

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateRectilinearMeasure function in DynaPDF manual.

### 77.39.189 CreateResetAction as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A reset form action resets all or specific fields of an interactive form to their default values.
See also CreateResetAction function in DynaPDF manual.

### 77.39.190 CreateSeparationCS(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a Separation color space.
**Notes:** This function passes colorant string in UTF-8 encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

### 77.39.191 CreateSeparationCSAnsi(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a Separation color space.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** This function passes colorant string in Windows ANSI encoding to the library.
See also CreateSeparationCS function in DynaPDF manual.

### 77.39.192 CreateSetOCGStateAction(On() as UInt32, Off() as UInt32, Toggle() as UInt32, PreserveRB as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a SetOCGState action that can be used to change the visibility state of certain Optional Content Groups (OCGs).
See also CreateSetOCGStateAction function in DynaPDF manual.

### 77.39.193 CreateSigField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates an empty signature field which can be used to digitally sign the PDF file.
**Notes:** If you see errors in Acrobat Reader with signing multiple fields, please try DynaPDF.CreateStructureTree function and test whether it works then.
See also CreateSigField function in DynaPDF manual.

### 77.39.194 CreateSigFieldAP(SigField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a signature appearance template in the exact size of the base signature field.
See also CreateSigFieldAP function in DynaPDF manual.

### 77.39.195 CreateSoftMask(TranspGroup as UInt32, MaskType as Integer, BackColor as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new soft mask.
**Notes:**

MaskType: pass ksmtAlpha or ksmtLuminosity constants.
Requires DynaPDF Pro license.
See also CreateSoftMask function in DynaPDF manual.

### 77.39.196 CreateStdPattern(Pattern as Integer, LineWidth as Double, Distance as Double, LineColor as Integer, BackColor as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a hatch pattern.
See also CreateStdPattern function in DynaPDF manual.

### 77.39.197 CreateStructureTree as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a global structure tree that is required to create Tagged PDF files.
**Notes:**

Tagged PDF files require a root node of type Art, Div, Document, Part, or Sect. This function creates a root node of type Document if nothing else was already imported. Other types can be created with the function CreateStructureTreeEx.

Notice:
DynaPDF is able to extend an existing structure tree that was imported from an external PDF file. However, when editing external PDF files the following rules must be considered:

- The structure information of a PDF file will only be imported when the entire PDF file is imported with ImportPDFFile(). When importing single pages with ImportPage() or ImportPageEx() of a PDF file that contains structure information then tagging will be disabled because DynaPDF is not able to import the structure information of a PDF file on a per page basis.
- Import first the PDF file and call then CreateStructureTree(). The reverse order causes that the structure tree will not be imported and tagging will be disabled!
- Only one PDF file with structure information can be imported without invalidating the structure information.
- Keep in mind that the structure tree of a PDF file is a complex global structure that is difficult to edit. Because of this, probably millions of PDF files exist that contain damages in the structure tree, mostly due to editing actions in certain viewer applications. When opening an existing page with EditPage() the function tries to find the corresonding StructParents array of the page in the ParentTree of the document's Structure Tree. When this action fails then tagging will be disabled for this page. OpenTag() and CloseTag() do not produce further warnings in this case. The function GetIsTaggingEnabled() can be used to determine whether tagging is still enabled after an existing page was opened for editing.

When creating Tagged PDF files it is important to create the PDF file in the logical reading order.

If the function succeeds the return value is true. If the function fails the return value is false.
See also CreateStructureTree function in DynaPDF manual.

### 77.39.198 CreateStructureTreeEx(Tag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates the global structure tree as described at CreateStructureTree().
**Notes:**

The only difference is that the type of the root node can be specified.

Returns true on success and false on failure.

### 77.39.199 CreateSubmitAction(Flags as Integer, URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A submit form action submits the field values of an interactive form to a web server.
See also CreateSubmitAction function in DynaPDF manual.

### 77.39.200 CreateTable(AllocRows as UInt32, NumCols as UInt32, width as Double, DefRowHeight as Double) as DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a table with the given size.
**Notes:** Returns a new table object.
See also CreateTable function in DynaPDF manual.

### 77.39.201 CreateTextField(Name as string, Parent as Integer, Multiline as boolean, MaxLen as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a text field.
**Example:**

```
Dim pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Dim Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
```

Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)

See also CreateTextField function in DynaPDF manual.

### 77.39.202 CreateTraceFile(File as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a trace file.
**Notes:**

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

While assignment to TraceFile property or CreateTraceFile() always overwrites existing log file, the AppendTraceFile method can append to it.

### 77.39.203 CreateURIAction(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

A uniform resource identifier (URI) is a string that identifies (resolves to) a resource on the internet - typically a file that is the destination of a hyperlink, although it can also resolve to a query or other entity.
**Notes:**

A URI action causes a URI to be resolved. The parameter URL must be 7√Ö ] bit ASCII string.

See also CreateURIAction function in DynaPDF manual.

### 77.39.204 CreateViewport(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a viewport.
**Notes:**

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().
See also CreateViewport function in DynaPDF manual.

### 77.39.205 CreateViewportAnsi(Name as String, X1 as Double, Y1 as Double, X2 as Double, Y2 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a viewport.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

A viewport is a rectangular region of a page that can be associated with a measure dictionary. A measure dictionary achieves a coordinate conversion so that the distance and area can be calculated in other units like meters, feets, or millimeters, for example.
This is especially useful for CAD drawings which are not defined in PDF units. A PDF unit represents 1/72 inch.
A page can contain an arbitrary number of viewports and every viewport can be assigned with its own measure dictionary, e.g. to calculate coordinates in different units on the same page.
Viewports should be created in drawing order. Since viewports might overlap a PDF viewer examines the array starting with the last one and itereates in reverse order. The first one whose bounding box contains the point or cursor coordiante is chosen.
See also CreateRectilinearMeasure().

This is ANSI version, so all strings are converted to ANSI encoding.
See also CreateViewport function in DynaPDF manual.

### 77.39.206 CreateXFAStream(Name as String, Buffer as String) as Integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates an XFA stream and adds it to the global XFA resource array.
**Notes:**

The parameter Name must be the name of the XFA resource. Buffer must be a valid XFA stream buffer or

"", if the buffer should be set later with SetXFAStream().

If the function succeeds the return value is the stream handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CreateXFAStream function in DynaPDF manual.

### 77.39.207 DecryptPDF(File as folderitem, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function decrypts a PDF file by using the supplied password to decrypt the file.
See also DecryptPDF function in DynaPDF manual.

### 77.39.208 DecryptPDFAnsi(Path as string, PwdType as Integer, Password as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function decrypts a PDF file by using the supplied password to decrypt the file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as DecryptPDF, but takes path name in Windows ANSI encoding.
See also DecryptPDF function in DynaPDF manual.

### 77.39.209 DeleteAcroForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes an acrobat reader form.
See also DeleteAcroForm function in DynaPDF manual.

### 77.39.210 DeleteActionFromObj(ObjType as Integer, ActHandle as Integer, ObjHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes an action from a PDF object.
See also DeleteActionFromObj function in DynaPDF manual.

### 77.39.211 DeleteActionFromObjEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to delete an action from an object without using an action handle.
See also DeleteActionFromObjEx function in DynaPDF manual.

### 77.39.212 DeleteAltFontList(FontListHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes an alternate font list that was created by DynaPDF.CreateAltFontList.
**Notes:**

If the parameter Handle was set to -1 all available lists will be deleted.
Returns true on success.
See also DeleteAltFontList function in DynaPDF manual.

### 77.39.213 DeleteAnnotation(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes an annotation.
See also DeleteAnnotation function in DynaPDF manual.

### 77.39.214 DeleteAnnotationFromPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes an annotation from a page.
See also DeleteAnnotationFromPage function in DynaPDF manual.

### 77.39.215 DeleteAppEvents(ApplyEvent as Boolean, TOCAppEvent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes all application events if any.
**Notes:**

The function can optionally apply the visibility state of an event before the application events will be deleted. The new visibility state will be stored in the PDF file. To apply the visibility state of a specific event without deletion call ApplyAppEvent() instead.

If the function succeeds and if application events were deleted the return value is 1. If the no application events were defined the return value is 0. If the function fails the return value is a negative error code.

See also DeleteAppEvents function in DynaPDF manual.

### 77.39.216 DeleteBookmark(ABmk as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes a bookmark.
See also DeleteBookmark function in DynaPDF manual.

### 77.39.217 DeleteEmbeddedFile(handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes the embedded file with the given handle.
See also DeleteEmbeddedFile function in DynaPDF manual.

### 77.39.218 DeleteField(Field as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes an interactive form field.
See also DeleteField function in DynaPDF manual.

### 77.39.219 DeleteFieldEx(URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name.
See also DeleteFieldEx function in DynaPDF manual.

### 77.39.220 DeleteJavaScripts(DelJavaScriptActions as boolean)

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes java scripts.
See also DeleteJavaScripts function in DynaPDF manual.

### 77.39.221 DeleteNamedDest(Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes a named destination.
**Notes:** If Name is an empty string all named destinations will be deleted.
See also DeleteNamedDest function in DynaPDF manual.

### 77.39.222 DeleteNamedDestByIndex(Index as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes a named destination.
**Notes:** If Index is set to a negative value all named destinations will be deleted.
See also DeleteNamedDestByIndex function in DynaPDF manual.

### 77.39.223 DeleteOCGFromAppEvent(Handle as UInt32, Events as Integer, Categories as Integer, DelCategoryOnly as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes an OCG or layer from one or more application events, or it deletes only one or more categories from an application event in which the OCG was found (if DelCategoryOnly is true).
**Notes:**

If DelCategoryOnly is true, and if no more categories are left in the application event, then the event will be deleted. See also AddOCGToAppEvent() and SetOCGContUsage() for further information.
If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromAppEvent function in DynaPDF manual.

### 77.39.224 DeleteOCGFromDisplayTree(OCGHandle as UInt32, Recursive as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes a layer or OCG (Optional Content Group) from the display tree of the currently active layer configuration.
**Notes:**

Notice:
If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

The display tree is a linked list that contains UI nodes. UI stands for User Interface. Every node in this tree can contain an OCG or an array of OCGs with an optional label.
This function can be used to delete an OCG from the display tree without traversing every node of it with GetOCUINode() beforehand. Therefore, the function is suitable for console applications but GUI based applications should use DeleteOCUINode() instead. DeleteOCUINode() can also be used to delete the entire display tree with just one function call.

If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromDisplayTree function in DynaPDF manual.

### 77.39.225 DeleteOCUINode(OCGNodeHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes an OCUINode.
**Notes:**

Deletes an OCUINode (Optional Content User Interface Node) from the display tree of the currently active layer configuration or the entire tree if Node is set to 0.

If the PDF file was not imported with ImportPDFFile() the function ImportOCProperties() must be called in order to import the global Optional Content Properties.
It is also required to load a layer configuration with LoadLayerConfig() before the function can be called.

Note that the deletion of the display tree does not delete any layer or OCG (Optional Content Group). All OCGs still exists and are fully functional. However, users are not able to change the visibility state of OCGs which are not included in the display tree of the corresponding layer configuration.

If the parameter Node is set then it must be a valid pointer of an OCUINode that was returned by GetOCUINode(). Note that the deletion of a node invalidates all pointers which were previously returned by GetOCUINode().

Return value: If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCUINode function in DynaPDF manual.

### 77.39.226 DeleteOutputIntent(Index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Can be used to delete a specific or all output intents.
**Notes:**

A PDF file can contain more than one output intent. Call GetOutputIntentCount to determine the number of available output intents. If the parameter Index is set to -1 all output intents will be deleted.

If the function succeeds the return value is the remaining number of output intents. If the function fails the return value is a negative error code.
See also DeleteOutputIntent function in DynaPDF manual.

### 77.39.227 DeletePage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes a page.
**Example:**

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)

// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
```

Call pdf.closefile

See also DeletePage function in DynaPDF manual.

### 77.39.228 DeletePageLabels

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes all page labels contained in the current open document, if any.
See also DeletePageLabels function in DynaPDF manual.

### 77.39.229 DeleteSeparationInfo(AllPages as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deleted the separation of the current open page or of all pages if the parameter AllPages is set to true.
See also DeleteSeparationInfo function in DynaPDF manual.

### 77.39.230 DeleteTemplate(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes a template.
See also DeleteTemplate function in DynaPDF manual.

### 77.39.231 DeleteTemplateEx(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function deletes a template by using an index instead of a template handle.
See also DeleteTemplateEx function in DynaPDF manual.

### 77.39.232 DeleteXFAForm

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes XFA Form.
See also DeleteXFAForm function in DynaPDF manual.

### 77.39.233 DrawArc(PosX as Double, PosY as Double, Radius as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws an arc by using a start and end angle.
See also DrawArc function in DynaPDF manual.

### 77.39.234 DrawArcEx(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws an elliptical arc.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// create new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// new page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// draw an arc
call pdf.DrawArcEx 100,100,100,100, 90,180
call pdf.StrokePath

// and a second one
call pdf.DrawArcEx 200,200,100,100, 0,90
call pdf.StrokePath
```

```
// and a third one. 0 to 0 gives a full circle
call pdf.DrawArcEx 300,300,100,100, 0,0
call pdf.StrokePath

// finish page
call pdf.EndPage

// Close file
call pdf.CloseFile

// open PDF
f.Launch
```

See also DrawArcEx function in DynaPDF manual.

### 77.39.235 DrawChord(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws an elliptical chord (a region bounded by the intersection of an ellipse and a line segment, called a secant).
See also DrawChord function in DynaPDF manual.

### 77.39.236 DrawCircle(PosX as Double, PosY as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws a circle.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown
```

```
// Add a page
call pdf.Append

// a circle, filled
call pdf.SetFillColor pdf.RGB(0,255,0) // green
call pdf.DrawCircle(100, 100, 100, pdf.kfmFill)

// a circle, stoked
call pdf.SetStrokeColor pdf.RGB(255,0,0) // red
call pdf.DrawCircle(200, 200, 100, pdf.kfmStroke)

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also DrawCircle function in DynaPDF manual.

### 77.39.237 DrawNGon(PosX as double, PosY as double, Radius as double, Alpha as double, NumSides as Integer, FillMode as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Draws a n-gon.
**Notes:**

PosX: X-Coordinate of the midpoint of the ngon
PosY: Y-Coordinate of the midpoint of the ngon
Radius: The radius.
Alpha: Rotation angle in degrees
NumSides: Number of sides. Must be greater 2.
FillMode: Fill mode, e.g. kfmFillStroke

The function A n-gon is a polygon with "n" number of sides. The minimum number of sides is three.
A n-gon is a closed path that can be filled, stroked or both. It is also possible to draw a n-gon invisible to apply the filling rules nonzero winding number or even-odd. The filling rules are described at ClipPath().
The parameter FillMode is ignored if the circle is drawn inside a clipping path. The fill modes are described at ClosePath().

If the function succeeds the return value is true. If the function fails the return value is false.
See also DrawNGon function in DynaPDF manual.

### 77.39.238 DrawPie(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a pie-shaped wedge bounded by the intersection of an ellipse and two angles.
See also DrawPie function in DynaPDF manual.

### 77.39.239 EditPage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function prepares a page for editing.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

See also EditPage function in DynaPDF manual.

### 77.39.240 EditTemplate(index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function prepares a template for editing.

See also EditTemplate function in DynaPDF manual.

### 77.39.241 EditTemplate2(handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prepares the template for editing.
See also EditTemplate2 function in DynaPDF manual.

### 77.39.242 Ellipse(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws an ellipse.
See also Ellipse function in DynaPDF manual.

### 77.39.243 EnableMutex(Value as boolean)

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to enable mutex or not.

### 77.39.244 EncryptPDF(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function encrypts a PDF file.
See also EncryptPDF function in DynaPDF manual.

### 77.39.245 EncryptPDFAnsi(Path as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function encrypts a PDF file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as EncryptPDF, but takes path name in Windows ANSI encoding.

See also EncryptPDF function in DynaPDF manual.

### 77.39.246 EndContinueText as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function finishes a continue text block that was created with the function BeginContinueText() beforehand.
**Deprecated:** This item is deprecated and should no longer be used. See also EndContinueText function in DynaPDF manual.

### 77.39.247 EndLayer as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function closes a layer that was opened by BeginLayer.
**Notes:**

If the function succeeds the return value is true. If the function fails the return value is false.

See also EndLayer function in DynaPDF manual.

### 77.39.248 EndPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function closes an open page that was opened by Append() or EditPage().
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.EndPage
```

See also EndPage function in DynaPDF manual.

### 77.39.249 EndPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function closes an open pattern that was opened by BeginPattern() or CreateStdPattern().
See also EndPattern function in DynaPDF manual.

### 77.39.250 EndTemplate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function closes an open template that was opened by BeginTemplate(), EditTemplate() or EditTemplate2().
See also EndTemplate function in DynaPDF manual.

### 77.39.251 EnumDocFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function enumerates all fonts used in the current PDF document.
**Notes:** Will call the EnumDocFont event.
See also EnumDocFonts function in DynaPDF manual.

### 77.39.252 EnumDocFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function enumerates all fonts used in the current PDF document and returns the count.
**Notes:** Returns the number of fonts found. Does not call the event.

### 77.39.253 EnumHostFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function enumerates all fonts found in the search directories by passing the font names to a callback function.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
**Notes:** Calls the EnumHostFont event.
See also EnumHostFonts function in DynaPDF manual.

### 77.39.254 EnumHostFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function enumerates all fonts found in the search directories.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
**Notes:** Returns the number of fonts found. Does not call the event.

### 77.39.255 EnumHostFontsEx as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function enumerates all fonts found in the search directories in the same way as EnumHostFonts().
**Deprecated:** This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
**Notes:** Calls the EnumHostFontEx event.
See also EnumHostFontsEx function in DynaPDF manual.

### 77.39.256 EnumHostFontsExCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function enumerates all fonts found in the search directories in the same way as EnumHostFontsCount().
**Deprecated:** This item is deprecated and should no longer be used. You can use GetSysFontInfos instead.
**Notes:** Returns the number of fonts found. Does not call the event.

### 77.39.257 ExchangeBookmarks(Bmk1 as Integer, Bmk2 as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function exchanges two bookmarks.
See also ExchangeBookmarks function in DynaPDF manual.

### 77.39.258 ExchangePages(first as Integer, second as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function exchanges two pages.
See also ExchangePages function in DynaPDF manual.

### 77.39.259 ExtractPageText(RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts text of current open page.
**Notes:**

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

### 77.39.260 ExtractPageTextRect(Left as Double, Top as Double, Right as Double, Bottom as Double, RemoveText as boolean = false) as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts text of current open page within given rectangle.
**Notes:**

Text that starts within the given rectangle is captured.
Be aware that PDF coordinates start on bottom left of page with 0/0.

This is a convenience function so you don't need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

Deprecated in favor of newer ExtractText function.

### 77.39.261 ExtractText(PageNum as Integer, Flags as Integer, rect as DynaPDFRectMBS = nil, byref text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the text of the page PageNum.
**Example:**

```
dim pdf as DynaPDFMBS
```

```
dim Page as Integer = 1 // first page
dim Flags as Integer = ktefDefault
dim text as string
dim ok as boolean = pdf.ExtractText(Page, Flags, text)

if ok then
msgbox text
end if
```

**Notes:**

The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag ktefDeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coordinates, see SetPageCoords() for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ExtractText function in DynaPDF manual.

### 77.39.262 FileAttachAnnot(PosX as Double, PosY as Double, Icon as Integer, Author as string, Desc as string, File as folderitem, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a file attachment annotation on the current open page.
**Notes:** On Windows, the Desc and the Author parameters are converted to unicode.
See also FileAttachAnnot function in DynaPDF manual.

### 77.39.263 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
**Notes:**

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 77.39.264 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer 14856

### 77.39.264 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.
**Notes:**

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also FileAttachAnnotEx function in DynaPDF manual.
See also:

- 77.39.263 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer 14856

### 77.39.265 FileLink(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a file link annotation.
**Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

### 77.39.266 FileLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a file link annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.
See also FileLink function in DynaPDF manual.

### 77.39.267 FindBookmark(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function searches for a bookmark in the document outline tree.
**Notes:** The text parameter is converted to unicode.
See also FindBookmark function in DynaPDF manual.

### 77.39.268 FindBookmarkAnsi(DestPage as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function searches for a bookmark in the document outline tree.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also FindBookmark function in DynaPDF manual.

### 77.39.269 FindEmbeddedFile(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Searches for the embedded file Name and returns the handle of it when it can be found.
**Notes:**

The file can then be extracted with GetEmbeddedFile().

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1.
See also FindEmbeddedFile function in DynaPDF manual.

### 77.39.270 FindField(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function searches for an interactive form field by using the fully qualified field name.
**Notes:** The Name parameter is converted to unicode.
See also FindField function in DynaPDF manual.

### 77.39.271 FindFieldAnsi(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function searches for an interactive form field by using the fully qualified field name.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name parameter is converted to ANSI.
See also FindField function in DynaPDF manual.

### 77.39.272 FindLinkAnnot(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function searches for a file link or web link annotation.
See also FindLinkAnnot function in DynaPDF manual.

### 77.39.273 FindNextBookmark as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function searches for the next bookmark with the same search parameters which were used by a previous call of FindBookmark().
See also FindNextBookmark function in DynaPDF manual.

### 77.39.274 FinishSignature(PKCS7 as Memoryblock) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
**Notes:**

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 77.39.275 FinishSignature(PKCS7 as string) as boolean 14859

### 77.39.275 FinishSignature(PKCS7 as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.
**Notes:**

If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 77.39.274 FinishSignature(PKCS7 as Memoryblock) as boolean 14859

### 77.39.276 FlattenAnnotOrField(AnnotationOrFieldHandle as Integer, AnnotFlattenFlags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Draws an annotation or form field on the current open page.
**Notes:**

Form fields are annotations of type atWidget. The annotations of a page can be enumerated with GetPageAnnotEx() / GetPageAnnotCount().
The annotation or form field is deleted from the page's annotation array after it was flattened. If the function succeeds the return value is true. If the function fails the return value is false.

See also FlattenAnnotOrField function in DynaPDF manual.

### 77.39.277 FlattenAnnots(AnnotFlattenFlags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flattens the annotations.
**Notes:**

By default all annotations which have an appearance stream and which have the print flag set are flattened. All annotations are deleted when the function returns with the exception of file attachment annotations. If you want to flatten the view state then set the flag affUseViewState.

Annotation flags:

| | | |
|---|---|---|
| kaffNone | 0 | Printable annotations independent of the type |
| kaffUseViewState | 1 | If set, annotations which are visible in a viewer become flattened. |
| kaffMarkupAnnots | 2 | If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact. |

See also FlattenAnnots function in DynaPDF manual.

### 77.39.278 FlattenForm as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts all fields of an Interactive Form to native PDF vector graphics and deletes the form after all fields are converted, incl. all JavaScript actions which are connected with form fields, pages, or the catalog object, and global JavaScript functions.
**Notes:** Requires DynaPDF Pro license.
See also FlattenForm function in DynaPDF manual.

### 77.39.279 FlushPageContent(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces the content stream of a page or template that was changed with the function ReplacePageText() or ReplacePageTextEx() beforehand.
**Notes:**

The function must be called after all changes are made. See GetPageText() for an example application.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also FlushPageContent function in DynaPDF manual.

### 77.39.280 FlushPages(Flags as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flushes pages.
**Notes:** Do not use FlushPages and SetUseSwapFile together. Use one function.
See also FlushPages function in DynaPDF manual.

### 77.39.281 FlushPagesEx(Flags as integer, LastPage as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the pages in memory to the PDF file exactly like FlushPages().
**Notes:** The only difference is that the last page can be specified. The function calls FlushPages() if LastPage is smaller than 1.
See also FlushPagesEx function in DynaPDF manual.

### 77.39.282 FreeImageBuffer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Frees the current image buffer.
See also FreeImageBuffer function in DynaPDF manual.

### 77.39.283 FreeImageObj(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function releases memory that was allocated by GetImageObj to decompress the image.
**Notes:** If the function succeeds the return value is true. If the function fails the return value is false.
See also FreeImageObj function in DynaPDF manual.

### 77.39.284 FreePDF as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function frees all used resources except the font cache.
See also FreePDF function in DynaPDF manual.

### 77.39.285 FreeTextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a free text annotation.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```

**Notes:** The Name and Author parameters are converted to unicode.
See also FreeTextAnnot function in DynaPDF manual.

### 77.39.286 FreeTextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function creates a free text annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Name and Author parameters are converted to ANSI.

See also FreeTextAnnot function in DynaPDF manual.

### 77.39.287 Get3DAnnotStream(Annot as UInt32, byref Data as String, byref SubType as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the data stream of a 3D annotation.
**Notes:**

At time of publication, PDF supports U3D and PRC files. Check the value of the string SubType to determine the file type. The default format is U3D. SubType can be "" in this case. For PRC files, SubType is required to be present.

Returns true on success and false on failure.
See also Get3DAnnotStream function in DynaPDF manual.

### 77.39.288 GetActionCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of actions contained in a document.
See also GetActionCount function in DynaPDF manual.

### 77.39.289 GetActionHandle(ObjType as Integer, ObjHandle as UInt32, ActIndex as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the handle of an action.
**Notes:**

To determine the number of available actions of a specific object call GetObjActionCount. Since the Catalog object contains no handle, the parameter ObjHandle will be ignored for this object type.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also GetActionHandle function in DynaPDF manual.

### 77.39.290 GetActionType(ActHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the type of an annotation.
See also GetActionType function in DynaPDF manual.

### 77.39.291 GetActionTypeEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the action type of an action used by a specific PDF object.
See also GetActionTypeEx function in DynaPDF manual.

### 77.39.292 GetActiveFont as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the handle of the active font or -1 if no font is set.
See also GetActiveFont function in DynaPDF manual.

### 77.39.293 GetAllocBy as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the pre allocated buffer size of page content streams in bytes.
See also GetAllocBy function in DynaPDF manual.

### 77.39.294 GetAnnot(ahandle as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function retrieves the most important properties of an annotation.
**Example:**

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)
```

```
MsgBox str(a.Type)
next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use GetAnnotEx instead. See also GetAnnot function in DynaPDF manual.

### 77.39.295 GetAnnotBBox(ahandle as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function retrieves the bounding box of an annotation measured in bottom up coordinates. See also GetAnnotBBox function in DynaPDF manual.

### 77.39.296 GetAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of annotations currently used in the document.
See also GetAnnotCount function in DynaPDF manual.

### 77.39.297 GetAnnotEx(ahandle as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function retrieves the most important properties of an annotation.
**Example:**

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)

MsgBox str(a.Type)
next
```

See also GetAnnotEx function in DynaPDF manual.

### 77.39.298 GetAnnotFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the default flags used for newly created annotations.
See also GetAnnotFlags function in DynaPDF manual.

### 77.39.299 GetAnnotLink(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns the URL or file path of a file link annotation.
See also GetAnnotLink function in DynaPDF manual.

### 77.39.300 GetAnnotType(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the type of a specific annotation.
See also GetAnnotType function in DynaPDF manual.

### 77.39.301 GetAscent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the ascender of the active font.
See also GetAscent function in DynaPDF manual.

### 77.39.302 GetBBox(boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a bounding box of a PDF page.
See also GetBBox function in DynaPDF manual.

### 77.39.303 GetBidiMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current bidirectional mode.
**Notes:**

Useful constants:

| | | |
|---|---|---|
| kbmLeftToRight | 0 | Apply the bidi algorithm in Left to Right layout |
| kbmRightToLeft | 1 | Apply the bidi algorithm in Right to Left layout |
| kbmNone | 2 | Default ->do not apply the bidi algorithm |

See also GetBidiMode function in DynaPDF manual.

### 77.39.304 GetBookmark(ahandle as Integer) as DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns the properties of a bookmark.
See also GetBookmark function in DynaPDF manual.

### 77.39.305 GetBookmarkCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of bookmarks defined in the document.
See also GetBookmarkCount function in DynaPDF manual.

### 77.39.306 GetBorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the global border style which is used for newly created Interactive Form fields.
See also GetBorderStyle function in DynaPDF manual.

### 77.39.307 GetBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a pointer to the buffer of a memory based PDF file.
**Notes:** The result string has no encoding set.

See also GetBuffer function in DynaPDF manual.

### 77.39.308 GetBufferMemory as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a pointer to the buffer of a memory based PDF file.
**Notes:** The result string has no encoding set.

### 77.39.309 GetCapHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the cap height of the active font.
See also GetCapHeight function in DynaPDF manual.

### 77.39.310 GetCharacterSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current character spacing.
See also GetCharacterSpacing function in DynaPDF manual.

### 77.39.311 GetCheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the character used for newly created check boxes.
See also GetCheckBoxChar function in DynaPDF manual.

### 77.39.312 GetCheckBoxCharEx(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the check box character for the given field.
See also GetCheckBoxCharEx function in DynaPDF manual.

### 77.39.313 GetCheckBoxDefState(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns the default state of a check box, that is 1 == checked or 0 == unchecked.
See also GetCheckBoxDefState function in DynaPDF manual.

### 77.39.314 GetCMap(index as Integer) as DynaPDFCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the CMap object with the given index.
See also GetCMap function in DynaPDF manual.

### 77.39.315 GetCMapCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of character maps.
See also GetCMapCount function in DynaPDF manual.

### 77.39.316 GetColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the active color space.
See also GetColorSpace function in DynaPDF manual.

### 77.39.317 GetColorSpaceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of color spaces.
**Example:**

```
Sub DrawSomething(pdf as DynaPDFMBS)
// draw all colorants with their own color
Dim MyX, MyY as Double

MyX = 10
MyY = 100
```

```
// set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

// loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

For j as Integer = 0 to Colorcount-1
MyX = 10
dim MyColourSpace as DynaPDFColorSpaceMBS = PDF.GetColorSpaceObj(j)
dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
dim c as Integer = MyColourSpace.NumInComponents
Call pdf.SetExtColorSpace j

// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# "+str(i)
if i <= ColorantsCount then
name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub
```

See also GetColorSpaceCount function in DynaPDF manual.

### 77.39.318 GetColorSpaceObj(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a ColorSync Profile for the given index.
**Notes:** Index from 0 to GetColorSpaceCount-1.
See also GetColorSpaceObj function in DynaPDF manual.

### 77.39.319 GetCompressionFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the standard compression filter for images.
See also GetCompressionFilter function in DynaPDF manual.

### 77.39.320 GetCompressionLevel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the active compression level.
See also GetCompressionLevel function in DynaPDF manual.

### 77.39.321 GetContent as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns a pointer to the content stream of the currently open page or template.
**Notes:** The result string has no encoding set.
See also GetContent function in DynaPDF manual.

### 77.39.322 GetDefBitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns default color depth in bits per pixel, which determines whether images should be down sampled.
See also GetDefBitsPerPixel function in DynaPDF manual.

### 77.39.323 GetDescent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the descender of the active font.
See also GetDescent function in DynaPDF manual.

### 77.39.324 GetDocInfo(dinfo as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves a document info entry as Unicode string.
**Notes:** The result is an unicode string.
See also GetDocInfo function in DynaPDF manual.

### 77.39.325 GetDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of document info entries defined in the document.
See also GetDocInfoCount function in DynaPDF manual.

### 77.39.326 GetDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a document info entry.
**Notes:** Key is an ascii string and value an unicode string.
See also GetDocInfoEx function in DynaPDF manual.

### 77.39.327 GetDocumentColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries Colorspace objects for all colorspaces in the current working document.

### 77.39.328 GetDocUsesTransparency(Flags as UInt32 = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether this document uses transparency.
**Notes:**

Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0.
The function checks all pages, templates, extended graphics states, images, annotations, and form fields.
If the file uses transparency the return value is true. If it uses no transparency the return value is false.
See also GetDocUsesTransparency function in DynaPDF manual.

### 77.39.329 GetDrawDirection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the actual draw direction for closed vector graphics such as rectangles, circles, ellipses and so on.
See also GetDrawDirection function in DynaPDF manual.

### 77.39.330 GetDynaPDFVersion as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the version string of DynaPDF.
**Notes:** Result is an ASCII string.
See also GetDynaPDFVersion function in DynaPDF manual.

### 77.39.331 GetEmbeddedFile(Handle as Integer, byref FileSpec as DynaPDF-FileSpecMBS, Decompress as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of an embedded file as well as a pointer to the file buffer.
**Example:**

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)
```

```
// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
call pdf.CloseFile
```

See also GetEmbeddedFile function in DynaPDF manual.

### 77.39.332 GetEmbeddedFileCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of embedded files available in the PDF file.
**Example:**

```
// new PDF Environment
dim pdf as new MyDynaPDFMBS
call pdf.CreateNewPDF nil

// import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

// walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
dim e as DynaPDFFileSpecMBS
if pdf.GetEmbeddedFile(i, e, true) then
dim data as string = e.Buffer

Break
end if
next

// cleanup
```

call pdf.CloseFile

See also GetEmbeddedFileCount function in DynaPDF manual.

### 77.39.333 GetEMFPatternDistance as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the distance between lines of standard patterns during EMF conversion.
See also GetEMFPatternDistance function in DynaPDF manual.

### 77.39.334 GetErrLogMessage(index as Integer) as DynaPDFErrorMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Querties the error message details for the given index.
**Notes:** Index from 0 to GetErrLogMessageCount-1.
See also GetErrLogMessage function in DynaPDF manual.

### 77.39.335 GetErrLogMessageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of error log messages.
See also GetErrLogMessageCount function in DynaPDF manual.

### 77.39.336 GetErrorMessage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the last error message as a string, or "" if no error occurred.
See also GetErrorMessage function in DynaPDF manual.

### 77.39.337 GetErrorMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current error mode.
See also GetErrorMode function in DynaPDF manual.

### 77.39.338 GetField(index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of a field.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetFieldEx instead. See also GetField function in DynaPDF manual.

### 77.39.339 GetFieldBackColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the default background color used for newly created interactive form fields.
See also GetFieldBackColor function in DynaPDF manual.

### 77.39.340 GetFieldBorderColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the default border color used for newly created interactive form fields.
See also GetFieldBorderColor function in DynaPDF manual.

### 77.39.341 GetFieldBorderStyle(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the border style of a specific form field.
See also GetFieldBorderStyle function in DynaPDF manual.

### 77.39.342 GetFieldBorderWidth(aField as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the line width of the border of a field.
See also GetFieldBorderWidth function in DynaPDF manual.

### 77.39.343 GetFieldCalcOrder as UInt32()

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries field calculation order.
**Notes:**

Retrieves the calculation order of form fields which contain an action in the OnCalc event (see AddActionToObj() for further information). This is the order in which their values will be recalculated when the value of any field changes. The retrieved array values are field handles.

To change the calculation order of a specific field call SetFieldCalcOrder().
See also GetFieldCalcOrder function in DynaPDF manual.

### 77.39.344 GetFieldChoiceValue(Field as Integer, ValIndex as Integer) as DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the choice values for this field.
See also GetFieldChoiceValue function in DynaPDF manual.

### 77.39.345 GetFieldColor(Field as Integer, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves a specific color of an interactive form field.
See also GetFieldColor function in DynaPDF manual.

### 77.39.346 GetFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of fields contained in the document.
See also GetFieldCount function in DynaPDF manual.

### 77.39.347 GetFieldEx(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the most important properties of a field.
**Example:**

```
dim pdf as new MyDynaPDFMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

call pdf.CreateNewPDF(nil)
call pdf.SetImportFlags(BitwiseOr(pdf.kifImportAll, pdf.kifImportAsPage))

dim filePath as FolderItem=SpecialFolder.Desktop.Child("acroform.pdf")
if (pdf.OpenImportFile(filePath, pdf.kptOpen, "") <0) then
MsgBox "Input file """+filePath.name+""" not found!"
quit
end if

// import all pages
dim r as Integer = pdf.ImportPDFFile( 1, 1.0, 1.0)

// now check all fields
dim n as Integer = pdf.GetFieldCount
for i as Integer = 0 to n-1
dim f as DynaPDFFieldExMBS = pdf.GetFieldEx(i)

break // inspect in debugger
next
```

**Notes:** See dynapdf_help.pdf for more details.
See also GetFieldEx function in DynaPDF manual.

### 77.39.348 GetFieldExpValCount(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of values/export values which are defined for a field.
See also GetFieldExpValCount function in DynaPDF manual.

### 77.39.349 GetFieldExpValue(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function retrieves the export value(s) of a check box, list box, or combo box.
See also GetFieldExpValue function in DynaPDF manual.

### 77.39.350 GetFieldExpValueEx(Field as Integer, ValIndex as Integer, byref Value as string, byref ExpValue as string, byref Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to enumerate the choice values of a combo box, list box, or radio button.
See also GetFieldExpValueEx function in DynaPDF manual.

### 77.39.351 GetFieldFlags(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the flags of a specific interactive form field.
See also GetFieldFlags function in DynaPDF manual.

### 77.39.352 GetFieldGroupType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the base type of a field group.
See also GetFieldGroupType function in DynaPDF manual.

### 77.39.353 GetFieldHighlightMode(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the highlight mode of buttons, checkboxes, and signature fields.
See also GetFieldHighlightMode function in DynaPDF manual.

### 77.39.354 GetFieldIndex(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the index or tab order of the field.
See also GetFieldIndex function in DynaPDF manual.

### 77.39.355 GetFieldMapName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the mapping name of a specific form field if set.
**Notes:** The result string is in unicode or ASCII encoding.
See also GetFieldMapName function in DynaPDF manual.

### 77.39.356 GetFieldName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the name of a specific interactive form field.
See also GetFieldName function in DynaPDF manual.

### 77.39.357 GetFieldOrientation(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the orientation of a field.
See also GetFieldOrientation function in DynaPDF manual.

### 77.39.358 GetFieldTextAlign(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the text alignment of a text field or button field.
See also GetFieldTextAlign function in DynaPDF manual.

### 77.39.359 GetFieldTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the default text color used for newly created fields.
See also GetFieldTextColor function in DynaPDF manual.

### 77.39.360 GetFieldToolTip(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves a pointer to the tool tip string of a specific interactive form field.
**Notes:** The result string has either unicode or ascii encoding.
See also GetFieldToolTip function in DynaPDF manual.

### 77.39.361 GetFieldType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the field type.
See also GetFieldType function in DynaPDF manual.

### 77.39.362 GetFillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current color used for fillings.
See also GetFillColor function in DynaPDF manual.

### 77.39.363 GetFontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the font count.
See also GetFontCount function in DynaPDF manual.

### 77.39.364 GetFontEx(index as Integer) as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the font information for the font specified by the index value.
**Example:**

```
// create PDF object with page
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// draw some text
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
call pdf.WriteFText pdf.ktaCenter, "My first Xojo output!"

// and list all fonts:
```

```
dim n as Integer = pdf.GetFontCount-1

for i as Integer = 0 to n
MsgBox pdf.GetFontEx(i).FontName
next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use GetFontInfo instead.
**Notes:**

Returns nil on any error.
Index from 0 to GetFontCount-1.
See also GetFontEx function in DynaPDF manual.

### 77.39.365 GetFontInfoEx(index as Integer) as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the most important properties of a font.
**Notes:**

This function accepts a font handle instead. A font handle is a simple array index. To enumerate all fonts of a document execute the function in a loop from zero to GetFontCount - 1.

If the function succeeds the return value is font info object. If the function fails the return value is nil.
See also GetFontInfoEx function in DynaPDF manual.

### 77.39.366 GetFontMetrics(FontHandle as Integer) as DynaPDFFontMetricsMBS

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries font metrics for a font handle.
See also GetFontMetrics function in DynaPDF manual.

### 77.39.367 GetFontOrigin as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current font origin.
See also GetFontOrigin function in DynaPDF manual.

### 77.39.368 GetFontSearchOrder as Integer()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the font search order.
**Notes:**

The values in the array use this constants:

| | |
|---|---|
| kfbtTrueType | TrueType, TrueType Collections, or OpenType fonts with TrueType outlines |
| kfbtType1 | Type1 font |
| kfbtOpenType | OpenType font with Postscript outlines |
| kfbtStdFont | PDF Standard font |
| kfbtDisabled | This value can be used to disable a specific font format. |

The array has 4 values.
See also GetFontSearchOrder function in DynaPDF manual.

### 77.39.369 GetFontSelMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current font selection mode.
See also GetFontSelMode function in DynaPDF manual.

### 77.39.370 GetFontWeight as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the weight that will be used to emulate a bold font style.
See also GetFontWeight function in DynaPDF manual.

### 77.39.371 GetFTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Notes:** The text parameter is converted to unicode.
See also GetFTextHeight function in DynaPDF manual.

### 77.39.372 GetFTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeight function in DynaPDF manual.

### 77.39.373 GetFTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Notes:** The text parameter is converted to unicode.
See also GetFTextHeightEx function in DynaPDF manual.

### 77.39.374 GetFTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetFTextHeightEx function in DynaPDF manual.

### 77.39.375 GetGlyphIndex(Index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the glyph index of the given code page or Unicode index.
**Notes:**

How Index must be defined depends on the code page with which the font was loaded. For example, if the font was loaded with a 8 bit code page, then indexes below 256 are treated as index into the code page table. Higher indexes are treated as Unicode value in this case. Note that all Unicode encoded glyphs of the font are accessible in this case, also if the font was loaded with a 8 bit code page!

At time of publication the function does not support CJK code pages which require a conversion to Unicode, e.g. cpCJK_Big5_Uni, cpCJK_EUC_JP_Uni, and so on.

If the function succeeds the return value is greater or equal zero. If the function fails the return value is a negative error code.
See also GetGlyphIndex function in DynaPDF manual.

### 77.39.376 GetGlyphOutline(Index as UInt32) as DynaPDFGlyphOutlineMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the outline of a glyph of the active font.
**Notes:**

Note that not all glyphs have an outline. A space character, for example, has no outline and therefore the size can be zero. The function returns normalized outlines scaled to a font size of 1000 units.

Please see dynapdf_help.pdf and our example project on how to process the outline data.
See also GetGlyphOutline function in DynaPDF manual.

### 77.39.377 GetGoToAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a GoToR action.
**Notes:**

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToAction function in DynaPDF manual.

### 77.39.378 GetGoToRAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a GoTo action.
**Notes:**

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToRAction function in DynaPDF manual.

### 77.39.379 GetGStateFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current graphics state flags.
See also GetGStateFlags function in DynaPDF manual.

### 77.39.380 GetHideAction(index as Integer) as DynaPDFHideActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a hide action.
**Notes:** Index is from 0 to GetActionCount-1.
See also GetHideAction function in DynaPDF manual.

### 77.39.381 GetIconColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the icon color used for newly created text annotations.
See also GetIconColor function in DynaPDF manual.

### 77.39.382 GetImageBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the image buffer.
See also GetImageBuffer function in DynaPDF manual.

### 77.39.383 GetImageBufferMemory as memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the image buffer.

### 77.39.384 GetImageCount(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 77.39.385 GetImageCount(Path as string) as Integer 14887

### 77.39.385 GetImageCount(Path as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of images contained in a multi page image.
See also GetImageCount function in DynaPDF manual.
See also:

- 77.39.384 GetImageCount(File as folderitem) as Integer 14887

### 77.39.386 GetImageCountEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 77.39.387 GetImageCountEx(Buffer as string) as Integer 14887

### 77.39.387 GetImageCountEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.
See also GetImageCountEx function in DynaPDF manual.
See also:

- 77.39.386 GetImageCountEx(Buffer as Memoryblock) as Integer 14887

### 77.39.388 GetImageHeight(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the height of an image in pixel.
See also GetImageHeight function in DynaPDF manual.

### 77.39.389 GetImageObj(Handle as UInt32, Flags as Integer) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the properties of an image as well as the decompressed image buffer if needed.
**Notes:**

For the flags use the constants: kpfNone, kpfDecomprAllImages, kpfNoJPXDecode, kpfDitherImagesToBW, kpfConvImagesToGray, kpfConvImagesToRGB, kpfConvImagesToCMYK or kpfImageInfoOnly.

By default all images are returned decompressed, with exception of image types which are already stored in a valid file format like JPEG and JPEG 2000 images.
If all image types should be decompressed set the flag kpfDecompressAllImages.
This function allocates memory that should be released with FreeImageObj when finish.
Image handles are simple array indexes. The number of image objects can be determined with GetImageObjCount. Note that this array does not include inline images which are stored in content streams. Such images can only be accessed with ParseContent().

Returns the function succeeds the return value is true. If the function fails the return value is false.
See also GetImageObj function in DynaPDF manual.

### 77.39.390 GetImageObjCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files.
**Notes:**

The images can be accessed with GetImageObj().
The return value is the number of image objects. This function cannot fail.
See also GetImageObjCount function in DynaPDF manual.

### 77.39.391 GetImageWidth(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the width of an image in pixel.
See also GetImageWidth function in DynaPDF manual.

### 77.39.392 GetImportDataAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for an import action.
**Notes:**

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetImportDataAction function in DynaPDF manual.

### 77.39.393 GetImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current import flags used to import PDF files.
See also GetImportFlags function in DynaPDF manual.

### 77.39.394 GetImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries import flags 2.
See also GetImportFlags2 function in DynaPDF manual.

### 77.39.395 GetInBBox(PageNum as Integer, Boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves a bounding box of an external PDF page.
**Example:**

```
dim pdf as new MyDynaPDFMBS

// import some PDF
call pdf.CreateNewPDF(nil)
call pdf.OpenImportFile(file, 0, "")
call pdf.SetImportFlags(pdf.kifImportAsPage) // important! It makes the rendering faster.
call pdf.ImportPDFFile(1,1.0,1.0)

dim bounds as DynaPDFRectMBS = pdf.GetInBBox(1, pdf.kpbMediaBox)
```

See also GetInBBox function in DynaPDF manual.

### 77.39.396 GetInDocInfo(DInfo as Integer, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves a document info entry from an external PDF file as Unicode string.
See also GetInDocInfo function in DynaPDF manual.

### 77.39.397 GetInDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of available document info entries of the currently opened import file or a negative error code on failure.
See also GetInDocInfoCount function in DynaPDF manual.

### 77.39.398 GetInDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a document info entry from the currently opened import file.
**Example:**

```
dim p as new DynaPDFMBS

call p.CreateNewPDF(nil)
```

```
// Skip anything that is not required
call p.SetImportFlags p.kifImportAll+p.kifImportAsPage

// From which PDF file do you want to extract the information?
call p.OpenImportFile(file, p.kptOpen, "")

// lookup all document information

dim count as integer = p.GetInDocInfoCount
for i as integer = 0 to count-1

dim DInfo as integer
dim key as string
dim value as string
if p.GetInDocInfoEx(i, DInfo, key, value) >= 0 then

dim Type as string
select case dinfo
case p.kdiAuthor
type = "Author"
case p.kdiCreator
type = "Creator"
case p.kdiKeywords
type = "Keywords"
case p.kdiProducer
type = "Producer"
case p.kdiSubject
type = "Subject"
case p.kdiTitle
type = "Title"
case p.kdiCompany
type = "Company"
case p.kdiPDFX_Ver
type = "PDF/X Version"
case p.kdiCustom
type = "Custom"
case p.kdiPDFX_Conf
type = "PDF/X Config"
case p.kdiCreationDate
type = "Creation Date"
case p.kdiModDate
type = "Modification Date"
else
Break
type = "?"
end Select

List.AddRow type, key, value
```

```
end if

next

// close import file
call p.CloseImportFile
```

**Notes:**

The key result is an ASCII string.
The value result is an ASCII or Unicode string.
See also GetInDocInfoEx function in DynaPDF manual.

### 77.39.399 GetInEncryptionFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the encryption flags of the currently opened import file.
See also GetInEncryptionFlags function in DynaPDF manual.

### 77.39.400 GetInFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns number of field in open import file.
See also GetInFieldCount function in DynaPDF manual.

### 77.39.401 GetInIsCollection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks whether the currently opened import file is a portable collection.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsCollection function in DynaPDF manual.

### 77.39.402 GetInIsEncrypted as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks whether the currently opened import file is encrypted.

**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsEncrypted function in DynaPDF manual.

### 77.39.403 GetInIsSigned as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to determine whether a PDF file contains a digital signature.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsSigned function in DynaPDF manual.

### 77.39.404 GetInIsTaggedPDF as integer

MBS DynaPDF Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the currently open import file is a Tagged PDF file.
**Notes:**

The PDF file must be opened beforehand with OpenImportFile() or OpenImportBuffer().
The return value is a set flags indicating the tagging status of the file.

If the function succeeds, the return value is greater or equal zero. If the function fails, the return value is a negative error code.
See also GetInIsTaggedPDF function in DynaPDF manual.

### 77.39.405 GetInIsTrapped as Integer

MBS DynaPDF Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the input PDF is trapped.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsTrapped function in DynaPDF manual.

### 77.39.406 GetInIsXFAForm as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the input PDF is a XFA form.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsXFAForm function in DynaPDF manual.

### 77.39.407 GetInMetadata(PageNum as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Access the optional metadata streams of pages or the global metadata stream of the current open import file.
**Notes:**

Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with OpenImportImportFile or OpenImportBuffer beforehand.
Although the global XMP stream does usually exist in todays PDF files, metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetInMetadata function in DynaPDF manual.

### 77.39.408 GetInOrientation(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the orientation of a specific page within the currently open import file (see also OpenImportFile()).
See also GetInOrientation function in DynaPDF manual.

### 77.39.409 GetInPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of pages contained in an external PDF file.
See also GetInPageCount function in DynaPDF manual.

### 77.39.410 GetInPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the minor PDF version number of an external PDF file.
See also GetInPDFVersion function in DynaPDF manual.

### 77.39.411 GetInPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the version information of the currently open import file.
See also GetInPDFVersionEx function in DynaPDF manual.

### 77.39.412 GetInPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the print settings for the imported document.
**Notes:** This is a PDF 1.7 extension.
See also GetInPrintSettings function in DynaPDF manual.

### 77.39.413 GetInRepairMode as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to determine whether the current open import file was opened in repair or normal mode.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInRepairMode function in DynaPDF manual.

### 77.39.414 GetIsFixedPitch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns 1 if the active font is a fixed pitch font or 0 if the font is a variable pitch font.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetIsFixedPitch function in DynaPDF manual.

### 77.39.415 GetIsTaggingEnabled as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether tagging is enabled.
See also GetIsTaggingEnabled function in DynaPDF manual.

### 77.39.416 GetItalicAngle as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the italic angle in degrees that will be used to emulate italic style fonts.
See also GetItalicAngle function in DynaPDF manual.

### 77.39.417 GetJavaScript(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a global JavaScript as string.
**Notes:**

The result text string has either unicode or ASCII encoding.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScript function in DynaPDF manual.

### 77.39.418 GetJavaScriptAction(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a java script action value for the given handle.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:** May return an unicode string.
See also GetJavaScriptAction function in DynaPDF manual.
See also:

- 77.39.419 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string 14896

### 77.39.419 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a java script action value for the given object.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetJavaScriptActionEx instead. **Notes:**

May return an unicode string.

The ObjEvent parameter was added in plugin version 9.3 and contains a value from the koe* constants.
See also GetJavaScriptAction function in DynaPDF manual.

See also:

- 77.39.418 GetJavaScriptAction(Handle as Integer) as string 14896

### 77.39.420 GetJavaScriptActionEx(index as Integer) as DynaPDFJavaScriptActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for an javascript action.
**Notes:** Index is from 0 to GetActionCount-1.
See also GetJavaScriptActionEx function in DynaPDF manual.

### 77.39.421 GetJavaScriptCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of global JavaScripts contained in a document.
See also GetJavaScriptCount function in DynaPDF manual.

### 77.39.422 GetJavaScriptEx(Name as string) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns a global JavaScript as string by using the script s name instead of a handle to identify the script.
**Notes:**

The result string is an unicode or an ASCII string.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

If the JavaScript is attached to a field, please use GetFieldEx functions to get the action handle (DynaPDFFieldExMBS.Action) and then use GetJavaScriptAction instead.
See also GetJavaScriptEx function in DynaPDF manual.

### 77.39.423 GetJavaScriptName(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the name of a global JavaScript.
**Notes:** The result string has either unicode or ASCII encoding.
See also GetJavaScriptName function in DynaPDF manual.

### 77.39.424 GetJPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current JPEG compression quality in percent used for newly inserted images which are compressed with JPEG.
See also GetJPEGQuality function in DynaPDF manual.

### 77.39.425 GetJPEGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries JPEG library version.
**Notes:** Currently reporting 9.1 for version 9b.

### 77.39.426 GetLanguage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the language identifier of the document as an ISO 3166 language tag or IANA tag, or "" if not set.
See also GetLanguage function in DynaPDF manual.

### 77.39.427 GetLastTextPosX as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the x coordinate of the last printed text.

### 77.39.428 GetLastTextPosY as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the y coordinate of the last printed text.

### 77.39.429 GetLaunchAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a launch action.
**Notes:**

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetLaunchAction function in DynaPDF manual.

### 77.39.430 GetLayerConfig(Index as Integer) as DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the most important properties of a layer configuration.
**Notes:**

A PDF file can contain one or more layer configurations so that different layers can be initially shown or hidden.
A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
To determine the number of available configurations call GetLayerConfigCount(). The first index is denoted by 0.

If the function succeeds the return value is the object. If the function fails the return value is nil.
See also GetLayerConfig function in DynaPDF manual.

### 77.39.431 GetLayerConfigCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of available layer configurations.
**Notes:**

Note that it is possible that a document contains layers but no layer configuration. To determine whether a document contains layers or optional content groups use GetOCGCount().
To load a specific layer configuration call LoadLayerConfig().

See also GetLayerConfigCount function in DynaPDF manual.

### 77.39.432 GetLeading as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current leading.
See also GetLeading function in DynaPDF manual.

### 77.39.433 GetLineCapStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current line cap style used for vector graphics.
See also GetLineCapStyle function in DynaPDF manual.

### 77.39.434 GetLineJoinStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current line join style used for vector graphics.
See also GetLineJoinStyle function in DynaPDF manual.

### 77.39.435 GetLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current line width used for stroked vector graphics and the border of interactive objects.
See also GetLineWidth function in DynaPDF manual.

### 77.39.436 GetLinkHighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current highlight mode used for newly created annotations.
See also GetLinkHighlightMode function in DynaPDF manual.

### 77.39.437 GetLogMetafileSize(FileName as folderitem) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSize function in DynaPDF manual.

### 77.39.438 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 77.39.439 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS 14901

### 77.39.439 GetLogMetafileSizeEx(Buffer as string) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile.
See also GetLogMetafileSizeEx function in DynaPDF manual.
See also:

- 77.39.438 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS 14901

### 77.39.440 GetMatrix(byref Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the current transformation.
See also GetMatrix function in DynaPDF manual.

### 77.39.441 GetMaxFieldLen(TxtField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the allowed maximum string length of a text field, or zero if the length is not restricted.
See also GetMaxFieldLen function in DynaPDF manual.

### 77.39.442 GetMetaConvFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the conversion flags used to convert enhanced metafiles to PDF.
See also GetMetaConvFlags function in DynaPDF manual.

### 77.39.443 GetMetadata(ObjType as Integer, Handle as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function can be used to access the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object.
**Notes:**

Metadata streams are in XMP format that is a superset of XML.
The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when CloseFile or CloseFileEx is called. Note that the creation and modification date will be updated when the file is closed.
The original global XMP stream of external PDF files can be accessed with GetInMetadata().
Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetMetadata function in DynaPDF manual.

### 77.39.444 GetMissingGlyphs as UInt32()

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an array with missing glyphs.
**Notes:** See also GetMissingGlyphsString.
See also GetMissingGlyphs function in DynaPDF manual.

### 77.39.445 GetMissingGlyphsString as String

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string containing the missing glpyhs characters.
**Notes:**

This is a convenience function which builds a string from the array given by pdfGetMissingGlyphs.

See also GetMissingGlyphs.

### 77.39.446 GetMiterLimit as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current miter limit used to draw stroked vector graphics.
See also GetMiterLimit function in DynaPDF manual.

### 77.39.447 GetMovieAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a movie action.
**Notes:**

Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed.
And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetMovieAction function in DynaPDF manual.

### 77.39.448 GetNamedAction(index as Integer) as DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for a named action.
**Notes:** Index is from 0 to GetActionCount-1.
See also GetNamedAction function in DynaPDF manual.

### 77.39.449 GetNamedDest(index as Integer) as DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries information about the named destination with the given index.
**Notes:**

Index from 0 to GetNamedDestCount-1.
Returns nil on any error.
See also GetNamedDest function in DynaPDF manual.

### 77.39.450 GetNamedDestCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of named destination objects.
See also GetNamedDestCount function in DynaPDF manual.

### 77.39.451 GetNeedAppearance as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether appearance is needed.
See also GetNeedAppearance function in DynaPDF manual.

### 77.39.452 GetObjActionCount(ObjType as Integer, ObjHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of actions used by an object.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetObjActions instead.
See also GetObjActionCount function in DynaPDF manual.

### 77.39.453 GetObjActions(ObjType as Integer, ObjHandle as Integer, byref Actions as DynaPDFObjActionsMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for an object action.
**Notes:**

Index is from 0 to GetActionCount-1.

The function retrieves the first action and additional trigger events that should be executed when a specific event occurs.
If the object type is a page, then use the page number as handle.

Trigger events are supported by the global Catalog object (this is the document root), Pages, and Form Fields. All other objects do not support trigger events.
Actions are defined as a single linked list. That means one action can execute another action (if NextAction of that action is >= 0).
Note that an action can reference itself! The application must check whether an action is already in the

execution list before it will be executed.

If an error occurred, the plugin returns nil.
On success, we provide the DynaPDFObjActionsMBS object in Actions parameter.

Return values:

| | |
|---|---|
| <0 | An error occurred, e.g. due to an invalid handle. |
| 0 | The object contains no action or trigger event. |
| 1 | The object contains an action. |
| 2 | The object contains a trigger event. |
| 3 | The object contains an action and a trigger event. |

See also GetObjActions function in DynaPDF manual.

### 77.39.454 GetOCG(Handle as UInt32) as DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the properties of an OCG, also called layer.
**Notes:**

An OCG handle is a simple array index. You can loop over all available OCGs from 0 to GetOCGCount - 1. If the member HaveContUsage is true, the OCG contains a Content Usage dictionary. The contents of this dictionary can be accessed with the function GetOCGContUsage. A Content Usage dictionary contains additional information about a layer or OCG.

If the OCG is also included in an application event, this is the case if AppEvent is non-zero, then the Content Usage dictionary is used to control the visibility state of the layer. The member Categories specifies which categories control the visibility state.

Returns nil on any error.
See also GetOCG function in DynaPDF manual.

### 77.39.455 GetOCGContUsage(Handle as UInt32) as DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the properties of the Content Usage dictionary that is associated with an OCG or layer.
**Notes:**

If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.
If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function GetOCG returns the events and categories which control the layer visibility.
If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with GetOCGUsageUserName.
Ôøº

Returns nil on any error.
See also GetOCGContUsage function in DynaPDF manual.

### 77.39.456 GetOCGCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of OCGs or layers which are available in document.
**Notes:** This function cannot fail, the return value is always greater or equal zero.
See also GetOCGCount function in DynaPDF manual.

### 77.39.457 GetOCGUsageUserName(Handle as UInt32, Index as UInt32, byref Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a user name of a Content Usage dictionary that is associated with an OCG or layer.
**Notes:**

The functions a pointer of the original string that is stored in the PDF file.
If the function succeeds the return value is true. If the function fails the return value is false.
See also GetOCGUsageUserName function in DynaPDF manual.

### 77.39.458 GetOCUINode(Node as Integer) as DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the most important properties of an Optional Content UI node (UI stands for User Interface).
**Notes:**

If the PDF file was not already imported with ImportPDFFile() the function ImportOCProperties() must be called to import the global Optional Content Properties.
UI nodes are part of a layer configuration. Therefore, a layer configuration must be loaded with LoadLayerConfig() before the function can be called.

Optional Content Groups (OCGs) which are returned by this function should be visible in the user interface of a viewer application. All other OCGs should not be shown by default.
UI nodes are stored in a single linked list. To get the pointer of the root node set the parameter Node to 0. The parameter OutNode will be ignored in this case but it is required otherwise.
The next node of the root is in the NextItem property. If no further node is available the return value will be 0.
Every node can contain one or more child nodes, an optional label, or a reference to an OCG.
See also GetOCUINode function in DynaPDF manual.

### 77.39.459 GetOpacity as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the opacity value used to draw the visible appearance of an annotation (requires Acrobat 5 or higher).
See also GetOpacity function in DynaPDF manual.

### 77.39.460 GetOrientation as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.
See also GetOrientation function in DynaPDF manual.

### 77.39.461 GetOutputIntent(Index as Integer) as DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an output intent as well as the properties of it.
**Notes:**

An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call GetOutputIntentCount.

Returns nil in case of error.
See also GetOutputIntent function in DynaPDF manual.

### 77.39.462 GetOutputIntentCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of available output intents.
See also GetOutputIntentCount function in DynaPDF manual.

### 77.39.463 GetPage(PageNum as UInt32) as DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the page object for the given page number.
**Notes:** If you like to open a page for editing, please use editpage function.

### 77.39.464 GetPageAnnot(index as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the page annotation with the given index.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetPageAnnotEx instead.
See also GetPageAnnot function in DynaPDF manual.

### 77.39.465 GetPageAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the page annotation count.
See also GetPageAnnotCount function in DynaPDF manual.

### 77.39.466 GetPageAnnotEx(index as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries an extended annotation with the given index.
See also GetPageAnnotEx function in DynaPDF manual.

### 77.39.467 GetPageColorSpaces as DynaPDFColorSpaceMBS()

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries for current open page the color spaces used.
**Notes:**

Color spaces used for drawing colors (Stroke and Fill Color) and for image color space.
The list may be empty if for example everything is drawn in standard color spaces like RGB.

### 77.39.468 GetPageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the page coordinate system setting.
**Notes:** The native coordinate system of the Portable Document Format is bottom up.
See also GetPageCoords function in DynaPDF manual.

### 77.39.469 GetPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of pages of the current PDF file if any.
See also GetPageCount function in DynaPDF manual.

### 77.39.470 GetPageField(Index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of a field.
**Deprecated:** This item is deprecated and should no longer be used. You can use GetPageFieldEx instead.
See also GetPageField function in DynaPDF manual.

### 77.39.471 GetPageFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of fields used by a page.
See also GetPageFieldCount function in DynaPDF manual.

### 77.39.472 GetPageFieldEx(Index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of a field.
**Notes:** The parameter Index must be a valid index to the page's field array. To enumerate the fields of a page execute the function in a loop from 0 to GetPageFieldCount - 1.
See also GetPageFieldEx function in DynaPDF manual.

### 77.39.473 GetPageHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the height of the currently open page.
See also GetPageHeight function in DynaPDF manual.

### 77.39.474 GetPageLabel(index as Integer, byref Label as DynaPDFPageLabelMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the properties of a page label.
See also GetPageLabel function in DynaPDF manual.

### 77.39.475 GetPageLabelCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of page labels defined in the document.
See also GetPageLabelCount function in DynaPDF manual.

### 77.39.476 GetPageLayout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the page layout that is used when opening the document with Adobe s Acrobat.
See also GetPageLayout function in DynaPDF manual.

### 77.39.477 GetPageMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the page mode that is used when opening the document with Adobe's Acrobat.
See also GetPageMode function in DynaPDF manual.

### 77.39.478 GetPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the page number of the currently open page.
See also GetPageNum function in DynaPDF manual.

### 77.39.479 GetPageText(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to extract the text of a page or template, or to find a specific text that should be replaced or deleted with the function ReplacePageText() or ReplacePageTextEx().
**Notes:**

InitStack must be called before you use GetPageText.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also GetPageText function in DynaPDF manual.

### 77.39.480 GetPageWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the width of the currently open page.
See also GetPageWidth function in DynaPDF manual.

### 77.39.481 GetPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the minor version of the output PDF file as Integer value.

**Notes:** Zero stand for PDF 1.0, one for PDF 1.1 and so on.
See also GetPDFVersion function in DynaPDF manual.

### 77.39.482 GetPDFVersionEx as DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves the major and minor version of the PDF document as well as the underlying PDF standard, if any.
**Example:**

```
Dim d As New DynaPDFMBS
Dim v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

**Notes:**

Result includes:

| | |
|---|---|
| Major | PDF major version, e.g. 1 |
| Minor | PDF minor version, e.g. 7 |
| MainVer | Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on. |
| SubVer | e.g. "ZUGFeRD 2.0", "Factur-X", and so on |

Returns nil in case of an error.
See also GetPDFVersionEx function in DynaPDF manual.

### 77.39.483 GetPNGVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries PNG library version used in DynaPDF.

### 77.39.484 GetPrintSettings as DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the print settings for the current document.
**Notes:** This is a PDF 1.7 extension.
See also GetPrintSettings function in DynaPDF manual.

### 77.39.485 GetResetAction(Handle as UInt32) as DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the properties of a Reset Form Action.
See also GetResetAction function in DynaPDF manual.

### 77.39.486 GetResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
See also GetResolution function in DynaPDF manual.

### 77.39.487 GetSaveNewImageFormat as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If false, images are not downscaled if necessary.
See also GetSaveNewImageFormat function in DynaPDF manual.

### 77.39.488 GetSeparationInfo(byref Colorant as string, byref ColorSpace as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the separation info stored in the current open page.
See also GetSeparationInfo function in DynaPDF manual.

### 77.39.489 GetSpaceWidth(FontHandle as Integer, FontSize as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the width of the space character of the font depending on the font size.
**Notes:**

If the font contains no space character a default size is used to compute the space width.
The parameter FontHandle must be a valid pointer to a PDF font. Such a reference is returned by GetPageText, EnumDocFonts, or by the content parser (see ParseContent).

Returns: If the function succeeds the return value is the space width. If the function fails the return value is zero. This function does not use the exception handling of DynaPDF. No error message is set on failure.

See also GetSpaceWidth function in DynaPDF manual.

### 77.39.490 GetStrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current stroke color.
See also GetStrokeColor function in DynaPDF manual.

### 77.39.491 GetSubmitAction(Handle as UInt32) as DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the properties of a Submit Form Action.
**Notes:** Returns nil in case of an error.
See also GetSubmitAction function in DynaPDF manual.

### 77.39.492 GetSysFontInfo as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the most important properties of a system font.
**Example:**

```
// list all fonts
dim d as new DynaPDFMBS

dim f as DynaPDFSysFontMBS = d.GetSysFontInfo
while f<>nil
Listbox1.AddRow f.FamilyName
```

```
f = f.NextFont
wend
```

**Notes:**

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 77.39.493 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS 14915

### 77.39.493 GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries system font with given postscript name.
**Example:**

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

**Notes:** Returns nil if font is not found.
See also GetSysFontInfo function in DynaPDF manual.
See also:

- 77.39.492 GetSysFontInfo as DynaPDFSysFontMBS 14914

### 77.39.494 GetSysFontInfos as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an array with the most important properties of system fonts.
**Example:**

```
dim pdf as new MyDynaPDFMBS

// get all fonts
dim fonts() as DynaPDFSysFontMBS = pdf.GetSysFontInfos

// add one row for each font
for each f as DynaPDFSysFontMBS in fonts

dim name as string = f.FamilyName

if f.BaseType = pdf.kfbtOpenType and f.CIDOrdering = "" then
// This font cannot be used with Unicode

else
// Anything is ok
end if

next
```

**Notes:**

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 77.39.495 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS() 14916

### 77.39.495 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an array with the most important properties of system fonts.
**Example:**

```
dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger
```

**Notes:**

Matchs fonts by family name, full name or Postscript name.

The function returns the fonts in the current font search order. That means if the search order is { fbtTrueType, fbtOpenType, fbtType1, fbtStdFont } , for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on.
Since standard fonts are no system fonts, these fonts are not returned.
See also:

- 77.39.494 GetSysFontInfos as DynaPDFSysFontMBS() 14915

### 77.39.496 GetTabLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the tabulator length in spaces that is used to emulate tabulators during text formatting (see WriteFText() for further information).
See also GetTabLen function in DynaPDF manual.

### 77.39.497 GetTemplCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the number of templates used by a page.
See also GetTemplCount function in DynaPDF manual.

### 77.39.498 GetTemplHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the handle of the current open template or a negative error code on failure.
See also GetTemplHandle function in DynaPDF manual.

### 77.39.499 GetTemplHeight(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the height of a template.
See also GetTemplHeight function in DynaPDF manual.

### 77.39.500 GetTemplWidth(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the width of a template. The parameter Handle must be a valid template handle.
**Notes:** If the function succeeds the return value is the width of the template. If the function fails the return value is a negative error code.
See also GetTemplWidth function in DynaPDF manual.

### 77.39.501 GetTextDrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the text draw mode. Se draw modes are described in detail under SetTextDrawMode().
See also GetTextDrawMode function in DynaPDF manual.

### 77.39.502 GetTextFieldValue(Field as Integer, byref Value as string, byref DefValue as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the text of a field.
**Notes:** The strings may be ANSI or Unicode encoded.
See also GetTextFieldValue function in DynaPDF manual.

### 77.39.503 GetTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF instance

dim text as string = "Hello \ul# World"

dim h1 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)
dim h2 as Integer = pdf.GetFTextHeight(pdf.ktaLeft, text)

dim h3 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)
dim h4 as Integer = pdf.GetFTextHeightEx(150, pdf.ktaLeft, text)
```

```
// see different heights in debugger.
```

**Notes:**

GetTextHeight does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

### 77.39.504 GetTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightAnsi does escape backslashes so no formatting commands are taken from the string.

The text parameter is converted to ANSI.

### 77.39.505 GetTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Example:**

```
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

call pdf.SetFont("Helvetica", pdf.kfsnone, 12, true, pdf.kcpUnicode)

dim h as Double = pdf.GetTextHeightEx(100, pdf.ktaLeft, "Hello World. Just a test string.")

MsgBox "height: "+str(h)

call pdf.EndPage
call pdf.CloseFile
```

**Notes:**

GetTextHeightEx does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to unicode.

### 77.39.506 GetTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function measures the height of a formatted text block.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

GetTextHeightExAnsi does escape backslashes so no formatting commands are taken from the string.
The text parameter is converted to ANSI.

### 77.39.507 GetTextRect(byref PosX as Double, byref PosY as Double, byref Width as Double, byref Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the bounding rectangle to output formatted text.
See also GetTextRect function in DynaPDF manual.

### 77.39.508 GetTextRise as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current text rise used to output text.
See also GetTextRise function in DynaPDF manual.

### 77.39.509 GetTextScaling as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current value of horizontal text scaling.
See also GetTextScaling function in DynaPDF manual.

### 77.39.510 GetTextWidth(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function calculates the width of a string.
**Notes:** The text parameter is converted to unicode.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 14921

### 77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates text width.
**Notes:**

The function can be used to calculate the width of a sub string that was returned by the content parser (see ParseContent() for further information). The parameter FontHandle must be a valid handle of a font object that was provided in the SetFont event. Note that this function is optimized for speed and does not use the normal error handling of DynaPDF. The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state.

If the function succeeds the return value is the string width measured in text space. If the parameter FontHandle is set 0 the return value is 0.0.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.510 GetTextWidth(aText as string) as Double 14921

### 77.39.512 GetTextWidthAnsi(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function calculates the width of a string.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also GetTextWidth function in DynaPDF manual.
See also:

- 77.39.510 GetTextWidth(aText as string) as Double 14921
- 77.39.511 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double 14921

### 77.39.513 GetTIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries version of tiff library.
**Notes:**

Should be 3.7.2 on plugins 17.1.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

### 77.39.514 GetTransparentColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the transparent color value that is used for newly inserted images.
See also GetTransparentColor function in DynaPDF manual.

### 77.39.515 GetTrapped as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the trapped key of the document.
See also GetTrapped function in DynaPDF manual.

### 77.39.516 GetTypoLeading as double

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the typographic leading or line height of a font.
**Notes:**

This is sTypoAscender ,Äì sTypoDescender + sTypoLineGap of the OS/2 table of TrueType and OpenType fonts. The value is scaled to the current font size. Type1 fonts do not support these metrics.

The function can be called after a font was activated in the graphics state, e.g. with SetFont(), SetFontEx(), SetCIDFont(), or ChangeFont().

If typographic metrics are not available the return value is Ascent ,Äì Descent. If the value is smaller than the font size then the font size is returned.

If the function succeeds the return value is the typographic leading of the active font, this is a value greater

zero. If the function fails the return value is a negative error code.
See also GetTypoLeading function in DynaPDF manual.

### 77.39.517 GetURIAction(index as Integer) as DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries details for an URI action.
**Notes:** Index is from 0 to GetActionCount-1.
See also GetURIAction function in DynaPDF manual.

### 77.39.518 GetUseExactPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also GetUseExactPwd function in DynaPDF manual.

### 77.39.519 GetUseGlobalImpFiles as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files.
See also GetUseGlobalImpFiles function in DynaPDF manual.

### 77.39.520 GetUserRights as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the encryption flags of an imported PDF file or -1 if the imported PDF file was not encrypted.
See also GetUserRights function in DynaPDF manual.

### 77.39.521 GetUserUnit as single

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the user unit of the current open page.
**Notes:**

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.
See also GetUserUnit function in DynaPDF manual.

### 77.39.522 GetUseStdFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns 1 (true) if the 14 standard fonts are enabled.
See also GetUseStdFonts function in DynaPDF manual.

### 77.39.523 GetUsesTransparency(Page as Integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether a page or the entire document uses transparency.
**Notes:**

This is no quick check as GetDocUsesTransparency() applies. The function parses the page or pages to determine whether transparent objects are relly used.
To check whether a specific page uses transparency set the parameter PageNum to the wished page number. The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a negative error code on failure.
The following flags are defined:

- 0: The page or document uses no transparency.
- 1: The content stream of a page contains transparent objects.
- 2: A page defines the blending color space (Group dictionary).
- 4: A page contains transparent annotations or form fields.

The above values can occur in any combination. To check whether a specific flag was set use a binary and operator: BitwiseAnd(value, flag)

See also GetUsesTransparency function in DynaPDF manual.

### 77.39.524 GetUseSystemFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether the % Windows% /Fonts directory should be added automatically to the list of available font search paths.
See also GetUseSystemFonts function in DynaPDF manual.

### 77.39.525 GetUseTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether images should get a transparent background.
See also GetUseTransparency function in DynaPDF manual.

### 77.39.526 GetUseVisibleCoords as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also GetUseVisibleCoords function in DynaPDF manual.

### 77.39.527 GetViewerPreferences(byref Preference as Integer, byref AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the viewer preferences specified in the document.
See also GetViewerPreferences function in DynaPDF manual.

### 77.39.528 GetViewport(Page as UInt32, index as Integer) as DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a viewport that is associated with a page.
**Notes:**

A viewport is a rectangular region of a page, that specifies usually a measure coordinate system or points in a geospatical coordinate system.
Since viewports might overlap, to determine the viewport to use for any point on a page, the viewports in the array shall be examined, starting with the last one and iterating in reverse, and the first one whose BBox entry contains the point shall be chosen.
To determine how viewports and measure dictionaries can be used, please have a look into the PDF Reference 2.0, ISO/DIS 32000-2, Section Measurement properties.
Returns nil on any error.
See also GetViewport function in DynaPDF manual.

### 77.39.529 GetViewportCount(Page as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of viewports which are associated with a page.
**Notes:**

The first page has the page number 1.
If the function succeeds the return value is the number of viewports, a number greater or equal zero. If the function fails the return value is a negative error code. The function can only fail if the page number is invalid.
See also GetViewportCount function in DynaPDF manual.

### 77.39.530 GetWMFDefExtent(byref width as Integer, byref height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the default size which is used to convert non portable WMF files to EMF.
See also GetWMFDefExtent function in DynaPDF manual.

### 77.39.531 GetWMFPixelPerInch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also GetWMFPixelPerInch function in DynaPDF manual.

### 77.39.532 GetWordSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the current word spacing.
See also GetWordSpacing function in DynaPDF manual.

### 77.39.533 GetXFAStream(Handle as UInt32) as DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns an XFA stream.
**Notes:**

The parameter Index is the array index. The function GetXFAStreamCount() returns the number of available streams.
An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.
If the function succeeds the return value is 1. If the function fails the return value is 0.
See also GetXFAStream function in DynaPDF manual.

### 77.39.534 GetXFAStreamCount as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of available XFA streams.
**Notes:**

XFA streams are available after a PDF file was imported.
If the function succeeds the return value is the number of available XFA streams. If the function fails the return value is a negative error code.
See also GetXFAStreamCount function in DynaPDF manual.

### 77.39.535 GetZlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries version of zlib library.
**Notes:**

Should be 1.2.7 on plugins 17.x.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

### 77.39.536 GofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns G of a RGB color value.
**Example:**

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.GofRGB(rgb)) // shows 2
```

### 77.39.537 HaveOpenDoc as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory.
See also HaveOpenDoc function in DynaPDF manual.

### 77.39.538 HaveOpenPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a page is open.
See also HaveOpenPage function in DynaPDF manual.

### 77.39.539 HighlightAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a highlight annotation with unicode text.
See also HighlightAnnot function in DynaPDF manual.

### 77.39.540 HighlightAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a highlight annotation with ANSI text.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also HighlightAnnot function in DynaPDF manual.

### 77.39.541 HighlightOnAllPages(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Highlights text on all pages of the current document.
**Notes:**

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Searches on all pages in the document.
Returns number of times the text was found.

### 77.39.542 HighlightOnCurrentPage(SearchText as string, ColorValue as Color, CaseInsenitive as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Highlights text on all pages of the current page.
**Notes:**

If CaseInsenitive is true, the case of letters is ignored (also umlauts and accents)
Use EditPage function to open the page before you search on it.
Returns number of times the text was found.

### 77.39.543 ImportBookmarks as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function imports the outline tree of the currently opened import file (see OpenImportFile() or OpenImportBuffer()).
See also ImportBookmarks function in DynaPDF manual.

### 77.39.544 ImportCatalogObjects as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function imports global objects of the currently opened import file such as bookmarks, JavaScripts, embedded files, open actions, invisible page templates, rendering intents, the document info

entries, and certain other global properties such as the page mode or page layout.
See also ImportCatalogObjects function in DynaPDF manual.

### 77.39.545 ImportDocInfo as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function imports the document info entries from the currently opened import file.
See also ImportDocInfo function in DynaPDF manual.

### 77.39.546 ImportEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Imports the encryption settings from the currently open import file (see OpenImportFile() or OpenImportBuffer() for further information).
**Notes:**

If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call GetInIsEncrypted().
The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See GetUserRights() for further information.
If the file was opened with the owner password, then all editing rights should be grated. The PDF file must be closed with CloseFile() or CloseAndSignFile() for example. Don't use
CloseFileEx() for example since this function would override the encryption settings.
If the file should be saved unencrypted call ResetEncryptionSettings() before closing the file. Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportEncryptionSettings function in DynaPDF manual.

### 77.39.547 ImportOCProperties as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Imports the global Optional Content Properties of the curent open import file.
**Notes:**

OC properties are normally automatically imported by functions like ImportPDFFile() or when importing a page that contains layers. However, a viewer application must be able to access the OC properties right after the PDF file was opened so that the layer configuration and the layer tree can be loaded (see LoadLayerConfig() and GetOCUINode() for further information).
The function can be called multiple times without causing unwanted side effects.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ImportOCProperties function in DynaPDF manual.

### 77.39.548 ImportPage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function imports a page of an external PDF file and converts this page to a template.
**Notes:** Requires DynaPDF Pro license.
See also ImportPage function in DynaPDF manual.

### 77.39.549 ImportPageEx(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function imports a PDF page of an external PDF file incl. interactive objects such as annotations, form fields and so on, if any.
**Notes:** Requires DynaPDF Pro license.
See also ImportPageEx function in DynaPDF manual.

### 77.39.550 ImportPDFFile(DestPage as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function imports an external PDF file incl. interactive objects such as annotations, bookmarks, form fields and so on.
**Example:**

```
// new PDF
Dim pdf As New MyDynapdfMBS

pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License

// create output file
Dim outFile As folderitem = SpecialFolder.Desktop.Child("NewPDF.pdf")
Call pdf.CreateNewPDF(outFile)

// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)
```

```
// import PDF
Dim inFile As folderitem = SpecialFolder.Desktop.Child("test.pdf")

Call pdf.OpenImportFile(inFile)
Call pdf.ImportPDFFile(1)

// now delete one page
Call pdf.DeletePage(2)

// close output file
Call pdf.closefile
```

**Notes:**

Scaling factor is ignored if importing as pages (not templates).

This function returns the page number of the last page imported. It does not return how many pages are imported. If you need number of imported pages, please use returned value minus DestPage.
See also ImportPDFFile function in DynaPDF manual.

### 77.39.551 ImportPDFPage(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Imports a PDF page.
**Notes:**

If a page is open, this function calls EndPage.
Than it appends a new page, calls ImportPageEx and Endpage.

On success the return value is zero. If the function fails the return value is a negative error code.
See also ImportPDFPage function in DynaPDF manual.

### 77.39.552 InitColorManagement(profiles as DynaPDFColorProfilesMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes color management with the given default profiles.
**Notes:**

Pass nil for profiles to disable color management.

DestSpace can be kcsDeviceRGB, kcsDeviceCMYK or kcsDeviceGray.
Flags can be kicmDefault or kicmBPCompensation for:
Black point compensation preserves the black point when converting CMYK colors to different color spaces.

See also InitColorManagement function in DynaPDF manual.

### 77.39.553 InitColorManagementEx(profiles as DynaPDFColorProfilesExMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize color management.
**Notes:**

The function enables color management in the functions RenderPage(), RenderPageEx(), RenderPageToImage(), and RenderPDFFile() exactly like InitColorManagement() but accepts ICC profile buffers instead of file paths. See InitColorManagement() for further information.

To disable color management set the parameter Profiles to nil.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.
The color management can be initialized right after the PDF instance was created.

Returns true on succes or false on failure.
See also InitColorManagementEx function in DynaPDF manual.

### 77.39.554 InitStack(byref stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function initializes the variable Stack with default values and prepares the editing of a content stream.
**Example:**

```
dim s as DynaPDFStackMBS
dim pdf as DynaPDFMBS // get your DynaPDF object

call pdf.InitStack(s)
```

**Notes:**

If stack is nil, a new one will be created and stored in the variable.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also InitStack function in DynaPDF manual.

### 77.39.555 InkAnnot(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an Ink annotation.
**Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

### 77.39.556 InkAnnotAnsi(points() as DynaPDFPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an Ink annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The

parameter Points represents a stroked path. More paths can be added with AddInkList.
The points are interpreted in currect user space. Any transformation that was applied on the coordinate system will be taken into account.
The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also InkAnnot function in DynaPDF manual.

### 77.39.557 InsertBarcode(PosX as double, PosY as double, Width as double, Height as double, HAlign as Integer, VAlign as Integer, Barcode as DynaPDFBarcode2MBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inserts a barcode to the current open page.
**Example:**

```
Dim d As New DynapdfMBS
// create/edit a page, then draw barcode:

// UPCA
Dim b1 As New DynaPDFBarcode2MBS
b1.BarcodeType = b1.kbctUPCA
b1.Data = "72527270270"

Call d.InsertBarcode(100, 100, 200, 50, d.kcoLeft, d.kcoTop, b1)
```

**Notes:**

See the kbct* constants for the types supported.

Options are very similar to what we have in our BarcodeGeneratorMBS class as both use the same zint library.
See also InsertBarcode function in DynaPDF manual.

### 77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a Device Independent Bitmap from a file buffer.
**Deprecated:** This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14936
- 77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14936

### 77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a Device Independent Bitmap from a file buffer.
**Deprecated:** This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14936
- 77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer 14936

### 77.39.560 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a Device Independent Bitmap from a file buffer.
**Deprecated:** This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also InsertBMPFromBuffer function in DynaPDF manual.
See also:

- 77.39.558 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer 14936
- 77.39.559 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer 14936

### 77.39.561 InsertBMPFromHandle(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, hBitmap as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts a bitmap in the same way as InsertImage() but accepts a HBITMAP handle as input.
See also InsertBMPFromHandle function in DynaPDF manual.

### 77.39.562 InsertBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts a bookmark to the global outline tree of the document.
**Notes:** The title parameter is converted to unicode.
See also InsertBookmark function in DynaPDF manual.

### 77.39.563 InsertBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts a bookmark to the global outline tree of the document.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmark function in DynaPDF manual.

### 77.39.564 InsertBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts a bookmark to the global outline tree of the document.
**Notes:** The title parameter is converted to unicode.
See also InsertBookmarkEx function in DynaPDF manual.

### 77.39.565 InsertBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts a bookmark to the global outline tree of the document.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The title parameter is converted to ANSI.
See also InsertBookmarkEx function in DynaPDF manual.

### 77.39.566 InsertImage(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a file.
**Example:**

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use InsertImage instead.
**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImage function in DynaPDF manual.

### 77.39.567 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a file.
**Example:**

```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(false)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImageEx(0, 0, 300, 200, source)
```

**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 77.39.568 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer 14940

### 77.39.568 InsertImageEx(PosX as double, PosY as double, ScaleWidth as double, ScaleHeight as double, Path as String, index as integer = 1) as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a file.
**Example:**

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.
See also:

- 77.39.567 InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer 14939

### 77.39.569 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 77.39.570 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer 14941

### 77.39.570 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass positon and size as doubles. If you use integers, Xojo will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 77.39.569 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer 14941

### 77.39.571 InsertMetafile(FileName as folderitem, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic.
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafile function in DynaPDF manual.

### 77.39.572 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 77.39.573 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14942

### 77.39.573 InsertMetafileEx(Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileEx function in DynaPDF manual.
See also:

- 77.39.572 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14942

### 77.39.574 InsertMetafileExt(FileName as folderitem, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileExt function in DynaPDF manual.

### 77.39.575 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 77.39.576 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14943

### 77.39.576 InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt().
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileExtEx function in DynaPDF manual.
See also:

- 77.39.575 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean 14943

### 77.39.577 InsertMetafileFromHandle(hEnhMetafileHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts an Enhanced Metafile exactly in the same way as InsertMetafile() but accepts a HENHMETAFILE handle as input.
**Notes:** Requires DynaPDF Lite license.

See also InsertMetafileFromHandle function in DynaPDF manual.

### 77.39.578 InsertMetafileFromHandleEx(hEnhMetafileHandle as Integer, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function inserts an Enhanced Metafile exactly in the same way as InsertMetafileExt() but accepts a HENHMETAFILE handle as input.
**Notes:** Requires DynaPDF Lite license.
See also InsertMetafileFromHandleEx function in DynaPDF manual.

### 77.39.579 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Takes a Xojo picture with a mask and adds it to the PDF.
**Example:**

```
// insert MBS Logo with round Mask
dim d as new MyDynaPDFMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call d.CreateNewPDF file
call d.Append

// get picture
dim p as Picture = LogoMBS(500)

// get mask
dim m as new Picture(500, 500, 32)
m.Graphics.ForeColor = & cFFFFFF
m.Graphics.FillRect 0,0,500,500
m.Graphics.ForeColor = & c000000
m.Graphics.FillOval 0,0,500,500

// add image to pdf
call d.InsertPicture(p, m, 50, 150, 500, 500)

call d.EndPage
call d.CloseFile
```

**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
This is a convenience function to handle picture with mask.

Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

Usually InsertPicture with the mask/alpha is better.
PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 77.39.580 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14945

### 77.39.580 InsertPicture(pic as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Takes a Xojo picture and adds it to the PDF.
**Notes:**

Please call SetUseTransparency(false) before inserting image if you don't like one of the colors (default white) to become transparent.
Internally this calls pdfInsertRawImage so check the documtation on this function in the dynapdf manual.
For images with alpha channel, we pass a PNG via pdfInsertImageFromBuffer.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image.
See also:

- 77.39.579 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14944

### 77.39.581 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 77.39.582 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14946

### 77.39.582 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a raw image buffer which contains no image header.
See also InsertRawImage function in DynaPDF manual.
See also:

- 77.39.581 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer 14945

### 77.39.583 InsertRawImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Image as DynaPDFRawImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts an image from a raw image buffer that contains no image header.
**Notes:**

See also InsertRawImageEx in dynapdf_help.pdf manual file.
Returns false if image parameter has invalid values.
See also InsertRawImageEx function in DynaPDF manual.

### 77.39.584 IsBidiText(Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function returns the position of the first bidirectional character that can be found in the string or -1 if no such character can be found.
**Notes:** The text parameter is converted to unicode.
See also IsBidiText function in DynaPDF manual.

### 77.39.585 IsColorPage(GrayIsColor as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function checks whether a page is a color page or if all graphic elements of the page use black & white only.
**Notes:** Value is 0 for false, 1 for true or negative for an error.
See also IsColorPage function in DynaPDF manual.

### 77.39.586 IsEmptyPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks whether a page is empty.
**Notes:** Value is 0 for false, 1 for true or negative for an error.
See also IsEmptyPage function in DynaPDF manual.

### 77.39.587 IsWrongPwd(errCode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether an error code is for a wrong password.
**Notes:** We have several error codes which result from different password protections and this function considers them all.
See also IsWrongPwd function in DynaPDF manual.

### 77.39.588 KofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns K of a CMYK color value.
**Example:**

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.KofCMYK(cmyk)) // shows 4
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 77.39.589 LAB(L as Integer, A as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Builds a LAB color value based on the given component values.
**Example:**

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox hex(lab)
```

### 77.39.590 LineAnnot(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a line annotation.
See also LineAnnot function in DynaPDF manual.

### 77.39.591 LineAnnotAnsi(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a line annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also LineAnnot function in DynaPDF manual.

### 77.39.592 LineTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a path from the current position up to the specified point.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")
```

```
pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also LineTo function in DynaPDF manual.

### 77.39.593 LoadCMap(CMapName as string, Embed as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads a character map.
See also LoadCMap function in DynaPDF manual.

### 77.39.594 LoadError as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message from LoadLibrary call.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox DynaPDFMBS.LoadError
end if
```

### 77.39.595 LoadFDFData(FileName as folderitem, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads PDF form data from the given PDF file.
See also LoadFDFData function in DynaPDF manual.

### 77.39.596 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 77.39.597 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean 14950

### 77.39.597 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:

- 77.39.596 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean 14950

### 77.39.598 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font from a file buffer.
**Notes:** Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 77.39.599 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14951

### 77.39.599 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font from a file buffer.
**Notes:** Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:

- 77.39.598 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14951

### 77.39.600 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 77.39.601 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14952

### 77.39.601 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.
See also LoadFontEx function in DynaPDF manual.
See also:

- 77.39.600 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 14951

### 77.39.602 LoadLayerConfig(Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the specified layer configuration.
**Notes:**

A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
Use this function to load another configuration if available. To determine the number of available configurations call GetLayerConfigCount().

The paramter Index can be one of the following:

- -1: Load the default configuration.
- -2: If a configuration was already loaded, leave it unchanged. Load
- the default configuration otherwise.
- 0..Count -1: Load the specified configuration.

If the function succeeds the return value is true. If the function fails the return value is false.
See also LoadLayerConfig function in DynaPDF manual.

### 77.39.603 LoadLibrary(File as FolderItem) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the dynapdf library file.
**Example:**

```
MsgBox "Version before: "+DynaPDFMBS.DynaPDFVersion

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf.dylib")

if DynaPDFMBS.LoadLibrary(f) then
MsgBox "Version after: "+DynaPDFMBS.DynaPDFVersion
else
MsgBox DynaPDFMBS.LoadError
end if
```

**Notes:**

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 77.39.604 LoadLibrary(Path as string) as boolean 14953

### 77.39.604 LoadLibrary(Path as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the dynapdf library file.
**Notes:**

Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 77.39.603 LoadLibrary(File as FolderItem) as boolean 14952

### 77.39.605 LockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unlocks a layer.
See also LockLayer function in DynaPDF manual.

### 77.39.606 LofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns L of a LAB color value.
**Example:**

```
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.LofLAB(lab)) // shows 1
```

### 77.39.607 MofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns M of a CMYK color value.
**Example:**

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.MofCMYK(cmyk)) // shows 2
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 77.39.608 MovePage(source as Integer, dest as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function moves a page to another position in the document.
See also MovePage function in DynaPDF manual.

### 77.39.609 MoveTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function moves the current position to the point specified by PosX, PosY.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
```

```
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also MoveTo function in DynaPDF manual.

### 77.39.610 MultiplyMatrix(M1 as DynaPDFMatrixMBS, M2 as DynapdfMatrixMBS, NewMatrix as DynapdfMatrixMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function multiplies two transformation matrices and stores the result in the parameter NewMatrix.
**Notes:** You must pass three non nil matrix references into the function.
See also MultiplyMatrix function in DynaPDF manual.

### 77.39.611 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
**Notes:** Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 77.39.612 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer 14956

### 77.39.612 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it.
**Notes:** Requires DynaPDF Lite license.
See also OpenImportBuffer function in DynaPDF manual.
See also:

- 77.39.611 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer 14956

### 77.39.613 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function opens an external PDF file so that it can be imported entirely or parts of it.
**Notes:** Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 77.39.614 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer 14956

### 77.39.614 OpenImportFile(Path as String, PwdType as integer = 0, Password as string = "") as integer

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function opens an external PDF file so that it can be imported entirely or parts of it.
**Notes:** Requires DynaPDF Lite license.
See also OpenImportFile function in DynaPDF manual.
See also:

- 77.39.613 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer 14956

### 77.39.615 OpenOutputFile(File as folderitem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function opens the output file into which the PDF file should be written.
**Example:**

```
Dim d As New DynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Dim f As FolderItem = SpecialFolder.Desktop.Child("mond.pdf")
Call d.OpenOutputFile(f)

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 77.39.616 OpenOutputFile(Path as String) as Boolean 14957

### 77.39.616 OpenOutputFile(Path as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function opens the output file into which the PDF file should be written.
**Example:**

```
Dim d As New MyDynaPDFMBS

// create PDF in memory
Call d.CreateNewPDF

// add a picture
Call d.Append
Call d.InsertImageEx(100, 100, 100, 100, "/Users/cs/Pictures/mond.jpg")
Call d.EndPage

// okay?
If d.HaveOpenDoc Then

// open target file
Call d.OpenOutputFile("/Users/cs/Desktop/mond.pdf")

// write and close
Call d.CloseFile

End If
```

See also OpenOutputFile function in DynaPDF manual.
See also:

- 77.39.615 OpenOutputFile(File as folderitem) as Boolean 14957

### 77.39.617 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the output file and sets the encryption parameters.
**Notes:**

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 77.39.618 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean 14959

### 77.39.618 OpenOutputFileEncrypted(Path as String, OpenPwd as string, OwnerPwd as string, KeyLen as integer, Restrict as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the output file and sets the encryption parameters.
**Notes:**

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.
The function can be called in a while statement, e.g. to display a open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.
See also OpenOutputFileEncrypted function in DynaPDF manual.
See also:

- 77.39.617 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean 14958

### 77.39.619 OpenTag(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tag.
**Notes:**

Rect: Optional parameter BBox that is required by the tags btFigure and btTable.

BBox must be defined in the current coordinate system that is used to output the corresponding contents. All transformations will be taken into account.
See also OpenTag function in DynaPDF manual.

### 77.39.620 OpenTagAnsi(Tag as Integer, Lang as string, AltText as string, Expansion as string, BBox as DynaPDFRectMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a tag with ANSI encoding.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Notes:** Rect: Optional parameter BBox that is required by the tags btFigure and btTable.
See also OpenTag function in DynaPDF manual.

### 77.39.621 Optimize(Flags as Integer = 0, Params as DynaPDFOptimizeParamsMBS = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optimizes PDF.
**Example:**

```
dim pdf as new DynapdfMBS
// import PDF here

dim flags as integer = Bitwise.BitOr(_
pdf.kofInMemory, _ // Optimize the file fully in memory. Only useful for small PDF files.
pdf.kofScaleImages, _ // Scale images as specified in the DynaPDFOptimizeParamsMBS class.
pdf.kofNewLinkNames, _ // If set, rename all object links to short names like F1, F2 etc.
pdf.kofDeleteInvPaths, _ // Delete invisible paths.
pdf.kofDeletePrivateData, _ // Delete private data objects from pages, templates, and images.
pdf.kofIgnoreZeroLineWidth, _
pdf.kofDeleteAlternateImages, _ // If set, alternate images will be deleted.
pdf.kofDeleteThumbnails) // Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

// pdf.kofInMemory // Optimize the file fully in memory. Only useful for small PDF files.
// pdf.kofConvertAllColors // If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.
// pdf.kofIgnoreICCBased // If set, ICCBased color spaces will be left unchanged.
// pdf.kofScaleImages // Scale all images
// pdf.kofNewLinkNames // If set, rename all object links to short names like F1, F2 etc.
// pdf.kofDeleteInvPaths // Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".
// more flags in DynaPDF documentation

Dim o As New DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi

call pdf.Optimize(flags, o)
```

**Notes:**

This repairs also a lot of errors in the PDF and can shrink the PDF size.
After optimize, please close PDF. If you need to further edit it, please import it again in a new environment.

You need to use InitColorManagement to get color conversion working well if needed.

Note that this function requires the DynaPDF Pro.
See also Optimize function in DynaPDF manual.

### 77.39.622 PageLink(PosX as Double, PosY as Double, Width as Double, Height as Double, DestPage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a page link onto the current open page.
See also PageLink function in DynaPDF manual.

### 77.39.623 PageLink2(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a page link onto the current open page by using a named destination as target.
See also PageLink2 function in DynaPDF manual.

### 77.39.624 PageLink3(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds a page link to the current open page by using a named destination as target.
**Notes:**

The difference in comparison to PageLink2() is that the named destination can be defined as string.
This makes it possible to create the link, also if you don't have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the link does nothing. See also, CreateNamedDest().

Return values:
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the

function fails the return value is a negative error code.

See also PageLink3 function in DynaPDF manual.

### 77.39.625 PageLinkEx(PosX as Double, PosY as Double, Width as Double, Height as Double, DestType as Integer, DestPage as Integer, a as Double = 0.0, b as Double = 0.0, c as Double = 0.0, d as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a page link onto the current open page.
See also PageLinkEx function in DynaPDF manual.

### 77.39.626 PageStatistic(page as Integer = -1) as DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries statistics from a page.
**Notes:**

If page is -1 the current open page is used. Else the plugin uses editpage(page) to open the page and run the statistics on that.
Returns nil on any error or statistic value.

### 77.39.627 ParseContent(ParseInterface as DynaPDFParseInterfaceMBS, flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses the content of a page.
**Notes:** Requires DynaPDF Pro license.
See also ParseContent function in DynaPDF manual.

### 77.39.628 PlaceImage(ImgHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Images can be used multiple times on different positions and with different sizes. This function

places an image onto a page or template that was already inserted beforehand by an image function.
See also PlaceImage function in DynaPDF manual.

### 77.39.629 PlaceSigFieldValidateIcon(SigField as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function places the validation icon in a signature field to the whished position.
See also PlaceSigFieldValidateIcon function in DynaPDF manual.

### 77.39.630 PlaceTemplate(TmplHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function places a template onto a page, another open template, or pattern.
See also PlaceTemplate function in DynaPDF manual.

### 77.39.631 PlaceTemplateEx(TmplHandle as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Places a template.
See also PlaceTemplateEx function in DynaPDF manual.

### 77.39.632 PolygonAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a Polygon Annotation.
**Notes:**

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is

not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

### 77.39.633 PolygonAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a Polygon Annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
ÔøºÔøº

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolygonAnnot function in DynaPDF manual.

### 77.39.634 PolyLineAnnot(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a PolyLine Annotation.
**Notes:**

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

### 77.39.635 PolyLineAnnotAnsi(Vertices() as DynaPDFPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a PolyLine Annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpretet in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

### 77.39.636 PrintGetDevMode as String

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

**Function:** Queries last print dev mode.
**Notes:**

You can store this in a preferences file for next printing.
This is same data structure as in WindowsDeviceModeMBS class.

### 77.39.637 PrintGetDevNames(byref Driver as String, byref Device as String, byref Output as String, byref DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

**Function:** Queries printer device names.
**Notes:**

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

### 77.39.638 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

**Function:** Prints current PDF file.
**Notes:**

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.

Margin can be nil. If not nil, specifies the margins to use.
DCHandle is the handle of the graphics context.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.

Does not work with a graphics handle from Xojo 2016r4 and newer due to switch to DirectDraw APIs.
Or in other words, you can use a HDC handle from graphics class in Xojo 2016r3 and older to print PDF.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 77.39.639 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14967

### 77.39.639 PrintPDFFile(TempDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: All.

**Function:** Prints current PDF file.
**Notes:**

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
PrinterName is the name of the printer to use. The plugin will open the printer and print PDF there with default settings.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don't want to print.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 77.39.638 PrintPDFFile(TempDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14966

### 77.39.640 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

**Function:** Prints current PDF file with dialog.
**Notes:**

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.
See also:

- 77.39.641 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 14968

### 77.39.641 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Prints current PDF file with dialog.
**Notes:**

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function.
Or use DeletePage to remove the pages you don't want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.
See also:

- 77.39.640 PrintPDFFileWithDialog(TempDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 14968

### 77.39.642 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints a page.
**Notes:** See PrintPDFFile for details and options.
See also:

- 77.39.643 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14969

### 77.39.643 PrintPDFPage(PageNumber as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Prints a page.
**Notes:**

See PrintPDFFile for details and options.

Version 18.4 and newer use device mode set with DynaPDFMBS.PrintSetDevMode method for printer settings.
See also:

- 77.39.642 PrintPDFPage(PageNumber as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean 14969

### 77.39.644 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Prints a page with dialog.
**Notes:** See PrintPDFFileWithDialog for details and options.
See also:

- 77.39.645 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean 14970

### 77.39.645 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer, Margin as DynaPDFRectMBS, PrintParams as DynaPDFPrintParamsMBS, parentWindow as DesktopWindow) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Prints a page with dialog.
**Notes:** See PrintPDFFileWithDialog for details and options.
See also:

- 77.39.644 PrintPDFPageWithDialog(PageNumber as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean 14970

### 77.39.646 PrintSetDevMode(data as MemoryBlock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

**Function:** Set last print dev mode.
**Notes:**

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 77.39.647 PrintSetDevMode(data as String) as Boolean 14971

### 77.39.647 PrintSetDevMode(data as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

**Function:** Set last print dev mode.
**Notes:**

Returns true on success.
This is same data structure as in WindowsDeviceModeMBS class.
See also:

- 77.39.646 PrintSetDevMode(data as MemoryBlock) as Boolean 14970

### 77.39.648 PrintSetDevNames(Driver as String, Device as String, Output as String, DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop only.

**Function:** Sets printer device names.
**Notes:**

Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

### 77.39.649 ReadImageFormat(FileName as folderitem, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of an image file.
See also ReadImageFormat function in DynaPDF manual.

### 77.39.650 ReadImageFormat2(FileName as folderitem, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of an image file.
**Example:**

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageFormat2 function in DynaPDF manual.

### 77.39.651 ReadImageFormatEx(hBitmap as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of a memory bitmap.
See also ReadImageFormatEx function in DynaPDF manual.

### 77.39.652 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 77.39.653 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14973

### 77.39.653 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input.
See also ReadImageFormatFromBuffer function in DynaPDF manual.
See also:

- 77.39.652 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean 14973

### 77.39.654 ReadImageResolution(FileName as folderitem, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the horizontal and vertical resolution of an image file.
**Example:**

```
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer
```

```
call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <>resY and resX >0 and resY >0) then
if (resX >resY) then
physWidth = w
physHeight = h \(resX \resY)
else
physWidth = w \(resY \resX)
physHeight = h
end if
else
physHeight = h
physWidth = w
end if
```

See also ReadImageResolution function in DynaPDF manual.

### 77.39.655 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 77.39.656 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 14974

### 77.39.656 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 77.39.655 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean 14974

### 77.39.657 Rectangle(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function draws a rectangle.
See also Rectangle function in DynaPDF manual.

### 77.39.658 ReEncryptPDF(File as folderitem, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function encrypts an already encrypted or unencrypted PDF file.
See also ReEncryptPDF function in DynaPDF manual.

### 77.39.659 ReEncryptPDFAnsi(Path as string, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function encrypts an already encrypted or unencrypted PDF file.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** Same as ReEncryptPDF, but takes path name in Windows ANSI encoding.
See also ReEncryptPDF function in DynaPDF manual.

### 77.39.660 RenameSpotColor(Colorant as string, NewName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renames a colorant.
**Example:**

```
// your instance
dim pdf as DynaPDFMBS

// rename the color
call pdf.RenameSpotColor("Magenta", "Magenta2")
```

**Notes:** Strings are converted to UTF-8.
See also RenameSpotColor function in DynaPDF manual.

### 77.39.661 RenderAnnotOrField(Handle as UInt32, IsAnnot as boolean, State as Integer, Matrix as DynaPDFMatrixMBS, Flags as Integer, PixFmt as Integer, Filter as Integer, byref Out as DynaPDFBitmapMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function renders an annotation or field independent of the page.
**Notes:**

Please check dynapdf_help.pdf for details on RenderAnnotOrField function.
Plugin will fill out parameter only if result is zero.
Requires DynaPDF Pro license.
See also RenderAnnotOrField function in DynaPDF manual.

### 77.39.662 RenderPagePicture(PageNum as Integer) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders a picture for the page with the given page number.
**Example:**

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page
dim out as Picture = pdf.RenderPagePicture(1)
```

```
// display in window
Backdrop = out
```

**Notes:**

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture size is set to the Cropbox. If no crop box is defined, it uses the media box.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

For pages with orientation of 90 or 270 degree, the plugin will take that into account and swap width/height to have rendered picture have the riuht size.
See also:

- 77.39.663 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture 14977

### 77.39.663 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynaPDFMatrixMBS = nil) as picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders a picture for the page with the given page number.
**Example:**

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
```

```
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page with window size
dim out as Picture = pdf.RenderPagePicture(1, Width, Height)

// display in window
Backdrop = out
```

**Notes:**

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture is created with the given size. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.

If page is rotated, please swap width and height yourself.
See also:

- 77.39.662 RenderPagePicture(PageNum as Integer) as picture 14976

### 77.39.664 RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function renders a PDF page into an image.
**Example:**

```
dim pdf as new MyDynaPDFMBS // your DynaPDF subclass with Error event filled

// where to get PDF page
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// where to write
dim t as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

pdf.SetLicenseKey "Pro" // For this example you can use a Pro or Enterprise License

call pdf.CreateNewPDF nil
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open file
call pdf.OpenImportFile(f,0,"")

// add page
call pdf.Append

// import the page
call pdf.ImportPageEx(1,1.0,1.0)
call pdf.EndPage

// render the page
call pdf.RenderPageToImage(1, t, 72, ImageView1.Width, ImageView1.Height, DynaPDFRasterImageMBS.krfDe-
fault, DynaPDFRasterizerMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG)
```

**Notes:**

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to

retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats.
If the function succeeds the return value is true. If the function fails the return value is false.
Requires DynaPDF Pro license.
See also RenderPageToImage function in DynaPDF manual.

### 77.39.665 RenderPageToImageMT(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function renders a PDF page into an image.
**Notes:**

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage() open a page and EndPage() closes a page).
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.
- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.
- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.
- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats. If the function succeeds the return value is true. If the function fails the return value is false.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 77.39.666 RenderPageToPicture(PageNum as integer, pic as picture, DefScale as integer = 2, matrix as DynaPDFMatrixMBS = nil, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders the page into the given picture.
**Example:**

```
dim pdf as new MyDynaPDFMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
```

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create picture
dim out as new Picture(800, 600, 32)

// render first page in the existing picture
call pdf.RenderPageToPicture(1, out)

// display in window
Backdrop = out
```

**Notes:**

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

This method draws into an existing picture. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

This does not work on Linux desktop targets as the plugin can't write into a picture there.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it's faster when you reuse the rasterizer.
Requires DynaPDF Pro license.

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.

### 77.39.667 RenderPDFFile(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
**Example:**

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim pdf as new MyDynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create a TIFF file:

dim outfile as FolderItem = SpecialFolder.Desktop.Child("test.tif")

dim Flags as Integer = DynaPDFRasterImageMBS.krfDefault
dim PixFmt as Integer = DynaPDFRasterizerMBS.kpxfRGB
dim Format as Integer = DynaPDFMBS.kifmTIFF // use kifm* constants
dim Filter as Integer = DynaPDFMBS.kcfLZW // pick a compression scheme for the file format

call pdf.RenderPDFFile(outfile, 300, Flags, PixFmt, Filter, Format)

// create a folder of JPEG file:

dim outfolder as FolderItem = SpecialFolder.Desktop.Child("test files")
outfolder.CreateAsFolder

Flags = DynaPDFRasterImageMBS.krfDefault
PixFmt = DynaPDFRasterizerMBS.kpxfRGB
Format = DynaPDFMBS.kifmJPEG // use kifm* constants
Filter = DynaPDFMBS.kcfJPEG

call pdf.RenderPDFFile(outfolder, 300, Flags, PixFmt, Filter, Format)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
**Notes:**

One page PDF can go to e.g. a JPEG file.
Multi page PDF file can go to a TIFF file with several images.
Or you specify a folder and get a folder of JPEG/PNG/TIFF files.
See also RenderPDFFile function in DynaPDF manual.

### 77.39.668 RenderPDFFileEx(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
**Notes:**

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

See also RenderPDFFileEx function in DynaPDF manual.

### 77.39.669 RenderPDFFileExMT(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
**Notes:**

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.

The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the whished resolution.
- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.
- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder

must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

Same as RenderPDFFile, but multithreaded.

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 77.39.670 RenderPDFFileMT(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.
**Deprecated:** This item is deprecated and should no longer be used. You can use RenderPDFFileEx instead.
**Notes:**

Same as RenderPDFFile, but multithreaded.
Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

Requires DynaPDF Pro license.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 77.39.671 ReOpenImportFile(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function re-opens a PDf file so that further contents can be imported from it.
**Notes:**

The parameter Handle must be a valid file handle that OpenImportFile() or OpenImportBuffer() returned. When the file is no longer needed close the parser instance with CloseImportFileEx().
If the function succeeds the return value is true. If the function fails the return value is false.
See also ReOpenImportFile function in DynaPDF manual.

### 77.39.672 ReplaceFont(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces a PDF font with another one.
**Notes:**

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

### 77.39.673 ReplaceFontAnsi(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces a PDF font with another one.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.

### 77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces a PDF font with another one.
**Notes:**

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14988

### 77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces a PDF font with another one.
**Notes:**

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14988

### 77.39.676 ReplaceFontExAnsi(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces a PDF font with another one.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

- 77.39.674 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer 14988
- 77.39.675 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer 14988

### 77.39.677 ReplaceICCProfile(ColorSpace as Integer, ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function is used to dynamically create ICC based color spaces within OnReplaceICCProfile event of CheckConformance().
**Notes:** Use in OnReplaceICCProfile event.
See also ReplaceICCProfile function in DynaPDF manual.

### 77.39.678 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
**Notes:**

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 77.39.679 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer 14990

### 77.39.679 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.
**Notes:**

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
Use in OnReplaceICCProfile event.
See also ReplaceICCProfileEx function in DynaPDF manual.
See also:

- 77.39.678 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer 14989

### 77.39.680 ReplaceImage(ImageToReplace as DynaPDFImageMBS, ImageFile as FolderItem, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces an image with another image.
**Notes:**

The parameter ImageToReplace must be a valid pointer of an image object which is retrieved by functions like GetImageObj() or ParseContent().
The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrinked to fit into the output rectangle.
The parameter ColorSpace specifies the destination color space into which the image should be converted or saved, if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as InsertImageEx() with the following differences:
,Ä¢ The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function.

,Äc The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known.

If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to kesDeviceGray, kesCalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel.
The flags kgfUseImageColorSpace, kgfIgnoreICCProfiles, kgfRealPassThrough, and kfNoBitmapAlpha are all supported. See SetGStateFlags() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.
See also ReplaceImage function in DynaPDF manual.

### 77.39.681 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
**Notes:**

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 77.39.682 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14991

### 77.39.682 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
**Notes:**

See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also ReplaceImageEx function in DynaPDF manual.
See also:

- 77.39.681 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean 14991

### 77.39.683 ReplacePageText(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
**Notes:**

Be aware that ReplacePageText can't always replace text as encoding must match and fonts may not have the characters for the new text. For that better use ReplacePageTextEx.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageText function in DynaPDF manual.

### 77.39.684 ReplacePageTextEx(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
**Notes:**

The text parameter is converted to unicode.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

### 77.39.685 ReplacePageTextExAnsi(text as string, stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI.
Requires DynaPDF Pro license.
See also ReplacePageTextEx function in DynaPDF manual.

### 77.39.686 ResetAnnotAP(Handle as integer = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Forces a rebuild of the appearance stream of the specified annotation.
**Notes:** If Handle is set to -1 all annotation appearances will be rebuild. This function be useful if an imported annotation has an invalid or empty appearance stream.
See also ResetAnnotAP function in DynaPDF manual.

### 77.39.687 ResetEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the encryption settings which were imported from an external PDF file so that the PDF file in memory can be saved unencrypted.
**Notes:** If the function succeeds the return value is true. If the function fails the return value is false.
See also ResetEncryptionSettings function in DynaPDF manual.

### 77.39.688 ResetLineDashPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function resets a previously defined line dash pattern to its default value (straight line).
See also ResetLineDashPattern function in DynaPDF manual.

### 77.39.689 RestoreGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function restores a previously saved graphics state.
See also RestoreGraphicState function in DynaPDF manual.

### 77.39.690 RGB(R as Integer, G as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Builds a RGB color value based on the given component values.
**Example:**

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox hex(rgb)
```

### 77.39.691 RofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns R of a RGB color value.
**Example:**

```
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.RofRGB(rgb)) // shows 1
```

### 77.39.692 RotateCoords(alpha as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function rotates the coordinate system at the point OriginX, OriginY by applying a transformation matrix.
**Notes:** Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also RotateCoords function in DynaPDF manual.

### 77.39.693 RotateTemplate(OldTemplate as Integer, Rotation as Integer, RotateCoords as boolean = true) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Rotates a template.
**Notes:**

Returns a new template handle.
This is a convenience function which creates a new template and draws the existing template there with rotation.

Returns negative number for errors. The plugin uses -1 for plugin errors like wrong rotation angle.

RotateCoords: Whether to rotate coordinate system.
This is now done by DynaPDF automatically, so for current version of the library, this must be false. But older versions need the true.

### 77.39.694 RoundRect(PosX as Double, PosY as Double, Width as Double, Height as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a rectangle with rounded corners.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRect function in DynaPDF manual.

### 77.39.695 RoundRectEx(PosX as Double, PosY as Double, Width as Double, Height as Double, rWidth as Double, rHeight as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a rectangle with elliptical corners.
**Example:**

```
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch
```

See also RoundRectEx function in DynaPDF manual.

### 77.39.696 SaveGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function saves the current graphics state.
See also SaveGraphicState function in DynaPDF manual.

### 77.39.697 ScaleCoords(sx as Double, sy as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function scales the coordinate system by applying a transformation matrix.
**Notes:** Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also ScaleCoords function in DynaPDF manual.

### 77.39.698 SelfTest as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks the size of all required data types and checks whether the endian configuration of the library is correct.
See also SelfTest function in DynaPDF manual.

### 77.39.699 Set3DAnnotProps(Annot as Integer, ActType as Integer, DeActType as Integer, InstType as Integer, DeInstType as Integer, DisplayToolbar as boolean, DisplayModelTree as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the properties of a 3D Annotation.
See also Set3DAnnotProps function in DynaPDF manual.

### 77.39.700 Set3DAnnotScriptAnsi(Annot as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the 3D Annoation Script.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also Set3DAnnotScript function in DynaPDF manual.

### 77.39.701 SetAllocBy(Value as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the size of the memory blocks in kilo bytes, which will be allocated if memory must be allocated for page content streams.
See also SetAllocBy function in DynaPDF manual.

### 77.39.702 SetAltFonts(FontListHandle as Integer, List() as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fills an alternate font list created by CreateAltFontList() with data.
**Notes:**

Alternate font list are tested if one more glyphs were not found in the current font. Since the fonts in the list are used as fallback they should be compatible to the active font in regard to properties like serif, sans serif, proportional or fixed pitch, and so on.
A list should be sorted by priority and not by name. That means index 0 should contain a font name that is most probably the best match. If this one was not available or incompatible then the next font in the list will be tested until the end of the list was reached. If no suitable font was found then system fonts are tested.
The fonts in the list should support the language that must be output. Otherwise, the fonts can never be selected. An alternate font list can be arbitrary large but it is usually best to restrict the number fonts in a list to speed up processing.
A list can contain font names which are not available on the system. This causes no error. Non existing fonts are simply ignored. This makes it possible to define suitable alternate font lists statically. Such lists can then be loaded on demand.
After a list was filled with data it can be activated with ActivateAltFontList(). If a list is no longer needed delete it with DeleteAltFontList().

Please note that alternate font lists are used only, if complex text layout was enabled. This can be done by setting the flag kgfComplexText with SetGStateFlags().

Returns true on success.
See also SetAltFonts function in DynaPDF manual.

### 77.39.703 SetAnnotBorderEffect(Handle as Integer, BorderEffect as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border effect for an annotation.
**Notes:**

Returns true on success.
Handle is in range of 0 to number of annotations - 1.
See also SetAnnotBorderEffect function in DynaPDF manual.

### 77.39.704 SetAnnotBorderStyle(Handle as Integer, BorderStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation border style.
See also SetAnnotBorderStyle function in DynaPDF manual.

### 77.39.705 SetAnnotBorderWidth(Handle as Integer, LineWidth as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation border width.
See also SetAnnotBorderWidth function in DynaPDF manual.

### 77.39.706 SetAnnotColor(Handle as Integer, ColorType as Integer, PDFColorSpace as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation color.
See also SetAnnotColor function in DynaPDF manual.

### 77.39.707 SetAnnotFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the default flags used for newly created annotations.
See also SetAnnotFlags function in DynaPDF manual.

### 77.39.708 SetAnnotFlagsEx(Handle as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation flags.
See also SetAnnotFlagsEx function in DynaPDF manual.

### 77.39.709 SetAnnotHighlightMode(Handle as Integer, HighlightMode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation highlight mode.
See also SetAnnotHighlightMode function in DynaPDF manual.

### 77.39.710 SetAnnotIcon(Handle as Integer, AnnotIcon as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation icon.
See also SetAnnotIcon function in DynaPDF manual.

### 77.39.711 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or deletes the line dash pattern of an annotation.
**Notes:**

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Memoryblock must contain floating point values (Single).
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 77.39.712 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean 

### 77.39.712 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or deletes the line dash pattern of an annotation.
**Notes:**

The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 77.39.711 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean 15000

### 77.39.713 SetAnnotLineEndStyle(Handle as UInt32, StartLineStyle as Integer, EndLineStyle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the line end styles of a Line or PolyLine Annotation.
**Notes:** If the function succeeds the return value is true. If the function fails the return value is false.
See also SetAnnotLineEndStyle function in DynaPDF manual.

### 77.39.714 SetAnnotMigrationState(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a migration state to a markup annotation.
**Notes:**

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

### 77.39.715 SetAnnotMigrationStateAnsi(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a migration state to a markup annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed upÔøºprocessing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.

### 77.39.716 SetAnnotOpacity(Handle as Integer, opacity as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the opacity of a markup annotation.
**Notes:**

The function GetAnnotEx() or GetPageAnnotEx() can be used to determine whether an annotation is a markup annotation.

Returns true on succes or false on failure.
See also SetAnnotOpacity function in DynaPDF manual.

### 77.39.717 SetAnnotOpenState(Handle as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the annotation open state.
See also SetAnnotOpenState function in DynaPDF manual.

### 77.39.718 SetAnnotOrFieldDate(CSHandle as UInt32, IsField as Boolean, Type as Integer, DateTime as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the creation or modification date of an annotation or form field.
**Notes:**

If the parameter IsField is set to true, a valid field handle must be passed to the parameter Handle. An annotation handle is expected otherwise.
Annotations and form fields support a modification date but a creation date is supported by markup annotations only.
The following annotation types are markup annotations:

- Care
- Circle
- FileAttach
- FreeText

- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- Polygon
- Projection
- Redact
- Sound
- Square
- Stamp
- Text

The function GetAnnotEx() or GetPageAnnotEx() can also be used to determine whether an annotation is a markup annotation.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also SetAnnotOrFieldDate function in DynaPDF manual.

### 77.39.719 SetAnnotQuadPoints(Handle as UInt32, points() as DynaPDFPointMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or changes the quad points defintion of a Highlight, Link, Redakt, Squiggly, atStrikeOut, or Underline annotation.
**Notes:**

The function must be called within an open page.
Independent of the used coordinate system (bottom up or top down), the points must be defined in the following order:
x1,y1 x3,y3
x2,y2 x4,y4
Ôøº
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The number of points must be 4 or a multiple of 4.

Returns true on success.
See also SetAnnotQuadPoints function in DynaPDF manual.

### 77.39.720 SetAnnotString(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

### 77.39.721 SetAnnotStringAnsi(Handle as Integer, StringType as Integer, Value as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a stamp annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetAnnotString function in DynaPDF manual.

### 77.39.722 SetAnnotSubject(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the optional subject string of an annotation.
**Notes:** The value parameter is converted to unicode.
See also SetAnnotSubject function in DynaPDF manual.

### 77.39.723 SetAnnotSubjectAnsi(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the optional subject string of an annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetAnnotSubject function in DynaPDF manual.

### 77.39.724 SetBBox(Boundary as Integer, LeftX as Double, LeftY as Double, RightX as Double, RightY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets a specific bounding box of the current open PDF page.
See also SetBBox function in DynaPDF manual.

### 77.39.725 SetBidiMode(BidiMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the bidirectional mode.
See also SetBidiMode function in DynaPDF manual.

### 77.39.726 SetBlack(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets black color.
**Notes:**

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set black.

### 77.39.727 SetBookmarkDest(ABmk as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the destination of a bookmark.
See also SetBookmarkDest function in DynaPDF manual.

### 77.39.728 SetBookmarkStyle(ABmk as Integer, Style as Integer, RGBColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the bookmark style.
See also SetBookmarkStyle function in DynaPDF manual.

### 77.39.729 SetBorderStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set the global border style which is used for newly created form fields.
See also SetBorderStyle function in DynaPDF manual.

### 77.39.730 SetCharacterSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the current character spacing. The function requires an open page, template or pattern.
See also SetCharacterSpacing function in DynaPDF manual.

### 77.39.731 SetCheckBoxChar(CheckBoxChar as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the character which should be used for newly created check boxes.
See also SetCheckBoxChar function in DynaPDF manual.

### 77.39.732 SetCheckBoxDefState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function changes the default state of a check box; it can differ from the current visible state of the check box.
See also SetCheckBoxDefState function in DynaPDF manual.

### 77.39.733 SetCheckBoxState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the state of a check box. The parameter Field must be a valid check box handle.
See also SetCheckBoxState function in DynaPDF manual.

### 77.39.734 SetCIDFont(CMapHandle as Integer, Name as string, Style as Integer, Size as Double, Embed as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets a CID Font.
See also SetCIDFont function in DynaPDF manual.

### 77.39.735 SetCMapDir(path as folderitem, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the character map directory.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), 3
```

**Notes:**

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 77.39.736 SetCMapDir(path as string, flags as Integer) as Integer 15008

### 77.39.736 SetCMapDir(path as string, flags as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the character map directory.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetCMapDir SpecialFolder.Desktop.Child("CMAP"), pdf.klcmRecursive
```

**Notes:**

Takes an integer instead of a boolean starting with plugin version 11.2pr6.
See klcmDefault, klcmDelayed and klcmRecursive constants.
Requires DynaPDF Pro license.
See also SetCMapDir function in DynaPDF manual.
See also:

- 77.39.735 SetCMapDir(path as folderitem, flags as Integer) as Integer 15008

### 77.39.737 SetColDefFile(EmbFile as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the initial document of a portable collection that should be opened in the viewer application. See also CreateCollection().
See also SetColDefFile function in DynaPDF manual.

### 77.39.738 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The functions sets or overrides the color mask of an image.
**Notes:** See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 77.39.739 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean 15009

### 77.39.739 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The functions sets or overrides the color mask of an image.
**Notes:**

Same as other SetColorMask function, but values are taken from array.
See also SetColorMask function in dynapdf_help.pdf manual.
See also SetColorMask function in DynaPDF manual.
See also:

- 77.39.738 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean 15009

### 77.39.740 SetColors(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the fill and stroke color.
See also SetColors function in DynaPDF manual.

### 77.39.741 SetColorSpace(ColorSpace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the color space.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// get the colorspace of the image file
const DP_csDeviceRGB=0
const DP_csDeviceCMYK=1
const DP_csDeviceGray=2

dim iColorSpace as Integer

iColorSpace=DP_csDeviceRGB

// define color space
bBool=pdf.SetColorSpace(iColorSpace)
```

See also SetColorSpace function in DynaPDF manual.

### 77.39.742 SetColSortField(ColField as Integer, AscendingOrder as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the collection field that should be used to sort the list of embedded files.
See also SetColSortField function in DynaPDF manual.

### 77.39.743 SetCompressionFilter(Filter as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the compression filter which is used to compress images.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set compression filter
bBool = pdf.SetCompressionFilter(pdf.kcfJPEG)
```

**Notes:** Use kcfCCITT3, kcfCCITT4, kcfFlate, kcfFlateBW, kcfJP2K, kcfJPEG or kcfLZW constants.
See also SetCompressionFilter function in DynaPDF manual.

### 77.39.744 SetCompressionLevel(CompressLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the current compression level.
See also SetCompressionLevel function in DynaPDF manual.

### 77.39.745 SetContent(buffer as memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 77.39.746 SetContent(buffer as string) as Boolean 15011

### 77.39.746 SetContent(buffer as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function replaces the content stream of the currently open page or template with a new one.
See also SetContent function in DynaPDF manual.
See also:

- 77.39.745 SetContent(buffer as memoryblock) as Boolean 15011

### 77.39.747 SetDateTimeFormat(TxtField as Integer, Fmt as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function restricts the allowed value of a text field to a date time format and applies this format if the value was valid.
See also SetDateTimeFormat function in DynaPDF manual.

### 77.39.748 SetDefBitsPerPixel(value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the default color depth in bits per pixel, which determines whether images should be downsampled.
See also SetDefBitsPerPixel function in DynaPDF manual.

### 77.39.749 SetDocInfo(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes a document info entry.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfo(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfo(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diKeywords, "")
bBool=pdf.SetDocInfo(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfo(diSubject, "")
bBool=pdf.SetDocInfo(diTitle, source.name)
```

**Notes:** The text parameter is converted to unicode.
See also SetDocInfo function in DynaPDF manual.

### 77.39.750 SetDocInfoAnsi(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes a document info entry.

**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfoAnsi(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfoAnsi(diCreator, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diKeywords, "")
bBool=pdf.SetDocInfoAnsi(diProducer, "SysProgName"+" - "+"MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diSubject, "")
bBool=pdf.SetDocInfoAnsi(diTitle, source.name)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetDocInfo function in DynaPDF manual.

### 77.39.751 SetDocInfoEx(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes a document info entry.
**Notes:** The Text parameter is converted to unicode.
See also SetDocInfoEx function in DynaPDF manual.

### 77.39.752 SetDocInfoExAnsi(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes a document info entry.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function

instead. **Notes:** The Text parameter is converted to ANSI.
See also SetDocInfoEx function in DynaPDF manual.

### 77.39.753 SetDrawDirection(Direction as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the draw direction of closed vector graphics such as rectangles, ellipses, triangles and so on.
See also SetDrawDirection function in DynaPDF manual.

### 77.39.754 SetEMFFrameDPI(DPIX as Integer, DPIY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to adjust DPI value which is used to calculate the picture size of an EMF file.
See also SetEMFFrameDPI function in DynaPDF manual.

### 77.39.755 SetEMFPatternDistance(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the default distance between lines of standard patterns during EMF conversion.
See also SetEMFPatternDistance function in DynaPDF manual.

### 77.39.756 SetErrorMode(ErrMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error mode specifies which error types should be treated as fatal error.
See also SetErrorMode function in DynaPDF manual.

### 77.39.757 SetExtColorSpace(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function activates an extended color space in the graphics state.
**Notes:** Requires DynaPDF Pro license.

See also SetExtColorSpace function in DynaPDF manual.

### 77.39.758 SetExtFillColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the colorspace for filling.
**Notes:**

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtFillColorSpace function in DynaPDF manual.

### 77.39.759 SetExtGState(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function applies an extended graphics state.
See also SetExtGState function in DynaPDF manual.

### 77.39.760 SetExtStrokeColorSpace(Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the colorspace for filling.
**Notes:**

Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtStrokeColorSpace function in DynaPDF manual.

### 77.39.761 SetFieldBackColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the background color used for newly created interactive form fields and annotations.
See also SetFieldBackColor function in DynaPDF manual.

### 77.39.762 SetFieldBBox(Handle as Integer, rect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the bounding box of a field.
See also SetFieldBBox function in DynaPDF manual.

### 77.39.763 SetFieldBorderColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the border color used for newly created interactive form fields and annotations.
See also SetFieldBorderColor function in DynaPDF manual.

### 77.39.764 SetFieldBorderStyle(Field as Integer, Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the border style of a specific Interactive Form field.
See also SetFieldBorderStyle function in DynaPDF manual.

### 77.39.765 SetFieldBorderWidth(Field as Integer, LineWidth as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to change the border width of a field.
See also SetFieldBorderWidth function in DynaPDF manual.

### 77.39.766 SetFieldCalcOrder(CurrIndex as UInt32, NewIndex as UInt32) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves a field in the global calc order array.
**Notes:**

This is the order in which field values will be recalculated when the value of any field changes.
The current calc order can be accessed with GetFieldCalcOrder(). The calc order array contains field handles. A field handle is a simple array index.

Returns true on success.

See also SetFieldCalcOrder function in DynaPDF manual.

### 77.39.767 SetFieldColor(Field as Integer, ColorType as Integer, ColorSpace as Integer, ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets a specific color of an interactive form field.
See also SetFieldColor function in DynaPDF manual.

### 77.39.768 SetFieldExpValue(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to change the choice values of a combo box, list box, or radio button.
See also SetFieldExpValue function in DynaPDF manual.

### 77.39.769 SetFieldExpValueAnsi(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to change the choice values of a combo box, list box, or radio button.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also SetFieldExpValue function in DynaPDF manual.

### 77.39.770 SetFieldExpValueEx(Field as Integer, ValIndex as Integer, Selected as boolean, DefSelected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function marks a choice value of a combo or list box as selected or unselected.
**Notes:**

It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a redio button or field group).

To enumerate the choice values of a combo box, list box or radio button use the function GetFieldExpValueEx().

Return value:
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetFieldExpValueEx function in DynaPDF manual.

### 77.39.771 SetFieldFlags(Field as Integer, Flags as Integer, Reset as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the flags of a specific interactive form field.
**Example:**

```
Dim pdf As DynapdfMBS // your PDF environment with open page

// create field on current page
Dim Field1 As Integer = pdf.CreateTextField("Field1", -1, True, 0, 50.0, 100, 200.0, 100.0)

// and fill value
Call pdf.SetTextFieldValue(Field1, "Hello", "", pdf.ktaLeft)

// make a field the user should not mess up with
Dim Flags As Integer
flags = Bitwise.BitOr(pdf.kffNoView, pdf.kffInvisible, pdf.kffHidden, pdf.kffReadOnly)
Call pdf.SetFieldFlags(field1, flags, False)
```

See also SetFieldFlags function in DynaPDF manual.

### 77.39.772 SetFieldFont(Field as Integer, Name as string, Style as Integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the font of a form field.
**Notes:** See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

### 77.39.773 SetFieldFontAnsi(Field as Integer, Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the font of a form field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** See documentation of SetFieldFont function in dynapdf_help manual file for details.
See also SetFieldFont function in DynaPDF manual.

### 77.39.774 SetFieldFontEx(Field as UInt32, Handle as UInt32, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or replaces the font of a field.
**Notes:**

The function requires a font handle that was returned by SetFieldFont.
Returns true on success and false on failure.
See also SetFieldFontEx function in DynaPDF manual.

### 77.39.775 SetFieldFontSize(aField as Integer, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the font size of a specific field.
See also SetFieldFontSize function in DynaPDF manual.

### 77.39.776 SetFieldHighlightMode(Field as Integer, HighlightMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the highlight mode of a specific field.
See also SetFieldHighlightMode function in DynaPDF manual.

### 77.39.777 SetFieldIndex(Field as Integer, Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function can be used to set the tab order of interactive form fields.
See also SetFieldIndex function in DynaPDF manual.

### 77.39.778 SetFieldMapName(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the mapping name of a field.
**Notes:** The parameter name is converted to unicode.
See also SetFieldMapName function in DynaPDF manual.

### 77.39.779 SetFieldMapNameAnsi(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the mapping name of a field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The parameter name is converted to ANSI.
See also SetFieldMapName function in DynaPDF manual.

### 77.39.780 SetFieldName(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the name of an interactive form field.
See also SetFieldName function in DynaPDF manual.

### 77.39.781 SetFieldNameAnsi(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the name of an interactive form field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also SetFieldName function in DynaPDF manual.

### 77.39.782 SetFieldOrientation(Field as Integer, Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the orientation of a field.
See also SetFieldOrientation function in DynaPDF manual.

### 77.39.783 SetFieldTextAlign(Field as Integer, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes the text alignment of a text or button field.
See also SetFieldTextAlign function in DynaPDF manual.

### 77.39.784 SetFieldTextColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the text color which is used for newly created interactive form fields.
See also SetFieldTextColor function in DynaPDF manual.

### 77.39.785 SetFieldToolTip(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes the tool tip or description string of an interactive form field.
**Notes:** The value parameter is converted to unicode.
See also SetFieldToolTip function in DynaPDF manual.

### 77.39.786 SetFieldToolTipAnsi(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function set or changes the tool tip or description string of an interactive form field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The value parameter is converted to ANSI.
See also SetFieldToolTip function in DynaPDF manual.

### 77.39.787 SetFillColor(ColorValue as Color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the fill color.
**Notes:**

Raises an exception if current color space is CMYK or Gray and not RGB.
The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 15022
- 77.39.789 SetFillColor(values() as Double) as boolean 15023
- 77.39.790 SetFillColor(values() as single) as boolean 15024

### 77.39.788 SetFillColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the fill color.
**Example:**

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColor pdf.RGB(255,0,0)

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile
```

```
// open in users preferred PDF viewer application
f.Launch
```

**Notes:** The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 15021
- 77.39.789 SetFillColor(values() as Double) as boolean 15023
- 77.39.790 SetFillColor(values() as single) as boolean 15024

### 77.39.789 SetFillColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets fill color based on an array of floats.
**Example:**

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim colorvalues() as Double = array(0.0, 1.0, 0.0)
call pdf.SetFillColor colorvalues

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage
```

```
// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

**Notes:** The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 15021
- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 15022
- 77.39.790 SetFillColor(values() as single) as boolean 15024

### 77.39.790 SetFillColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets fill color based on an array of floats.
**Notes:** The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 77.39.787 SetFillColor(ColorValue as Color) as Boolean 15021
- 77.39.788 SetFillColor(ColorValue as Integer) as Boolean 15022
- 77.39.789 SetFillColor(values() as Double) as boolean 15023

### 77.39.791 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the fill color using the values in parameters.
**Example:**

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
```

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set blue text color with values in memoryblock
dim m as new MemoryBlock(3)
m.Byte(0) = 0
m.Byte(1) = 0
m.Byte(2) = 255
call pdf.SetFillColorEx m,3

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

**Notes:** Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 77.39.792 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean 15025

### 77.39.792 SetFillColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the fill color using the values in parameters.
**Example:**

```
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS
```

```
// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColorEx 255,0,0

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

**Notes:** Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetFillColorEx function in DynaPDF manual.
See also:

- 77.39.791 SetFillColorEx(colorvalues as memoryblock, count as Integer) as Boolean 15024

### 77.39.793 SetFillColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the fill color space.
See also SetFillColorSpace function in DynaPDF manual.

### 77.39.794 SetFloatPrecision(NumTextDecDigits as UInt32, NumVectDecDigits as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the output precision of text and vector coordinates.
**Notes:**

The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.
Note that higher values increase the resulting file size.

NumTextDecDigits: Number decimal digits for text object.
NumVectDecDigits: Number of decimal digits for vector objects.

Returns boolean, true for success.
See also SetFloatPrecision function in DynaPDF manual.

### 77.39.795 SetFont(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font that can be used for text output and interactive form fields.
**Notes:**

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

### 77.39.796 SetFontAnsi(Name as string, Style as integer = 0, Size as double = 12, Embed as boolean = true, CodePage as integer = & h27) as integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font that can be used for text output and interactive form fields.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF object
call pdf.SetFontAnsi("Helvetica", pdf.kfsNone, 10.0, true, pdf.kcp1252)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.

### 77.39.797 SetFontEx(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font that can be used for text output and interactive form fields.
**Notes:**

The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

### 77.39.798 SetFontExAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CodePage as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function loads a font that can be used for text output and interactive form fields.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

### 77.39.799 SetFontOrigin(Origin as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the current font origin that is used to position text strings.
See also SetFontOrigin function in DynaPDF manual.

### 77.39.800 SetFontSearchOrder(Order() as Integer)

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the font search order.
**Notes:**

The values in the array use this constants:

| | |
|---|---|
| kfbtTrueType | TrueType, TrueType Collections, or OpenType fonts with TrueType outlines |
| kfbtType1 | Type1 font |
| kfbtOpenType | OpenType font with Postscript outlines |
| kfbtStdFont | PDF Standard font |
| kfbtDisabled | This value can be used to disable a specific font format. |

The array has 4 values.
See also SetFontSearchOrder function in DynaPDF manual.

### 77.39.801 SetFontSearchOrderEx(Order1 as Integer, Order2 as Integer, Order3 as Integer, Order4 as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the font search order in the same way as SetFontSearchOrder() but it does not use an array to set the search order to improve compatibility to programming languages with limited array support.
**Notes:** use the font base constants.
See also SetFontSearchOrderEx function in DynaPDF manual.

### 77.39.802 SetFontSelMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the font selection mode.
See also SetFontSelMode function in DynaPDF manual.

### 77.39.803 SetFontWeight(Weight as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font weight specifies the thickness or boldness of a font.
See also SetFontWeight function in DynaPDF manual.

### 77.39.804 SetGStateFlags(Flags as Integer, Reset as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets optional flags affecting the graphics state and coordinate handling.
See also SetGStateFlags function in DynaPDF manual.

### 77.39.805 SetIconColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The icon color is used for the closed state of a text annotation.
See also SetIconColor function in DynaPDF manual.

### 77.39.806 SetImportFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets optional flags to control the import of external PDF files.
**Example:**

```
// set flags to import all
Dim flags As Integer = Bitwise.BitOr(pdf.kifImportAsPage, pdf.kifImportAll)
Call pdf.SetImportFlags(flags)
```

See also SetImportFlags function in DynaPDF manual.

### 77.39.807 SetImportFlags2(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets optional flags to control the import of external PDF files.
See also SetImportFlags2 function in DynaPDF manual.

### 77.39.808 SetItalicAngle(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property ItalicAngle is used to emulate an italic font if the font is not available in an italic style.
See also SetItalicAngle function in DynaPDF manual.

### 77.39.809 SetJPEGQuality(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the quality of JPEG compressed images in percent if JPEG compression is used.
See also SetJPEGQuality function in DynaPDF manual.

### 77.39.810 SetLanguage(ISOTag as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies the language of the document.
See also SetLanguage function in DynaPDF manual.

### 77.39.811 SetLeading(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the leading that will be used by the functions AddContinueText() and WriteF-Text() to calculate the distance between two text lines.
**Notes:** This is for setting the line height.
See also SetLeading function in DynaPDF manual.

### 77.39.812 SetLicenseKey(Value as string)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Use this function to enter your license key.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
pdf.SetLicenseKey("1234567890") // enter your code here
```

**Deprecated:** This item is deprecated and should no longer be used. You can use SetLicenseKeyGlobal instead. **Notes:**

If the value represents a correct license key the demo string does not longer appear on PDF pages. Once a correct key was set, it will be active until the library is unloaded or the current PDF object is released. Note that the key must be entered for each PDF object or process of a multi-threading application separately.

The license key must not be stored in the registry or other files in an unencrypted form.

You need to buy a license key from MBS.
The key will unlock the library to not run in demo mode.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx

- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.
See also SetLicenseKey function in DynaPDF manual.

### 77.39.813 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Use this function to enter your license key.
**Notes:** This method stores the key for later use. The constructor uses than this key to call SetLicenseKey for any new instance of the DynaPDFMBS class. This way you can register in the app.open event for your whole application.
See also:

- 77.39.814 SetLicenseKeyGlobal(Value as string) 15033

### 77.39.814 SetLicenseKeyGlobal(Value as string)

MBS DynaPDF Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private method to avoid you call this on an object.
**Notes:**

Please call shared method in app.open.
Because if you make a new object and set key, it's too late.
See also:

- 77.39.813 SetLicenseKeyGlobal(Value as string) 15033

### 77.39.815 SetLineAnnotParms(Handle as UInt32, FontHandle as Integer, FontSize as Double, Params as DynaPDFLineAnnotParameterMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the properties of a line annotation relating to measure lines.
**Notes:**

The parameter Parms can be set to nil to delete all measure line specific values. The parameters FontHandle and FontSize will be ignored in this case.
The member Caption specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line. Although a measure line can display the string in a PopUp annotation like ordinary line annotations, this is not recommended and not fully supported in Adobe's Acrobat or Reader. If Caption is true (recommended), the caption is drawn horizontally centered either on top or inside the measure line. The text position can be changed from its normal position with the members CaptionOffsetX and CaptionOffsetY.
The parameter FontHandle can be used to specify an arbitrary font that should be used to draw the caption. Although it is possible to use any font or font size greater 0 with DynaPDF, a PDF viewer will change the font and font size to it's default values when the annotation will be edited since line annotations support no property to specify the font or font size.
ÔøºÔøºFunction Reference

The default font to draw the caption is Helvetica and the default font size is 9 units. In order to use the default font set the parameter FontHandle to -1. The default font size is used if the parameter FontSize is set to to zero.

Returns true on success or false on failure.
See also SetLineAnnotParms function in DynaPDF manual.

### 77.39.816 SetLineCapStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the line cap style that specifies how the endpoint of a line will be drawn.
See also SetLineCapStyle function in DynaPDF manual.

### 77.39.817 SetLineDashPattern(Dash as string, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The line dash pattern controls the pattern of dashes and gaps used to stroke paths.
See also SetLineDashPattern function in DynaPDF manual.

### 77.39.818 SetLineDashPattern2(dash() as double, Phase as double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets a line dash pattern with a given array.
**Notes:**

Returns true on success.
If array is nil, the pattern is removed.
See also SetLineDashPattern2 function in DynaPDF manual.

### 77.39.819 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets a line dash pattern in the same way as SetLineDashPattern().
**Deprecated:** This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

dash is a memoryblock with doubles.
So dash.size=NumValues*8.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 77.39.820 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean 15035

### 77.39.820 SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets a line dash pattern with a given array.
**Deprecated:** This item is deprecated and should no longer be used. You can use SetLineDashPattern2 instead. **Notes:**

However, this version accepts an array of doubles instead of a string value.
Returns true on success.
See SetLineDashPattern for more details.

If array is nil, the pattern is removed.
See also SetLineDashPatternEx function in DynaPDF manual.
See also:

- 77.39.819 SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean 15035

### 77.39.821 SetLineJoinStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the line join style which specifies how two line segments are connected.
See also SetLineJoinStyle function in DynaPDF manual.

### 77.39.822 SetLineWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the line width used to stroke paths.
See also SetLineWidth function in DynaPDF manual.

### 77.39.823 SetLinkHighlightMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the highlight mode that is used by link annotations.
See also SetLinkHighlightMode function in DynaPDF manual.

### 77.39.824 SetListFont(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function marks an arbitrary font as list font.
See also SetListFont function in DynaPDF manual.

### 77.39.825 SetMatrix(Matrix as DynaPDFMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function left multiplies the current transformation matrix with the new one.
See also SetMatrix function in DynaPDF manual.

### 77.39.826 SetMaxErrLogMsgCount(value as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the maximum number of error log messages kept in memory.
See also SetMaxErrLogMsgCount function in DynaPDF manual.

### 77.39.827 SetMaxFieldLen(TxtField as Integer, MaxLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the maximum count of characters which can be entered into a text field.
**Notes:**

A value of zero determines that the string length should not be restricted.

See also SetMaxFieldLen function in DynaPDF manual.

### 77.39.828 SetMetaConvFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets specific flags to control the conversion of metafiles.
See also SetMetaConvFlags function in DynaPDF manual.

### 77.39.829 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or replaces the XMP metadata stream of a specific object.
**Notes:**

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and

modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 77.39.830 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean 15038

### 77.39.830 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or replaces the XMP metadata stream of a specific object.
**Notes:**

The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:

- 77.39.829 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean 15037

### 77.39.831 SetMiterLimit(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the miter limit.
See also SetMiterLimit function in DynaPDF manual.

### 77.39.832 SetNeedAppearance(value as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the appearance flag.
See also SetNeedAppearance function in DynaPDF manual.

### 77.39.833 SetNumberFormat(TxtField as Integer, Sep as Integer, DecPlaces as Integer, NegStyle as Integer, CurrStr as string, Prepend as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified.
See also SetNumberFormat function in DynaPDF manual.

### 77.39.834 SetOCGContUsage(Handle as UInt32, Value as DynaPDFOCGContUsageMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates or changes the Content Usage dictionary of an OCG.
**Notes:**

See dynapdf_help.pdf manual for details.
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGContUsage function in DynaPDF manual.

### 77.39.835 SetOCGState(Handle as UInt32, On as Boolean, SaveState as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the visibility state of an OCG or layer.
**Notes:**

If the parameter SaveState is true, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the whished state can be rendered with RenderPage or RenderPageToImage for example.
Note that only the new state of the current OCG will be be saved. If the state of other OCGs were changed beforehand, while SaveState was set to false, then these changes will not be considered.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGState function in DynaPDF manual.

### 77.39.836 SetOpacity(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the opacity value which is used to render the appearance of a text annotation.
See also SetOpacity function in DynaPDF manual.

### 77.39.837 SetOrientation(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the orientation of a page.
See also SetOrientation function in DynaPDF manual.

### 77.39.838 SetOrientationEx(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system.
See also SetOrientationEx function in DynaPDF manual.

### 77.39.839 SetPageCoords(PageCoords as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The native coordinate system of the Portable Document Format is bottom up.
**Notes:** Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
See also SetPageCoords function in DynaPDF manual.

### 77.39.840 SetPageFormat(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets a predefined page or paper format.
**Notes:**

Common paper formats and sizes in points:

| Format | Size in units (Width x Height) |
|---|---|
| DIN A3 | 842.0 x 1191.0 |
| DIN A4 | 595.0 x 842.0 |
| DIN A5 | 419.0 x 595.0 |
| DIN B4 | 709.0 x 1001.0 |
| DIN B5 | 499.0 x 709.0 |
| DIN B6 | 354.0 x 499.0 |
| DIN C3 | 918.0 x 1298.0 |
| DIN C4 | 649.0 x 918.0 |
| DIN C5 | 459.0 x 649.0 |
| DIN C6 | 323.0 x 459.0 |
| DIN C65 | 323.0 x 649.0 |
| DIN DL | 312.0 x 624.0 |
| DIN E4 | 623.0 x 879.0 |
| DIN E5 | 439.0 x 624.0 |
| DIN E6 | 312.0 x 439.0 |
| DIN E65 | 312.0 x 624.0 |
| DIN M5 | 439.0 x 632.0 |
| DIN M65 | 317.0 x 632.0 |
| US Legal | 612.0 x 1008.0 |
| US Letter | 612.0 x 792.0 |

See also SetPageFormat function in DynaPDF manual.

### 77.39.841 SetPageHeight(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the height of the currently open page if any, or the default height for newly created pages.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

**Notes:**

Common paper formats and sizes in points:

| Format | Size in units (Width x Height) |
|---|---|
| DIN A3 | 842.0 x 1191.0 |
| DIN A4 | 595.0 x 842.0 |
| DIN A5 | 419.0 x 595.0 |
| DIN B4 | 709.0 x 1001.0 |
| DIN B5 | 499.0 x 709.0 |
| DIN B6 | 354.0 x 499.0 |
| DIN C3 | 918.0 x 1298.0 |
| DIN C4 | 649.0 x 918.0 |
| DIN C5 | 459.0 x 649.0 |
| DIN C6 | 323.0 x 459.0 |
| DIN C65 | 323.0 x 649.0 |
| DIN DL | 312.0 x 624.0 |
| DIN E4 | 623.0 x 879.0 |
| DIN E5 | 439.0 x 624.0 |
| DIN E6 | 312.0 x 439.0 |
| DIN E65 | 312.0 x 624.0 |
| DIN M5 | 439.0 x 632.0 |
| DIN M65 | 317.0 x 632.0 |
| US Legal | 612.0 x 1008.0 |
| US Letter | 612.0 x 792.0 |

See also SetPageHeight function in DynaPDF manual.

### 77.39.842 SetPageLayout(Layout as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the page layout that is used when opening the document with Adobe's Acrobat.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page view
'plSinglePage = 0, // Show one page at time
```

```
'plOneColumn = 1, // Show the pages continous
'plTwoColumnLeft = 2, // Two columns, start with left column
'plTwoColumnRight = 3 // Two columns, start with right column
bBool=pdf.SetPageLayout(0)
```

See also SetPageLayout function in DynaPDF manual.

### 77.39.843 SetPageMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the page mode that is used when opening the document with Adobe's Acrobat.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page mode
'pmUseNone = 0, // Default
'pmUseOutlines = 1, // Show the outline tree
'pmUseThumbs = 2, // Show the thumb nails
'pmFullScreen = 3 // Open the document in full-screen mode
bBool=pdf.SetPageMode(0)
```

See also SetPageMode function in DynaPDF manual.

### 77.39.844 SetPageWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the width of the currently open page if any, or the default width for newly created pages.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
```

bBool=pdf.SetPageHeight(dHeight)

**Notes:**

Common paper formats and sizes in points:

| Format | Size in units (Width x Height) |
|---|---|
| DIN A3 | 842.0 x 1191.0 |
| DIN A4 | 595.0 x 842.0 |
| DIN A5 | 419.0 x 595.0 |
| DIN B4 | 709.0 x 1001.0 |
| DIN B5 | 499.0 x 709.0 |
| DIN B6 | 354.0 x 499.0 |
| DIN C3 | 918.0 x 1298.0 |
| DIN C4 | 649.0 x 918.0 |
| DIN C5 | 459.0 x 649.0 |
| DIN C6 | 323.0 x 459.0 |
| DIN C65 | 323.0 x 649.0 |
| DIN DL | 312.0 x 624.0 |
| DIN E4 | 623.0 x 879.0 |
| DIN E5 | 439.0 x 624.0 |
| DIN E6 | 312.0 x 439.0 |
| DIN E65 | 312.0 x 624.0 |
| DIN M5 | 439.0 x 632.0 |
| DIN M65 | 317.0 x 632.0 |
| US Legal | 612.0 x 1008.0 |
| US Letter | 612.0 x 792.0 |

See also SetPageWidth function in DynaPDF manual.

### 77.39.845 SetPDFVersion(Version as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the output PDF file version.
**Example:**

```
const pvPDF_1_3=3

dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
```

```
// ask to create a pdf in version 1.3
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvPDFA_2005)
```

**Notes:** Requires DynaPDF Lite license for PDF/A and PDF/X versions.
See also SetPDFVersion function in DynaPDF manual.

### 77.39.846 SetPrintSettings(Mode as Integer, PickTrayByPDFSize as Integer, NumCopies as Integer, PrintScaling as Integer, PrintRanges() as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the print settings.
**Notes:**

This is a PDF 1.7 extension.

For the Mode use the kdpm* constants.
For the PrintScaling use the kps* constants.
See also SetPrintSettings function in DynaPDF manual.

### 77.39.847 SetRenderingIntent(ImgHandle as Integer, RenderingIntent as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set function sets the rendering intent of an image.
**Notes:**

The rendering intent describes how colors should be interpreted.
The parameter ImgHandle must be a valid image handle that was returned by InsertImage or InsertImageFile. Imported images returned in ParseContent, for example, can be changed too.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetRenderingIntent function in DynaPDF manual.

### 77.39.848 SetResolution(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set maximum resolution
bBool = pdf.SetResolution(150)
```

See also SetResolution function in DynaPDF manual.

### 77.39.849 SetSaveNewImageFormat(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also SetResolution()).
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// whether you want image to be recompressed
bBool=pdf.SetSaveNewImageFormat(False)
```

See also SetSaveNewImageFormat function in DynaPDF manual.

### 77.39.850 SetSeparationInfo(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the separation info of the current open page.
See also SetSeparationInfo function in DynaPDF manual.

### 77.39.851 SetStrokeColor(ColorValue as color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the color used for stroked graphics objects.
**Notes:** Raises an exception if current color space is CMYK or Gray and not RGB.

See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15047
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15047
- 77.39.854 SetStrokeColor(values() as single) as boolean 15047

### 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the color used for stroked graphics objects.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15046
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15047
- 77.39.854 SetStrokeColor(values() as single) as boolean 15047

### 77.39.853 SetStrokeColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets stroke color based on an array of floats.
**Notes:** The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15046
- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15047
- 77.39.854 SetStrokeColor(values() as single) as boolean 15047

### 77.39.854 SetStrokeColor(values() as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets stroke color based on an array of floats.
**Notes:** The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 77.39.851 SetStrokeColor(ColorValue as color) as Boolean 15046

- 77.39.852 SetStrokeColor(ColorValue as Integer) as Boolean 15047
- 77.39.853 SetStrokeColor(values() as Double) as boolean 15047

### 77.39.855 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the stroke color using the values in parameters.
**Example:**

```
dim p as DynaPDFMBS // get a pdf object

dim colorvalues as memoryblock

colorvalues=NewMemoryBlock(3)
colorvalues.Byte(0)=255
colorvalues.Byte(1)=128
colorvalues.Byte(2)=0

if p.SetStrokeColorEx(colorvalues, 3) then
' ok
else
' failed
end if
```

**Notes:** Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 77.39.856 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean 15048

### 77.39.856 SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the stroke color using the values in parameters.
**Example:**

```
dim p as DynaPDFMBS // get a pdf object

if p.SetStrokeColorEx(255,128,0) then
' ok
else
```

```
' failed
end if
```

**Notes:** Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:

- 77.39.855 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean 15048

### 77.39.857 SetStrokeColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the stroke color space. In PDF, fill and stroke colors use both their own color spaces.
See also SetStrokeColorSpace function in DynaPDF manual.

### 77.39.858 SetTabLen(TabLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the tabulator length, specified in number of spaces, which will be used to emulate tabulators during text formatting (see WriteFText() for further information).
See also SetTabLen function in DynaPDF manual.

### 77.39.859 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or changes a bounding box of a template.
**Notes:**

Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.
If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 77.39.860 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean 15050

### 77.39.860 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, Left as Double, Top as Double, Right as Double, Bottom as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or changes a bounding box of a template.
**Notes:**

Templates support the bounding boxes kpbMediaBox and kpbCropBox only. The latter one is considered by PlaceTemplateEx() only.

A crop box can be set to clip the contents of a template without changing its bounding box. This can be useful when placing imported pages on another page.
If BBox is set to nil, the bounding box is deleted. Note that only the crop box can be deleted.

Returns true on success or false in case of an error.
See also SetTemplBBox function in DynaPDF manual.
See also:

- 77.39.859 SetTemplBBox(TemplateHandle as Integer, PageBoundary as Integer, BBoxRect as DynaPDFRectMBS) as Boolean 15049

### 77.39.861 SetTextDrawMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text draw mode specifies how text should be rendered.
See also SetTextDrawMode function in DynaPDF manual.

### 77.39.862 SetTextFieldValue(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the value and default value of a text field.
**Notes:** The Value and the DefValue strings are converted to unicode.

See also SetTextFieldValue function in DynaPDF manual.

### 77.39.863 SetTextFieldValueAnsi(Field as Integer, Value as string, DefValue as string, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets or changes the value and default value of a text field.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The Value and the DefValue strings are converted to ANSI.
See also SetTextFieldValue function in DynaPDF manual.

### 77.39.864 SetTextFieldValueAnsiEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text field value.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead.

### 77.39.865 SetTextFieldValueEx(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text field value.
See also SetTextFieldValueEx function in DynaPDF manual.

### 77.39.866 SetTextRect(PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function defines the output rectangle that is used to output formatted text by the function WriteFText().
See also SetTextRect function in DynaPDF manual.

### 77.39.867 SetTextRise(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text rise specifies the distance, to move the baseline up or down from its default location.
See also SetTextRise function in DynaPDF manual.

### 77.39.868 SetTextScaling(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction.
See also SetTextScaling function in DynaPDF manual.

### 77.39.869 SetTransparentColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the transparent color which is used for newly inserted images.
**Example:**

```
dim pdf as DynaPDFMBS

call pdf.SetTransparentColor pdf.kNO_COLOR
```

See also SetTransparentColor function in DynaPDF manual.

### 77.39.870 SetTrapped(value as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the trapped key of the document.
See also SetTrapped function in DynaPDF manual.

### 77.39.871 SetUseExactPwd(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also SetUseExactPwd function in DynaPDF manual.

### 77.39.872 SetUseGlobalImpFiles(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property can be used to load an external PDF file permanent into memory, e.g. to split a large PDF file into smaller pieces.
**Notes:** Requires DynaPDF Pro license.
See also SetUseGlobalImpFiles function in DynaPDF manual.

### 77.39.873 SetUseImageInterpolation(Index as Integer, Value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables or disables image interpolation explictely for a given image.
**Notes:**

If nothing was specified (this is the default), a viewer applications can only use a heuristic to determine whether image interpolation should be enabled or not. The result is then of course application specific.
The parameter Handle must be a valid image handle that was returned by a DynaPDF function like InsertImage(), InsertImageEx(), or InsertImageFromBuffer(), for example.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUseImageInterpolation function in DynaPDF manual.

### 77.39.874 SetUserUnit(value as single) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the user unit of the current open page.
**Notes:**

A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.
The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.
Default value = 1.0

Return values:

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUserUnit function in DynaPDF manual.

### 77.39.875 SetUseStdFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function can be used to disable the 14 standard fonts temporarily.
See also SetUseStdFonts function in DynaPDF manual.

### 77.39.876 SetUseSwapFile(SwapContents as Boolean, SwapLimit as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** When creating large PDF files with many or large images it is sometimes recommended to page out large objects to a temp file to restrict the memory usage.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object

// define a swap file in case memory is low
dim b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
if b=False then
MsgBox "Failed to create swap file."
Return
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Do not use FlushPages and SetUseSwapFile together. Use one function.
See also SetUseSwapFile function in DynaPDF manual.

### 77.39.877 SetUseSwapFileEx(SwapContents as Boolean, SwapLimit as Integer, SwapDir as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function enables paging out of large objects to restrict the memory usage in the same way as SetUseSwapFile().
**Deprecated:** This item is deprecated and should no longer be used. See also SetUseSwapFileEx function

in DynaPDF manual.

### 77.39.878 SetUseSystemFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether the Windows/Fonts directory should be added automatically to the list of available font search paths.
See also SetUseSystemFonts function in DynaPDF manual.

### 77.39.879 SetUseTransparency(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether images should get a transparent background.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// allow transparency for images
bBool=pdf.SetUseTransparency(False)
```

See also SetUseTransparency function in DynaPDF manual.

### 77.39.880 SetUseVisibleCoords(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.
See also SetUseVisibleCoords function in DynaPDF manual.

### 77.39.881 SetViewerPreferences(Value as Integer, AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the viewer preferences which can be used to control a few parameter of Adobe's Acrobat, such as hide the toolbar or men bar.

See also SetViewerPreferences function in DynaPDF manual.

### 77.39.882 SetWhite(FillColor as Boolean, StrokeColor as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets white color.
**Notes:**

This function is a bit optimized to check the current color space.
Depending on whether it's RGB, Gray, CMYK or Lab, it will set different color values.
And if other color space is active, it switches to Gray colorspace to set white.

### 77.39.883 SetWMFDefExtent(Width as Integer, Height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the default size which is used to convert non-portable WMF files to EMF. See InsertMetafile() for further information.
See also SetWMFDefExtent function in DynaPDF manual.

### 77.39.884 SetWMFPixelPerInch(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also SetWMFPixelPerInch function in DynaPDF manual.

### 77.39.885 SetWordSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the word spacing.
See also SetWordSpacing function in DynaPDF manual.

### 77.39.886 SetXFAStream(Index as UInt32, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function replaces the contents of an XFA stream with new contents.
**Notes:**

Index must be a valid XFA resource index. XFA streams can be enumerated with GetXFAStream() / GetXFAStreamCount().
The function does not check whether the provided XFA buffer is valid. The buffer is written to the stream as is.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetXFAStream function in DynaPDF manual.

### 77.39.887 ShowDifferences(PageIndex1 as Integer, OtherPDF as DynaPDFMBS, PageIndex2 as Integer, CheckMoving as boolean, HighlightColor as UInt32 = & hFFFF, ScaleFactor as Integer = 1, ColorTolerance as Integer = 3, debug as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Shows differences on two PDF pages by adding highlight annotations.
**Notes:**

Please pass page indexes for both pages. OtherPDF can be same as the current instance you call this method on.

CheckMoving: Whether to check for moving parts, e.g. the big part of the page shifted up one line.

Returns number of annotations on success which means that highlight annotations have been added to both pages.
Or returns negative value in case of error.
You can than render a page to show differences to user.
Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

Scale: When comparison, scales up the pictures used for comparison. Default is 1 for 72dpi, but you can use 2 for double.
ColorTolerance: The tolerance for color comparison.
Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFF and FFFFFD are equal.
Default is 3.

Debug Parameter: Whether to write debug images to temp folder.
If true, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the raster, green equal pixels.

### 77.39.888 SkewCoords(alpha as Double, beta as Double, OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function skews the coordinate system and sets the coordinate origin to the point OriginX, OriginY.
**Notes:** Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also SkewCoords function in DynaPDF manual.

### 77.39.889 SortFieldsByIndex as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sorts the interactive form fields of a page by comparing the internal indices which can be set for each field separately (see SetFieldIndex() for further information).
See also SortFieldsByIndex function in DynaPDF manual.

### 77.39.890 SortFieldsByName as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sorts the interactive form fields of a page in ascending order by field name.
See also SortFieldsByName function in DynaPDF manual.

### 77.39.891 SquareAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a square annotation on the current open page.
**Notes:**

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in

Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

### 77.39.892 SquareAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a square annotation on the current open page.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should beÔøºdrawn without a border, set the parameter LineWidth zo zero or StrokeColor to the special constant kNO_COLOR.
If the interior should be transparent set FillColor to the special constant kNO_COLOR.
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.
See also SquareAnnot function in DynaPDF manual.

### 77.39.893 StampAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a stamp annotation.
See also StampAnnot function in DynaPDF manual.

### 77.39.894 StampAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a stamp annotation with ANSI encoded texts.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. See also StampAnnot function in DynaPDF manual.

### 77.39.895 StrokePath as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function strokes the current path without closing it.
See also StrokePath function in DynaPDF manual.

### 77.39.896 TestGlyphs(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks whether all glyphs of the text are available in the specified font.
**Example:**

```
// create dummy PDF with one page
dim d as new myDynaPDFMBS

call d.CreateNewPDF
call d.Append

// check this text
dim x as string = "ÊÇ®Â•Ω" // Hello in Chinese

// load 2 fonts to check
dim FontHandle1 as Integer = d.SetFont("Times", 12)
dim FontHandle2 as Integer = d.SetFont("Arial Unicode MS", 12)

dim r1 as Integer = d.TestGlyphs(FontHandle1, x)

if r1 = -1 then
MsgBox "Times supports chinese characters"
else
MsgBox "Times does not support chinese characters"
end if
```

```
dim r2 as Integer = d.TestGlyphs(FontHandle2, x)

if r2 = -1 then
MsgBox "Arial Unicode MS supports chinese characters"
else
MsgBox "Arial Unicode MS does not support chinese characters"
end if
```

**Notes:**

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
See also TestGlyphs function in DynaPDF manual.

### 77.39.897 TestGlyphsAnsi(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function checks whether all glyphs of the text are available in the specified font.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The return value is the position of the first missing glyph, or -1 if all glyphs are available.
If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with "_Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string.
The text parameter is converted to ANSI.
See also TestGlyphs function in DynaPDF manual.

### 77.39.898 TextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a text annotation.
**Notes:** The text and the author parameters are converted to unicode.
See also TextAnnot function in DynaPDF manual.

### 77.39.899 TextAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function creates a text annotation.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text and the author parameters are converted to ANSI.
See also TextAnnot function in DynaPDF manual.

### 77.39.900 TranslateCoords(OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function translates the coordinate system to the new origin OriginX, OriginY.
See also TranslateCoords function in DynaPDF manual.

### 77.39.901 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translates a raw code.
**Notes:** Deprecated. Please use other variant with more parameters.
See also TranslateRawCode function in DynaPDF manual.
See also:

- 77.39.902 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string 15062

### 77.39.902 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

MBS DynaPDF Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function converts a source character to Unicode.
**Notes:**

The code length of a character depends on the font's encoding. PDF supports encodings with fixed and variable code lengths from one through four bytes per character. The Count parameter provides the number of bytes which were consumed to convert the character to Unicode; this value must be used to increment the textOffset parameter for further calls.
The resulting Unicode character or sequence is returned in function result. The width parameter is used to return the character width.
The parameter Decoded is set to true if the source character could be sucsessfully converted to Unicode. If Decode is false the output string and character width contain no meaningful values.
The function can only fail when processing strings of CID fonts, e.g. if the font depends on an external CMap that could not be loaded, or if the font uses a damaged CMap. The search path(s) to external CMaps should always be set before extracting text from PDF files with SetCMapDir().
Passing an invalid or undefined code sequence to the function does not result in an error. In this case the notdef character is added to the output string (this is usually 0 or 0xFFFD if the font contains a ToUnicode CMap).
Notice:
To improve processing speed the function does not check whether the parameters are valid.
Remarks:
This function was designed to convert raw strings on a per character basis to Unicode which were returned by ParseContent() or GetPageText(). The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state or from the structure DynaPDFStackMBS.
Return values:
The count value of this function is always greater or equal to one. Check the parameter Decoded to determine whether the function succeed.
See also TranslateRawCode function in DynaPDF manual.
See also:

- 77.39.901 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string 15062

### 77.39.903 TranslateString(IFont as Integer, text as string, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translates a string.
See also TranslateString function in DynaPDF manual.
See also:

- 77.39.904 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string 15063

### 77.39.904 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function translates a binary string returned by GetPageText() to Unicode.

See also TranslateString function in DynaPDF manual.
See also:

- 77.39.903 TranslateString(IFont as Integer, text as string, flags as Integer) as string 15063

### 77.39.905 Triangle(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function draws a triangle.
See also Triangle function in DynaPDF manual.

### 77.39.906 UnLockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Locks a layer.
See also UnLockLayer function in DynaPDF manual.

### 77.39.907 WatermarkAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a Watermark annotation.
**Example:**

```
// create watermark annotation
Dim AnnotHandle As Integer = pdf.WatermarkAnnot(100, 100, 300, 200)

// it's empty initially

// so we create an annotation appearance stream
Dim x As Integer = pdf.CreateAnnotAP(AnnotHandle)

// set a color and draw rectangle
Call pdf.SetFillColor(& cFF7777)
Call pdf.Rectangle 0, 0, 300, 200, pdf.kfmFill

Call pdf.SetStrokeColor(& c000000)
Call pdf.SetFillColor(& c000000)
Call pdf.SetFont("Helvetica", pdf.kfsBold, 30)
Call pdf.WriteText(20, 20, "Hello World")
```

```
// close template
Call pdf.EndTemplate
```

**Notes:**

Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.
The annotation has no appearance after it was created. Call CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.
Watermark annotations can be shared on multiple pages. To place the annotation on other pages call AddAnnotToPage.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also WatermarkAnnot function in DynaPDF manual.

### 77.39.908 WebLink(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a web link onto the current open page.
**Notes:** The text parameter is converted to unicode.
See also WebLink function in DynaPDF manual.

### 77.39.909 WebLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a web link onto the current open page.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI.
See also WebLink function in DynaPDF manual.

### 77.39.910 WeightFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a style value to a weight value.

### 77.39.911 WeightToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a weight value to a style value.

### 77.39.912 WidthFromStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a style constant to the width value.

### 77.39.913 WidthToStyle(s as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a width value to a style value.

### 77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a string in a user defined angle around a radius.
**Notes:** The text parameter is converted to unicode.
See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

### 77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a string in a user defined angle around a radius.
**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15066

### 77.39.916 WriteAngleTextAnsi(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a string in a user defined angle around a radius.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteAngleText function in DynaPDF manual.
See also:

- 77.39.914 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15066
- 77.39.915 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15067

### 77.39.917 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a string in a user defined angle around a radius.
**Notes:** The text parameter is not converted, so pass a string in the right encoding.
See also:

- 77.39.918 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15068

### 77.39.918 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a string in a user defined angle around a radius.
**Notes:**

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 77.39.917 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean 15067

### 77.39.919 WriteFText(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
**Notes:**

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 15068

### 77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.

See also:

- 77.39.919 WriteFText(Align as Integer, aText as string) as Boolean 15068

### 77.39.921 WriteFTextAnsi(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFText function in DynaPDF manual.
See also:

- 77.39.919 WriteFText(Align as Integer, aText as string) as Boolean 15068
- 77.39.920 WriteFText(Align as Integer, glyphs() as Integer) as Boolean 15068

### 77.39.922 WriteFTextDirect(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
**Notes:**

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 77.39.923 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean 15069

### 77.39.923 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.
**Notes:**

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.

- 77.39.922 WriteFTextDirect(Align as Integer, aText as string) as Boolean 15069

### 77.39.924 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a formatted text exactly in the same way as WriteFText().
**Notes:**

The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 77.39.925 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 15070

### 77.39.925 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a formatted text exactly in the same way as WriteFText().
**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 77.39.924 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 15070

### 77.39.926 WriteFTextExAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a formatted text exactly in the same way as WriteFText().
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:**

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:

- 77.39.924 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 15070
- 77.39.925 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 15070

### 77.39.927 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a formatted text exactly in the same way as WriteFText().
**Notes:**

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.
See also:

- 77.39.928 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean 15071

### 77.39.928 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a formatted text exactly in the same way as WriteFText().
**Notes:**

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.
See also:

- 77.39.927 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean 15071

### 77.39.929 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes styled text.
**Notes:**

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledText function in DynaPDF manual.
See also:

- 77.39.930 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 15072

### 77.39.930 WriteStyledText(Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Writes styled text from TextArea.
**Notes:**

Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledText function in DynaPDF manual.
See also:

- 77.39.929 WriteStyledText(Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean 15072

### 77.39.931 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes styled text.
**Notes:**

Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledTextEx function in DynaPDF manual.
See also:

- 77.39.932 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean 15073

### 77.39.932 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea, LeadingFactor as double = -1) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Writes styled text from TextArea.
**Notes:**

Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.

LeadingFactor: Added in v21.0. If you pass a value >0, the plugin will add \LD [ ] commands to styled text to set leading relative to font size. This way you define the spacing beteween lines. e.g. 1.2.

If you have a problem with the conversion, you can always use ConvertStyledText function directly and inspect what it generates. And you can of course modify it and e.g. convert "* " on a beginning of a line to a list.
See also WriteStyledTextEx function in DynaPDF manual.
See also:

- 77.39.931 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText, LeadingFactor as double = -1) as Boolean 15073

### 77.39.933 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern.
**Notes:** The text parameter is converted to unicode.
See also WriteText function in DynaPDF manual.
See also:

- 77.39.934 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 15074

### 77.39.934 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern.
**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteText function in DynaPDF manual.
See also:

- 77.39.933 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 15074

### 77.39.935 WriteTextAnsi(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteText function in DynaPDF manual.
See also:

- 77.39.933 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean 15074
- 77.39.934 WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 15074

### 77.39.936 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern.
**Notes:** The text parameter is not converted, so pass a string in the right encoding.
See also:

- 77.39.937 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean 15075

### 77.39.937 WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern.
**Notes:**

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 77.39.936 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean 15075

### 77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15076

### 77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
**Notes:** The text parameter is converted to unicode.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15075

### 77.39.940 WriteTextMatrixAnsi(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
**Deprecated:** This item is deprecated and should no longer be used. You can use the non ANSI function instead. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
See also WriteTextMatrix function in DynaPDF manual.
See also:

- 77.39.938 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15075
- 77.39.939 WriteTextMatrix(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15076

### 77.39.941 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
**Notes:**

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 77.39.942 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean 15077

### 77.39.942 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
**Notes:** The text parameter is not converted, so pass a string in the right encoding.
See also:

- 77.39.941 WriteTextMatrixDirect(Matrix as DynaPDFMatrixMBS, glyphs() as Integer) as Boolean 15076

### 77.39.943 YofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns Y of a CMYK color value.
**Example:**

```
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.YofCMYK(cmyk)) // shows 3
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 77.39.944 Properties

### 77.39.945 ActiveFontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries font info for active font.
**Notes:**

Added, so you can see it in debugger.
(Read only property)

### 77.39.946 ClearRectMode as Integer

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ClearRect Mode for Graphics class.
**Example:**

```
dim pdf as new DynaPDFMBS
pdf.ClearRectMode = kClearRectModeIgnoreAll
```

**Notes:**

When graphics class is called with ClearRect method, the area in the PDF page is filled with white color.
If you like to ignore such calls, please set value to ignore all or just big rectangles.
(Read and Write property)

### 77.39.947 DynaPDFVersion as String

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The DynaPDF version text.
**Notes:** (Read only property)

### 77.39.948 ErrorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of warnings reported by DynaPDF.
**Notes:**

Use Error event to track them.
Or catch exceptions.
(Read only property)

### 77.39.949 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the font size of the active font.
**Notes:**

The function returns the font size, a value greater zero on success, or a negative error code on failure.

If you set this property, it calls ChangeFontSize internally.
(Read and Write property)

### 77.39.950 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The IPDF handle passed to each API function.
**Notes:**

The constructor fills this handle and the destructor frees it.
(Read only property)

### 77.39.951 HasLite as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a lite or pro license is in use.
**Notes:**

Relevant for some example projects and graphics class support to know whether CreateExtGState is available.
(Read only property)

### 77.39.952 HasPro as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a pro license is in use.
**Notes:**

Relevant for some example projects and graphics class support to know whether Render Engine is available.
(Read only property)

### 77.39.953 ImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get/Set import flags.
**Notes:**

Same as using GetImportFlags and SetImportFlags.
(Read and Write property)

### 77.39.954 ImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get/Set import flags 2.
**Notes:**

Same as using GetImportFlags2 and SetImportFlags2.
(Read and Write property)

### 77.39.955 JasperVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns version of Jasper library.
**Example:**

MsgBox DynaPDFMBS.JasperVersion

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

DynaPDF uses customized version of Jasper library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

### 77.39.956 PageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The page coordinate system setting.
**Notes:**

The native coordinate system of the Portable Document Format is bottom up.
Also check the dynapdf manual on the pdfGetPageCoords and pdfSetPageCoords functions.
Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
(Read and Write property)

### 77.39.957 PageGraphics as Graphics

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The page graphics object.
**Example:**

```
Dim pdf As New DynapdfMBS
// please subclass DynapdfMBS to implement error event

Dim f As FolderItem = SpecialFolder.Desktop.Child("DynaPDF Graphics.pdf")

'pdf.SetLicenseKey "Starter"
// For this example you can use a Starter, Lite, Pro or Enterprise License

// Create new PDF. Use f = nil for in-memory PDF
Call pdf.CreateNewPDF(f)

// append a new page, so we have an open page
Call pdf.Append

// get graphics object to draw on the page
Dim g As Graphics = pdf.PageGraphics

// draw as usual
g.DrawString "Hello World", 105, 100
g.DrawRect 100, 80, 100, 100

// close page and file
Call pdf.EndPage
Call pdf.CloseFile

// for in-memory PDF, use GetBuffer here to grab it.
'Dim PDFData As String = pdf.GetBuffer
```

**Notes:**

We create a temporary picture and subclass the graphics to reproduce all drawing commands called on this graphics object to the current PDF Page.

For every drawing command, we apply the following properties from graphics object to DynaPDF:

- ForeColor
- Bold
- Italic

- Underline
- TextUnit
- TextFont
- TextSize
- ScaleX
- ScaleY
- PenHeight
- PenWidth
- CharacterSpacing

Supports the following graphics commands:

- Draw/Fill Oval/Rect/RoundRect/Line/Polygon
- DrawString
- StringHeight and StringWidth
- DrawPicture
- NextPage
- Get/Set Pixel.
- Clip
- Supports vector graphics classes (Object2D)
- Supports report engine

Some notes:

- Handle() function returns handle for picture.
- Pixel reads from temporary picture
- ClearRect draws white rectangle
- DrawCautionIcon, DrawNoteIcon and DrawStopIcon are not supported.
- NextPage method calls NextPage event. If missing, we end page and create a new one. In the event, please call EndPage and maybe Append or import an existing PDF page from import PDF.
- If CMYK, Gray or Lab colorspace is set, the plugin will keep them for white/black colors, but switch to RGB for all other colors.

StyledTextPrinter is not supported, but you can do similar things via WriteStyledText or WriteStyledTextEx methods in DynaPDFMBS class.

If no page is open, call this may append a new page. If no document is open, we call CreateNewPDF for you with nil folderitem, so an in memory PDF get's created.

Seems like reports on Windows may not work for v19.2 of our plugins. This is fixed for 19.3.
(Read only property)

### 77.39.958 PageGraphicsPicture as Picture

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The temporary picture for page graphics.
**Notes:**

For debugging it may be useful to see the temporary picture with all the draws made on the PDF page.
This is not 1 to 1 what you will see in rendered PDF Page.

This can be viewed even when graphics object is cleared.
(Read only property)

### 77.39.959 PrintCancelled as Boolean

MBS DynaPDF Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether last print operation was cancelled.
**Notes:**

Set by PrintPDFFileWithDialog and PrintPDFPageWithDialog methods if user presses cancel button.
Otherwise will be false.
(Read and Write property)

### 77.39.960 SpaceWidthFactor as Single

MBS DynaPDF Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The space width factor.
**Notes:**

Sets the space width factor that is used by DynaPDF.ExtractText to determine whether the distance between two text records or glyphs should be interpreted as space character.

PDF files do often not contain space characters. Depending on the font type, i.e. fixed pitch or proportional fonts, different default widths are used during text extraction. However, the full space width is mostly too large to find spaces. Therefore, the text extraction algorithm multiplies the default space width with the space width factor to find suitable values.
The default value is 0.7. Increase the value if too many spaces occur in extracted text and decrease the value if too few spaces were found.
The value must be large zero. Although the upper bound is not restricted, values larger than 2 are mostly not meaningful.
(Read and Write property)

### 77.39.961 TIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns version of tiff library.
**Example:**

MsgBox DynaPDFMBS.TIFFVersion

**Notes:**

DynaPDF uses customized version of tiff library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

### 77.39.962 TraceFile as FolderItem

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The trace file.
**Notes:**

The plugin writes debug messages to this file so you can check what functions you called.

Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.

See also AppendTraceFile method to append the log file.
(Read and Write property)

### 77.39.963 TraceHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal file handle for the trace file.
**Notes:**

If this is not zero, the tracing option is turned on.
You can set this value indirectly by using the TraceFile property.
(Read only property)

### 77.39.964 ValidateTextEncodings as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to validate text encodings.
**Example:**

```
dim pdf as new DynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

// enable validating
pdf.ValidateTextEncodings = true

// make text without text encoding
dim s as string = "Hello World"
s = DefineEncoding(s, nil) // remove encoding

call pdf.SetFont "Times", pdf.kfsItalic, 20.0, true, pdf.kcp1252
// now cause exception
call pdf.WriteText 50.0, 580.0, s

call pdf.EndPage
call pdf.CloseFile
```

**Notes:**

You should enable this for debugging to find bugs with text encodings.
(Read and Write property)

### 77.39.965 WarningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of errors reported by DynaPDF.
**Notes:**

Use Error event to track them.
Or catch exceptions.
(Read only property)

### 77.39.966 zlibVersion as String

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns version of zLib library.
**Example:**

MsgBox DynaPDFMBS.zlibVersion

**Notes:**

DynaPDF uses customized version of zlib library, so this may not be the latest public version.
But it's patched to fix a couple of issues seen in PDF context.
(Read only property)

### 77.39.967 Events

### 77.39.968 EnumDocFont(Font as DynaPDFFontMBS, FontInfo as DynaPDFFontInfoMBS, Type as Integer, BaseFont as string, Fontname as string, Embedded as boolean, IsFormFont as boolean, Flags as Integer, FontRef as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event being called if you use the EnumDocFonts function.
**Notes:**

Font is deprecated. FontRef is the internal reference to the font.
FontInfo is the new property to use for font details.

### 77.39.969 EnumHostFont(FamilyName as string, PostScriptName as string, Style as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called by EnumHostFonts.

### 77.39.970 EnumHostFontEx(FamilyName as string, PostScriptName as string, Style as Integer, BaseType as Integer, Embeddable as boolean, Flags as Integer, FilePath as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called by EnumHostFontsEx.

### 77.39.971 Error(ErrorCode as Integer, ErrorMessage as string, ErrorType as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The error callback.
**Notes:**

ErrCode is a positive error number starting at zero; it is an index into the array of error messages. ErrType is a bitmask to determine what kind of error occurred. The following
constants are defined:

const E_WARNING = & h02000000
const E_SYNTAX_ERROR = & h04000000
const E_VALUE_ERROR = & h08000000
const E_FONT_ERROR = & h10000000
const E_FATAL_ERROR = & h20000000
const E_FILE_ERROR = & h40000000

At time of publication only one flag is set at any one time. Future versions may be set multiple flags, e.g. E_SYNTAX_ERROR and E_WARNING. Because of this, it is recommended to mask out the error type with a bitwise and operator.
If the callback function returns a value other than zero (0), processing stops immediately.

You can return kErrorEventRaise (-2), we raise an exception.
We also raise the exception when no Error event is implemented.

### 77.39.972 InitProgress(ProgType as Integer, MaxCount as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when a progress ist starting.
**Notes:**

The return value of the progress callback function must be 0, any other return value breaks processing.

See pt* constants for ProgType.

### 77.39.973 NextPage(g as graphics)

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for graphics.nextpage method.
**Notes:**

If you don't implement this event, the plugin will end the page and append a new page.
You can implement this event to do your own code to import e.g. an existing page as background.

### 77.39.974 OnFontNotFound(PDFFontRef as Integer, FontName as string, Style as Integer, StdFontIndex as Integer, IsSymbolFont as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The events called when a font is not found.
**Notes:**

Please call one of the ReplaceFont functions here and return their return code from the callback.
Or return -1 if your code has an error.
See also OnFontNotFound function in DynaPDF manual.

### 77.39.975 OnReplaceICCProfile(Type as Integer, ColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when an ICC profile is replaced.
**Notes:** Please use various ReplaceICCProfile functions to provide replacement profile.
See also OnReplaceICCProfile function in DynaPDF manual.

### 77.39.976 PageBreak(LastPosX as Double, LastPosY as Double, PageBreak as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called on every pagebreak.
**Notes:**

The parameter PageBreak of the event specifies why the event was called:

- If true, a page break tag in the string was found (see WriteFText for further information).
- If false, the output rectangle was filled with text entirely.

The usage of the event is described in detail under WriteFText(). However, the following return values of the event can be used the change the text alignment:

| | |
|---|---|
| New Alignment Left | 1 |
| New Alignment Right | 2 |
| New Alignment Center | 3 |
| New Alignment Justify | 4 |

A return value of zero indicates that the alignment must not be changed. Negative return values break processing immediately. WriteFText() returns then with a warning.

When the event is called, the coordinate system is always bottom-up, it can be changed to top-down coordinates inside the event if necessary. The current page is still open, the page must be closed with EndPage() before a new page can be added or opened with Append() or EditPage(). To determine the current page number, call GetPageNum().

For example SetFont may fail if you try normal font family names. That is because SetFontSelMode is used with postscript names and you may want to set it to ksmPostScriptName using SetFontSelMode for SetFont to accept family names.

### 77.39.977 Progress(ActivePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The progress callback.
**Notes:** The return value of the progress callback function must be 0, any other return value breaks processing.

### 77.39.978 RasterShowText(MatrixBefore as DynaPDFMatrixMBS, MatrixAfter as DynapdfMatrixMBS, TextBuffers() as DynaPDFTextRecordAMBS, Texts() as String, Width as Double, Vertical as boolean, FontRef as Integer, textScaling as Double)

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Rastering draws text.
**Notes:**

This is experimental and will be replaced later with a better API in a future DynaPDF release.
Works only if you have a plugin where this is enabled by us.

If you implement this event, you get an event whenever one of the rasterizers draws some text on a page. MatrixBefore tells you start position, MatrixAfter end position. TextBuffers provide raw text data. Texts array the matching unicode text. Width is length of text in points. Vertical is true for vertical text. FontRef is the internal font reference. You can query fonts with EnumDocFont before to get a list of all fonts and find it in the array. Do not use font functions in the event as that can confuse the rasterizer.

Do not use with MT methods, please.

### 77.39.979 Constants

### 77.39.980 kadAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is annotation handle.

### 77.39.981 kadCatalog = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is root object of document (no handle).

### 77.39.982 kadField = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is field handle.

### 77.39.983 kadImage = 3

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is image handle.

### 77.39.984 kadPage = 4

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is page handle.

### 77.39.985 kadTemplate = 5

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the destination object types.
**Notes:** Destination is template handle.

### 77.39.986 kaeExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the application event constants.
**Notes:** Export

### 77.39.987 kaePrint = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the application event constants.
**Notes:** Print

### 77.39.988 kaeView = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the application event constants.
**Notes:** View

### 77.39.989 kaffFormFields = 16

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the annotation flatten flags.
**Notes:** If set, form fields will be flattened too.

### 77.39.990 kaffKeepEmptySigFields = & h00008000

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the annotation flatten flags.
**Notes:** If set, signature fields which are not already signed will be kept.

### 77.39.991 kaffKeepFileAttach = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the annotation flatten flags.
**Notes:** If set, file attachment annotations will be kept.

### 77.39.992 kaffKeepLinkAnnots = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the annotation flatten flags.
**Notes:** If set, link annotations will be kept.

### 77.39.993 kaffKeepTextAnnots = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the annotation flatten flags.
**Notes:** If set, text annotations will be kept.

### 77.39.994 kaffMarkupAnnots = 2

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** One of the annotation flatten flags.
**Notes:** If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.

### 77.39.995 kaffNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** One of the annotation flatten flags.
**Notes:**

Printable annotations independent of the type.
By default all annotations which have an appearance stream and which have the print flag set are flattened.
All annotations are deleted when the function returns with the exception of file attachment annotations.
If you want to flatten the view state then set the flag affUseViewState.

### 77.39.996 kaffNonPDFA_1 = 4

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the annotation flatten flags.
**Notes:** Flatten all annotations which are unsupported in PDF/A 1.

### 77.39.997 kaffNonPDFA_2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the annotation flatten flags.
**Notes:** Flatten all annotations which are unsupported in PDF/A 2/3.

### 77.39.998 kaffPreserveZOrder = & h00400000

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the annotation flatten flags.
**Notes:** If set, preserve the z-order under any curcumstances. That means visible overlapping annotations or form fields will be flattened, regardless the type.

### 77.39.999 kaffSigFields = 64

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the annotation flatten flags.
**Notes:** Meaningful only if affFormFields is not set. If set, signature fields with an appearance stream will be flattened.

### 77.39.1000 kaffUseFieldViewState = 32

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the annotation flatten flags.
**Notes:** Meaningful only if kaffFormFields or kaffSigFields is set. If set, flatten the view state of form fields. Use the print state otherwise.

### 77.39.1001 kaffUseViewState = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** One of the annotation flatten flags.
**Notes:** If set, annotations which are visible in a viewer become flattened.

### 77.39.1002 kafHidden = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

### 77.39.1003 kafInvisible = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

### 77.39.1004 kafLocked = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.3.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** (PDF 1.4) If set, do not allow the annotation to be deleted or its properties (including position and size) to be modified by the user. However, this flag does not restrict changes to the annotation,Äôs contents.

### 77.39.1005 kafLockedContents = & h00000200

MBS DynaPDF Plugin, Plugin Version: 15.3.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** (PDF 1.7) If set, do not allow the contents of the annotation to be modified by the user. This flag does not restrict deletion of the annotation or changes to other annotation properties, such as position and size.

### 77.39.1006 kafNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** No flags are set

### 77.39.1007 kafNoRotate = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** Do not rotate the annotation

### 77.39.1008 kafNoView = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

### 77.39.1009 kafNoZoom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** Do not zoom the annotation

### 77.39.1010 kafPrint = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** Annotation is printable

### 77.39.1011 kafReadOnly = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** Changes are not allowed.

### 77.39.1012 kafToggleNoView = & h00000100

MBS DynaPDF Plugin, Plugin Version: 15.3.

**Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** (PDF 1.5) If set, invert the interpretation of the NoView flag for certain events.

### 77.39.1013 kaiComment = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1014 kaiHelp = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1015 kaiInsert = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1016 kaiKey = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1017 kaiNewParagraph = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1018 kaiNote = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1019 kaiParagraph = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for annotation icons.

### 77.39.1020 karAlternative = 4

MBS DynaPDF Plugin, Plugin Version: 14.3.

**Function:** One of the relationship constants.
**Notes:** This key must be used for ZUGFeRD compatible invoices

### 77.39.1021 karAssociated = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the relationship constants.

### 77.39.1022 karData = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the relationship constants.

### 77.39.1023 karSource = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the relationship constants.

### 77.39.1024 karSupplement = 3

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the relationship constants.

### 77.39.1025 kasAccepted = 1

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Accepted

### 77.39.1026 kasAuthor = 0

MBS DynaPDF Plugin, Plugin Version: 9.7.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Author

### 77.39.1027 kasCancelled = 3

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Cancelled

### 77.39.1028 kasCompleted = 4

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Completed

### 77.39.1029 kasContent = 1

MBS DynaPDF Plugin, Plugin Version: 9.7.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Content

### 77.39.1030 kasCreateReply = 5

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Don't add a migration state, create a reply instead. Set the contents of the reply with SetAnnotString.

### 77.39.1031 kasName = 2

MBS DynaPDF Plugin, Plugin Version: 9.7.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Name

### 77.39.1032 kasNone = 0

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Undefined

### 77.39.1033 kasRejected = 2

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the annotation migration state constants.
**Notes:** Rejected

### 77.39.1034 kasRichStyle = 4

MBS DynaPDF Plugin, Plugin Version: 15.3.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Default style string. ->FreeText annotations only.

### 77.39.1035 kasRichText = 5

MBS DynaPDF Plugin, Plugin Version: 15.3.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Rich text string. ->Supported by markup annotations.

### 77.39.1036 kasSubject = 3

MBS DynaPDF Plugin, Plugin Version: 9.7.

**Function:** One of the annotation string type constants for SetAnnotString.
**Notes:** Subject

### 77.39.1037 kat3D = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.6

### 77.39.1038 kat3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D Activation Type constants.
**Notes:** Default.

### 77.39.1039 kat3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D Activation Type constants.
**Notes:** The annotation should remain inactive until explicitely activated by a script or action (default).

### 77.39.1040 kat3D_PageOpen = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D Activation Type constants.
**Notes:** The annotaiton should be activated when the page is opened.

### 77.39.1041 kat3D_PageVisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D Activation Type constants.
**Notes:** The annotaiton should be activated when the page becomes visible.

### 77.39.1042 katCaret = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1043 katCircle = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1044 katFileAttach = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.3

### 77.39.1045 katFileLink = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1046 katFreeText = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1047 katGoTo = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1048 katGoTo3DView = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.
**Notes:** PDF 1.6

### 77.39.1049 katGoToE = 17

MBS DynaPDF Plugin, Plugin Version: 9.3.

**Function:** Like katGoToR but refers to an embedded PDF file.
**Notes:** PDF 1.6 Like atGoToR but refers to an embedded PDF file.

### 77.39.1050 katGoToR = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1051 katHide = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1052 katHighlight = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1053 katImportData = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1054 katInk = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1055 katJavaScript = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1056 katLaunch = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1057 katLine = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1058 katMovie = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1059 katMovieAnnot = 25

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.2

### 77.39.1060 katNamed = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1061 katPageLink = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1062 katPolygon = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1063 katPolyLine = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1064 katPopUp = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1065 katPrinterMark = 26

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.4

### 77.39.1066 katProjection = 27

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.7 Extension Level 3

### 77.39.1067 katRedact = 22

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.7

### 77.39.1068 katRendition = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.
**Notes:** PDF 1.5

### 77.39.1069 katReset = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.
**Notes:** Reset Form

### 77.39.1070 katRichMedia = 28

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.7 Extension Level 3

### 77.39.1071 katRichMediaExec = 18

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for action types.
**Notes:** PDF 1.7 Extension Level 3

### 77.39.1072 katScreen = 29

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.5

### 77.39.1073 katSetOCGState = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.
**Notes:** PDF 1.5

### 77.39.1074 katSound = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1075 katSoundAnnot = 20

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.2

### 77.39.1076 katSquare = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1077 katSquiggly = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** Highlight annotation

### 77.39.1078 katStamp = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.

### 77.39.1079 katStrikeOut = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** Highlight annotation

### 77.39.1080 katSubmit = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.
**Notes:** Submit Form

### 77.39.1081 katText = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** Also used as container to store the State Model

### 77.39.1082 katThread = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1083 katTransition = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1084 katTrapNet = 30

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.3

### 77.39.1085 katUnderline = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** Highlight annotation

### 77.39.1086 katUnknown = 24

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the constants for annotation types.
**Notes:** Unknown annotation type

### 77.39.1087 katURI = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for action types.

### 77.39.1088 katWatermark = 23

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the constants for annotation types.
**Notes:** PDF 1.6

### 77.39.1089 katWebLink = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** A Link annotation with an associated URI action

### 77.39.1090 katWidget = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for annotation types.
**Notes:** Form Fields are handled separately

### 77.39.1091 kavDirectionL2R = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1092 kavDirectionR2L = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1093 kavNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1094 kavNonFullScrUseNone = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1095 kavNonFullScrUseOC = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1096 kavNonFullScrUseOutlines = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

### 77.39.1097 kavNonFullScrUseThumbs = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for parameter of the viewer preference.

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.

### 77.39.1185 kbtTableDataCell = 32

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.
**Notes:** TD

### 77.39.1186 kbtTableHeader = 33

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.
**Notes:** TH

### 77.39.1187 kbtTableRow = 34

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.
**Notes:** TR

### 77.39.1188 kbtTOC = 35

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.

### 77.39.1189 kbtTOCEntry = 36

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the PDF base tag constants.
**Notes:** TOCI

### 77.39.1190 kcbChecked = 1

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the checkbox state constants.

### 77.39.1191 kcbfIgnoreWhiteAreas = 1

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.
**Notes:** Ignore white vector graphics or text.

### 77.39.1192 kcbfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.

### 77.39.1193 kcbfParse1BitImages = 2

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.
**Notes:** Find the visible area in 1 bit images. This is the most important case since scanned faxes are usually 1 bit images.

### 77.39.1194 kcbfParseAllImages = 14

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.
**Notes:** Find the visible area in all images.

### 77.39.1195 kcbfParseColorImages = 8

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.
**Notes:** Find the visible area in color images. This is usually not required and slow downs processing a lot.

### 77.39.1196 kcbfParseGrayImages = 4

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the flag constants for ComputeBBox.
**Notes:** Find the visible area in gray images.

### 77.39.1197 kcbUnChecked = 2

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the checkbox state constants.

### 77.39.1198 kcbUnknown = 0

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the checkbox state constants.

### 77.39.1199 kccCheck = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1200 kccCircle = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1201 kccCross1 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1202 kccCross2 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1203 kccCross3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1204 kccCross4 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1205 kccDiamond = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1206 kccfBW_To_Gray = 0

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** One of the flag constants for color conversion.
**Notes:** Default, RGB Black and White set with rg or RG inline operators are converted to gray

### 77.39.1207 kccfRGB_To_Gray = 1

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** One of the flag constants for color conversion.
**Notes:** If set, inline color operators rg and RG are converted to gray

### 77.39.1208 kccfToGrayAdjust = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the flag constants for color conversion.
**Notes:** Converts RGB and gray inline operators to gray and allows to darken or lighten the colors.

### 77.39.1209 kccSquare = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1210 kccStar = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the checkbox character constants.

### 77.39.1211 kcfCCITT3 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** PDF or TIFF output ->B& W CCITT Fax G3 compression ->fast but less compression ratio

### 77.39.1212 kcfCCITT4 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** PDF or TIFF output ->B& W CCITT Fax G4 compression ->slower but higher compression ratio

### 77.39.1213 kcfConvGrayToOtsu = & h00002000

MBS DynaPDF Plugin, Plugin Version: 18.1.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** The Otsu filter is a special filter to produce black & white images. It is very useful if an OCR scan should be applied on the resulting 1 bit image. The flag is considered in AddRasImage(), RenderPDFFile(),

and RenderPageToImage() if the pixel format was set to pxfGray.

### 77.39.1214 kcfDitherFloydSteinberg = & h00001000

MBS DynaPDF Plugin, Plugin Version: 18.1.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** Floyd Steinberg dithering. Special flags for AddRasImage(). These flags can be combined with the filters cfFlate, cfCCITT3, cfCCITT4, and LZW.

### 77.39.1215 kcfFlate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** PDF or TIFF output

### 77.39.1216 kcfFlateBW = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** TIFF, PNG, or BMP output ->Dithered black & white output. The resulting image will be compressed with Flate or left uncompressed if the output image format is a bitmap. If you want to use CCITT Fax 4 compression (TIFF only) set the flag icUseCCITT4 in the AddImage() function call. Note that this filter is not supported for PDF creation!

### 77.39.1217 kcfIgnoreICCProfile = & h00008000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** Meaningful only if color management is enabled. If set, the device ICC profile is not embedded in the image.

### 77.39.1218 kcfJBIG2 = 8

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** JBIG2 for PDF output only.

### 77.39.1219 kcfJP2K = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** PDF or JPEG2000 output

### 77.39.1220 kcfJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** PDF, JPEG, or TIFF output

### 77.39.1221 kcfLZW = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** TIFF or GIF output ->Very fast but less compression ratios than flate

### 77.39.1222 kcfLZWBW = 5

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** TIFF output ->Very fast but less compression ratios than flate. For black and white.

### 77.39.1223 kcfNone = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 20.4.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** No compression, only for TIFF format.

### 77.39.1224 kcfOrderedDithering = & h00004000

MBS DynaPDF Plugin, Plugin Version: 21.0.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:** Ordered dithering. The difference in comparison to the pixel format pxf1Bit is that we render into a GrayA buffer instead of a native 1 bit buffer since this one produces incorrect results in certain transparency calculations.

### 77.39.1225 kcfPresLosslessFilter = & h00010000

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:**

Preserve loss-less compression filters.
Use the specified filter otherwise.

### 77.39.1226 kcfPresLossyFilter = & h00020000

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the DynaPDF constants for compression filter.
**Notes:**

Preserve lossy compression filters.
Use the specified filter otherwise.

### 77.39.1227 kcisCompressedSize = 8

MBS DynaPDF Plugin, Plugin Version: 11.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The compressed file size.
Data value comes from the embedded file.

### 77.39.1228 kcisCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The creation date of this file.
Data value comes from the embedded file.

### 77.39.1229 kcisCustomDate = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:** User defined date.

### 77.39.1230 kcisCustomNumber = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:** User defined number.

### 77.39.1231 kcisCustomString = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:** User defined string.

### 77.39.1232 kcisDescription = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The description of the file.
Data value comes from the embedded file.

### 77.39.1233 kcisFileName = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The file name.
Data value comes from the embedded file.

### 77.39.1234 kcisModDate = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The modification date.
Data value comes from the embedded file.

### 77.39.1235 kcisSize = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for user defined columns is stored in collection items.
**Notes:**

The file size.
Data value comes from the embedded file.

### 77.39.1236 kcivCustom = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the DynaPDF constants for specifying how a file collection is shown.
**Notes:** Custom: PDF 1.7 Extension Level 3, the collection view is presented by a SWF file.

### 77.39.1237 kcivDetails = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for specifying how a file collection is shown.
**Notes:** Details.

### 77.39.1238 kcivHidden = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for specifying how a file collection is shown.
**Notes:** Hidden.

### 77.39.1239 kcivNotSet = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for specifying how a file collection is shown.
**Notes:** Not set.

### 77.39.1240 kcivTile = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for specifying how a file collection is shown.
**Notes:** Title.

### 77.39.1241 kclDefault = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression level.

### 77.39.1242 kClearRectModeDefault = 0

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the Clear Rect Mode constants.
**Notes:** Let all ClearRect calls pass through.

### 77.39.1243 kClearRectModeIgnoreAll = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the Clear Rect Mode constants.
**Notes:** Ignore all clearRect calls.

### 77.39.1244 kClearRectModeIgnoreBig = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the Clear Rect Mode constants.
**Notes:** Ignore clear rect calls bigger than half of page size.

### 77.39.1245 kclFastest = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression level.

### 77.39.1246 kclMax = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression level.

### 77.39.1247 kclNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for compression level.

### 77.39.1248 kcmEvenOdd = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for clipping mode.

### 77.39.1249 kcmFill = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for color modes.

### 77.39.1250 kcmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for color modes.

### 77.39.1251 kcmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for color modes.

### 77.39.1252 kcmWinding = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for clipping mode.

### 77.39.1253 kcoAllowDeviceSpaces = & h40000000

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** If set, device color spaces will not be replaced with ICC based color spaces. This flag is meaningful for normalization only.

### 77.39.1254 kcoApplyExportState = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Meaningful only if coDeleteAppEvents is set. Apply the export state.

### 77.39.1255 kcoApplyPrintState = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Meaningful only if coDeleteAppEvents is set. Apply the print state.

### 77.39.1256 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the cell orientation constants.
**Notes:** Bottom

### 77.39.1257 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the cell orientation constants.
**Notes:** Center

### 77.39.1258 kcoCheckImages = & h00800000

MBS DynaPDF Plugin, Plugin Version: 18.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Images will be decompressed to identify damages.

### 77.39.1259 kcoDefault = & h0010FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Default flags

### 77.39.1260 kcoDefault_Normalize = & h50000000

MBS DynaPDF Plugin, Plugin Version: 21.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** kcoAllowDeviceSpaces + kcoNoFontEmbedding: Common default flags for different PDF/A versions:

### 77.39.1261 kcoDefault_PDFA_1 = & h0030FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** The ability to flatten layers was added after coDefault was defined. Includes kcoFlattenLayers

### 77.39.1262 kcoDefault_PDFA_2 = & h0050FFFF

MBS DynaPDF Plugin, Plugin Version: 21.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Presentations are prohibited in PDF/A 2 and PDF/A 3. Includes kcoDeletePresentation

### 77.39.1263 kcoDefault_PDFA_3 = & h0050FF7F

MBS DynaPDF Plugin, Plugin Version: 21.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Embedded files are allowed in PDF/A 3. kcoDefault_PDFA_2, but without kcoDeleteEmbeddedFiles.

### 77.39.1264 kcoDeleteActionsAndScripts = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete actions and scripts. Imported files only.

### 77.39.1265 kcoDeleteAlternateImages = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:**

Delete alternate images.
Alternate images are seldom used and prohibited in PDF/A.

### 77.39.1266 kcoDeleteAppEvents = & h00008000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** PDF/A 2 and 3. Application events are prohibited in PDF/A. The view state will be applied.

### 77.39.1267 kcoDeleteDamagedImages = & h01000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Meaningful only if coCheckImages is set.

### 77.39.1268 kcoDeleteEmbeddedFiles = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete embedded files. Imported files only

### 77.39.1269 kcoDeleteHalftones = & h00100000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete halftone screens.

### 77.39.1270 kcoDeleteInvRenderingIntent = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete rendering intent. Imported files only

### 77.39.1271 kcoDeleteMultiMediaContents = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete multimedia content. Imported files only.

### 77.39.1272 kcoDeleteOPIComments = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete OPI comments. Imported files only

### 77.39.1273 kcoDeletePostscript = & h00000400

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete Postscript XObjects.

### 77.39.1274 kcoDeletePresentation = & h00400000

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Presentations are prohibited in PDF/A 2 and 3.

### 77.39.1275 kcoDeleteReplies = & h00080000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete annotation replies. If absent, replies will be converted to regular text annotations.

### 77.39.1276 kcoDeleteSignatures = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete signatures. Imported files only

### 77.39.1277 kcoDeleteTransferFuncs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Delete transfer functions. Imported files only

### 77.39.1278 kcoEmbedSubsets = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Already done.

### 77.39.1279 kcoFlattenFormFields = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Flatten form fields.

### 77.39.1280 kcoFlattenLayers = & h00200000

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** PDF/A 1b only. Flatten layers if any.

### 77.39.1281 kcoFlushPages = & h20000000

MBS DynaPDF Plugin, Plugin Version: 16.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Write converted pages directly into the output file to reduce the memory usage.

### 77.39.1282 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the cell orientation constants.
**Notes:** Left

### 77.39.1283 kcoMakeLayerVisible = & h00004000

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** PDF/A 2 and 3 prohibit invisible layers. Layers can also be flattened if this is no option.

### 77.39.1284 kcoNoFontEmbedding = & h10000000

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the check flag constants for CheckConformance.
**Notes:**

Normalization only.
If this flag is set not PDF/A file will be produced!

### 77.39.1285 kcoReComprJPEG2000Images = & h00001000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:**

Recompresses JPEG 2000 as flate images.
Recompression results in lower quality and usually in larger images. It is often better to keep such files as is.

### 77.39.1286 kcoRepairDamagedImages = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Meaningful only if coCheckImages is set. If set, try to recompress a damaged image. The new image is maybe incomplete but error free. This flag can be combined with coDeleteDamagedImages to delete the image if recompression fails.

### 77.39.1287 kcoReplaceV4ICCProfiles = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Replace V4 ICC Profiles. Imported files only

### 77.39.1288 kcoReplCCITTFaxWithFlate = & h00010000

MBS DynaPDF Plugin, Plugin Version: 10.3.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** Replace CCITT Fax compression with Flate.

### 77.39.1289 kcoResetAnnotAppearance = & h80000000

MBS DynaPDF Plugin, Plugin Version: 20.3.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** If set, appearance streams of annotations are rebuild before executing CheckConformance.

### 77.39.1290 kcoResolveOverprint = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the check flag constants for CheckConformance.
**Notes:** PDF/A 2 and 3. Set the overprint mode to 0 if the overprint mode = 1 and if overprinting for fill or stroke is true and if a ICCBased CMYK color space is used. Note that DeviceCMYK is treated as ICCBased color space due to implicit color conversion rules.

### 77.39.1291 kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the cell orientation constants.
**Notes:** Right

### 77.39.1292 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the cell orientation constants.
**Notes:** Top

### 77.39.1293 kcp1250 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1294 kcp1251 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1295 kcp1252 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1296 kcp1253 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1297 kcp1254 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1298 kcp1255 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1299 kcp1256 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1300 kcp1257 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1301 kcp1258 = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1302 kcp437 = 23

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1303 kcp737 = 24

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1304 kcp775 = 25

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1305 kcp850 = 26

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1306 kcp852 = 27

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1307 kcp855 = 28

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1308 kcp857 = 29

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1309 kcp860 = 30

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1310 kcp861 = 31

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1311 kcp862 = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1312 kcp863 = 33

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1313 kcp864 = 34

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1314 kcp865 = 35

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1315 kcp866 = 36

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1316 kcp869 = 37

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1317 kcp874 = 38

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1318 kcp8859_10 = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1319 kcp8859_13 = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1320 kcp8859_14 = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1321 kcp8859_15 = 20

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1322 kcp8859_16 = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1323 kcp8859_2 = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1324 kcp8859_3 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1325 kcp8859_4 = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1326 kcp8859_5 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1327 kcp8859_6 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1328 kcp8859_7 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1329 kcp8859_8 = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1330 kcp8859_9 = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1331 kcpAdobeStd = 63

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** Internal ->not usable

### 77.39.1332 kcpBig5 = 58

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** Big5 plus HKSCS extension.

### 77.39.1333 kcpCJK_2022_CN_Uni = 47

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-2022-CN-EXT (GB-2312 plus ISO-11643 Planes 1-7).

### 77.39.1334 kcpCJK_2022_JP_Uni = 48

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-2022-JP.

### 77.39.1335 kcpCJK_2022_KR_Uni = 49

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-2022-KR.

### 77.39.1336 kcpCJK_646_CN_Uni = 50

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-646-CN (GB-1988-80).

### 77.39.1337 kcpCJK_646_JP_Uni = 51

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-646-JP (JIS_C6220-1969-RO).

### 77.39.1338 kcpCJK_932_Uni = 53

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** Microsoft extended version of SHIFT_JIS.

### 77.39.1339 kcpCJK_949_Uni = 54

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** EUC-KR extended with UHC (Unified Hangul Codes).

### 77.39.1340 kcpCJK_950_Uni = 55

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** Microsoft extended version of Big5.

### 77.39.1341 kcpCJK_Big5_Uni = 40

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** Big5 plus HKSCS extension.

### 77.39.1342 kcpCJK_EUC_JP_Uni = 41

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** EUC-JP.

### 77.39.1343 kcpCJK_EUC_KR_Uni = 42

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** EUC-KR.

### 77.39.1344 kcpCJK_EUC_TW_Uni = 43

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** CNS-11643-1992 (Planes 1-15).

### 77.39.1345 kcpCJK_GB12345_Uni = 45

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** GB-12345-1990 (Traditional Chinese form of GB-2312).

### 77.39.1346 kcpCJK_GBK_Uni = 44

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** GBK is the Microsoft code page 936 (GB2312, EUC-CN plus GBK extension).

### 77.39.1347 kcpCJK_HZ_Uni = 46

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** Mixed ASCII / GB-2312 encoding

### 77.39.1348 kcpCJK_IR_165_Uni = 52

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** ISO-IR-165 (extended version of GB-2312).

### 77.39.1349 kcpCJK_JOHAB_Uni = 56

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for Chinese, Japanese, and Korean codepages.
**Notes:** JOHAB.

### 77.39.1350 kcpDingbats = 68

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the code page constants.
**Notes:** Internal ->Special encoding for ZapfDingbats

### 77.39.1351 kcpExtCMap = 67

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the code page constants.
**Notes:** Internal ->not usable. This code page is set when a font was loaded with an external cmap.

### 77.39.1352 kcpGB2312 = 59

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** GB2312 charset plus GBK and cp936 extension.

### 77.39.1353 kcpGlyphIndexes = 65

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** Internal ->not usable

### 77.39.1354 kcpInline = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the Line Caption Positions.
**Notes:** The caption is centered inside the line.

### 77.39.1355 kcpJohab = 61

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** The Johab text encoding.

### 77.39.1356 kcpMacRoman = 62

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** The Mac Roman text encoding.

### 77.39.1357 kcpRoman8 = 70

MBS DynaPDF Plugin, Plugin Version: 12.5.

**Function:** One of the code page constants.
**Notes:** This is a standard PCL 5/6 code page.

### 77.39.1358 kcpShiftJIS = 57

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** ShiftJIS charset plus code page 932 extension.

### 77.39.1359 kcpSymbol = 22

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for 8 bit code pages.

### 77.39.1360 kcpTop = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the Line Caption Positions.
**Notes:** The caption is drawn on top of the line.

### 77.39.1361 kcpUnicode = 39

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for unicode codepage.

### 77.39.1362 kcpWansung = 60

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for code pages.
**Notes:** The Wansung encoding.

### 77.39.1363 kcsButtCap = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line cap styles.
**Notes:** Butt cap.

### 77.39.1364 kcsDeviceCMYK = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF colorspace constants.

### 77.39.1365 kcsDeviceGray = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF colorspace constants.

### 77.39.1366 kcsDeviceRGB = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF colorspace constants.

### 77.39.1367 kcsRoundCap = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line cap styles.
**Notes:** Round cap.

### 77.39.1368 kcsSquareCap = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line cap styles.
**Notes:** Square cap.

### 77.39.1369 kctFacturX_Basic = 13

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the FacturX conformance level to Basic.

### 77.39.1370 kctFacturX_Basic_WL = 14

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the FacturX conformance level to Basic WL.

### 77.39.1371 kctFacturX_Comfort = 15

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the FacturX conformance level to Comfort.

### 77.39.1372 kctFacturX_Extended = 16

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the FacturX conformance level to Extended.

### 77.39.1373 kctFacturX_Minimum = 12

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the FacturX conformance level to Minimum.

### 77.39.1374 kctFacturX_XRechnung = 17

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the conformance type constants.
**Notes:** German XRechnung profile

### 77.39.1375 kctNormalize = 1

MBS DynaPDF Plugin, Plugin Version: 10.3.

**Function:** One of the conformance type constants.
**Notes:** Check the file for errors, rebuild all embedded fonts plus options.

### 77.39.1376 kctPDFA_1b_2005 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the conformance type constants.
**Notes:** Convert the file to PDF/A if possible.

### 77.39.1377 kctPDFA_2b = 2

MBS DynaPDF Plugin, Plugin Version: 14.4.

**Function:** One of the conformance type constants.
**Notes:** Convert the file to PDF/A 2b if possible

### 77.39.1378 kctPDFA_2u = 18

MBS DynaPDF Plugin, Plugin Version: 22.1.

**Function:** One of the conformance type constants.
**Notes:** Convert the file to PDF/A 2u if possible

### 77.39.1379 kctPDFA_3b = 3

MBS DynaPDF Plugin, Plugin Version: 14.4.

**Function:** One of the conformance type constants.
**Notes:** Convert the file to PDF/A 3b if possible

### 77.39.1380 kctPDFA_3u = 19

MBS DynaPDF Plugin, Plugin Version: 22.1.

**Function:** One of the conformance type constants.
**Notes:** Convert the file to PDF/A 3u if possible

### 77.39.1381 kctZUGFeRD2_Basic = 8

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the ZUGFeRD 2.0 conformance level to Basic.

### 77.39.1382 kctZUGFeRD2_Basic_WL = 9

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the ZUGFeRD 2.0 conformance level to Basic WL.

### 77.39.1383 kctZUGFeRD2_Comfort = 10

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the ZUGFeRD 2.0 conformance level to Comfort (EN 169319).

### 77.39.1384 kctZUGFeRD2_Extended = 11

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the ZUGFeRD 2.0 conformance level to Extended.

### 77.39.1385 kctZUGFeRD2_Minimum = 7

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the conformance type constants.
**Notes:** Set the ZUGFeRD 2.0 conformance level to Minimum.

### 77.39.1386 kctZUGFeRD_Basic = 4

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the conformance type constants.
**Notes:**

Set the ZUGFeRD conformance level to Basic
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

### 77.39.1387 kctZUGFeRD_Comfort = 5

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the conformance type constants.
**Notes:**

Set the ZUGFeRD conformance level to Comfort
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

### 77.39.1388 kctZUGFeRD_Extended = 6

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the conformance type constants.
**Notes:**

Set the ZUGFeRD conformance level to Extended
This constant convert the file to PDF/A 3b and set the whished ZUGFeRD conformance level in the XMP metadata. CheckConformance() does not validate the XML invoice but it checks whether it is present. Setting the correct ZUGFeRD conformance level is very important since this value defines which fields must be present in the XML invoice.

### 77.39.1389 kddClockwise = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for draw direction.
**Notes:** Clockwise.

### 77.39.1390 kddCounterClockwise = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for draw direction.
**Notes:** Counter Clockwise.

### 77.39.1391 kDEFAULT_LIST_CHAR = & h0000009F

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** Default character index of the font Wingdings-Regular to create a list (see WriteFText())

### 77.39.1392 kdf12HR_MM = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 2pm:59

### 77.39.1393 kdf12HR_MM_SS = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 2pm:59:59

### 77.39.1394 kdf24HR_MM = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 14:59

### 77.39.1395 kdf24HR_MM_SS = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 14:59:59

### 77.39.1396 kdfASCII85Decode = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1397 kdfASCIIHexDecode = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1398 kdfCCITTFaxDecode = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1399 kdfDCTDecode = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1400 kdfDD_MMM_YY = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 24 Dec 99

### 77.39.1401 kdfD_MMM = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 24 Dec

### 77.39.1402 kdfD_MMM_YY = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 24 Dec 99

### 77.39.1403 kdfFlateDecode = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1404 kdfJBIG2Decode = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1405 kdfJPXDecode = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1406 kdfLZWDecode = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1407 kdfMMMM_D_YYYY = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. December 24 1999

### 77.39.1408 kdfMMMM_YY = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. December 99

### 77.39.1409 kdfMMM_D_YYYY = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. Dec 24 1999

### 77.39.1410 kdfMMM_YY = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. Dec 99

### 77.39.1411 kdfMM_D = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12/24

### 77.39.1412 kdfMM_DD_YY = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12/24/99

### 77.39.1413 kdfMM_YY = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12 99

### 77.39.1414 kdfM_D_YY = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12 24 99

### 77.39.1415 kdfM_D_YY_HH_MM = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12/24/99 14:59

### 77.39.1416 kdfM_D_YY_H_MM_TT = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 12/24/99 14:59:59

### 77.39.1417 kdfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1418 kdfRunLengthDecode = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Decode Filter constants.

### 77.39.1419 kdfYY_MM_DD = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the date/time constants.
**Notes:** e.g. 99.12.24

### 77.39.1420 kdi3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the De-instantiation type constants for Set3DAnnotProps.

### 77.39.1421 kdi3D_Instantiated = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the De-instantiation type constants for Set3DAnnotProps.
**Notes:** The annotation will be instantiated but animations are disabled.

### 77.39.1422 kdi3D_Live = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the De-instantiation type constants for Set3DAnnotProps.
**Notes:** The annotation will be instantiated and animations are enabled (default).

### 77.39.1423 kdi3D_UnInstantiated = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the De-instantiation type constants for Set3DAnnotProps.
**Notes:** The annotation will be uninstantiated (default)

### 77.39.1424 kdiAuthor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** Author Name

### 77.39.1425 kdiCompany = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** Company Name

### 77.39.1426 kdiCreationDate = 10

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the DynaPDF constants for document information.
**Example:**

```
// set creation date
call pdf.SetDocInfoEx pdf.kdiCreationDate, "", "D:20150418131854Z00'00'"
```

**Notes:** Creation Date

### 77.39.1427 kdiCreator = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** Creator Name

### 77.39.1428 kdiCustom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** User defined key

### 77.39.1429 kdiKeywords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** Keywords

### 77.39.1430 kdiModDate = 11

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the DynaPDF constants for document information.
**Notes:** Modification date.

### 77.39.1431 kdiPDFX_Conf = 9

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the DynaPDF constants for document information.

### 77.39.1432 kdiPDFX_Ver = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Notes:** GetInDocInfo() only ->The PDF/X version is set by SetPDFVersion()!

### 77.39.1433 kdiProducer = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiProducer, "Xojo test application"
```

**Notes:** Producer Name

### 77.39.1434 kdiSubject = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiSubject, "My first Xojo output"
```

**Notes:** Subject line

### 77.39.1435 kdiTitle = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for document information.
**Example:**

```
dim pdf as DynaPDFMBS // your dynapdf instance
call pdf.SetDocInfo pdf.kdiTitle, "My first Xojo output"
```

**Notes:** Title tag.

### 77.39.1436 kdmClipping = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1437 kdmFillClip = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1438 kdmFillStroke = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1439 kdmFillStrokeClip = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1440 kdmInvisible = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1441 kdmNormal = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1442 kdmStroke = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1443 kdmStrokeClip = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for draw modes.

### 77.39.1444 kdpmFlipLongEdge = 3

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the duplex mode constants for the print settings.
**Notes:** flip long edge

### 77.39.1445 kdpmFlipShortEdge = 2

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the duplex mode constants for the print settings.
**Notes:** flip short edge

### 77.39.1446 kdpmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the duplex mode constants for the print settings.
**Notes:** Use the default value of the viewer

### 77.39.1447 kdpmSimplex = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the duplex mode constants for the print settings.
**Notes:** Simplex

### 77.39.1448 kDRV_FLOAT_PRECISION = 5

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** The precision used for float values.

### 77.39.1449 kdsCommaDot = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for thousand and decimal separators.
**Notes:** 1,234.56

### 77.39.1450 kdsDotComma = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for thousand and decimal separators.
**Notes:** 1.234,56

### 77.39.1451 kdsNoneComma = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for thousand and decimal separators.
**Notes:** 1234,56

### 77.39.1452 kdsNoneDot = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for thousand and decimal separators.
**Notes:** 1234.56

### 77.39.1453 kdsQuoteDot = 4

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the DynaPDF constants for thousand and decimal separators.
**Notes:** Quote with dot.

### 77.39.1454 kdt3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D DeActivateType constants.

### 77.39.1455 kdt3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D DeActivateType constants.
**Notes:** The annotation should remain active until explicitely deactivated by a script or action.

### 77.39.1456 kdt3D_PageClosed = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D DeActivateType constants.
**Notes:** The annotaiton should be deactivated as soon as the page is closed.

### 77.39.1457 kdt3D_PageInvisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the 3D DeActivateType constants.
**Notes:** The annotaiton should be deactivated as soon as the page becomes invisible (default).

### 77.39.1458 kdtCreationDate = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the date types.
**Notes:** Creation Date, Markup annotations only.

### 77.39.1459 kdtFit = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** no parameters

### 77.39.1460 kdtFitB = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** no parameters

### 77.39.1461 kdtFitBH_Top = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** one parameter (a)

### 77.39.1462 kdtFitBV_Left = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** one parameter (a)

### 77.39.1463 kdtFitH_Top = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** one parameter

### 77.39.1464 kdtFitV_Left = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** one parameter (a)

### 77.39.1465 kdtFit_Rect = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** four parameters (a, b, c, d) ->(left, bottom, right, top)

### 77.39.1466 kdtModDate = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

**Function:** One of the date types.
**Notes:** Modification Date, Annotations or form fields.

### 77.39.1467 kdtXY_Zoom = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the destination type constants for a link.
**Notes:** Three parameters (a, b, c) ->(X, Y, Zoom)

### 77.39.1468 kDYNAPDF_REVISION = "$ Rev: 372 $ "

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** The version of the dynapdf library.

### 77.39.1469 kDYNAPDF_VERSIONSTRING = "4.0.72.208"

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** The version of the dynapdf library.

### 77.39.1470 keflChild = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is an embedded file in the current document.

### 77.39.1471 keflChildAnnot = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is located in a file attachment annotion in the current document.

### 77.39.1472 keflExternal = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is an embedded file in an external document.

### 77.39.1473 keflExternalAnnot = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is located in a file attachment annotion in an external document.

### 77.39.1474 keflParent = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is located in the parent document.

### 77.39.1475 keflParentAnnot = 5

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the possible values for embedded file location.
**Notes:** The file is located in a file attachment annotion in the parent document.

### 77.39.1476 kefpAnsiPath = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the flags for the EnumHostFontEx event.
**Notes:** Code page 1252 on Windows, UTF-8 otherwise. The font has embedding rights.

### 77.39.1477 kefpEditable = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the EnumHostFontEx event.
**Notes:** If set, the font has editing rights (important for form fields).

### 77.39.1478 kefpEmbeddable = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the flags for the EnumHostFontEx event.
**Notes:** The font has embedding rights.

### 77.39.1479 kefpUnicodePath = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the flags for the EnumHostFontEx event.
**Notes:** FilePath is in Unicode format. Make a typecast to (UI16*) in this case. The plugin handles that for you.

### 77.39.1480 kemAllErrors = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** All errors

### 77.39.1481 kemFileError = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** File Error

### 77.39.1482 kemFontError = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Font Error

### 77.39.1483 kemIgnoreAll = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Ignore All

### 77.39.1484 kemLogFonts = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the error mode constants.
**Notes:** If set, CheckConformance() logs which fonts were replaced with system fonts or converted to Type3.

### 77.39.1485 kemLogFontsVerbose = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the error mode constants.
**Notes:** If set, the path to the font file is added to the message too. Use with kemLogFonts.

### 77.39.1486 kemNoFuncNames = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Do not print function names in error messages

### 77.39.1487 kemSyntaxError = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Syntax Error

### 77.39.1488 kemUseErrLog = & h20000000

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the error mode constants.
**Notes:** Redirect all error messages to the error log.

### 77.39.1489 kemValueError = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Value Error

### 77.39.1490 kemWarning = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the error mode constants.
**Notes:** Warning

### 77.39.1491 kErrorEventContinue = 0

MBS DynaPDF Plugin, Plugin Version: 20.4.

**Function:** One of the return codes for the error event.
**Notes:** Please return zero to ignore the error and continue with your code.

### 77.39.1492 kErrorEventRaise = -2

MBS DynaPDF Plugin, Plugin Version: 20.4.

**Function:** One of the return codes for the error event.
**Notes:** Please return -2 to raise an exception.

### 77.39.1493 kErrorEventStop = -1

MBS DynaPDF Plugin, Plugin Version: 20.4.

**Function:** One of the return codes for the error event.
**Notes:** Please return -1 to stop processing.

### 77.39.1494 kesCalGray = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** CIE-based color space

### 77.39.1495 kesCalRGB = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** CIE-based color space

### 77.39.1496 kesDeviceCMYK = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Device color space

### 77.39.1497 kesDeviceGray = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Device color space

### 77.39.1498 kesDeviceN = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Special color space

### 77.39.1499 kesDeviceRGB = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Device color space

### 77.39.1500 kesICCBased = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** CIE-based color space ->contains an ICC profile

### 77.39.1501 kesIndexed = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Special color space

### 77.39.1502 kesLab = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** CIE-based color space

### 77.39.1503 kesNChannel = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Special color space

### 77.39.1504 kesPattern = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Special color space

### 77.39.1505 kesSeparation = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the extended color space constants.
**Notes:** Special color space

### 77.39.1506 kE_FATAL_ERROR = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FATAL_ERROR)=E_FATAL_ERROR then msgbox "A fatal error occurred!"

### 77.39.1507 kE_FILE_ERROR = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FILE_ERROR)=E_FILE_ERROR then msgbox "A fatal error occurred!"

### 77.39.1508 kE_FONT_ERROR = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_FONT_ERROR)=E_FONT_ERROR then msgbox "A fatal error occurred!"

### 77.39.1509 kE_SYNTAX_ERROR = & h04000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_SYNTAX_ERROR)=E_SYNTAX_ERROR then msgbox "A fatal error occurred!"

### 77.39.1510 kE_VALUE_ERROR = & h08000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_VALUE_ERROR)=E_VALUE_ERROR then msgbox "A fatal error occurred!"

### 77.39.1511 kE_WARNING = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for error types.
**Notes:**

Note that error codes are negative; to determine the error type use the absolute value:

// if bitwiseand(-errCode,E_WARNING)=E_WARNING then msgbox "A fatal error occurred!"

### 77.39.1512 kfaiGraph = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the file attach icon constants.
**Notes:** Graph.

### 77.39.1513 kfaiPaperClip = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the file attach icon constants.
**Notes:** Paper Clip

### 77.39.1514 kfaiPushPin = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the file attach icon constants.
**Notes:** Push Pin

### 77.39.1515 kfaiTag = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the file attach icon constants.
**Notes:** Tag

### 77.39.1516 kfbtDisabled = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font base type constants.
**Notes:** This value can be used to disable a specific font format. See SetFontSearchOrder() for further information.

### 77.39.1517 kfbtOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font base type constants.
**Notes:** OpenType font with Postscript outlines

### 77.39.1518 kfbtStdFont = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font base type constants.
**Notes:** PDF Standard font

### 77.39.1519 kfbtTrueType = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the font base type constants.
**Notes:** TrueType, TrueType Collections, or OpenType fonts with TrueType outlines

### 77.39.1520 kfbtType1 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the font base type constants.
**Notes:** Type1 font

### 77.39.1521 kfcBackColor = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for field or annotation colors.

### 77.39.1522 kfcBorderColor = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for field or annotation colors.

### 77.39.1523 kfcTextColor = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for field or annotation colors.

### 77.39.1524 kffComb = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** PDF 1.5 Text fields only

### 77.39.1525 kffCommitOnSelCh = & h04000000

MBS DynaPDF Plugin, Plugin Version: 9.3.

**Function:** One of the field flags constants.
**Notes:** (PDF 1.5) If set, the new value is committed as soon as a selection is made with the pointing device. This allows applications to perform an action once a selection is made, without requiring the user to exit the field. If clear, the new value is not committed until the user exits the field. Supported by combo boxes and list boxes only.

### 77.39.1526 kffDoNotScroll = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** PDF 1.4 Text fields only

### 77.39.1527 kffDoNotSpellCheck = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** PDF 1.4 Text fields, combo boxes. If the field is a combo box, this flag is meaningful only if ffEdit is also set.

### 77.39.1528 kffEdit = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** Combo boxes only

### 77.39.1529 kffFileSelect = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** PDF 1.4 Text fields only

### 77.39.1530 kffHidden = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1531 kffInvisible = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1532 kffMultiline = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** Text fields only

### 77.39.1533 kffMultiSelect = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** PDF 1.4 List boxes only

### 77.39.1534 kffNoExport = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1535 kffNoRotate = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1536 kffNoToggleToOff = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** Radio buttons

### 77.39.1537 kffNoView = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1538 kffNoZoom = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1539 kffPassword = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** Text fields only

### 77.39.1540 kffPrint = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1541 kffRadioIsUnion = & h02000000

MBS DynaPDF Plugin, Plugin Version: 9.3.

**Function:** One of the field flags constants.
**Notes:** PDF-1.5 check boxes of a radio button field only

### 77.39.1542 kffReadOnly = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1543 kffRequired = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.

### 77.39.1544 kffsCIDFontType0C = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font file sub types.
**Notes:** CFF based Type1 CID font

### 77.39.1545 kffsCIDFontType2 = 4

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font file type constants.
**Notes:** TrueType based CID Font

### 77.39.1546 kffsNoSubtype = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font file sub types.
**Notes:** The font file is in the format of FontType

### 77.39.1547 kffsOpenType = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font file sub types.
**Notes:** TrueType based OpenType font

### 77.39.1548 kffsOpenTypeC = 3

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font file type constants.
**Notes:** CFF based OpenType font

### 77.39.1549 kffSorted = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field flags constants.
**Notes:** Use this flag to change the sort flag of combo boxes or list boxes

### 77.39.1550 kffsType1C = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font file sub types.
**Notes:** CFF based Type1 font.

### 77.39.1551 kfmClose = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Close the path, but do not fill or stroke it. More vertices are required or stroke the path in a separate step.

### 77.39.1552 kfmFill = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill path.

### 77.39.1553 kfmFillEvOdd = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill even odd.

### 77.39.1554 kfmFillEvOddNoClose = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill even odd and no close.

### 77.39.1555 kfmFillNoClose = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill, but don't close.

### 77.39.1556 kfmFillStroke = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill and stroke.

### 77.39.1557 kfmFillStrokeEvOdd = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill and stroke even odd.

### 77.39.1558 kfmFillStrokeEvOddNoClose = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill and stroke even odd, no close.

### 77.39.1559 kfmFillStrokeNoClose = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Fill, Stroke, but don't close.

### 77.39.1560 kfmNoFill = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Don't fill.

### 77.39.1561 kfmStroke = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Stroke path.

### 77.39.1562 kfmStrokeNoClose = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the fill mode.
**Notes:** Stroke, but do not close.

### 77.39.1563 kfoOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
**Notes:** Open file.

### 77.39.1564 kfoPrint = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for file operation for use with CreateLaunchAction function.
**Notes:** Print file.

### 77.39.1565 kfpfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the flush constants for Flush method.
**Notes:** Write anything to the file that is possible.

### 77.39.1566 kfpfExclLastPage = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the flush constants for Flush method.
**Notes:** If set, the last page is not flushed.

### 77.39.1567 kfpfImagesOnly = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the flush constants for Flush method.
**Notes:** If set, only images are written to the file. The pages are still in memory and can be modified with EditPage(). Flushed images can still be referenced in other pages. The image handles remain valid.

### 77.39.1568 kfsBlack = & h38400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1569 kfsBold = & h2BC00000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.
**Notes:** The old constant 2 is still supported to preserve backward compatibility

### 77.39.1570 kfsCondensed = & h00000300

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1571 kfsDblUnderline = 32

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the constants for font style.
**Notes:** Double underlined text.

### 77.39.1572 kfsDemiBold = & h25800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1573 kfsExpanded = & h00000700

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1574 kfsExtraBold = & h32000000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1575 kfsExtraCondensed = & h00000200

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1576 kfsExtraExpanded = & h00000800

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1577 kfsExtraLight = & h0C800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1578 kfsItalic = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for font style.

### 77.39.1579 kfsLight = & h12C00000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1580 kfsMedium = & h1F400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1581 kfsNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for font style.

### 77.39.1582 kfsNormal = & h00000500

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1583 kfsRegular = & h19000000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.
**Notes:** Same as fsNone

### 77.39.1584 kfsSemiCondensed = & h00000400

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1585 kfsSemiExpanded = & h00000600

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1586 kfsStriked = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for font style.

### 77.39.1587 kfsThin = & h06400000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1588 kfsUltraBlack = & h3E800000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the weight class.

### 77.39.1589 kfsUltraCondensed = & h00000100

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1590 kfsUltraExpanded = & h00000900

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the font style constants for the width class.

### 77.39.1591 kfsUnderlined = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for font style.
**Notes:** Underlined text.

### 77.39.1592 kfsVerticalMode = 16

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the constants for font style.
**Notes:** Not considered at this time (v2.5)

### 77.39.1593 kftButton = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the field type constants.
**Notes:** Button

### 77.39.1594 kftCheckBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Checkbox

### 77.39.1595 kftComboBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Combobox

### 77.39.1596 kftGroup = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** This is not a real field type, it is just an array of fields.

### 77.39.1597 kftListBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Listbox

### 77.39.1598 kftMMType1 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font types.
**Notes:** Multiple Master

### 77.39.1599 kftRadioBtn = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Radio Button

### 77.39.1600 kftSignature = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Signature

### 77.39.1601 kftText = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Text.

### 77.39.1602 kftTrueType = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font types.
**Notes:** TrueType font

### 77.39.1603 kftType0 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font types.
**Notes:** CID font ->the descendant font can be a TrueType, Type1 (CFF), or OpenType font

### 77.39.1604 kftType1 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font types.
**Notes:** Type1 font

### 77.39.1605 kftType3 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font types.
**Notes:** Type3 font

### 77.39.1606 kgfAnsiStringIsUTF8 = 32

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the graphics state flag constants.
**Notes:**

If set, single byte strings in Ansi functions are treated as UTF-8 encoded Unicode strings.
Currently not useable with plugins.

### 77.39.1607 kgfCompatible = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the graphics state flag constants.
**Notes:** Compatible graphics state to earlier DynaPDF versions ->default

### 77.39.1608 kgfComplexText = & h00000400

MBS DynaPDF Plugin, Plugin Version: 20.1.

**Function:** One of the graphics state flag constants.
**Notes:** If set, text is processed with Uniscribe on Windows.

### 77.39.1609 kgfDisableBidiCtrls = & h00001000

MBS DynaPDF Plugin, Plugin Version: 22.0.

**Function:** One of the graphics state flag constants.
**Notes:** Meaningful only if gfComplexText is set too. If set, bidi control characters are ignored. This flag can be useful if the result of web browsers should be emulated since web browsers do not support bidi control characters. This flag is also used internally to create the appearance stream of form fields since form fields do not support bidi control characters.

### 77.39.1610 kgfDisableJavascript = & h00000800

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the graphics state flag constants.
**Notes:** If set, Javascript actions associated with the OnFormat event of text fields are not executed to format the field value.

### 77.39.1611 kgfDoNotComprMetadata = & h00002000

MBS DynaPDF Plugin, Plugin Version: 22.4.

**Function:** One of the graphics state flag constants.
**Notes:** If set, arbitrary metadata stream associated with PDF objects other that the global metadata stream will not be compressed. This can be useful since certain standards prohibit compression of metadata streams. The flag is automatically for PDF/X files.

### 77.39.1612 kgfIgnoreICCProfiles = 16

MBS DynaPDF Plugin, Plugin Version: 9.3.

**Function:** One of the graphics state flag constants.
**Notes:** Meaningful only if the flag kgfUseImageColorSpace is set. If set, an embedded profile is not used to create an ICCBased color space for the image. The image is inserted in the corresponding device color

space instead.

### 77.39.1613 kgfNativeBlackWhite = 4

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the graphics state flag constants.
**Notes:** Do not convert RGB black or white to DeviceGray

### 77.39.1614 kgfNoBitmapAlpha = & h00000080

MBS DynaPDF Plugin, Plugin Version: 14.3.

**Function:** One of the graphics state flag constants.
**Notes:** If set, the alpha channel in 32 bit bitmaps will be ignored. Useful for bitmaps with an invalid alpha channel.

### 77.39.1615 kgfNoImageDuplCheck = & h00000100

MBS DynaPDF Plugin, Plugin Version: 14.3.

**Function:** One of the graphics state flag constants.
**Notes:** Disables duplicate check for images.

### 77.39.1616 kgfNoObjCompression = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the graphics state flag constants.
**Notes:** If set, object compression will be disabled.

### 77.39.1617 kgfRealPassThrough = 64

MBS DynaPDF Plugin, Plugin Version: 14.3.

**Function:** One of the graphics state flag constants.
**Notes:** If set, JPEG images are inserted as is. JPEG images are normally rebuild, also in pass-through mode, to avoid issues with certain malformed JPEG images which cannot be displayed in Adobes Acrobat or Reader. If you know that your JPEG images work then set this flag to avoid unnecessary processing time.

### 77.39.1618 kgfRealTopDownCoords = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the graphics state flag constants.
**Notes:** If set, the page coordinate system is not reset to bottom-up when transforming the coordinate system. However, real top-down coordinates require a large internal overhead and where never fully implemented. The usage of this flag should be avoided if possible.

### 77.39.1619 kgfRestorePageCoords = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the graphics state flag constants.
**Notes:** Restore the coordinate system with the graphics state (the value of PageCoords, see SetPageCoords())

### 77.39.1620 kgfUpdatePDFVTModDate = & h00004000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the graphics state flag constants.
**Notes:** If set, the key GTS_PDFVTModDate will be set to the file's modification date.

### 77.39.1621 kgfUseImageColorSpace = 8

MBS DynaPDF Plugin, Plugin Version: 9.3.

**Function:** One of the graphics state flag constants.
**Notes:** If set, the active color space is ignored when inserting an image. The color space is taken from the image file instead.

### 77.39.1622 khmInvert = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Highlight Mode Constants.

### 77.39.1623 khmNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Highlight Mode Constants.

### 77.39.1624 khmOutline = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Highlight Mode Constants.

### 77.39.1625 khmPush = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Highlight Mode Constants.

### 77.39.1626 khmPushUpd = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Highlight Mode Constants.
**Notes:** Update appearance stream on changes

### 77.39.1627 khtDetached = 0

MBS DynaPDF Plugin, Plugin Version: 10.2.

**Function:** One of the constants for CloseAndSignFileExt.
**Notes:** Returns the byte ranges of the finish PDF buffer to create a detached signature.

### 77.39.1628 khtSHA1 = 1

MBS DynaPDF Plugin, Plugin Version: 10.2.

**Function:** One of the constants for CloseAndSignFileExt.
**Notes:** Returns the SHA1 hash of the PDF file so that it can be signed.

### 77.39.1629 kicfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the cache initialization flags.

### 77.39.1630 kicfIgnoreOpenAction = 1

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the cache initialization flags.

### 77.39.1631 kicfIgnorePageLayout = 2

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the cache initialization flags.

### 77.39.1632 kicmBPCompensation = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the flags to pass to InitColorManagement function.
**Notes:** Black point compensation preserves the black point when converting CMYK colors to different color spaces.

### 77.39.1633 kicmCheckBlackPoint = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

**Function:** One of the flags to pass to InitColorManagement function.
**Notes:** If set, soft proofing will be disabled if the black point of the output intent is probably invalid.

### 77.39.1634 kicmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the flags to pass to InitColorManagement function.
**Notes:** Default rules.

### 77.39.1635 kicNone = 0

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the image conversion flag constants.
**Notes:** Default value.

### 77.39.1636 kictCMYK = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for ICC profile types.

### 77.39.1637 kictGray = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for ICC profile types.

### 77.39.1638 kictLab = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for ICC profile types.

### 77.39.1639 kictRGB = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for ICC profile types.

### 77.39.1640 kicUseCCITT4 = 1

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the image conversion flag constants.
**Notes:** Use CCITT Fax 4 compression instead of Flate for dithered images.

### 77.39.1641 kif2CopyEncryptDict = 64

MBS DynaPDF Plugin, Plugin Version: 17.0.

**Function:** One of the constants for ImportFlags2.
**Notes:**

If set, the encryption settings of an encrypted PDF file are copied to the new PDF file.
The flag does nothing if the file is not encrypted.

### 77.39.1642 kif2DuplicateCheck = 16

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the constants for ImportFlags2.
**Notes:** Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.

### 77.39.1643 kif2MergeLayers = 1

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the constants for ImportFlags2.
**Notes:** If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was orignally used.

### 77.39.1644 kif2NoMetadata = 8

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the constants for ImportFlags2.
**Notes:** Ignore metadata streams which are attached to fonts, pages, images, and so on.

### 77.39.1645 kif2NoResNameCheck = 32

MBS DynaPDF Plugin, Plugin Version: 16.5.

**Function:** One of the constants for ImportFlags2.
**Notes:** Useful in viewer applications

### 77.39.1646 kif2Normalize = 2

MBS DynaPDF Plugin, Plugin Version: 10.3.

**Function:** One of the constants for ImportFlags2.
**Notes:** Replace LZW compression with Flate, apply limit checks, repair errors if possible.

### 77.39.1647 kif2UseProxy = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the constants for ImportFlags2.
**Notes:** Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never hold in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before CloseFile() or CloseFileEx() was called.

### 77.39.1648 kif3DAnnot = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1649 kifAllAnnots = & h009F0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1650 kifAllPageObjects = & h40000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1651 kifArticles = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1652 kifBookmarks = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1653 kifBoxColorInfo = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1654 kifCatalogAction = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1655 kifContentOnly = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1656 kifDocInfo = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1657 kifEmbeddedFiles = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1658 kifEnumFonts = & h20000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1659 kifFileCollections = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1660 kifFormFields = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1661 kifFreeText = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1662 kifImportAll = & h0FFFFFFE

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1663 kifImportAsPage = & h80000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1664 kifJavaScript = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1665 kifJSActions = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1666 kifLink = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1667 kifmBMP = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the image format constants.
**Notes:** BMP: DeviceGray, DeviceRGB, Black & White ->Uncompressed.

### 77.39.1668 kifmJPC = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the image format constants.
**Notes:** JPEG 2000: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG2000 compression.

### 77.39.1669 kifmJPEG = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the image format constants.
**Notes:** JPEG: DeviceRGB, DeviceCMYK, DeviceGray ->JPEG compression.

### 77.39.1670 kifmPNG = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the image format constants.
**Notes:** PNG: DeviceGray, DeviceRGB, Black & White ->Flate compression.

### 77.39.1671 kifmTIFF = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the image format constants.
**Notes:** TIFF: DeviceRGB, DeviceCMYK, DeviceGray, Black & White ->CCITT Fax Group 3/4, JPEG, Flate, LZW.

### 77.39.1672 kifNoContent = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1673 kifOtherAnnots = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1674 kifPageActions = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1675 kifPageLabels = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1676 kifPieceInfo = & h02000000

MBS DynaPDF Plugin, Plugin Version: 16.5.

**Function:** One of the constants for import flags.
**Notes:** The PieceInfo dictionary contains arbitrary application defined data. The data in this dictionary is meaningful only for the application that created the data.

### 77.39.1677 kifPrepareForPDFA = & h10000000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1678 kifSearchIndex = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1679 kifSeparationInfo = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.
**Notes:** Separation info

### 77.39.1680 kifStamp = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1681 kifStructureTree = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1682 kifTextAnnot = & h00020000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1683 kifThumbs = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1684 kifTransition = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1685 kifTranspGroups = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for import flags.

### 77.39.1686 kit3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the Instantiation type constants for Set3DAnnotProps.
**Notes:** Default

### 77.39.1687 kit3D_Instantiated = 1

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the Instantiation type constants for Set3DAnnotProps.
**Notes:** The annotation will be instantiated but animations are disabled.

### 77.39.1688 kit3D_Live = 2

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the Instantiation type constants for Set3DAnnotProps.
**Notes:** The annotation will be instantiated and animations are enabled (default).

### 77.39.1689 kjsBevelJoin = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line join styles.
**Notes:** Bevel Join

### 77.39.1690 kjsMiterJoin = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line join styles.
**Notes:** Miter Join

### 77.39.1691 kjsRoundJoin = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for line join styles.
**Notes:** Round Join

### 77.39.1692 kkl128bit = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for key length.
**Notes:** RC4 Encryption ->Acrobat 5 or higher

### 77.39.1693 kkl128bitEx = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for key length.
**Notes:** RC4 Encryption ->Acrobat 6 or higher

### 77.39.1694 kkl40bit = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for key length.
**Notes:** RC4 Encryption ->Acrobat 3 or higher

### 77.39.1695 kklAES128 = 3

MBS DynaPDF Plugin, Plugin Version: 9.1.

**Function:** One of the DynaPDF constants for key length.
**Notes:** AES Encryption ->Acrobat 7 or higher

### 77.39.1696 kklAES256 = 4

MBS DynaPDF Plugin, Plugin Version: 9.1.

**Function:** One of the DynaPDF constants for key length.
**Notes:** AES Encryption ->Acrobat 9 or higher

### 77.39.1697 kklAESRev6 = 5

MBS DynaPDF Plugin, Plugin Version: 15.4.

**Function:** One of the DynaPDF constants for key length.
**Notes:** AES Encryption ->PDF 2.0, Acrobat X or higher

### 77.39.1698 klcmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the constants for flags to SetCMapDir function
**Notes:** Load the cmaps in the directory now.

### 77.39.1699 klcmDelayed = 2

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the constants for flags to SetCMapDir function
**Notes:** Load the cmap files only when a font requires an external cmap.

### 77.39.1700 klcmRecursive = 1

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the constants for flags to SetCMapDir function
**Notes:** Load sub directories recursively.

### 77.39.1701 kleButt = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Butt

### 77.39.1702 kleCircle = 2

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Circle

### 77.39.1703 kleClosedArrow = 3

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Left Close Arrow

### 77.39.1704 kleDiamond = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Diamond

### 77.39.1705 kleNone = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** No end

### 77.39.1706 kleOpenArrow = 5

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Left Open Arrow

### 77.39.1707 kleRClosedArrow = 6

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Right Close Arrow

### 77.39.1708 kleROpenArrow = 7

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Right Open Arrow

### 77.39.1709 kleSlash = 8

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Slash

### 77.39.1710 kleSquare = 9

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the flags for the line end style.
**Notes:** Square

### 77.39.1711 klsArtwork = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.
**Notes:** Lights from file lsBlue,

### 77.39.1712 klsBlue = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1713 klsCAD = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1714 klsCube = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1715 klsDay = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1716 klsHard = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1717 klsHeadlamp = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1718 klsNight = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1719 klsNoLights = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1720 klsNotSet = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1721 klsPrimary = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1722 klsRed = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1723 klsWhite = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for a 3D Rendering mode for Create3DView.

### 77.39.1724 kmdoCatalog = 0

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the metadata object contants.
**Notes:** The global XMP stream of the document (no handle needed)

### 77.39.1725 kmdoFont = 1

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the metadata object contants.
**Notes:** Parameter Handle must be a font handle.

### 77.39.1726 kmdoImage = 2

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the metadata object contants.
**Notes:** Parameter Handle must be an image handle.

### 77.39.1727 kmdoPage = 3

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the metadata object contants.
**Notes:** Parameter Handle must be a page number.

### 77.39.1728 kmdoTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 14.0.

**Function:** One of the metadata object contants.
**Notes:** Parameter Handle must be a template handle.

### 77.39.1729 kmfApplyBidiAlgo = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Apply the bidirectional algorithm on Unicode strings

### 77.39.1730 kmfClipRclBounds = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.5.

**Function:** One of the metaflags constants.
**Notes:**

If set, the graphic is drawn into a clipping path with the size of rclBounds.
This flag is useful if the graphic contains content outside of its bounding box.

### 77.39.1731 kmfClipView = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Draw the file into a clipping rectangle

### 77.39.1732 kmfCurrComprFilter = & h20000000

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the meta flag constants.
**Notes:**

If set, the currently active compression filter is used to compress the image (see SetCompressionFilter()).
This flag is used only if the file is rastered to an image.

### 77.39.1733 kmfDebug = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Write debug information into the content stream.

### 77.39.1734 kmfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Default conversion

### 77.39.1735 kmfDefBkModeTransp = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Initialize the background mode to transparent (SetBkMode() overrides this state).

### 77.39.1736 kmfDisableRasterEMF = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the metaflags constants.
**Notes:** If set, EMF files which use unsupported ROP codes are not rastered.

### 77.39.1737 kmfDontSkipROP_DPa = & h10000000

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the metaflags constants.
**Notes:**

If set, the ROP code 0x00A000C9 (DPa) is considered in BitBlt, StretchBlt, TranparentBlt, and AlphaBlend records.
This kind of ROP code combines a pattern brush with the backdrop. If the flag mfDisableRasterEMF is absent, the usage of such a ROP code causes that the file is rendered to an image.

### 77.39.1738 kmfFullScale = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Recommended if 32 bit coordinates are used

### 77.39.1739 kmfGDIFontSelection = & h00100000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Use the GDI to select fonts

### 77.39.1740 kmfIgnoreEmbFonts = & h08000000

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the meta flag constants.
**Notes:** If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMFSpool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.

### 77.39.1741 kmfIntersectClipRect = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** enabled by default ->can be disabled with mfNoClippingRgn

### 77.39.1742 kmfNoBBoxCheck = & h04000000

MBS DynaPDF Plugin, Plugin Version: 13.3.

**Function:** One of the meta flag constants.
**Notes:** Disable the bbox check.

### 77.39.1743 kmfNoBmpPatterns = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Ignore bitmap patterns

### 77.39.1744 kmfNoClippingRgn = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath

### 77.39.1745 kmfNoFontEmbedding = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Do not embed fonts ->Fonts should be embedded!!!

### 77.39.1746 kmfNoImages = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Ignore image records

### 77.39.1747 kmfNoStdPatterns = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Ignore standard patterns

### 77.39.1748 kmfNoText = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Ignore text records

### 77.39.1749 kmfNoTextClipping = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.5.

**Function:** One of the metaflags constants.
**Notes:** If set, the ETO_CLIPPED flag in text records is ignored.

### 77.39.1750 kmfNoTextScaling = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Do not scale text

### 77.39.1751 kmfNoUnicode = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Avoid usage of Unicode fonts ->recommended to enable PDF 1.2 compability

### 77.39.1752 kmfRclFrameEx = & h00200000

MBS DynaPDF Plugin, Plugin Version: 8.1.

**Function:** One of the DynaPDF constants.

### 77.39.1753 kmfShowBounds = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Show the bounding boxes of text strings

### 77.39.1754 kmfSrcCopy_Only = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.5.

**Function:** One of the metaflags constants.
**Notes:** If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when pro-

cessing Excel 2007 spool files.

### 77.39.1755 kmfUseRclBounds = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Use rclBounds instead of rclFrame

### 77.39.1756 kmfUseRclFrame = & h00020000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** This flag should be set if the rclFrame rectangle is properly set

### 77.39.1757 kmfUseSpacingArray = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** enabled by default ->can be disabled with mfUseTextScaling

### 77.39.1758 kmfUseTextScaling = & h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Scale text instead of using the intercharacter spacing array

### 77.39.1759 kmfUseUnicode = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the meta flag constants.
**Notes:** Ignore ANSI_CHARSET

### 77.39.1760 kmiNotTagged = 0

MBS DynaPDF Plugin, Plugin Version: 21.4.

**Function:** One of the flags for tagged PDF file status.
**Notes:** This is no Tagged PDF file.

### 77.39.1761 kmiSuspects = 2

MBS DynaPDF Plugin, Plugin Version: 21.4.

**Function:** One of the flags for tagged PDF file status.
**Notes:** The file contains suspect contents that whose ordering does not ordered meet the requirements of the Tagged PDF specifications.

### 77.39.1762 kmiTagged = 1

MBS DynaPDF Plugin, Plugin Version: 21.4.

**Function:** One of the flags for tagged PDF file status.
**Notes:** This is a Tagged PDF file.

### 77.39.1763 kmiUserProperties = 4

MBS DynaPDF Plugin, Plugin Version: 21.4.

**Function:** One of the flags for tagged PDF file status.
**Notes:** A flag indicating that at least one structure element contains user properties. User properties are stored in User Property dictionaries.

### 77.39.1764 knaDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D named action.

### 77.39.1765 knaDeletePages = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1766 knaFirst = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D named action.

### 77.39.1767 knaFirstPage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1768 knaFitPage = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1769 knaFontsInfo = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1770 knaFullScreen = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1771 knaGeneralInfo = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1772 knaGoBack = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1773 knaLast = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D named action.

### 77.39.1774 knaLastPage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1775 knaNext = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D named action.

### 77.39.1776 knaNextPage = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1777 knaOpenDlg = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1778 knaPrevious = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D named action.

### 77.39.1779 knaPrevPage = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1780 knaPrintDlg = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1781 knaQuit = 14

MBS DynaPDF Plugin, Plugin Version: 9.8.

**Function:** One of the named action constants.

### 77.39.1782 knaSaveAs = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1783 knaSecurityInfo = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the named action constants.

### 77.39.1784 kNEW_ALIGN_CENTER = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.

### 77.39.1785 kNEW_ALIGN_JUSTIFY = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.

### 77.39.1786 kNEW_ALIGN_LEFT = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.

### 77.39.1787 kNEW_ALIGN_RIGHT = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.

### 77.39.1788 kNO_COLOR = & hFFFFFFF1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the RGB color constants.
**Notes:**

This value can be used for form fields, annotations and standard patterns to determine that the specific color is not set.
For example, when a form field should have a transparent background, set the field background color to NO_COLOR. The background appears then transparent.

### 77.39.1789 knsMinusBlack = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored black with a minus sign.

### 77.39.1790 knsParensBlack = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored black with parenthesis.

### 77.39.1791 knsParensRed = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored red with parenthesis.

### 77.39.1792 knsRed = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored red.

### 77.39.1793 koeOnAfterPrinting = 21

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.4 ->Catalog only

### 77.39.1794 koeOnAfterSaving = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.4 ->Catalog only

### 77.39.1795 koeOnBeforeClosing = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.4 ->Catalog only.

### 77.39.1796 koeOnBeforePrinting = 20

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.4 ->Catalog only.

### 77.39.1797 koeOnBeforeSaving = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.4 ->Catalog only.

### 77.39.1798 koeOnBlur = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only

### 77.39.1799 koeOnCalc = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1800 koeOnClose = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Pages only

### 77.39.1801 koeOnFocus = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1802 koeOnFormat = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1803 koeOnKeyStroke = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1804 koeOnMouseDown = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1805 koeOnMouseEnter = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only.

### 77.39.1806 koeOnMouseExit = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Form fields only

### 77.39.1807 koeOnMouseUp = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** All fields, page link annotations, bookmarks

### 77.39.1808 koeOnOpen = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** Catalog, Pages

### 77.39.1809 koeOnPageClose = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.5 ->Form fields only

### 77.39.1810 koeOnPageInVisible = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.5 ->Form fields only

### 77.39.1811 koeOnPageOpen = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.5 ->Form fields only

### 77.39.1812 koeOnPageVisible = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** PDF 1.5 ->Form fields only

### 77.39.1813 koeOnValidate = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants.
**Notes:** All form fields, except buttons

### 77.39.1814 kofAdjZeroLineWidthOnly = & h00002000

MBS DynaPDF Plugin, Plugin Version: 17.0.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if the parameter MinLineWidth of the optimize parameters is greater zero. If set, change the line width of real hairlines only (a hairline is a one pixel width line ->LineWidth = 0).

### 77.39.1815 kofCompressWithJBIG2 = & h00004000

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, 1 bit images are compressed with JBIG2 if not already compressed with this filter.

### 77.39.1816 kofConvertAllColors = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.

### 77.39.1817 kofConvertGrayTo1Bit = & h00010000

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Useful for scanned faxes since many scanners create gray images for black & white input.

### 77.39.1818 kofConvertToCMYK = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, images, text, and vector graphics are converted to DeviceCMYK.

### 77.39.1819 kofConvertToGray = & h00020000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, images, text, and vector graphics are converted to DeviceGray.

### 77.39.1820 kofConvertToRGB = & h00040000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, images, text, and vector graphics are converted to DeviceRGB.

### 77.39.1821 kofConvNonEmbFontsOnly = & h00800000

MBS DynaPDF Plugin, Plugin Version: 21.0.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only, if the flag kofConvTextToOutlines is set. If set, text of non-embedded fonts are converted to outlines only. Embedded fonts remain embedded.

### 77.39.1822 kofConvTextToOutlines = & h00400000

MBS DynaPDF Plugin, Plugin Version: 21.0.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, texts of non-Type3 fonts are converted to outlines or vector graphics. The resulting file contains no fonts with exception of Type3 fonts, if any. Such files are large but avoid printing issues due to missing or damaged fonts.

### 77.39.1823 kofDefault = 0

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Just rebuild the content streams.

### 77.39.1824 kofDeleteAlternateImages = & h00000400

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, alternate images will be deleted.

### 77.39.1825 kofDeleteInvPaths = 64

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".

### 77.39.1826 kofDeletePrivateData = & h00000100

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:**

Delete private data objects from pages, templates, and images.
For example Indesign may store the original Photoshop image within the PDF file.

### 77.39.1827 kofDeleteThumbnails = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

### 77.39.1828 kofFailOnOverprinting = & h08000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if a color conversion flag is set. If set, the function returns with a fatal error if an object with enabled overprinting was found on the page. The appearance of overprinted objects would change and make the page maybe unusable. Overprinted objects can be left unchanged (set the flag kofSkipOverprintedObj in this case) or Optimize() can return with a fatal error to avoid the creation of an invalid document.

### 77.39.1829 kofFlattenLayers = & h00000080

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Flatten layers if any.

### 77.39.1830 kofIgnoreDeviceN = & h01000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, DeviceN color spaces are left unchanged.

### 77.39.1831 kofIgnoreICCBased = 4

MBS DynaPDF Plugin, Plugin Version: 14.2.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, ICCBased color spaces will be left unchanged.

### 77.39.1832 kofIgnoreNChannel = & h02000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, NChannel color spaces are left unchanged.

### 77.39.1833 kofIgnoreSeparation = & h04000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, Separation color spaces are left unchanged.

### 77.39.1834 kofIgnoreSeparationAll = & h80000000

MBS DynaPDF Plugin, Plugin Version: 22.0.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if a color conversion flag is set. If set, Separation color spaces with the special colorant "All" will be ignored.

### 77.39.1835 kofIgnoreZeroLineWidth = & h00001000

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if the parameter MinLineWidth of the DynaPDFOptimizeParamsMBS class is greater zero. If set, ignore line width operators with a value of zero (zero means one device unit).

### 77.39.1836 kofInMemory = 1

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Optimize the file fully in memory. Only useful for small PDF files.

### 77.39.1837 kofNewLinkNames = 32

MBS DynaPDF Plugin, Plugin Version: 16.1.

**Function:** One of the constants for the Optimize function.
**Notes:** If set, rename all object links to short names like F1, F2 etc.

### 77.39.1838 kofNoFilterCheck = & h00008000

MBS DynaPDF Plugin, Plugin Version: 18.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only, if the flag ofCompressWithJBIG2 is set. If set, re-compress all 1 bit images, also if already compressed with JBIG2.

### 77.39.1839 kofNoImageSizeCheck = & h00000800

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if ofScaleImages is set. If set, do not check whether the scaled image is smaller as the original image.

### 77.39.1840 kofRemoveBatesNumbers = & h20000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Remove bates numbers if any. The type BatesN can also contain headers / footers.

### 77.39.1841 kofRemoveHeaderFooter = & h40000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Remove headers / footers if any. This type is set if no bates numbering was added.

### 77.39.1842 kofReplaceJP2KWithJPEG = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.3.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only, if the flag kofConvertToGray, kofConvertToRGB, or kofConvertToCMYK is set. If set, JPEG 2000 compressed images (which are converted to another color space) will be compressed with JPEG instead JPEG 2000. JPEG 2000 compression is very slow and requires much memory. JPEG compression is around 10 times faster and produces almost identical results.

### 77.39.1843 kofScaleImages = 8

MBS DynaPDF Plugin, Plugin Version: 14.2.

**Function:** One of the constants for the Optimize function.
**Notes:** Scale images as specified in the DynaPDFOptimizeParamsMBS class.

### 77.39.1844 kofSkipMaskedImages = 16

MBS DynaPDF Plugin, Plugin Version: 16.4.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if ofScaleImages is set. If set, don't scale images with a color mask.

### 77.39.1845 kofSkipOverprintedObj = & h10000000

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the constants for the Optimize function.
**Notes:** Meaningful only if a color conversion flag is set. If set, objects that would be rendered with enabled overprinting are left unchanged to avoid color errors on the page.

### 77.39.1846 kofUseOtsuFilter = & h00200000

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** Whether to use Otsu filter.
**Notes:**

Meaningfulonly, if the flag kofConvertGrayTo1Bit is set.
The Otsu filter is useful for gray scanned faxes.

### 77.39.1847 koiAll = 8

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object intent constants for CreateOCG.

### 77.39.1848 koiDesign = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object intent constants for CreateOCG.

### 77.39.1849 koiEmpty = 16

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object intent constants for CreateOCG.
**Notes:** Internal (refers to koiView if used)

### 77.39.1850 koiView = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object intent constants for CreateOCG.
**Notes:** Default.

### 77.39.1851 koiVisible = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the object intent constants for CreateOCG.
**Notes:** Visible

### 77.39.1852 kooAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object type constants for AddObjectToLayer.
**Notes:** Handle is an annotation handle.

### 77.39.1853 kooField = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object type constants for AddObjectToLayer.
**Notes:** Handle is a field handle.

### 77.39.1854 kooImage = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object type constants for AddObjectToLayer.
**Notes:** Handle is a image handle.

### 77.39.1855 kooTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the object type constants for AddObjectToLayer.
**Notes:** Handle is a template handle.

### 77.39.1856 korDownLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the origin constants.

### 77.39.1857 korTopLeft = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the origin constants.

### 77.39.1858 kotAction = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Action

### 77.39.1859 kotAnnotation = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Annotation

### 77.39.1860 kotBookmark = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Bookmark

### 77.39.1861 kotCatalog = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Catalog. PDF 1.4

### 77.39.1862 kotField = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Field

### 77.39.1863 kotPage = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Page

### 77.39.1864 kotPageLink = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the object type constants.
**Notes:** Page Link.

### 77.39.1865 koucExport = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** Export

### 77.39.1866 koucLanguage = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** Language

### 77.39.1867 koucNone = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.

### 77.39.1868 koucPrint = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** Print

### 77.39.1869 koucUser = 8

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** User

### 77.39.1870 koucView = 16

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** View

### 77.39.1871 koucZoom = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the usage Categories which control the layer state.
**Notes:** Zoom

### 77.39.1872 kovAllOff = 0

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the visibility constants for CreateOCMD.
**Notes:** All Off

### 77.39.1873 kovAllOn = 1

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the visibility constants for CreateOCMD.
**Notes:** All On

### 77.39.1874 kovAnyOff = 2

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the visibility constants for CreateOCMD.
**Notes:** Any Off

### 77.39.1875 kovAnyOn = 3

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the visibility constants for CreateOCMD.
**Notes:** Any On

### 77.39.1876 kovNotSet = 4

MBS DynaPDF Plugin, Plugin Version: 10.5.

**Function:** One of the visibility constants for CreateOCMD.
**Notes:** Not Set

### 77.39.1877 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF box constants.
**Notes:** Art box.

### 77.39.1878 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF box constants.
**Notes:** Bleed box.

### 77.39.1879 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF box constants.
**Notes:** Crop Box.

### 77.39.1880 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF box constants.
**Notes:** Media Box.

### 77.39.1881 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF box constants.
**Notes:** Trim Box.

### 77.39.1882 kpcBottomUp = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the page coordinates.

### 77.39.1883 kpcrHandClosed = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the cursor constants.

### 77.39.1884 kpcrHandNormal = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the cursor constants.

### 77.39.1885 kpcrHandPoint = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the cursor constants.

### 77.39.1886 kpcrIBeam = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the cursor constants.

### 77.39.1887 kpcTopDown = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the page coordinates.

### 77.39.1888 kPDF_ANNOT_INDEX = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** Special flag for GetPageFieldEx() to indicate that an annotation index was passed to the function.
**Notes:** See GetPageFieldEx() for further information.

### 77.39.1889 kPDF_AQUA = & h00FFFF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** aqua

### 77.39.1890 kPDF_BLACK = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** black

### 77.39.1891 kPDF_BLUE = & h00FF0000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** blue

### 77.39.1892 kPDF_CREAM = & h00F0FBFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** cream

### 77.39.1893 kPDF_DKGRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** dark gray

### 77.39.1894 kPDF_FUCHSIA = & h00FF00FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** fuchsia

### 77.39.1895 kPDF_GRAY = & h00808080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** gray

### 77.39.1896 kPDF_GREEN = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** green

### 77.39.1897 kPDF_LIME = & h0000FF00

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** lime

### 77.39.1898 kPDF_LIST_FONT = "Wingdings-Regular"

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** Default font to display the list symbol ->can be changed with SetListFont()

### 77.39.1899 kPDF_LIST_SEP_WIDTH = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** Default width between the list symbol and text (see WriteFText() in the help file for further information)

### 77.39.1900 kPDF_LTGRAY = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** light gray

### 77.39.1901 kPDF_MAROON = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** maroon

### 77.39.1902 kPDF_MAX_INT = & h7FFFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** The maximum integer value.

### 77.39.1903 kPDF_MAX_LIST_COUNT = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** Maximum count of nested list levels (WriteFText())
**Notes:** Was 6, but got changed to 32 for DynaPDF version 4.0.28.81.

### 77.39.1904 kPDF_MEDGRAY = & h00A4A0A0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** medium gray

### 77.39.1905 kPDF_MOGREEN = & h00C0DCC0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** mogreen

### 77.39.1906 kPDF_NAVY = & h00800000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** navy

### 77.39.1907 kPDF_OLIVE = & h00008080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** olive

### 77.39.1908 kPDF_PURPLE = & h00800080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** purple

### 77.39.1909 kPDF_RED = & h000000FF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** red

### 77.39.1910 kPDF_SILVER = & h00C0C0C0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** silver

### 77.39.1911 kPDF_SKYBLUE = & h00F0CAA6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** skyblue

### 77.39.1912 kPDF_TABLEN = 3

MBS DynaPDF Plugin, Plugin Version: 8.6.

**Function:** The default tab length.

### 77.39.1913 kPDF_TEAL = & h00808000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** teal

### 77.39.1914 kPDF_WHITE = & h00FFFFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** white

### 77.39.1915 kPDF_YELLOW = & h0000FFFF

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for basic RGB colors.
**Notes:** yellow

### 77.39.1916 kpeBackgroundImage = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the possible pagination artefact for an optional content group.
**Notes:** Background image.

### 77.39.1917 kpeForegroundImage = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the possible pagination artefact for an optional content group.
**Notes:** Foreground Image.

### 77.39.1918 kpeHeaderFooter = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the possible pagination artefact for an optional content group.
**Notes:** Header or Footer

### 77.39.1919 kpeLogo = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the possible pagination artefact for an optional content group.
**Notes:** Logo

### 77.39.1920 kpeNone = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the possible pagination artefact for an optional content group.

### 77.39.1921 kpfConvImagesToCMYK = 64

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the PDF Parser constants.
**Notes:** Convert images to CMYK.

### 77.39.1922 kpfConvImagesToGray = 16

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the PDF Parser constants.
**Notes:** Convert images to grayscale.

### 77.39.1923 kpfConvImagesToRGB = 32

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the PDF Parser constants.
**Notes:** Convert images to RGB.

### 77.39.1924 kpfDecomprAllImages = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the parser flags.
**Notes:** This flag causes that all image formats will be decompressed with the exception of JBIG2 compressed images. If this flag is not set, images which are already stored in a valid image file format are returned as is. This is the case for RGB JPEG and JPEG2000 compressed images. If you want to extract the images of a PDF file this flag should be absent!

### 77.39.1925 kpfDIN_A0 = 20

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A0

### 77.39.1926 kpfDIN_A1 = 21

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A1

### 77.39.1927 kpfDIN_A10 = 27

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A10

### 77.39.1928 kpfDIN_A2 = 22

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A2

### 77.39.1929 kpfDIN_A3 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A3

### 77.39.1930 kpfDIN_A4 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A4

### 77.39.1931 kpfDIN_A5 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A5

### 77.39.1932 kpfDIN_A6 = 23

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A6

### 77.39.1933 kpfDIN_A7 = 24

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A7

### 77.39.1934 kpfDIN_A8 = 25

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A8

### 77.39.1935 kpfDIN_A9 = 26

MBS DynaPDF Plugin, Plugin Version: 18.5.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN A9

### 77.39.1936 kpfDIN_B4 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN B4

### 77.39.1937 kpfDIN_B5 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN B5

### 77.39.1938 kpfDIN_B6 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN B6

### 77.39.1939 kpfDIN_C3 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN C3

### 77.39.1940 kpfDIN_C4 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN C4

### 77.39.1941 kpfDIN_C5 = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN C5

### 77.39.1942 kpfDIN_C6 = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN C6

### 77.39.1943 kpfDIN_C65 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN C65

### 77.39.1944 kpfDIN_DL = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN DL

### 77.39.1945 kpfDIN_E4 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN E4

### 77.39.1946 kpfDIN_E5 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN E5

### 77.39.1947 kpfDIN_E6 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN E6

### 77.39.1948 kpfDIN_E65 = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN E65

### 77.39.1949 kpfDIN_M5 = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN M5

### 77.39.1950 kpfDIN_M65 = 17

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** DIN M65

### 77.39.1951 kpfDitherImagesToBW = 8

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the PDF Parser constants.
**Notes:** Floyd-Steinberg dithering.

### 77.39.1952 kpff1Bit = 1

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:** Print with 1 bit in black and white.

### 77.39.1953 kpffAllCap = & h00010000

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** All capitals font

### 77.39.1954 kpffAutoCenter = & h00000400

MBS DynaPDF Plugin, Plugin Version: 18.3.

**Function:** One of the printing flags.
**Notes:** Automatically scale the page to match printer context.

### 77.39.1955 kpffAutoRotate = & h00000200

MBS DynaPDF Plugin, Plugin Version: 18.3.

**Function:** One of the printing flags.
**Notes:** Automatically rotate the page to match printer context.

### 77.39.1956 kpffAutoRotateAndCenter = 4

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:**

Automatically rotate and scale the page to match printer context.
With newer versions you can use kpffAutoRotate and kpffAutoCenter separately.

### 77.39.1957 kpffColor = 2

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:** Print in color.

### 77.39.1958 kpffDefault = 0

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:** Default print settings.

### 77.39.1959 kpffFixedPitch = 1

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Fixed pitch

### 77.39.1960 kpffForceBold = & h00040000

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Bold required

### 77.39.1961 kpffItalic = 64

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Italic font

### 77.39.1962 kpffNoEndDoc = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.2.

**Function:** One of the printing flags.
**Notes:** Do not call EndDoc on Windows

### 77.39.1963 kpffNonSymbolic = 32

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Non symbolic font.

### 77.39.1964 kpffNoStartDoc = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

**Function:** One of the printing flags.
**Notes:** Do not call StartDoc on Windows

### 77.39.1965 kpffNoStartPage = 64

MBS DynaPDF Plugin, Plugin Version: 15.2.

**Function:** One of the printing flags.
**Notes:** Do not call StartPage on Windows

### 77.39.1966 kpffPrintAsImage = 8

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:** Print by rendering each page as image and drawing it in the graphics context.

### 77.39.1967 kpffPrintPageAsIs = & h00000100

MBS DynaPDF Plugin, Plugin Version: 17.2.

**Function:** One of the printing flags.
**Notes:** If set, do not scale or rotate a page to fit into the printable area.

### 77.39.1968 kpffScriptStyle = 8

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Font in script style.

### 77.39.1969 kpffSerifs = 2

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Serif font

### 77.39.1970 kpffShrinkToPrintArea = 16

MBS DynaPDF Plugin, Plugin Version: 15.1.

**Function:** One of the printing flags.
**Notes:** Shrink PDF to print area.

### 77.39.1971 kpffSmallCap = & h00020000

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Small Caps font

### 77.39.1972 kpffSymbolic = 4

MBS DynaPDF Plugin, Plugin Version: 20.2.

**Function:** One of the PDF font flag constants.
**Notes:** Symbolic font.

### 77.39.1973 kpfImageInfoOnly = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.2.

**Function:** One of the image import flags.
**Notes:** If set, images are not decompressed. This flag is useful if you want to enumerate the images of a PDF file or if you want to determine how many images are stored in it. Note that images can be compressed with multiple filters. The member Filter of the structure TPDFImage contains only the last filter with which the image was compressed. There is no indication whether multiple decode filters are required to decompress the image buffer. So, it makes no sense to set this flag if you want to try to decompress the image buffer manually with your own decode filters.

### 77.39.1974 kpfNoJPXDecode = 4

MBS DynaPDF Plugin, Plugin Version: 7.7.

**Function:** One of the PDF Parser constants.
**Notes:** Meaningful only if the flag pfDecomprAllImages is set. If set, JPEG2000 images are returned as is so that you can use your own library to decompress such images since the the entire JPEG2000 codec is still marked as experimental. If we find an alternative to the currently used Jasper library then we will replace it immediatly with another one...

### 77.39.1975 kpfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Parser constants.

### 77.39.1976 kpfUS_Legal = 18

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** US Legal

### 77.39.1977 kpfUS_Letter = 19

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF page format constants for SetPageFormat.
**Notes:** US Letter

### 77.39.1978 kplDefault = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.
**Notes:** Use viewer's default settings

### 77.39.1979 kplfDecimalArabic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.
**Notes:** 1,2,3,4...

### 77.39.1980 kplfLowercaseLetters = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.
**Notes:** a,b,c,d...

### 77.39.1981 kplfLowercaseRoman = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.
**Notes:** i,ii,iii,iv...

### 77.39.1982 kplfNone = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.

### 77.39.1983 kplfUppercaseLetters = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.
**Notes:** A,B,C,D...

### 77.39.1984 kplfUppercaseRoman = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Page Label Format constants.
**Notes:** I,II,III,IV...

### 77.39.1985 kplOneColumn = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.

### 77.39.1986 kplSinglePage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.

### 77.39.1987 kplTwoColumnLeft = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.

### 77.39.1988 kplTwoColumnRight = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.

### 77.39.1989 kplTwoPageLeft = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.
**Notes:** PDF 1.5

### 77.39.1990 kplTwoPageRight = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page layout constants.
**Notes:** PDF 1.5

### 77.39.1991 kpmFullScreen = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.

### 77.39.1992 kpmUseAttachments = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.
**Notes:** PDF 1.6

### 77.39.1993 kpmUseNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.

### 77.39.1994 kpmUseOC = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.
**Notes:** PDF 1.5

### 77.39.1995 kpmUseOutlines = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.

### 77.39.1996 kpmUseThumbs = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the page mode constants.

### 77.39.1997 kpsAppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the print scaling flag constants.

### 77.39.1998 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page so that it fits fully into the image buffer.

### 77.39.1999 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page to the height of the image buffer.

### 77.39.2000 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page to the width of the image buffer.

### 77.39.2001 kpsFitZoom = 3

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** This mode must be used if the scaling factors of the transformation matrix are <>1.0

### 77.39.2002 kpsNone = 1

MBS DynaPDF Plugin, Plugin Version: 8.7.

**Function:** One of the print scaling flag constants.

### 77.39.2003 kpt3DOrthographic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for 3D projection types.
**Notes:** Orthographic

### 77.39.2004 kpt3DPerspective = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for 3D projection types.
**Notes:** Perspective

### 77.39.2005 kptColored = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the pattern type constants.

### 77.39.2006 kptConvertPage = 3

MBS DynaPDF Plugin, Plugin Version: 21.1.

**Function:** One of the DynaPDF constants for the progtype parameter in the progress event.
**Notes:** Start converting the PDF file (Optimize(), CheckConformance())

### 77.39.2007 kptDontCopyBuf = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for password type to pass when opening files.
**Notes:** If set, OpenImportBuffer() does not copy the PDF buffer to an internal buffer. This increases the processing speed and reduces the memory usage. The PDF buffer must not be released until CloseImportFile() or CloseFile() was called.

### 77.39.2008 kptForceRepair = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for password type to pass when opening files.
**Notes:** Meaningful only when opening a PDF file with OpenImportFile() or OpenImportBuffer(). If set, the PDF parser rebuilds the cross-reference table by scanning all the objects in the file. This can be useful if the cross-reference table contains damages while the top level objects are intact. Setting this flag makes only sence if the file was already previously opened in normal mode and if errors occured when importing

pages of it.

### 77.39.2009 kptImportPage = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the progtype parameter in the progress event.
**Notes:** This value is for: Start page import

### 77.39.2010 kptOpen = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for password type to pass when opening files.
**Notes:** No password.

### 77.39.2011 kptOwner = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for password type to pass when opening files.
**Notes:** Owner password provided.

### 77.39.2012 kptPrintPage = 2

MBS DynaPDF Plugin, Plugin Version: 15.2.

**Function:** One of the DynaPDF constants for the progtype parameter in the progress event.
**Notes:** Progress for printing a page.

### 77.39.2013 kptShadingPattern = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the pattern type constants.

### 77.39.2014 kptUnColored = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the pattern type constants.

### 77.39.2015 kptWritePage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for the progtype parameter in the progress event.
**Notes:** This value is for: Start writing a page to file or buffer

### 77.39.2016 kpvFacturX_Basic = & h00100000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Basic
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Basic)
```

**Notes:** Basic profile for FacturX.

### 77.39.2017 kpvFacturX_Basic_WL = & h00200000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Notes:** Basic WL profile for FacturX.

### 77.39.2018 kpvFacturX_Comfort = & h00400000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Comfort
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Comfort)
```

**Notes:** Comfort profile for FacturX.

### 77.39.2019 kpvFacturX_Extended = & h00800000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Extended
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Extended)
```

**Notes:** Extended profile for FacturX.

### 77.39.2020 kpvFacturX_Mask = & h02F80000

MBS DynaPDF Plugin, Plugin Version: 20.5.

**Function:** One of the PDF Version constants.
**Notes:**

Mask for all FacturX variants.
Contains kpvFacturX_Minimum, kpvFacturX_Basic, kpvFacturX_Basic_WL, kpvFacturX_Comfort, kpvFacturX_Extended and kpvFacturX_XRechnung,

### 77.39.2021 kpvFacturX_Minimum = & h00080000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Example:**

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// Factur-X Minimum
bBool=pdf.SetPDFVersion(DynaPDFMBS.kpvFacturX_Minimum)
```

**Notes:** Minimum profile for FacturX.

### 77.39.2022 kpvPDFA_1a = 16

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 1a

### 77.39.2023 kpvPDFA_2005 = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A-1b 2005

### 77.39.2024 kpvPDFA_2a = 17

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 2a

### 77.39.2025 kpvPDFA_2b = 18

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 2b

### 77.39.2026 kpvPDFA_2u = 19

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 2u

### 77.39.2027 kpvPDFA_3a = 20

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 3a

### 77.39.2028 kpvPDFA_3b = 21

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 3b

### 77.39.2029 kpvPDFA_3u = 22

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/A 3u

### 77.39.2030 kpvPDFUA1 = 29

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Example:**

```
Dim pdf As New DynapdfMBS

// set version to PDF/UA-1
Call pdf.SetPDFVersion(pdf.kpvPDFUA1)
```

**Notes:** PDF/UA-1

### 77.39.2031 kpvPDFVT1 = & h10000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/VT 1 flag. This is just a flag because PDF/VT requires always a PDF/X base version.

### 77.39.2032 kpvPDFVT2 = & h04000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/VT 2 flag. This is just a flag because PDF/VT requires always a PDF/X base version.

### 77.39.2033 kpvPDFVT3 = & h08000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/VT 3 flag. This is just a flag because PDF/VT requires always a PDF/X base version.

### 77.39.2034 kpvPDFVTMask = & h1C000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Notes:** Mask for PDF/VT flags

### 77.39.2035 kpvPDFX1a_2001 = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-1a:2001

### 77.39.2036 kpvPDFX1a_2003 = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-1a:2003

### 77.39.2037 kpvPDFX3_2002 = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-3:2002

### 77.39.2038 kpvPDFX3_2003 = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-3:2003

### 77.39.2039 kpvPDFX4p = 30

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-4p

### 77.39.2040 kpvPDFX5g = 23

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 5g

### 77.39.2041 kpvPDFX5n = 24

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 5n

### 77.39.2042 kpvPDFX5pg = 25

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 5pq

### 77.39.2043 kpvPDFX6 = 26

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 6

### 77.39.2044 kpvPDFX6n = 27

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 6n

### 77.39.2045 kpvPDFX6p = 28

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X 6p

### 77.39.2046 kpvPDFX_4 = 15

MBS DynaPDF Plugin, Plugin Version: 13.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF/X-4

### 77.39.2047 kpvPDF_1_0 = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.0

### 77.39.2048 kpvPDF_1_1 = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.1

### 77.39.2049 kpvPDF_1_2 = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.2

### 77.39.2050 kpvPDF_1_3 = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.3

### 77.39.2051 kpvPDF_1_4 = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.4

### 77.39.2052 kpvPDF_1_5 = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.5

### 77.39.2053 kpvPDF_1_6 = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.6

### 77.39.2054 kpvPDF_1_7 = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 1.7

### 77.39.2055 kpvPDF_2_0 = 8

MBS DynaPDF Plugin, Plugin Version: 13.0.

**Function:** One of the PDF Version constants.
**Notes:** PDF 2.0

### 77.39.2056 kpvZUGFeRD2_Flag = & h01000000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the PDF Version constants.
**Notes:** The flag to indicate it is a ZUGFeRD PDF and not FacturX.

### 77.39.2057 kpvZUGFeRD_Basic = & h00010000

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the PDF Version constants.
**Notes:**

ZUGFeRD Basic level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If

used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

### 77.39.2058 kpvZUGFeRD_Comfort = & h00020000

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the PDF Version constants.
**Notes:**

ZUGFeRD Comfort level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

### 77.39.2059 kpvZUGFeRD_Extended = & h00040000

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the PDF Version constants.
**Notes:**

ZUGFeRD Extended level.
This constant are flags which can be combined with kpvPDFA_3a, kpvPDFA_3b, and kpvPDFA_3u. If used stand alone PDF/A 3b with the correspondig ZUGFeRD metadata will be created.

### 77.39.2060 kpvZUGFeRD_Mask = & h00070000

MBS DynaPDF Plugin, Plugin Version: 16.3.

**Function:** One of the PDF Version constants.
**Notes:** The mask to bitwise AND the value and get the ZUGFeRD part.

### 77.39.2061 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** 1 bit per pixel black and white.

### 77.39.2062 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** ABGR.

### 77.39.2063 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** ARGB

### 77.39.2064 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** BGR

### 77.39.2065 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** BGRA

### 77.39.2066 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the pixel format constants.
**Notes:** CMYK without alpha

### 77.39.2067 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the pixel format constants.
**Notes:** CMYK with alpha

### 77.39.2068 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** 8 bit grayscale.

### 77.39.2069 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the pixel format constants.
**Notes:** 8 bit grayscale with alpha.

### 77.39.2070 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** RGB

### 77.39.2071 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the pixel format constants.
**Notes:** RGBA

### 77.39.2072 krfClipBoxMask = 28

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** The mask for Clip flags.

### 77.39.2073 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

### 77.39.2074 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

### 77.39.2075 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

### 77.39.2076 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the raster flag constants.
**Notes:** Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

### 77.39.2077 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Render the page as usual

### 77.39.2078 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

### 77.39.2079 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for text.

### 77.39.2080 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for vector graphics.

### 77.39.2081 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.

### 77.39.2082 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

### 77.39.2083 krfEnableBlendCS = & h10000000

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the raster flag constants.
**Notes:** If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.

### 77.39.2084 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Don't render annotations.

### 77.39.2085 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 14.4.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2086 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2087 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2088 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Don't render form fields.

### 77.39.2089 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2090 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

**Function:** One of the raster flag constants.
**Notes:** If set, only annotations and form fields will be rendered (if any).

### 77.39.2091 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.

If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2092 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.39.2093 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Ignore the crop box and render anything inside the media box without clipping.

### 77.39.2094 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the raster flag constants.
**Notes:** Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

### 77.39.2095 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

**Function:** One of the raster flag constants.
**Notes:** If set, treat text rendering mode Invisible as Normal.

### 77.39.2096 krfRenderPrintState = & h20000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the raster flag constants.
**Notes:** If set, the print state of layers, annotations, and form fields will be rendered.

### 77.39.2097 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Rotate the page 180 degress.

### 77.39.2098 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Rotate the page 270 degress.

### 77.39.2099 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Example:**

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
```

```
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

**Notes:** Rotate the page 90 degress.

### 77.39.2100 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Meaningful only, if rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the whished bounding box.

### 77.39.2101 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.
**Notes:** Render the real paper format. Contents outside the crop box is clipped.

### 77.39.2102 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 12.2.

**Function:** One of the raster flag constants.

**Notes:** Don't generate an update event after initializing the background to white.

### 77.39.2103 kriAbsoluteColorimetric = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rendering intent constants.

### 77.39.2104 krifByteAligned = & h00001000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the flags for adding raw images.

### 77.39.2105 krifCMYKData = & h00004000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the flags for adding raw images.

### 77.39.2106 krifRGBData = & h00002000

MBS DynaPDF Plugin, Plugin Version: 10.1.

**Function:** One of the flags for adding raw images.

### 77.39.2107 kriPerceptual = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rendering intent constants.

### 77.39.2108 kriRelativeColorimetric = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rendering intent constants.

### 77.39.2109 kriSaturation = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rendering intent constants.

### 77.39.2110 krmBoundingBox = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2111 krmHiddenWireframe = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2112 krmIllustration = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2113 krmNotSet = 15

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2114 krmShadedIllustration = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2115 krmShadedVertices = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2116 krmShadedWireframe = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2117 krmSolid = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2118 krmSolidOutline = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2119 krmSolidWireframe = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2120 krmTransparent = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2121 krmTranspBBox = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2122 krmTranspBBoxOutline = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2123 krmTranspWireframe = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2124 krmVertices = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2125 krmWireframe = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D rendering mode.

### 77.39.2126 krsAddObj = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2127 krsApproved = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2128 krsAsIs = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2129 krsAssemble = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:** This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

### 77.39.2130 krsConfidential = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2131 krsCopyObj = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2132 krsDenyAll = & h00000F3C

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2133 krsDenyNothing = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2134 krsDepartmental = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2135 krsDraft = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2136 krsEmbFilesOnly = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:**

This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.
PDF 1.6 Encrypt embedded files only ->Requires AES encryption.

### 77.39.2137 krsExlMetadata = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:**

This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.
PDF 1.5 Exclude metadata streams ->128/256 bit encryption bit only.

### 77.39.2138 krsExperimental = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2139 krsExpired = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2140 krsExtractObj = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:** This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

### 77.39.2141 krsFillInFormFields = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:** This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

### 77.39.2142 krsFinal = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2143 krsForComment = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2144 krsForPublicRelease = 9

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2145 krsModify = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2146 krsNotApproved = 10

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2147 krsNotForPublicRelease = 11

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2148 krsPrint = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.

### 77.39.2149 krsPrintHighRes = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF restriction constants.
**Notes:** This flag is only used for 128 bit encryption. So this flag is ignored if 40 bit encryption is used.

### 77.39.2150 krsSold = 12

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2151 krsTopSecret = 13

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2152 krsUserDefined = 14

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the rubber stamp constants for StampAnnotation.

### 77.39.2153 ksfCanonicalFormat = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2154 ksfEmbedForm = & h00002000

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** PDF 1.5 embed the entire form into a file stream inside the FDF file ->requires the full version of Adobe's Acrobat.

### 77.39.2155 ksfExlFKey = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2156 ksfExlNonUserAnnots = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2157 ksfExlude = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** If set, the fields in a submit form action are excluded if any.

### 77.39.2158 ksfGetMethod = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2159 ksfHTML = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2160 ksfInclAnnots = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2161 ksfInclAppSaves = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** Requires the full version of Adobe's Acrobat

### 77.39.2162 ksfInclNoValFields = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2163 ksfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** The default export format is FDF

### 77.39.2164 ksfPDF = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** Submit the entire PDF file ->requires the full version of Adobe's Acrobat.

### 77.39.2165 ksfSubmCoords = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2166 ksfXML = 36

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the submit flag constants for CreateSubmitAction.

### 77.39.2167 ksmFamilyName = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font selection modes.

### 77.39.2168 ksmFullName = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the DynaPDF constants for font selection modes.
**Notes:** Full name.

### 77.39.2169 ksmPostScriptName = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for font selection modes.
**Notes:**

If font selection mode is set to smPostScriptName the font styles fsItalic or fsBold are ignored.
The PostScriptName is already a unique font name incl. style information.

### 77.39.2170 ksmtAlpha = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the soft mask constants.
**Notes:** Alpha mode.

### 77.39.2171 ksmtLuminosity = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the soft mask constants.
**Notes:** Luminosity mode.

### 77.39.2172 kspcDefault = 0

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the constants for ConvertEMFSpool.
**Notes:** Default flags.

### 77.39.2173 kspcDontAddMargins = 2

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the constants for ConvertEMFSpool.
**Notes:** If set, the page format is calculated from the EMF files as is. The current page format is not used to calculate margins which are maybe required. Note that the parameters LeftMargin and TopMargin will still be considered.

### 77.39.2174 kspcFlushPages = 8

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the constants for ConvertEMFSpool.
**Notes:** If set, the function writes every finish page directly to the output file to reduce the memory usage. This flag is meaningful only if the PDF file is not created in memory. Note also that it is not possible to access already flushed pages again with EditPage().

### 77.39.2175 kspcIgnorePaperFormat = 1

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the constants for ConvertEMFSpool.
**Notes:** If set, the current page format is used as is for the entire spool file.

### 77.39.2176 kspcLoadSpoolFontsOnly = 4

MBS DynaPDF Plugin, Plugin Version: 13.4.

**Function:** One of the constants for ConvertEMFSpool.
**Notes:** If set, only embedded fonts will be loaded. The EMF files must be converted with the flag mfIgnoreEmbFonts in this case. This flag can be useful if you want to use your own code to convert the EMF files of the spool file.

### 77.39.2177 kspCross = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2178 kspDiaCross = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2179 kspHorizontal = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2180 kspLDiagonal = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2181 kspRDiagonal = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2182 kspVertical = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Standard Pattern Constants.

### 77.39.2183 kst3DHeight = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D scale type.

### 77.39.2184 kst3DMax = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D scale type.

### 77.39.2185 kst3DMin = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D scale type.

### 77.39.2186 kst3DValue = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D scale type.

### 77.39.2187 kst3DWidth = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the DynaPDF constants for a 3D scale type.

### 77.39.2188 kstAxial = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2189 kstCoonsPatch = 6

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2190 kstFreeFormGouraud = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2191 kstFunctionBased = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2192 kstLatticeFormGouraud = 5

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2193 kstRadial = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2194 kstTensorProduct = 7

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the shading type constants.

### 77.39.2195 ktaCenter = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the text alignment.
**Notes:** Center

### 77.39.2196 ktaJustify = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the text alignment.
**Notes:** Justify

### 77.39.2197 ktaLeft = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the text alignment.
**Notes:** Left

### 77.39.2198 ktaPlainText = & h10000000

MBS DynaPDF Plugin, Plugin Version: 19.2.

**Function:** One of the constants for the text alignment.
**Notes:** Added to alignment flag to tell WriteFText to not interpret escape commands.

### 77.39.2199 ktaRight = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the text alignment.
**Notes:** Right

### 77.39.2200 ktefDefault = 0

MBS DynaPDF Plugin, Plugin Version: 18.0.

**Function:** One of the text extraction flags.
**Notes:** Create text lines in the original order.

### 77.39.2201 ktefDeleteOverlappingText = 4

MBS DynaPDF Plugin, Plugin Version: 18.0.

**Function:** One of the text extraction flags.
**Notes:** Delete duplicate text records on same position.

### 77.39.2202 ktefSortTextX = 1

MBS DynaPDF Plugin, Plugin Version: 18.0.

**Function:** One of the text extraction flags.
**Notes:** Sort text records in x-direction.

### 77.39.2203 ktefSortTextXY = 3

MBS DynaPDF Plugin, Plugin Version: 18.0.

**Function:** One of the text extraction flags.
**Notes:** Sort text records in x and y-direction.

### 77.39.2204 ktefSortTextY = 2

MBS DynaPDF Plugin, Plugin Version: 18.0.

**Function:** One of the text extraction flags.
**Notes:** Sort text records in y-direction.

### 77.39.2205 ktoAnnots = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the Tab Order constants.
**Notes:** Annotation order ->PDF 1.7 Extension Level 3

### 77.39.2206 ktoColumn = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tab Order constants.
**Notes:** Column.

### 77.39.2207 ktoFields = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the Tab Order constants.
**Notes:** Widget order (Form Fields) ->PDF 1.7 Extension Level 3.

### 77.39.2208 ktoNone = 3

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tab Order constants.

### 77.39.2209 ktoRow = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tab Order constants.
**Notes:** Row.

### 77.39.2210 ktoStructure = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the tab order.
**Notes:** Structure

### 77.39.2211 kTRANSP_3D_ANNOT = & h40000000

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the annotation flags.
**Notes:**

This flag can be combined with the annotation handle in Set3DAnnotProps().

3D Annotations with a transparent background are supported since PDF 1.7, Extension Level 3

### 77.39.2212 kttConstSpacing = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tiling Type Constants.

### 77.39.2213 kttFastConstSpacing = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tiling Type Constants.

### 77.39.2214 kttNoDistortion = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the Tiling Type Constants.

### 77.39.2215 kusbCursorHandClosed = 32

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:**

Occurs when the cursor leaves an action field and if the left mouse button is pressed.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

### 77.39.2216 kusbCursorHandNormal = 16

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:**

This is the default if the left mouse button is not pressed and if we are not over an action field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

### 77.39.2217 kusbCursorHandPoint = 64

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:**

Occurs when we enter link or button field.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

### 77.39.2218 kusbCursorIBeam = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:**

Occurs when we enter an action field that accepts text input.
The cursor constants are set by MouseMove. Since we have only one cursor there is never more than one constant set.

### 77.39.2219 kusbCursorMask = & h00003FF0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Bitmask to mask out the cursor constants.

### 77.39.2220 kusbHorzRange = 4

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Update the horizontal scroll range.

### 77.39.2221 kusbHorzScrollPos = 8

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Update the horizontal scroll position.

### 77.39.2222 kusbNoUpdate = 0

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Nothing to do.

### 77.39.2223 kusbUpdateAll = 15

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Update both scroll ranges and the scroll positions.

### 77.39.2224 kusbVertRange = 1

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Update the vertical scroll range.

### 77.39.2225 kusbVertScrollPos = 2

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the scrollbar update constants.
**Notes:** Update the vertical scroll position.

### 77.39.2226 kvpCenterWindow = 16

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2227 kvpDirection = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2228 kvpDisplayDocTitle = 32

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2229 kvpFitWindow = 8

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2230 kvpHideMenuBar = 2

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2231 kvpHideToolBar = 1

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2232 kvpHideWindowUI = 4

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2233 kvpNonFullScrPageMode = 64

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2234 kvpPrintArea = & h00000400

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2235 kvpPrintClip = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2236 kvpUseNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2237 kvpViewArea = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2238 kvpViewClip = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0.

**Function:** One of the viewer preference constants.

### 77.39.2239 Screenshots

### 77.39.2240 DynaPDF1.jpg

**Function:** A PDF file created with the unregistered DynaPDF plugin.

### 77.39.2241 DynaPDF2.jpg

**Function:** A PDF file created with the unregistered DynaPDF plugin showing an embedded picture and a blue triangle on top.

### 77.39.2242 DynaPDF3.jpg

**Function:** A PDF file created with the unregistered DynaPDF plugin showing an embedded PDF.

## 77.40 class DynaPDFMeasureMBS

### 77.40.1 class DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a measure dictionary.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.40.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.40.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.40.4 Methods

### 77.40.5 Angles as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array to measure angles.

### 77.40.6 Area as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array to measure areas.

### 77.40.7 Bounds as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array of numbers taken pairwise to describe the bounds for which geospatial transforms are valid.

### 77.40.8 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.40.9 Distance as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array to measure distances.

### 77.40.10 GPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Required, an array of numbers that shall be taken pairwise, defining points in geographic space as degrees of latitude and longitude, respectively.

### 77.40.11 LPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, an array of numbers that shall be taken pairwise to define points in a 2D unit square.

### 77.40.12 Slope as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array for measurement of the slope of a line.

### 77.40.13 X as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array for measurement of change along the x-axis and, if Y is not present, along the y-axis as well.

### 77.40.14 Y as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number format array for measurement of change along the y-axis.

### 77.40.15 Properties

### 77.40.16 AnglesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 77.40.17 AreaCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 77.40.18 BoundCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the array.
**Notes:**

Should be a multiple of two.
(Read and Write property)

### 77.40.19 CXY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, meaningful only when Y is present.
**Notes:** (Read and Write property)

### 77.40.20 DCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, either EPSG or WKT is set.
**Notes:** (Read and Write property)

### 77.40.21 DCS_IsSet as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the DCS members are set.
**Notes:** (Read and Write property)

### 77.40.22 DCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the DCS values contains a pojected coordinate system.
**Notes:** (Read and Write property)

### 77.40.23 DCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional ASCII string.
**Notes:** (Read and Write property)

### 77.40.24 DistanceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 77.40.25 GCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, either EPSG or WKT is set.
**Notes:** (Read and Write property)

### 77.40.26 GCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the GCS values contains a pojected coordinate system.
**Notes:** (Read and Write property)

### 77.40.27 GCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional ASCII string.
**Notes:** (Read and Write property)

### 77.40.28 GPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the array.
**Notes:** (Read and Write property)

### 77.40.29 IsRectilinear as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the members of the rectilinear measure dictionary are set.
**Notes:**

The geospatial members otherwise.
(Read and Write property)

### 77.40.30 LPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the array.
**Notes:** (Read and Write property)

### 77.40.31 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Origin of the measurement coordinate system.
**Notes:** (Read and Write property)

### 77.40.32 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Origin of the measurement coordinate system.
**Notes:** (Read and Write property)

### 77.40.33 PDU1 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional preferred linear display units.
**Notes:** (Read and Write property)

### 77.40.34 PDU2 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional preferred area display units.
**Notes:** (Read and Write property)

### 77.40.35 PDU3 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional preferred angular display units.
**Notes:** (Read and Write property)

### 77.40.36 R as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A text string expressing the scale ratio of the drawing.
**Notes:** (Read and Write property)

### 77.40.37 SlopeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 77.40.38 XCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 77.40.39 YCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

# 77.41 class DynaPDFMissingFunctionExceptionMBS

## 77.41.1 class DynaPDFMissingFunctionExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception for a missing function.
**Notes:**

Only used when DynaPDF library is loaded manually and is an older version and missing a function.
Subclass of the RuntimeException class.

## 77.42 class DynaPDFMovieActionMBS

### 77.42.1 class DynaPDFMovieActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a movie action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.42.2 Methods

### 77.42.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.42.4 FWPosition(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position.
**Notes:** Index from 0 to 1.

### 77.42.5 FWScale(index as Integer) as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The scaling.
**Notes:** Index from 0 to 1.

### 77.42.6 Properties

### 77.42.7 Annot as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional. The movie annotation handle identifying the movie that shall be played.
**Notes:**

Either Annot or Title should be set, but not both.
(Read only property)

### 77.42.8 Mode as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mode.
**Notes:** (Read only property)

### 77.42.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

### 77.42.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

### 77.42.11 Operation as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Operation.
**Notes:** (Read only property)

### 77.42.12 Rate as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The playback rate.
**Notes:** (Read only property)

### 77.42.13 ShowControls as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to show controls.
**Notes:** (Read only property)

### 77.42.14 Synchronous as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Synchronous flag.
**Notes:** (Read only property)

### 77.42.15 Title as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The title of a movie annotation that shall be played.
**Notes:**

Either Annot or Title should be set, but not both.
(Read only property)

### 77.42.16 Volume as Single

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The volume.
**Notes:** (Read only property)

# 77.43 class DynaPDFNamedActionMBS

## 77.43.1 class DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a named action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.43.2 Methods

## 77.43.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.43.4 Properties

## 77.43.5 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the action.
**Notes:**

Only set if Type = knaUserDefined.
(Read only property)

## 77.43.6 NewWindow as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to show in a new window or not.
**Notes:**

-1 = viewer default, 0 = false, 1 = true.
(Read only property)

### 77.43.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

### 77.43.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

### 77.43.9 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Known pre-defined actions.
**Notes:**

See kna* constants.
(Read only property)

# 77.44 class DynaPDFNamedDestMBS

## 77.44.1 class DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for the Named Destination.

## 77.44.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.44.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.44.4 Properties

## 77.44.5 DestFile as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination file.
**Notes:** (Read only property)

## 77.44.6 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination page.
**Notes:** (Read only property)

## 77.44.7 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination position.
**Notes:** (Read only property)

### 77.44.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination type.
**Notes:**

Values can be a kdt* constant.
(Read only property)

### 77.44.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of that destination.
**Notes:**

This string is either Unicode or ANSI encoded.
(Read only property)

## 77.45 class DynaPDFNotInitializedExceptionMBS

### 77.45.1 class DynaPDFNotInitializedExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An exception for the case a function is called and the library is not initialized.
**Notes:**

Should only happen on the unsupported platforms.
Subclass of the RuntimeException class.

## 77.46 class DynaPDFNumberFormatMBS

### 77.46.1 class DynaPDFNumberFormatMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a number format.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.46.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.46.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.46.4 Methods

### 77.46.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.46.6 Properties

### 77.46.7 C as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The conversion factor used to multiply a value in partial units.
**Notes:** (Read and Write property)

### 77.46.8 D as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A positive integer that shall specify the precision or denominator of a fractional amount.
**Notes:** (Read and Write property)

### 77.46.9 F as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number format.
**Notes:**

can be kmnfDecimal, kmnfFractional, kmnfRound or kmnfTruncate.
(Read and Write property)

### 77.46.10 FD as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, a fractional value formatted according to the D entry may not have its denominator reduced or low-order zeros truncated.
**Notes:** (Read and Write property)

### 77.46.11 O as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The label position.
**Notes:**

Can be kmlpSuffix or kmlpPrefix.
(Read and Write property)

### 77.46.12 PS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text to be concatenated to the left of the label specified by U.
**Notes:** (Read and Write property)

### 77.46.13 RD as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text for the decimal position in displaying numerical values.
**Notes:** (Read and Write property)

### 77.46.14 RT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text to be used between orders of thousands in display of numerical values.
**Notes:** (Read and Write property)

### 77.46.15 SS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Text that shall be concatenated after the label specified by U.
**Notes:** (Read and Write property)

### 77.46.16 U as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Label, should be a universally recognized abbreviation.
**Notes:** (Read and Write property)

### 77.46.17 Constants

### 77.46.18 kmlpPrefix = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the label position constants.
**Notes:** Prefix

### 77.46.19 kmlpSuffix = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the label position constants.
**Notes:** Suffix

### 77.46.20 kmnfDecimal = 0

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the number formats.
**Notes:** Decimal

### 77.46.21 kmnfFractional = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the number formats.
**Notes:** Fractional

### 77.46.22 kmnfRound = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the number formats.
**Notes:** Round

### 77.46.23 kmnfTruncate = 3

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the number formats.
**Notes:** Truncate

## 77.47 class DynaPDFObjActionsMBS

### 77.47.1 class DynaPDFObjActionsMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an object action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.47.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr9

### 77.47.3 Blog Entries

- MBS Xojo Plugins, version 18.0pr9

### 77.47.4 Methods

### 77.47.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.47.6 Properties

### 77.47.7 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the action.
**Notes:**

-1 or action handle to be executed if any
(Read only property)

### 77.47.8 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the action.
**Notes:**

Only set if Action is >= 0.
(Read only property)

### 77.47.9 Events as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Additional events if any.
**Notes:** (Read only property)

## 77.48 class DynaPDFObjEventMBS

### 77.48.1 class DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class with information about an object event.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.48.2 Methods

### 77.48.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.48.4 Properties

### 77.48.5 Action as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Action to be executed.
**Notes:** (Read only property)

### 77.48.6 ActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the action.
**Notes:**

See kat* constants.
(Read only property)

### 77.48.7 NextObject as DynaPDFObjEventMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Pointer to the next event if any.
**Notes:** (Read only property)

### 77.48.8 ObjEvent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The event when the action should be executed.
**Notes:**

See koe* constants.
(Read only property)

## 77.49 class DynaPDFOCGContUsageMBS

### 77.49.1 class DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for content usage properties of an optional layer.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.49.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr6

### 77.49.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr6

### 77.49.4 Methods

### 77.49.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.49.6 Properties

### 77.49.7 ExportState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The export state.
**Notes:**

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647)
(Read and Write property)

### 77.49.8 InfoCreator as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The application that created the group.
**Notes:** (Read and Write property)

### 77.49.9 InfoSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A name defining the type of content, e.g. Artwork, Technical etc.
**Notes:** (Read and Write property)

### 77.49.10 LangPreferred as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The preffered state if there is a partial but no exact match of the lang id.
**Notes:**

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set.
(Read and Write property)

### 77.49.11 Language as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A language code as described at DynaPDFMBS.SetLanguage.
**Notes:** (Read and Write property)

### 77.49.12 PageElement as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If the group contains a pagination artefact.
**Notes:** (Read and Write property)

### 77.49.13 PrintState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The print state.
**Notes:**

0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647).
(Read and Write property)

### 77.49.14 PrintSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of content that is controlled by the OCG, e.g. Trapping, PrintersMarks or Watermark.
**Notes:** (Read and Write property)

### 77.49.15 UserNamesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The user names can be accessed with GetOCGUsageUserName.
**Notes:** (Read and Write property)

### 77.49.16 UserType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The user for whom the OCG is primarily intendet.
**Notes:**

Can be kutIndividual, kutOrganization, kutTitle or kutNotSet. (constants defined in DynaPDFMBS)
(Read and Write property)

### 77.49.17 ViewState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The view state.
**Notes:**

0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set
(Read and Write property)

### 77.49.18 ZoomMax as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum zoom factor at which the OCG should be On.
**Notes:**

-1 = not set
(Read and Write property)

### 77.49.19 ZoomMin as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum zoom factor at which the OCG should be On.
**Notes:**

-1 = not set
(Read and Write property)

## 77.50 class DynaPDFOCGMBS

### 77.50.1 class DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for details ob OCG layers.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.50.2 Methods

### 77.50.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.50.4 Properties

### 77.50.5 AppEvents as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If non-zero, the layer is included in one or more app events which control the layer state.
**Notes:**

Only valid if HaveContUsage is true.
see TOCAppEvent constants: kaeExport, kaePrint and kaeView. (constants defined in DynaPDFMBS)
(Read and Write property)

### 77.50.6 Categories as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Usage Categories which control the layer state.
**Notes:**

Only valid if HaveContUsage is true.
See UsageCategory constants: koucNone, koucExport, koucLanguage, koucPrint, koucUser, koucView or oucZoom. (constants defined in DynaPDFMBS)
(Read and Write property)

### 77.50.7 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 77.50.8 HaveContUsage as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the layer contains a Content Usage dictionary.
**Notes:**

see GetOCGContUsage function.
(Read and Write property)

### 77.50.9 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The intent.
**Notes:**

See intent enumeration. Can be koiDesign, koiView, koiAll or koiEmpty. (constants defined in DynaPDFMBS)
(Read and Write property)

### 77.50.10 IsAll as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An accessor for intent state koiAll.
**Notes:** (Read only property)

### 77.50.11 IsDesign as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An accessor for intent state koiDesign.
**Notes:** (Read only property)

### 77.50.12 IsEmpty as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An accessor for intent state koiEmpty.
**Notes:** (Read only property)

### 77.50.13 IsView as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An accessor for intent state koiView.
**Notes:** (Read only property)

### 77.50.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An accessor for intent state koiVisible.
**Notes:** (Read only property)

### 77.50.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The layer name.
**Notes:** (Read and Write property)

# 77.51 class DynaPDFOCLayerConfigMBS

## 77.51.1 class DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an optional content layer configuration.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.51.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

## 77.51.3 Blog Entries

- MBS Xojo Plugins, version 17.5pr3

## 77.51.4 Methods

## 77.51.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.51.6 Properties

## 77.51.7 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The object intent.
**Notes:**

Possible values koiDesign, koiView, or koiAll.
(Read only property)

## 77.51.8 IsDefault as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, this is the default configuration.
**Notes:** (Read only property)

### 77.51.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional configuration name.
**Notes:** (Read only property)

### 77.51.10 NameLen as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length in characters.
**Notes:** (Read only property)

# 77.52 class DynaPDFOCUINodeMBS

## 77.52.1 class DynaPDFOCUINodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an optional content user interface node.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.52.4 Methods

## 77.52.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.52.6 Properties

## 77.52.7 Label as String

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional label.
**Notes:** (Read only property)

## 77.52.8 LabelLength as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Label Length in characters.
**Notes:** (Read only property)

### 77.52.9 NewNode as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, a new child node must be created.
**Notes:** (Read only property)

### 77.52.10 NextChild as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If set, the next child node that must be loaded.
**Notes:** (Read only property)

### 77.52.11 NextItem as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The next item handle in the list.
**Notes:** (Read only property)

### 77.52.12 OCG as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional OCG handle.
**Notes:**

-1 if not set. See GetOCG method.
(Read only property)

# 77.53 class DynaPDFOptimizeParamsMBS

## 77.53.1 class DynaPDFOptimizeParamsMBS

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for optimize parameters.
**Example:**

```
dim o as new DynaPDFOptimizeParamsMBS

o.MinColorRes = 100 // scale colored images with more than 100 dpi
o.ResColorImages = 150 // down to 150 dpi
```

- 19.6, page 19: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

### 77.53.6 Methods

### 77.53.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 77.53.8 ExcludeCS as UInt32()

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array of color space handles which should be excluded from color conversion.
**Notes:**

Queries array, which you can change.
If you set IncludeCS, this array controls which color spaces will be converted.

### 77.53.9 setExcludeCS(values() as UInt32)

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the array of color space handles which should be excluded from color conversion.
**Notes:** Replaces the current array with a new one.

### 77.53.10 Properties

### 77.53.11 ExcludeCSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of color space handles in the array.
**Notes:**

This is ExcludeCS.ubound + 1.
(Read only property)

### 77.53.12 Filter1Bit as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Filter for black & white images.
**Notes:**

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

### 77.53.13 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Filter for multi-channel images.
**Notes:**

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

### 77.53.14 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The filter for gray image compression.
**Notes:**

See kcf* constants. Default is kcfJPEG.
(Read and Write property)

### 77.53.15 IncludeCS as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If set, only these color spaces in ExcludeCS will be converted.
**Notes:**

If false, the conversion excludes the color spaces in ExcludeCS array.
If true, the conversion only includes the color spaces in ExcludeCS array.
(Read and Write property)

### 77.53.16 JP2KQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The JPEG 2000 quality.
**Notes:**

Default is 80.
(Read and Write property)

### 77.53.17 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The JPEG quality.
**Notes:**

Default is 80.
(Read and Write property)

### 77.53.18 Min1BitRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum resolution before scaling for one bit images.
**Notes:**

Default is 100.
Can be zero to disable.
(Read and Write property)

### 77.53.19 MinColorRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum resolution before scaling for color images.
**Notes:**

Default is 100.
Can be zero to disable.
(Read and Write property)

### 77.53.20 MinGrayRes as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum resolution before scaling for gray images.
**Notes:**

Default is 100 dpi.
Can be zero to disable.
(Read and Write property)

### 77.53.21 MinLineWidth as Single

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum line width for lines.
**Notes:**

Zero means no hair line removal.
(Read and Write property)

### 77.53.22 Res1BitImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolution for 1 bit black & white images.
**Notes:**

Default is 150.
Can be zero to disable.
(Read and Write property)

### 77.53.23 ResColorImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolution for images with more than one color channel.
**Notes:**

Default is 150.
Can be zero to disable.
(Read and Write property)

### 77.53.24 ResGrayImages as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolution for Gray images.
**Notes:**

Default is 150.
Can be zero to disable.
(Read and Write property)

# 77.54 class DynaPDFOutputIntentMBS

## 77.54.1 class DynaPDFOutputIntentMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for details on an output intent.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.54.2 Methods

## 77.54.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private constructor.

## 77.54.4 Properties

## 77.54.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** ICC profile buffer (optional)
**Notes:** (Read and Write property)

## 77.54.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Buffer size in bytes.
**Notes:** (Read and Write property)

## 77.54.7 Info as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Info string or name of the ICC profile.
**Notes:** (Read and Write property)

### 77.54.8 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of components.
**Notes:** (Read and Write property)

### 77.54.9 OutputCondition as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Describtion of the output device.
**Notes:** (Read and Write property)

### 77.54.10 OutputConditionID as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Describtion of the output device.
**Notes:** (Read and Write property)

### 77.54.11 RegistryName as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The registry in which OutputConditionID is defined.
**Notes:** (Read and Write property)

### 77.54.12 SubType as String

MBS DynaPDF Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sub type.
**Notes:**

GTS_PDFX, GTS_PDFA1, or ISO_PDFE1
(Read and Write property)

# 77.55 class DynaPDFPageLabelMBS

## 77.55.1 class DynaPDFPageLabelMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a Page label.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.55.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr2

## 77.55.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr2

## 77.55.4 Methods

## 77.55.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.55.6 Properties

## 77.55.7 FirstPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** First page number to be displayed in the page label.
**Notes:**

Subsequent pages are numbered sequentially from this value.
(Read only property)

## 77.55.8 Format as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The format of the page label.
**Notes:** (Read only property)

### 77.55.9 Prefix as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The prefix.
**Notes:**

This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

### 77.55.10 PrefixLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of the prefix in characters.
**Notes:** (Read only property)

### 77.55.11 PrefixUni as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the prefix is in unicode.
**Notes:** (Read only property)

### 77.55.12 StartRange as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The start range.
**Notes:** (Read only property)

# 77.56 class DynaPDFPageMBS

## 77.56.1 class DynaPDFPageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a DynaPDF page.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.56.2 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 20.2pr2
- MBS Xojo Plugins, version 18.2pr6

## 77.56.3 Blog Entries

- Improvements for MBS Xojo DynaPDF Plugin
- MBS Xojo Plugins, version 20.2pr2
- MBS Xojo Plugins, version 18.2pr6

## 77.56.4 Methods

## 77.56.5 BBox(type as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the requested bounding box.
**Notes:**

use the constants kpbArtBox, kpbBleedBox, kpbCropBox, kpbMediaBox or kpbTrimBox.

If orientation gives you 90, 270, -90 or -270, you may want to swap width and height of the rectangle.

## 77.56.6 CalcPagePixelSize(DefScale as UInt32, Scale as single, FrameWidth as UInt32, FrameHeight as UInt32, Flags as UInt32, byref Width as UInt32, byref Height as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function calculates the image size of a page exactly in the way as RenderPage() does, if called with the same parameters.
**Example:**

```
// your PDF environment
dim pdf as new DynaPDFMBS

// some PDF
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call pdf.CreateNewPDF(nil)

// We import all pages
call pdf.SetImportFlags(pdf.kifImportAsPage)
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1,1.0,1.0)

// get first page
dim p as DynaPDFPageMBS = pdf.GetPage(1)

// and calculate how big it would be:
dim PageWidth, PageHeight as UInt32

dim DefScale as UInt32 = DynaPDFMBS.kpsFitBest
dim Scale as Single = 1.0
dim Flags as Uint32 = DynaPDFRasterImageMBS.krfDefault

p.CalcPagePixelSize(DefScale, Scale, window1.Width, window1.Height, Flags, PageWidth, PageHeight)

MsgBox "PageWidth: "+str(PageWidth)+EndOfLine+"PageHeight: "+str(PageHeight)
```

**Notes:**

This makes it possible to create the image in the required size so that it can be rendered without a border.

### 77.56.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.56.8 GetWidthHeight(Flags as UInt32, byref Width as Single, byref Height as Single, Rotate as Integer = 0) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates page width and height.

### 77.56.9 SetBBox(type as integer, BBox as DynaPDFRectMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets or changes the bounding box of a page.
**Notes:**

This function is intended to be fast as possible. It requires no open page like DynaPDFMBS.SetBBox(), it does not change the default media or crop box, and it does not adjust the current coordinate system if the media box will be changed.

The function is useful if only one or more bounding boxes must be changed, whithout editing a page, or when a specific area of a page should be rendered. In the latter case change the crop box and restore it to the previous value when finish.
To delete a bounding box set the bounding box to 0, 0, 0, 0. The parameter BBox is required to be present, it cannot be nil.

If the function succeeds the return value is true. If the function fails the return value is false.

### 77.56.10 Properties

### 77.56.11 ArtBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries art box for this page.
**Notes:**

May be nil if not defined.
(Read only property)

### 77.56.12 BleedBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries bleed box for this page.
**Notes:**

May be nil if not defined.
(Read only property)

### 77.56.13 CropBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries crop box for this page.
**Notes:**

May be nil if not defined.
(Read only property)

### 77.56.14 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 77.56.15 MediaBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries media box for this page.
**Notes:** (Read only property)

### 77.56.16 Orientation as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the page orientation.
**Notes:** (Read only property)

### 77.56.17 Page as Integer

MBS DynaPDF Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The original page number used to query this page.
**Notes:** (Read only property)

### 77.56.18 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference back to parent dynaPDF object.
**Notes:** (Read only property)

### 77.56.19 TrimBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries trim box for this page.
**Notes:**

May be nil if not defined.
(Read only property)

### 77.56.20 Constants

### 77.56.21 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the PDF box constants.
**Notes:** Art box.

### 77.56.22 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the PDF box constants.
**Notes:** Bleed box.

### 77.56.23 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the PDF box constants.
**Notes:** Crop Box.

### 77.56.24 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the PDF box constants.
**Notes:** Media Box.

### 77.56.25 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the PDF box constants.
**Notes:** Trim Box.

# 77.57 class DynaPDFPageStatisticMBS

## 77.57.1 class DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for page statistics.
**Notes:**

You could count yourself with DynaPDFParseInterfaceMBS class and using the events.
This is just a convenience way to learn about whether for example there is an image on the page.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.57.6 Methods

## 77.57.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.57.8 Properties

### 77.57.9 BezierCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of bezier curves.
**Notes:** (Read and Write property)

### 77.57.10 ClipPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of path clippings.
**Notes:** (Read and Write property)

### 77.57.11 ClosePathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of paths closed.
**Notes:** (Read and Write property)

### 77.57.12 DrawShadingCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of shading drawings.
**Notes:** (Read and Write property)

### 77.57.13 FontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of fonts used.
**Notes:** (Read and Write property)

### 77.57.14 ImageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of images used.
**Notes:** (Read and Write property)

### 77.57.15 LayerCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of layers used.
**Notes:** (Read and Write property)

### 77.57.16 LineCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of lines.
**Notes:** (Read and Write property)

### 77.57.17 PatternCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of patterns used.
**Notes:** (Read and Write property)

### 77.57.18 RectangleCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of rectangles.
**Notes:** (Read and Write property)

### 77.57.19 TemplateCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of templates.
**Notes:** (Read and Write property)

### 77.57.20 TextCount as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of text fragments.
**Notes:** (Read and Write property)

### 77.57.21 TextLength as Integer

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length in characters of the text on the page.
**Notes:** (Read and Write property)

# 77.58 class DynaPDFParseInterfaceMBS

## 77.58.1 class DynaPDFParseInterfaceMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for parsing pdf content.
**Notes:** You need to implement the BeginTemplate event in order to get events for images, vector graphics and text on the templates used on the page.

### 77.58.4 Events

### 77.58.5 ApplyPattern(ObjectPtr as Integer, Type as Integer, PatternPtr as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:**

Type is one of the following constants:

```
kptColored          = 0
 kptUnColored       = 1
 kptShadingPattern  = 2
```

### 77.58.6 BeginLayer(OCHandle as Integer, InVisible as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when the PDF parser found a begin layer command.
**Notes:**

The plugin will process the OCG object for you. So if handle is -1, there is no layer handle.
If it is >= 0, you have a handle. If it is <0, something failed.

### 77.58.7 BeginPattern(ObjectPtr as Integer, Fill as Boolean, PatternType as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS, XStep as Double, YStep as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:**

PatternType is one of the following constants:

```
kptColored          = 0
 kptUnColored       = 1
 kptShadingPattern  = 2
```

### 77.58.8 BeginTemplate(ObjectPtr as Integer, Handle as Integer, BBox as DynaPDFRectMBS, Matrix as DynaPDFMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:** You need to implement this event in order to get text, images and vector graphics from inside templates.

### 77.58.9 BezierTo1(ObjectPtr as Integer, x1 as Double, y1 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.10 BezierTo2(ObjectPtr as Integer, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.11 BezierTo3(ObjectPtr as Integer, x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.12 ClipPath(ObjectPtr as Integer, EvenOdd as boolean, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:** For the Mode parameter, the kfm* constants are used.

### 77.58.13 ClosePath(ObjectPtr as Integer, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:** For the Mode parameter, the kfm* constants are used.

### 77.58.14 DrawShading(ObjectPtr as Integer, Type as Integer, Shading as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:**

For the type parameter you use the kst* constants.

### 77.58.15 EndLayer(OCHandle as Integer, InVisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called when the PDF parser found an end layer command.

### 77.58.16 EndPattern

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.17 EndTemplate

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.18 InsertImage(image as DynaPDFImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:** You can return zero on success or 1 to stop processing.

### 77.58.19 LineTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.20 MoveTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.21 MulMatrix(ObjectPtr as Integer, matrix as DynaPDFMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A matrix multiplication was found.

### 77.58.22 Rectangle(ObjectPtr as Integer, x as Double, y as Double, w as Double, h as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The parser found a rectangle.

### 77.58.23 RestoreGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.24 SaveGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.25 SetCharSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.26 SetExtGState(ObjectPtr as Integer, GS as DynaPDFExtGState2MBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.27 SetFillColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:**

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

### 77.58.28 SetFont(ObjectPtr as Integer, fontType as Integer, Embedded as boolean, FontName as string, Style as Integer, FontSize as Double, FontHandle as Integer, FontInfo as DynaPDFFontInfoMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.29 SetLeading(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.30 SetLineCapStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.31 SetLineDashPattern(ObjectPtr as integer, dash() as Double, NumValues as integer, Phase as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.32 SetLineJoinStyle(ObjectPtr as Integer, Style as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.33 SetLineWidth(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.34 SetMiterLimit(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.35 SetStrokeColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.
**Notes:**

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

### 77.58.36 SetTextDrawMode(ObjectPtr as Integer, Mode as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.37 SetTextScale(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.38 SetWordSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.39 ShowTextArrayA(ObjectPtr as Integer, Matrix as DynaPDFMatrixMBS, Kerning() as DynapdfTextRecordAMBS, Count as Integer, Width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

### 77.58.40 ShowTextArrayW(Source() as DynaPDFTextRecordAMBS, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordWMBS, Count as Integer, Width as Double, Decoded as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: .

**Function:** One of the parser events.

## 77.59 class DynaPDFPointDataDictionaryMBS

### 77.59.1 class DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a dictionary with point data.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.59.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.59.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.59.4 Methods

### 77.59.5 Arrays as DynaPDFPointDataMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of entries in the point data dictionary.

### 77.59.6 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.59.7 Properties

### 77.59.8 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of point data arrays
**Notes:** (Read and Write property)

### 77.59.9 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sub type for the point data.
**Notes:**

Should be Cloud.
(Read and Write property)

## 77.60 class DynaPDFPointDataMBS

### 77.60.1 class DynaPDFPointDataMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data class for point data dictionary entries.
**Notes:**

A point data dictionary specifies points in 2D space for geospatical measures. The parameter DataType specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.60.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.60.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.60.4 Methods

### 77.60.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.60.6 values as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Array with values.

### 77.60.7 Properties

### 77.60.8 DataType as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Data type as string.
**Notes:**

Specifies the type of points, such as LAT for latitude in degrees, LON for longitute in degrees, or ALT for altitude in metres.
(Read and Write property)

### 77.60.9 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The index in the dictionary.
**Notes:** (Read and Write property)

### 77.60.10 ValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of values in the array.
**Notes:** (Read and Write property)

## 77.61 class DynaPDFPointMBS

### 77.61.1 class DynaPDFPointMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a point.

### 77.61.2 Methods

### 77.61.3 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 77.61.4 Properties

### 77.61.5 X as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The X value.
**Notes:** (Read and Write property)

### 77.61.6 Y as Double

MBS DynaPDF Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Y value.
**Notes:** (Read and Write property)

# 77.62 class DynaPDFPrintParamsMBS

## 77.62.1 class DynaPDFPrintParamsMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for additional print parameters.

## 77.62.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

## 77.62.3 Blog Entries

- MBS Xojo Plugins, version 19.5pr6
- MBS Xojo Plugins, version 17.2pr4

## 77.62.4 Properties

## 77.62.5 Compress as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to compress images sent to printer.
**Notes:**

Meaningful only for image output. If true, compressed images are send to the printer.
(Read and Write property)

## 77.62.6 FilterColor as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compression filter to use for color images.
**Notes:**

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

### 77.62.7 FilterGray as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compression filter to use for grayscale images.
**Notes:**

Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

### 77.62.8 IgnoreDCSize as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, PageSize is used to calculate the output format.
**Notes:** (Read and Write property)

### 77.62.9 JPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** JPEG Quality in percent (1..100).
**Notes:**

Zero means Default, which is 60% .
(Read and Write property)

### 77.62.10 MaxRes as Integer

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum print resolution.
**Notes:**

Zero means Default, which is 600 DPI.
(Read and Write property)

### 77.62.11 PageSize as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The page size to use.
**Notes:**

Considered only, if IgnoreDCSize is set to true.
(Read and Write property)

## 77.63 class DynaPDFPrintSettingsMBS

### 77.63.1 class DynaPDFPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the print settings in a PDF document.
**Notes:** This requires PDF 1.7.

### 77.63.2 Methods

### 77.63.3 PrintRanges(index as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of print ranges.
**Notes:** If set, the array contains PrintRangesCount * 2 values. Each pair consists of the first and last pages in the sub-range. The first page in the PDF file is denoted by 0.

### 77.63.4 Properties

### 77.63.5 DuplexMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The duplex mode.
**Notes:**

Use the kdpm* constants.
(Read only property)

### 77.63.6 NumCopies as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of copies.
**Notes:**

-1 means not set. Values larger than 5 are ignored in viewer applications.
(Read only property)

### 77.63.7 PickTrayByPDFSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The setting for picking the tray by the PDF size.
**Notes:**

-1 means not set. 0 = false, 1 = true.
(Read only property)

### 77.63.8 PrintRangesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of ranges available in PrintRanges.
**Notes:** (Read only property)

### 77.63.9 PrintScaling as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The print scaling setting.
**Notes:**

kdpmNone means not set.
(Read only property)

## 77.64 class DynaPDFRasterImageMBS

### 77.64.1 class DynaPDFRasterImageMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for advanced rendering options.
**Example:**

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
```

```
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

**Notes:** This class is named RasterImage due to the name in the underlying DynaPDF library. A better name would be RasterizerOptions as it includes options for the rasterizer engine.

### 77.64.2 Blog Entries

- MBS Xojo Plugins, version 23.1pr1
- RenderPageToImage
- MBS Real Studio Plugins, version 11.3pr9
- MBS Real Studio Plugins, version 11.2pr5

### 77.64.3 Blog Entries

- MBS Xojo Plugins, version 23.1pr1
- RenderPageToImage
- MBS Real Studio Plugins, version 11.3pr9
- MBS Real Studio Plugins, version 11.2pr5

### 77.64.4 Properties

### 77.64.5 ClipRect as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional clipping rectangle defined in device coordinates (Pixels)
**Notes:** (Read and Write property)

### 77.64.6 DefScale as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Specifies how the page should be scaled into the image buffer.
**Notes:**

can be kpsFitBest, kpsFitHeight or kpsFitWidth.
(Read and Write property)

### 77.64.7 DrawFrameRect as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the area outside the page's bounding box is filled with the frame color.
**Notes:**

InitWhite can still be used, with or without a clipping rectangle.
(Read and Write property)

### 77.64.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flags for the raster operation.
**Notes:**

This is a bit mask. Flags can be combined with a binary or operator.
Use a combination of krf* constants.
(Read and Write property)

### 77.64.9 FrameColor as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color for drawing the frame.
**Notes:**

Must be defined in the color space of the pixel format but in the natural component order, e.g. RGB.
(Read and Write property)

### 77.64.10 InitWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to clear the buffer first.
**Notes:**

If true, the buffer is initialized with white color (default).
Must be set to false if you want to raster the page over an existing image.

When a clipping rectangle is set, only the area inside the clipping rectangle is initialized to white.
(Read and Write property)

### 77.64.11 Matrix as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional transformation matrix.
**Notes:**

The matrix can be used to zoom into the page or to move the picture to a specific area in the image buffer.
(Read and Write property)

### 77.64.12 NumAnnots as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of rendered form annotations (excluding invisible annotation but annotations with no appearance are included)
**Notes:** (Read and Write property)

### 77.64.13 NumBezierCurves as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of bezier curves which where rendered. Glyph outlines are not taken into account.
**Notes:** (Read and Write property)

### 77.64.14 NumClipPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of clipping paths used in the page. Should be small as possible!
**Notes:** (Read and Write property)

### 77.64.15 NumFormFields as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of rendered form fields (excluding invisible fields but fields with no appearance are included)
**Notes:** (Read and Write property)

### 77.64.16 NumGlyphs as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** When the number of glyphs equals NumTextRecords then there is probably some room for optimization...
**Notes:** (Read and Write property)

### 77.64.17 NumImages as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of images that were rendered.
**Notes:** (Read and Write property)

### 77.64.18 NumLineTo as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of LineTo operators.
**Notes:** (Read and Write property)

### 77.64.19 NumPaths as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of paths which were processed.
**Notes:** (Read and Write property)

### 77.64.20 NumPatterns as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of pattern which were processed.
**Notes:** (Read and Write property)

### 77.64.21 NumRectangles as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of rectangle operators.
**Notes:** (Read and Write property)

### 77.64.22 NumRestoreGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Should be equal to NumSaveGraphicStates.
**Notes:** (Read and Write property)

### 77.64.23 NumSaveGState as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of save graphics state operators.
**Notes:** (Read and Write property)

### 77.64.24 NumShadings as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of shadings.
**Notes:** (Read and Write property)

### 77.64.25 NumSoftMasks as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of soft masks that were processed.
**Notes:**

Alpha channels of images are not taken into account.
(Read and Write property)

### 77.64.26 NumTextRecords as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of independent text records which were rendered.
**Notes:** (Read and Write property)

### 77.64.27 PageSpace as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The matrix represents the mapping from page space to device space.
**Notes:**

Output parameter.
This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.
(Read and Write property)

### 77.64.28 UpdateOnImageCoverage as Single

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** DynaPDF multiplies the output image area with this factor to determine when the window should be updated.
**Notes:**

The factor should be around 0.5 through 5.0. Larger values cause less frequently update events.
(Read and Write property)

### 77.64.29 UpdateOnPathCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Call OnUpdateWindow event when the UpdateOnPathCount limit was reached.
**Notes:**

Clipping paths increment the number too.
Only full paths are considered, independent of the number of vertices they contain. The value should be larger than 50 and smaller than 10000.
(Read and Write property)

### 77.64.30 Yield as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to yield time to other threads.
**Notes:**

Set to true if you render page in a thread, so time is given to other threads.
(Read and Write property)

### 77.64.31 Events

### 77.64.32 UpdateWindow(r as DynaPDFRectMBS, pic as Variant) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called regularly so you can update your GUI.
**Notes:**

Please set UpdateOnPathCount and UpdateOnImageCoverage to use this event.
If you draw to a picture, the picture is passed as parameter for your convenience.

Pic is a variant so the plugin compiles in older Xojo versions for console targets.

Returns -1 to stop the processing.

### 77.64.33 Constants

### 77.64.34 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page so that it fits fully into the image buffer.

### 77.64.35 kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page to the height of the image buffer.

### 77.64.36 kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the constants to specify how the page should be scaled into the image buffer.
**Notes:** Scale the page to the width of the image buffer.

### 77.64.37 krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the art box if any.

Only one of these clip flags must be set at time!

### 77.64.38 krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

### 77.64.39 krfClipToTrimBox = 16

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:**

Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

### 77.64.40 krfCompositeWhite = & h00001000

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the raster flag constants.
**Notes:** Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

### 77.64.41 krfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:** Render the page as usual

### 77.64.42 krfDisableAAClipping = & h00200000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

### 77.64.43 krfDisableAAText = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for text.

### 77.64.44 krfDisableAAVector = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for vector graphics.

### 77.64.45 krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Fully disable Anti-Aliasing.

### 77.64.46 krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:** Disable the BiLevel filter for images. Sometetimes useful if sharp images are needed, e.g. for barcodes.

### 77.64.47 krfEnableBlendCS = & h10000000

MBS DynaPDF Plugin, Plugin Version: 22.3.

**Function:** One of the raster flag constants.
**Notes:** If set, the page is rendered in the color space of the page group, soft proof color space, or output intent (if set), and finally converted to the destination colorspace.

### 77.64.48 krfExclAnnotations = 32

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:** Don't render annotations.

### 77.64.49 krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.50 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Exclude check boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes.
If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.51 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Exclude combo boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox.
If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.52 krfExclFormFields = 64

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:** Don't render form fields.

### 77.64.53 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Exclude listbox fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox.
If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.54 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4.

**Function:** One of the raster flag constants.
**Notes:** If set, only annotations and form fields will be rendered (if any).

### 77.64.55 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Exclude signature fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.56 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Exclude text fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

### 77.64.57 krfIgnoreCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:** Ignore the crop box and render anything inside the media box without clipping.

### 77.64.58 krfInitBlack = & h00000800

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the raster flag constants.

**Notes:** Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

### 77.64.59 krfRenderInvisibleText = & h02000000

MBS DynaPDF Plugin, Plugin Version: 18.2.

**Function:** One of the raster flag constants.
**Notes:** If set, treat text rendering mode Invisible as Normal.

### 77.64.60 krfRenderPrintState = & h20000000

MBS DynaPDF Plugin, Plugin Version: 23.1.

**Function:** One of the raster flag constants.
**Notes:** If set, the print state of layers, annotations, and form fields will be rendered.

### 77.64.61 krfRotate180 = & h00000200

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the raster flag constants.
**Notes:** Rotate the page 180 degress.

### 77.64.62 krfRotate270 = & h00000400

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the raster flag constants.
**Notes:** Rotate the page 270 degress.

### 77.64.63 krfRotate90 = & h00000100

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the raster flag constants.
**Example:**

```
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")
```

```
// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then
// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page "+Format(i,"0")+".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
end
next
```

**Notes:** Rotate the page 90 degress.

### 77.64.64 krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the raster flag constants.
**Notes:**

Considered only, if the flag rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set.
If set, the picture size is set to the size of the whished bounding box.

### 77.64.65 krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the raster flag constants.
**Notes:** Render the real paper format. Contents outside the crop box is clipped.

### 77.64.66 krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3.

**Function:** One of the raster flag constants.
**Notes:** Don't generate an update event after initializing the background to white.

## 77.65 class DynaPDFRasterizerMBS

### 77.65.1 class DynaPDFRasterizerMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for the rasterizer interface.

- 17.5, page 39: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes
- 17.2, page 10: News

### 77.65.7 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

### 77.65.8 Methods

### 77.65.9 Abort

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Aborts raster process.
**Notes:** Stops the function RenderPage as soon as possible when RenderPage() is running in a separate thread.

### 77.65.10 AddRasImage(Filter as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function adds an image from the rasterizer to the current open image file.
**Notes:** The output image must be opened with CreateImage() beforehand.

### 77.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Attaches a new image buffer of the same pixelformat.
**Notes:**

Returns true on success.
Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 77.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean 15414

### 77.65.12 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Attaches a new image buffer of the same pixelformat.
**Notes:**

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
Returns true on success.
See also:

- 77.65.11 AttachImageBuffer(Pic as Picture, RenderWithAlpha as boolean = false) as boolean 15414

### 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes rasterizer targeting a device context.
**Notes:**

Special version to simplify rendering into a device context. It creates a DIB Section into which pages can be rendered.

See also:

- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15415
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15415
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15416

### 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new rasterizer object targeting the given picture.
**Notes:**

Added RenderWithAlpha parameter in plugin version 19.0.
If RenderWithAlpha is true, we render with alpha channel. If the destination is a picture has alpha channel, you should get the alpha there. Otherwise for picture without alpha channel, we only copy RGB channels.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15414
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15415
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15416

### 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new rasterizer object targeting the given memory area.
**Notes:**

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15414
- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15415
- 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 15416

### 77.65.16 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:**

Creates a new picture as buffer for you with the given size.
PDF must not be nil and point to a valid DynaPDF context.
See also:

- 77.65.13 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 15414
- 77.65.14 Constructor(PDF as DynaPDFMBS, Pic as Picture, RenderWithAlpha as boolean = false) 15415
- 77.65.15 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 15415

### 77.65.17 Redraw(DeviceContextHandle as Integer, DestX as Integer, DestY as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Because there is no direct access to the internal DIB Sesction when rendering into a device context, this function can be used to redraw the bitmap on the device context.
**Notes:**

If RenderPageEx() was called in a separate thread then this function can be called after the thread returned. While the thread is running you can change the position by directly manipulating the coordinate variables which were passed to RenderPageEx().
The function calls the system function SetDIBitsToDevice() to copy the image into the device context.

### 77.65.18 RenderPage(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders a page of a PDF Document with the given options.
**Notes:** Returns true on success and false on failure.

### 77.65.19 RenderPageEx(DeviceContextHandle as Integer, byref DestX as Integer, byref DestY as Integer, page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders a page into a device context.
**Notes:**

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

### 77.65.20 RenderPageMT(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Renders a page of a PDF Document with the given options.
**Notes:**

Returns true on success and false on failure.

Same as RenderPage, but with additional multithreading.

As the actual transfer runs on a preemptive thread, the event UpdateWindow is called asynchrounously and run a few milliseconds later.

Do not call other functions on this DynaPDFRasterizerMBS instance while RenderPageMT is running!

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 77.65.21 ResizeBitmap(DeviceContextHandle as Integer, Width as Integer, Height as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Changes the size of the DIB Section.
**Notes:**

Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

### 77.65.22 Properties

### 77.65.23 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference to the rasterizer object.
**Notes:**

If the constructor is successful, this value is not zero.
(Read only property)

### 77.65.24 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of the picture or buffer.
**Notes:** (Read only property)

### 77.65.25 MinLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The minimum line width in which thin lines are rendered.
**Notes:**

The value should be in the range 0.1 through 1.0.
Default value: 0.5
(Read and Write property)

### 77.65.26 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference back to parent dynaPDF object.
**Notes:** (Read only property)

### 77.65.27 Pic as Picture

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The target picture.
**Notes:** (Read only property)

### 77.65.28 PixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The pixel format of picture.
**Notes:** (Read only property)

### 77.65.29 Premultiply as Boolean

MBS DynaPDF Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to premultiply pixels.
**Notes:**

This is used when we render ARGB or ABGR and copy it to the Xojo picture.
Some picture formats in Xojo need pre-multiplied pixel values, so this is turned on automatically when needed.
(Read and Write property)

### 77.65.30 ScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The scan line length in bytes of the picture.
**Notes:** (Read only property)

### 77.65.31 ScreenResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the screen resolution in DPI.
**Notes:**

The screen resolution is sometimes required, e.g. to render Text annotations correctly. This type of annotation has a fixed size that is independent of the current scaling factor. However, the correct size depends on

the screen resolution on which the image is rendered.

Default is zero.
(Read and Write property)

### 77.65.32 TempBuffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The temporary buffer data pointer.
**Notes:**

If the picture pixel format is not directly supported with DynaPDF, we render in a temporary buffer and copy it to the picture.
(Read only property)

### 77.65.33 TempPixelFormat as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The temporary buffer pixel format.
**Notes:** (Read only property)

### 77.65.34 TempScanlineLen as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The temporary buffer scan line length in bytes.
**Notes:** (Read only property)

### 77.65.35 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the picture or buffer.
**Notes:** (Read only property)

### 77.65.36 Constants

### 77.65.37 kpxf1Bit = 0

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** 1 bit per pixel black and white.

### 77.65.38 kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** ABGR.

### 77.65.39 kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** ARGB

### 77.65.40 kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** BGR

### 77.65.41 kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** BGRA

### 77.65.42 kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the pixel format constants.
**Notes:** CMYK without alpha

### 77.65.43 kpxfCMYKA = 10

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the pixel format constants.
**Notes:** CMYK with alpha

### 77.65.44 kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** 8 bit grayscale.

### 77.65.45 kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2.

**Function:** One of the pixel format constants.
**Notes:** 8 bit grayscale with alpha.

### 77.65.46 kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** RGB

### 77.65.47 kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 11.1.

**Function:** One of the pixel format constants.
**Notes:** RGBA

## 77.66 class DynaPDFRawImageMBS

### 77.66.1 class DynaPDFRawImageMBS

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to hold information about a raw image.
**Notes:** Used with InsertRawImageEx.

### 77.66.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr4

### 77.66.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr4

### 77.66.4 Methods

### 77.66.5 setBuffer(data as MemoryBlock)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the buffer to point to the bytes in the memoryblock.
**Notes:** Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15424
- 77.66.7 setBuffer(data as Ptr) 15425
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15425
- 77.66.9 setBuffer(data as string) 15426
- 77.66.10 setBuffer(data as string, size as Int64) 15426

### 77.66.6 setBuffer(data as MemoryBlock, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the buffer to point to the bytes in the memoryblock.
**Notes:** Size is optional. Some memoryblocks have no known size and there you need to specify one.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15424
- 77.66.7 setBuffer(data as Ptr) 15425
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15425
- 77.66.9 setBuffer(data as string) 15426
- 77.66.10 setBuffer(data as string, size as Int64) 15426

### 77.66.7 setBuffer(data as Ptr)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Private method to set the buffer using a pointer to some memory.
**Notes:** This is a private method to make sure nobody passes a ptr instead of memoryblock or ptr+size.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15424
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15424
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15425
- 77.66.9 setBuffer(data as string) 15426
- 77.66.10 setBuffer(data as string, size as Int64) 15426

### 77.66.8 setBuffer(data as Ptr, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the buffer using a pointer to some memory.
**Notes:** Please provide the right size.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15424
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15424
- 77.66.7 setBuffer(data as Ptr) 15425
- 77.66.9 setBuffer(data as string) 15426
- 77.66.10 setBuffer(data as string, size as Int64) 15426

### 77.66.9 setBuffer(data as string)

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets buffer to point to contents of this string.
**Notes:** If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15424
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15424
- 77.66.7 setBuffer(data as Ptr) 15425
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15425
- 77.66.10 setBuffer(data as string, size as Int64) 15426

### 77.66.10 setBuffer(data as string, size as Int64)

MBS DynaPDF Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets buffer to point to contents of this string.
**Notes:** If you specify a size, the size can be smaller than thing length to use only first part.
See also:

- 77.66.5 setBuffer(data as MemoryBlock) 15424
- 77.66.6 setBuffer(data as MemoryBlock, size as Int64) 15424
- 77.66.7 setBuffer(data as Ptr) 15425
- 77.66.8 setBuffer(data as Ptr, size as Int64) 15425
- 77.66.9 setBuffer(data as string) 15426

### 77.66.11 Properties

### 77.66.12 BitsPerComponent as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bits per component.
**Notes:**

For example 8 for the usual RGB images.
(Read and Write property)

### 77.66.13 Buffer as Ptr

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The buffer as pointer.
**Notes:**

Please use setBuffer methods to set this.
(Read only property)

### 77.66.14 BufSize as Int64

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The buffer size.
**Notes:** (Read only property)

### 77.66.15 CS as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Image color space.
**Notes:** (Read and Write property)

### 77.66.16 CSHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Color space handle or -1.
**Notes:** (Read and Write property)

### 77.66.17 HasAlpha as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The image has an alpha channel?
**Notes:** (Read and Write property)

### 77.66.18 Height as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Height in pixels.
**Notes:** (Read and Write property)

### 77.66.19 IsBGR as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Windows bitmap format?
**Notes:** (Read and Write property)

### 77.66.20 Memory as MemoryBlock

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The memoryblock used with setBuffer.
**Notes:** (Read only property)

### 77.66.21 MinIsWhite as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether image has value zero for white instead of black.
**Notes:**

One bit images only.
(Read and Write property)

### 77.66.22 NumComponents as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of components.
**Notes:**

Maximum is 32 for DynaPDF.
(Read and Write property)

### 77.66.23 Stride as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of bytes per row.
**Notes:**

A negative value mirrors the image.
(Read and Write property)

### 77.66.24 String as String

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The String used with setBuffer.
**Notes:** (Read only property)

### 77.66.25 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Width in pixels.
**Notes:** (Read and Write property)

## 77.67 class DynaPDFRectMBS

### 77.67.1 class DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A rectangle for DynaPDF.

- 19.6, page 14: Things you can do with DynaPDF, The MBS DynaPDF Plugin is more powerful than you think by Stefanie Juchmes

### 77.67.6 Methods

### 77.67.7 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0)

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new rectangle with the given values.

### 77.67.8 Properties

### 77.67.9 Bottom as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bottom coordinate.
**Notes:** (Read and Write property)

### 77.67.10 Left as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The left coordinate.
**Notes:** (Read and Write property)

### 77.67.11 Right as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The right coordinate.
**Notes:** (Read and Write property)

### 77.67.12 Top as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The top coordinate.
**Notes:** (Read and Write property)

### 77.67.13 Width as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the rectangle.
**Notes:**

This is the difference between right and left.

Height property is missing as it depends on the coordinate origin. For top-down coordinates you would calculate bottom - top while for bottom-up coordinates you calculate top - bottom.
(Read and Write property)

# 77.68 class DynaPDFRelFileNodeMBS

## 77.68.1 class DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The information on a related file node.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.68.2 Methods

## 77.68.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.68.4 Properties

## 77.68.5 EF as DynaPDFFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Embedded file.
**Notes:** (Read only property)

## 77.68.6 Name as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of this file spcification.
**Notes:** (Read only property)

## 77.68.7 NextNode as DynaPDFRelFileNodeMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Next node if any.
**Notes:** (Read only property)

# 77.69 class DynaPDFResetFormActionMBS

## 77.69.1 class DynaPDFResetFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for reset form action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.69.2 Methods

## 77.69.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.69.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries array of fields.
**Notes:** Index is from 0 to FieldsCount-1.

## 77.69.5 Properties

## 77.69.6 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of fields in the array.
**Notes:** (Read only property)

## 77.69.7 Include as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Include or exclude given fields?
**Notes:**

If true, the fields in the array must be reset. If false, these fields must be excluded.
(Read only property)

### 77.69.8 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The next action.
**Notes:**

-1 or next action handle to be executed if any.
(Read only property)

### 77.69.9 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

See kat* constants.
(Read only property)

# 77.70 class DynaPDFSigDictMBS

## 77.70.1 class DynaPDFSigDictMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for details on signature fields.

## 77.70.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.70.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

## 77.70.4 Properties

## 77.70.5 Cert as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** X.509 Certificate when SubFilter is adbe.x509.rsa_sha1.
**Notes:** (Read and Write property)

## 77.70.6 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional contact info string, e.g. an email address
**Notes:** (Read and Write property)

## 77.70.7 Contents as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The signature.
**Notes:**

This is either a DER encoded PKCS# 1 binary data object or a DER-encoded PKCS# 7 binary data object depending on the used SubFilter.

(Read and Write property)

### 77.70.8 Filter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the security handler, usually Adobe.PPKLite.
**Notes:** (Read and Write property)

### 77.70.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional location of the signer.
**Notes:** (Read and Write property)

### 77.70.10 Name as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional signers name.
**Notes:** (Read and Write property)

### 77.70.11 PropAuthTime as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional. The number of seconds since the signer was last authenticated.
**Notes:** (Read and Write property)

### 77.70.12 PropAuthType as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional. The method that shall be used to authenticate the signer.
**Notes:**

Valid values are PIN, Password, and Fingerprint.
(Read and Write property)

### 77.70.13 Reason as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional reason.
**Notes:** (Read and Write property)

### 77.70.14 Revision as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, The version of the signature handler that was used to create the signature.
**Notes:** (Read and Write property)

### 77.70.15 SignTime as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Date/Time string.
**Notes:** (Read and Write property)

### 77.70.16 SubFilter as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A name that describes the encoding of the signature value.
**Notes:**

Should be adbe.x509.rsa_sha1, adbe.pkcs7.detached, or adbe.pkcs7.sha1.
(Read and Write property)

### 77.70.17 Version as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the signature dictionary format.
**Notes:** (Read and Write property)

## 77.71 class DynaPDFSigParmsMBS

### 77.71.1 class DynaPDFSigParmsMBS

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for PDF signature parameters.

### 77.71.2 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

### 77.71.3 Blog Entries

- Sign PDF with DynaPDF and your custom signature
- MBS REALbasic Plugins, version 11.1pr4

### 77.71.4 Properties

### 77.71.5 ContactInfo as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, e.g. an email address.
**Notes:**

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

### 77.71.6 Encrypt as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the file will be encrypted.
**Notes:** (Read and Write property)

### 77.71.7 HashType as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The hash type: khtDetached or khtSHA1.
**Notes:** (Read and Write property)

### 77.71.8 KeyLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Key length to encrypt the file.
**Notes:**

This value is ignored if Encrypt is set to false.
On of the kkl* constants like kkl128bit.
(Read and Write property)

### 77.71.9 Location as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional location of the signer.
**Notes:**

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

### 77.71.10 OpenPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional open password.
**Notes:**

This value is ignored if Encrypt is set to false.
(Read and Write property)

### 77.71.11 OwnerPwd as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional owner password.
**Notes:**

This value is ignored if Encrypt is set to false.
(Read and Write property)

### 77.71.12 PKCS7ObjLen as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Max length of the signed PKCS# 7 object.
**Notes:** (Read and Write property)

### 77.71.13 Range1 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Hash or byte range.
**Notes:** (Read and Write property)

### 77.71.14 Range1Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the buffer Range1.
**Notes:** (Read and Write property)

### 77.71.15 Range2 as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Second range value.
**Notes:**

Set only if HashType = htDetached.
(Read and Write property)

### 77.71.16 Range2Length as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of buffer Range2.
**Notes:** (Read and Write property)

### 77.71.17 Reason as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional reason why the file was signed.
**Notes:**

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

### 77.71.18 Restrict as Integer

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** What should be restricted?
**Notes:**

This value is ignored if Encrypt is set to false.
A combination of krs* constants.
(Read and Write property)

### 77.71.19 Signer as String

MBS DynaPDF Plugin, Plugin Version: 10.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, see manual.
**Notes:**

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

## 77.72 class DynaPDFStackMBS

### 77.72.1 class DynaPDFStackMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for the current text found by GetPageText.
**Notes:** Before you can use it, call InitStack.

### 77.72.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

### 77.72.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr5
- MBS Xojo / Real Studio Plugins, version 16.2pr1
- MBS REALbasic Plugins, version 11.1pr4

### 77.72.4 Methods

### 77.72.5 KerningAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negative values move the cursor to the right.

### 77.72.6 KerningLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length in characters.

### 77.72.7 KerningText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Translated Unicode string.
**Notes:**

May contain chr(0) characters.
Encoding is UTF8.

### 77.72.8 KerningWidth(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** String width measured in text space.

### 77.72.9 RawKernAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negative values move the cursor to the right.

### 77.72.10 RawKernLength(index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raw text length in bytes.

### 77.72.11 RawKernText(index as UInt32) as string

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raw text.

### 77.72.12 Properties

### 77.72.13 CharSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Current character spacing, info only.
**Notes:** (Read only property)

### 77.72.14 CIDFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, a CID font is used to render the text.
**Notes:**

It is not possible to replace a text with ReplacePageText() in this case. However, it is still possible to delete the text. If the text should be replaced use either ReplacePageTextEx() or WriteTextMatrixEx().
(Read only property)

### 77.72.15 ConvColors as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

If true (default), all colors are converted to the destination color space
DestSpace.
**Notes:**

The default color space is DeviceRGB. This variable can be changed after the structure has been initialized with InitStack(). If set to false, colors of complex color spaces are still converted into the alternate color space but the color space can then be changed arbitrary often. See also the description of FillCS.
(Read and Write property)

### 77.72.16 ctm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The transformation matrix.
**Notes:**

Pre-multiplied global transformation matrix.
(Read only property)

### 77.72.17 DeleteKerningAt as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This member can be used in combination with ReplacePageText().
**Notes:**

ReplacePageText() deletes or replaces normally always a complete text record but this is often not required especially if a text must be deleted or replaced in the middle or end of a kerning array. To make text replacement easier it is possible to preserve an arbitrary number of kerning records from deletion. The value of DeleteKerningAt represents the first array index which should be deleted. All kerning records above this index will be deleted too. Take a look into the demo examples/edit_text which is delivered with DynaPDF to determine how this member can be used.
(Read and Write property)

### 77.72.18 DestSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destination color space in which all colors should be converted.
**Notes:**

If
ConvColor is set to false, the value of this member is ignored. If the destination color space should be DeviceCMYK initialize the members FillColor and StrokeColor with PDF_CMYK(0,0,0,255); which represents black.
(Read and Write property)

### 77.72.19 DrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The draw mode used to render the text.
**Notes:**

See SetTextDrawMode() for further information.
(Read only property)

### 77.72.20 Embedded as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the font is embedded.
**Notes:**

This information is very important if the text should be replaced. The function ReplacePageText() can be used if the font is not embedded and if the member CIDFont is false. Otherwise, the function ReplacePageTextEx() or WriteTextMatrixEx() must be used to replace the text, see the examples on the following pages for further information.

(Read only property)

### 77.72.21 FillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The fill color represents the text color if the text draw mode is dmNormal.
**Notes:**

Depending on the draw mode the fill and stroke color can be invoked to render the text.
(Read only property)

### 77.72.22 FillCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

This is the current color space in which the color value of FillColor is defined.
**Notes:**

If ConvColor is set to true (default) the value is always equal to DestSpace. If ConvColor is set to false the fill color is still returned in a device color space but the color space can be changed arbitrary often. Colors of complex color spaces, such as Separation or DeviceN, are always converted into the alternate color space. If the original or alternate color space is an ICC based color space the color value is returned as is and the color space is set depending on the number of components. The ICC profile is not invoked to calculate the color value in the device color space. Future versions of DynaPDF maybe use the ICC profile to convert the color into device color space.
(Read only property)

### 77.72.23 Font as DynaPDFFontMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font object used to print the string.
**Notes:**

Deprecated. Better use FontInfo property.

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

### 77.72.24 FontFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The PDF font flags.
**Notes:** (Read and Write property)

### 77.72.25 FontHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal font object handle.
**Notes:**

In DynaPDF documentation named IFont, a pointer to the C object for the font.
(Read only property)

### 77.72.26 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font object used to print the string.
**Notes:**

Reading this property creates a new object each time.
Please put object in local variable and avoid querying the property value several times.
(Read only property)

### 77.72.27 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The font size used to display the text.
**Notes:** (Read only property)

### 77.72.28 HScale as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Current horizontal scaling, info only.
**Notes:** (Read only property)

### 77.72.29 KerningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of kerning records.
**Notes:**

RawKern and Kerning contain always the same number of records.
(Read only property)

### 77.72.30 Leading as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The leading is already included in the text transformation matrix tm.
**Notes:**

The value of leading must not be considered to calculate the text position.
(Read only property)

### 77.72.31 LineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current line width; it can be ignored if the text is not stroked.
**Notes:** (Read only property)

### 77.72.32 SpaceWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The space width.
**Notes:**

The space width can be used to determine whether a space character is
emulated at a given position. A default space width is set if the font does not

contain a space character. Note that many documents emulate spaces with kerning space. Such documents contain usually no space character. It is usually best to use the half space width to determine whether a space character is emulated. This is especially important if a document uses condensed fonts which contain no space character.
(Read only property)

### 77.72.33 StrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stoke color.
**Notes:**

The stroke color can be ignored if the text draw mode is not dmStroke, dmFillStroke, dmStrokeClip or dmFillStrokeClip since it is then not used to render the text.
(Read only property)

### 77.72.34 StrokeCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

This is the current color space in which the color value of StrokeColor is defined.
**Notes:**

The color space is set in an identical manner like FillCS.
(Read only property)

### 77.72.35 Text as String

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The raw text line that was found in the content stream.
**Notes:**

This string can contain single or multi-byte characters. This member should no longer be used to extract or replace text. Use the Kerning array instead.
(Read only property)

### 77.72.36 TextLen as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string length in bytes, not characters!
**Notes:**

If TextLen is zero no text was found or an error occurred.
(Read only property)

### 77.72.37 TextRise as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text rise is already included in the text transformation matrix tm.
**Notes:**

The
value is always 0.0.
(Read only property)

### 77.72.38 TextWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text width measured in text space.
**Notes:**

This is the width of the entire kerning array incl. kerning space.
(Read only property)

### 77.72.39 tm as DynaPDFMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The transformation matrix.
**Notes:**

Pre-multiplied text transformation matrix.
(Read only property)

### 77.72.40 WordSP as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Current word spacing, info only.
**Notes:** (Read only property)

### 77.72.41 x as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position.
**Notes:**

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

### 77.72.42 y as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The position.
**Notes:**

These members are no longer used. All positioning operators are already
included in the text transformation matrix tm.
(Read only property)

## 77.73 class DynaPDFSubmitFormActionMBS

### 77.73.1 class DynaPDFSubmitFormActionMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for submit form action details.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.73.2 Methods

### 77.73.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.73.4 Fields(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries array of field.
**Notes:** Index is from 0 to FieldCount-1.

### 77.73.5 Properties

### 77.73.6 CharSet as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional charset in which the form should be submitted.
**Notes:** (Read only property)

### 77.73.7 FieldsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of fields in the array.
**Notes:** (Read only property)

### 77.73.8 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Various flags.
**Notes:**

See CreateSubmitAction() for further information.
(Read only property)

### 77.73.9 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The next action.
**Notes:**

-1 or next action handle to be executed if any.
(Read only property)

### 77.73.10 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

See kat* constants.
(Read only property)

### 77.73.11 URL as String

MBS DynaPDF Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The URL of the script at the Web server that will process the submission.
**Notes:** (Read only property)

## 77.74 class DynaPDFSysFontMBS

### 77.74.1 class DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for system font info.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.74.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.74.3 Blog Entries

- MBS Xojo Plugins, version 18.4pr1
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.74.4 Methods

### 77.74.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.74.6 NextFont as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries next font in the chain of fonts.
**Notes:** Returns nil on the end of list.

### 77.74.7 Properties

### 77.74.8 BaseType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font type.
**Notes:**

Can be kfbtTrueType, kfbtType1, kfbtOpenType or kfbtStdFont.
(Read and Write property)

### 77.74.9 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CID Ordering.
**Notes:**

OpenType CID fonts only.
(Read and Write property)

### 77.74.10 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CID Registry.
**Notes:**

OpenType CID fonts only
(Read and Write property)

### 77.74.11 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CID Supplement.
**Notes:**

OpenType CID fonts only
(Read and Write property)

### 77.74.12 DataOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Data offset.
**Notes:** (Read and Write property)

### 77.74.13 FamilyName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Family name.
**Notes:** (Read and Write property)

### 77.74.14 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font file path.
**Notes:** (Read and Write property)

### 77.74.15 FileSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** File size in bytes.
**Notes:** (Read and Write property)

### 77.74.16 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags.
**Notes:**

Can be combination of kefpAnsiPath, kefpUnicodePath, kefpEmbeddable and kefpEditable.
(Read and Write property)

### 77.74.17 FullName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Full name.
**Notes:** (Read and Write property)

### 77.74.18 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Zero based font index if stored in a TrueType collection.
**Notes:** (Read and Write property)

### 77.74.19 IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If true, the font is a fixed pitch font.
**Notes:** (Read and Write property)

### 77.74.20 Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the clear text portion of a Type1 font.
**Notes:** (Read and Write property)

### 77.74.21 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of the eexec encrypted binary portion of a Type1 font.
**Notes:** (Read and Write property)

### 77.74.22 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Postscript mame.
**Notes:** (Read and Write property)

### 77.74.23 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Font style.
**Notes:**

See kfs* constants.
(Read and Write property)

### 77.74.24 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Supported unicode ranges, part 1.
**Notes:** (Read and Write property)

### 77.74.25 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Supported unicode ranges, part 2.
**Notes:** (Read and Write property)

### 77.74.26 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Supported unicode ranges, part 3.
**Notes:** (Read and Write property)

### 77.74.27 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Supported unicode ranges, part 4.
**Notes:** (Read and Write property)

### 77.74.28 Constants

### 77.74.29 kurAlphabeticPresentationForms = & h40000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.30 kurAncientGreekNumbers = 64

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.31 kurAncientSymbols = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.32 kurArabic = & h00002000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.33 kurArabicPresentationFormsA = & h80000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.34 kurArabicPresentationFormsB = 8

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.35 kurArmenian = & h00000400

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.36 kurArrows = 32

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.37 kurBalinese = & h08000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.38 kurBasicLatin = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.39 kurBengali = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.40 kurBlockElements = & h00001000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.41 kurBopomofo = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.42 kurBoxDrawing = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.43 kurBraillePatterns = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.44 kurBuginese = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.45 kurCarian = & h02000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.46 kurCham = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.47 kurCherokee = & h00001000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.48 kurCJKCompatibility = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.49 kurCJKStrokes = & h20000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.50 kurCJKSymbolsAndPunctuation = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.51 kurCJKUnifiedIdeographs = & h08000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.52 kurCombDiacritMarksForSymbols = 4

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.53 kurCombiningDiacriticalMarks = 64

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.54 kurCombiningHalfMarks = 1

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.55 kurControlPictures = & h00000100

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.56 kurCoptic = & h00000100

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.57 kurCountingRodNumerals = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.58 kurCuneiform = & h00004000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.59 kurCurrencySymbols = 2

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.60 kurCypriotSyllabary = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.61 kurCyrillic = & h00000200

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.62 kurDeseret = & h00800000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.63 kurDevanagari = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.64 kurDingbats = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.65 kurDominoTiles = & h04000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.66 kurEnclosedAlphanumerics = & h00000400

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.67 kurEnclosedCJKLettersAndMonths = & h00400000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.68 kurEthiopic = & h00000800

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.69 kurGeneralPunctuation = & h80000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.70 kurGeometricShapes = & h00002000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

### 77.74.71 kurGeorgian = & h04000000

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

MBS DynaPDF Plugin, Plugin Version: 15.0.

**Function:** One of the unicode range constants.

## 77.75 class DynaPDFTableMBS

### 77.75.1 class DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a table in DynaPDF.
**Notes:**

This tables are more for doing a layout, but can also be used to show a list or a worksheet like in Excel.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.75.6 Methods

### 77.75.7 AddColumn(left as boolean, width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a column to the table.
See also AddColumn function in DynaPDF manual.

### 77.75.8 AddRow(height as Double = 0.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a row with given height.
See also AddRow function in DynaPDF manual.

### 77.75.9 AddRows(count as UInt32, height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a couple of rows with given height.
See also AddRows function in DynaPDF manual.

### 77.75.10 ClearColumn(Col as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes the content in the specified column in all rows.
**Notes:** The paramter Types is described in ClearContent() below.
See also ClearColumn function in DynaPDF manual.

### 77.75.11 ClearContent(Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears content of table.
**Notes:** See kdc constants for possible flags.
See also ClearContent function in DynaPDF manual.

### 77.75.12 ClearRow(Row as Integer, Types as Integer)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function deletes the content in the specified row.
**Notes:** The paramter Types is described in ClearContent().
See also ClearRow function in DynaPDF manual.

### 77.75.13 Constructor

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.75.14 DeleteColumn(column as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes the column.

### 77.75.15 DeleteRow(row as UInt32)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes the row with the given index.
See also DeleteRow function in DynaPDF manual.

### 77.75.16 DeleteRows

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Deletes all rows.
See also DeleteRows function in DynaPDF manual.

### 77.75.17 DrawTable(x as Double, y as Double, MaxHeight as Double = 0.0) as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Draws the table at the given position into the PDF:
**Notes:**

The function draws the table on the specified position. The x/y-coordinates specify the top left cornerof the table. The table flows always from top to bottom.

The function must be executed in a while statement if the parameter MaxHeight is set to a value greater than zero.

The function draws the header rows if any and at least one row to avoid an endless loop if themaximum height would be smaller as the first row height.

If the function succeeds the return value is the height of the table that was drawn so that additionalcontents can be drawn below the table if necessary. If the function fails the return value is -1.
See also DrawTable function in DynaPDF manual.

### 77.75.18 GetFirstRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries first row from last draw operation.
See also GetFirstRow function in DynaPDF manual.

### 77.75.19 GetFlags(Row as Integer, Column as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries flag for a cell, a column or a row.
**Notes:** If Row is -1, only column flags are returned. If Column is -1, the row flags are returned for given row.
See also GetFlags function in DynaPDF manual.

### 77.75.20 GetNextHeight(MaxHeight as Double, byref NextRow as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the next row.
**Example:**

```
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// create dummy table with 20 rows, 1 column and 500 points width. 20 points per row by default.
dim table as DynaPDFTableMBS = pdf.CreateTable(20, 1, 500.0, 20.0)

// fill in dummy data
for i as Integer = 1 to 20
dim rowNum as Integer = table.AddRow
call table.SetCellText(rowNum, 0, pdf.ktaLeft, table.kcoCenter, str(i))
next

// and do some calculations
dim nextrow as Integer
dim h as Double = table.GetNextHeight(0, nextrow)

MsgBox str(h)+" with no limit."

dim h2 as Double = table.GetNextHeight(200, nextrow)

MsgBox str(h2)+" with limit of 200 and rows till "+str(nextrow-1)

break
```

**Notes:**

If MaxHeight is zero, returns the height of table.
If MaxHeight is the height of space available, plugin calculates the effective height of table and which row

would be the next one.
Returns negative number on error.
See also GetNextHeight function in DynaPDF manual.

### 77.75.21 GetNextRow as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries next row of last draw operation.
See also GetNextRow function in DynaPDF manual.

### 77.75.22 GetNumCols as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of columns of last draw operation.
See also GetNumCols function in DynaPDF manual.

### 77.75.23 GetNumRows as Integer

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of rows of last draw operation.
See also GetNumRows function in DynaPDF manual.

### 77.75.24 GetTableHeight as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the table height.
See also GetTableHeight function in DynaPDF manual.

### 77.75.25 GetTableWidth as Double

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates table width.
See also GetTableWidth function in DynaPDF manual.

### 77.75.26 HaveMore as boolean

MBS DynaPDF Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether there are more rows to draw.
**Notes:** If you draw a table, you can loop and fill pages until the whole table is drawn.
See also HaveMore function in DynaPDF manual.

### 77.75.27 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the back color of the table, a row or cells.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColor(0, allColumns, array(255,0,0,0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColor(1, allColumns, array(0, 255, 0, 0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColor(2, allColumns, array(0, 0, 255, 0), pdf.kcsDeviceCMYK)
// row 3 in RGB red with 50% transparency
call tbl.SetBackColor(3, allColumns, array(255, 0, 0))
```

**Notes:**

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.28 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15489

### 77.75.28 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the back color of the table, a row or cells.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by integer values
const allRows = -1
const allColumns = -1
call tbl.SetBackColor(allRows, allColumns, 255, 0, 0)
```

**Notes:**

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.27 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15488

### 77.75.29 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the back color of the table, a row or cells.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 100.0) // make some table

const allRows = -1
const allColumns = -1
```

```
// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColorFloat(0, allColumns, array(1.0, 0.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColorFloat(1, allColumns, array(0.0, 1.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColorFloat(2, allColumns, array(0.0, 0.0, 1.0, 0.0), pdf.kcsDeviceCMYK)
// row 3 in RGB red
call tbl.SetBackColorFloat(3, allColumns, array(1.0, 0.0, 0.0))
```

**Notes:**

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.30 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15490

### 77.75.30 SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the back color of the table, a row or cells.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by double values
const allRows = -1
const allColumns = -1
call tbl.SetBackColorFloat(allRows, allColumns, 1.0, 0.0, 0.0)
```

**Notes:**

Default is none (transparent)

If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.29 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15489

### 77.75.31 SetBackColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the back color of the table, a row or cells.
**Example:**

```
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by RGB() call
const allRows = -1
const allColumns = -1

dim c as Integer = DynaPDFMBS.RGB(255, 0, 0)
call tbl.SetBackColorValue(allRows, allColumns, DynaPDFMBS.kcsDeviceRGB, c)
```

**Notes:**

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.32 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border color of the table, a row or cells.
**Example:**

```
// set color in CMYK with cyan (255 = 100% )
Call tbl.SetBorderColor(-1, -1, Array(255, 0, 0, 0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.33 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15492

### 77.75.33 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border color of the table, a row or cells.
**Example:**

```
const AllRows = -1
const AllColumns = -1

// set gray color for all borders to RGB(100,100,100)
call tbl.SetBorderColor(AllRows, AllColumns, 100, 100, 100)

// set border for all cells with fine line
call table.SetBorderWidth(AllRows, AllColumns, 0.5, 0.5, 0.5, 0.5)
```

**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.32 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15491

### 77.75.34 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border color of the table, a row or cells.
**Example:**

```
// set color in CMYK with magenta (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, Array(0.0, 1.0, 0.0, 0.0), pdf.kesDeviceCMYK)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.35 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15493

### 77.75.35 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border color of the table, a row or cells.
**Example:**

```
// set color in RGB with blue (1.0 = 100% )
Call tbl.SetBorderColorFloat(-1, -1, 0.0, 0.0, 1.0)
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)
```

**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.34 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15493

### 77.75.36 SetBorderColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border color of the table, a row or cells.
**Example:**

```
// set color in CMYK with magenta (255 = 100% )
Call tbl.SetBorderColorValue(-1, -1, pdf.kesDeviceCMYK, pdf.CMYK(0, 255, 0, 0))
Call tbl.SetBorderWidth(-1, -1, 2.0, 2.0, 2.0, 2.0)

// set color in RGB with green (255 = 100% )
Call tbl.SetBorderColorValue(row, -1, pdf.kesDeviceRGB, pdf.RGB(0, 255, 0))
Call tbl.SetBorderWidth(row, -1, 2.0, 2.0, 2.0, 2.0)
```

**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.37 SetBorderWidth(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the border width of the table, a row or cells.
**Example:**

```
// set border for a row to right/bottom with fine line
call table.SetBorderWidth(rowNum, -1, 0.0, 0.0, 0.5, 0.5)
```

**Notes:**

Default value is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

### 77.75.38 SetCellAction(Row as Integer, Column as Integer, ActionHandle as UInt32, Mode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates an invisible link annotation for the specified cell or table and associates the provided action with that annotation.
**Notes:**

The result is an interactive area that executes the action if the user clicks on cell or table.
A cell action is always a background object that is created in the size of the background area when the table is drawn.

Unlike other cell objects like images, text, and so on, a cell link is no persistent object because the action will be deleted when then PDF file in memory will be closed or when destructor will be called.
If the table should be drawn into more than one PDF file then re-create the actions and cell action before drawing the table into the next PDF file.

Actions can be created with functions like CreateGoToAction(), CreateGoToRAction(), and so on.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetCellAction function in DynaPDF manual.

### 77.75.39 SetCellDashPattern(Row as Integer, Column as Integer, CellSide as Integer, LineCapStyle as Integer, values() as Double, Phase as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Apply a line dash pattern to cell, row, and table borders.
**Notes:** Pass kcsTop, kcsBottom, kcsLeft or kcsRight for CellSide parameter.
See also SetCellDashPattern function in DynaPDF manual.

### 77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the cell image.

See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 15496

### 77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 15495

### 77.75.42 SetCellImageAnsi(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets cell image.
See also SetCellImage function in DynaPDF manual.
See also:

- 77.75.40 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean 15495
- 77.75.41 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean 15496

### 77.75.43 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets cell image.
**Example:**

```
dim PictureData as memoryblock // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

**Notes:** Returns true on success.
See also:

- 77.75.44 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean 15497

### 77.75.44 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets cell image.
**Example:**

```
dim PictureData as string // from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
```

See also:

- 77.75.43 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as

Integer = 0) as boolean 15496

### 77.75.45 SetCellOrientation(Row as Integer, Column as Integer, Orientation as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function sets the cell orientation.
**Notes:** See dynapdf_help.pdf for details.
See also SetCellOrientation function in DynaPDF manual.

### 77.75.46 SetCellPadding(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the cell padding of the table, a row or cells.
**Notes:**

Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

### 77.75.47 SetCellPicture(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as double, Height as Double, Pic as Picture) as boolean

MBS DynaPDF Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets cell image with given picture.
**Example:**

```
dim Pic as picture // your picture from database maybe?
dim w as Double = 300 // destination size
dim h as Double = 200
dim row as Integer
dim column as Integer

dim table as DynaPDFTableMBS // your table

call table.SetCellPicture(row, column, true, table.kcoCenter, table.kcoCenter, w, h, Pic)
```

**Notes:** Returns true on success.

### 77.75.48 SetCellSpacing(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the cell spacing of the table, a row or cells.
**Notes:**

Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

### 77.75.49 SetCellTable(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, SubTable as DynaPDFTableMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a sub table into the specfied cell.
**Notes:**

A sub table is always a foreground object that has a strong width and height. That means, if the cell is not large enough then it will be expanded.
Note that the function creates no copy of the table. Do not delete the sub table when it is used by another table.
In programming languages which use reference counting like Xojo, it is important to delete the tables in right order. Delete first the tables which contain references to sub tables. Finally, delete the sub tables.

If the function succeeds the return value is true. If the function fails the return value is false.
See dynapdf_help.pdf for details.
See also SetCellTable function in DynaPDF manual.

### 77.75.50 SetCellTemplate(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, TmplHandle as Integer, Width as Double = 0, Height as Double = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function inserts a template into the specified cell.
**Notes:** See dynapdf_help.pdf for details.
See also SetCellTemplate function in DynaPDF manual.

### 77.75.51 SetCellText(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text of a cell.
**Notes:**

Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

### 77.75.52 SetCellTextAnsi(Row as Integer, Column as Integer, HTextAlign as Integer, VAlign as Integer, text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text of a cell with ANSI text.
**Notes:**

Use DynaPDFMBS.ktaLeft and similar text align constants for HAlign.
But use DynaPDFTableMBS.kcoCenter and similar cell orientation constants for Valign.
See also SetCellText function in DynaPDF manual.

### 77.75.53 SetColWidth(column as UInt32, Width as Double, ExtTable as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the column width for a column.
See also SetColWidth function in DynaPDF manual.

### 77.75.54 SetFlags(Row as Integer, Column as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the flags for a cell.
**Notes:** If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFlags function in DynaPDF manual.

### 77.75.55 SetFont(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = & h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the font of the table, a row or cells.
**Example:**

```
dim tbl as DynaPDFTableMBS // your table

// set font for all cells
call tbl.SetFont -1, -1, "Helvetica", pdf.kfsNone, true, pdf.kcpUnicode
// set bold font for a special cell
call tbl.SetFont rowNum, 2, "Helvetica", pdf.kfsBold, true, pdf.kcpUnicode
```

**Notes:**

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

### 77.75.56 SetFontAnsi(Row as Integer, Column as Integer, name as string, Style as Integer = 0, Embed as Boolean = true, CodePage as Integer = & h27) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the font of the table, a row or cells.
**Notes:**

Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

### 77.75.57 SetFontSelMode(Row as Integer, Column as Integer, value as Int32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the font selection mode of the table, a row or cells.
**Notes:**

Default is ksmFamilyName.

If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSelMode function in DynaPDF manual.

### 77.75.58 SetFontSize(Row as Integer, Column as Integer, size as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the font size of the table, a row or cells.
**Notes:**

Default is 10.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSize function in DynaPDF manual.

### 77.75.59 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.60 SetGridHorizontalColor(paramarray channels as Integer) as boolean 15502

### 77.75.60 SetGridHorizontalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.59 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15502

### 77.75.61 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.62 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean 15503

### 77.75.62 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.61 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15503

### 77.75.63 SetGridHorizontalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.64 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the vertical grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.65 SetGridVerticalColor(paramarray channels as Integer) as boolean 15504

### 77.75.65 SetGridVerticalColor(paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the vertical grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.64 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15504

### 77.75.66 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the vertical grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.67 SetGridVerticalColorFloat(paramarray channels as Double) as boolean 15505

### 77.75.67 SetGridVerticalColorFloat(paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the vertical grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.66 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15504

### 77.75.68 SetGridVerticalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the vertical grid color.
**Notes:**

Default is black.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.69 SetGridWidth(h as Double, v as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the grid width.
**Notes:** Default is 0.

See also SetGridWidth function in DynaPDF manual.

### 77.75.70 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the image color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.71 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15506

### 77.75.71 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the image color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.70 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15506

### 77.75.72 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the image color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.73 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15507

### 77.75.73 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the image color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.72 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15506

### 77.75.74 SetImageColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the image color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.75 SetPDF(pdf as DynaPDFMBS)

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the target PDF for this table.

### 77.75.76 SetRowHeight(Row as Integer, value as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the row height of a row.
See also SetRowHeight function in DynaPDF manual.

### 77.75.77 SetTableWidth(Value as single, AdjustType as Integer, MinColWidth as single)

MBS DynaPDF Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function changes the width of the table.
**Notes:**

At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column width should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.
If the new width is smaller then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to kcoaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the difference, then the minimum column width is set to the column. This adjustment continues until the gap is zero. If the new table width is smaller as MinColWidth * NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

| | |
|---|---|
| kcoaUniqueWidth | Set the column widths to TableWidth / NumColumns |
| kcoaAdjLeft | Adjust the widths starting from the left side |
| kcoaAdjRight | Adjust the widths starting from the right side |

See dynapdf_help manual for details.
Returns true on success or false on failure.
See also SetTableWidth function in DynaPDF manual.

### 77.75.78 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.79 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean 15509

### 77.75.79 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 77.75.78 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15509

### 77.75.80 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.81 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean 15510

### 77.75.81 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the text color of the table, a row or cells.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 77.75.80 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean 15509

### 77.75.82 SetTextColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the horizontal grid color.
**Notes:**

Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 77.75.83 Properties

### 77.75.84 Parent as Variant

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reference to parent object.
**Notes:** (Read only property)

### 77.75.85 PDF as DynaPDFMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reference to parent PDF object.
**Notes:** (Read only property)

### 77.75.86 Constants

### 77.75.87 kcctAction = 4

MBS DynaPDF Plugin, Plugin Version: 19.1.

**Function:** One of the cell content type constants.
**Notes:** Action

### 77.75.88 kcctImage = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell content type constants.
**Notes:** Image.

### 77.75.89 kcctTable = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell content type constants.
**Notes:** Table.

### 77.75.90 kcctTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the cell content type constants.
**Notes:** Template.

### 77.75.91 kcctText = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell content type constants.
**Notes:** Text

### 77.75.92 kcoaAdjLeft = 1

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the column adjustment constants.
**Notes:** Adjust the widths starting from the left side.

### 77.75.93 kcoaAdjRight = 2

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the column adjustment constants.
**Notes:** Adjust the widths starting from the right side.

### 77.75.94 kcoaUniqueWidth = 0

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the column adjustment constants.
**Notes:** Set the column widths to TableWidth / NumColumns.

### 77.75.95 kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell orientation constants.
**Notes:** Bottom

### 77.75.96 kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell orientation constants.
**Notes:** Center

### 77.75.97 kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell orientation constants.
**Notes:** Left

### 77.75.98 kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell orientation constants.
**Notes:** Right

### 77.75.99 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the cell orientation constants.
**Notes:** Top

### 77.75.100 kcsBottom = 1

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the cell side constants.
**Notes:** Bottom side

### 77.75.101 kcsLeft = 0

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the cell side constants.
**Notes:** Left side

### 77.75.102 kcsRight = 2

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the cell side constants.
**Notes:** Right side

### 77.75.103 kcsTop = 3

MBS DynaPDF Plugin, Plugin Version: 20.0.

**Function:** One of the cell side constants.
**Notes:** Top side

### 77.75.104 kdcAction = 16

MBS DynaPDF Plugin, Plugin Version: 19.1.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete action.

### 77.75.105 kdcAllCont = 31

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete all content types

### 77.75.106 kdcBackGround = & h20000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete background objects

### 77.75.107 kdcBoth = & h30000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete both foreground and background objects

### 77.75.108 kdcForeGround = & h10000000

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete foreground objects

### 77.75.109 kdcImage = 2

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete image.

### 77.75.110 kdcTable = 8

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete table.

### 77.75.111 kdcTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the delete option flags for ClearContent function.
**Notes:** Template table.

### 77.75.112 kdcText = 1

MBS DynaPDF Plugin, Plugin Version: 12.4.

**Function:** One of the delete option flags for ClearContent function.
**Notes:**

Delete text.
Text is always a foreground object

### 77.75.113 ktfAddFlags = 32

MBS DynaPDF Plugin, Plugin Version: 15.2.

**Function:** One of the cell flags.
**Notes:**

If used when setting flags, the flags are not replacing existing values, but added.
This way a call can set one flag and later another call can add a second flag without clearing first one.

### 77.75.114 ktfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 12.5.

**Function:** One of the cell flags.
**Notes:** Default flag.

### 77.75.115 ktfFixedTextHeight = 64

MBS DynaPDF Plugin, Plugin Version: 21.5.

**Function:** One of the cell flags.
**Notes:** If set, text does not increase the row height if necessary. The row height must be non-zero in this case. The flag is ignored otherwise.

### 77.75.116 ktfHeaderRow = 2

MBS DynaPDF Plugin, Plugin Version: 13.1.

**Function:** One of the cell flags.
**Notes:** Header rows are drawn first after a page break occurred

### 77.75.117 ktfNoLineBreak = 4

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the cell flags.
**Notes:** Prohibit line breaks in cells whith text ->Can be set to the entire table, columns, rows, and cells.

### 77.75.118 ktfScaleToRect = 8

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the cell flags.
**Notes:**

If set, the specified output width and height represents the maximum size of the image or template.
The image or template is scaled into this rectangle without changing the aspect ratio.

### 77.75.119 ktfStatic = 1

MBS DynaPDF Plugin, Plugin Version: 12.5.

**Function:** One of the cell flags.
**Notes:** This flag marks a row, column, or cell as static to avoid the deletion of the content with ClearContent().

### 77.75.120 ktfUseImageCS = 16

MBS DynaPDF Plugin, Plugin Version: 13.2.

**Function:** One of the cell flags.
**Notes:** If set, images are inserted in the native image color space.

## 77.76 class DynaPDFTextRecordAMBS

### 77.76.1 class DynaPDFTextRecordAMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an ANSI text.

### 77.76.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

### 77.76.3 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

### 77.76.4 Properties

### 77.76.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The advance value for this text.
**Notes:**

Negative values move the cursor the right, positive to the left

(Read only property)

### 77.76.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raw text length in bytes.
**Notes:** (Read and Write property)

### 77.76.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Raw text.
**Notes:** (Read and Write property)

# 77.77 class DynaPDFTextRecordWMBS

## 77.77.1 class DynaPDFTextRecordWMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an unicode text.

## 77.77.2 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

## 77.77.3 Blog Entries

- DynaPDF Text Position Examples updated
- DynaPDF Text Position Examples

## 77.77.4 Properties

## 77.77.5 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The advance value for this text.
**Notes:**

Negative values move the cursor the right, positive to the left

(Read only property)

## 77.77.6 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length in characters.
**Notes:** (Read and Write property)

### 77.77.7 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Already translated Unicode string.
**Notes:** (Read and Write property)

### 77.77.8 Width as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** String width measured in text space.
**Notes:** (Read only property)

# 77.78 class DynaPDFURIActionMBS

## 77.78.1 class DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an URL action.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.78.2 Methods

## 77.78.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 77.78.4 Properties

## 77.78.5 BaseURL as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional, if defined in the Catalog object.
**Notes:** (Read only property)

## 77.78.6 IsMap as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A flag specifying whether to track the mouse position when the URI is resolved.
**Notes:**

e.g. http://test.org?50,70.
(Read only property)

## 77.78.7 NextAction as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the next action.
**Notes:**

-1 or next action handle to be executed if any
(Read only property)

### 77.78.8 NextActionType as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the next action.
**Notes:**

Only set if NextAction is >= 0.
(Read only property)

### 77.78.9 URI as String

MBS DynaPDF Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Uniform Resource Identifier.
**Notes:** (Read only property)

# 77.79 class DynaPDFVersionInfoMBS

## 77.79.1 class DynaPDFVersionInfoMBS

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for version information.
**Example:**

```
Dim d As New DynaPDFMBS
Dim v As DynaPDFVersionInfoMBS = d.GetPDFVersionEx

Break // check in debugger
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 77.79.5 Xojo Developer Magazine

- 21.1, page 20

### 77.79.6 Methods

### 77.79.7 Constructor

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 77.79.8 Properties

### 77.79.9 FXConfLevel as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The conformance level for ZUGFeRD, Factur-X or XRechnung.
**Notes:** (Read only property)

### 77.79.10 FXDocName as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The document file name for ZUGFeRD, Factur-X or XRechnung.
**Notes:** (Read only property)

### 77.79.11 FXDocType as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The document type for ZUGFeRD, Factur-X or XRechnung.
**Notes:** (Read only property)

### 77.79.12 FXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The version for ZUGFeRD, Factur-X or XRechnung.
**Notes:** (Read only property)

### 77.79.13 MainVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The main version.
**Notes:**

Set only if the file conforms to a specific PDF standard, e.g. "PDF/X // 1a:2003", "PDF/A 3b", and so on.
(Read only property)

### 77.79.14 Major as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** PDF major version.
**Notes:**

e.g. 1
(Read only property)

### 77.79.15 Minor as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** PDF minor version.
**Notes:**

e.g. 7
(Read only property)

### 77.79.16 PDFAConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/A conformance.
**Notes:**

e.g. A, B, E, F, U, or UA.
(Read only property)

### 77.79.17 PDFAVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/A version.
**Notes:**

If greater zero, this is a PDF/A file.
(Read only property)

### 77.79.18 PDFEVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/E version.
**Notes:**

e.g. PDF/E-1
(Read only property)

### 77.79.19 PDFVTModDate as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/VT Modification date.
**Notes:**

e.g. 2016-05-07T15:42:23+01:00
(Read only property)

### 77.79.20 PDFVTVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/VT version.
**Notes:**

e.g. PDF/VT-2
(Read only property)

### 77.79.21 PDFXConformance as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/X conformance.
**Notes:**

e.g. PDF/X-1a:2001 or PDF/X-1a:2003. PDF/X 3 and above do not set this key anymore.
(Read only property)

### 77.79.22 PDFXVersion as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PDF/X Version string.
**Notes:**

e.g. PDF/X-1:2001, PDF/X-1:2003, and so on.
(Read only property)

### 77.79.23 SubVer as String

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The sub version string.
**Notes:**

e.g. "ZUGFeRD 2.0", "Factur-X", and so on
(Read only property)

### 77.79.24 VersionConst as Integer

MBS DynaPDF Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The version number constant for DynaPDF.
**Notes:**

If >= 0 this is the TPDFVersion constant as integer.
If the version is not supported by DynaPDF, this member is set to -1.
(Read only property)

## 77.80 class DynaPDFViewportMBS

### 77.80.1 class DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The viewport details class.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.80.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.80.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 77.80.4 Methods

### 77.80.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.80.6 Properties

### 77.80.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Bounding box.
**Notes:** (Read and Write property)

### 77.80.8 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional measure dictionary.
**Notes:** (Read and Write property)

### 77.80.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Optional name.
**Notes:** (Read and Write property)

### 77.80.10 PtData as DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Point Data dictionary.
**Notes:** (Read and Write property)

## 77.81 class DynaPDFXFAStreamMBS

### 77.81.1 class DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a XFA stream.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 77.81.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr7

### 77.81.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr7

### 77.81.4 Methods

### 77.81.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 77.81.6 Properties

### 77.81.7 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** XML Stream.
**Notes:** (Read and Write property)

### 77.81.8 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The stream index.
**Notes:** (Read and Write property)

### 77.81.9 Name as String

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Stream name.
**Notes:** (Read and Write property)

### 77.81.10 Size as Integer

MBS DynaPDF Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Buffer size in bytes.
**Notes:** (Read and Write property)

# Chapter 78

# EmailParser

## 78.1 class MimeAddressListMBS

### 78.1.1 class MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a list of addresses.

### 78.1.2 Methods

### 78.1.3 Addresses as MimeAddressMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of addresses.
See also:

- 78.1.4 Addresses(index as Integer) as MimeAddressMBS 15535

### 78.1.4 Addresses(index as Integer) as MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries address by index.
**Notes:** Index is zero based.
See also:

- 78.1.3 Addresses as MimeAddressMBS() 15535

### 78.1.5 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses a text with addresses.

### 78.1.6 Properties

### 78.1.7 AddressesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of addresses.
**Notes:**

This property is only to see array in debugger.
(Read only property)

### 78.1.8 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of addresses in this list.
**Notes:** (Read only property)

### 78.1.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address list as a string.
**Notes:** (Read only property)

## 78.2 class MimeAddressMBS

### 78.2.1 class MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an address which can be an email or a group.

### 78.2.2 Methods

### 78.2.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an address from text.
**Example:**

```
dim m as new MimeAddressMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.Mailbox.LabelDecoded
```

### 78.2.4 Properties

### 78.2.5 Group as MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The group for this address.
**Notes:** (Read only property)

### 78.2.6 isGroup as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this address is a group.
**Notes:** (Read only property)

### 78.2.7 Mailbox as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mailbox for this address.
**Notes:** (Read only property)

### 78.2.8 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address as a string.
**Notes:** (Read only property)

## 78.3 class MimeAttachmentMBS

### 78.3.1 class MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an attachment.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 78.3.2 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

### 78.3.3 Blog Entries

- MBS Xojo Plugins, version 22.6pr3

### 78.3.4 Methods

### 78.3.5 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 78.3.6 Properties

### 78.3.7 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference to the body of this attachment.
**Notes:**

The StringValue of the body has the attachment's encoded data.
(Read only property)

### 78.3.8 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content description.
**Notes:** (Read only property)

### 78.3.9 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content disposition.
**Notes:**

e.g. inline; filename="agb.pdf"
(Read only property)

### 78.3.10 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content ID for inline graphics.
**Notes:**

e.g. c1441531740.48804.1@MacbookPro-Christian.local
(Read only property)

### 78.3.11 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content transfer encoding.
**Notes:**

e.g. base64
(Read only property)

### 78.3.12 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content type.
**Notes:**

e.g. text/plain, charset=utf-8 or application/pdf; name="agb.pdf"
(Read only property)

### 78.3.13 Data as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data for this attachment.
**Notes:**

Decoded for your convenience.
(Read only property)

### 78.3.14 Filename as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The filename for this attachment.
**Notes:**

The class pulls this from various header fields and decodes it if necessary.
The file name may contain invalid characters for your platform.
Like double colons for OS X or backslash for Windows.
(Read only property)

### 78.3.15 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The header details for this attachment.
**Notes:** (Read only property)

### 78.3.16 MimeType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mime type of the attachment.
**Notes:**

e.g. "application/pdf" for a PDF file
See also MimeTypeToFileExtensionMBS function.
(Read only property)

### 78.3.17 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mime version of the attachment.
**Notes:**

e.g. "1.0"
(Read only property)

## 78.4 class MimeBodyMBS

### 78.4.1 class MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a body of a mime entity.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 78.4.2 Methods

### 78.4.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 78.4.4 Parts as MimeEntityMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of parts.
**Notes:** Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
See also:

- 78.4.5 Parts(index as Integer) as MimeEntityMBS 15543

### 78.4.5 Parts(index as Integer) as MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries part by index.
**Notes:** Index is zero based.
See also:

- 78.4.4 Parts as MimeEntityMBS() 15543

### 78.4.6 Properties

### 78.4.7 epilogue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The epilogue of the body.
**Notes:** (Read only property)

### 78.4.8 PartsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of parts.
**Notes:**

Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
This property is only to see array in debugger.
(Read only property)

### 78.4.9 preamble as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The preamble of the body.
**Notes:**

This is sometimes a message like: "This is a MIME encoded message."
(Read only property)

### 78.4.10 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The string value of the body.
**Notes:** (Read only property)

## 78.5 class MimeEmailMBS

### 78.5.1 class MimeEmailMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an email.
**Notes:** Subclass of the MimeEntityMBS class.

### 78.5.6 Methods

### 78.5.7 Attachments as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of attachments.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

See also:

- 78.5.8 Attachments(index as Integer) as MimeAttachmentMBS 15546

### 78.5.8 Attachments(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries attachment by index.
**Notes:** Index is zero based.
See also:

- 78.5.7 Attachments as MimeAttachmentMBS() 15546

### 78.5.9 Constructor(Content as MemoryBlock)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an email from a memoryblock.
See also:

- 78.5.10 Constructor(Content as string) 15547
- 78.5.11 Constructor(File as FolderItem) 15547

### 78.5.10 Constructor(Content as string)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an email from a string.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim m as new MimeEmailMBS(s)

MsgBox m.Subject
```

**Notes:**

This is to parse raw email text, e.g. eml file.
To parse emlx, open the text file and read the first line. The first line contains the length of the email. Then read the following number of bytes of that value and that is the eml content. Followed by a plist structure.
See also:

- 78.5.9 Constructor(Content as MemoryBlock) 15547
- 78.5.11 Constructor(File as FolderItem) 15547

### 78.5.11 Constructor(File as FolderItem)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an email from a text file.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.Subject
```

**Notes:** You can pass here an EML file.
See also:

- 78.5.9 Constructor(Content as MemoryBlock) 15547
- 78.5.10 Constructor(Content as string) 15547

### 78.5.12 DecodeInline(Text as String) as String

MBS CURL Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes a text with inline encoded text.
**Example:**

```
dim e,s as string

s = "=?UTF-8?B?WW91ciBBY2NvdW50IFNuYXBzaG90?="
e = MimeEmailMBS.DecodeInline(s)

MsgBox e
```

**Notes:**

This is the function our plugin uses to decode names and subject in the email.
You don't need to use it unless you got subject/name encoded from somewhere else.

### 78.5.13 HTMLToPlainText(HTMLText as String) as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts html to plain text.
**Notes:**

This is the function our plugin uses internally to fill PlainText field for html only email.
Removes HTML tags, decodes entities and adds returns where appropriated.

### 78.5.14 Inlines as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of inline items.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"

for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```

**Notes:** Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
See also:

- 78.5.15 Inlines(index as Integer) as MimeAttachmentMBS 15549

### 78.5.15 Inlines(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries inline by index.
**Notes:** Index is zero based.
See also:

- 78.5.14 Inlines as MimeAttachmentMBS() 15548

### 78.5.16 Properties

### 78.5.17 AttachmentsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of attachments.
**Notes:**

This property is only to see array in debugger.
(Read only property)

### 78.5.18 Date as Date

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the sent date of the email.
**Notes:**

Can be undefined and return nil.
The plugin looks in email headers for a Date: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

### 78.5.19 HTMLText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The html text of the email.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.HTMLText
```

**Notes:**

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

### 78.5.20 InlinesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of inline items.
**Notes:**

Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
This property is only to see array in debugger.
(Read only property)

### 78.5.21 PlainText as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The plain text of the email.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)
```

MsgBox m.PlainText

**Notes:**

Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

### 78.5.22 RaiseUnknownFormatExceptions as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to raise an exception when plugin finds encoding in email which is not in list of known encodings.
**Notes:**

Used to find unknown encodings.
(Read and Write property)

### 78.5.23 ReceivedDate as Date

MBS CURL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the receive date of the email.
**Notes:**

Can be undefined and return nil.
The plugin looks in email headers for a Receive: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

### 78.5.24 Source as String

MBS CURL Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source code of the email parsed.
**Notes:** (Read only property)

### 78.5.25 Subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The decoded subject line of the email.
**Notes:** (Read only property)

## 78.6 class MimeEntityMBS

### 78.6.1 class MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a mime entity.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 78.6.2 Methods

### 78.6.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 78.6.4 Properties

### 78.6.5 Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The raw content of this entity.
**Notes:**

This may be quoted printable, base64 or otherwise encoded.
(Read only property)

### 78.6.6 BodyDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The decoded body content.
**Notes:** (Read only property)

### 78.6.7 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The header for this entity.
**Notes:**

The email itself has header, but each entity in the mime tree has also headers.
(Read only property)

## 78.7 class MimeFieldMBS

### 78.7.1 class MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a header field.

### 78.7.2 Methods

### 78.7.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses the text in a field.

### 78.7.4 Properties

### 78.7.5 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field name.
**Notes:** (Read only property)

### 78.7.6 Value as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The field value.
**Notes:** (Read only property)

## 78.8 class MimeGroupMBS

### 78.8.1 class MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an email group.
**Example:**

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

### 78.8.2 Methods

### 78.8.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses a group.
**Example:**

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.NameDecoded+" "+str(g.Count)
```

### 78.8.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of mailboxes in this group.
See also:

- 78.8.5 Mailboxes(index as Integer) as MimeMailboxMBS 15556

### 78.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a mailbox in the group.
**Example:**

```
dim g as new MimeGroupMBS("clients:=?utf-8?Q?Josef=20M=C3=BCller?= <josef@test.test>, =?utf-8?Q?Peter=20M=C3=BCller?= <peter@test.test>;")

MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

See also:

- 78.8.4 Mailboxes as MimeMailboxMBS() 15556

### 78.8.6 Properties

### 78.8.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of emails in this group.
**Notes:** (Read only property)

### 78.8.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of mailboxes in this group.
**Notes:**

This property is only to see array in debugger.
(Read only property)

### 78.8.9 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the group.
**Notes:**

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

### 78.8.10 NameDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the group.
**Notes:**

The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

### 78.8.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The group as a string.
**Notes:** (Read only property)

## 78.9 class MimeHeaderMBS

### 78.9.1 class MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for headers of a mime entity.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 78.9.2 Methods

### 78.9.3 Constructor

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 78.9.4 FieldByName(name as string) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds a field by name.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.FieldByName("Date").Value
```

**Notes:** e.g. "Sat, 5 Sep 2015 23:52:13 +0200" for the date field.

### 78.9.5 Fields as MimeFieldMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of fields in this header.
See also:

- 78.9.6 Fields(index as Integer) as MimeFieldMBS 15560

### 78.9.6 Fields(index as Integer) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries field by index.
**Notes:** Index is zero based.
See also:

- 78.9.5 Fields as MimeFieldMBS() 15559

### 78.9.7 hasField(name as string) as boolean

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a certain field exists.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
if h.hasField("Date") then
MsgBox "Has date: "+h.FieldByName("Date").Value
end if
```

### 78.9.8 Properties

### 78.9.9 bcc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The BCC address list.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get BCC
dim l as MimeAddressListMBS = h.BCC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
```

```
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

**Notes:** (Read only property)

### 78.9.10 cc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The CC address list.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get CC
dim l as MimeAddressListMBS = h.CC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

**Notes:** (Read only property)

### 78.9.11 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content description.
**Notes:** (Read only property)

### 78.9.12 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content disposition.
**Notes:** (Read only property)

### 78.9.13 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content ID for an inline graphic.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.contentId
```

**Notes:** (Read only property)

### 78.9.14 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content transfer encoding.
**Notes:**

e.g. base64
(Read only property)

### 78.9.15 ContentTransferEncodingMechanism as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content transfer encoding mechanism.
**Notes:**

base64
(Read only property)

### 78.9.16 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content type.
**Notes:**

e.g. "multipart/alternative; boundary="Apple-Mail=_F9738882-571C-4469-8349-574115CE32F4""
(Read only property)

### 78.9.17 from as MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The from address list.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get from
dim l as MimeMailboxListMBS = h.from
// get mailboxes
dim a() as MimeMailboxMBS = l.Mailboxes
// get first one
dim b as MimeMailboxMBS = a(0)
// and show to user with name and email
MsgBox b.LabelDecoded+" "+b.Email
```

**Notes:** (Read only property)

### 78.9.18 messageid as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The message ID for this email.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.messageid
```

**Notes:**

e.g. "<599782DA-09A0-4461-8474-2BE9F3197CAF@macsw.de>"
(Read only property)

### 78.9.19 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mime version.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.MimeVersion
```

**Notes:**

e.g. "1.0"
(Read only property)

### 78.9.20 replyto as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The replyto address field.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get replyto
dim l as MimeAddressListMBS = h.replyto
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

**Notes:** (Read only property)

### 78.9.21 sender as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sender of the email.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
dim b as MimeMailboxMBS = h.sender
MsgBox b.Email
```

**Notes:**

May be different from "from" field.
(Read only property)

### 78.9.22 subject as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The original subject line.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subject
```

**Notes:**

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

### 78.9.23 subjectDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The decoded subject line.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subjectDecoded
```

**Notes:**

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

### 78.9.24 too as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The TO receivers.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get to
dim l as MimeAddressListMBS = h.too
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded+" "+x.Email
```

**Notes:**

Named "too" in this class as "to" is a reserved word.
(Read only property)

## 78.10 class MimeMailboxListMBS

### 78.10.1 class MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a list of mailboxes.

### 78.10.2 Methods

### 78.10.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses a list of mailboxes.
**Example:**

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

### 78.10.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of mailboxes.
See also:

- 78.10.5 Mailboxes(index as Integer) as MimeMailboxMBS 15568

### 78.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries mailbox by index.
**Notes:** Index is zero based.
See also:

- 78.10.4 Mailboxes as MimeMailboxMBS() 15568

### 78.10.6 Properties

### 78.10.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of mailboxes in list.
**Example:**

```
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

**Notes:** (Read only property)

### 78.10.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The array of mailboxes.
**Notes:**

This property is only to see array in debugger.
(Read only property)

### 78.10.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content of this list as a string.
**Notes:** (Read only property)

## 78.11 class MimeMailboxMBS

### 78.11.1 class MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an email address.
**Example:**

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

### 78.11.2 Methods

### 78.11.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an email address.
**Example:**

```
dim m as new MimeMailboxMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox m.LabelDecoded+" "+m.Email
```

### 78.11.4 Properties

### 78.11.5 Domain as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The domain name of the email address.
**Notes:** (Read only property)

### 78.11.6 Email as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The email address.
**Notes:**

Mailbox and Domain together.

(Read only property)

### 78.11.7 Label as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The label for this email address.
**Notes:**

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

### 78.11.8 LabelDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The label for this email address.
**Notes:**

Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

### 78.11.9 Mailbox as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the email mailbox.
**Notes:** (Read only property)

### 78.11.10 Sourceroute as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source route parameter.
**Notes:** (Read only property)

### 78.11.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The email address as a string.
**Notes:** (Read only property)

# Chapter 79

# Encryption and Hash

## 79.1 class AESMBS

### 79.1.1 class AESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for AES encryption.
**Example:**

```
dim a as AESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new AESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CipherMBS instead.
**Notes:**

For newer projects we recommend switching to CipherMBS class.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

### 79.1.6 Methods

### 79.1.7 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
**Notes:**

If odata is nil, idata is used for output.
This is ECB mode.

### 79.1.8 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

### 79.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB1 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.

oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string 15576

### 79.1.10 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB1 mode.
**Example:**

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:** If IVector is nil, a vector filled with zeros is used.
See also:

- 79.1.9 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15575

### 79.1.11 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.
See also:

- 79.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string 15577

### 79.1.12 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB128 mode.
**Example:**

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.

Older plugin version had problems that they didn't use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.

### 79.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB8 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.14 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string 15578

### 79.1.14 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the data in CFB8 mode.
**Example:**

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:** If IVector is nil, a vector filled with zeros is used.
See also:

- 79.1.13 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15578

### 79.1.15 DecryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decryptes the 16 byte data block in the data.
**Notes:** If odata is nil, idata is used for output.

### 79.1.16 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
**Notes:**

If odata is nil, idata is used for output.
This is ECB mode.

### 79.1.17 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

### 79.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB1 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string 15580

### 79.1.19 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB1 mode.
**Example:**

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.18 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15580

### 79.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string 15581

### 79.1.21 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB128 mode.
**Example:**

```
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
```

```
MsgBox "OK"
end if
end if
end if
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.20 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15581

### 79.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB8 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 79.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string 15582

### 79.1.23 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in CFB8 mode.
**Example:**

```
dim a as new AESMBS
```

```
if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB8(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB8(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.1.22 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0) 15582

### 79.1.24 EncryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the 16 byte data block in the data.
**Notes:** If odata is nil, idata is used for output.

### 79.1.25 EncryptOFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes the data in OFB mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

### 79.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the key.
**Notes:**

possible values for the bitcount:

| | |
|---|---|
| 128 | key is 16 bytes long |
| 192 | key is 24 bytes long |
| 256 | key is 32 bytes long |

Plugin version 13.4 and newer pads this memoryblock with 00 bytes if string is shorter.
See also:

- 79.1.27 SetKey(key as string) as boolean 15584

### 79.1.27 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the key.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new AESMBS
```

```
call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptCFB128(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptCFB128(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

Please use 16, 24 or 32 byte long key strings.
Plugin version 13.4 and newer pads this string with 00 bytes if string is shorter.
See also:

- 79.1.26 SetKey(key as memoryblock, nBits as Integer) as boolean 15584

## 79.2 class Argon2MBS

### 79.2.1 class Argon2MBS

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to calculate hashes using Argon2.
**Example:**

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

**Notes:**

You can use this class to calculate password hashes.
Due to the cost associated to calculate it, the hash is difficult to brute force.

see
https://github.com/p-h-c/phc-winner-argon2

### 79.2.6 Methods

### 79.2.7 Calc(type as Integer = 0) as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Function that performs memory-hard hashing with certain degree of parallelism.
**Example:**

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6" then
// ok
else
Break // failed
end if
```

**Notes:**

Returns hash on success or empty string in case of error.
Lasterror is set.

### 79.2.8 Constructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 79.2.9 Destructor

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Destructor.

### 79.2.10 Verify(Hash as String, type as Integer = 0) as boolean

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies a password hash.
**Example:**

```
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536
a.Lanes = 4
a.Threads = 4

dim h as string = DecodeHex("45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6")
if a.Verify(h, a.kTypeI) then
// ok
break
else
// failed
break
end if
```

**Notes:**

Returns true on success.
Lasterror is set.

### 79.2.11 Properties

### 79.2.12 AssociatedData as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The associated data.
**Notes:** (Read and Write property)

### 79.2.13 Cost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of passes.
**Notes:** (Read and Write property)

### 79.2.14 Flags as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flags.
**Notes:** (Read and Write property)

### 79.2.15 Lanes as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of lanes.
**Notes:** (Read and Write property)

### 79.2.16 LastError as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 79.2.17 LastErrorMessage as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message.
**Notes:** (Read and Write property)

### 79.2.18 MemoryCost as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Amount of memory requested (KB).
**Notes:**

In kilo bytes. Default is 1 MB.
(Read and Write property)

### 79.2.19 OutputLength as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of the hash.
**Notes:** (Read and Write property)

### 79.2.20 Password as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The password to hash.
**Notes:** (Read and Write property)

### 79.2.21 Salt as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The salt.
**Notes:** (Read and Write property)

### 79.2.22 Secret as String

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The secret.
**Notes:** (Read and Write property)

### 79.2.23 Threads as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum number of threads.
**Notes:** (Read and Write property)

### 79.2.24 Version as Integer

MBS Encryption Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of argon to use.
**Notes:**

Can be kVersion10 or kVersion13.
(Read and Write property)

### 79.2.25 Constants

### 79.2.26 kErrorAdPtrMismatch = -21

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** AssociatedData ptr is nil, but size >0.

### 79.2.27 kErrorAdTooLong = -9

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** AssociatedData too long.

### 79.2.28 kErrorAdTooShort = -8

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** AssociatedData too short.

### 79.2.29 kErrorAllocateMemoryCbkNull = -24

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Allocation failed.

### 79.2.30 kErrorDecodingFail = -32

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Decoding failed.

### 79.2.31 kErrorDecodingLengthFail = -34

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Decoding length failed.

### 79.2.32 kErrorEncodingFail = -31

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Encoding failed.

### 79.2.33 kErrorFreeMemoryCbkNull = -23

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Free memory failed.

### 79.2.34 kErrorIncorrectParameter = -25

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Incorrect parameter.

### 79.2.35 kErrorIncorrectType = -26

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Incorrect type.

### 79.2.36 kErrorLanesTooFew = -16

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Lanes too small.

### 79.2.37 kErrorLanesTooMany = -17

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Too many lanes.

### 79.2.38 kErrorMemoryAllocationError = -22

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Memory allocation failed.

### 79.2.39 kErrorMemoryTooLittle = -14

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Memory too little.

### 79.2.40 kErrorMemoryTooMuch = -15

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Memory too big.

### 79.2.41 kErrorMissingArgs = -30

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Missing Argument.

### 79.2.42 kErrorOk = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Okay.

### 79.2.43 kErrorOutPtrMismatch = -27

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Output ptr is nil, but size >0.

### 79.2.44 kErrorOutputPtrNull = -1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Output Ptr is nil.

### 79.2.45 kErrorOutputTooLong = -3

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Output too long.

### 79.2.46 kErrorOutputTooShort = -2

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Output too short.

### 79.2.47 kErrorPwdPtrMismatch = -18

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Password ptr is nil, but size >0.

### 79.2.48 kErrorPwdTooLong = -5

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Password too long.

### 79.2.49 kErrorPwdTooShort = -4

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Password too short.

### 79.2.50 kErrorSaltPtrMismatch = -19

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Salt ptr is nil, but size >0.

### 79.2.51 kErrorSaltTooLong = -7

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Salt too long.

### 79.2.52 kErrorSaltTooShort = -6

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Salt too short.

### 79.2.53 kErrorSecretPtrMismatch = -20

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Secret ptr is nil, but size >0.

### 79.2.54 kErrorSecretTooLong = -11

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Secret too long.

### 79.2.55 kErrorSecretTooShort = -10

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Secret too short.

### 79.2.56 kErrorThreadFail = -33

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Threads failed.

### 79.2.57 kErrorThreadsTooFew = -28

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Threads too small.

### 79.2.58 kErrorThreadsTooMany = -29

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Too many threads.

### 79.2.59 kErrorTimeTooLarge = -13

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Time too large.

### 79.2.60 kErrorTimeTooSmall = -12

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Time too small.

### 79.2.61 kErrorVerifyMismatch = -35

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the error constants.
**Notes:** Verify Mismatch

### 79.2.62 kFlagClearMemory = 4

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the possible flags.
**Notes:** Clear memory.

### 79.2.63 kFlagClearPassword = 1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the possible flags.
**Notes:** Clear password.

### 79.2.64 kFlagClearSecret = 2

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the possible flags.
**Notes:** Clear Secret after hashing.

### 79.2.65 kFlagDefault= 4

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the possible flags.
**Notes:** Default flags.

### 79.2.66 kMaxAssociatedDataLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum associated data length in bytes.

### 79.2.67 kMaxLanes = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum number of lanes (degree of parallelism)

### 79.2.68 kMaxMemory = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum memory size.

### 79.2.69 kMaxOutputLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum digest size in bytes.

### 79.2.70 kMaxPasswordLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum password length in bytes.

### 79.2.71 kMaxSaltLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum salt length in bytes

### 79.2.72 kMaxSecretLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum key length in bytes.

### 79.2.73 kMaxThreads = & hFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum number of threads.

### 79.2.74 kMaxTime = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Maximum number of passes.

### 79.2.75 kMinAssociatedDataLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum associated data length in bytes.

### 79.2.76 kMinLanes = 1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum number of lanes (degree of parallelism)

### 79.2.77 kMinMemory = 8

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum and maximum number of memory blocks (each of BLOCK_SIZE bytes)

### 79.2.78 kMinOutputLength = 4

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum digest size in bytes.

### 79.2.79 kMinPasswordLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum password length in bytes.

### 79.2.80 kMinSaltLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum salt length in bytes

### 79.2.81 kMinSecretLength = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum key length in bytes.

### 79.2.82 kMinThreads = 1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum number of threads.

### 79.2.83 kMinTime = 1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Minimum number of passes.

### 79.2.84 kSyncPoints = 4

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** Number of synchronization points between lanes per pass.

### 79.2.85 kTypeD = 0

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the types.
**Notes:** Argon2d is faster and uses data-depending memory access, which makes it highly resistant against GPU cracking attacks and suitable for applications with no threats from side-channel timing attacks (eg. cryptocurrencies).

### 79.2.86 kTypeI = 1

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the types.
**Notes:** Argon2i instead uses data-independent memory access, which is preferred for password hashing and password-based key derivation, but it is slower as it makes more passes over the memory to protect from tradeoff attacks.

### 79.2.87 kVersion10 = & h10

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the version numbers.
**Notes:** Version 1.0

### 79.2.88 kVersion13 = & h13

MBS Encryption Plugin, Plugin Version: 16.4.

**Function:** One of the version numbers.
**Notes:** Version 1.3

## 79.3 module BCryptMBS

### 79.3.1 module BCryptMBS

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for bcrypt encryption.

- 18.3, page 10: News

### 79.3.6 Methods

### 79.3.7 BCrypt(Pass as String, Salt as String) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Hashes password with bcrypt based on given salt.
**Example:**

```
Dim salt As String = BCryptMBS.BCryptSalt(11)
Dim hash As String = BCryptMBS.BCrypt("password", salt)
```

Break

### 79.3.8 BCryptSalt(Rounds as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates salt based on given numbers of rounds.

### 79.3.9 Verify(Pass as String, Hash as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies a hash to be right.
**Example:**

```
// check various levels
For i As Integer = 4 To 15
Dim salt As String = BCryptMBS.BCryptSalt(i)
Dim hash As String = BCryptMBS.BCrypt("password", salt)

Dim b As Boolean = BCryptMBS.Verify("password", hash)

System.DebugLog Str(i)+" "+Str(b)+" "+hash

If Not b Then Break
Next
```

**Notes:**

Check is case sensitive!
Returns true on success.

## 79.4 class BlowfishMBS

### 79.4.1 class BlowfishMBS

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for blowfish encryption.
**Example:**

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

**Notes:** For newer projects we recommend switching to CipherMBS class.

### 79.4.4 Methods

### 79.4.5 Decrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Lowest level function to decrypt data in a memoryblock.
**Notes:**

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 79.4.6 Decrypt(key as string, data as string) as string 15606

### 79.4.6 Decrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts the data using blowfish and the given key.
**Example:**

```
dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)
```

```
// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s
```

**Notes:**

This is our convenience function to encode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.
See also:

- 79.4.5 Decrypt(iodata as memoryblock) 15606

### 79.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Example:**

```
dim b as new BlowfishMBS

dim s as string = "UTYbBEZSMLfa0kvNDSla/n/GSUcA/545gp7LcA330Nw="
dim x as string = DecodeBase64(s)

dim m as MemoryBlock = nil
b = new BlowfishMBS
b.SetKey "geheim"
dim t1 as string = b.DecryptCBC(x,m)

// shows SD10003$ $ 2012.03.16 11:00
MsgBox t1
```

**Notes:**

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 79.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 15608

### 79.4.8 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 79.4.7 DecryptCBC(data as string, byref temp as memoryblock) as string 15607

### 79.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Notes:**

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15609

### 79.4.10 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Example:**

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.9 DecryptCFB64(data as string, byref temp as memoryblock) as string 15608

### 79.4.11 DecryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The basic Blowfish decryption function.
**Notes:**

This function decrypts only 8 bytes. For more, please use other functions!

data: data to be decrypted
Returns "" on invalid input.
See also:

- 79.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 15610

### 79.4.12 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The basic Blowfish encryption function.
**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
See also:

- 79.4.11 DecryptECB(data as string) as string 15610

### 79.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Notes:**

data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15611

### 79.4.14 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish decryption function.
**Example:**

```
dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
```

**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.13 DecryptOFB64(data as string, byref temp as memoryblock) as string 15610

### 79.4.15 Encrypt(iodata as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Lowest level function to encrypt data in a memoryblock.
**Notes:**

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 79.4.16 Encrypt(key as string, data as string) as string 15612

### 79.4.16 Encrypt(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts the data using blowfish and the given key.
**Example:**

```
dim v as string = "Hello World, this is just a test string"

// encrypt CFB64 with BlowfishMBS
dim b as new BlowfishMBS
dim Key as string = "1234567812345678"
dim r as string = b.Encrypt( key , v )
dim h as string = EncodeHex( r )

// and decrypt with OpenSSL
dim c as CipherMBS = CipherMBS.bf_cfb64

c.DecryptInit key
dim d as string = c.ProcessString(r)
d = d + c.FinalizeAsString

Break // see in debugger, v and d have same content
```

**Notes:**

This is our convenience function to decode a string quickly. Using CFB64 mode and an all zero initializing vector.

If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.15 Encrypt(iodata as memoryblock) 15612

### 79.4.17 EncryptCBC(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Example:**

```
dim m as memoryblock // temporary storage of current state
dim b as blowfishmbs
dim s as string

b=new blowfishmbs
b.SetKey "EinKey1234567890" // some key

s=b.EncryptCBC("Hallo",m)
s=s+b.EncryptCBC(" ",m)
s=s+b.EncryptCBC("Leute",m)
s=s+b.EncryptCBC("!",m)
```

**Notes:**

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

See also:

- 79.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock) 15614

### 79.4.18 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Notes:**

idata: memoryblock for input data, at least 8 bytes in size and not nil.
odata: memoryblock for output data, at least 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time. On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.
See also:

- 79.4.17 EncryptCBC(data as string, byref temp as memoryblock) as string 15613

### 79.4.19 EncryptCFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Notes:**

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.20 EncryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15615

### 79.4.20 EncryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 79.4.19 EncryptCFB64(data as string, byref temp as memoryblock) as string 15614

### 79.4.21 EncryptECB(data as string) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The basic Blowfish encryption function.
**Notes:**

This function encrypts only 8 bytes. For more, please use other functions!

data: data to be encrypted
Returns "" on invalid input.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.22 EncryptECB(idata as memoryblock, odata as memoryblock, offset as Integer) 15616

### 79.4.22 EncryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The basic Blowfish decryption function.
**Notes:**

This function encrypts only 8 bytes. For more, please use other functions!

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
See also:

- 79.4.21 EncryptECB(data as string) as string 15615

### 79.4.23 EncryptOFB64(data as string, byref temp as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Notes:**

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.4.24 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer) 15617

### 79.4.24 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The continuing Blowfish encryption function.
**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 79.4.23 EncryptOFB64(data as string, byref temp as memoryblock) as string 15616

### 79.4.25 SetKey(key as string)

MBS Encryption Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the key to be used.
**Notes:** The longer the key, the better. Suggested is at least 16 bytes.

## 79.5 Globals

### 79.5.1 CalculateCRC16MemoryMBS(data as MemoryBlock, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided memoryblock.
**Notes:**

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.
If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

### 79.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

### 79.5.3 CalculateCRC16StringMBS(data as string, Start as UInt16 = 65535, Polynomial as UInt16 = & h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided string.
**Example:**

```
dim c as string = DecodeHex("3E4400026201000D")
dim p as UInt16 = CalculateCRC16StringMBS(c, & hFFFF, & h1021, 0, true, true)
MsgBox hex(p)+" = 3E5A"
```

**Notes:**

Start is the start value.
Polynominal is what is xored to the value in each round.
FinalXOR is an XOR we do on the end.
If ReflectInput is true, we swap bits in input.

If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

### 79.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

### 79.5.5 Adler32MemoryMBS(adler as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The adler32 hash function from the zlib library.
**Notes:**

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

### 79.5.6 Adler32StringMBS(adler as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The adler32 hash function from the zlib library.
**Example:**

```
dim b as binarystream // some stream
dim adler as Integer
dim data as string
dim originalAdler as Integer = 12345

adler=Adler32MemoryMBS(0,nil,0,0)

data=b.read(10000)
while data<>""
adler=Adler32StringMBS(adler, data)
data=b.read(10000)
wend

if adler <>originalAdler then msgbox "Error in checksum!"
```

**Notes:**

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

### 79.5.7 CRC32MemoryMBS(crc as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The crc32 hash function from the zlib library.
**Notes:**

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

### 79.5.8 CRC32StringMBS(crc as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The crc32 hash function from the zlib library.
**Example:**

```
dim originalCrc as Integer// original CRC
dim crc as Integer // new crc
dim data as string
dim b as binarystream

crc=0

data=b.read(10000)
while data<>""
crc=CRC32StringMBS(crc, data)
data=b.read(10000)
wend

if crc <>originalCrc then msgbox "Error in checksum!"
```

**Notes:** Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one's complement) is performed within this function so it shouldn't be done by the application.

### 79.5.9 CRC16MBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided string.
**Example:**

```
dim n1 as Integer = CRC16MBS("Hello World")
dim n2 as Integer = CRC16MBS("Hallo World")

MsgBox str(n1)+" "+str(n2)
```

**Notes:** Please note: Different CRC functions give different result. This is one specific 16 bit CRC function which may be or not be the one you need for your application.

### 79.5.10 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

### 79.5.11 CRC_32InMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided memory address.

### 79.5.12 CRC_32InMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided memory address.

### 79.5.13 CRC_32OfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided block of data.

### 79.5.14 CRC_32OfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided string.
**Example:**

```
dim n as Integer
n=CRC_32OfStrMBS("Hello World")
' n is now 1243066710
```

**Notes:**

See the text "About-CRC" for details about this Checksum things.
This function is also available as part of the memoryblock class.

About Checksums:

These functions calculate CRCs over a range of bytes in a MemoryBlock or in a String.

There are three versions of CRC calculation: One for 16 Bit, one for 32 Bit and one for 16 to 64 Bit wide checksums. If you are free to choose, I suggest that you use the 32 Bit version because of its accuracy and performance.

Some background on using checksums/CRCs:
Checksums, such as CRCs, are used to quickly verify that a chunk of data has not been modified somehow without your control. To use it, you'd calculate the checksum (CRC) of your data, then store that checksum value (which only needs 2 to 8 bytes of storage) somewhere. Later, when retrieving your data, you calculate its checksum again and compare its value with the previously stored value. If it does not match, the data got somehow corrupted. If it matches, that it is quite likely, although not 100% sure, that the data is still in its original state.

There are 3 different CRC algorithms available:

- CRC_CCITT...() as Integer

- CRC_32...() as Integer
- CRC_Dillon...(bitWidth as Integer, ...) as String

The CCITT version calculates a rather classic 16 bit CRC. Unless you need that CRC for legacy data, I recomment not to use it, but rather use the CRC_32 version.

CRC_32 is the most common used algorithm for 32 bit wide CRCs. Be aware there are theoretically many other ways to calculate a CRC 32, however.

The Dillon algorithm is a smart routine to calculate CRCs in any width between 16 and 64 bit. This one is only useful if you find that a 32 bit CRC is not sufficient for your needs. If you can live with a plain 32 bit CRC, you should prefer the CRC_32 routines, because they are faster than the Dillon code.

The result, since it can be up to 64 bit in size, cannot be returned in an Integer (they can only hold 32 bit). Instead, the result is returned as a 8 byte value, stored in a 8 byte long string. To get the value of that string, you can copy the string into a MemoryBlock, and then access the parts opf the 8 byte long value there. The demo project shows how to accomplish this.

The CRC code was developed and published by Matthew Dillon. Here's his web page with more information about it:
http://www.backplane.com/diablo/crc64.html

### 79.5.15 CRC_CCITTInMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided memory address.

### 79.5.16 CRC_CCITTInMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided memory address.

### 79.5.17 CRC_CCITTOfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided string.

### 79.5.18 CRC_CCITTOfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided string.
**Example:**

```
dim n as Integer
n=CRC_CCITTOfStrMBS("Hello World")
' n is now 39210
```

### 79.5.19 CRC_DillonInMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as String

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided memory address.

### 79.5.20 CRC_DillonOfStrMBS(bitWidth as Integer, s as String) as String

MBS Util Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided string.
**Example:**

```
dim s as string
s=CRC_DillonOfStrMBS(64,"Hello World")
' s has now the 64bit checksum inside an 8 byte binary string
```

### 79.5.21 CRC_DillonUInt64InMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided memory address.

### 79.5.22 CRC_DillonUInt64OfStrMBS(bitWidth as Integer, s as String) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided string.

### 79.5.23 GetHash32MBS(s as string) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates some special Hash value.
**Example:**

MsgBox hex(GetHash32MBS("xskin-b013fafit_01-PELVIS-BODY.skn")) // should show 67A53A4D

**Notes:**

The 255 char limit was in the original C function, but should be resolved for this plugin, so string longer than 255 chars will work.
The original C code looks like this:

```
static UInt32 GetHash32 (StringPtr inString)
{

 int                                    length = inString [ 0 ] ;
  UInt32        hash = length + 1;
  int                                   i;

for (i = 1; i <= length; i++)
{
hash = ___rlwinm(hash, 3, 0, 31) ^tolower(inString [ i ] );
}

return hash;
}
```

Originally this was added for Cherie Benoit, which describes it like this:

"GetHash32MBS" duplicates the hashing function of Westlake
Interactive's "Namer" application which creates LFN-style short
filenames for use with the Macintosh version of "The Sims."

### 79.5.24 ModBusCalculateRTUMessageCRCMBS(data as string) as UInt16

MBS Util Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the RTU Message CRC string.
**Example:**

```
dim m as new MemoryBlock(9)

m.UInt8Value(0) = 1 // start of package
m.UInt8Value(1) = 6 // command code
m.UInt8Value(2) = 0 // some data...
m.UInt8Value(3) = 0
m.UInt8Value(4) = 0
m.UInt8Value(5) = & h21
m.UInt8Value(6) = 0 // checksum comes here
m.UInt8Value(7) = 0
m.UInt8Value(8) = 4 // end of package

dim Data as string = m.StringValue(0,6)
dim CheckSum as Int16 = ModBusCalculateRTUMessageCRCMBS(data)

m.UInt16Value(6) = checksum

MsgBox EncodeHex(m)
```

### 79.5.25 MD5MBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a memoryblock as 16 byte string.

### 79.5.26 MD5StringMBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string as hex string.

### 79.5.27 ValidateUUIDMBS(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Validates the given UUID/GUID.
**Example:**

```
// wrong
dim w1 as string = ValidateUUIDMBS("hello") // wrong due to missing {
dim w2 as string = ValidateUUIDMBS("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
dim w3 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
dim w4 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
dim w5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
dim w6 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
dim w7 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1)
dim o2 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ")
dim o3 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
dim o4 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
dim o5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
dim o6 as string = ValidateUUIDMBS(" { 550e8400e29b11d4a716446655440000 } ", 2)
dim o7 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
dim o8 as string = ValidateUUIDMBS("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
dim o9 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
dim o10 as string = ValidateUUIDMBS("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
dim o11 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

**Notes:**

If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

- MBS Real Studio Plugins, version 13.0pr5
- MBS Real Studio Plugins, version 12.3pr11

### 79.5.29 MD5MBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string.
**Example:**

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5MBS("Hallo")

msgbox str(StrComp(a,b,0))
```

**Notes:** Same as the MD5 function in RB5.

### 79.5.30 Blog Entries

- MBS Xojo Plugins, version 19.4pr3
- MBS Real Studio Plugins, version 12.5pr12
- Encryption Interoperability
- MBS SQLite Extension 0.9
- REAL Server Plugin 0.2

### 79.5.31 MD5StringMBS(data as string) as string

MBS Encryption Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string as hex string.
**Example:**

```
// Compare RB5 MD5 to the one from MBS
```

```
dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5StringMBS("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

### 79.5.32 Blog Entries

- REAL Server Plugin 0.2

### 79.5.33 CRC_DillonUInt64MBS(extends mem as memoryblock, bitWidth as Integer, offset as Integer, numBytes as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided memory address.
**Notes:** The 64bit integer version for RB 2006r4 and newer.

### 79.5.34 CalculateTOTPMBS(Key as String, timeNow as UInt64, timeStart as UInt64, timeStep as UInt64, digitCount as Integer, DecodeBase32 as Boolean = false) as UInt32

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Calculates a Time-based one-time password.
**Notes:**

Key is the secret to use.
timeNow the current time in seconds, e.g. pass CurrentUnixTimeMBS.
timeStart the start time in seconds, e.g. zero.
timeStep the duration the code is valid in seconds, e.g. 30 seconds.
digitCount: the number of digits to generate, e.g. 6.

Uses SHA-1 as hash algorithm.
Added DecodeBase32 parameter in v22.5 to specify whether the password is base32 encoded and should be decoded.

The result is returned as number and may miss leading zeros, if you just convert it to text.

### 79.5.35 Blog Entries

- MBS Xojo Plugins in version 22.3

### 79.5.36 CurrentUnixTimeMBS as UInt64

MBS Util Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries unix time stamp.
**Notes:**

Seconds since 1970.
Useful for CalculateTOTPMBS function.

### 79.5.37 Blog Entries

- MBS Xojo Plugins, version 22.3pr1

## 79.6 class CCCryptorMBS

### 79.6.1 class CCCryptorMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Generic interface for symmetric encryption.
**Example:**

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0,
"Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
dim q as UInt64 = 0

h.Update "Hello World!1234", m, BytesLeft, q
```

```
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

**Notes:**

This interface provides access to a number of symmetric encryption algorithms. Symmetric encryption algorithms come in two "flavors" - block ciphers, and stream ciphers. Block ciphers process data (while both encrypting and decrypting) in discrete chunks of data called blocks; stream ciphers operate on arbitrary sized data.

The object declared in this interface, CCCryptorMBS, provides access to both block ciphers and stream ciphers with the same API; however some options are available for block ciphers that do not apply to stream ciphers.

The general operation of a CCCryptor is: initialize it with raw key data and other optional fields with Constructor(); process input data via one or more calls to Update(), each of which may result in output data being written to caller-supplied memory; and obtain possible remaining output data with Final(). The CCCryptor is disposed of via Destructor(), or it can be reused (with the same key data as provided to Constructor()) by calling Reset().

One option for block ciphers is padding, as defined in PKCS7; when padding is enabled, the total amount of data encrypted does not have to be an even multiple of the block size, and the actual length of plaintext is calculated during decryption.

Another option for block ciphers is Cipher Block Chaining, known as CBC mode. When using CBC mode, an Initialization Vector (IV) is provided along with the key when starting an encrypt or decrypt operation. If CBC mode is selected and no IV is provided, an IV of all zeroes will be used.

CCCryptorMBS also implements block bufferring, so that individual calls to Update() do not have to provide data whose length is aligned to the block size. (If padding is disabled, encrypting with block ciphers does require that the *total* length of data input to Update() call(s) be aligned to the block size.)

A given CCCryptorMBS can only be used by one thread at a time; multiple threads can use safely different CCCryptors at the same time.

This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.6.4 Methods

### 79.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a cryptographic context.
**Notes:**

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.

- 79.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil) 15633

### 79.6.6 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Create a cryptographic context.
**Example:**

```
// key length must be 16 bytes for AES128
dim key as string = "1234567890123456"

dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, key)

if h.Lasterror<>0 then
MsgBox "error: "+str(h.Lasterror)
else
MsgBox "OK"
end if
```

**Notes:**

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

(by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 79.6.5 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil) 15632

### 79.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Stateless, one-shot encrypt or decrypt operation.
**Example:**

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"

dim InputMemory as MemoryBlock = InputString
dim KeyMemory as MemoryBlock = KeyString
dim IV as ptr = nil // default to zeros
dim OutputMemory as new MemoryBlock(100)
dim Size as UInt64 = 0

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyMemory, KeyMemory.size, IV, InputMemory, InputMemory.size, OutputMemory, OutputMemory.size, size)

if e = CCCryptorMBS.kCCSuccess then
dim result as string = OutputMemory.StringValue(0, size)
MsgBox EncodingToHexMBS(result)
else
MsgBox "Error: "+str(e)
end if
```

**Notes:**

This basically performs a sequence of Constructor, Update, Final and Destructor.

Parameters:

| | |
|---|---|
| Operation | Defines the basic operation: kCCEncrypt or kCCDecrypt. |
| Algorithm | Defines the encryption algorithm. |
| Options | A word of flags defining options. See kCCOption constants. |
| Key | Raw key material, length keyLength bytes. |
| keyLength | Length of key material. Must be appropriate for the select algorithm. Some algorithms may provide for varying key lengths. |
| IV | Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected. |
| dataIn | Data to encrypt or decrypt, length dataInLength bytes. |
| dataInLength | Length of data to encrypt or decrypt. |
| dataOut | Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output. |
| dataOutAvailable | The size of the dataOut buffer in bytes. |
| dataOutMoved | On successful return, the number of bytes written to dataOut. If kCCBuffer-TooSmall is returned as a result of insufficient buffer space being provided, the required buffer space is returned here. |

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

| | |
|---|---|
| kCCDecodeError | Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations. |

See also:

- 79.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer 15636

### 79.6.8 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Stateless, one-shot encrypt or decrypt operation.
**Example:**

```
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"
dim IV as ptr = nil // default to zeros
dim Output as string = ""

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyString, IV, InputString, Output)

if e = CCCryptorMBS.kCCSuccess then
MsgBox EncodingToHexMBS(Output)
else
MsgBox "Error: "+str(e)
end if
```

**Notes:**

This basically performs a sequence of Constructor, Update, Final and Destructor. This is the convenience function for Xojo with using strings instead of data pointers.

Parameters:

| | |
|---|---|
| Operation | Defines the basic operation: kCCEncrypt or kCCDecrypt. |
| Algorithm | Defines the encryption algorithm. |
| Options | A word of flags defining options. See kCCOption constants. |
| Key | Raw Key. |
| IV | Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm's block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected. |
| dataIn | Data to encrypt or decrypt. |
| dataOut | Result is written here. |

Possible errors in lasterror:

kCCBufferTooSmall indicates insufficent space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

| | |
|---|---|
| kCCDecodeError | Indicates improperly formatted ciphertext or a "wrong key" error; occurs only during decrypt operations. |

See also:

- 79.6.7 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer 15634

### 79.6.9 Final(DataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finish an encrypt or decrypt operation, and obtain the (possible) final data output.
**Notes:**

dataOut: Result is written here. Allocated by caller. Pass a memoryblock of right size.
dataOutAvailable: The size of the dataOut buffer in bytes.
dataOutMoved: On successful return, the number of bytes written to dataOut.

Lasterror is set to:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

kCCAlignmentError When decrypting, or when encrypting with a block cipher with padding disabled, kCCAlignmentError will be returned if the total number of bytes provided to Update() is not an integral multiple of the current algorithm's block size.

kCCDecodeError Indicates garbled ciphertext or the wrong key during decryption. This can only be returned while decrypting with padding enabled.

Except when kCCBufferTooSmall is returned, the CCCryptorMBS can no longer be used for subsequent operations unless Reset() is called on it.
It is not necessary to call Final() when performing symmetric encryption or decryption if padding is disabled, or when using a stream cipher.

### 79.6.10 GetOutputLength(inputLength as UInt64, Final as Boolean = true) as UInt64

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Determine output buffer size required to process a given input size.
**Example:**

```
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, "Hello12312345678")

MsgBox str(h.GetOutputLength(1000))
```

**Notes:**

inputLength: The length of data which will be provided to Update().

Final: If false, the returned value will indicate the output buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update(). When 'final' is true, the returned value will indicate the total combined buffer space needed when 'inputLength' bytes are provided to CCCryptorMBS.Update() and then CCCryptorMBS.Final() is called.

Returns the maximum buffer space need to perform CCCryptorMBS.Update() and optionally CCCryptorMBS.Final().

Some general rules apply that allow clients of this module to know a priori how much output buffer space will be required in a given situation. For stream ciphers, the output size is always equal to the input size, and CCCryptorMBS.Final() never produces any data. For block ciphers, the output size will always be less than or equal to the input size plus the size of one block. For block ciphers, if the input size provided to each call to CCCryptorMBS.Update() is is an integral multiple of the block size, then the output size for each call to CCCryptorMBS.Update() is less than or equal to the input size for that call to CCCryptorMBS.Update(). CCCryptorMBS.Final() only produces output when using a block cipher with padding enabled.

### 79.6.11 RandomGenerateBytes(data as MemoryBlock) as integer

MBS MacOSX Plugin, Plugin Version: 21.4, Platform: macOS, Targets: All.

**Function:** Return random bytes in a buffer allocated by the caller.
**Example:**

```
Dim m As New MemoryBlock(16)

Dim r As Integer = CCCryptorMBS.RandomGenerateBytes(m)

If r = CCCryptorMBS.kCCSuccess Then
MessageBox EncodeHex(m)
```

```
Else
MessageBox "Error " + Str(r)
End If
```

**Notes:**

The PRNG returns cryptographically strong random bits suitable for use as cryptographic keys, IVs, nonces etc.

Return kCCSuccess on success.

### 79.6.12 Reset(iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Reinitializes an existing CCCryptorRef with a (possibly) new initialization vector.
**Notes:**

The key is unchanged. Not implemented for stream ciphers.

iv: Optional initialization vector; if present, must be the same size as the current algorithm's block size.

The the only possible errors are kCCParamError and kCCUnimplemented.
This can be called on a CCCryptorMBS with data pending (i.e. in a padded mode operation before Final is called); however any pending data will be lost in that case.

### 79.6.13 Update(dataIn as Ptr, dataInLength as UInt64, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Process (encrypt, decrypt) some data.
**Notes:**

The result, if any, is written to a caller-provided buffer.

Parameters:

dataOutAvailable The size of the dataOut buffer in bytes.

| | |
|---|---|
| dataIn | Data to process, length dataInLength bytes. |
| dataInLength | Length of data to process. |
| dataOut | Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output. |
| dataOutMoved | On successful return, the number of bytes written to dataOut. |

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.
See also:

- 79.6.14 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64) 15640

### 79.6.14 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Process (encrypt, decrypt) some data.
**Notes:**

The result, if any, is written to a caller-provided buffer.

Parameters:

| | |
|---|---|
| dataIn | Data to process, length dataInLength bytes. |
| dataInLength | Length of data to process. |
| dataOut | Result is written here. Allocated by caller. Encryption and decryption can be performed "in-place", with the same buffer used for input and output. |

dataOutAvailable The size of the dataOut buffer in bytes.

| | |
|---|---|
| dataOutMoved | On successful return, the number of bytes written to dataOut. |

Possible error codes:
kCCBufferTooSmall indicates insufficent space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is bufferred as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

### 79.6.15 Properties

### 79.6.16 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The internal handle for the crypter instance.
**Notes:** (Read and Write property)

### 79.6.17 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Last error code.
**Notes:** (Read and Write property)

### 79.6.18 Constants

### 79.6.19 kCCAlgorithm3DES = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** Triple-DES, three key, EDE configuration

### 79.6.20 kCCAlgorithmAES128 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** Advanced Encryption Standard, 128-bit block. Key length 128 to 256 bits.

### 79.6.21 kCCAlgorithmBlowfish = 6

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the encryption algorithms constants.
**Notes:** Blowfish encryption.

### 79.6.22 kCCAlgorithmCAST = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** CAST

### 79.6.23 kCCAlgorithmDES = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** Data Encryption Standard

### 79.6.24 kCCAlgorithmRC2 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** RC2 stream cipher

### 79.6.25 kCCAlgorithmRC4 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the encryption algorithms constants.
**Notes:** RC4 stream cipher

### 79.6.26 kCCAlignmentError = -4303

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Input size was not aligned properly.

### 79.6.27 kCCBlockSize3DES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the block size constants.
**Notes:** Triple DES block size.

### 79.6.28 kCCBlockSizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the block size constants.
**Notes:** AES block size (currently, only 128-bit blocks are supported).

### 79.6.29 kCCBlockSizeBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the block size constants.
**Notes:** Blowfish block size.

### 79.6.30 kCCBlockSizeCAST = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the block size constants.
**Notes:** CAST block size.

### 79.6.31 kCCBlockSizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the block size constants.
**Notes:** DES block size.

### 79.6.32 kCCBlockSizeRC2 = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the block size constants.
**Notes:** RC2 block size.

### 79.6.33 kCCBufferTooSmall = -4301

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Insufficent buffer provided for specified operation.

### 79.6.34 kCCCallSequenceError = -4309

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** Functions called in wrong order.

### 79.6.35 kCCDecodeError = -4304

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Input data did not decode or decrypt properly.

### 79.6.36 kCCDecrypt = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the operation modes.
**Notes:** Symmetric decryption.

### 79.6.37 kCCEncrypt = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the operation modes.
**Notes:** Symmetric encryption.

### 79.6.38 kCCInvalidKey = -4311

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** Key is not valid.

### 79.6.39 kCCKeySize3DES = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

Triple DES key size.
DES and TripleDES have fixed key sizes.

### 79.6.40 kCCKeySizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

128 bit AES key size.
AES has three discrete key sizes.

### 79.6.41 kCCKeySizeAES192 = 24

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

192 bit AES key size.
AES has three discrete key sizes.

### 79.6.42 kCCKeySizeAES256 = 32

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

256 bit AES key size.
AES has three discrete key sizes.

### 79.6.43 kCCKeySizeDES = 8

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

DES key size.
DES and TripleDES have fixed key sizes.

### 79.6.44 kCCKeySizeError = -4310

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** The key size is incorrect.

### 79.6.45 kCCKeySizeMaxBlowfish = 56

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the key size constants.
**Notes:** Maximum key size for blowfish. You may better do a hash on the key and use the hash.

### 79.6.46 kCCKeySizeMaxCAST = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

CAST maximum key size.
CAST and RC4 have variable key sizes.

### 79.6.47 kCCKeySizeMaxRC2 = 128

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

RC2 maximum key size.
CAST and RC4 have variable key sizes.

### 79.6.48 kCCKeySizeMaxRC4 = 512

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

RC4 maximum key size.
CAST and RC4 have variable key sizes.

### 79.6.49 kCCKeySizeMinBlowfish = 8

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the key size constants.
**Notes:** Minimum key size for blowfish.

### 79.6.50 kCCKeySizeMinCAST = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

CAST minimum key size.
CAST and RC4 have variable key sizes.

### 79.6.51 kCCKeySizeMinRC2 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

RC2 minimum key size.
CAST and RC4 have variable key sizes.

### 79.6.52 kCCKeySizeMinRC4 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the key size constants.
**Notes:**

RC4 minimum key size.
CAST and RC4 have variable key sizes.

### 79.6.53 kCCMemoryFailure = -4302

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Memory allocation failure.

### 79.6.54 kCCOptionCBCMode = 0

MBS MacOSX Plugin, Plugin Version: 20.1.

**Function:** One of the option constants.
**Notes:** Cipher Block Chaining Mode. Default is CBC.

### 79.6.55 kCCOptionECBMode = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the option constants.
**Notes:**

Electronic Code Book Mode. Default is CBC.
Stream ciphers currently have no options

### 79.6.56 kCCOptionPKCS7Padding = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the option constants.
**Example:**

```
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, CC-
CryptorMBS.kCCOptionPKCS7Padding, "Hello12312345678")

if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as Uint64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
```

```
dim q as UInt64 = 0

// due to padding, we don't need to pass a multiple of block size
h.Update "Hello World!", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

**Notes:**

Perform PKCS7 padding.
Stream ciphers currently have no options

### 79.6.57 kCCOverflow = -4306

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** Buffer overflow.

### 79.6.58 kCCParamError = -4300

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Illegal parameter value.

### 79.6.59 kCCRNGFailure = -4307

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** Random number generator failed.

### 79.6.60 kCCSuccess = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Operation completed normally.

### 79.6.61 kCCUnimplemented = -4305

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the error constants.
**Notes:** Function not implemented for the current algorithm.

### 79.6.62 kCCUnspecifiedError = -4308

MBS MacOSX Plugin, Plugin Version: 21.4.

**Function:** One of the error constants.
**Notes:** An error occurred, but not matching one of the other error codes.

## 79.7 class CCHMacMBS

### 79.7.1 class CCHMacMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Keyed Message Authentication Code (HMAC) functions.
**Example:**

```
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgSHA1, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.7.4 Methods

### 79.7.5 Constructor(algorithm as Integer, key as memoryblock)

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

**Function:** Initializes the hmac engine with the given algorithm and key.
See also:

- 79.7.6 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64) 15653
- 79.7.7 Constructor(algorithm as Integer, key as string) 15653

### 79.7.6 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hmac engine with the given algorithm and key.
See also:

- 79.7.5 Constructor(algorithm as Integer, key as memoryblock) 15652
- 79.7.7 Constructor(algorithm as Integer, key as string) 15653

### 79.7.7 Constructor(algorithm as Integer, key as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hmac engine with the given algorithm and key.
**Example:**

```
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgMD5, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

See also:

- 79.7.5 Constructor(algorithm as Integer, key as memoryblock) 15652
- 79.7.6 Constructor(algorithm as Integer, key as Ptr, keyLength as UInt64) 15653

### 79.7.8 Final(macOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Obtain the final Message Authentication Code.
**Notes:**

Writes mac to given pointer.
Please pass a memoryblock with 16 bytes for MD5 and 20 bytes for SHA1.

### 79.7.9 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Obtain the final Message Authentication Code.
**Notes:** Returns digest. 16 bytes for MD5 and 20 bytes for SHA1.

### 79.7.10 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Stateless, one-shot HMAC function.
**Notes:**

Make sure your memoryblock for key, data and macout have the right size and are not nil!
keyLength and dataLength are the size of key and data in bytes.
See also:

- 79.7.11 Hmac(algorithm as Integer, key as String, data as String) as String 15654

### 79.7.11 Hmac(algorithm as Integer, key as String, data as String) as String

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

**Function:** Stateless, one-shot HMAC function.
See also:

- 79.7.10 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr) 15654

### 79.7.12 Update(data as memoryblock)

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

**Function:** Process some data.
**Notes:** Takes bytes in memoryblock.
See also:

- 79.7.13 Update(data as Ptr, dataLength as UInt64) 15654
- 79.7.14 Update(data as string) 15655

### 79.7.13 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Process some data.
**Notes:** Takes given bytes from pointer. You can pass a memoryblock there and pass the size of the memoryblock as length.
See also:

- 79.7.12 Update(data as memoryblock) 15654
- 79.7.14 Update(data as string) 15655

### 79.7.14 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Process some data.
**Notes:** Takes bytes in string.
See also:

- 79.7.12 Update(data as memoryblock) 15654
- 79.7.13 Update(data as Ptr, dataLength as UInt64) 15654

### 79.7.15 Properties

### 79.7.16 Algorithm as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The algorithm passed in the constructor.
**Notes:**

see kCCHmacAlg* constants.
(Read and Write property)

### 79.7.17 Constants

### 79.7.18 kCCHmacAlgMD5 = 1

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.19 kCCHmacAlgSHA1 = 0

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.20 kCCHmacAlgSHA224 = 5

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.21 kCCHmacAlgSHA256 = 2

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.22 kCCHmacAlgSHA384 = 3

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.23 kCCHmacAlgSHA512 = 4

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** One of the Algorithms selector constants.

### 79.7.24 kCCMD5DigestLength = 16

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** The length of the SHA1 digest in bytes.

### 79.7.25 kCCSHA1DigestLength = 20

MBS MacOSX Plugin, Plugin Version: 11.3.

**Function:** The length of the SHA1 digest in bytes.

## 79.8 class CCMD2MBS

### 79.8.1 class CCMD2MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for MD2 hash.
**Example:**

```
dim s as new CCMD2MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.8.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 79.8.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 79.8.4 Methods

### 79.8.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hash engine.

### 79.8.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD2.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.8.8 MD2(data as String) as Memoryblock 15658

### 79.8.8 MD2(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD2.
**Example:**

```
dim m as MemoryBlock = CCMD2MBS.MD2("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.8.7 MD2(data as Ptr, dataLength as Integer) as Memoryblock 15658

### 79.8.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.8.10 Update(data as string) 15658

### 79.8.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.8.9 Update(data as Ptr, dataLength as UInt64) 15658

## 79.9 class CCMD4MBS

### 79.9.1 class CCMD4MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for MD4 hash.
**Example:**

```
dim s as new CCMD4MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.9.4 Methods

### 79.9.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hash engine.

### 79.9.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.9.7 MD4(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD4.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.9.8 MD4(data as String) as Memoryblock 15661

### 79.9.8 MD4(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD4.
**Example:**

```
dim m as MemoryBlock = CCMD4MBS.MD4("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.9.7 MD4(data as Ptr, dataLength as Integer) as Memoryblock 15661

### 79.9.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.9.10 Update(data as string) 15661

### 79.9.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.9.9 Update(data as Ptr, dataLength as UInt64) 15661

## 79.10 class CCMD5MBS

### 79.10.1 class CCMD5MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for MD5 hash.
**Example:**

```
dim s as new CCMD5MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.10.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hash engine.

### 79.10.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.10.7 MD5(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD5.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.10.8 MD5(data as String) as Memoryblock 15664

### 79.10.8 MD5(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with MD5.
**Example:**

```
dim m as MemoryBlock = CCMD5MBS.MD5("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.10.7 MD5(data as Ptr, dataLength as Integer) as Memoryblock 15664

### 79.10.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.10.10 Update(data as string) 15664

### 79.10.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.10.9 Update(data as Ptr, dataLength as UInt64) 15664

## 79.11 class CCSHA1MBS

### 79.11.1 class CCSHA1MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for SHA-1 hash.
**Example:**

```
dim s as new CCSHA1MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hash engine.

### 79.11.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.11.7 SHA1(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-1.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.11.8 SHA1(data as String) as Memoryblock 15667

### 79.11.8 SHA1(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-1.
**Example:**

```
dim m as MemoryBlock = CCSHA1MBS.SHA1("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.11.7 SHA1(data as Ptr, dataLength as Integer) as Memoryblock 15667

### 79.11.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.11.10 Update(data as string) 15667

### 79.11.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.11.9 Update(data as Ptr, dataLength as UInt64) 15667

## 79.12 class CCSHA224MBS

### 79.12.1 class CCSHA224MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for SHA-224 hash.
**Example:**

```
dim s as new CCSHA224MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

**Function:** Initializes the hash engine.

### 79.12.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.12.7 SHA224(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-256.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.12.8 SHA224(data as String) as Memoryblock 15670

### 79.12.8 SHA224(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-224.
**Example:**

```
dim m as MemoryBlock = CCSHA224MBS.SHA224("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.12.7 SHA224(data as Ptr, dataLength as Integer) as Memoryblock 15670

### 79.12.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.12.10 Update(data as string) 15670

### 79.12.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.

- 79.14.10 Update(data as string) 15676

### 79.14.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.14.9 Update(data as Ptr, dataLength as UInt64) 15676

## 79.15 class CCSHA512MBS

### 79.15.1 class CCSHA512MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** The class for SHA-512 hash.
**Example:**

```
dim s as new CCSHA512MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don't need to apply for an export license for this classes here.

### 79.15.2 Blog Entries

### 79.15.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 79.15.4 Methods

### 79.15.5 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Initializes the hash engine.

### 79.15.6 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Finalizes hash and returns digest as memoryblock.
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

### 79.15.7 SHA512(data as Ptr, dataLength as Integer) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-512.
**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.15.8 SHA512(data as String) as Memoryblock 15679

### 79.15.8 SHA512(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** One-shot hash calculation with SHA-512.
**Example:**

```
dim m as MemoryBlock = CCSHA512MBS.SHA512("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 79.15.7 SHA512(data as Ptr, dataLength as Integer) as Memoryblock 15679

### 79.15.9 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass memoryblock and data length in bytes.
See also:

- 79.15.10 Update(data as string) 15679

### 79.15.10 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Processes some data.
**Notes:** Pass string with data.
See also:

- 79.15.9 Update(data as Ptr, dataLength as UInt64) 15679

## 79.16 class CipherMBS

### 79.16.1 class CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The high level cipher class using OpenSSL encryption.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS

call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 79.16.6 Methods

### 79.16.7 aes_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

### 79.16.8 aes_128_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.9 aes_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.10 aes_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS
```

```
call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

### 79.16.11 aes_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.12 aes_128_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.13 aes_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.14 aes_128_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.15 aes_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.16 aes_128_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_128_xts
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_128_xts
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.17 aes_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.18 aes_192_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.19 aes_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.20 aes_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.21 aes_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.22 aes_192_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.23 aes_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.24 aes_192_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.25 aes_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.26 aes_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.27 aes_256_ccm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.28 aes_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.29 aes_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cfb128
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cfb128
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.30 aes_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.31 aes_256_ctr as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.32 aes_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_256_ecb
```

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

c = CipherMBS.aes_256_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.33 aes_256_gcm as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.34 aes_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.35 aes_256_xts as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.36 bf_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for Blowfish with CBC mode.

### 79.16.37 bf_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for Blowfish with CFB64 mode.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.bf_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.bf_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.38 bf_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for Blowfish with ECB mode.

### 79.16.39 bf_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for Blowfish with OFB mode.

### 79.16.40 BytesToKey(cipher as CipherMBS, digest as DigestMBS, Salt as MemoryBlock, InputKey as Memoryblock, IterationCount as Integer, byref OutputKey as memoryblock, byref IV as memoryblock) as boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Derives a key and IV from a given input data.
**Notes:**

Returns true on success or false on failure.

BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt paramter is used as a salt in the derivation: it should point to an 8 byte buffer or nil if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to peform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm is compatible with PKCS# 5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PBKDF2 as defined in PKCS# 5v2.1 for key derivation.

Key Derivation Algorithm

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

D_i = HASH^count(D_(i-1) | | data | | salt)

where | | denotes concatentaion, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

### 79.16.41 camellia_128_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.42 camellia_128_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.43 camellia_128_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.44 camellia_128_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.45 camellia_128_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.46 camellia_128_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.47 camellia_192_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.48 camellia_192_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.49 camellia_192_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.50 camellia_192_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.51 camellia_192_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.52 camellia_192_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.53 camellia_256_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.camellia_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.camellia_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.54 camellia_256_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.55 camellia_256_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.56 camellia_256_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.57 camellia_256_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.58 camellia_256_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.59 cast5_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.60 cast5_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.61 cast5_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.62 cast5_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.63 CipherByName(name as string) as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds a cipher by name.
**Notes:**

Possible names:
AES-128-CFB, BF-CBC, BF-CFB, BF-ECB, BF-OFB, AES-128-CBC, id-aes128-CCM, AES-128-CFB1, AES-128-CFB8, AES-128-CTR, AES-128-ECB, id-aes128-GCM, AES-128-OFB, AES-128-XTS, AES-192-CBC, id-aes192-CCM, AES-192-CFB1, AES-192-CFB8, AES-192-CFB, AES-192-CTR, AES-192-ECB, id-aes192-GCM, AES-192-OFB, AES-256-CBC, id-aes256-CCM, AES-256-CFB1, AES-256-CFB8, AES-256-CFB, AES-256-CTR, AES-256-ECB, id-aes256-GCM, AES-256-OFB, AES-256-XTS, CAMELLIA-128-CBC, CAMELLIA-128-CFB1, CAMELLIA-128-CFB8, CAMELLIA-128-CFB, CAMELLIA-128-ECB, CAMELLIA-128-OFB, CAMELLIA-192-CBC, CAMELLIA-192-CFB1, CAMELLIA-192-CFB8, CAMELLIA-192-CFB, CAMELLIA-192-ECB, CAMELLIA-192-OFB, CAMELLIA-256-CBC, CAMELLIA-256-CFB1, CAMELLIA-256-CFB8, CAMELLIA-256-CFB, CAMELLIA-256-ECB, CAMELLIA-256-OFB, CAST5-CBC, CAST5-CFB, CAST5-ECB, CAST5-OFB, DES-EDE, DES-EDE-CBC, DES-EDE-CFB, DES-EDE, DES-EDE-OFB, DES-EDE3, DES-EDE3-CBC, DES-EDE3-CFB1, DES-EDE3-CFB8, DES-EDE3-CFB, DES-EDE3, DES-EDE3-OFB, RC2-40-CBC, RC2-64-CBC, RC2-CBC, RC2-CFB, RC2-ECB, RC2-OFB, RC4, RC4-40, RC4-HMAC-MD5, IDEA-CFB, IDEA-ECB, IDEA-OFB, IDEA-CBC, DES-CFB1, DES-CFB8, DES-CFB, DES-OFB, DES-ECB, DES-CBC or DESX-CBC.

### 79.16.64 CipherInit(key as memoryblock, IV as memoryblock, Encrypt as boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the cipher for encryption or decryption.
**Notes:**

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

### 79.16.65 CipherNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all ciphers.
**Example:**

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

**Notes:**

The list may not be the same for Mac, Windows and Linux.

Current list:

aes-128-cbc, aes-128-cbc-hmac-sha1, aes-128-ccm, aes-128-cfb, aes-128-cfb1, aes-128-cfb8, aes-128-ctr, aes-128-ecb, aes-128-gcm, aes-128-ocb, aes-128-ofb, aes-128-xts, aes-192-cbc, aes-192-ccm, aes-192-cfb, aes-192-cfb1, aes-192-cfb8, aes-192-ctr, aes-192-ecb, aes-192-gcm, aes-192-ocb, aes-192-ofb, aes-256-cbc, aes-256-cbc-hmac-sha1, aes-256-ccm, aes-256-cfb, aes-256-cfb1, aes-256-cfb8, aes-256-ctr, aes-256-ecb, aes-256-gcm, aes-256-ocb, aes-256-ofb, aes-256-xts, aes128, aes128-wrap, aes192, aes192-wrap, aes256, aes256-wrap, aria-128-cbc, aria-128-ccm, aria-128-cfb, aria-128-cfb1, aria-128-cfb8, aria-128-ctr, aria-128-ecb, aria-128-gcm, aria-128-ofb, aria-192-cbc, aria-192-ccm, aria-192-cfb, aria-192-cfb1, aria-192-cfb8, aria-192-ctr, aria-192-ecb, aria-192-gcm, aria-192-ofb, aria-256-cbc, aria-256-ccm, aria-256-cfb, aria-256-cfb1, aria-256-cfb8, aria-256-ctr, aria-256-ecb, aria-256-gcm, aria-256-ofb, aria128, aria192, aria256, bf, bf-cbc, bf-cfb, bf-ecb, bf-ofb, blowfish, camellia-128-cbc, camellia-128-cfb, camellia-128-cfb1, camellia-128-cfb8, camellia-128-ctr, camellia-128-ecb, camellia-128-ofb, camellia-192-cbc, camellia-192-cfb, camellia-192-cfb1, camellia-192-cfb8, camellia-192-ctr, camellia-192-ecb, camellia-192-ofb, camellia-256-cbc, camellia-256-cfb, camellia-256-cfb1, camellia-256-cfb8, camellia-256-ctr, camellia-256-ecb, camellia-256-ofb, camellia128, camellia192, camellia256, cast, cast-cbc, cast5-cbc, cast5-cfb, cast5-ecb, cast5-ofb, chacha20, chacha20-poly1305, des, des-cbc, des-cfb, des-cfb1, des-cfb8, des-ecb, des-ede, des-ede-cbc, des-ede-cfb, des-ede-ecb, des-ede-ofb, des-ede3, des-ede3-cbc, des-ede3-cfb, des-ede3-cfb1, des-ede3-cfb8, des-ede3-ecb, des-ede3-ofb, des-ofb, des3, des3-wrap, desx, desx-cbc, id-aes128-CCM, id-aes128-GCM, id-aes128-wrap, id-aes128-wrap-pad, id-aes192-CCM, id-aes192-GCM, id-aes192-wrap, id-aes192-wrap-pad, id-aes256-CCM, id-aes256-GCM, id-aes256-wrap, id-aes256-wrap-pad, id-smime-alg-CMS3DESwrap, idea, idea-cbc, idea-cfb, idea-ecb, idea-ofb, rc2, rc2-128, rc2-40, rc2-40-cbc, rc2-64, rc2-64-cbc, rc2-cbc, rc2-cfb, rc2-ecb, rc2-ofb, rc4, rc4-40, rc4-hmac-md5, RC5, rc5-cbc, rc5-cfb, rc5-ecb, rc5-ofb, seed, seed-cbc, seed-cfb, seed-ecb, seed-ofb, sm4, sm4-cbc, sm4-cfb, sm4-ctr, sm4-ecb, sm4-ofb

### 79.16.66 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the current state.

### 79.16.67 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 79.16.68 DecryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the cipher for decrypting.
**Example:**

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

**Notes:**

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

### 79.16.69 desx_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DESX algorithm in CBC mode.

### 79.16.70 des_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in CBC.

### 79.16.71 des_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in CFB.

### 79.16.72 des_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in CFB.

### 79.16.73 des_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in CFB.

### 79.16.74 des_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in ECB.

### 79.16.75 des_ede as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.76 des_ede3 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.77 des_ede3_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.78 des_ede3_cfb1 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.79 des_ede3_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.80 des_ede3_cfb8 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.81 des_ede3_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.82 des_ede3_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.83 des_ede_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.84 des_ede_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.85 des_ede_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.86 des_ede_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.87 des_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for DES in OFB.

### 79.16.88 EncryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the cipher for encrypting.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

**Notes:**

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

For AES the length of the key defines whether you get 128, 192 or 256 bit encryption. Pass some other key length will return an error. Best is usually to put a hashing algorithm before to make sure the key has the required bit length, e.g. use SHA256MBS class.

### 79.16.89 FinalizeAsMemory as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finalizes en/decryption and returns last data.

### 79.16.90 FinalizeAsString as String

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finalizes en/decryption and returns last data.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

**Notes:**

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

### 79.16.91 idea_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for IDEA encryption algorithm in CBC.

### 79.16.92 idea_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for IDEA encryption algorithm in CFB.

### 79.16.93 idea_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for IDEA encryption algorithm in ECB.

### 79.16.94 idea_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for IDEA encryption algorithm in OFB.

### 79.16.95 MaxBlockLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum possible block length size for any cipher.

### 79.16.96 MaxIVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum possible IV vector size for any cipher.

### 79.16.97 MaxKeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum possible key length size for any cipher.

### 79.16.98 ProcessFile(InputFile as FolderItem, OutputFile as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes content of file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks and write to output file.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.

### 79.16.99 ProcessMemory(data as memoryblock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes data in a memory block.
**Notes:** due to block sizes, the result may be longer or shorter than the input size.

### 79.16.100 ProcessString(data as String) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes data in a string.
**Example:**

```
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key

dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```

**Notes:**

due to block sizes, the result may be longer or shorter than the input size.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

### 79.16.101 rc2_40_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.102 rc2_64_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.

### 79.16.103 rc2_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cbc
call c.DecryptInit Ckey, CIV
```

```
dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.104 rc2_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.105 rc2_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_ecb
```

```
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_ecb
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2
```

### 79.16.106 rc2_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc2_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc2_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

### 79.16.107 rc4 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc4
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

### 79.16.108 rc4_40 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc4_40
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
```

```
MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_40
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

### 79.16.109 rc4_hmac_md5 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc4_hmac_md5
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc4_hmac_md5
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

### 79.16.110 rc5_32_12_16_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cbc
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cbc
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

**Notes:** RC5 with CBC. 32 bit word size, 12 rounds, 16 byte key.

### 79.16.111 rc5_32_12_16_cfb64 as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_cfb64
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
```

```
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cfb64
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

**Notes:** RC5 with CFB64. 32 bit word size, 12 rounds, 16 byte key.

### 79.16.112 rc5_32_12_16_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ecb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

**Notes:** RC5 with ECB. 32 bit word size, 12 rounds, 16 byte key.

### 79.16.113 rc5_32_12_16_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher.
**Example:**

```
dim c as CipherMBS = CipherMBS.rc5_32_12_16_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypred as hex: "+EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: "+output2
```

**Notes:** RC5 with OFB. 32 bit word size, 12 rounds, 16 byte key.

### 79.16.114 seed_cbc as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The cipher for a Seed CBC.

### 79.16.115 seed_cfb128 as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Seed cipher for CFB128 mode.

### 79.16.116 seed_ecb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cipher for seed ECB.

### 79.16.117 seed_ofb as CipherMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Seed cipher for OFB mode.

### 79.16.118 SetPadding(padding as boolean)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables padding.
**Notes:** On by default.

### 79.16.119 Properties

### 79.16.120 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the block size for this cipher.
**Notes:** (Read only property)

### 79.16.121 Encrypting as Boolean

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the class is encrypting or decrypting.
**Notes:**

True if encrypting or false for decrypting.
(Read only property)

### 79.16.122 Flags as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the flags for the cipher.
**Notes:** (Read only property)

### 79.16.123 IVLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the size of the initialization vector.
**Notes:** (Read only property)

### 79.16.124 KeyLength as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The key length.
**Notes:** (Read and Write property)

### 79.16.125 Mode as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries cipher mode.
**Notes:** (Read only property)

### 79.16.126 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the cipher engine.
**Notes:** (Read only property)

### 79.16.127 Padding as Boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to apply padding or not.
**Example:**

```
dim c as CipherMBS = CipherMBS.aes_256_ctr

call c.EncryptInit "Hello"

MsgBox "default: "+str(c.Padding)
c.Padding = false

MsgBox "set to false: "+str(c.Padding)
c.Padding = true

MsgBox "set to true: "+str(c.Padding)
```

**Notes:**

On by default.
(Read and Write property)

### 79.16.128 RC2KeyBits as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of bits for RC2.
**Notes:** (Read and Write property)

### 79.16.129 RC5Rounds as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of rounds for RC5.
**Notes:** (Read and Write property)

## 79.17 class DigestMBS

### 79.17.1 class DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OpenSSL class for calculating hashes.
**Example:**

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 79.17.6 Methods

### 79.17.7 Clear

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the current state.

### 79.17.8 Constructor

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 79.17.9 DigestByName(name as string) as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a digest by name.
**Example:**

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.Size)
```

**Notes:**

Returns nil if name is not registered.
May need string to be in upper case.

### 79.17.10 DigestNames as String()

MBS Encryption Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all digest algorithms.
**Example:**

```
// see hash and encryption algorithms available
dim CipherNames() as string = CipherMBS.CipherNames
dim DigestNames() as string = DigestMBS.DigestNames
Break
```

**Notes:**

The list may not be the same for Mac, Windows and Linux.

Current list:

blake2b512, blake2s256, id-rsassa-pkcs1-v1_5-with-sha3-224, id-rsassa-pkcs1-v1_5-with-sha3-256, id-rsassa-pkcs1-v1_5-with-sha3-384, id-rsassa-pkcs1-v1_5-with-sha3-512, md4, md4WithRSAEncryption, md5, md5-sha1, md5WithRSAEncryption, mdc2, mdc2WithRSA, ripemd, ripemd160, ripemd160WithRSA, rmd160, RSA-MD4, RSA-MD5, RSA-MDC2, RSA-RIPEMD160, RSA-SHA1, RSA-SHA1-2, RSA-SHA224, RSA-SHA256, RSA-SHA3-224, RSA-SHA3-256, RSA-SHA3-384, RSA-SHA3-512, RSA-SHA384, RSA-SHA512, RSA-SHA512/224, RSA-SHA512/256, RSA-SM3, sha1, sha1WithRSAEncryption, sha224, sha224WithRSAEncryption, sha256, sha256WithRSAEncryption, sha3-224, sha3-256, sha3-384, sha3-512, sha384, sha384WithRSAEncryption, sha512, sha512-224, sha512-224WithRSAEncryption, sha512-256, sha512-256WithRSAEncryption, sha512WithRSAEncryption, shake128, shake256, sm3, sm3WithRSAEncryption, ssl3-md5, ssl3-sha1, whirlpool

### 79.17.11 Final as memoryblock

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finalizes the hash and returns it.

### 79.17.12 FinalText as String

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finalizes the hash and returns it.
**Notes:** Returns text with hex encoding.

### 79.17.13 MD5 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for MD5.
**Example:**

```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.14 MDC2 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for MDC2.
**Example:**

```
dim d as DigestMBS = DigestMBS.MDC2
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.15 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds more data to the hash.
See also:

- 79.17.16 Process(data as string) 15720
- 79.17.17 Process(file as FolderItem) as boolean 15721

### 79.17.16 Process(data as string)

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds more data to the hash.
See also:

- 79.17.15 Process(data as memoryblock) 15720
- 79.17.17 Process(file as FolderItem) as boolean 15721

### 79.17.17 Process(file as FolderItem) as boolean

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes content of file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
See also:

- 79.17.15 Process(data as memoryblock) 15720
- 79.17.16 Process(data as string) 15720

### 79.17.18 RipeMD160 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for RipeMD160.
**Example:**

```
dim d as DigestMBS = DigestMBS.RipeMD160
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.19 SHA1 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA 1.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA1
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
```

```
MsgBox result
```

### 79.17.20 SHA224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA 224.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.21 SHA256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA 256.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.22 SHA384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA 384.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.23 SHA3_224 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA-3 with 224 bits.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA3_224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.24 SHA3_256 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA-3 with 256 bits.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA3_256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.25 SHA3_384 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA-3 with 384 bits.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA3_384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.26 SHA3_512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA-3 with 512 bits.

**Example:**

```
dim d as DigestMBS = DigestMBS.SHA3_512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.27 SHA512 as DigestMBS

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the cipher for SHA512.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 79.17.28 Properties

### 79.17.29 BlockSize as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries block size.
**Example:**

```
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.BlockSize)
```

**Notes:** (Read only property)

### 79.17.30 Name as String

MBS Encryption Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the digest engine.
**Notes:** (Read only property)

### 79.17.31 Size as Integer

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries size of digest.
**Example:**

```
dim d as DigestMBS = DigestMBS.SHA512
MsgBox str(d.Size)
```

**Notes:** (Read only property)

## 79.18 class ECDHEMBS

### 79.18.1 class ECDHEMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for ECDH key creation.
**Notes:**

Elliptic Curve Diffie Hellman (ECDH) is an Elliptic Curve variant of the standard Diffie Hellman algorithm. See Elliptic Curve Cryptography for an overview of the basic concepts behind Elliptic Curve algorithms. ECDH is used for the purposes of key agreement.

Constructor to create and map functions into the struct.
EC_Curve_NID An Elliptical Curve ID specified in the openssl header <openssl/obj_mac.h>. (e.g. NID_X9_62_prime256v1)

- 11.6, page 8: News

### 79.18.6 Methods

### 79.18.7 Constructor(CurveID as Integer)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Creates a new key with the given CurveID, e.g. NID_X9_62_prime256v1.

### 79.18.8 DeriveSecretKey(peerKey as string) as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** After receiving a public key from your peer, derive the secret key by combining the peer key with yours.
**Notes:**

Returns a string (i.e. shared secret) that is the result of the EC DHE secret derivation.
Never use a derived secret directly. Typically it is passed through some hash function to produce a key (e.g. SHA512).
peerKey: A string containing the peer's public key.

### 79.18.9 Destructor

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** Public keys and shared secrets should be copied before freeing memory as ecdhe owns the public key and shared secret.

### 79.18.10 LastError as String

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error string.

### 79.18.11 PublicKey as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the public key.
**Example:**

```
dim EC_Curve_ID as Integer = 415 // NID_X9_62_prime256v1
dim ec_dhe as new ECDHEMBS(EC_Curve_ID)
dim publicKey as string = ec_dhe.PublicKey

MsgBox publicKey
```

**Notes:**

Returns a string (i.e. public key) to be shared with your peer; this can be accomplished over the network or by file.
Encoding is PEM, so you can write to a file with .pem file name extension.

### 79.18.12 Properties

### 79.18.13 CurveID as Integer

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Curve ID used in constructor.
**Notes:** (Read only property)

### 79.18.14 CurveIDName as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The textual name of the used curve ID.
**Notes:** (Read only property)

### 79.18.15 ParamsInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Debug Information on the parameters used.
**Notes:** (Read only property)

### 79.18.16 PeerKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Debug Information on the peer key used.
**Notes:** (Read only property)

### 79.18.17 PrivateKeyInfo as String

MBS Encryption Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Debug Information on the private key used.
**Notes:** (Read only property)

### 79.18.18 Constants

### 79.18.19 NID_secp112r1 = 704

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.20 NID_secp112r2 = 705

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.21 NID_secp128r1 = 706

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.22 NID_secp128r2 = 707

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.23 NID_secp160k1 = 708

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.24 NID_secp160r1 = 709

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.25 NID_secp160r2 = 710

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.26 NID_secp192k1 = 711

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.27 NID_secp224k1 = 712

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.28 NID_secp224r1 = 713

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.29 NID_secp256k1 = 714

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.30 NID_secp384r1 = 715

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.31 NID_secp521r1 = 716

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.32 NID_sect113r1 = 717

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.33 NID_sect113r2 = 718

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.34 NID_sect131r1 = 719

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.35 NID_sect131r2 = 720

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.36 NID_sect163k1 = 721

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.37 NID_sect163r1 = 722

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.38 NID_sect163r2 = 723

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.39 NID_sect193r1 = 724

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.40 NID_sect193r2 = 725

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.41 NID_sect233k1 = 726

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.42 NID_sect233r1 = 727

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.43 NID_sect239k1 = 728

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.44 NID_sect283k1 = 729

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.45 NID_sect283r1 = 730

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.46 NID_sect409k1 = 731

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.47 NID_sect409r1 = 732

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.48 NID_sect571k1 = 733

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.49 NID_sect571r1 = 734

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.50 NID_wap_wsg_idm_ecid_wtls1 = 735

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.51 NID_wap_wsg_idm_ecid_wtls10 = 743

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.52 NID_wap_wsg_idm_ecid_wtls11 = 744

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.53 NID_wap_wsg_idm_ecid_wtls12 = 745

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.54 NID_wap_wsg_idm_ecid_wtls3 = 736

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.55 NID_wap_wsg_idm_ecid_wtls4 = 737

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.56 NID_wap_wsg_idm_ecid_wtls5 = 738

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.57 NID_wap_wsg_idm_ecid_wtls7 = 740

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.58 NID_wap_wsg_idm_ecid_wtls8 = 741

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.59 NID_wap_wsg_idm_ecid_wtls9 = 742

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.60 NID_X9_62_c2pnb163v1 = 684

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.61 NID_X9_62_c2pnb163v2 = 685

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.62 NID_X9_62_c2pnb163v3 = 686

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.63 NID_X9_62_c2pnb176v1 = 687

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.64 NID_X9_62_c2pnb208w1 = 693

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.65 NID_X9_62_c2pnb272w1 = 699

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.66 NID_X9_62_c2pnb304w1 = 700

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.67 NID_X9_62_c2pnb368w1 = 702

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.68 NID_X9_62_c2tnb191v1 = 688

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.69 NID_X9_62_c2tnb191v2 = 689

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.70 NID_X9_62_c2tnb191v3 = 690

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.71 NID_X9_62_c2tnb239v1 = 694

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.72 NID_X9_62_c2tnb239v2 = 695

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.73 NID_X9_62_c2tnb239v3 = 696

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.74 NID_X9_62_c2tnb359v1 = 701

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.75 NID_X9_62_c2tnb431r1 = 703

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

### 79.18.76 NID_X9_62_prime256v1 = 415

MBS Encryption Plugin, Plugin Version: 13.4.

**Function:** One of the curve constants.

## 79.19 class ECKeyMBS

### 79.19.1 class ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for Elliptic Curve Digital Signature Algorithm.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

### 79.19.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr6
- MBS Xojo / Real Studio plug-ins in version 15.4

### 79.19.4 Methods

### 79.19.5 BuiltInCurves as Dictionary

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries built in curves.
**Example:**

```
// show curve IDs with description in listbox
dim d as Dictionary = ECKeyMBS.BuiltInCurves
```

```
for each key as Variant in d.keys
Listbox1.AddRow key, d.Value(key)
next
```

**Notes:**

The dictionary returned has as key the ID and the description as value.

The list looks like this:

### 79.19.6 Constructor

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 79.19.7 Copy as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the key.

### 79.19.8 Generate as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates new key and stores in the current object.
**Notes:** Returns true on success or false on failure.

### 79.19.9 GetPrivateKey(Hex as Boolean) as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries priv key.
**Example:**

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
```

```
// show private key
MsgBox e.GetPrivateKey(True)+_
EndOfLine+_
e.GetPrivateKey(False)
```

**Notes:** The private key is a big number, which can be returned as decimal or hexadecimal value.

### 79.19.10 GetPublicKey(byref x as String, byref y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries X and Y of public key.
**Example:**

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
dim x,y as string
If e.GetPublicKey(x, y, False) Then
MsgBox x+EndOfLine+y
End If
```

**Notes:**

The public key is made up with two big numbers, which can be returned as decimal or hexadecimal value.
Returns true on success or false on failure.

### 79.19.11 GetPublicKeyPoint as String

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries Public key as hex string.
**Example:**

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

// show public key
```

msgbox e.GetPublicKeyPoint

**Notes:** Can be queried to save/send and later be assigned with SetPublicKeyPoint.

### 79.19.12 KeyByCurveName(CurveID as Integer, Generate as Boolean = true) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates a new pair of private and public keys.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

**Notes:**

You can use ReadPrivateKey and ReadPublicKey functions to get the keys.
If Generate is false, we create an empty object with private and public keys.

Some possible curve IDs:

### 79.19.13 OpenPrivateKey(Data as String) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a private key.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim PrivateKeyData as string = key.PrivateKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPrivateKey(PrivateKeyData)
MsgBox pub.Description
```

**Notes:** The key is in binary format and you may need to use EncodeBase64/DecodeBase64.

### 79.19.14 OpenPublicKey(Data as String, CurveID as Integer) as ECKeyMBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a public key.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim pubKeyData as string = key.PublicKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPublicKey(pubKeyData, NID_secp192k1)
MsgBox pub.Description
```

### 79.19.15 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the priv key.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PrivateKey
MsgBox EncodeBase64(data)
```

### 79.19.16 PublicKey as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the public key.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim Data as string = key.PublicKey
MsgBox EncodeBase64(data)
```

### 79.19.17 SetPrivateKey(Value as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the key.
**Example:**

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description

// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

**Notes:** Returns true on success or false on failure.

### 79.19.18 SetPublicKey(x as String, y as String, Hex as Boolean) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets X and Y of public key.
**Example:**

```
// make a key
Const NID_secp192k1 = 711
Dim e As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox e.Description
```

```
// get hex
Dim pubk As String = e.GetPublicKeyPoint
Dim priv As String = e.GetPrivateKey(False)

// make new empty key and put in the data
Dim ee As ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1, False)

If ee.SetPrivateKey(priv, False) Then
If ee.SetPublicKeyPoint(pubk) Then
MsgBox ee.Description
Else
Break // failed?
End If
Else
Break // failed?
End If
```

**Notes:** Returns true on success or false on failure.

### 79.19.19 SetPublicKeyPoint(Value as String) as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets public key.
**Notes:** Returns true on success or false on failure.

### 79.19.20 Sign(Data as String) as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs the given data.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

**Notes:**

We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.

### 79.19.21 Verify(SignatureData as String, Data as String) as Boolean

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies the digital signature.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)

if key.Verify(data, sig) then
MsgBox "Signature ok"
end if
```

**Notes:**

Returns true on success. Returns false if data, signature and public key don't belong together.
We highly recommend to use a hash like SHA-512 to preprocess the data.

### 79.19.22 Properties

### 79.19.23 CanSign as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Indicates if an ECKey can be used for signing.
**Notes:**

Returns true if can can sign and false otherwise.
(Read only property)

### 79.19.24 Description as String

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an user readable description text for the current key.
**Example:**

```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)

MsgBox key.Description
```

**Notes:** (Read only property)

### 79.19.25 Flags as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The flag field.
**Notes:**

see OpenSSL for details.
(Read and Write property)

### 79.19.26 Size as Integer

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns size of key.
**Notes:** (Read only property)

### 79.19.27 Valid as Boolean

MBS Encryption Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies that a private and/or public key is valid.
**Notes:**

Returns true on success and false otherwise.
(Read only property)

704 SECG/WTLS curve over a 112 bit prime field
705 SECG curve over a 112 bit prime field
706 SECG curve over a 128 bit prime field

# 79.20 class EncryptMBS

## 79.20.1 class EncryptMBS

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This class does a enryption using a 104 Byte Key.
**Deprecated:** This item is deprecated and should no longer be used. You can use CipherMBS instead.
**Notes:**

Fixed with version 8.1 to work on 64-bit.

This class is kept for compatibility. On new projects please use the blowfishMBS class which offers more options. And two easy usable shared methods to quickly encrypt and decrypt.

Create a EncryptMBS Object using "e=new EncryptMBS". Then initialize it with your password using "e.init(password)". Now you can call Encode and Decode to get your data encrypted.
The GetKey function is only for you to verify if it is working correctly. For the same password, you should always get the same key and the same result for the same data.
Known issues:
The data length must be aligned to 8 bytes for best results.
e.g. "Hello World!" has a length of 12 bytes and the encode function will only do the first 8 bytes.

The result on Mac and Windows is not the same!
See also AESMBS class and BlowfishMBS class.

Uses an older implementation for RC5.

## 79.20.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.1
- MBS Xojo Plugins, version 18.1pr4

## 79.20.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.1
- MBS Xojo Plugins, version 18.1pr4

### 79.20.4 Methods

### 79.20.5 Decode(data as string) as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decodes the string using the key.
**Example:**

```
dim e as new EncryptMBS

e.Init "password"
dim encoded as string = e.encode("Hello World")
MsgBox e.Decode(encoded)
```

**Notes:**

Does nothing without you calling Init before to generate a key.
The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

### 79.20.6 Encode(data as string) as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encodes the string using the key.
**Example:**

```
dim e as new EncryptMBS

e.Init "password"
msgbox e.encode("Hello World")
```

**Notes:**

Does nothing without you calling Init before to generate a key.
The result is a binary string which can contain any ASCII value and may not be printable.
The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

### 79.20.7 Init(password as string)

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates the key needed for encryption based on the provided keyword.
**Example:**

```
dim e as new EncryptMBS
e.init("mypassword")
```

### 79.20.8 Key as string

MBS Encryption Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the key used inside the encryption object.
**Example:**

```
dim e as new EncryptMBS
e.Init "Hello"
msgbox e.key
```

**Notes:** Call Init to generate this key before.

## 79.21 class MD5DigestMBS

### 79.21.1 class MD5DigestMBS

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to calculate the message-digest of a string.
**Notes:**

Same class as the one in RB5, so the same documentation:

The MD5Digest class enables you to process a string in segments. Pass each string segment to the Process method. The value property contains the current message digest and the clear method clears the MD5Digest object so that you can repeat the process.

The MD5 message digest algorithm takes a message of any length and produces a 128-bit "fingerprint" or message digest of the input string. The MD5 algorithm is useful for digital signature applications, where a large file must be processed in a secure manner before being encrypted with a secret key under a system such as RSA.

### 79.21.2 Blog Entries

- Multithreaded plugin functions can increase speed of Xojo application
- MBS Xojo / Real Studio Plugins, version 14.2pr8
- Doing hash or encryption on several CPUs in Xojo

### 79.21.4 Methods

### 79.21.5 clear

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the MD5Digest object so that you can start with a new data stream.

### 79.21.6 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates hash from whole file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 79.21.7 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the a specific HASH based on the key and the data string.

### 79.21.8 MD5(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string.
See also:

- 79.21.9 MD5(data as string) as string 15756

### 79.21.9 MD5(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string.
**Example:**

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5DigestMBS.MD5("Hallo")

msgbox str(StrComp(a,b,0))
```

**Notes:** Same as the MD5 function in RB5.
See also:

- 79.21.8 MD5(data as memoryblock) as string 15755

### 79.21.10 MD5String(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a memoryblock as hex string.
See also:

- 79.21.11 MD5String(data as string) as string 15756

### 79.21.11 MD5String(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MD5 message digest value of a string as hex string.
**Example:**

```
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5DigestMBS.MD5String("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

See also:

- 79.21.10 MD5String(data as memoryblock) as string 15756

### 79.21.12 Process(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes the given data.
See also:

- 79.21.13 Process(Data as string) 15757

### 79.21.13 Process(Data as string)

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Processes the given data.
**Example:**

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new MD5DigestMBS
dim lines(-1) as string

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Process s
wend

lines.append EncodingToHexMBS(m.Value)+" using plugin with MD5DigestMBS"

dim d as new MD5Digest

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
```

```
s=b.Read(1000000)
d.Process s
wend

lines.append EncodingToHexMBS(d.Value)+" using RB with MD5Digest"

// process file in one chunk (small files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.Length)

lines.append EncodingToHexMBS(MD5MBS(s))+" using plugin with MD5MBS()"

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.length)

lines.append EncodingToHexMBS(MD5(s))+" using RB with MD5()"

MsgBox Join(lines,EndOfLine)
```

See also:

- 79.21.12 Process(data as memoryblock) 15757

### 79.21.14 Properties

### 79.21.15 Value as string

MBS Encryption Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Contains the current message digest.
**Notes:** (Read only property)

## 79.22 class OldAESMBS

### 79.22.1 class OldAESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class for AES encryption.
**Example:**

```
dim a as OldAESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234" // 16 byte key for 128bit

a=new OldAESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CipherMBS instead.
**Notes:**

Please don't use this class. This class is deprecated and just kept for compatibility. This class will not be available in 64bit.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

### 79.22.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr5

### 79.22.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr5

### 79.22.4 Methods

### 79.22.5 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
**Notes:**

If odata is nil, idata is used for output.
This is ECB mode.

### 79.22.6 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

### 79.22.7 DecryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.8 DecryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.#

### 79.22.9 DecryptString(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decrypts a string in CFB128 mode.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)
```

```
dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.10 DecryptStringOld(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Decrypts a string in CFB128 mode.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS
```

```
call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.11 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
**Notes:**

If odata is nil, idata is used for output.
This is ECB mode.

### 79.22.12 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

### 79.22.13 EncryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.14 EncryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encryptes the data in CFB128 mode.
**Notes:**

If odata is nil, idata is used for output.

If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.15 EncryptString(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypts a string in CFB128 mode.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.16 EncryptStringOld(idata as string, IVector as memoryblock=nil) as string

MBS Encryption Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encrypts a string in CFB128 mode.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

If IVector is nil, a vector filled with zeros is used.

The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

### 79.22.17 SetKey(key as memoryblock, nBits as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the key.
**Notes:**

possible values for the bitcount:

| | |
|---|---|
| 128 | key is 16 bytes long |
| 192 | key is 24 bytes long |
| 256 | key is 32 bytes long |

See also:

- 79.22.18 SetKey(key as string) as boolean 15767

### 79.22.18 SetKey(key as string) as boolean

MBS Encryption Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the key.
**Example:**

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")
```

```
iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u
```

**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
Please use 16, 24 or 32 byte long key strings.

- 79.22.17 SetKey(key as memoryblock, nBits as Integer) as boolean 15767

## 79.23 class OpenSSLExceptionMBS

### 79.23.1 class OpenSSLExceptionMBS

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The OpenSSL class for error exceptions.
**Notes:** Subclass of the RuntimeException class.

### 79.24.5 Xojo Developer Magazine

- 17.5, page 9: News

### 79.24.6 Methods

### 79.24.7 ErrorString(ErrorCode as Integer) as string

MBS Encryption Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the human readable error string for an OpenSSL error.
**Example:**

```
MsgBox OpenSSLMBS.ErrorString(336109761)
```

### 79.24.8 GeneratePrivateKey(Bits as Integer = 4096, Exp as Integer = 65537, Password as string = """, Algorithm as string = """) as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates a new private key.
**Example:**

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

**Notes:**

Bit size of key should be high.
See RSA key documentation on the web about details.

In Plugin version 16.2 and later this function yields time to other Xojo threads.
Algorithm specifies the encryption algorithm for key encryption. See CipherMBS for cipher names, e.g. "AES-128-CBC". (new in 17.5)

### 79.24.9 GetPublicKey(PrivateKey as String, PrivateKeyPassword as string = "") as string

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts public key from private key.
**Example:**

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

**Notes:** Optionally you can define a password for private key.

### 79.24.10 OpenSSLVersion as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries version of OpenSSL version.
**Example:**

```
MsgBox OpenSSLMBS.OpenSSLVersion
```

### 79.24.11 PKCS7Sign(flags as Integer, InputData as string, SignKey as string, PrivateKey as String, PrivateKeyPassword as string, intermediaCertsData() as string, OutputBinary as boolean) as string

MBS Encryption Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs with SMIME.
**Example:**

```
dim testPrivKey as string = ReadFile("passkey.pem")
dim testCertificate as string = ReadFile("passcertificate.pem")
dim data as string = ReadFile("test.txt")
dim privKeyPassword as string = "12345"

dim intermediateCertificates() as string
intermediateCertificates.Append ReadFile("WWDR.pem")
dim Sign as string = OpenSSLMBS.PKCS7Sign(0, data, testCertificate, testPrivKey, privKeyPassword, intermediateCertificates, true)
```

```
// write result
dim f as FolderItem = SpecialFolder.Desktop.Child("output")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write sign
```

**Notes:**

Returns the signature. If OutputBinary is true, we use DER output, else text based output.
intermediaCertsData array can be empty if you have no intermediate certificates.

### 79.24.12 PKCS7SignData(Certificate as X509MBS, PrivateKey as PKeyMBS, certs() as X509MBS = nil, data as string, flags as Integer = 0) as string

MBS Encryption Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs with PKCS7.
**Notes:**

Returns the signature (binary format = DER).
intermediaCertsData array can be empty or nil if you have no intermediate certificates.

### 79.24.13 PKCS7SignedData(DataP7M as String) as String

MBS Encryption Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads content of signed data in PKCS7 file.
**Example:**

```
// get a file
Dim f As FolderItem = GetFolderItem("/Users/cs/Desktop/p7m/work.xml.p7m", FolderItem.PathTypeNa-
tive)

// read
Dim b As BinaryStream = BinaryStream.Open(f)
Dim s As String = b.Read(b.Length)

// decode
Dim data As String = OpenSSLMBS.PKCS7SignedData(s)

Break
```

**Notes:**

Please pass content of a P7M file, so we can read signed content.
Returns data or empty string if this failed.

### 79.24.14 RandomBytes(count as Integer) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates random bytes.
**Example:**

```
Dim m As MemoryBlock = OpenSSLMBS.RandomBytes(16)
MsgBox EncodeHex(m)
```

**Notes:** Puts count cryptographically strong pseudo-random bytes into MemoryBlock.

### 79.24.15 RandomBytesString(count as Integer) as String

MBS Encryption Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Generates random bytes.
**Example:**

```
Dim p As String = OpenSSLMBS.RandomBytesString(16)
MsgBox EncodeHex(p)
```

**Notes:** Puts count cryptographically strong pseudo-random bytes into string.

### 79.24.16 RSAPrivateDecrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts data using private key.
**Example:**

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
```

```
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

**Notes:**

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

### 79.24.17 RSAPrivateEncrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts data using private key.
**Example:**

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

**Notes:**

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

### 79.24.18 RSAPublicDecrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts data using public key.
**Example:**

```
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

**Notes:**

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it's <= length of key.

### 79.24.19 RSAPublicEncrypt(data as string, PublicKey as string, padding as Integer = 1, Password as string = "") as String

MBS Encryption Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts data using public key.
**Example:**

```
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
```

**Notes:**

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it's <= length of key.

### 79.24.20 SignData(data as string, key as string, Password as string = "") as string

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs a piece of data with a given private key.
**Example:**

```
dim data as string // some data
dim test as string // the private key PEM file content
dim Signature as string = OpenSSLMBS.SignData(data, test)
msgbox EncodeHex(Signature)
```

**Notes:**

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a SHA1 hash of the data, open the private RSA key and do a RSA sign operation. We return the raw key as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 79.24.21 SignData(data as string, key as string, Password as string = """, Algorithm as Integer) as string 15778

### 79.24.21 SignData(data as string, key as string, Password as string = """, Algorithm as Integer) as string

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs a piece of data with a given private key.
**Example:**

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA256)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA256)
```

**Notes:**

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 79.24.20 SignData(data as string, key as string, Password as string = "") as string 15777

### 79.24.22 SMimePKCS7Decrypt(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts S/Mime PKCS# 7 encrypted data.
**Notes:**

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

### 79.24.23 SMimePKCS7Encrypt(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts data with S/Mime PKCS# 7.
**Notes:**

Raises nil object exception if certificate is nil.
Returns empty text on error.

### 79.24.24 SMimePKCS7Sign(InputData as string, Certificate as X509MBS, SignKey as PKeyMBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Signs data with S/Mime PKCS# 7.
**Notes:**

Raises nil object exception if certificate or key is nil.
Returns empty text on error.

### 79.24.25 SMimePKCS7Verify(InputData as string, Certificate as X509MBS) as String

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies S/Mime PKCS# 7 signature.
**Notes:**

Raises nil object exception if certificate is nil.
Returns empty text on error.

### 79.24.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies a signature with given data and public key.
**Notes:**

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A SHA1 hash is performed and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 79.24.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean 15780

### 79.24.27 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

MBS Encryption Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies a signature with given data and public key.
**Example:**

```
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature

Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
```

```
if Signature = "" then
// failed
break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA512)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA512)
```

**Notes:**

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare agains. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 79.24.26 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean 15780

### 79.24.28 Constants

### 79.24.29 kAlgorithmSHA1 = 1

MBS Encryption Plugin, Plugin Version: 16.0.

**Function:** One of the hash algorithms.
**Notes:** SHA 1.

### 79.24.30 kAlgorithmSHA224 = 2

MBS Encryption Plugin, Plugin Version: 16.0.

**Function:** One of the hash algorithms.
**Notes:** SHA 2 with 224bit.

### 79.24.31 kAlgorithmSHA256 = 3

MBS Encryption Plugin, Plugin Version: 16.0.

**Function:** One of the hash algorithms.
**Notes:** SHA 2 with 256bit.

### 79.24.32 kAlgorithmSHA384 = 4

MBS Encryption Plugin, Plugin Version: 16.0.

**Function:** One of the hash algorithms.
**Notes:** SHA 2 with 384bit.

### 79.24.33 kAlgorithmSHA512 = 5

MBS Encryption Plugin, Plugin Version: 16.0.

**Function:** One of the hash algorithms.
**Notes:** SHA 2 with 512bit.

### 79.24.34 kPaddingNone = 3

MBS Encryption Plugin, Plugin Version: 16.2.

**Function:** One of the padding options for RSA encryption.
**Notes:** Raw RSA encryption. This mode should only be used to implement cryptographically sound padding modes in the application code. Encrypting user data directly with RSA is insecure.

### 79.24.35 kPaddingPKCS1 = 1

MBS Encryption Plugin, Plugin Version: 16.2.

**Function:** One of the padding options for RSA encryption.
**Notes:** PKCS # 1 v1.5 padding. This currently is the most widely used mode.

### 79.24.36 kPaddingPKCS1OAEP = 4

MBS Encryption Plugin, Plugin Version: 16.2.

**Function:** One of the padding options for RSA encryption.
**Notes:** EME-OAEP as defined in PKCS # 1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications.

### 79.24.37 kPaddingSSLv23 = 2

MBS Encryption Plugin, Plugin Version: 16.2.

**Function:** One of the padding options for RSA encryption.
**Notes:** PKCS # 1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable.

### 79.24.38 kPaddingX931 = 5

MBS Encryption Plugin, Plugin Version: 16.2.

**Function:** One of the padding options for RSA encryption.
**Notes:** X931 padding.

## 79.25 module PassSignerMBS

### 79.25.1 module PassSignerMBS

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The module to sign iOS passes from a Mac app.

### 79.25.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

### 79.25.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr7

### 79.25.4 Methods

### 79.25.5 signPass(Pass as folderitem, CertSuffix as String, Output as folderitem, Zip as boolean = true) as boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Sign a pass.
**Notes:**

Pass: Input folder with pass files.
CertSuffix: The certificate suffix.
Output: Where to store the new pass.
Zip: If true, we do the last step to zip the pass.
Returns true if signed or false if failed.

### 79.25.6 verifyPassSignature(pass as folderitem) as Boolean

MBS MacExtras Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Verify a pass.
**Notes:**

Pass must point to the pass file (a zip archive).
Returns true if verified and false if failed.

## 79.26 class PKeyMBS

### 79.26.1 class PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a public/private key.
**Notes:**

Currently this class only implements a part of the PKey functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 79.26.8 Methods

### 79.26.9 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
**Notes:**

Creates a new empty key.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 79.26.10 Copy as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the key.

### 79.26.11 Open(Data as MemoryBlock) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a private or public key.
**Notes:** Returns key or nil in case of error.
See also:

- 79.26.12 Open(Data as String) as PKeyMBS

### 79.26.12 Open(Data as String) as PKeyMBS

MBS Encryption Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a private or public key.
**Notes:** Returns key or nil in case of error.
See also:

- 79.26.11 Open(Data as MemoryBlock) as PKeyMBS 15786

### 79.26.13 PrivateKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The key as binary representation.
**Notes:** You can write this to a pem file.

### 79.26.14 PublicKeyData as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The key as binary representation.
**Notes:** You can write this to a pem file.

### 79.26.15 Properties

### 79.26.16 Bits as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of bits of key.
**Notes:** (Read only property)

### 79.26.17 DescriptionParams as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The description of the parameters.
**Notes:**

This is only for human to read.
(Read only property)

### 79.26.18 DescriptionPrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The description of private/public key.
**Notes:**

If no private key is there, you only get the public key part here.
This is only for human to read.
(Read only property)

### 79.26.19 DescriptionPublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The description of public key.
**Notes:**

This is only for human to read.
(Read only property)

### 79.26.20 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the key.
**Notes:** (Read and Write property)

### 79.26.21 ID as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The ID (type) of the key.
**Notes:** (Read only property)

### 79.26.22 PrivateKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the private key.
**Notes:**

This is the binary representation.
(Read only property)

### 79.26.23 PublicKey as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the public key.
**Notes:**

This is the binary representation.
(Read only property)

### 79.26.24 Size as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the key in bytes.
**Notes:** (Read only property)

### 79.26.25 Type as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of key.
**Notes:** (Read only property)

### 79.26.26 TypeString as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of key as string.
**Notes:**

EC, DSA, RSA or DH.
(Read only property)

## 79.27 class RC4MBS

### 79.27.1 class RC4MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An implementation of the RC4 algorithem.
**Example:**

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:**

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

### 79.27.2 Methods

### 79.27.3 Constructor(key as MemoryBlock)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the class with the given key.
See also:

- 79.27.4 Constructor(key as string)

### 79.27.4 Constructor(key as string)

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the class with the given key.
**Example:**

```
dim r as new RC4MBS("MyKey")
dim s as string = r.Crypt("MyData")

MsgBox EncodeHex(s)
```

**Notes:** Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 79.27.3 Constructor(key as MemoryBlock) 15790

### 79.27.5 Crypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes or decryptes the given Memoryblock.
See also:

- 79.27.6 Crypt(data as string) as string 15791

### 79.27.6 Crypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encryptes or decryptes the given string.
**Example:**

```
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
```

```
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:**

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 79.27.5 Crypt(data as Memoryblock) as Memoryblock 15791

# 79.28 class RC5MBS

## 79.28.1 class RC5MBS

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for RC5 encryption.
**Example:**

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:**

Do use to read existing RC5 encrypted things.
New projects may better use a better encryption.

## 79.28.2 Methods

## 79.28.3 Constructor(key as MemoryBlock, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Example:**

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")
```

MsgBox EncodeHex(s)

See also:

- 79.28.4 Constructor(key as string, rounds as Integer = 16) 15794

### 79.28.4 Constructor(key as string, rounds as Integer = 16)

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Example:**

```
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")

MsgBox EncodeHex(s)
```

**Notes:** Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 79.28.3 Constructor(key as MemoryBlock, rounds as Integer = 16) 15793

### 79.28.5 decrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Notes:** Low level variant without any block mode.
See also:

- 79.28.6 decrypt(data as string) as string 15794

### 79.28.6 decrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

• 79.28.5 decrypt(data as Memoryblock) as Memoryblock 15794

### 79.28.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Notes:** With Cipher Block Chaining mode.
See also:

• 79.28.8 decryptCBC(data as string, iv as memoryblock = nil) as string 15795

### 79.28.8 decryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

• 79.28.7 decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 15795

### 79.28.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Example:**

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
```

```
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:** with Cipher Feedback mode.
See also:

- 79.28.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 15796

### 79.28.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 79.28.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15795

### 79.28.11 encrypt(data as Memoryblock) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:** Low level variant without any block mode.
See also:

- 79.28.12 encrypt(data as string) as string 15796

### 79.28.12 encrypt(data as string) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 79.28.11 encrypt(data as Memoryblock) as Memoryblock 15796

### 79.28.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:** With Cipher Block Chaining mode.
See also:

- 79.28.14 encryptCBC(data as string, iv as memoryblock = nil) as string 15797

### 79.28.14 encryptCBC(data as string, iv as memoryblock = nil) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 79.28.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock 15797

### 79.28.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Example:**

```
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
```

```
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:** with Cipher Feedback mode.
See also:

- 79.28.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string 15798

### 79.28.16 encryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 79.28.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15797

### 79.28.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:** with Output Feedback mode.
See also:

- 79.28.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string 15799

### 79.28.18 encryptOFB64(data as string, iv as memoryblock, byref num as Integer) as string

MBS Encryption Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts some data.
**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.
with Output Feedback mode.
See also:

- 79.28.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock 15798

## 79.29 class SHA1MBS

### 79.29.1 class SHA1MBS

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An implementation of the SHA1 algorithem to calculate hash values.
**Example:**

```
dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new SHA1MBS

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
m.Add s

wend

MsgBox EncodingToHexMBS(m.Result)+" using plugin with SHA1MBS"
```

**Notes:**

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

### 79.29.6 Methods

### 79.29.7 Add(data as string)

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds more input bytes to the current hash.
**Example:**

```
dim s as new SHA1MBS
s.Reset
s.Add "Hello"
s.Add "World"
dim e as string=s.Result
```

**Notes:** Lasterror is set.

### 79.29.8 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hash string for the given key.
**Example:**

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

**Notes:**

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.

### 79.29.9 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates hash from whole file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 79.29.10 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the hash string for the given key.
**Example:**

MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

**Notes:**

The string returned is 20 bytes long (if successfull) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.
Returns the digest as text string with hexadecimal digits.

### 79.29.11 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the a specific HASH based on the key and the data string.
**Example:**

```
Function HMAC(key as string, data as string) As string
// Implementation by Matthijs van Duin
# pragma DisableBackgroundTasks

dim ikey, okey, k as string
dim temp, i as Integer

if (lenB(key) >64) then
k = Hash(key)
else
k = key
end if

for i = 1 to 64
temp = ascB(midB(k, i, 1))
ikey = ikey + chrB(BitwiseXor(temp, & h36))
okey = okey + chrB(BitwiseXor(temp, & h5C))
next

return Hash(okey + Hash(ikey + data))
End Function

// test code:

// de7c9b85b8b78aa6bc8a7a36f70a90701c9db4d9
dim s as string = SHA1MBS.HMAC("key", "The quick brown fox jumps over the lazy dog")
MsgBox EncodeHex(s)

// fbdb1d1b18aa6c08324b7d64b71fb76370690e1d
s = SHA1MBS.HMAC("", "")
MsgBox EncodeHex(s)
```

**Notes:** Above is the source code of this function.

### 79.29.12 Reset

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the current hash value.

### 79.29.13 Result as string

MBS Encryption Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current hash value.
**Notes:**

Returns "" on any error.
Lasterror is set.

### 79.29.14 ResultText as string

MBS Encryption Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current hash value.
**Notes:**

Returns the digest as text string with hexadecimal digits.
Returns "" on any error.
Lasterror is set.

# 79.30 class SHA256MBS

## 79.30.1 class SHA256MBS

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to calculate SHA-256 hashes.
**Example:**

```
dim s3 as string = SHA256MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)
dim e4 as string = SHA256MBS.HashText("")

if e3 <>"e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855" then
break
elseif e3 <>e4 then
break
else
MsgBox "OK"
end if
```

### 79.30.4 Methods

### 79.30.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data to the hash calculation.
**Example:**

```
dim s as new SHA256MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** Using this method you can process huge amounts of data by passing them in small portions.

### 79.30.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim s2 as string = SHA256MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "78206a866dbb2bf017d8e34274aed01a8ce405b69d45db30bafa00f5eeed7d5e" then
Msgbox "OK"
else
MsgBox "Failed"
```

```
end if
```

**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.30.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates hash from whole file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 79.30.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim s1 as string = SHA256MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** Returns the digest as text string with hexadecimal digits.

### 79.30.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the a specific HASH based on the key and the data string.

### 79.30.10 Reset

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the hash class so you can reuse it for the SHA-256 hash.

### 79.30.11 Result as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash.
**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.30.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash.
**Notes:** Returns the digest as text string with hexadecimal digits.

# 79.31 class SHA3MBS

## 79.31.1 class SHA3MBS

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to calculate SHA-3 hashes.
**Example:**

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

## 79.31.4 Methods

## 79.31.5 Add(data as memoryblock)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data to the hash calculation.
**Notes:** Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 79.31.6 Add(data as string) 15810

### 79.31.6 Add(data as string)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data to the hash calculation.
**Notes:** Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 79.31.5 Add(data as memoryblock) 15809

### 79.31.7 Constructor(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Example:**

```
dim s as new SHA3MBS(1088, 512) // 256 bit

s.Add "Compute Me"
s.Add "Me too"

dim h as string = s.ResultText(256/8)

Break
```

**Notes:** See example project or SHA-3 documentation for useful values for Rate and Capacity.

### 79.31.8 Hash(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.Hash(t, 1088, 512, 32)

// encode as text to display
h = EncodeHex(h)
// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

**Notes:**

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.31.9 HashText(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.HashText(t, 1088, 512, 32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

**Notes:**

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.

### 79.31.10 Reset(Rate as UInt32, capacity as UInt32)

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the hash class so you can reuse it for another SHA-3 hash.

### 79.31.11 Result(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash in the requested length.
**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.31.12 ResultText(outputLength as Integer) as string

MBS Encryption Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash in the requested length.
**Example:**

```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)

s.Add t
dim h as string = s.ResultText(32)

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h
```

**Notes:** Returns the digest as text string with hexadecimal digits.

## 79.32 class SHA512MBS

### 79.32.1 class SHA512MBS

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to calculate SHA-512 hashes.
**Example:**

```
dim s3 as string = SHA512MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)

if e3 = "CF83E1357EEFB8BDF1542850D66D8007D620E4050B5715DC83F4A921D36CE9CE47D0D13C5D85F2B0FF8318D2
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

### 79.32.4 Methods

### 79.32.5 Add(data as string)

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds data to the hash calculation.
**Example:**

```
dim s as new SHA512MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** Using this method you can process huge amounts of data by passing them in small portions.

### 79.32.6 Hash(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim s2 as string = SHA512MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "90B30EF9902AE4C4C691D2D78C2F8FA0AA785AFBC5545286B310F68E91DD2299C84A2484F0419FC5EAA7DE5
then
Msgbox "OK"
else
```

```
MsgBox "Failed"
end if
```

**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.32.7 HashFile(file as FolderItem, Hex as boolean = true) as string

MBS Encryption Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates hash from whole file.
**Notes:**

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 79.32.8 HashText(data as string) as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```
dim s1 as string = SHA512MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A
then
Msgbox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** Returns the digest as text string with hexadecimal digits.

### 79.32.9 HMAC(key as string, data as string) as string

MBS Encryption Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the a specific HASH based on the key and the data string.

### 79.32.10 Reset

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the hash class so you can reuse it for the SHA-256 hash.

### 79.32.11 Result as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash.
**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 79.32.12 ResultText as string

MBS Encryption Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The final hash.
**Notes:** Returns the digest as text string with hexadecimal digits.

## 79.33 module TwofishMBS

### 79.33.1 module TwofishMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for Twofish encryption.
**Notes:** You can use this class for compatibility to PHP.

### 79.33.8 Methods

### 79.33.9 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts with CBC mode and memoryblocks.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.10 DecryptCBC(Key as String, InputData as String, IV as String) as String

### 79.33.10 DecryptCBC(Key as String, InputData as String, IV as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts with CBC mode and strings.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.

- 79.33.9 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock 15818

### 79.33.11 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts with ECB mode and memoryblocks.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.12 DecryptECB(Key as String, InputData as String) as String 15820

### 79.33.12 DecryptECB(Key as String, InputData as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrypts with ECB mode and strings.

**Example:**

```
// key is 16 bytes, so 128 bit
dim key as string = "Hello World 1234"

// some UTF-8 input
dim InputData as string = "Just a test. √§√√º"
InputData = ConvertEncoding(InputData, encodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)

// restore encoding
Decrypted = DefineEncoding(Decrypted, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decrypted, chrb(0))
if p >0 then
Decrypted = leftb(Decrypted, p-1)
end if

// check
if Decrypted = InputData then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.11 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock 15820

### 79.33.13 EncryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts with CBC mode and memoryblocks.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV
```

```
// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.14 EncryptCBC(Key as String, InputData as String, IV as String) as String 15822

### 79.33.14 EncryptCBC(Key as String, InputData as String, IV as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts with CBC mode and string.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV
```

```
// some UTF-8 input
dim InputText as string = "Just a test. √§√√º"
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.13 EncryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock 15821

### 79.33.15 EncryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts with ECB mode and memoryblocks.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
```

```
dim InputText as string = "Just a test. √§√√º"
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.16 EncryptECB(Key as String, InputData as String) as String 15824

### 79.33.16 EncryptECB(Key as String, InputData as String) as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Encrypts with ECB mode and strings.
**Example:**

```
// key is 16 bytes, so 128 bit
dim key as string = "Hello World 1234"

// some UTF-8 input
dim InputData as string = "Just a test. √§√√º"
InputData = ConvertEncoding(InputData, encodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)
```

```
// restore encoding
Decrypted = DefineEncoding(Decrypted, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decrypted, chrb(0))
if p >0 then
Decrypted = leftb(Decrypted, p-1)
end if

// check
if Decrypted = InputData then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 79.33.15 EncryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock 15823

## 79.34 class UUIDMBS

### 79.34.1 class UUIDMBS

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to create Universally Unique Identifier.
**Example:**

```
dim u as UUIDMBS

u=new UUIDMBS

MsgBox EncodingToHexMBS(u.ValueString)
```

**Notes:**

This class creates a 128 bit UUID (or UID or GUID) which is random.

On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

If you need to validate a GUID or UUID, please check the Validate function.

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0pr5

- MBS REALbasic Plugins, version 10.6pr6

### 79.34.4 Methods

### 79.34.5 randomUUID as UUIDMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a random v4 GUID.
**Example:**

```
for i as Integer = 1 to 20
Listbox1.AddRow UUIDMBS.randomUUID.ValueFormattedString
next
```

**Notes:**

This is using random numbers.
It is unlikely, but possible to have duplicates.
The UUID function checks for that.

### 79.34.6 UUID as UUIDMBS

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new UUID with system functions.
**Notes:**

On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

### 79.34.7 Validate(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Validates the given UUID/GUID.
**Example:**

```
// wrong
dim w1 as string = UUIDMBS.Validate("hello") // wrong due to missing {
dim w2 as string = UUIDMBS.Validate("550e8400-z29b-11d4-a716-446655440000",1) // wrong with, with z
```

```
dim w3 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus
dim w4 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-44665544000 } ") // wrong with being too short
dim w5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end
dim w6 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4
dim w7 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1)
dim o2 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ")
dim o3 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)
dim o4 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)
dim o5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)
dim o6 as string = UUIDMBS.Validate(" { 550e8400e29b11d4a716446655440000 } ", 2)
dim o7 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed
dim o8 as string = UUIDMBS.Validate("550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing { , but fixed
dim o9 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4
dim o10 as string = UUIDMBS.Validate("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1
dim o11 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger
```

**Notes:**

If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

### 79.34.8 ValueFormattedString(WithBrackets as Boolean = true) as String

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The UUID as a 38 character formatted hex string.

**Example:**

```
dim u as new UUIDMBS
MsgBox u.ValueFormattedString
```

**Notes:**

example output: { D3ED4292-FC09-11DF-8AC5-7C6D628C4C29 }

Added WithBrackets parameter in version 22.1, so you can turn curly brackets off.

### 79.34.9 ValueHexString as String

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The UUID as a 32 character long hex string.
**Example:**

```
dim u as new UUIDMBS
MsgBox u.ValueHexString
```

**Notes:** example output: DCACAF4EFC0911DF92E37C6D628C4C29

### 79.34.10 ValueMemory as Memoryblock

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The UUID as a sixteen byte big memoryblock.

### 79.34.11 ValueString as String

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The UUID as a sixteen byte big binary string.
**Example:**

```
dim u as new UUIDMBS
MsgBox u.ValueString
```

**Notes:** This string is not for user display as it contains unreadable characters.

### 79.34.12 Properties

### 79.34.13 Lasterror as Integer

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Last error code.
**Notes:**

-1 is for failure, 0 for okay.
Windows or Mac OS error codes else.
(Read and Write property)

### 79.34.14 Valid as Boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the constructor was able to create an UUID.
**Notes:** (Read and Write property)

# 79.35 class X509MBS

## 79.35.1 class X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a X509 certificate.
**Notes:**

Currently this class only implements a part of the X509 functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 79.35.8 Methods

### 79.35.9 CheckCertificates(rootCertificates() as X509MBS, certificate as X509MBS, intermediates() as X509MBS = nil) as Boolean

MBS Encryption Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Validates certificate agains root certificates and may use intermediates for it.
**Notes:**

Returns true if valid or false if not.

This function attempts to discover and validate a certificate chain based on parameters in context. The verification context, is constructed using given root certificates.

### 79.35.10 Constructor

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 79.35.11 Copy as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the certificate.

### 79.35.12 Data as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data of the certificate.
**Notes:** You can write this to a PEM file.

### 79.35.13 Open(Data as MemoryBlock) as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a X509 PEM file.
**Notes:** Line endings must be LF, not CR.
See also:

- 79.35.14 Open(Data as String) as X509MBS 15833

### 79.35.14 Open(Data as String) as X509MBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a X509 PEM file.
**Notes:**

Please read file via binarystream and pass here as string.
Line endings must be LF, not CR.
See also:

- 79.35.13 Open(Data as MemoryBlock) as X509MBS 15833

### 79.35.15 ReadFromPkcs12(Data as String, Pass as String, byref PKey as PKeyMBS, byref Cert as X509MBS, byref certs() as X509MBS) as Boolean

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads certificate and private key from a PKCS12 file.
**Example:**

```
dim f as FolderItem = FindFile("test.p12")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim c as X509MBS
dim p as PKeyMBS
dim others() as X509MBS

if X509MBS.ReadFromPkcs12(s, "HelloWorld", p, c, others) then
MsgBox c.Name
end if
```

**Notes:**

Data is the content of the PKCS12 file.
Returns true on success or false on failure.

### 79.35.16 ReadFromPkcs7(Data as String, Pass as String, byref certs() as X509MBS) as Boolean

MBS Encryption Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads certificates from PKCS# 7 data.
**Example:**

```
dim contents as string // PKCS# 7 file data
Dim certs() As X509MBS
If X509MBS.ReadFromPkcs7(contents, "", certs) Then

Dim x As X509MBS = certs(0)
If x <>Nil Then
// show it
TextArea1.Text= x.Description
end if
End If
```

**Notes:**

Returns true on success.
Only for PKCS# 7 data containing signatures.

### 79.35.17 Verify(PublicKey as PKeyMBS) as Integer

MBS Encryption Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies the signature of certificate using given public key.
**Notes:**

Returns 1 if valid, 0 if key is not valid, but -1 if format of key is invalid.
Calls X509_verify internally in OpenSSL.

### 79.35.18 Properties

### 79.35.19 Description as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The textual description of the certificate.
**Notes:**

This is only for human to read.
(Read only property)

### 79.35.20 Handle as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 79.35.21 IssuerName as Dictionary

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The issuer name.
**Notes:** (Read only property)

### 79.35.22 Name as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the certificate.
**Notes:** (Read only property)

### 79.35.23 PublicKey as PKeyMBS

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts public key.
**Notes:** (Read only property)

### 79.35.24 SerialNumber as String

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The serial number as text.
**Notes:** (Read only property)

### 79.35.25 SubjectName as Dictionary

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The subject name.
**Notes:** (Read only property)

### 79.35.26 ValidNotAfter as Date

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The date where the certificate expires.
**Example:**

```
// read certificate
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pem")
Dim b As BinaryStream = BinaryStream.Open(f, False)
Dim s As String = b.Read(b.Length)

// parse the certificate
```

```
Dim x As X509MBS = X509MBS.Open(s)

// check dates
MsgBox x.ValidNotBefore.SQLDateTime + EndOfLine + x.ValidNotAfter.SQLDateTime
```

**Notes:**

In GMT time zone.
(Read only property)

### 79.35.27 ValidNotAfterDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The date where the certificate expires.
**Notes:**

In GMT time zone.
(Read only property)

### 79.35.28 ValidNotBefore as Date

MBS Encryption Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The date where the certificate was created.
**Example:**

```
// read certificate
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pem")
Dim b As BinaryStream = BinaryStream.Open(f, False)
Dim s As String = b.Read(b.Length)

// parse the certificate
Dim x As X509MBS = X509MBS.Open(s)

// check dates
MsgBox x.ValidNotBefore.SQLDateTime + EndOfLine + x.ValidNotAfter.SQLDateTime
```

**Notes:**

In GMT time zone.
(Read only property)

### 79.35.29 ValidNotBeforeDateTime as DateTime

MBS Encryption Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The date where the certificate was created.
**Notes:**

In GMT time zone.
(Read only property)

### 79.35.30 Version as Integer

MBS Encryption Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the file.
**Notes:**

Currently usually 2 for version 3.
(Read only property)

# Chapter 80

# Endian

## 80.1 Globals

### 80.1.1 EndianS16_BtoLMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.2 EndianS16_BtoNMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.3 EndianS16_LtoBMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.4 EndianS16_LtoNMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.5 EndianS16_NtoBMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.6 EndianS16_NtoLMBS(n as Int16) as Int16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.7 EndianS32_BtoLMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.8 EndianS32_BtoNMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.9 EndianS32_LtoBMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.10 EndianS32_LtoNMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:

S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.11 EndianS32_NtoBMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.12 EndianS32_NtoLMBS(n as Int32) as Int32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.13 EndianSwap16MBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Swaps a 16 bit integer.

### 80.1.14 EndianSwap32MBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Swaps a 32 bit integer.

### 80.1.15 EndianU16_BtoLMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.16 EndianU16_BtoNMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.17 EndianU16_LtoBMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.18 EndianU16_LtoNMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.19 EndianU16_NtoBMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.20 EndianU16_NtoLMBS(n as UInt16) as UInt16

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.21 EndianU32_BtoLMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.22 EndianU32_BtoNMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:

S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.23 EndianU32_LtoBMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.24 EndianU32_LtoNMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Int32) as Int32
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.25 EndianU32_NtoBMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 80.1.26 EndianU32_NtoLMBS(n as UInt32) as UInt32

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

# Chapter 81

# Exif

## 81.1 class ExifTagMBS

### 81.1.1 class ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a data tag in EXIF.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 81.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr3

### 81.1.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr3

### 81.1.4 Methods

### 81.1.5 Constructor

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 81.1.6 Destructor

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 81.1.7 Values as Variant()

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries all values for the current tag.
**Notes:** Number of entries should be equal to components property.

### 81.1.8 Properties

### 81.1.9 ByteCount as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of bytes used for this tag's data.
**Notes:** (Read only property)

### 81.1.10 Components as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of components.
**Notes:**

Some values can be arrays, so components is greater than 1.
(Read only property)

### 81.1.11 DataPointer as Ptr

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The pointer to the data.
**Notes:**

Points into the MemoryBlock stored in data property of ExifTagsMBS object.
(Read only property)

### 81.1.12 Endian as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The endian setting for this value.
**Notes:**

See kEndian* constants.
(Read only property)

### 81.1.13 Format as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data format of this entry.
**Notes:**

See kFormat* constants.
(Read only property)

### 81.1.14 IsNumeric as Boolean

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether this tag is a numeric data type.
**Notes:**

False if format is invalid, string or undefined.
(Read only property)

### 81.1.15 StringValue as String

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value as string to display.
**Notes:**

Returns list of values with comma separated if there are multiple numeric values.
String or unknown fields are interpreted as text and trimmed.

(Read only property)

### 81.1.16 Tag as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag ID.
**Notes:**

See EXIF data format documentation for complete list of possible values.
(Read only property)

### 81.1.17 TagName as String

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the tag.
**Notes:**

We have a list of known tags where we lookup the name for you.
(Read only property)

### 81.1.18 Value as Variant

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value of the tag.
**Notes:**

First value for multi value objects (if Components >1).
(Read and Write property)
See also:

- 81.1.19 Value(ComponentIndex as Integer) as Variant 15852

### 81.1.19 Value(ComponentIndex as Integer) as Variant

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The value of the given component.
**Notes:**

ComponentIndex is from 0 to Components-1.
e.g. GPS Coordinate may be stored as 3 values (hour, minute and second)

(Read and Write computed property)
See also:

- 81.1.18 Value as Variant 15852

### 81.1.20 Constants

### 81.1.21 kEndianBig = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the endian constants.
**Notes:** Value is stored in big endian format.

### 81.1.22 kEndianLittle = 2

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the endian constants.
**Notes:** Value is stored in little endian format.

### 81.1.23 kEndianUnknown = 0

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the endian constants.
**Notes:** Unknown

### 81.1.24 kFlashAuto = & h18

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Auto

### 81.1.25 kFlashFired = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Fired

### 81.1.26 kFlashFlashFunctionPresent = & h20

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Flash Function Present

### 81.1.27 kFlashNo = 0

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** No flash

### 81.1.28 kFlashOff = & h10

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Off

### 81.1.29 kFlashOn = 8

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** On

### 81.1.30 kFlashRedEyeReduction = & h40

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Red Eye Reduction

### 81.1.31 kFlashStrobeReturnLightDetected = 6

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the flash constants.
**Notes:** Strobe Return Light Detected

### 81.1.32 kFormatByte = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Byte data. (UInt8)

### 81.1.33 kFormatDouble = 12

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Double

### 81.1.34 kFormatInvalid = 0

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Invalid

### 81.1.35 kFormatSByte = 6

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Signed byte

### 81.1.36 kFormatSingle = 11

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Single

### 81.1.37 kFormatSLong = 9

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Signed long

### 81.1.38 kFormatSRational = 10

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Signed rational value.

### 81.1.39 kFormatSShort = 8

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Signed short. (Int16)

### 81.1.40 kFormatString = 2

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Text

### 81.1.41 kFormatULong = 4

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Unsigned long. (UInt32)

### 81.1.42 kFormatUndefined = 7

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Undefined

### 81.1.43 kFormatURational = 5

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Unsigned rational value.

### 81.1.44 kFormatUShort = 3

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the data format constants.
**Notes:** Unsigned short. (UInt16)

### 81.1.45 kOrientationBottomLeft = 4

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Bottom Left

### 81.1.46 kOrientationBottomRight = 3

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Bottom Right

### 81.1.47 kOrientationLeftBottom = 8

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Left Bottom

### 81.1.48 kOrientationLeftTop = 5

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Left Top

### 81.1.49 kOrientationRightBottom = 7

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Right Bottom

### 81.1.50 kOrientationRightTop = 6

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Right Top

### 81.1.51 kOrientationTopLeft = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Top Left

### 81.1.52 kOrientationTopRight = 2

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the orientation constants.
**Notes:** Top Right

### 81.1.53 kTagArtist = & h13B

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.54 kTagCopyright = & h8298

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.55 kTagDateTime = & h132

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.56 kTagDescription = & h10E

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.57 kTagExposureTime = & h829A

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.58 kTagFlashUsed = & h9209

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.59 kTagFNumber = & h829D

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.60 kTagGPSAltitude = 6

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.61 kTagGPSAltitudeRef = 5

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.62 kTagGPSAreaInformation = & h1C

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.63 kTagGPSDateStamp = & h1D

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.64 kTagGPSDestBearing = & h18

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.65 kTagGPSDestBearingRef = & h17

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.66 kTagGPSDestDistance = & h1A

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.67 kTagGPSDestDistanceRef = & h19

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.68 kTagGPSDestLatitude = & h14

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.69 kTagGPSDestLatitudeRef = & h13

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.70 kTagGPSDestLongitude = & h16

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.71 kTagGPSDestLongitudeRef = & h15

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.72 kTagGPSDifferential = & h1E

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.73 kTagGPSDOP = 11

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.74 kTagGPSImgDirection = & h11

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.75 kTagGPSImgDirectionRef = & h10

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.76 kTagGPSLatitude = 2

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.77 kTagGPSLatitudeRef = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.78 kTagGPSLongitude = 4

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.79 kTagGPSLongitudeRef = 3

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.80 kTagGPSMapDatum = & h12

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.81 kTagGPSMeasureMode = 10

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.82 kTagGPSProcessingMethod = & h1B

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.83 kTagGPSSatellites = 8

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.84 kTagGPSSpeed = 13

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.85 kTagGPSSpeedRef = 12

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.86 kTagGPSStatus = 9

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.87 kTagGPSTimeStamp = 7

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.88 kTagGPSTrack = 15

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.89 kTagGPSTrackRef = 14

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.90 kTagGPSVersion = 0

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.91 kTagImageHeight = & h101

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.92 kTagImageWidth = & h100

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.93 kTagMake = & h10F

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.94 kTagModel = & h110

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.95 kTagOrientation = & h112

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.96 kTagResolutionUnit = & h128

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.97 kTagSoftware = & h131

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.98 kTagThumbnailLength = & h202

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.99 kTagThumbnailOffset = & h201

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.100 kTagUserComment = & h9286

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.101 kTagXResolution = & h11A

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.102 kTagYResolution = & h11B

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the tag constant.

### 81.1.103 kUnitCentimeter = 3

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the unit constants.
**Notes:** Pixel per centimeter

### 81.1.104 kUnitInch = 2

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the unit constants.
**Notes:** Pixel per Inches

### 81.1.105 kUnitUndefined = 1

MBS Images Plugin, Plugin Version: 20.2.

**Function:** One of the unit constants.
**Notes:** Undefined.

## 81.2 class ExifTagsMBS

### 81.2.1 class ExifTagsMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The EXIF class.
**Notes:**

This is a home grown class to parse Exif and allow small modifications.
Great to just read values or to update a date field.
This class does not allow to add values or to increase text lengths.
But you can take a template EXIF from one picture, change values and store it with another one.

See also CGImageSourceMBS class for MacOS and iOS for Apple's way to read/write EXIF data.
And see GMImageMBS class to read EXIF via attribute functions in GraphicsMagick.

### 81.2.6 Methods

### 81.2.7 Constructor(ExifData as MemoryBlock)

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor taking exif data as memoryblock.
**Notes:** Please use JPEGImporterMBS, GMImageMBS, NSImageMBS, PNGReaderMBS or other classes to get EXIF data block.
See also:

- 81.2.8 Constructor(ExifData as String) 15869

### 81.2.8 Constructor(ExifData as String)

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor taking exif data as string.
**Notes:** Please use JPEGImporterMBS, GMImageMBS, NSImageMBS, PNGReaderMBS or other classes to get EXIF data block.
See also:

- 81.2.7 Constructor(ExifData as MemoryBlock) 15869

### 81.2.9 TagByID(Tag as integer) as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a tag by ID.
**Notes:** This looks on the Tag property.

### 81.2.10 TagByIndex(index as integer) as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a tag by index.

### 81.2.11 Tags as ExifTagMBS()

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries an array with all tags found.

### 81.2.12 Properties

### 81.2.13 Artist as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Artist.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.14 Copyright as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Copyright.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.15 Count as Integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of tags found.
**Notes:** (Read only property)

### 81.2.16 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data of the Exif record.
**Notes:**

This is a copy of what you passed to the constructor.
It may have been modified if you overwrote a value.
(Read only property)

### 81.2.17 DateTime as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for DateTime.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.18 Description as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Description.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.19 ExposureTime as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ExposureTime.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.20 FlashUsed as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for FlashUsed.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.21 FNumber as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for FNumber.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.22 GPSAltitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSAltitude.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.23 GPSAltitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSAltitudeRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.24 GPSAreaInformation as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSAreaInformation.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.25 GPSDateStamp as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDateStamp.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.26 GPSDestBearing as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestBearing.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.27 GPSDestBearingRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestBearingRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.28 GPSDestDistance as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestDistance.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.29 GPSDestDistanceRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestDistanceRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.30 GPSDestLatitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestLatitude.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.31 GPSDestLatitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestLatitudeRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.32 GPSDestLongitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestLongitude.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.33 GPSDestLongitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDestLongitudeRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.34 GPSDifferential as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDifferential.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.35 GPSDOP as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSDOP.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.36 GPSImgDirection as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSImgDirection.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.37 GPSImgDirectionRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSImgDirectionRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.38 GPSLatitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSLatitude.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.39 GPSLatitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSLatitudeRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.40 GPSLongitude as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSLongitude.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.41 GPSLongitudeRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSLongitudeRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.42 GPSMapDatum as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSMapDatum.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.43 GPSMeasureMode as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSMeasureMode.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.44 GPSProcessingMethod as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSProcessingMethod.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.45 GPSSatellites as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSSatellites.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.46 GPSSpeed as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSSpeed.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.47 GPSSpeedRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSSpeedRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.48 GPSStatus as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSStatus.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.49 GPSTimeStamp as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSTimeStamp.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.50 GPSTrack as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSTrack.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.51 GPSTrackRef as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSTrackRef.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.52 GPSVersion as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for GPSVersion.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.53 ImageHeight as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ImageHeight.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.54 ImageWidth as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ImageWidth.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.55 Make as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Make.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.56 Model as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Model.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.57 Orientation as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Orientation.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.58 ResolutionUnit as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ResolutionUnit.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.59 Software as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for Software.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.60 ThumbnailLength as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ThumbnailLength.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.61 ThumbnailOffset as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for ThumbnailOffset.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.62 ThumnnailData as MemoryBlock

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies thumbnail from the EXIF data.
**Notes:**

Returns nil if not thumbnail exists.
(Read only property)

### 81.2.63 UserComment as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for UserComment.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.64 XResolution as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for XResolution.
**Notes:**

May be nil if not found.
(Read only property)

### 81.2.65 YResolution as ExifTagMBS

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks up the tag for YResolution.
**Notes:**

May be nil if not found.
(Read only property)

# Chapter 82

# Filemapping and Shared Memory

## 82.1 class FileMappingMBS

### 82.1.1 class FileMappingMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for file mapping and shared memory access.
**Notes:**

FilemappingMBS is a clever way to map the content of a file into memory without loading it.
All applications are today loaded via mapping using the virtual memory manager. So your data is inside the file but some memory is used to cache it and you can access it as a memoryblock.

You can use this class in several ways:

1. file mapping read/write: Call the constructor with a file, open the file mapping and map memory in your process to read or write a file.
2. file mapping read/write with temporary files: You can create (multi gigabyte) tempory memory storage to store data too big for your application own address space.
3. a variant of 2 is to pass nil to the constructor on Windows to have the data stored in the swap files.
4. use Constructor without paramaters and call CreateSharedMemory to create a shared memory object.
5. use Constructor without paramaters and call OpenSharedMemory to access a shared memory object from another process.

For shared memory objects, be careful how you design it. Your shared memory should have a flag for editing, so one app does not edit while another app edits. Add a version value to check your application versions. Also add a value for the revision of the content so your apps can see modifications. Finally your app should handle the possibility that the application crashes while writing data. So the data can be in a bad state.

### 82.1.2 Blog Entries

### 82.1.5 Xojo Developer Magazine

- 19.2, page 10: News

### 82.1.6 Methods

### 82.1.7 CloseFile

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the file you used for backstore.
**Notes:** Called by the destructor automatically.

### 82.1.8 CloseFileMapping

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the file mapping.
**Notes:**

Called by the destructor automatically.
You close all views, than you close the file mapping and finally the file.

### 82.1.9 Constructor

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The dummy constructor used if you create a shared memory object.
**Notes:** Use this constructor if you continue with OpenSharedMemory or CreateSharedMemory.
See also:

- 82.1.10 Constructor(file as folderitem, write as boolean = false) 15885

### 82.1.10 Constructor(file as folderitem, write as boolean = false)

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens or creates a file for file mapping.
**Notes:**

On Windows you can pass nil for the file parameter in order to have a file mapping using the swap files for back storage.

If write is true, the file is opened/created for write access.
See also:

- 82.1.9 Constructor 15885

### 82.1.11 CreateSharedMemory(name as string, Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a shared memory object with the given name.
**Notes:**

Returns true on success and false on failure. The name must be unique on the whole PC.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does exist. In this case, call OpenSharedMemory.
If your application crashes, on the next run the object will still exist on Mac OS X and Linux, so you need to open or delete & create it.

The Size should be a multiply of the page size (4096).
Sets DeleteSharedMemory to true so the object is deleted by the destructor. Set it to false if you don't want that behavior.

### 82.1.12 DeleteSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Targets: All.

**Function:** Deletes the shared memory object.
**Notes:**

Returns true on success and false on failure.
Called by the destructor if DeleteSharedMemory property is true.
See also:

- 82.1.24 DeleteSharedMemory as Boolean 15889

### 82.1.13 EnlargeFile(Size as Int64)

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resizes the file to the given size.
**Notes:** This is for file mappings used as temporary storage with a temporary file. You use the Constructor to create a temporary file. This file is enlarged to the size you need. Next you call OpenFileMapping and MapView. To cleanup, you close all views and the file mapping. Now before you close the file, you should call ShrinkFile. ShrinkFile reduces the file size to zero so the operation system doesn't start flushing the shared memory to the file. You can get this automatically if you set ShrinkFileOnClose to true.

### 82.1.14 GetSharedMemoryValue(name as string) as MemoryBlock

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries value of shared memory object.
**Notes:**

Returns copy of the data.
Since data is stored in blocks of page size (usually 4K), the returned size has additional null bytes on the end to round size up.
If you store text there, you may look for the end of your data, e.g. for JSON do a trim(Chr(0)) to remove the null bytes.

### 82.1.15 HasSharedMemoryValue(name as string) as Boolean

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether shared memory object exists.

### 82.1.16 MapView(mem as MemoryBlock, offset as Int64, Size as Integer) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maps a portion of the file mapping or shared memory object into your application's address space.
**Notes:**

Returns nil on any error.
Using invalide offset/size values can lead into a bad mapping.
Here you can pass your own memoryblock for back storage.
Make sure your memory is 4 or 64 KB aligned, depending on platform.
(Windows need 64 KB, Mac only 4 KB)

Changed Size parameter from Int32 to Integer in version 21.0.
Xojo may not handle ptr with offsets >2 GB as of version 2020r2. This is fixed in 2020r2.1.
See also:

- 82.1.17 MapView(offset as Int64, Size as Integer) as FileMappingViewMBS 15887

### 82.1.17 MapView(offset as Int64, Size as Integer) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maps a portion of the file mapping or shared memory object into your application's address space.
**Notes:**

Returns nil on any error.
Using invalide offset/size values can lead into a bad mapping.
(Windows need 64 KB, Mac only 4 KB)

Changed Size parameter from Int32 to Integer in version 21.0.
Xojo may not handle ptr with offsets >2 GB as of version 2020r2. This is fixed in 2020r2.1.
See also:

- 82.1.16 MapView(mem as MemoryBlock, offset as Int64, Size as Integer) as FileMappingViewMBS 15887

### 82.1.18 OpenFileMapping(MaxSize as Int64 = 0) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a file mapping.
**Notes:**

If MaxSize is zero, the file size is used for creating the mapping.
The Size should be a multiply of the page size (4096).

Returns true on success.
Do not call after using OpenSharedMemory or CreateSharedMemory as they open the file mapping for you.

### 82.1.19 OpenSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a shared memory object with the given name.
**Notes:**

Returns true on success and false on failure.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does not exist. In this case, call CreateSharedMemory.

### 82.1.20 SetSharedMemoryValue(name as string, data as MemoryBlock) as Boolean

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets shared memory value.
**Notes:**

Persistent object on Mac/Linux till computer restarts or shuts down.
On Windows object is destroyed when last application referring it quits.

Returns true on success.
Size of the data block will be rounded up to page size.

### 82.1.21 ShrinkFile

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resizes the file to by empty.
**Notes:** Useful if you used EnlargeFile before.

### 82.1.22 Properties

### 82.1.23 DeleteFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to delete the file in the destructor.
**Notes:**

Useful if a tempory file is used as backstore.
(Read and Write property)

### 82.1.24 DeleteSharedMemory as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Targets: All.

**Function:** Whether to delete the shared memory object on closing.
**Notes:**

True by default after Creating a shared memory object.

On Windows the shared memory objects exist as long as someone uses them.
On Mac OS X they live until you kill them even if your application is not running.

(Read and Write property)
See also:

- 82.1.12 DeleteSharedMemory(name as string) as boolean 15886

### 82.1.25 File as FolderItem

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file reference used for the backstore.
**Notes:** (Read only property)

### 82.1.26 isWriteable as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether opened/created the file mapping with write permission.
**Notes:**

Opening files for reading only in order to read inside gives the operation system some optimization possibilities.
(Read only property)

### 82.1.27 Lasterror as Integer

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

On Windows typically a Windows error code.
On Linux and Mac OS X typically 0 for success and other values for errors.
(Read and Write property)

### 82.1.28 LasterrorString as String

MBS Util Plugin, Plugin Version: 10.5, Platform: Windows, Targets: All.

**Function:** The string for the last error code.
**Notes:**

Only implemented for Windows.
Returns "" on any error.

(Read only property)

### 82.1.29 Name as String

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name used for a named shared memory object.
**Notes:** (Read only property)

### 82.1.30 SharedMemorySize as Int64

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries shared memory object size.
**Notes:**

Only valid for shared memory objects in handle.
(Read only property)

### 82.1.31 ShrinkFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to call ShrinkFile automatically from the destructor.
**Notes:**

Default false.
(Read and Write property)

## 82.2 class FileMappingViewMBS

### 82.2.1 class FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a file mapping view.
**Notes:** You can using file mapping with a 10 GB bit file. Your application has only 4 GB of address space and effectively you can only use 2 GB. So you can try to map in a few hundred mega bytes at a given time. But you can move this view on the large file to read the whole file. But remember: File mapping is only efficient if you read a little data form the file and jump a lot. For reading the whole file, use a binarystream.

### 82.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

### 82.2.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

### 82.2.4 Methods

### 82.2.5 FlushView

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flushes all data to the backstore.
**Notes:** For file mappings, the modified pages are written back to the file now. Normally you won't call this and let the operation system decide when to write the data to the file.

### 82.2.6 UnmapView

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Frees the memory allocated by the view.
**Notes:** Called automaticaly be the destructor.

### 82.2.7 Properties

### 82.2.8 FlushOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to call FlushView for you in the destructor.
**Notes:** (Read and Write property)

### 82.2.9 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The memoryblock for this view.
**Example:**

```
dim v as FileMappingViewMBS // your view

v.memory.cstring(0)="Hello World"
```

**Notes:**

The memoryblock has no known size and it becomes invalid once this view object is destroyed. So keep a reference around as long as you use the memoryblock.
(Read only property)

### 82.2.10 Offset as Int64

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The offset used to create this view.
**Notes:** (Read only property)

### 82.2.11 Parent as FileMappingMBS

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The owner FileMapping object.
**Notes:** (Read only property)

### 82.2.12 Size as Integer

MBS Util Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size in bytes of this view.
**Notes:** (Read only property)

# Chapter 83

# Files

## 83.1 class ACLEntryMBS

### 83.1.1 class ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The class for an ACL entry.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 83.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

### 83.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr1

### 83.1.4 Methods

### 83.1.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 83.1.6 Copy(dest as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Copy an ACL entry to another ACL entry.
**Notes:** see also acl_copy_entry man page.

### 83.1.7 GIDtoUUID(GID as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries the UUID for a group id.
**Notes:** Returns nil on any error.

### 83.1.8 GroupFromGID(GID as Integer) as string

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries the group name for a Group ID.

### 83.1.9 MaximalPermsetMask as UInt64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The maximal permset mask.
**Notes:** see also acl_maximal_permset_mask_np man page.

### 83.1.10 UIDtoUUID(UID as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries the UUID for an user id.
**Notes:** Returns nil on any error.

### 83.1.11 UserFromUID(UID as Integer) as string

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries the user name for a UID.

### 83.1.12 UUIDtoID(UUID as memoryblock, byref ID as Integer, byref Type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries the GID/UID for an UUID.
**Notes:**

Type is 0 for user and 1 for group.
Returns true on success.

### 83.1.13 Properties

### 83.1.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 83.1.15 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 83.1.16 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 83.1.17 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Get or Set the flag set.
**Notes:**

see also acl_get_flagset_np/acl_set_flagset_np man page.
(Read and Write computed property)

### 83.1.18 PermSet as ACLPermSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Get/Set the permissions set.
**Notes:**

see also acl_get_permset/acl_set_permset man page.
(Read and Write computed property)

### 83.1.19 PermSetMask as UInt64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Get/Set the permission set mask.
**Notes:**

see also acl_get_permset_mask_np/acl_set_permset_mask_np man page.
(Read and Write computed property)

### 83.1.20 Qualifier as Memoryblock

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Get/Set the qualifier.
**Notes:**

Value is a 16byte big GUID as memoryblock.
see also acl_set_qualifier/acl_get_qualifier man page.
(Read and Write computed property)

### 83.1.21 TagType as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Sets or gets the the tag type.
**Notes:**

see also acl_get_tag_type/acl_set_tag_type man page.
(Read and Write computed property)

### 83.1.22 Constants

### 83.1.23 kACLExtendedAllow = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL entry tag type bits.

### 83.1.24 kACLExtendedDeny = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL entry tag type bits.

### 83.1.25 kACLUndefinedTag = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL entry tag type bits.

## 83.2 class ACLFlagSetMBS

### 83.2.1 class ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The class for an ACL flag set.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 83.2.2 Methods

### 83.2.3 Add(flag as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Adds a flag to the flag set.
**Notes:** see also acl_add_flag_np man page.

### 83.2.4 Clear

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Clears the flag set.
**Notes:** see also acl_clear_flags_np man page.

### 83.2.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 83.2.6 Delete(flag as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Deletes flag from flag set.
**Notes:** see also acl_delete_flag_np man page.

### 83.2.7 HasFlag(flag as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Checks if a flag is set in this flag set.
**Notes:** see also acl_get_flag_np man page.

### 83.2.8 Properties

### 83.2.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 83.2.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 83.2.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 83.2.12 Constants

### 83.2.13 kACLEntryDirectoryInherit = 64

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.14 kACLEntryFileInherit = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.15 kACLEntryInherited = 16

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.16 kACLEntryLimitInherit = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.17 kACLEntryOnlyInherit = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.18 kACLFlagDeferInherit = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

### 83.2.19 kACLFlagNoInherit = 131072

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the flag constants.

## 83.3 class ACLPermSetMBS

### 83.3.1 class ACLPermSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The class for an ACL permission set.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 83.3.2 Methods

### 83.3.3 Add(perm as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Adds a permission.
**Notes:** see also acl_add_perm man page.

### 83.3.4 Clear

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Clears the permission set.
**Notes:** see also acl_clear_perms man page.

### 83.3.5 Constructor

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 83.3.6 Delete(perm as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Deletes a permission.
**Notes:** see also acl_delete_perm man page.

### 83.3.7 HasPerm(perm as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Checks if permissions is included in this permission set.
**Notes:** see also acl_get_perm_np man page.

### 83.3.8 Properties

### 83.3.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 83.3.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 83.3.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 83.3.12 Constants

### 83.3.13 kACLAddFile = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.14 kACLAddSubDirectory = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.15 kACLAppendData = 32

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.16 kACLChangeOwner = 8192

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.17 kACLDelete = 16

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.18 kACLDeleteChild = 64

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.19 kACLExecute = 8

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.20 kACLListDirectory = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.21 kACLMaxEntries = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** Maximum number of entries.

### 83.3.22 kACLReadAttributes = 128

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.23 kACLReadData = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.24 kACLReadExtraAttributes = 512

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.25 kACLReadSecurity = 2048

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.26 kACLSearch = 8

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.27 kACLWriteAttributes = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.28 kACLWriteData = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.29 kACLWriteExtraAttributes = 1024

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

### 83.3.30 kACLWriteSecurity = 4096

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the individual object access permissions.

## 83.4 class ACLRightMBS

### 83.4.1 class ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The class for ACL rights.

### 83.4.2 Methods

### 83.4.3 Constructor(count as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Allocates and initializes the working storage for an ACL of at least count ACL entries.
**Notes:** see also acl_init man page.
See also:

- 83.4.4 Constructor(text as string) 15908

### 83.4.4 Constructor(text as string)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates new ACL from text representation.
**Notes:** see also acl_from_text man page.
See also:

- 83.4.3 Constructor(count as Integer) 15908

### 83.4.5 CopyData(Native as boolean = false) as String

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates external representation.
**Notes:** see also acl_copy_int man page.

### 83.4.6 CreateEntry as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates a new entry.
**Notes:** see also acl_create_entry man page.
See also:

- 83.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS 15909

### 83.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates a new entry.
**Notes:** see also acl_create_entry_np man page.
See also:

- 83.4.6 CreateEntry as ACLEntryMBS 15908

### 83.4.8 DeleteEntry(entry as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Deletes an entry.
**Notes:** see also acl_delete_entry man page.

### 83.4.9 Duplicate as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates a duplicate of this right set.
**Notes:** see also acl_dup man page.

### 83.4.10 Entries as ACLEntryMBS()

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Queries array with all entries in this ACL.
**Notes:**

Lasterror is set.
see also acl_get_entry man page.

### 83.4.11 Entry(entryIndex as Integer) as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Queries entry with given index.
**Notes:**

You can use constants kACLFirstEntry, kACLLastEntry or kACLNextEntry.
see also acl_get_entry man page.

### 83.4.12 NewACL(count as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Allocates and initializes the working storage for an ACL of at least count ACL entries.
**Notes:** see also acl_init man page.

### 83.4.13 NewACLFromExternal(data as string, native as boolean = false) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates new ACL object from external representation.
**Notes:** see also acl_copy_ext man page.

### 83.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 14.0, Platform: macOS, Targets: All.

**Function:** Creates ACL object from file.
**Notes:** see also acl_get_file man page.
See also:

- 83.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS 15910

### 83.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates ACL object from file.
**Notes:** see also acl_get_file man page.
See also:

- 83.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS 15910

### 83.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates ACL object from FilePointer.
**Notes:** see also acl_get_fd man page.
See also:

- 83.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS 15911

### 83.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates ACL object from FilePointer.
**Notes:** see also acl_get_fd_np man page.
See also:

- 83.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS 15911

### 83.4.18 NewACLFromLink(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates ACL object from link.
**Notes:** see also acl_get_link_np man page.

### 83.4.19 NewACLFromText(text as string) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Creates new ACL from text representation.
**Notes:** see also acl_from_text man page.

### 83.4.20 SetFile(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Applies this ACL to a file.
**Notes:** see also acl_set_file man page.

### 83.4.21 SetFilePointer(FilePointer as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Applies this ACL to a file pointer.
**Notes:** see also acl_set_fd man page.
See also:

- 83.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean 15912

### 83.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Applies this ACL to a file pointer.
**Notes:** see also acl_set_fd_np man page.
See also:

- 83.4.21 SetFilePointer(FilePointer as Integer) as boolean 15912

### 83.4.23 SetLink(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Applies this ACL to a link file.
**Notes:** see also acl_set_link_np man page.

### 83.4.24 Size as Int64

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Queries size of binary representation.
**Notes:** see also acl_size man page.

### 83.4.25 Text as String

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Queries text representation of this ACL.
**Notes:** see also acl_to_text man page.

### 83.4.26 Valid as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Checks if ACL is valid in general.
**Notes:** see also acl_valid man page.

### 83.4.27 ValidFile(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Checks if ACL is valid for this file.
**Notes:** see also acl_valid_file_np man page.

### 83.4.28 ValidFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Checks if ACL is valid for this file pointer.
**Notes:** see also acl_valid_fd_np man page.

### 83.4.29 Properties

### 83.4.30 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 83.4.31 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 83.4.32 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Get/Set the flag set.
**Notes:**

see also acl_get_flagset_np/acl_set_flagset_np man page.
(Read and Write computed property)

### 83.4.33 Constants

### 83.4.34 kACLFirstEntry = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL Entry constants.
**Notes:** Next entry.

### 83.4.35 kACLLastEntry = -2

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL Entry constants.
**Notes:** Last entry.

### 83.4.36 kACLNextEntry = -1

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL Entry constants.
**Notes:** Next entry.

### 83.4.37 kACLTypeAccess = 0

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** Posix 1003.1e type, not supported.

### 83.4.38 kACLTypeAFS = 2

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

### 83.4.39 kACLTypeCODA = 3

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

### 83.4.40 kACLTypeDefault = 1

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** Posix 1003.1e type, not supported.

### 83.4.41 kACLTypeExtended = 256

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** Extended ACL.

### 83.4.42 kACLTypeNTFS = 4

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

### 83.4.43 kACLTypeNWFS = 5

MBS MacOSX Plugin, Plugin Version: 13.5.

**Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

## 83.5 class CopyFileMBS

### 83.5.1 class CopyFileMBS

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** The class for copyfile function.
**Notes:**

We provide a class to hold state and get event for progress.
Uses low level copyfile API from MacOS.

See copyfile man page in terminal.

### 83.5.8 Methods

### 83.5.9 CopyFile(From as FolderItem, Dest as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Copies files or folders.
**Notes:**

Copy a file's data and/or metadata. (Metadata consists of permissions, extended attributes, access control lists, and so forth.)

Recursive Copies When given the kFlagsRecursive flag, copyfile() will use the fts(3) functions to recursively descend into the source file-system object. It then calls copyfile() on each of the entries it finds that way. If a progress event is given the event will be called four times for each directory object, and twice for all other objects. (Each directory will be examined twice, once on entry – before copying each of the objects contained in the directory – and once on exit – after copying each object contained in the directory, in order to perform some final cleanup.)

Returns error code or zero for success.
See also:

- 83.5.10 CopyFile(From as String, Dest as String, flags as Integer) as Integer 15918

### 83.5.10 CopyFile(From as String, Dest as String, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Copies files or folders.
**Notes:**

Copy a file's data and/or metadata. (Metadata consists of permissions, extended attributes, access control lists, and so forth.)

Recursive Copies When given the kFlagsRecursive flag, copyfile() will use the fts(3) functions to recursively descend into the source file-system object. It then calls copyfile() on each of the entries it finds that way. If a progress event is given the event will be called four times for each directory object, and twice for all other objects. (Each directory will be examined twice, once on entry – before copying each of the objects contained in the directory – and once on exit – after copying each object contained in the directory, in order to perform some final cleanup.)

Returns error code or zero for success.
See also:

- 83.5.9 CopyFile(From as FolderItem, Dest as FolderItem, flags as Integer) as Integer 15918

### 83.5.11 ErrorMessage(error as Integer) as String

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Queries error message for unix error code.

### 83.5.12 Properties

### 83.5.13 BytesCopied as Int64

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Get the number of data bytes copied so far.
**Notes:**

Valid only in Progress event.
If a kFlagsClone or kFlagsCloneForce operation successfully cloned the requested objects, then this value will be 0.
(Read only property)

### 83.5.14 WasCloned as Boolean

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Whether file was cloned.
**Notes:**

Valid only in Progress event.
True if a kFlagsClone or kFlagsCloneForce operation successfully cloned the requested objects.
(Read only property)

### 83.5.15 XAttrName as String

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** Get the name of the extended attribute.
**Notes:**

Valid only in Progress event.
(Read only property)

### 83.5.16 YieldTicks as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

**Function:** How much time is given back to Xojo for other ticks.
**Example:**

```
dim t as new CopyFileMBS
t.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

### 83.5.17 Events

### 83.5.18 Progress(What as Integer, Stage as Integer, Source as String, Dest as String) as Integer

MBS MacOSX Plugin, Plugin Version: 19.4, Platform: macOS, Targets: .

**Function:** The progress event called while copying.
**Notes:**

What is one of the kWhat* constants.
Stage is one of the kStage* constants.
Source and Dest point to the current files being copied.

Return one of the kReturn* constants.

### 83.5.19 Constants

### 83.5.20 kFlagsACL = 1

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Copy the source file's access control lists.

### 83.5.21 kFlagsAll = 15

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Copy the entire file; equivalent to BitwiseOr(kFlagsMetaData, kFlagsData).

### 83.5.22 kFlagsCheck = & h10000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Return a bitmask (corresponding to the flags argument) indicating which contents would be copied; no data are actually copied. (E.g., if flags was set to kFlagsCheck + kFlagsMetaData, and the from file had extended attributes but no ACLs, the return value would be kFlagsXAttr.)

### 83.5.23 kFlagsClone = & h1000000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:**

Try to clone the file instead. This is a best try flag i.e. if cloning fails, fallback to copying the file. This flag is equivalent to BitwiseOr(kFlagsExcl, kFlagsACL, kFlagsStat, kFlagsXAttr, kFlagsData, kFlagsNoFollowSource).
Note that if cloning is successful, progress event will not be invoked. Note also that there is no support for cloning directories: if a directory is provided as the source and kFlagsCloneForce is not passed, this will instead copy the directory. Recursive copying however is supported.

### 83.5.24 kFlagsCloneForce = & h2000000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Clone the file instead. This is a force flag i.e. if cloning fails, an error is returned. This flag is equivalent to BitwiseOr(kFlagsExcl, kFlagsACL, kFlagsStat, kFlagsXAttr, kFlagsData, kFlagsNoFollowSource). Note that if cloning is successful, progress callbacks will not be invoked. Note also that there is no support for cloning directories: if a directory is provided as the source, an error will be returned.

### 83.5.25 kFlagsData = 8

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Copy the source file's data.

### 83.5.26 kFlagsDataSparse = & h8000000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:**

Copy a file sparsely. This requires that the source and destination file systems support sparse files with hole sizes at least as large as their block sizes.
If kFlagsData is also specified, this will fall back to a full copy if sparse copying cannot be performed for any reason; otherwise, an error is returned.

### 83.5.27 kFlagsExcl = & h20000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Fail if the to file already exists.

### 83.5.28 kFlagsMetaData = 7

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Copy the metadata; equivalent to BitwiseOr(kFlagsSecurity, kFlagsXAttr).

### 83.5.29 kFlagsMove = & h100000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:**

Unlink (using remove(3)) the from file.
No error is returned if remove(3) fails. Note that remove(3) removes a symbolic link itself, not the target of

the link.

### 83.5.30 kFlagsNoFollow = & hC00000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** This is a convenience macro, equivalent to BitwiseOr(kFlagsNoFollowDest, kFlagsNoFollowSource).

### 83.5.31 kFlagsNoFollowDest = & h80000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Do not follow the to file, if it is a symbolic link.

### 83.5.32 kFlagsNoFollowSource = & h40000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Do not follow the from file, if it is a symbolic link.

### 83.5.33 kFlagsPack = & h400000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Serialize the from file. The to file is an Apple-Double-format file.

### 83.5.34 kFlagsRecursive = & h8000

MBS MacOSX Plugin, Plugin Version: 19.4.

**Function:** One of the flag constants.
**Notes:** Causes copyfile to recursively copy a hierarchy.

### 83.5.35 kFlagsRunInPlace = & h4000000

MBS MacOSX Plugin, Plugin Version: 19.4.
