**Notes:** HR

### 121.4.23 kTypeHTML = 4

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** HTML

### 121.4.24 kTypeListItem = 10

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** ListItem

### 121.4.25 kTypeMarkup = 3

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Markup

### 121.4.26 kTypeOL = 8

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** OL

### 121.4.27 kTypeQuote = 2

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Quote

### 121.4.28 kTypeSource = 14

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Source

### 121.4.29 kTypeStyle = 5

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Style

### 121.4.30 kTypeTable = 13

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Table

### 121.4.31 kTypeUL = 7

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** UL

### 121.4.32 kTypeWhitespace = 0

MBS Tools Plugin, Plugin Version: 15.1.

**Function:** One of the type codes.
**Notes:** Whitespace

# Chapter 122

# Math

## 122.1 class BiggerNumberMBS

### 122.1.1 class BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a big number.
**Example:**

```
// speed of light in m/s
Dim SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Dim SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Dim DaysPerYear As New BiggerNumberMBS(365.25)

Dim LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Dim AgeOfUniversum As New BiggerNumberMBS(13810000000)

Dim MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

**Notes:**

This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.
Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

See LargeNumberMBS for a 4128 bit integer number, about 1200 digits in length.

### 122.1.8 Methods

### 122.1.9 Abs as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries absolute value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(-123)
dim z as BiggerNumberMBS = o.Abs

MsgBox z.StringValue
```

**Notes:** Removes sign.
See also:

- 122.1.10 Abs(value as BiggerNumberMBS) as BiggerNumberMBS 

### 122.1.10 Abs(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Absolute value of x.
**Example:**

```
Dim c As New BiggerNumberMBS(-3)
Dim d As BiggerNumberMBS = BiggerNumberMBS.Abs(c)
Dim e As BiggerNumberMBS = c.Abs

MsgBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 122.1.9 Abs as BiggerNumberMBS 20399

### 122.1.11 ACos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Cosine.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ACos(c)

Dim x As Double = ACos(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** we're using the formula: acos(x) = pi/2 - asin(x)

### 122.1.12 ACosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverse hyperbolic cosine.
**Example:**

```
Dim c As New BiggerNumberMBS(2.0)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
```

```
Dim x As Double = ACosHMBS(2.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** acosh(x) = ln( x + sqrt(x^2 - 1) ) x in <1, infinity)

### 122.1.13 ACot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Cotangent.
**Notes:** we're using the formula: actan(x) = pi/2 - atan(x)

### 122.1.14 ACoth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates inverse hyperbolic cotangent.
**Notes:** acoth(x) = 0.5 * ln( (x+1) / (x-1) ) x in (-infinity, -1) or (1, infinity)

### 122.1.15 Add(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim d as new BiggerNumberMBS(3)
dim p as BiggerNumberMBS = x.Add(d)

MsgBox p.StringValue // shows 5
```

### 122.1.16 ASin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Sine.
**Example:**

```
Dim c As New BiggerNumberMBS(1.0)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ASin(c)

Dim x As Double = ASin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** Range is from -1 to 1.

### 122.1.17 ASinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverse hyperbolic sine.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Dim x As Double = ASinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** asinh(x) = ln( x + sqrt(x^2 + 1) )

### 122.1.18 ATan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Tangent.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ATan(c)

Dim x As Double = ATan(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

### 122.1.19 ATanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates inverse hyperbolic tangent.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Dim x As Double = ATanhMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** atanh(x) = 0.5 * ln( (1+x) / (1-x) ) x in (-1, 1)

### 122.1.20 BitAnd(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise AND operation.
**Example:**

```
dim x as new BiggerNumberMBS(17)
dim y as new BiggerNumberMBS(16)
dim r as BiggerNumberMBS = x.BitAnd(y)

MsgBox r.StringValue
```

### 122.1.21 BitOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise or operation.
**Example:**

```
dim x as new BiggerNumberMBS(17)
dim y as new BiggerNumberMBS(16)
dim r as BiggerNumberMBS = x.BitOr(y)
```

```
MsgBox r.StringValue
```

### 122.1.22 BitXOr(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise xor operation.
**Example:**

```
dim x as new BiggerNumberMBS(17)
dim y as new BiggerNumberMBS(16)
dim r as BiggerNumberMBS = x.BitXOr(y)

MsgBox r.StringValue
```

### 122.1.23 Ceil as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns a value representing the smallest integer that is greater than or equal to x.
**Example:**

```
Dim c As New BiggerNumberMBS(-3.7)
Dim d As BiggerNumberMBS = c.Ceil

MsgBox d // shows -3
```

**Notes:**

e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3
Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

### 122.1.24 Constructor

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with zero value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS
MsgBox o.StringValue
```

See also:

- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.25 Constructor(other as BiggerNumberMBS)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with other value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
dim c as BiggerNumberMBS = new BiggerNumberMBS(o)

MsgBox c.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406

- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.26 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number object with a currency object.
**Example:**

```
dim v as Currency = 123.456
dim b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.27 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with double value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.26 Constructor(value as Currency) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.28 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 32-bit integer.
**Example:**

```
dim v as Int32 = 123
dim b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.29 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 64-bit integer.
**Example:**

```
dim v as Int64 = 123
dim b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.1.24 Constructor 20405

- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.30 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 32-bit floating point number.
**Example:**

```
dim v as Single = 123
dim b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.26 Constructor(value as Currency) 20406

- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.31 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with string value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS("123.456")
MsgBox o.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.32 Constructor(value as UInt32) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.32 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt32 = 123
dim b as new BiggerNumberMBS(v)
```

MsgBox b.StringValue

See also:

- 122.1.24 Constructor 20405

- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.33 Constructor(value as UInt64) 20410

### 122.1.33 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt64 = 123
dim b as new BiggerNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.1.24 Constructor 20405
- 122.1.25 Constructor(other as BiggerNumberMBS) 20405
- 122.1.26 Constructor(value as Currency) 20406
- 122.1.27 Constructor(value as Double) 20406
- 122.1.28 Constructor(value as Int32) 20407
- 122.1.29 Constructor(value as Int64) 20408
- 122.1.30 Constructor(value as Single) 20408
- 122.1.31 Constructor(value as String) 20409
- 122.1.32 Constructor(value as UInt32) 20409

### 122.1.34 Cos(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the cosine value.
**Example:**

```
Dim c As New BiggerNumberMBS(1.0)
Dim d As BiggerNumberMBS = BiggerNumberMBS.Cos(c)

Dim x As Double = Cos(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula cos(x) = sin(x + PI/2).

### 122.1.35 Cosh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Cosine.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Dim x As Double = CosHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula cosh(x)= ( e^x + e^(-x) ) / 2.

### 122.1.36 Cot(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Cotangent.
**Notes:** We're using the formula tan(x) = cos(x) / sin(x).

### 122.1.37 Coth(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Cotangent.
**Notes:** We're using the formula coth(x)= ( e^x + e^(-x) ) / ( e^x - e^(-x) )

### 122.1.38 DegToDeg(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format into one value.
**Notes:**

long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

### 122.1.39 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format to gradians.
See also:

- 122.1.40 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS 20412

### 122.1.40 DegToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to gradians.
**Notes:** it returns: x * 200 / 180
See also:

- 122.1.39 DegToGrad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 20412

### 122.1.41 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format to radians.
See also:

- 122.1.42 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS 20413

### 122.1.42 DegToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to radians.
**Notes:** It returns: x * pi / 180
See also:

- 122.1.41 DegToRad(d as BiggerNumberMBS, m as BiggerNumberMBS, s as BiggerNumberMBS) as BiggerNumberMBS 20413

### 122.1.43 Divide(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides the number.
**Example:**

```
dim x as new BiggerNumberMBS(8)
dim d as new BiggerNumberMBS(2)
dim p as BiggerNumberMBS = x.Divide(d)

MsgBox p.StringValue // shows 4
```

### 122.1.44 E as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value zero.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.e
MsgBox b.StringValue
```

### 122.1.45 Equals(other as BiggerNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if two numbers are the same.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(123)
dim z as BiggerNumberMBS = new BiggerNumberMBS(123)

if o.Equals(z) then
MsgBox "equal"
else
Break // error
end if
```

**Notes:** Returns true if equal.

### 122.1.46 Exp(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates e^value.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim p as BiggerNumberMBS = BiggerNumberMBS.Exp(x)

MsgBox p.StringValue // shows e^2 = 7.38
```

### 122.1.47 Floor as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes any fraction part.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
dim s as BiggerNumberMBS = o.Floor

MsgBox s.StringValue

dim a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
dim b as BiggerNumberMBS = a.Floor

MsgBox b.StringValue
```

### 122.1.48 Frac as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the fraction part.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.5)
dim s as BiggerNumberMBS = o.Frac

MsgBox s.StringValue

dim a as BiggerNumberMBS = new BiggerNumberMBS(-2.5)
dim b as BiggerNumberMBS = a.Frac

MsgBox b.StringValue
```

### 122.1.49 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries string value.
**Example:**

```
dim o as new BiggerNumberMBS(1234)
```

```
// show as hex
MsgBox o.GetStringValue(16)

// show as number with comma and 3 digits
dim z as new BiggerNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

**Notes:**

Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.

### 122.1.50 GradToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to gradians.
**Notes:** it returns: x * 180 / 200

### 122.1.51 GradToRad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts gradians to radians.
**Notes:** It returns: x * pi / 200.

### 122.1.52 HalfPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value pi/2.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.HalfPi
MsgBox b.StringValue
```

### 122.1.53 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries what implementation is used for this platform.
**Notes:**

Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

### 122.1.54 Ln(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates natural logarithm.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim p as BiggerNumberMBS = BiggerNumberMBS.Ln(x)

MsgBox p.StringValue // shows ln(2) = 0.69
```

### 122.1.55 Ln10 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value ln(10).
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Ln10
MsgBox b.StringValue
```

### 122.1.56 Ln2 as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value ln(2).
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Ln2
MsgBox b.StringValue
```

### 122.1.57 Log(value as BiggerNumberMBS, base as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates logarithm in a given base.
**Example:**

```
dim x as new BiggerNumberMBS(100)
dim d as new BiggerNumberMBS(10)
dim p as BiggerNumberMBS = BiggerNumberMBS.Log(x, d)

MsgBox p.StringValue // shows ln(100)/ln(10) = 2
```

### 122.1.58 Max as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with maximum value.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Min
MsgBox b.StringValue
```

### 122.1.59 Min as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with minimum value.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Min
MsgBox b.StringValue
```

### 122.1.60 Modulate(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulates a number.
**Example:**

```
dim x as new BiggerNumberMBS(17)
```

```
dim y as new BiggerNumberMBS(3)
dim r as BiggerNumberMBS = x.Modulate(y)

MsgBox r.StringValue
```

**Notes:** Similar to mod keyword in Xojo.

### 122.1.61 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulates by 2.
**Example:**

```
dim x as new BiggerNumberMBS(8)
dim y as new BiggerNumberMBS(9)

MsgBox str(x.Modulate2)+" "+str(y.Modulate2)
```

**Notes:** Returns 0 or 1.

### 122.1.62 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies two numbers.
**Example:**

```
dim x as new BiggerNumberMBS(8)
dim d as new BiggerNumberMBS(2)
dim p as BiggerNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16
```

See also:

- 122.1.63 Multiply(value as Integer) as BiggerNumberMBS 20420
- 122.1.64 Multiply(value as UInt32) as BiggerNumberMBS 20420

### 122.1.63 Multiply(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply by an integer.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim p as BiggerNumberMBS = x.Multiply(3)

MsgBox p.StringValue // shows 6
```

See also:

- 122.1.62 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 20419
- 122.1.64 Multiply(value as UInt32) as BiggerNumberMBS 20420

### 122.1.64 Multiply(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply by an unsigned integer.
**Example:**

```
dim x as new BiggerNumberMBS(17)
dim r as BiggerNumberMBS = x.Multiply(3)

MsgBox r.StringValue
```

See also:

- 122.1.62 Multiply(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS 20419
- 122.1.63 Multiply(value as Integer) as BiggerNumberMBS 20420

### 122.1.65 Nan as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value NaN.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Nan
MsgBox b.StringValue
```

### 122.1.66 Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates the number.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(123)
dim z as BiggerNumberMBS = o.Negate

MsgBox z.StringValue
```

### 122.1.67 NumberWithCurrency(value as Currency) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a currency value.
**Example:**

```
dim v as Currency = 123.456
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithCurrency(v)

MsgBox b.StringValue
```

### 122.1.68 NumberWithDouble(value as Double) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a 64-bit floating number.
**Example:**

```
dim v as Double = 123.456
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithDouble(v)

MsgBox b.StringValue
```

### 122.1.69 NumberWithInt32(value as Int32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a signed 32-bit integer.
**Example:**

```
dim v as Int32 = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt32(v)

MsgBox b.StringValue
```

### 122.1.70 NumberWithInt64(value as Int64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a signed 64-bit integer.
**Example:**

```
dim v as Int64 = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInt64(v)

MsgBox b.StringValue
```

### 122.1.71 NumberWithInteger(value as Integer) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an integer.
**Example:**

```
dim v as Integer = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithInteger(v)

MsgBox b.StringValue
```

### 122.1.72 NumberWithSingle(value as single) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an 32-bit floating point number.

**Example:**

```
dim v as Single = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithSingle(v)

MsgBox b.StringValue
```

### 122.1.73 NumberWithString(value as String) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with value from string.
**Example:**

```
dim v as String = "123"
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithString(v)

MsgBox b.StringValue
```

### 122.1.74 NumberWithUInt32(value as UInt32) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt32 = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt32(v)

MsgBox b.StringValue
```

### 122.1.75 NumberWithUInt64(value as UInt64) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned 64-bit integer.
**Example:**

```
dim v as UInt64 = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInt64(v)

MsgBox b.StringValue
```

### 122.1.76 NumberWithUInteger(value as UInteger) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned integer.
**Example:**

```
dim v as UInteger = 123
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithUInteger(v)

MsgBox b.StringValue
```

### 122.1.77 NumberWithVariant(value as Variant) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number based on a variant.
**Example:**

```
dim v as Variant = 123.456
dim b as BiggerNumberMBS = BiggerNumberMBS.NumberWithVariant(v)

MsgBox b.StringValue
```

**Notes:** Internally redirects to other NumberWith functions based on the value type.

### 122.1.78 One as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value one.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.One
MsgBox b.StringValue
```

### 122.1.79 Operator_Add(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim a as new BiggerNumberMBS(3)
dim b as new BiggerNumberMBS(4)

// add
dim c as BiggerNumberMBS = a + b

MsgBox c.StringValue
```

### 122.1.80 Operator_AddRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim a as new BiggerNumberMBS(3)
dim b as new BiggerNumberMBS(4)

// add
dim c as BiggerNumberMBS = a + b

MsgBox c.StringValue
```

### 122.1.81 Operator_Compare(other as BiggerNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two numbers.
**Example:**

```
dim a as new BiggerNumberMBS(1.2)
dim b as new BiggerNumberMBS(1.2)
dim c as new BiggerNumberMBS(1.3)

if a = b then
// ok
else
```

```
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

### 122.1.82 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts big number to string automatically.
**Example:**

```
dim b as new BiggerNumberMBS
dim n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MsgBox b
```

See also:

- 122.1.83 Operator_Convert(value as String) 20426

### 122.1.83 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a string to a big number.
**Example:**

```
dim b as new BiggerNumberMBS
dim n as string = "5"
```

```
// convert from string to big number automatically
b = n

// convert to double automatically
dim d as Double = b
MsgBox str(d)
```

See also:

- 122.1.82 Operator_Convert as String 20426

### 122.1.84 Operator_Divide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides two numbers.
**Example:**

```
dim a as new BiggerNumberMBS(9.3)
dim b as new BiggerNumberMBS(3.0)

dim r as BiggerNumberMBS = a / b

MsgBox r.StringValue
```

### 122.1.85 Operator_DivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides two numbers.

### 122.1.86 Operator_IntegerDivide(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates an integer divide.
**Example:**

```
dim a as new BiggerNumberMBS(9.3)
dim b as new BiggerNumberMBS(3.0)

dim r as BiggerNumberMBS = a \b

MsgBox r.StringValue
```

**Notes:** Same as normal divide, but removes fraction part.

### 122.1.87 Operator_IntegerDivideRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates an integer divide.
**Notes:** Same as normal divide, but removes fraction part.

### 122.1.88 Operator_Modulo(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the modulo of two numbers.
**Example:**

```
dim a as new BiggerNumberMBS(9.3)
dim b as new BiggerNumberMBS(3.0)

dim r as BiggerNumberMBS = a mod b

MsgBox r.StringValue
```

### 122.1.89 Operator_ModuloRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the modulo of two numbers.

### 122.1.90 Operator_Multiply(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply two numbers.
**Example:**

```
// speed of light in m/s
Dim SpeedOfLight As New BiggerNumberMBS("299792458")

// seconds per day
Dim SecondsPerDay As New BiggerNumberMBS(24 * 3600)

Dim DaysPerYear As New BiggerNumberMBS(365.25)

Dim LightYear As BiggerNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Dim AgeOfUniversum As New BiggerNumberMBS(13810000000)

Dim MaxDistance As BiggerNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

### 122.1.91 Operator_MultiplyRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply two numbers.

### 122.1.92 Operator_Negate as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates a number.
**Example:**

```
dim a as new BiggerNumberMBS(3)

// negate
dim c as BiggerNumberMBS = -a
```

```
MsgBox c.StringValue
```

### 122.1.93 Operator_Power(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates power of two numbers.
**Example:**

```
dim a as new BiggerNumberMBS(3)
dim b as new BiggerNumberMBS(4)

// pow
dim c as BiggerNumberMBS = a ^b

MsgBox c.StringValue
```

### 122.1.94 Operator_PowerRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates power of two numbers.

### 122.1.95 Operator_Subtract(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts one number from other.
**Example:**

```
dim a as new BiggerNumberMBS(3)
dim b as new BiggerNumberMBS(4)

// subtract
dim c as BiggerNumberMBS = a - b

MsgBox c.StringValue
```

### 122.1.96 Operator_SubtractRight(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts one number from other.

### 122.1.97 Pi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value pi.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Pi
MsgBox b.StringValue
```

### 122.1.98 Pow(other as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the power of the number.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim o as new BiggerNumberMBS(5)
dim p as BiggerNumberMBS = x.Pow(o)

MsgBox p.StringValue // shows 32
```

### 122.1.99 RadToDeg(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts radians to degrees.
**Notes:** It returns: x * 180 / pi.

### 122.1.100 RadToGrad(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts radians to gradians.
**Notes:** it returns: x * 200 / pi

### 122.1.101 Rand as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates random number.
**Notes:** Mantissa and exponent are filled with random bytes to generate a random names.

### 122.1.102 Root(value as BiggerNumberMBS, index as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Indexth Root of x
**Example:**

```
Dim c As New BiggerNumberMBS(5*5*5*5)
Dim e As New BiggerNumberMBS(4)
Dim d As BiggerNumberMBS = BiggerNumberMBS.Root(c, e)

MsgBox d.StringValue
```

**Notes:**

index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

### 122.1.103 Round as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Rounds the number.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.3)
dim s as BiggerNumberMBS = o.Round

MsgBox s.StringValue

dim a as BiggerNumberMBS = new BiggerNumberMBS(-2.3)
dim b as BiggerNumberMBS = a.Round

MsgBox b.StringValue
```

### 122.1.104 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses number from string.
**Example:**

```
// set to 1.2 and show
dim o as new BiggerNumberMBS

dim after as string
dim ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MsgBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

**Notes:**

Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.

### 122.1.105 Sgn(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries sign of number.
**Example:**

```
Dim negative As New BiggerNumberMBS(-5.6)
Dim sign1 As BiggerNumberMBS = BiggerNumberMBS.Sgn(negative)

Dim positive As New BiggerNumberMBS(5.6)
Dim sign2 As BiggerNumberMBS = BiggerNumberMBS.Sgn(positive)

Break
```

### 122.1.106 Sin(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the sinus value.
**Example:**

```
Dim c As New BiggerNumberMBS(1.0)
Dim d As BiggerNumberMBS = BiggerNumberMBS.Sin(c)

Dim x As Double = Sin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

### 122.1.107 Sinh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Sine.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Dim x As Double = SinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** we're using the formula sinh(x) = ( e^x - e^(-x) ) / 2

### 122.1.108 SkipFraction as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function skips the fraction.
**Example:**

```
Dim c As New BiggerNumberMBS(-3.7)
Dim d As BiggerNumberMBS = c.SkipFraction

MsgBox d // shows -3
```

**Notes:**

Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2
-2.7 =>2

### 122.1.109 Sqrt as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the square root.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(256)
dim s as BiggerNumberMBS = o.Sqrt

MsgBox s.StringValue
```

### 122.1.110 Subtract(other as BiggerNumberMBS, round as boolean = true) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts a number.
**Example:**

```
dim x as new BiggerNumberMBS(2)
dim d as new BiggerNumberMBS(3)
dim p as BiggerNumberMBS = x.Subtract(d)

MsgBox p.StringValue // shows -1
```

### 122.1.111 Tan(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Tangent.
**Example:**

```
Dim c As New BiggerNumberMBS(1.0)
Dim d As BiggerNumberMBS = BiggerNumberMBS.Tan(c)

Dim x As Double = Tan(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula tan(x) = sin(x) / cos(x).

### 122.1.112 Tanh(value as BiggerNumberMBS) as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Tangent.
**Example:**

```
Dim c As New BiggerNumberMBS(0.5)
Dim d As BiggerNumberMBS = BiggerNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Dim x As Double = TanHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula tanh(x)= ( e^x - e^(-x) ) / ( e^x + e^(-x) )

### 122.1.113 TwoPi as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value 2 * PI.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.TwoPi
MsgBox b.StringValue
```

### 122.1.114 Zero as BiggerNumberMBS

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value zero.
**Example:**

```
dim b as BiggerNumberMBS = BiggerNumberMBS.Zero
MsgBox b.StringValue
```

### 122.1.115 Properties

### 122.1.116 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets/Queries currency value.
**Example:**

```
dim u as Currency = 1234.5678
dim b as new BiggerNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

**Notes:** (Read and Write property)

### 122.1.117 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The exponent for this number.
**Notes:**

Setting this may need to update flags, too.
(Read and Write property)

### 122.1.118 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The flags.
**Notes:**

Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

### 122.1.119 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The mantissa for this number.
**Notes:**

Setting this may need to update flags, too.

(Read and Write property)

### 122.1.120 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or Set the double value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

**Notes:** (Read and Write property)

### 122.1.121 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get/Set value as Int64.
**Example:**

```
dim u as Int64 = &h7FFFFFFFFFFFFFFF // maximum Int64
dim b as new BiggerNumberMBS(u)
MsgBox str(b.Int64Value)

dim one as new BiggerNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

**Notes:** (Read and Write property)

### 122.1.122 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or Set the integer value.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

**Notes:** (Read and Write property)

### 122.1.123 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this number is an integer.
**Example:**

```
dim o as BiggerNumberMBS = new BiggerNumberMBS(1)
dim z as BiggerNumberMBS = new BiggerNumberMBS(1.5)

if o.IsInteger then
MsgBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MsgBox z.StringValue+" is not integer"
end if
```

**Notes:**

If true, there are no digits after the dot.
(Read only property)

### 122.1.124 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this is an invalid number.
**Example:**

```
dim o as BiggerNumberMBS = BiggerNumberMBS.zero
dim z as BiggerNumberMBS = BiggerNumberMBS.Nan
```

```
if z.IsNan then
MsgBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
MsgBox o.StringValue+" is not NaN"
end if
```

**Notes:** (Read only property)

### 122.1.125 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value is negative.
**Example:**

```
dim o as BiggerNumberMBS = BiggerNumberMBS.one
dim z as BiggerNumberMBS = BiggerNumberMBS.one.Negate

if z.IsNegative then
MsgBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o.StringValue+" is not negative"
end if
```

**Notes:** (Read only property)

### 122.1.126 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Checks if value is zero.
**Example:**

```
dim o as BiggerNumberMBS = BiggerNumberMBS.one
dim z as BiggerNumberMBS = BiggerNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue+" is zero"
else
break // error
end if

if o.IsZero then
break // error
else
MsgBox o.StringValue+" is not zero"
end if
```

**Notes:** (Read only property)

### 122.1.127 StringValue as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set string value of text.
**Example:**

```
// set to 1.2 and show
dim o as new BiggerNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue
```

**Notes:** (Read and Write property)
See also:

- 122.1.130 StringValue(Base as Integer) as String 20443

### 122.1.128 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get/Set value as UInt64.
**Example:**

```
dim u as UInt64 = 12345678901234567890
dim b as new BiggerNumberMBS(u)
MsgBox str(b.UInt64Value)
```

**Notes:** (Read and Write property)

### 122.1.129 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries/Sets value with variant.
**Notes:**

Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

### 122.1.130 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get/Set string value with a given base.
**Example:**

```
dim o as new BiggerNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

**Notes:** (Read and Write computed property)
See also:

- 122.1.127 StringValue as String 20442

## 122.2 class BigNumberErrorExceptionMBS

### 122.2.1 class BigNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception class for big number math.
**Example:**

```
dim b as new BigNumberMBS(5)
dim c as BigNumberMBS = BigNumberMBS.Zero

// raises exception due to division by zero
dim x as BigNumberMBS = b/c
```

**Notes:**

Raised when operations fail due to division by zero, invalid numbers or overflow/underflow.
Subclass of the RuntimeException class.

## 122.3 class BigNumberMBS

### 122.3.1 class BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a big number.
**Example:**

```
// speed of light in m/s
Dim SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Dim SecondsPerDay As New BigNumberMBS(24 * 3600)

Dim DaysPerYear As New BigNumberMBS(365.25)

Dim LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Dim AgeOfUniversum As New BigNumberMBS(13810000000)

Dim MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum

MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

**Notes:**

This is floating point number with 320 bits in BigNumber and 2560 bits in BiggerNumber class.
Precision is about 77 digits dot for the smaller one and 617 for the bigger one.
So use first for speed and second for precision.

So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

See LargeNumberMBS for a 4128 bit integer number, about 1200 digits in length.

### 122.3.8 Methods

### 122.3.9 Abs as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries absolute value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(-123)
dim z as BigNumberMBS = o.Abs

MsgBox z.StringValue
```

**Notes:** Removes sign.
See also:

- 122.3.10 Abs(value as BigNumberMBS) as BigNumberMBS 20448

### 122.3.10 Abs(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Absolute value of x.
**Example:**

```
Dim c As New BigNumberMBS(-3)
Dim d As BigNumberMBS = BigNumberMBS.Abs(c)
Dim e As BigNumberMBS = c.Abs

MsgBox d.StringValue+EndOfLine+e.StringValue // shows 3
```

See also:

- 122.3.9 Abs as BigNumberMBS 20448

### 122.3.11 ACos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Cosine.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.ACos(c)
```

```
Dim x As Double = ACos(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** we're using the formula: acos(x) = pi/2 - asin(x)

### 122.3.12 ACosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverse hyperbolic cosine.
**Example:**

```
Dim c As New BigNumberMBS(2.0)
Dim d As BigNumberMBS = BigNumberMBS.ACosh(c)

// ACosHMBS is in MBS Xojo Util Plugin
Dim x As Double = ACosHMBS(2.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** acosh(x) = ln( x + sqrt(x^2 - 1) ) x in <1, infinity)

### 122.3.13 ACot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Cotangent.
**Notes:** we're using the formula: actan(x) = pi/2 - atan(x)

### 122.3.14 ACoth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates inverse hyperbolic cotangent.
**Notes:** acoth(x) = 0.5 * ln( (x+1) / (x-1) ) x in (-infinity, -1) or (1, infinity)

### 122.3.15 Add(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim x as new BigNumberMBS(2)
dim d as new BigNumberMBS(3)
dim p as BigNumberMBS = x.Add(d)

MsgBox p.StringValue // shows 5
```

### 122.3.16 ASin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Sine.
**Example:**

```
Dim c As New BigNumberMBS(1.0)
Dim d As BigNumberMBS = BigNumberMBS.ASin(c)

Dim x As Double = ASin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** Range is from -1 to 1.

### 122.3.17 ASinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverse hyperbolic sine.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.ASinH(c)

// ASinHMBS is in MBS Xojo Util Plugin
Dim x As Double = ASinHMBS(0.5)
```

```
MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** asinh(x) = ln( x + sqrt(x^2 + 1) )

### 122.3.18 ATan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Arc Tangent.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.ATan(c)

Dim x As Double = ATan(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

### 122.3.19 ATanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates inverse hyperbolic tangent.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.ATanh(c)

// ATanhMBS is in MBS Xojo Util Plugin
Dim x As Double = ATanhMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** atanh(x) = 0.5 * ln( (1+x) / (1-x) ) x in (-1, 1)

### 122.3.20 BitAnd(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise AND operation.
**Example:**

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitAnd(y)

MsgBox r.StringValue
```

### 122.3.21 BitOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise or operation.
**Example:**

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitOr(y)

MsgBox r.StringValue
```

### 122.3.22 BitXOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates bitwise xor operation.
**Example:**

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitXOr(y)

MsgBox r.StringValue
```

### 122.3.23 Ceil as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns a value representing the smallest integer that is greater than or equal to x.
**Example:**

```
Dim c As New BigNumberMBS(-3.7)
Dim d As BigNumberMBS = c.Ceil

MsgBox d // shows -3
```

**Notes:**

e.g.
Ceil(-3.7) = -3
Ceil(-3.1) = -3
Ceil(-3.0) = -3
Ceil(4.0) = 4
Ceil(4.2) = 5
Ceil(4.8) = 5

### 122.3.24 Constructor

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with zero value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS
MsgBox o.StringValue
```

- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.25 Constructor(other as BigNumberMBS)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with other value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
dim c as BigNumberMBS = new BigNumberMBS(o)

MsgBox c.StringValue
```

- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.26 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number object with a currency object.
**Example:**

```
dim v as Currency = 123.456
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.27 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with double value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.28 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 32-bit integer.
**Example:**

```
dim v as Int32 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 122.3.27 Constructor(value as Double) 20455
- 129.7.6 Constructor(value as Int64) 20892
- 122.3.30 Constructor(value as Single) 20457
- 122.3.31 Constructor(value as String) 20457
- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.29 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 64-bit integer.
**Example:**

```
dim v as Int64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.3.27 Constructor(value as Double) 20455
- 122.3.28 Constructor(value as Int32) 20455
- 122.3.30 Constructor(value as Single) 20457

- 122.3.31 Constructor(value as String) 20457
- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.30 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with a 32-bit floating point number.
**Example:**

```
dim v as Single = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.3.24 Constructor 20453

- 122.3.27 Constructor(value as Double) 20455
- 122.3.28 Constructor(value as Int32) 20455
- 129.7.6 Constructor(value as Int64) 20892
- 122.3.31 Constructor(value as String) 20457
- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.31 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initialize the number with string value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS("123.456")
MsgBox o.StringValue
```

See also:

- 122.3.24 Constructor 20453
- 122.3.25 Constructor(other as BigNumberMBS) 20454
- 122.3.26 Constructor(value as Currency) 20454
- 122.3.27 Constructor(value as Double) 20455
- 122.3.28 Constructor(value as Int32) 20455
- 129.7.6 Constructor(value as Int64) 20892
- 122.3.30 Constructor(value as Single) 20457
- 122.3.32 Constructor(value as UInt32) 20458
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.32 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt32 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.3.24 Constructor 20453

- 122.3.26 Constructor(value as Currency) 20454
- 122.3.27 Constructor(value as Double) 20455
- 122.3.28 Constructor(value as Int32) 20455
- 129.7.6 Constructor(value as Int64) 20892
- 122.3.30 Constructor(value as Single) 20457
- 122.3.31 Constructor(value as String) 20457
- 129.10.15 Constructor(value as UInt64) 20905

### 122.3.33 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 122.3.24 Constructor 20453
- 122.3.25 Constructor(other as BigNumberMBS) 20454
- 122.3.26 Constructor(value as Currency) 20454
- 122.3.27 Constructor(value as Double) 20455
- 122.3.28 Constructor(value as Int32) 20455
- 129.7.6 Constructor(value as Int64) 20892
- 122.3.30 Constructor(value as Single) 20457
- 122.3.31 Constructor(value as String) 20457
- 122.3.32 Constructor(value as UInt32) 20458

### 122.3.34 Cos(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the cosine value.
**Example:**

```
Dim c As New BigNumberMBS(1.0)
Dim d As BigNumberMBS = BigNumberMBS.Cos(c)

Dim x As Double = Cos(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula cos(x) = sin(x + PI/2).

### 122.3.35 Cosh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Cosine.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.CosH(c)

// CosHMBS is in MBS Xojo Util Plugin
Dim x As Double = CosHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula cosh(x)= ( e^x + e^(-x) ) / 2.

### 122.3.36 Cot(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Cotangent.
**Notes:** We're using the formula tan(x) = cos(x) / sin(x).

### 122.3.37 Coth(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Cotangent.
**Notes:** We're using the formula coth(x)= ( e^x + e^(-x) ) / ( e^x - e^(-x) )

### 122.3.38 DegToDeg(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format into one value.
**Notes:**

long format: (degrees, minutes, seconds)
minutes and seconds must be greater than or equal zero

result:
if d>=0 : result= d + ((s/60)+m)/60
if d<0 : result= d - ((s/60)+m)/60

((s/60)+m)/60 = (s+60*m)/3600 (second version is faster because there's only one division)

for example:
DegToDeg(10, 30, 0) = 10.5
DegToDeg(10, 24, 35.6)=10.4098(8)

### 122.3.39 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format to gradians.
See also:

- 122.3.40 DegToGrad(value as BigNumberMBS) as BigNumberMBS 20461

### 122.3.40 DegToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to gradians.
**Notes:** it returns: x * 200 / 180
See also:

- 122.3.39 DegToGrad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 20461

### 122.3.41 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees in the long format to radians.
See also:

- 122.3.42 DegToRad(value as BigNumberMBS) as BigNumberMBS 20462

### 122.3.42 DegToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to radians.
**Notes:** It returns: x * pi / 180
See also:

- 122.3.41 DegToRad(d as BigNumberMBS, m as BigNumberMBS, s as BigNumberMBS) as BigNumberMBS 20461

### 122.3.43 Divide(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides the number.
**Example:**

```
dim x as new BigNumberMBS(8)
dim d as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Divide(d)

MsgBox p.StringValue // shows 4
```

### 122.3.44 E as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value zero.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.e
MsgBox b.StringValue
```

### 122.3.45 Equals(other as BigNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if two numbers are the same.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(123)
```

```
dim z as BigNumberMBS = new BigNumberMBS(123)

if o.Equals(z) then
MsgBox "equal"
else
Break // error
end if
```

**Notes:** Returns true if equal.

### 122.3.46 Exp(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates e^value.
**Example:**

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = BigNumberMBS.Exp(x)

MsgBox p.StringValue // shows e^2 = 7.38
```

### 122.3.47 Floor as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes any fraction part.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.3)
dim s as BigNumberMBS = o.Floor

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.3)
dim b as BigNumberMBS = a.Floor

MsgBox b.StringValue
```

### 122.3.48 Frac as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extracts the fraction part.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
dim s as BigNumberMBS = o.Frac

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.5)
dim b as BigNumberMBS = a.Frac

MsgBox b.StringValue
```

### 122.3.49 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries string value.
**Example:**

```
dim o as new BigNumberMBS(1234)

// show as hex
MsgBox o.GetStringValue(16)

// show as number with comma and 3 digits
dim z as new BigNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

**Notes:**

Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.

### 122.3.50 GradToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts degrees to gradians.
**Notes:** it returns: x * 180 / 200

### 122.3.51 GradToRad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts gradians to radians.
**Notes:** It returns: x * pi / 200.

### 122.3.52 HalfPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value pi/2.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.HalfPi
MsgBox b.StringValue
```

### 122.3.53 LibTypeStr as String

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries what implementation is used for this platform.
**Notes:**

Shows asm in the text if assembler code is used.
Assembler code is not available for all platforms.

### 122.3.54 Ln(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates natural logarithm.
**Example:**

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = BigNumberMBS.Ln(x)

MsgBox p.StringValue // shows ln(2) = 0.69
```

### 122.3.55 Ln10 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value ln(10).
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Ln10
MsgBox b.StringValue
```

### 122.3.56 Ln2 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value ln(2).
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Ln2
MsgBox b.StringValue
```

### 122.3.57 Log(value as BigNumberMBS, base as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates logarithm in a given base.
**Example:**

```
dim x as new BigNumberMBS(100)
dim d as new BigNumberMBS(10)
dim p as BigNumberMBS = BigNumberMBS.Log(x, d)

MsgBox p.StringValue // shows ln(100)/ln(10) = 2
```

### 122.3.58 Max as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with maximum value.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

### 122.3.59 Min as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with minimum value.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

### 122.3.60 Modulate(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulates a number.
**Example:**

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(3)
dim r as BigNumberMBS = x.Modulate(y)

MsgBox r.StringValue
```

**Notes:** Similar to mod keyword in Xojo.

### 122.3.61 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulates by 2.
**Example:**

```
dim x as new BigNumberMBS(8)
dim y as new BigNumberMBS(9)

MsgBox str(x.Modulate2)+" "+str(y.Modulate2)
```

**Notes:** Returns 0 or 1.

### 122.3.62 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies two numbers.
**Example:**

```
dim x as new BigNumberMBS(8)
dim d as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16
```

See also:

- 122.3.63 Multiply(value as Integer) as BigNumberMBS 20468
- 122.3.64 Multiply(value as UInt32) as BigNumberMBS 20469

### 122.3.63 Multiply(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply by an integer.
**Example:**

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(3)

MsgBox p.StringValue // shows 6
```

See also:

- 122.3.62 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 20468

• 122.3.64 Multiply(value as UInt32) as BigNumberMBS 20469

### 122.3.64 Multiply(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply by an unsigned integer.
**Example:**

```
dim x as new BigNumberMBS(17)
dim r as BigNumberMBS = x.Multiply(3)

MsgBox r.StringValue
```

See also:

• 122.3.62 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 20468

• 122.3.63 Multiply(value as Integer) as BigNumberMBS 20468

### 122.3.65 Nan as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value NaN.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Nan
MsgBox b.StringValue
```

### 122.3.66 Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates the number.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(123)
dim z as BigNumberMBS = o.Negate

MsgBox z.StringValue
```

### 122.3.67 NumberWithCurrency(value as Currency) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a currency value.
**Example:**

```
dim v as Currency = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithCurrency(v)

MsgBox b.StringValue
```

### 122.3.68 NumberWithDouble(value as Double) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a 64-bit floating number.
**Example:**

```
dim v as Double = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithDouble(v)

MsgBox b.StringValue
```

### 122.3.69 NumberWithInt32(value as Int32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a signed 32-bit integer.
**Example:**

```
dim v as Int32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt32(v)

MsgBox b.StringValue
```

### 122.3.70 NumberWithInt64(value as Int64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with a signed 64-bit integer.

**Example:**

```
dim v as Int64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt64(v)

MsgBox b.StringValue
```

### 122.3.71 NumberWithInteger(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an integer.
**Example:**

```
dim v as Integer = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInteger(v)

MsgBox b.StringValue
```

### 122.3.72 NumberWithSingle(value as single) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an 32-bit floating point number.
**Example:**

```
dim v as Single = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithSingle(v)

MsgBox b.StringValue
```

### 122.3.73 NumberWithString(value as String) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with value from string.
**Example:**

```
dim v as String = "123"
dim b as BigNumberMBS = BigNumberMBS.NumberWithString(v)

MsgBox b.StringValue
```

### 122.3.74 NumberWithUInt32(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned 32-bit integer.
**Example:**

```
dim v as UInt32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt32(v)

MsgBox b.StringValue
```

### 122.3.75 NumberWithUInt64(value as UInt64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned 64-bit integer.
**Example:**

```
dim v as UInt64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt64(v)

MsgBox b.StringValue
```

### 122.3.76 NumberWithUInteger(value as UInteger) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with an unsigned integer.
**Example:**

```
dim v as UInteger = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInteger(v)

MsgBox b.StringValue
```

### 122.3.77 NumberWithVariant(value as Variant) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number based on a variant.
**Example:**

```
dim v as Variant = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithVariant(v)

MsgBox b.StringValue
```

**Notes:** Internally redirects to other NumberWith functions based on the value type.

### 122.3.78 One as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value one.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.One
MsgBox b.StringValue
```

### 122.3.79 Operator_Add(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```

### 122.3.80 Operator_AddRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a number.
**Example:**

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```

### 122.3.81 Operator_Compare(other as BigNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two numbers.
**Example:**

```
dim a as new BigNumberMBS(1.2)
dim b as new BigNumberMBS(1.2)
dim c as new BigNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if

if c >b then
// ok
else
break
end if
```

### 122.3.82 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts big number to string automatically.
**Example:**

```
dim b as new BigNumberMBS
dim n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MsgBox b
```

See also:

- 122.3.83 Operator_Convert(value as String) 20475

### 122.3.83 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a string to a big number.
**Example:**

```
dim b as new BigNumberMBS
dim n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
dim d as Double = b
MsgBox str(d)
```

See also:

- 122.3.82 Operator_Convert as String 20475

### 122.3.84 Operator_Divide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides two numbers.
**Example:**

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a / b

MsgBox r.StringValue
```

### 122.3.85 Operator_DivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides two numbers.

### 122.3.86 Operator_IntegerDivide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates an integer divide.
**Example:**

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a \b

MsgBox r.StringValue
```

**Notes:** Same as normal divide, but removes fraction part.

### 122.3.87 Operator_IntegerDivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates an integer divide.
**Notes:** Same as normal divide, but removes fraction part.

### 122.3.88 Operator_Modulo(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the modulo of two numbers.
**Example:**

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a mod b

MsgBox r.StringValue
```

### 122.3.89 Operator_ModuloRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the modulo of two numbers.

### 122.3.90 Operator_Multiply(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply two numbers.
**Example:**

```
// speed of light in m/s
Dim SpeedOfLight As New BigNumberMBS("299792458")

// seconds per day
Dim SecondsPerDay As New BigNumberMBS(24 * 3600)

Dim DaysPerYear As New BigNumberMBS(365.25)

Dim LightYear As BigNumberMBS = SpeedOfLight * DaysPerYear * SecondsPerDay
MsgBox LightYear.StringValue+" meter per light year"

// 9.460.730.472.580.800 matches number from Wikipedia

Dim AgeOfUniversum As New BigNumberMBS(13810000000)

Dim MaxDistance As BigNumberMBS = LightYear * AgeOfUniversum
```

```
MsgBox MaxDistance.GetStringValue(10, False, 100, 3, True)+" meter maximum"
```

### 122.3.91 Operator_MultiplyRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply two numbers.

### 122.3.92 Operator_Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates a number.
**Example:**

```
dim a as new BigNumberMBS(3)

// negate
dim c as BigNumberMBS = -a

MsgBox c.StringValue
```

### 122.3.93 Operator_Power(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates power of two numbers.
**Example:**

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// pow
dim c as BigNumberMBS = a ^b

MsgBox c.StringValue
```

### 122.3.94 Operator_PowerRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates power of two numbers.

### 122.3.95 Operator_Subtract(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts one number from other.
**Example:**

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// subtract
dim c as BigNumberMBS = a - b

MsgBox c.StringValue
```

### 122.3.96 Operator_SubtractRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts one number from other.

### 122.3.97 Pi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value pi.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Pi
MsgBox b.StringValue
```

### 122.3.98 Pow(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the power of the number.
**Example:**

```
dim x as new BigNumberMBS(2)
dim o as new BigNumberMBS(5)
dim p as BigNumberMBS = x.Pow(o)

MsgBox p.StringValue // shows 32
```

### 122.3.99 RadToDeg(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts radians to degrees.
**Notes:** It returns: x * 180 / pi.

### 122.3.100 RadToGrad(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts radians to gradians.
**Notes:** it returns: x * 200 / pi

### 122.3.101 Rand as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates random number.
**Notes:** Mantissa and exponent are filled with random bytes to generate a random names.

### 122.3.102 Root(value as BigNumberMBS, index as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Indexth Root of x
**Example:**

```
Dim c As New BigNumberMBS(5*5*5*5)
Dim e As New BigNumberMBS(4)
Dim d As BigNumberMBS = BigNumberMBS.Root(c, e)
```

MsgBox d.StringValue

**Notes:**

index must be integer and not negative <0;1;2;3....)

if index==0 the result is one
if x==0 the result is zero and we assume root(0;0) is not defined

if index is even (2;4;6...) the result is x^(1/index) and x>0
if index is odd (1;2;3;...) the result is either

-(abs(x)^(1/index)) if x<0
or
x^(1/index)) if x>0

(for index==1 the result is equal x)

### 122.3.103 Round as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Rounds the number.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.3)
dim s as BigNumberMBS = o.Round

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.3)
dim b as BigNumberMBS = a.Round

MsgBox b.StringValue
```

### 122.3.104 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses number from string.
**Example:**

```
// set to 1.2 and show
dim o as new BigNumberMBS

dim after as string
dim ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MsgBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

**Notes:**

Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.

### 122.3.105 Sgn(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries sign of number.
**Example:**

```
Dim negative As New BigNumberMBS(-5.6)
Dim sign1 As BigNumberMBS = BigNumberMBS.Sgn(negative)

Dim positive As New BigNumberMBS(5.6)
Dim sign2 As BigNumberMBS = BigNumberMBS.Sgn(positive)

Break
```

### 122.3.106 Sin(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the sinus value.
**Example:**

```
Dim c As New BigNumberMBS(1.0)
Dim d As BigNumberMBS = BigNumberMBS.Sin(c)
```

```
Dim x As Double = Sin(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

### 122.3.107 Sinh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Sine.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.SinH(c)

// SinHMBS is in MBS Xojo Util Plugin
Dim x As Double = SinHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** we're using the formula sinh(x) = ( e^x - e^(-x) ) / 2

### 122.3.108 SkipFraction as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function skips the fraction.
**Example:**

```
Dim c As New BigNumberMBS(-3.7)
Dim d As BigNumberMBS = c.SkipFraction

MsgBox d // shows -3
```

**Notes:**

Similar to floor, but different for negative ones.

e.g
2.2 =>2
2.7 =>2
-2.2 =>2

-2.7 =>2

### 122.3.109 Sqrt as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the square root.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(256)
dim s as BigNumberMBS = o.Sqrt

MsgBox s.StringValue
```

### 122.3.110 Subtract(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts a number.
**Example:**

```
dim x as new BigNumberMBS(2)
dim d as new BigNumberMBS(3)
dim p as BigNumberMBS = x.Subtract(d)

MsgBox p.StringValue // shows -1
```

### 122.3.111 Tan(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Tangent.
**Example:**

```
Dim c As New BigNumberMBS(1.0)
Dim d As BigNumberMBS = BigNumberMBS.Tan(c)

Dim x As Double = Tan(1.0)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula tan(x) = sin(x) / cos(x).

### 122.3.112 Tanh(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Hyperbolic Tangent.
**Example:**

```
Dim c As New BigNumberMBS(0.5)
Dim d As BigNumberMBS = BigNumberMBS.TanH(c)

// TanHMBS is in MBS Xojo Util Plugin
Dim x As Double = TanHMBS(0.5)

MsgBox d.StringValue+EndOfLine+Str(x)
```

**Notes:** We're using the formula tanh(x)= ( e^x - e^(-x) ) / ( e^x + e^(-x) )

### 122.3.113 TwoPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value 2 * PI.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.TwoPi
MsgBox b.StringValue
```

### 122.3.114 Zero as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a number with value zero.
**Example:**

```
dim b as BigNumberMBS = BigNumberMBS.Zero
MsgBox b.StringValue
```

### 122.3.115 Properties

### 122.3.116 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sets/Queries currency value.
**Example:**

```
dim u as Currency = 1234.5678
dim b as new BigNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

**Notes:** (Read and Write property)

### 122.3.117 DataExponent as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The exponent for this number.
**Notes:**

Setting this may need to update flags, too.
(Read and Write property)

### 122.3.118 DataFlags as Integer

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The flags.
**Notes:**

Bits are 128 for Sign, 64 for NAN and 32 for zero.
(Read and Write property)

### 122.3.119 DataMantissa as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The mantissa for this number.
**Notes:**

Setting this may need to update flags, too.

(Read and Write property)

### 122.3.120 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or Set the double value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

**Notes:** (Read and Write property)

### 122.3.121 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get/Set value as Int64.
**Example:**

```
dim u as Int64 = & h7FFFFFFFFFFFFFFF // maximum Int64
dim b as new BigNumberMBS(u)
MsgBox str(b.Int64Value)

dim one as new BigNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

**Notes:** (Read and Write property)

### 122.3.122 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or Set the integer value.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

**Notes:** (Read and Write property)

### 122.3.123 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this number is an integer.
**Example:**

```
dim o as BigNumberMBS = new BigNumberMBS(1)
dim z as BigNumberMBS = new BigNumberMBS(1.5)

if o.IsInteger then
MsgBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MsgBox z.StringValue+" is not integer"
end if
```

**Notes:**

If true, there are no digits after the dot.
(Read only property)

### 122.3.124 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this is an invalid number.
**Example:**

```
dim o as BigNumberMBS = BigNumberMBS.zero
dim z as BigNumberMBS = BigNumberMBS.Nan
```

```
if z.IsNan then
MsgBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
MsgBox o.StringValue+" is not NaN"
end if
```

**Notes:** (Read only property)

### 122.3.125 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value is negative.
**Example:**

```
dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.one.Negate

if z.IsNegative then
MsgBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o.StringValue+" is not negative"
end if
```

**Notes:** (Read only property)

### 122.3.126 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Checks if value is zero.
**Example:**

```
dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue+" is zero"
else
break // error
end if

if o.IsZero then
break // error
else
MsgBox o.StringValue+" is not zero"
end if
```

**Notes:** (Read only property)

### 122.3.127 StringValue as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get or set string value of text.
**Example:**

```
// set to 1.2 and show
dim o as new BigNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue
```

**Notes:** (Read and Write property)
See also:

- 122.3.130 StringValue(Base as Integer) as String 20492

### 122.3.128 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Get/Set value as UInt64.
**Example:**

```
dim u as UInt64 = 12345678901234567890
dim b as new BigNumberMBS(u)
MsgBox str(b.UInt64Value)
```

**Notes:** (Read and Write property)

### 122.3.129 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries/Sets value with variant.
**Notes:**

Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

### 122.3.130 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get/Set string value with a given base.
**Example:**

```
dim o as new BigNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

**Notes:** (Read and Write computed property)
See also:

- 122.3.127 StringValue as String 20491

## 122.4 Globals

### 122.4.1 IsValidCreditCardNumberMBS(Number as String) as boolean

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies a credit card number.
**Example:**

```
MsgBox "test 49927398716 gives "+str(IsValidCreditCardNumberMBS("49927398716"))+EndOfLine+_
"test 49927398717 gives "+str(IsValidCreditCardNumberMBS("49927398717"))
```

**Notes:**

This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.
Returns true on success or false on failure.

If this function returns false, you can be sure the number is not valid. But if the function returns true, you may want to check the number online with some database.

### 122.4.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 122.4.3 CompareNumbersMBS(v1 as Variant, v2 as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares numbers.
**Example:**

```
Dim u As UInt64 = 12345678901234567890
Dim i As Int64 = -1

If u >i Then
Break // 12345678901234567890 >-1
Else
Break // xojo says it's smaller!
End If

If CompareNumbersMBS(u,i) >0 Then
Break // Plugin does it right
```

```
Else
Break
End If
```

**Notes:**

The goal: compare numbers better than Xojo.
Especially UInt64/Int64 edge cases.

We treat nil as 0 value and ptr as UInt64.
If first argument is string, we just compare both as string. If first argument is numeric and second argument is string, we convert second one to number.

### 122.4.4 Blog Entries

- News from the MBS Xojo Plugins Version 20.5
- MBS Xojo Plugins in version 20.5
- MBS Xojo Plugins, version 20.5pr3

### 122.4.5 ACosHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the inverse hyperbolic cosine of the real argument x.
**Example:**

```
MsgBox str(ACosHMBS(5))
```

**Notes:**

acosh(1) returns +0.
acosh(x) returns a NAN for x <1.
acosh(+infinity) returns +infinity.

### 122.4.6 ACosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the principal value of the arc cosine of x in the range [ 0, pi ] .
**Example:**

MsgBox str(ACosMBS(5))

**Notes:**

acos(1) returns +0.
acos(x) returns a NAN for | x | >1.

### 122.4.7 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.8 ArithmeticShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Does an arithmetic Shift of value and cares for the sign (+ or -).
**Example:**

msgbox str(ArithmeticShiftMBS(5,3))

// displays 40 which is 5*(2^3) = 5 * 8

**Notes:** Always using 32bit.

### 122.4.9 ASinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the principal value of the arc sine of x in the range [ -pi/2, +pi/2 ] .
**Example:**

MsgBox str(ASinHMBS(5))

**Notes:**

asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

### 122.4.10 ASinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the principal value of the arc sine of x in the range [ -pi/2, +pi/2 ] .
**Example:**

MsgBox str(ASinMBS(5))

**Notes:**

asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

### 122.4.11 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.12 ATan2MBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the principal value of the arc tangent of y/x, using the signs of both arguments to determine the quadrant of the return value.
**Example:**

MsgBox str(ATan2MBS(3,4))

**Notes:**

atan2(+-0, -0) returns +-pi.
atan2(+-0, +0) returns +-0.
atan2(+-0, x) returns +-pi for x <0.
atan2(+-0, x) returns +-0 for x >0.
atan2(y, +-0) returns -pi/2 for y >0.
atan2(+-y, -infinity) returns +-pi for finite y >0.
atan2(+-y, +infinity) returns +-0 for finite y >0.
atan2(+-infinity, +x) returns +-pi/2 for finite x.
atan2(+-infinity, -infinity) returns +-3*pi/4.
atan2(+-infinity, +infinity) returns +-pi/4.

### 122.4.13 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.14 ATanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the inverse hyperbolic tangent of the real argument x.
**Example:**

MsgBox str(ATanHMBS(5))

**Notes:**

atanh(+-0) returns +-0.
atanh(+-1) returns +-infinity.
atanh(x) returns a NaN for | x | >1.

### 122.4.15 ATanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The atan() function computes the principal value of the arc tangent of x in the range [ -pi/2, +pi/2 ] .
**Example:**

MsgBox str(ATanMBS(5))

**Notes:**

atan(+-0) returns +-0.
atan(+-infinity) returns +-pi/2.

### 122.4.16 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.17 BitClearMBS(value as UInt64, mask as UInt64) as UInt64

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the bits in the mask from the value.
**Example:**

```
MsgBox bin(BitClearMBS(& b1111,& b0110)) // 1001
```

**Notes:** Does not work for 64 bit integers.

### 122.4.18 BitCountMBS(value as UInt64) as Integer

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Counts the number of bits set.
**Example:**

```
MsgBox str(BitCountMBS(& b101)) // 2
MsgBox str(BitCountMBS(& b10101)) // 5
MsgBox str(BitCountMBS(& b11111111111100001111)) // 16
MsgBox str(BitCountMBS(& hFFFFFFFF)) // 32
```

**Notes:** Does not work for 64 bit integers.

### 122.4.19 BitExclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

Does an bitwiseAnd using the value and bitwisenot of 2^bitNumber.
Or: Switches off the bit bitNumber inside value.
**Example:**

```
msgBox str(BitExclMBS(80,4))
' displays 64 which is 80 without 16 = 2^4+2^5 without 2^4
```

**Notes:** Always using 64-bit.

### 122.4.20 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

### 122.4.21 BitInclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:**

Does an bitwiseOr using the value and 2^bitNumber
Or: Switches on the bit bitNumber inside value.
**Example:**

```
msgBox str(BitInclMBS(64,4))
' displays 80 which is 64 + 16 = 64 + 2^4
```

**Notes:** Always using 64-bit.

### 122.4.22 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

### 122.4.23 BitIsSetMBS(value as UInt64, bitNumber as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tests whether a certain bit is set inside the value
**Example:**

```
dim bool as boolean

bool=BitIsSetMBS(80,4)
' true, because 2^4=16 is included in 80=2^4+2^6
```

**Notes:** Always using 64-bit.

### 122.4.24 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

### 122.4.25 BitValMBS(bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns 2^bitNumber
**Example:**

```
msgBox str(BitValMBS(5))
' displays 32
```

**Notes:** Always using 64-bit.

### 122.4.26 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr6

### 122.4.27 BitwiseDiffMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns all bits of val1 which are not in val2.
**Example:**

```
msgBox str(BitwiseDiffMBS(65,80))
' displays 1, because 65=2^0+2^5 includes 1=2^0, which is not part of 80=2^4+2^5.
```

**Notes:** Always using 32bit.

### 122.4.28 BitwiseNAndMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** negates both values and does bitwiseAnd on them.
**Example:**

```
msgBox str(bitwiseNandMBS(65,80))
' displays -82
```

**Notes:** Always using 32bit.

### 122.4.29 BitwiseNOrMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** negates both values and does bitwiseor on them.
**Example:**

```
msgBox str(bitwisenorMBS(65,80))
' displays -65
```

**Notes:** Always using 32bit.

### 122.4.30 BitwiseNotMBS(value as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Does an bitwise negation of value.
**Example:**

```
msgBox str(BitwiseNotMBS(5))
' displays -6
```

**Notes:** Always using 32bit.

### 122.4.31 BitwiseRotateMBS(value as UInt64, count as Integer, offset as Integer, width as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Does an bitwise rotation of value.
**Example:**

```
msgBox str(BitwiseRotateMBS(5,2,0,32))
' displays 20
```

**Notes:** Always using 32bit.

### 122.4.32 ConvertFromFloat16MBS(Number as UInt16) as Single

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a 16bit floating point number to a 32bit floating point number.
**Example:**

```
dim h1 as UInt16 = ConvertToFloat16MBS(1.0)
dim f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0

dim h2 as UInt16 = ConvertToFloat16MBS(-1.0)
dim f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

dim h3 as UInt16 = ConvertToFloat16MBS(1000.0)
dim f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

dim h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
dim f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

dim inf as single = 65504.0
dim h5 as UInt16 = ConvertToFloat16MBS(inf)
dim f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

dim nan as single = sqrt(-1)
dim h6 as UInt16 = ConvertToFloat16MBS(nan)
dim f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

### 122.4.33 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

### 122.4.34 ConvertToFloat16MBS(Number as Single) as UInt16

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a 32bit floating point number to a 16bit floating point number.
**Example:**

```
dim h1 as UInt16 = ConvertToFloat16MBS(1.0)
dim f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0

dim h2 as UInt16 = ConvertToFloat16MBS(-1.0)
dim f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

dim h3 as UInt16 = ConvertToFloat16MBS(1000.0)
dim f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

dim h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
dim f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

dim inf as single = 65504.0
dim h5 as UInt16 = ConvertToFloat16MBS(inf)
dim f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

dim nan as single = sqrt(-1)
dim h6 as UInt16 = ConvertToFloat16MBS(nan)
dim f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

**Notes:** This looses precision as 16bit fit less bits than 32 bit.

### 122.4.35 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.5pr4

### 122.4.36 CosHMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the hyperbolic cosine of x.
**Example:**

```
MsgBox str(CosHMBS(5))
```

**Notes:**

cosh(+-0) returns 1.
cosh(+-infinity) returns +infinity.

### 122.4.37 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.38 CosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the cosine of x (measured in radians).
**Example:**

MsgBox str(CosMBS(5))

**Notes:**

cos(+-0) returns 1.
cos(+-infinity) returns a NaN.

### 122.4.39 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.40 CurrencyAddMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds two currency values.
**Notes:** This function uses 64bit integer math to avoid rounding issues.

### 122.4.41 CurrencyDivMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides currency value by integer.
**Notes:**

Rest is ignored.
This function uses 64bit integer math to avoid rounding issues.

### 122.4.42 CurrencyMulMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies currency value with integer.
**Example:**

```
dim c1 as Currency = 1234567890.1234

// in xojo
dim c3 as Currency = c1 * 12345

// with plugin
dim c4 as Currency = CurrencyMulMBS(c1, 12345)

// verify by 64bit math
dim c5 as Int64 = 12345678901234
dim c6 as int64 = c5 * 12345

// and plugin is correct
MsgBox str(c3)+" "+str(c4)+" "+str(c6)
```

**Notes:** This function uses 64bit integer math to avoid rounding issues.

### 122.4.43 CurrencySubMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts value2 from value1.
**Notes:** This function uses 64bit integer math to avoid rounding issues.

### 122.4.44 CurrencyValueMBS(value as string) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses string into currency value.
**Notes:** Replacement for val() which works better with large numbers and raises exceptions on errors.

### 122.4.45 Blog Entries

- Currency Data Type
- MBS Xojo / Real Studio Plugins, version 14.3pr9
- Currency Data Type

### 122.4.46 DoubleToExtendedStrMBS(x as Double) as string

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns the double as an 80bit Float stored inside a ten byte string.
**Example:**

```
dim s as string
dim d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

**Notes:** Returns "" if there is not enough memory to create the string.

### 122.4.47 Exp2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes 2^x, the base-2 exponential of x.
**Example:**

```
MsgBox str(Exp2MBS(5))
```

**Notes:**

exp2(+-0) return 1.
exp2(-infinity) return +0.

exp2(+infinity) return +infinity.

### 122.4.48 ExpMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes e^x, the base-e exponential of x.
**Example:**

```
MsgBox str(ExpMBS(5))
```

**Notes:**

exp(+-0) return 1.
exp(-infinity) return +0.
exp(+infinity) return +infinity.

### 122.4.49 Blog Entries

- REAL Server Plugin 0.4

### 122.4.50 ExtendedStrToDoubleMBS(v as string) as Double

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Returns the 80bit Float as a double.
**Example:**

```
dim s as string
dim d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

**Notes:**

Returns NAN (255) if the string is not valid. e.g. "".
Returns always NAN on Windows.

### 122.4.51 FacMBS(x as Integer) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates (value!).
**Example:**

```
Sub Open()
// Fill a listbox with Fac values:
dim x as Integer
dim y as Double

for x=1 to 100
listBox1.addrow format(x,"0")
y=FacMBS(x)
if y=0 then
exit
else
listBox1.cell(listBox1.lastIndex,1)=format(y,"0")
end if
next
End Sub
```

**Notes:**

```
msgBox str(facMBS(5))
' displays 120 which is 1*2*3*4*5
```

### 122.4.52 FloorMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns the largest integral value less than or equal to x.
**Example:**

```
MsgBox str(FloorMBS(5.45))
```

**Notes:**

floor(+-0) returns +-0.
floor(+-infinity) returns +-infinity.

### 122.4.53 Blog Entries

- REAL Server Plugin 0.4

### 122.4.54 FRExpMBS(inputx as Double, byref expValue as Integer) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Breaks floating-point number into normalized fraction and power of 2.
**Example:**

```
dim x as Double = 123.456

dim y as Integer
dim r as Double = FRExpMBS(x, y)

MsgBox str(X)+": "+str(y)+" "+str(r)
```

**Notes:**

This functions break the floating-point number value into a normalized fraction and an integral power of 2. They store the integer in the int object pointed to by exp.

The functions return a number x such that x has a magnitude in the interval [ 1/2, 1) or 0, and value = x*(2^exp).

frexp(+-0, exp) returns +-0, and stores 0 in the object pointed to by exp.

frexp(+-infinity, exp) returns +-infinity, and stores an unspecified value in the object pointed to by exp.

frexp(Nan, exp) returns a Nan, and stores an unspecified value in the object pointed to by exp.

### 122.4.55 HiWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the high word part of the integer.
**Example:**

```
MsgBox hex(HiWordMBS(& H12345678)) // shows 1234
```

**Notes:** equal to bitwiseshiftright(i,16)

### 122.4.56 HypotMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the sqrt(x*x+y*y) without undue overflow or underflow.
**Example:**

```
MsgBox str(HypotMBS(3,4)) // shows 5
```

**Notes:**

hypot(x, y) , hypot(y, x) , and hypot(x, -y) are equivalent.
hypot(x, +-0) is equivalent to fabs(x).
hypot(+-infinity, y) returns +infinity even if y is a NaN.

### 122.4.57 IsFiniteMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the parameter is finite.
**Example:**

```
dim x as Double

x=1/0
if not isfiniteMBS(x) then
msgbox "the result is Infinite."
end if
```

### 122.4.58 IsInfMBS(x as Double) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the double passed in is an infinity value.
**Example:**

```
dim e as Double = 0.0000000000000000000000000000000000000000000000001
dim d as Double = 1.0/e/e/e/e/e/e/e

MsgBox str(d)+" is inf: "+str(IsInfMBS(d))
```

### 122.4.59 IsNANMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the parameter is not a number.
**Example:**

```
dim x as Double
x=sqrt(-1)
if isnanMBS(x) then
msgbox "the square root of -1 is not correct."
end if
```

### 122.4.60 Log10MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the value of the logarithm of argument x to base 10.
**Example:**

```
MsgBox str(Log10MBS(5))
```

**Notes:**

log10(1) return +0.
log10(x) return a NaN for x <0.
log10(+infinity) return +infinity.

### 122.4.61 Blog Entries

- REAL Server Plugin 0.4

### 122.4.62 Log2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the value of the logarithm of argument x to base 2.
**Example:**

MsgBox str(Log2MBS(5))

**Notes:**

log2(1) return +0.
log2(x) return a NaN for x <0.
log2(+infinity) return +infinity.

### 122.4.63 LogicalShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Does an logical Shift of value and doesn't take care for the sign (+ or -).
**Example:**

msgbox str(LogicalShiftMBS(5,3))

**Notes:** Always using 32bit.

### 122.4.64 LogMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the value of the logarithm of argument x to base e.
**Example:**

MsgBox str(LogMBS(5))

**Notes:**

log(1) return +0.
log(x) return a NaN for x <0.
log(+infinity) return +infinity.

### 122.4.65 Blog Entries

- REAL Server Plugin 0.4

### 122.4.66 LoWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the low word part of the integer.
**Example:**

```
MsgBox hex(LoWordMBS(& H12345678)) // shows 5678
```

**Notes:** equal to bitwiseand(i,& HFFFF)

### 122.4.67 NormInvMBS(p as Double, mu as double = 0.0, sigma as double = 1.0) as double

MBS Util Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Calculates NormInv function like in Excel.
**Example:**

```
MsgBox Str(NormInvMBS(0.56, 5, 2)) // should show 5.3019
```

### 122.4.68 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.1
- MBS Xojo Plugins, version 21.1pr1

### 122.4.69 PowMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes x raised to the power y.
**Example:**

```
MsgBox str(PowMBS(5,5))
```

**Notes:**

pow(+-0, y) returns +-infinity for y an odd integer <0.
pow(+-0, y) returns +infinity for y <0 and not an odd integer.
pow(+-0, y) returns +-0 for y an odd integer >0.
pow(+-0, y) returns +0 for y >0 and not an odd integer.

pow(-1, +-infinity) returns 1.
pow(1, y) returns 1 for any y, even a NaN.
pow(x, +-0) returns 1 for any x, even a NaN.
pow(x, y) returns a NaN for finite x <0 and finite non-integer y.
pow(x, -infinity) returns +infinity for | x | <1.
pow(x, -infinity) returns +0 for | x | >1.
pow(x, +infinity) returns +0 for | x | <1.
pow(x, +infinity) returns +infinity for | x | >1.
pow(-infinity, y) returns -0 for y an odd integer <0.
pow(-infinity, y) returns +0 for y <0 and not an odd integer.
pow(-infinity, y) returns -infinity for y an odd integer >0.
pow(-infinity, y) returns +infinity for y >0 and not an odd integer.
pow(+infinity, y) returns +0 for y <0.
pow(+infinity, y) returns +infinity for y >0.

Range errors may occur.

### 122.4.70 Blog Entries

- REAL Server Plugin 0.4

### 122.4.71 RoundMBS(x as Double, decimals as Integer = 0) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function returns the integral value nearest to x rounding half-way cases away from zero, regardless of the current rounding direction.
**Example:**

```
MsgBox str(RoundMBS(5.5))

dim lines(-1) as string

for i as Integer = -5 to 5
lines.Append str(i)+": "+Format(RoundMBS(123456789.123456789, i), "0.0000000")
next

MsgBox join(lines,EndOfLine)
```

**Notes:**

round(+-0) returns +-0.
round(+-infinity) returns +-infinity.

### 122.4.72 Blog Entries

- MBS REALbasic Plugins, version 11.0pr14
- REAL Server Plugin 0.4

### 122.4.73 SinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the hyperbolic sine of x.
**Example:**

MsgBox str(SinHMBS(5.5))

**Notes:**

sinh(+-0) returns +-0.
sinh(+-infinity) returns +-infinity.

### 122.4.74 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.75 SinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the sine of x (measured in radians).
**Example:**

MsgBox str(SinMBS(5.5))

**Notes:**

sin(+-0) returns +-0.
sin(+-infinity) returns a NaN.

### 122.4.76 Blog Entries

- MBS SQLite Extension in version 1.1

- MBS SQLite Extension, version 1.1pr1

### 122.4.77 SqrtMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function compute the yth root of x.
**Example:**

```
dim r,x,y as Double

r=SqrtMBS(x,y)
// r^y=x
```

**Notes:**

sqrt(-0) returns -0.
sqrt(x,y) returns a NaN if the root can't be calculated.

### 122.4.78 Blog Entries

- REAL Server Plugin 0.4

### 122.4.79 TanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the hyperbolic tangent of x.
**Example:**

```
MsgBox str(TanHMBS(5.5))
```

**Notes:**

tanh(+-0) returns +-0.
tanh(+-infinity) returns +-1.

### 122.4.80 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.81 TanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function computes the tangent of x (measured in radians).
**Example:**

```
MsgBox str(TanMBS(5.5))
```

**Notes:**

tan(+-0) returns +-0.
tan(+-infinity) returns a NaN.

### 122.4.82 Blog Entries

- MBS SQLite Extension in version 1.1
- MBS SQLite Extension, version 1.1pr1

### 122.4.83 DoubleToInt64MBS(value as Double) as Int64

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a double value to Int64.

### 122.4.84 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

### 122.4.85 DoubleToUInt64MBS(value as Double) as UInt64

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a double value to UInt64 correctly.
**Example:**

```
// set d to a very high UInt64 value
dim d as Double = pow(256.0,8.0) - 10000

// RB will convert to Int64 here! so number is cut to 9... instead of 18...
dim u1 as UInt64 = d
```

```
// plugin does it right
dim u2 as UInt64 = DoubleToUInt64MBS(d)

MsgBox str(u1)+" "+str(u2)
```

**Notes:** Xojo converts UInt64 to Double with an intermediate Int64 which breaks big numbers. This function does it correctly.

### 122.4.86 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11

### 122.4.87 Int64ToDoubleMBS(value as Int64) as Double

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts an Int64 to Double.

### 122.4.88 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

### 122.4.89 UInt64ToDoubleMBS(value as UInt64) as Double

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts an UInt64 to Double.
**Example:**

```
dim d as Double = 18446744073709541376
MsgBox str(d) // fails

dim e as Double = UInt64ToDoubleMBS(18446744073709541376)
MsgBox str(e) // works
```

**Notes:** Xojo likes to use Int64 internally when doing math with UInt64, so we added this method to fix it.

## 122.5 class LargeNumberErrorExceptionMBS

### 122.5.1 class LargeNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception class used to report with problems in LargeNumberMBS class.
**Notes:** Subclass of the RuntimeException class.

- MBS Xojo Plugins, version 19.1pr5

### 122.5.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr5

## 122.6 class LargeNumberMBS

### 122.6.1 class LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An 4128 bit integer number.
**Example:**

```
Dim n1 As Int64 = 10000000000
Dim n2 As Int64 = 10000000000
Dim n3 As Int64 = n1 * n2 // overflow, so wrong result

Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n1)
Dim l2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n2)
Dim l3 As LargeNumberMBS = l1 * l2

Dim s4 As String = l3.StringValue // this is correct

Break
```

**Notes:**

Can be useful to calculate with more than Int64.
This class works with up to 1224 digits.

See BigNumberMBS for a 320 bit floating point number.

### 122.6.7 Videos

- Presentation from Xojo Developer Conference 2019 in Miami.

### 122.6.8 Methods

### 122.6.9 Add(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds other number.
See also:

- 122.6.10 Add(other as LargeNumberMBS) as LargeNumberMBS 20522

### 122.6.10 Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds other number and returns result.
See also:

- 122.6.9 Add(other as LargeNumberMBS) 20522

### 122.6.11 AddMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Addition with modulo.
**Example:**

```
Dim v As New LargeNumberMBS(100)
Dim o As New LargeNumberMBS(200)
Dim n As New LargeNumberMBS(& hFF)

Dim r As LargeNumberMBS = v.AddMod(o, n)

MsgBox r.StringValue // shows 45 = (100+200) mod 255
```

### 122.6.12 CheckBit(bit as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether a bit is set.
**Notes:** Returns true if bit is set.

### 122.6.13 Clone as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the number.

### 122.6.14 Constructor

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with value zero.
**Example:**

```
Dim l1 As New LargeNumberMBS
MsgBox l1.StringValue
```

See also:

- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.16 Constructor(value as Int32) 20524
- 122.6.17 Constructor(value as Int64) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.19 Constructor(value as UInt32) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.15 Constructor(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a copy of the number.
**Example:**

```
Dim l1 As New LargeNumberMBS(123456789)
Dim l2 As New LargeNumberMBS(l1)

MsgBox l2.StringValue
```

See also:

- 122.6.14 Constructor 20523
- 122.6.16 Constructor(value as Int32) 20524
- 122.6.17 Constructor(value as Int64) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.19 Constructor(value as UInt32) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.16 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with an 32-bit integer.
See also:

- 122.6.14 Constructor 20523
- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.17 Constructor(value as Int64) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.19 Constructor(value as UInt32) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.17 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with an 64-bit integer.
See also:

- 122.6.14 Constructor 20523
- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.16 Constructor(value as Int32) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.19 Constructor(value as UInt32) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.18 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new number based on a string.
See also:

- 122.6.14 Constructor 20523
- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.16 Constructor(value as Int32) 20524
- 122.6.17 Constructor(value as Int64) 20524
- 122.6.19 Constructor(value as UInt32) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.19 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with an unsigned 32-bit integer.
See also:

- 122.6.14 Constructor 20523
- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.16 Constructor(value as Int32) 20524
- 122.6.17 Constructor(value as Int64) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.20 Constructor(value as UInt64) 20525

### 122.6.20 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new instance with an unsigned 64-bit integer.
See also:

- 122.6.14 Constructor 20523
- 122.6.15 Constructor(other as LargeNumberMBS) 20523
- 122.6.16 Constructor(value as Int32) 20524

- 122.6.17 Constructor(value as Int64) 20524
- 122.6.18 Constructor(value as String) 20525
- 122.6.19 Constructor(value as UInt32) 20525

### 122.6.21 Decrement(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decrement number with an integer.
**Example:**

```
Dim o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

**Notes:** This is faster than building a new LargeNumberMBS, just to subtract some small number.

### 122.6.22 Divide(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides value with by value.
See also:

- 122.6.23 Divide(other as LargeNumberMBS) as LargeNumberMBS 20526
- 122.6.24 Divide(value as UInt32) as LargeNumberMBS 20527

### 122.6.23 Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides value with by value.
See also:

- 122.6.22 Divide(other as LargeNumberMBS) 20526
- 122.6.24 Divide(value as UInt32) as LargeNumberMBS 20527

### 122.6.24 Divide(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divide by given integer and return result.
**Example:**

```
Dim o As New LargeNumberMBS(63)
Dim r1 As LargeNumberMBS = o.Divide(8)
Dim r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

**Notes:** For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 122.6.22 Divide(other as LargeNumberMBS) 20526
- 122.6.23 Divide(other as LargeNumberMBS) as LargeNumberMBS 20526

### 122.6.25 DivMod(other as LargeNumberMBS, byref DivResult as LargeNumberMBS, byref ModResult as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs divide and modulo together.
**Example:**

```
Dim d As New LargeNumberMBS(100)
Dim n As New LargeNumberMBS(13)

Dim x As LargeNumberMBS
Dim y As LargeNumberMBS

d.DivMod n, x, y

MsgBox d.StringValue + " = " + x.StringValue + " * " + n.StringValue + " + " + y.StringValue
```

**Notes:** Puts result into both byref parameters.

### 122.6.26 Equals(other as LargeNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares if two numbers are equal.
**Notes:** Returns true if equal.

### 122.6.27 ExpMod(e as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates an exponent.
**Example:**

```
Dim o As New LargeNumberMBS(2)
Dim e As New LargeNumberMBS(11)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.ExpMod(e,m)

MsgBox r.StringValue // shows 8 = 2^11 mod 255
```

**Notes:** Returns x^e mod n where x is the current number, e a parameter and n the modulo parameter.

### 122.6.28 FindGCD(v as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds greatest common divisor for two positive numbers.

### 122.6.29 Increment(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Increment number with an integer.
**Example:**

```
Dim o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

**Notes:** This is faster than building a new LargeNumberMBS, just to add some small number.

### 122.6.30 IsPrime(iter as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if number is a prime number.
**Example:**

```
Dim lines() As String

For i As Integer = 61 To 69 Step 2
Dim a As New LargeNumberMBS(i)
lines.Append a.StringValue+": "+Str(a.IsPrime(5))
Next

MsgBox Join(lines, EndOfLine)
```

**Notes:**

Returns 1 if prime and 0 if not.
Returns -1 in case of error.

Iter is the factor between 1 and 680 about how deep to iterate. The bigger the this factor, the more exact the check is.

Miller-Rabin Algorithm (ret=1 .. n is composit)

### 122.6.31 LeftShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Shifts value to left by given number of bits.
**Notes:** Bits must be <= 32.

### 122.6.32 MaxInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum value which can be represented as Int32.

### 122.6.33 MaxInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum value which can be represented as Int64.

### 122.6.34 MaxUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum value which can be represented as UInt32.

### 122.6.35 MaxUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Maximum value which can be represented as UInt64.

### 122.6.36 MinInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum value which can be represented as Int32.

### 122.6.37 MinInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum value which can be represented as Int64.

### 122.6.38 MinUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum value which can be represented as UInt32.

### 122.6.39 MinUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Minimum value which can be represented as UInt64.

### 122.6.40 ModInverse(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This function calculates modular multiplicative inverse of an given integer a modulo m.
**Example:**

```
Dim l As New LargeNumberMBS(3)
Dim n As New LargeNumberMBS(26)

Dim r As LargeNumberMBS = l.ModInverse(n)

MsgBox r.StringValue
```

### 122.6.41 Modulo(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulo value.
**Notes:** Divides value and returns the rest.
See also:

- 122.6.42 Modulo(other as LargeNumberMBS) as LargeNumberMBS 20531
- 122.6.43 Modulo(value as UInt32) as UInt32 20532

### 122.6.42 Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulo value.
**Notes:** Divides value and returns the rest.
See also:

- 122.6.41 Modulo(other as LargeNumberMBS) 20531
- 122.6.43 Modulo(value as UInt32) as UInt32 20532

### 122.6.43 Modulo(value as UInt32) as UInt32

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divide by given integer and return remainder.
**Example:**

```
Dim o As New LargeNumberMBS(63)
Dim r1 As LargeNumberMBS = o.Divide(8)
Dim r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

**Notes:** For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 122.6.41 Modulo(other as LargeNumberMBS) 20531
- 122.6.42 Modulo(other as LargeNumberMBS) as LargeNumberMBS 20531

### 122.6.44 MulMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply with modulo.
**Example:**

```
Dim o As New LargeNumberMBS(50)
Dim f As New LargeNumberMBS(80)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.MulMod(f, m)

MsgBox r.StringValue // shows 175 = (50 * 80) mod 255
```

### 122.6.45 Multiply(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies value with other value.
See also:

- 122.6.46 Multiply(value as UInt32) as LargeNumberMBS 20533

### 122.6.46 Multiply(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply by given integer and return result.
**Example:**

```
Dim o As New LargeNumberMBS(5)
Dim r As LargeNumberMBS = o.Multiply(8)

MsgBox r.StringValue // shows 40
```

**Notes:** For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 122.6.45 Multiply(other as LargeNumberMBS) 20532

### 122.6.47 Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates the value.
**Notes:** Returns new value with different sign.

### 122.6.48 NumberWithInt32(value as Int32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given Int32 value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(123456789)
MsgBox l1.StringValue
```

### 122.6.49 NumberWithInt64(value as Int64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given Int64 value.
**Example:**

```
Dim d1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(0)
Dim d2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123)
```

```
Dim d3 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123456789012345)

MsgBox d1.StringValue+EndOfLine+d1.HexString+EndOfLine+_
d2.StringValue+EndOfLine+d2.HexString+EndOfLine+_
d3.StringValue+EndOfLine+d3.HexString
```

### 122.6.50 NumberWithInteger(value as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given integer value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(123456789)
MsgBox l1.StringValue
```

### 122.6.51 NumberWithString(value as String) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given string.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithString("123456789")
MsgBox l1.StringValue
```

### 122.6.52 NumberWithUInt32(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given UInt32 value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt32(123456789)
MsgBox l1.StringValue
```

### 122.6.53 NumberWithUInt64(value as UInt64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given UInt64 value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt64(123456789)
MsgBox l1.StringValue
```

### 122.6.54 NumberWithUInteger(value as UInteger) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given unsigned integer value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInteger(123456789)
MsgBox l1.StringValue
```

### 122.6.55 NumberWithVariant(value as variant) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a number with the given variant value.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithVariant(123456789)
MsgBox l1.StringValue
```

**Notes:** Variant can be integer or string.

### 122.6.56 Operator_Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds other number and returns result.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)
```

```
Dim r As LargeNumberMBS = l+o
Dim s As LargeNumberMBS = o+l

MsgBox r.StringValue+" "+s.StringValue
```

### 122.6.57 Operator_AddRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds other number and returns result.

### 122.6.58 Operator_And(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs bitwise AND operator on the values.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Dim ra As LargeNumberMBS = l And o
Dim ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

**Notes:** Returns new value.

### 122.6.59 Operator_Compare(other as LargeNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compares two values.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

If l >o Then
MsgBox "l is bigger"
```

```
Else
MsgBox "o is bigger"
end if
```

**Notes:** Returns -1, 1 or 0.

### 122.6.60 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts the number to string.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
MsgBox l
```

See also:

- 122.6.61 Operator_Convert(value as String) 20537

### 122.6.61 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts string to large number.
**Example:**

```
Dim l As LargeNumberMBS = "123"
MsgBox l
```

See also:

- 122.6.60 Operator_Convert as String 20537

### 122.6.62 Operator_Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides value by other value.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(21)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Dim r As LargeNumberMBS = l / o

MsgBox r.stringValue
```

### 122.6.63 Operator_DivideRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Divides value by other value.
**Example:**

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_DivideRight is called
Dim r As LargeNumberMBS = "10" / o

MsgBox r.StringValue
```

### 122.6.64 Operator_Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulo value.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Dim r As LargeNumberMBS = l Mod o

MsgBox r.stringValue
```

**Notes:** Divides value and returns the rest.

### 122.6.65 Operator_ModuloRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Modulo value.
**Notes:** Divides value and returns the rest.

### 122.6.66 Operator_Multiply(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies value with other value.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(5)
Dim r As LargeNumberMBS = o*l

MsgBox r.stringValue
```

### 122.6.67 Operator_MultiplyRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies value with other value.
**Example:**

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_MultiplyRight is called
Dim r As LargeNumberMBS = "10" * o

MsgBox r.StringValue
```

### 122.6.68 Operator_Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Negates the value.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim r As LargeNumberMBS = -l

MsgBox r.StringValue
```

### 122.6.69 Operator_Or(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs bitwise OR operator on the values.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Dim ra As LargeNumberMBS = l And o
Dim ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

**Notes:** Returns new value.

### 122.6.70 Operator_Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts other number and returns result.
**Example:**

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

Dim r As LargeNumberMBS = l-o
Dim s As LargeNumberMBS = o-l

MsgBox r.StringValue+" "+s.StringValue
```

### 122.6.71 Operator_SubtractRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts other number and returns result.
**Example:**

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_SubtractRight is called
Dim r As LargeNumberMBS = "10" - o

MsgBox r.StringValue
```

### 122.6.72 Prime(byte as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new big prime number.
**Example:**

```
Dim lines() As String
For i As Integer = 1 To 10

Dim r As LargeNumberMBS = LargeNumberMBS.Prime(i)
lines.Append r.StringValue

Next
MsgBox Join(lines,EndOfLine)
```

**Notes:** Byte defines how big the prime number becomes. Range 1 to 680.

### 122.6.73 RightShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Shifts value to right by given number of bits.
**Notes:** Bits must be <= 32.

### 122.6.74 SetZero

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets number to zero.
**Example:**

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(12345)
MsgBox l1.StringValue
```

```
// set to zero
l1.SetZero
MsgBox l1.StringValue
```

### 122.6.75 SqrMod(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiply with itself and modulo.
**Example:**

```
Dim o As New LargeNumberMBS(90)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.SqrMod(m)

MsgBox r.StringValue // shows 195 = (90 * 90) mod 255
```

### 122.6.76 sqrt as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates square root of value.
**Notes:** Get nearly square root of a. The answer will be a >= ret^2.

### 122.6.77 Square as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates square of current value.
**Notes:** Return x^2.

### 122.6.78 SubMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtraction with modulo.
**Example:**

```
Dim v As New LargeNumberMBS(100)
Dim o As New LargeNumberMBS(200)
Dim n As New LargeNumberMBS(& hFF)

Dim r As LargeNumberMBS = v.SubMod(o, n)

MsgBox r.StringValue // shows 155 = (100-200) mod 255

// -100 is too small, so 255 is added to bring to range.
```

### 122.6.79 Subtract(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts other number.
See also:

- 122.6.80 Subtract(other as LargeNumberMBS) as LargeNumberMBS 20543

### 122.6.80 Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Subtracts other number and returns result.
See also:

- 122.6.79 Subtract(other as LargeNumberMBS) 20543

### 122.6.81 Properties

### 122.6.82 BitSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries bit size of the number.
**Notes:**

Up to 4128 bits.
(Read only property)

### 122.6.83 Bytes as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Provides raw bytes of number in memory.
**Example:**

```
Dim o As New LargeNumberMBS(& h12345678)
Dim m As MemoryBlock = o.Bytes

Break
```

**Notes:**

Without sign as number is always positive.
(Read only property)

### 122.6.84 ByteSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries byte size of the number.
**Notes:**

Up to 516 bytes.
(Read only property)

### 122.6.85 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as double.
**Notes:**

Result is not correct if value is not in range of a double.
(Read only property)

### 122.6.86 HexString as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as hex string.
**Notes:** (Read only property)

### 122.6.87 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as Int64.
**Notes:**

Result is not correct if value is not in range of a double.
(Read and Write property)

### 122.6.88 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as integer.
**Notes:**

Result is not correct if value is not in range of a double.
(Read and Write property)

### 122.6.89 IsDouble as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value fits in double range.
**Notes:** (Read only property)

### 122.6.90 IsInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value fits in Int32 range.
**Notes:** (Read only property)

### 122.6.91 IsInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value fits in Int64 range.
**Notes:** (Read only property)

### 122.6.92 IsNegate as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether value is negative.
**Notes:** (Read and Write property)

### 122.6.93 IsUInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value fits in UInt32 range.
**Notes:** (Read only property)

### 122.6.94 IsUInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether this value fits in UInt64 range.
**Notes:** (Read only property)

### 122.6.95 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether value is zero.
**Notes:** (Read only property)

### 122.6.96 StringValue as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as string.
**Notes:**

Result is not correct if value is not in range of a double.
(Read and Write property)

### 122.6.97 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as UInt64.
**Notes:**

Result is not correct if value is not in range of a double.
(Read and Write property)

### 122.6.98 UIntegerValue as UInteger

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as unsigned integer.
**Notes:**

Result is not correct if value is not in range of a double.
(Read and Write property)

### 122.6.99 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries value as variant.
**Notes:**

Result is can be string, integer or double.
(Read and Write property)

## 122.7 class SplineMBS

### 122.7.1 class SplineMBS

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This class calculates a 2D cubic spline.
**Notes:** The curve goes smooth through all points.

### 122.7.2 Blog Entries

- MBS Xojo / Real Studio plug-ins in version 15.4
- MBS Xojo / Real Studio Plugins, version 15.4pr4
- MBS Xojo / Real Studio Plugins, version 15.3pr3

### 122.7.3 Blog Entries

- MBS Xojo / Real Studio plug-ins in version 15.4
- MBS Xojo / Real Studio Plugins, version 15.4pr4
- MBS Xojo / Real Studio Plugins, version 15.3pr3

### 122.7.4 Methods

### 122.7.5 a(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constant part of the coefficient.

### 122.7.6 b(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The 1st order coefficient.

### 122.7.7 c(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The 2nd order coefficient.

### 122.7.8 calc(x as Double) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the Y value on the spline for a given X value.

### 122.7.9 Constructor(X() as Double, Y() as Double)

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:**

Raises an exception for invalid arrays passed, e.g. different size.
Calculates the spline curve coefficients and sets count property.

### 122.7.10 d(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The 3rd order coefficient.

### 122.7.11 x(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The x value for this coefficent.

### 122.7.12 y(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The y value for this coefficent.

### 122.7.13 Properties

### 122.7.14 count as Integer

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of coefficients.
**Notes:** (Read and Write property)

## 122.8 module SunTimesMBS

### 122.8.1 module SunTimesMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A helper module to calculate sunset/sunrise times.
**Example:**

```
// may be an hour off due to daylight saving time

dim d as new date

dim jd as Double = SunTimesMBS.CalcJulianDate(d.day, d.Month, d.Year)

// Koblenz, Germany
const latitude = 50.356667
const longitude = 7.593889

// Miami, FL
'const latitude = 25.787778
'const longitude = -80.224167

dim sr as Double = SunTimesMBS.CalcSunriseUTC(jd, latitude, longitude)
dim ss as Double = SunTimesMBS.CalcSunsetUTC (jd, latitude, longitude)

d.gmtoffset = 0
d.hour = 0
d.minute = 0
d.second = 0

dim base as Double = d.totalseconds
d.totalseconds = sr*60 + base

MsgBox "Sunrise: "+d.longdate+" "+d.longtime

d.totalseconds = ss*60 + base

MsgBox "Sunset: "+d.longdate+" "+d.longtime
```

**Notes:** The example code above works well, but seems not to take into account the daylight saving time.

### 122.8.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

### 122.8.3 Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

### 122.8.4 Methods

### 122.8.5 CalcJulianDate(day as Integer, month as Integer, year as Integer) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a julian date from given date values.

### 122.8.6 CalcSunriseUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates sunrise time.
**Notes:**

Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

### 122.8.7 CalcSunsetUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates sunset time.
**Notes:**

Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

# Chapter 123

# Media Keys

## 123.1 class MediaKeysMBS

### 123.1.1 class MediaKeysMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Catch some special keys with this class.
**Example:**

```
dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

// set which keys to watch for
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

// and start
m.startWatchingMediaKeys
```

**Notes:**

First written to catch play, fast and rewind keys from Apple keyboards.
Later extended to also catch other keys.
Still not all keys are available on all keyboards.

Please have only instance of this class running your application.

### 123.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr12

### 123.1.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr12
- MBS Real Studio Plugins, version 11.2pr11
- MBS Real Studio Plugins, version 11.2pr9
- MBS Real Studio Plugins, version 11.2pr9

### 123.1.4 Methods

### 123.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Initializes the key watcher.

### 123.1.6 startWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Starts watching for keys.
**Example:**

```
dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
m.startWatchingMediaKeys
```

### 123.1.7 stopWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Stops watching for keys.
**Example:**

```
dim m as MediaKeysMBS // global property

// when closing media window
m.stopWatchingMediaKeys
```

**Notes:** The destructor calls this for cleanup.

### 123.1.8 Properties

### 123.1.9 Keys(keyCode as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Which keys should be intercepted and handled by your application.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** (Read and Write computed property)

### 123.1.10 Events

### 123.1.11 receivedMediaKeyEvent(e as NSEventMBS, keyCode as Integer, keyFlags as Integer, keyState as Integer, keyRepeat as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** The event called when the user uses one of the special keys we listen for.
**Notes:**

If you don't get the event, did you make sure all conditions are right?

- Requires Mac OS X 10.5
- Keys(x) set to kModeEventAndBlock or kModeEventAndPass for the keys you need?
- startWatchingMediaKeys called?
- your object is still alive in your application?

### 123.1.12 Constants

### 123.1.13 kMediaKeyBrightnessDown = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessDown) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.14 kMediaKeyBrightnessUp = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessUp) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.15 kMediaKeyCapsLock = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
```

m.Keys(MediaKeysMBS.kMediaKeyCapsLock) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Caps Lock

### 123.1.16 kMediaKeyContrastDown = 12

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyContrastDown) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.17 kMediaKeyContrastUp = 11

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyContrastUp) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.18 kMediaKeyDownArrow = 9

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyDownArrow) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.19 kMediaKeyEject = 14

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Eject key

### 123.1.20 kMediaKeyFast = 19

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyFast) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Fast key. On by default.

### 123.1.21 kMediaKeyHelp = 5

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyHelp) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.22 kMediaKeyIlluminationDown = 22

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationDown) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.23 kMediaKeyIlluminationToggle = 23

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationToggle) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.24 kMediaKeyIlluminationUp = 21

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationUp) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.25 kMediaKeyLaunchPanel = 13

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.

**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyLaunchPanel) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.26 kMediaKeyMute = 7

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyMute) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Sound Mute

### 123.1.27 kMediaKeyNext = 17

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNext) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.28 kMediaKeyNumLock = 10

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object
```

```
// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNumLock) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Num Lock key

### 123.1.29 kMediaKeyPlay = 16

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPlay) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Play key. On by default.

### 123.1.30 kMediaKeyPower = 6

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPower) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Power Key

### 123.1.31 kMediaKeyPrevious = 18

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.

**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPrevious) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Previous key

### 123.1.32 kMediaKeyRewind = 20

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyRewind) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Rewind Key. On by default.

### 123.1.33 kMediaKeySoundDown = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeySoundDown) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Sound down

### 123.1.34 kMediaKeySoundUp = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeySoundUp) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Sound up

### 123.1.35 kMediaKeyUpArrow = 8

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyUpArrow) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.36 kMediaKeyVideoMirror = 15

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the key constants.
**Example:**

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyVideoMirror) = MediaKeysMBS.kModeEventAndBlock
```

### 123.1.37 kModeBlock = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the mode constants.
**Notes:** Block the event.

### 123.1.38 kModeEventAndBlock = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the mode constants.
**Notes:** Call the receivedMediaKeyEvent event and block the event.

### 123.1.39 kModeEventAndPass = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the mode constants.
**Notes:** Call the receivedMediaKeyEvent event and pass the event to other applications.

### 123.1.40 kModePass = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the mode constants.
**Notes:** Pass event to other applications.

# Chapter 124

# MediaLibrary

## 124.1 class MLMediaGroupMBS

### 124.1.1 class MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The MLMediaGroup class provides groupings for media objects from a single source of media, such as iTunes or Aperture.
**Notes:**

The media objects,Äîindividual files containing a piece of media such as a photo, song, or movie,Äîare referenced by one or more groups within each media source. These groupings serve as filters, providing hierarchical structure to the collection of objects in each source.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.

A media group has an array of attributes which can change at any point. For example, a media group may have certain attributes that describe its objects, but these attributes appear only after the objects for that group have been loaded. When any media group attribute changes, observers are notified via KVO notification. For information about handling attributes that change, see Cocoa Bindings Programming Topics.

Every media group has a unique identifier as well as a type identifier. In certain cases, multiple groups within a source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.

All MLMediaGroup properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 124.1.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.1.3 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.1.4 Methods

### 124.1.5 childGroups as MLMediaGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A list of child groups contained in the media group.

### 124.1.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 124.1.7 mediaObjects as MLMediaObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A list of media objects in the media group.
**Notes:** This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. A KVO notification will be sent via the main thread when data arrives.

### 124.1.8 MLApertureAllPhotosTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents all photos in Aperture.

### 124.1.9 MLApertureAllProjectsTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents all projects in Aperture.

### 124.1.10 MLApertureFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Facebook album that is visible in Aperture.

### 124.1.11 MLApertureFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Facebook user account in Aperture. A Facebook user account contains one or more Facebook albums.

### 124.1.12 MLApertureFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Faces album in Aperture. Individual Faces albums are nested in the main Faces album.

### 124.1.13 MLApertureFlaggedTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents the album of flagged media in Aperture.

### 124.1.14 MLApertureFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Flickr album that is visible in Aperture.

### 124.1.15 MLApertureFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Flickr user account in Aperture. A Flickr user account contains one or more Flickr albums.

### 124.1.16 MLApertureFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a folder in Aperture.

### 124.1.17 MLApertureLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents the last import album in Aperture.

### 124.1.18 MLApertureLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents the recent content album in Aperture, known as the Last N Months album. The value for N is usually 12 (settable in Aperture >Preferences >General).

### 124.1.19 MLApertureLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents the last viewed event in Aperture.

### 124.1.20 MLApertureLightTableTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a light table in Aperture.

### 124.1.21 MLAperturePhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a photo stream in Aperture.

### 124.1.22 MLAperturePlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents the Places album in Aperture.

### 124.1.23 MLAperturePlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Places album for a city in Aperture. A city album is nested in a province or state album.

### 124.1.24 MLAperturePlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Places album for a country in Aperture. A country album is nested in the main Places album.

### 124.1.25 MLAperturePlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Places album for a point-of-interest in Aperture. A point of interest album is nested in a city album.

### 124.1.26 MLAperturePlacesProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a Places album for a province or state in Aperture. A province or state album is nested in a country album.

### 124.1.27 MLApertureProjectAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a project in Aperture.

### 124.1.28 MLApertureProjectFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a folder within a project in Aperture.

### 124.1.29 MLApertureRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The root media group for Aperture.

### 124.1.30 MLApertureSlideShowTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** The media group that represents a slideshow in Aperture.

### 124.1.31 MLApertureSmugMugAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a SmugMug album that is visible in Aperture.

### 124.1.32 MLApertureSmugMugGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a SmugMug user account in Aperture. A SmugMug user account contains one or more SmugMug albums.

### 124.1.33 MLApertureUserAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a user-created album in Aperture.

### 124.1.34 MLApertureUserSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Aperture media source.
**Notes:** A media group that represents a user-created smart album in Aperture.

### 124.1.35 MLFinalCutEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** A media group that represents a collection of events from a specific time period in Final Cut Pro.

### 124.1.36 MLFinalCutEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** A media group that represents an event in Final Cut Pro.

### 124.1.37 MLFinalCutEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** The media group that represents the event library in Final Cut Pro. The event library contains all event calendar groups.

### 124.1.38 MLFinalCutFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** A media group that represents a folder in Final Cut Pro.

### 124.1.39 MLFinalCutProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** A media group that represents a project in Final Cut Pro.

### 124.1.40 MLFinalCutRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Final Cut Pro media source.
**Notes:** The root media group for Final Cut Pro.

### 124.1.41 MLFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in folder-based media sources.
**Notes:** A media group that represents a folder in folder-based media.

### 124.1.42 MLFolderRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in folder-based media sources.
**Notes:** The root media group for folder-based media.

### 124.1.43 MLGarageBandFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the GarageBand media source.
**Notes:** A media group that represents a folder in GarageBand.

### 124.1.44 MLGarageBandRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the GarageBand media source.
**Notes:** The root media group for GarageBand.

### 124.1.45 MLiMovieEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** A media group that represents a collection of events from a specific time period in iMovie.

### 124.1.46 MLiMovieEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** A media group that represents an event in iMovie.

### 124.1.47 MLiMovieEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** The media group that represents the event library in iMovie. The event library contains all event calendar groups.

### 124.1.48 MLiMovieFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** A media group that represents a folder in iMovie.

### 124.1.49 MLiMovieProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** A media group that represents a project in iMovie.

### 124.1.50 MLiMovieRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iMovie media source.
**Notes:** The root media group for iMovie.

### 124.1.51 MLiPhotoAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents an album in iPhoto.

### 124.1.52 MLiPhotoEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents an event in iPhoto.

### 124.1.53 MLiPhotoEventsFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the Events album in iPhoto.

### 124.1.54 MLiPhotoFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Facebook album that is visible in iPhoto.

### 124.1.55 MLiPhotoFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Facebook user account in iPhoto. A Facebook user account contains one or more Facebook albums.

### 124.1.56 MLiPhotoFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Faces album in iPhoto. Individual Faces albums are nested in the main Faces album.

### 124.1.57 MLiPhotoFlaggedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the album of flagged media in iPhoto.

### 124.1.58 MLiPhotoFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Flickr album that is visible in iPhoto.

### 124.1.59 MLiPhotoFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Flickr user account in iPhoto. A Flickr user account contains one or more Flickr albums.

### 124.1.60 MLiPhotoFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a folder in iPhoto.

### 124.1.61 MLiPhotoLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the Last Import album in iPhoto.

### 124.1.62 MLiPhotoLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the recent content album in iPhoto, known as the Last N Months album. The value for N is usually 12 (settable in iPhoto >Preferences >General).

### 124.1.63 MLiPhotoLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the last viewed event in iPhoto.

### 124.1.64 MLiPhotoLibraryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the Photos album in iPhoto.

### 124.1.65 MLiPhotoPhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a photo stream in iPhoto.

### 124.1.66 MLiPhotoPlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The media group that represents the Places album in iPhoto.

### 124.1.67 MLiPhotoPlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Places album for a city in iPhoto. A city album is nested in a province or state album.

### 124.1.68 MLiPhotoPlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Places album for a country in iPhoto. A country album is nested in the main Places album.

### 124.1.69 MLiPhotoPlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Places album for a point-of-interest in iPhoto. A point of interest album is nested in a city album.

### 124.1.70 MLiPhotoPlacesProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a Places album for a province or state in iPhoto. A province or state album is nested in a country album.

### 124.1.71 MLiPhotoRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** The root media group for iPhoto.

### 124.1.72 MLiPhotoSlideShowAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a slideshow album in iPhoto.

### 124.1.73 MLiPhotoSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a smart album in iPhoto.

### 124.1.74 MLiPhotoSubscribedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iPhoto media source.
**Notes:** A media group that represents a subscribed album in iPhoto.

### 124.1.75 MLiTunesAudioBooksPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the Audio Books playlist in iTunes.

### 124.1.76 MLiTunesFolderPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** A media group that represents a folder in iTunes.

### 124.1.77 MLiTunesGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** A media group that represents a genius playlist in iTunes.

### 124.1.78 MLiTunesiTunesUPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the iTunes U playlist in iTunes.

### 124.1.79 MLiTunesMoviesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the Movies playlist in iTunes.

### 124.1.80 MLiTunesMusicPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the Music playlist in iTunes.

### 124.1.81 MLiTunesMusicVideosPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** Musicvideos playlist

### 124.1.82 MLiTunesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** A media group that represents a user-created playlist in iTunes.

### 124.1.83 MLiTunesPodcastPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the Podcast playlist in iTunes.

### 124.1.84 MLiTunesPurchasedPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the Purchased playlist in iTunes.

### 124.1.85 MLiTunesRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The root media group for iTunes.

### 124.1.86 MLiTunesSavedGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** A media group that represents a saved genius playlist in iTunes.

### 124.1.87 MLiTunesSmartPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** A media group that represents a smart playlist in iTunes.

### 124.1.88 MLiTunesTVShowsPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the iTunes media source.
**Notes:** The media group that represents the TV Shows playlist in iTunes.

### 124.1.89 MLiTunesVideoPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** Video Playlist

### 124.1.90 MLLogicBouncesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** The media group that represents all bounces in Logic.

### 124.1.91 MLLogicProjectsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** The media group that represents all projects in Logic.

### 124.1.92 MLLogicProjectTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** A media group that represents a project in Logic. Projects may be nested.

### 124.1.93 MLLogicRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Logic media source.
**Notes:** The root media group for Logic.

### 124.1.94 MLPhotosAlbumsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.95 MLPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.
**Notes:** A media group that represents an album in Photos.

### 124.1.96 MLPhotosAllCollectionsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.97 MLPhotosAllMomentsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.98 MLPhotosAllPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.99 MLPhotosAllYearsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.100 MLPhotosAnimatedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.101 MLPhotosBurstGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.102 MLPhotosCollectionGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.103 MLPhotosDepthEffectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.104 MLPhotosFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.105 MLPhotosFavoritesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.106 MLPhotosFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.107 MLPhotosFrontCameraGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.108 MLPhotosLastImportGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.109 MLPhotosLivePhotosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.110 MLPhotosLongExposureGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.111 MLPhotosMomentGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.112 MLPhotosMyPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.113 MLPhotosPanoramasGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.114 MLPhotosPublishedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.115 MLPhotosRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.
**Notes:** The root media group for Photos.

### 124.1.116 MLPhotosScreenshotGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.117 MLPhotosSharedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.118 MLPhotosSharedPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.119 MLPhotosSloMoGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.120 MLPhotosSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.
**Notes:** A media group that represents a smart album in Photos.

### 124.1.121 MLPhotosTimelapseGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.122 MLPhotosVideosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.123 MLPhotosYearGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for media group types in the Photos media source.

### 124.1.124 Properties

### 124.1.125 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internet object reference.
**Notes:** (Read and Write property)

### 124.1.126 IconImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The media group,Äôs icon.
**Notes:** (Read only property)

### 124.1.127 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An identifier for the media group.
**Notes:**

Each group,Äôs identifier is unique within a media source.
(Read only property)

### 124.1.128 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A pointer to the media library instance that loaded the media group,Äôs source.
**Notes:** (Read only property)

### 124.1.129 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An identifier for the source that loaded the media group.
**Notes:** (Read only property)

### 124.1.130 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date and time when the media group was last altered.
**Notes:** (Read only property)

### 124.1.131 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date and time when the media group was last altered.
**Notes:** (Read only property)

### 124.1.132 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the media group.
**Notes:**

This string is human-readable. It is either user created (such as the name of an iTunes playlist) or already localized.
(Read only property)

### 124.1.133 Parent as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The media group,Äôs parent group.
**Notes:** (Read only property)

### 124.1.134 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A dictionary of attributes describing the media group.
**Notes:**

These attributes are usually defined by the source app, such as iTunes. For example, an iTunes playlist is represented as a group. iTunes attaches attributes such as "Playlist Persistent ID" to the group in its attributes. The attribute names vary based on the media source. Attributes common to all sources are called out as separate properties.
(Read only property)

### 124.1.135 TypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An identifier for the media group,Äôs type.
**Notes:**

Multiple groups within a media source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.
(Read only property)

### 124.1.136 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the media group.
**Notes:**

Some groups do not have a URL, in which case this returns nil. For example, a group that represents a filesystem folder on disk has a URL, but a group that represents a named face in iPhoto does not.
(Read only property)

## 124.2 class MLMediaLibraryMBS

### 124.2.1 class MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The MLMediaLibrary class provides an interface for accessing a collection of media objects from various sources.
**Notes:**

It serves as the initial access point of the Media Library framework.

The media library structure is defined by MLMediaSource, MLMediaGroup, and MLMediaObject classes. At the highest level, all content within a media library instance is categorized by media source. Conceptually, a media source represents a single app, such as iTunes or Aperture. Each source contains a hierarchy of media groups that originates from a root group. These groups consist of media objects,Äîindividual files containing a piece of media such as a photo, song, or movie. Only one copy of each object exists within a media library instance, but an object can be referenced by multiple groups from a single source. The structure of the group hierarchy is specific to each media source.

A media library is initialized using the Constructor. The options argument to this method serves as a filter. By specifying which folders or sources to include or exclude during load, you can view a particular subset of groups and objects from your collection. All objects provided are thread-safe. For descriptions of possible load options, see Load Options Keys.
The typical and most efficient use case is to create and use one instance of MLMediaLibrary for the lifetime of an app. When the underlying media files and metadata on the user,Äôs system change, the corresponding data model objects (media groups and media objects) are automatically updated and KVO notifications are sent to notify the calling code of any changes. Multiple instances of MLMediaLibrary can be created and used, but their sources, groups, and objects will be independent of those provided by other instances of MLMediaLibrary.

### 124.2.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr2
- MBS Xojo Plugins, version 18.2pr1

### 124.2.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr2
- MBS Xojo Plugins, version 18.2pr1

### 124.2.4 Methods

### 124.2.5 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether this class available.
**Notes:** Returns true on Mac OS 10.7 or newer in 64-bit app.

### 124.2.6 Constructor(options as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the media library based on the specified load options.
**Notes:**

options: A dictionary of load options.

Returns a new media library.

For descriptions of possible load options, see Load Options Keys.

### 124.2.7 MLMediaLoadAppFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the option keys.
**Notes:** Specifies one or more relative paths inside the caller,Äôs app bundle in which to search for media files. The value for this key is an array of strings (relative paths inside the caller,Äôs app bundle).

### 124.2.8 MLMediaLoadAppleLoops as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for well-known media folders used to specify the value for MLMediaLoad-FoldersKey.
**Notes:** Identifies the folder containing audio loops from Apple.

### 124.2.9 MLMediaLoadExcludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the option keys.
**Notes:** Defines which media sources to exclude when loading. This option is processed after MLMediaLoadIncludeSourcesKey. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

### 124.2.10 MLMediaLoadFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the option keys.
**Notes:** Specifies the well-known folders that should be searched for media files. If this key is not present, none of the well-known folders will be provided. The value for this key is an array of strings (identifiers that correspond to well-known folder locations). For a list of well-known folder identifiers, see MLMediaLoadMoviesFolder and MLMediaLoadAppleLoops.

### 124.2.11 MLMediaLoadIncludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the option keys.
**Notes:** Defines which media sources to include when loading. If not present, load all available media sources. This option is processed after MLMediaLoadSourceTypesKey. If MLMediaLoadIncludeSourcesKey is present but MLMediaLoadSourceTypesKey is not, then only those sources specified here will be loaded. This is useful for loading a single media source. When both keys are present, this is useful for adding one or more media sources that normally would not appear for the requested library type. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

### 124.2.12 MLMediaLoadMoviesFolder as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the identifiers for well-known media folders used to specify the value for MLMediaLoadFoldersKey.
**Notes:** Identifies the user,Äôs Movies folder.

### 124.2.13 MLMediaLoadSourceTypesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the option keys.
**Notes:** Defines which sources to load based on library type. If not present, this will load all sources. The value for this key is a media source type.

### 124.2.14 Properties

### 124.2.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internet object reference.
**Notes:** (Read and Write property)

### 124.2.16 mediaSources as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary of media sources by identifier.
**Notes:**

Returns nil the first time, beginning an asynchronous load of the media sources. A KVO notification is sent when all media sources have been loaded. If there are no objects in a media source, the source does not appear in this dictionary.
(Read only property)

## 124.3 class MLMediaObjectMBS

### 124.3.1 class MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The MLMediaObject class describes a single media file, such as a photo, song, or movie.
**Notes:**

Each media object contains basic metadata including a name, media type, URL, and so on. Additional information about each object is stored in its list of attributes. For a list of possible object attribute keys, see Media Object Attribute Keys.

A media object belongs to a single media source but can be referenced by several groups within that source. In other words, an object can appear in multiple places in the group hierarchy under a single media source. In iTunes, a movie that was purchased through the iTunes Store is referenced by both the Purchased playlist and the Movies playlist. If a user adds the movie to his own playlist, the group respresenting that playlist will also reference the movie. All three groups reference the same media object.

All MLMediaObject properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 124.3.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.3.3 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.3.4 Methods

### 124.3.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 124.3.6 MLMediaObjectAlbumKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs album. The value for this key is a string.

### 124.3.7 MLMediaObjectArtistKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs artist. The value for this key is a string.

### 124.3.8 MLMediaObjectBitRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs bit rate, in kilobits per second. The value for this key is a number.

### 124.3.9 MLMediaObjectChannelCountKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs channel count. The value for this key is a number.

### 124.3.10 MLMediaObjectCommentsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the contents of the comments field associated with the media object. The value for this key is a string.

### 124.3.11 MLMediaObjectDurationKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs duration, in seconds. The value for this key is a number.

### 124.3.12 MLMediaObjectGenreKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs genre. The value for this key is a string.

### 124.3.13 MLMediaObjectKeywordsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the keywords associated with the media object. The value for this key is an array of strings.

### 124.3.14 MLMediaObjectKindKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Used by iTunes only. Specifies the media object,Äôs file format (shown in the ,ÄúKind,Äù column in iTunes). The value for this key is a string.

### 124.3.15 MLMediaObjectProtectedKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies whether the media object is protected by DRM (Digital Rights Management). The value for this key is a boolean value.

### 124.3.16 MLMediaObjectResolutionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs resolution. The value for this key is a string with size.

### 124.3.17 MLMediaObjectSampleRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs sample rate, in samples per second (Hz). The value for this key is a number.

### 124.3.18 MLMediaObjectTrackNumberKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the property keys for a media object.
**Notes:** Specifies the media object,Äôs track number. The value for this key is a number.

### 124.3.19 Properties

### 124.3.20 ArtworkImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Album artwork associated with the media object.
**Notes:**

Applies to iTunes media only. Returns nil if not applicable or not available.
(Read only property)

### 124.3.21 ContentType as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The UTI associated with the media object.
**Notes:** (Read only property)

### 124.3.22 File as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the media object.
**Notes:**

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

### 124.3.23 FileSize as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The size, in bytes, of the media object.
**Notes:** (Read only property)

### 124.3.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internet object reference.
**Notes:** (Read and Write property)

### 124.3.25 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An identifier for the media object.
**Notes:**

Each object,Äôs identifier is unique within a media source.
(Read only property)

### 124.3.26 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A pointer to the media library instance that loaded the media object,Äôs source.
**Notes:** (Read only property)

### 124.3.27 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An identifier for the source that loaded the media object.
**Notes:**

For a list of possible media source identifiers, see MLMediaLibraryMBS.
(Read only property)

### 124.3.28 MediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The media object,Äôs type of media (image, audio, or movie).
**Notes:**

For a list of possible media types, see kType* constants.
(Read only property)

### 124.3.29 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date and time when the media object was last altered.
**Notes:** (Read only property)

### 124.3.30 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The date and time when the media object was last altered.
**Notes:** (Read only property)

### 124.3.31 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the media object.
**Notes:** (Read only property)

### 124.3.32 OriginalFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the original media object, if URL is not the original (master).
**Notes:**

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

### 124.3.33 OriginalURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the original media object, if URL is not the original (master).
**Notes:**

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

### 124.3.34 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A dictionary of attributes describing the media object.
**Notes:**

For a list of possible object attribute keys, see Media Object Attribute Keys.
(Read only property)

### 124.3.35 ThumbnailFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the media object,Äôs thumbnail image.
**Notes:**

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

### 124.3.36 ThumbnailURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the media object,Äôs thumbnail image.
**Notes:**

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

### 124.3.37 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The location of the media object.
**Notes:**

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

### 124.3.38 Constants

### 124.3.39 kTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the types.
**Notes:** Audio

### 124.3.40 kTypeImage = 2

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the types.
**Notes:** Image

### 124.3.41 kTypeMovie = 4

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the types.
**Notes:** Movie

## 124.4 class MLMediaSourceMBS

### 124.4.1 class MLMediaSourceMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The MLMediaSource class identifies a specific provider of media.
**Notes:**

Conceptually, a media source respresents a single app, such as iTunes or Aperture. Each media source contains multiple groups of media objects,Äîindividual files containing a piece of media such as a photo, song, or movie.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.
Every media source has a unique media source identifier within a single media library instance. For a list of possible media source identifiers, see Media Source Identifiers.
All MLMediaSourceMBS properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 124.4.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.4.3 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

### 124.4.4 Methods

### 124.4.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 124.4.6 mediaGroupForIdentifier(mediaGroupIdentifier as string) as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the media group with the specified identifier.
**Notes:**

mediaGroupIdentifier: The media group identifier to search for in the source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

### 124.4.7 mediaGroupsForIdentifiers(mediaGroupIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the media groups with the specified identifiers.
**Notes:**

mediaGroupIdentifiers: An array of media group identifiers to search for in the source.

Returns a dictionary of media groups matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

### 124.4.8 mediaObjectForIdentifier(mediaObjectIdentifier as string) as MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the media object with the specified identifier.
**Notes:**

mediaObjectIdentifier: The media object identifier to search for in the media source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

### 124.4.9 mediaObjectsForIdentifiers(mediaObjectIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the media objects with the specified identifiers.
**Notes:**

mediaObjectIdentifiers: An array of media object identifiers to search for in the source.

Returns a dictionary of media objects matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

### 124.4.10 MLMediaSourceApertureIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from Aperture.

### 124.4.11 MLMediaSourceAppDefinedFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from app defined folder.

### 124.4.12 MLMediaSourceCustomFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from a custom folder.

### 124.4.13 MLMediaSourceFinalCutIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from Final Cut Pro.

### 124.4.14 MLMediaSourceGarageBandIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from GarageBand.

### 124.4.15 MLMediaSourceiMovieIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from iMovie.

### 124.4.16 MLMediaSourceiPhotoIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from iPhoto.

### 124.4.17 MLMediaSourceiTunesIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from iTunes.

### 124.4.18 MLMediaSourceLogicIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from Logic.

### 124.4.19 MLMediaSourceMoviesFolderIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from movies folder.

### 124.4.20 MLMediaSourcePhotoBoothIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from Photo Booth.

### 124.4.21 MLMediaSourcePhotosIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the media source providing content from photos folder.

### 124.4.22 Properties

### 124.4.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internet object reference.
**Notes:** (Read and Write property)

### 124.4.24 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A pointer to the media library instance that loaded this media source.
**Notes:** (Read only property)

### 124.4.25 mediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A unique identifier for the media source.
**Notes:**

For a list of possible media source identifiers, see shared methods.
(Read only property)

### 124.4.26 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A list of attributes describing the media source.
**Notes:** (Read only property)

### 124.4.27 rootMediaGroup as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The base media group in the media source that contains all other groups within the source as descendant elements.
**Notes:**

This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. When data arrives, a KVO notification is sent via the main thread.
(Read only property)

### 124.4.28 Constants

### 124.4.29 kSourceTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the source types.
**Notes:** Audio

### 124.4.30 kSourceTypeImage = 2

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the source types.
**Notes:** Images

### 124.4.31 kSourceTypeMovie = 4

MBS Mac64bit Plugin, Plugin Version: 18.2.

**Function:** One of the source types.
**Notes:** Movies

## 124.5 class NSMediaLibraryBrowserControllerMBS

### 124.5.1 class NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** An instance of an NSMediaLibraryBrowserController configures and displays a Media Library Browser Panel.
**Notes:**

A User can drag and drop media files from the Media Library Browser into views in their application.
Requires Mac OS X 10.9.

### 124.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr1

### 124.5.4 Methods

### 124.5.5 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.9 and false on other platforms.

### 124.5.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new object for the shared library browser.

### 124.5.7 orderFront

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

**Function:** Orders window to front.

### 124.5.8 orderOut

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

**Function:** Orders window out.
**Notes:** Hides window.

### 124.5.9 sharedMediaLibraryBrowserController as NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns a new object for the shared library browser.

### 124.5.10 togglePanel

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Toggles the panel to hide/show.

### 124.5.11 Properties

### 124.5.12 Frame as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** The bounds of the panel.
**Notes:** (Read and Write property)

### 124.5.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 124.5.14 mediaLibraries as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** Which media library to show: audio, video or image.
**Notes:** (Read and Write property)

### 124.5.15 Visible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

**Function:** The visible state of the browser panel.
**Notes:** (Read and Write property)

### 124.5.16 Constants

### 124.5.17 NSMediaLibraryAudio = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the media library type constants.
**Notes:** Audio

### 124.5.18 NSMediaLibraryImage = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the media library type constants.
**Notes:** Image

### 124.5.19 NSMediaLibraryMovie = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the media library type constants.
**Notes:** Movie

# Chapter 125

# MemoryBlock

## 125.1 Globals

### 125.1.1 NewMemoryBlockWithBytesMBS(Data as Ptr, size as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new memoryblock with a copy of the given data.

### 125.1.2 NewMemoryBlockFromPtrMBS(ptr as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a memoryblock for a given address in memory.

### 125.1.3 Memoryblock2ptrMBS(mem as memoryblock) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the memory adress of the memoryblock

### 125.1.4 ptr2MemoryblockMBS(Value as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a memoryblock with the bytes at position mem in memory.

## 125.2 class Memoryblock

### 125.2.1 class Memoryblock

Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Extends Xojo's Memoryblock class.

### 125.2.2 Methods

### 125.2.3 AddressMBS(offset as Int64 = 0) as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the adress of the byte at offset inside the memoryblock.

### 125.2.4 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 125.2.5 Xojo Developer Magazine

- 11.3, page 8: News

### 125.2.6 AddressPtrMBS(offset as Int64 = 0) as Ptr

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the adress of the byte at offset inside the memoryblock.

### 125.2.7 Blog Entries

- MBS Real Studio Plugins, version 11.3pr5

### 125.2.8 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a And on the bits in the memoryblock.
**Example:**

```
dim m1 as MemoryBlock = NewMemoryBlock(20)
dim m2 as MemoryBlock = NewMemoryBlock(20)
dim m3 as MemoryBlock = NewMemoryBlock(20)

m1.Int32Value(0)=& b10000001
m2.Int32Value(0)=& b10000000

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))

call m1.AndBitsMBS(m2,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

**Notes:**

Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 125.2.9 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock 20615

### 125.2.9 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a And on the bits in the memoryblock.
**Example:**

```
dim m1 as MemoryBlock = NewMemoryBlock(20)
dim m2 as MemoryBlock = NewMemoryBlock(20)
dim m3 as MemoryBlock = NewMemoryBlock(20)
```

```
m1.Int32Value(0)=& b11110001
m2.Int32Value(0)=& b11110000

const mask = & b11001111

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))

call m1.AndBitsMBS(m2,mask,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

**Notes:**

The mask is always 8 bit. Use the & b notation to specify it.
Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them. Only bits set int he given mask are used.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 125.2.8 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock 20615

### 125.2.10 AppendMBS(other as memoryblock) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a new memoryblock with the bytes of the two given memoryblocks.
**Example:**

```
Dim m1 As MemoryBlock = "Hello "
Dim m2 As MemoryBlock = "World!"

Dim m3 As MemoryBlock = m1.AppendMBS(m2)
Dim s As String = m3

MessageBox s
```

**Notes:**

This function will not work if the memoryblock has an unknown size.
If one memoryblock is nil than you get a copy of the other memoryblock.

### 125.2.11 BitwiseAndMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitwise AND for a Memoryblock.
**Example:**

```
Dim m1 As New MemoryBlock(555)
Dim m2 As New MemoryBlock(555)
Dim r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Dim mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Dim mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Dim mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)

// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If

Next

Break
```

**Notes:**

We walk over all values in current and second MemoryBlock and apply a bitwise AND to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

### 125.2.13 BitwiseOrMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitwise OR for a Memoryblock.
**Example:**

```
Dim m1 As New MemoryBlock(555)
Dim m2 As New MemoryBlock(555)
Dim r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Dim mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Dim mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Dim mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)

// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If
```

Next

Break

**Notes:**

We walk over all values in current and second MemoryBlock and apply a bitwise OR to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

### 125.2.15 BitwiseXOrMBS(Second as MemoryBlock, Dest as MemoryBlock = nil) as MemoryBlock

MBS Util Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Bitwise XOR for a Memoryblock.
**Example:**

```
Dim m1 As New MemoryBlock(555)
Dim m2 As New MemoryBlock(555)
Dim r As New Random

For i As Integer = 0 To 555-1
m1.Byte(i) = r.InRange(0,255)
m2.Byte(i) = r.InRange(0,255)
Next

Dim mAND As MemoryBlock = m1.BitwiseAndMBS(m2)
Dim mOR As MemoryBlock = m1.BitwiseOrMBS(m2)
Dim mXOR As MemoryBlock = m1.BitwiseXOrMBS(m2)
```

```
// check value
For i As Integer = 0 To 555-1
If BitwiseAnd(m1.Byte(i), m2.Byte(i)) <>mAND.Byte(i) Then
Break
End If
If BitwiseOr(m1.Byte(i), m2.Byte(i)) <>mOR.Byte(i) Then
Break
End If
If BitwiseXor(m1.Byte(i), m2.Byte(i)) <>mXOR.Byte(i) Then
Break
End If

Next

Break
```

**Notes:**

We walk over all values in current and second MemoryBlock and apply a bitwise XOR to each byte and store that in the destination block.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

### 125.2.16 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0
- MBS Xojo Plugins, version 22.6pr1
- News from the MBS Xojo Plugins Version 22.5

### 125.2.17 BytesEqualMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if equal byte data.
**Example:**

```
dim m1 as MemoryBlock = NewMemoryBlock(100)
dim m2 as MemoryBlock = NewMemoryBlock(100)
```

```
// try with 2 different strings
m1.CString(0)="Hello"
m2.CString(0)="Hallo"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if

// try with 2 equal strings
m1.CString(0)="Hello"
m2.CString(0)="Hello"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

**Notes:**

Fixed in 10.1 to return true on equal bytes and false on non equal bytes. Older plugin versions returned the wrong value.

Does not check the bounds of the memoryblock, so it can crash with wrong parameters.
Returns false if one of the memoryblocks is nil.

### 125.2.18 BytesZeroMBS(srcOfs as Integer, numBytes as Integer) as Boolean

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if all bytes in the memoryblock in the given range are zero.
**Example:**

```
dim m as MemoryBlock = NewMemoryBlock(100)

if m.BytesZeroMBS(0,100) then
MsgBox "all zero"
else
MsgBox "error"
end if

m.Byte(50)=1
```

```
if m.BytesZeroMBS(0,100) then
MsgBox "error"
else
MsgBox "okay"
end if
```

**Notes:**

Returns false on any error.
Bounds are not checked with the memoryblock, so be careful.

### 125.2.19 Blog Entries

- MBS Xojo Plugins, version 22.4pr2

### 125.2.20 ClearBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)
Dim v1 As Boolean = m.IsBitSetMBS(123)
m.ClearBitMBS(123)
Dim v2 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

**Notes:**

Sets value of the bit to zero.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

### 125.2.21 Blog Entries

- MBS Xojo Plugins Version 21.0 News
- MBS Xojo Plugins, version 20.6pr5

### 125.2.22 ConvertRGB12BitTo8BitMBS(Width as Integer)

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts a memoryblock with 12 bit RGB data into 8 bit RGB data.
**Notes:**

Width is number of pixels.

Please make sure the memoryblock is 9 bytes bigger than input to avoid errors.
Plugin converts each 9 bytes (72 bits) with 2 RGB triple. So first 12 bits are red, next 12 bits green and last 12 bits blue.
Plugin removes last 4 bits.

### 125.2.23 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr7

### 125.2.24 CopyBytesFromMacHandleMBS(srcHandle as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Copies bytes from Mac Handle into your memoryblock.
**Notes:** Same as CopyBytesFromMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

### 125.2.25 CopyBytesFromMacPtrMBS(srcPtr as Ptr, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the given amount of bytes from the given address in the Mac's memory address space into the memoryBlock.
**Notes:** Make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).

### 125.2.26 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the specified amount of bytes into a second memoryBlock.
**Example:**

```
dim m as MemoryBlock
dim n as MemoryBlock

m=NewMemoryBlock(100)
n=NewMemoryBlock(100)

m.Long(0)=12345

m.CopyBytesMBS(0,4,n,0)

MsgBox str(n.long(0))
```

**Notes:** You must make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).

- 125.2.27 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer) 20624

### 125.2.27 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the specified amount of bytes inside the memoryBlock.
**Notes:** You must make sure that the copied bytes fit inside the block (if they don't, your application or even the whole system can crash).
See also:

- 125.2.26 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) 20623

### 125.2.28 CopyBytesToMacHandleMBS(srcOfs as Integer, numBytes as Integer, destHandle as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

**Function:** Copies byte data from the memoryblock into the memory the handle is pointing to.
**Notes:** Same as CopyBytesToMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

### 125.2.29 CopyBytesToMacPtrMBS(srcOfs as Integer, numBytes as Integer, destPtr as Ptr)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies the given amount of bytes from the memoryBlock to the given address in the Mac's memory address space.
**Notes:** Be careful where you copy the data to - you can easily crash your computer if you write to the wrong address space.

### 125.2.30 CopyByteToUShortMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies bytes in a memoryblock to another memoryblock converting the 8bit values to 16bit values.
**Notes:**

Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

### 125.2.31 CopyNthBitsMBS(source as memoryblock, SourceOffsetBits as Integer, DestinationOffsetBits as Integer, BitCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies every nth bits in the source memoryblock to the current memoryblock.
**Notes:**

BitCount = the number of bits to copy from each step.
StepCount = the number of bits to not copy.
NumberOfSteps = the number of rounds to do.
There is no bound checking. The function will crash with invalid parameters!

### 125.2.32 CopyNthBytesMBS(source as memoryblock, SourceOffsetBytes as Integer, DestinationOffsetBytes as Integer, ByteCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies every nth bytes in the source memoryblock to the current memoryblock.
**Example:**

```
dim s,d as memoryBlock

s=NewmemoryBlock(100)
d=NewmemoryBlock(100)

s.CString(0)="Hello World!"

call d.CopyNthBytesMBS(s,0,0,2,4,3)

MsgBox d.CString(0) // "Heo rl"
```

**Notes:**

ByteCount = the number of bytes to copy from each step.
StepCount = the number of bytes to move for each step forward in source.
NumberOfSteps = the number of steps to do.
There is no bound checking. The function will crash with invalid parameters!

### 125.2.33 CopyUShortToByteMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies shorts in a memoryblock to another memoryblock converting the 16bit values to 8bit values.
**Notes:**

Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

### 125.2.34 CRC_32ContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided block of data.

### 125.2.35 CRC_32MBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 32bit Checksum about the provided block of data.

### 125.2.36 CRC_CCITTContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided string.

### 125.2.37 CRC_CCITTMBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16bit Checksum about the provided block of data.
**Notes:**

See the text "About-CRC" for details about this Checksum things.
This function is also available for strings.

See the CRC_32 for more details on Checksums.

### 125.2.38 CRC_DillonMBS(bitWidth as Integer, offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates a 16 to 64bit Checksum about the provided block of data.
**Notes:**

This function is also available for strings.

See the CRC_32 for more details on Checksums.

### 125.2.39 EndianS16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_BtoLMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.40 EndianS16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_BtoNMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.41 EndianS16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_LtoBMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.42 EndianS16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_LtoNMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.43 EndianS16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_NtoBMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.44 EndianS16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_NtoLMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.45 EndianS32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_BtoLMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.46 EndianS32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_BtoNMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.47 EndianS32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_LtoBMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.48 EndianS32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_LtoNMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.49 EndianS32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_NtoBMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.50 EndianS32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_NtoLMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.51 EndianSwap16MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Swaps several 16 bit integers inside a memoryblock.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianSwap16MBS(0,mem.size/2)
```

### 125.2.52 EndianSwap32MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Swaps several 32 bit integers inside a memoryblock.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianSwap32MBS(0,mem.size/4)
```

### 125.2.53 EndianU16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_BtoLMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.54 EndianU16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_BtoNMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.55 EndianU16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_LtoBMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.56 EndianU16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_LtoNMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.57 EndianU16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_NtoBMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.58 EndianU16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
```

```
mem.EndianU16_NtoLMBS(0,mem.size/2)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.59 EndianU32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_BtoLMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.60 EndianU32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_BtoNMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.61 EndianU32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_LtoBMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.62 EndianU32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_LtoNMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.63 EndianU32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_NtoBMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.64 EndianU32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

**Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Example:**

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_NtoLMBS(0,mem.size/4)
```

**Notes:**

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

### 125.2.65 ExpandBitsMBS(dest as memoryblock, SourceByteCount as Integer, LowValue as Integer = 0, HighValue as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Expands bits into bytes.
**Example:**

```
dim m1 as new MemoryBlock(200)
dim m2 as new MemoryBlock(1600)
```

```
for i as Integer = 0 to 127
m1.Int8Value(i) = i
next

dim n as Integer = 128
dim b as Boolean = m1.ExpandBitsMBS(m2, n)

break // see result in debugger
```

**Notes:**

Takes a bit from the source memoryblock and writes a byte for it to destination. Uses LowValue (default 0) if the bit is not set and HighValue (Default 255) if the bit is set.
Works only on x86 CPUs (no PPC).
Reads source memoryblock in 32 bit blocks and writes the destination in 32 byte blocks.

### 125.2.66 Blog Entries

- MBS REALbasic Plugins, version 10.6pr9

### 125.2.67 ExtractBitsMBS(Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies bits from a memoryblock to another.
**Example:**

```
dim mask as Integer = & b01010101
dim m as MemoryBlock = "Hello World"

dim r as MemoryBlock = m.ExtractBitsMBS(mask)

MsgBox r.StringValue(0,r.size) // shows "@EDDE UEPDD"
```

**Notes:**

The mask is always 8 bit. Use the & b notation to specify it.
If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

### 125.2.68 FillBytesMBS(offset as Integer, count as Integer, value as Integer)

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Fills memory with a specific byte value.
**Notes:** Caution: No bounds checking.

### 125.2.69 FindByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds the position of the first byte which has the given value.
**Example:**

```
dim m as MemoryBlock = NewMemoryBlock(100)
dim n as Integer

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 0 as the byte at offset 0 is zero

m.Byte(0)=1

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 1 as the byte at offset 1 is zero

m.FillBytesMBS(0,100,5)

n = m.FindByteMBS(0, 100, 6)

MsgBox str(n) // shows -1 as there is no byte with value 6
```

**Notes:** Returns -1 if the byte is not found.
See also:

- 125.2.70 FindByteMBS(values() as UInt8, StartByteOffset as Integer = 0) as Integer 20643

### 125.2.70 FindByteMBS(values() as UInt8, StartByteOffset as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 21.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds position of a given value.
**Example:**

```
Dim m As MemoryBlock = "Hello World"

Dim u() As UInt8
u.Append Asc("e")
u.Append Asc("o")

Dim pos1 As Integer = m.FindByteMBS(u)
Dim pos2 As Integer = m.FindByteMBS(u, pos1+1)

// shows 1 and 4
MsgBox "Found position: "+Str(pos1)+" and "+Str(pos2)
```

**Notes:**

Values is an array of possible values to find.
For best performance avoid duplicates in that array.

Returns zero based byte offset.
Result is -1 if not found.

- 19.6, page 10: News

See also:

- 125.2.69 FindByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer 20643

### 125.2.73 FindBytesMBS(srcOfs as Integer, maxBytes as Integer, target as memoryBlock, targOfs as Integer, targLen as Integer) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds some bytes from the target memoryblock inside the current memoryblock.

### 125.2.74 FindNotByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds the position of the first byte which has no the given value.
**Example:**

```
dim m as MemoryBlock = NewMemoryBlock(100)
dim n as Integer

n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // -1 as no value is not zero

m.Byte(30)=1

n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // shows 30 as the byte at offset 30 is not zero

m.Byte(0)=255

n = m.FindNotByteMBS(0, 100, 255)

MsgBox str(n) // shows 1 as the byte at offset 1 is not 255
```

**Notes:** Returns -1 if the no byte was found which has not the given value.

### 125.2.75 FindStringMBS(srcOfs as Integer, maxBytes as Integer, target as String) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finds a string inside a memoryblock.

### 125.2.76 GetBitMBS(Bit as UInt64) as Integer

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries value of the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)
Dim v1 As Integer = m.GetBitMBS(123)
Break // see debugger
```

**Notes:**

Returns 1 if bit is set or 0 if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

### 125.2.77 Blog Entries

- MBS Xojo Plugins Version 21.0 News
- MBS Xojo Plugins, version 20.6pr5

### 125.2.78 GetStringMBS(offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a string from the memoryblock.
**Notes:** With newer RB versions you may better use StringValue.

### 125.2.79 InvertBytesMBS(offset as Integer, count as Integer)

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Inverts the given number of bytes in a memoryblock.
**Example:**

```
dim m as memoryblock
m=newmemoryblock(100)
' do something
m.InvertBytesMBS(0,100) // invert all bytes
```

**Notes:** Does work faster if count is a multiply of 4.

### 125.2.80 IsBitSetMBS(Bit as UInt64) as Boolean

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries value of the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

**Notes:**

Returns true if bit is set or false if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

### 125.2.81 Blog Entries

- MBS Xojo Plugins Version 21.0 News
- MBS Xojo Plugins, version 20.6pr5

### 125.2.82 LeftMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a memoryblock with the first given number of bytes.
**Notes:**

If length is greater than the size of the memoryblock then then length is set to size.
Returns nil if length<=0 or on low memory.
This function will not work if the memoryblock has an unknown size.

### 125.2.83 MaxMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates max values of values in memory.
**Example:**

```
dim m1 as new MemoryBlock(12)
dim m2 as new MemoryBlock(12)
dim mr1 as new MemoryBlock(12)
dim mr2 as new MemoryBlock(12)

for i as Integer = 0 to 11
m1.UInt8Value(i) = i
m2.UInt8Value(11-i) = i
next

if mr1.minMBS(m1, m2) then
if mr2.maxMBS(m1, m2) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

**Notes:**

firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises exceptions for invalid parameters.

### 125.2.84 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4

### 125.2.85 MidMBS(offset as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a memoryblock with the bytes of the given memoryblock from the given offset on.
**Notes:**

Offset is 0 based.
Returns nil if offset<0 or on low memory.
This function will not work if the memoryblock has an unknown size.
See also:

- 125.2.86 MidMBS(offset as Integer, length as Integer) as memoryblock 20649

### 125.2.86 MidMBS(offset as Integer, length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a memoryblock with the given bytes from the middle of the memoryblock.
**Notes:**

Offset is 0 based.
Returns nil if offset<0 or on low memory.
If length is too long then length is set to a lower value.
This function will not work if the memoryblock has an unknown size.
See also:

- 125.2.85 MidMBS(offset as Integer) as memoryblock 20649

### 125.2.87 MinMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates min values of values in memory.
**Example:**

```
dim m1 as new MemoryBlock(24)
dim m2 as new MemoryBlock(24)
dim mr1 as new MemoryBlock(24)
dim mr2 as new MemoryBlock(24)

for i as Integer = 0 to 11
m1.UInt16Value(2*i) = i
m2.UInt16Value(2*(11-i)) = i
next
```

```
if mr1.minMBS(m1, m2, 16, false, 0, 24) then
if mr2.maxMBS(m1, m2, 16, false, 0, 24) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

**Notes:**

firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises exceptions for invalid parameters.

### 125.2.90 MirrorBitsInBytesMBS(offsetByte as Integer, lengthByte as Integer)

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Mirrors bits in each byte.
**Example:**

```
dim m as new MemoryBlock(12)

m.CString(0)="HelloHello"

m.MirrorBitsInBytesMBS(0,5)

MsgBox EncodingToHexMBS(m.StringValue(5,5))+" ->"+EncodingToHexMBS(m.StringValue(0,5))
```

**Notes:**

offsetByte: where to start in the memoryblock
lengthByte: number of bytes to swap

Mirror means in this case, that if you a byte with bits 11001100, after the mirror, you have 00110011. So bit 0 and 7 exchange values. Same for 1 and 6, 2 and 5, 3 and 4.

### 125.2.91 MirrorBitsMBS(offsetBit as Integer, lengthBit as Integer)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Mirrors the bits in a memoryblock.
**Notes:**

e.g. "111100001" in the memoryblock would give "100001111"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 ,â§ offsetBit <mem.size*8 and 0 ,â§ lengthBit ,â§ mem.size*8 - offsetBit

### 125.2.92 MirrorBytesMBS(offsetByte as Integer = 0, lengthByte as Integer = -1)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Mirrors the bytes in the given range.
**Notes:**

e.g. "abcdefgh" in the memoryblock would give "hgfedcba"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 ,â§ offsetByte <mem.size and 0 ,â§ lengthByte ,â§ mem.size - offsetByte

If lengthByte is -1, we query memoryblock for size. If size is unknown or negative, the function does nothing.

### 125.2.93 MultiplyUInt16MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplied UInt16 values in the memoryblock.
**Example:**

```
dim myMemOut3 as new MemoryBlock(500)
myMemOut3.MultiplyUInt16MBS(0.9)
```

**Notes:**

Values bigger than 65535 are set to 65535.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.
Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative) can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.

### 125.2.94 Blog Entries

- MBS Xojo Plugins, version 18.4pr7

### 125.2.95 MultiplyUInt8MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Multiplies UInt8 values in the memoryblock.
**Example:**

```
dim myMemOut3 as new MemoryBlock(500)
myMemOut3.MultiplyUInt8MBS(0.9)
```

**Notes:**

Values bigger than 255 are set to 255.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.
Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative)

can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.

### 125.2.96 Blog Entries

- MBS Xojo Plugins, version 18.4pr7

### 125.2.97 RightMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a memoryblock with the given number of bytes from the right side of the memoryblock.
**Example:**

```
dim mem,m as MemoryBlock
mem=m.RightMBS(5)
```

**Notes:**

If length is more than the memoryblock's size, than length is set to size.
Returns nil if length<=0 or on low memory.
This function will not work if the memoryblock has an unknown size.

### 125.2.98 SetBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets value of the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

**Notes:**

Sets bit to 1.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 125.2.99 SetBitMBS(Bit as UInt64, Value as Boolean) 20654
- 125.2.100 SetBitMBS(Bit as UInt64, Value as Integer) 20654

### 125.2.99 SetBitMBS(Bit as UInt64, Value as Boolean)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets value of the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123, true)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

**Notes:**

Pass true to set bit or false to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 125.2.98 SetBitMBS(Bit as UInt64) 20653
- 125.2.100 SetBitMBS(Bit as UInt64, Value as Integer) 20654

### 125.2.100 SetBitMBS(Bit as UInt64, Value as Integer)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets value of the given bit in the MemoryBlock.
**Example:**

```
Dim m As New MemoryBlock(100)
```

```
m.SetBitMBS(123, 1)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

**Notes:**

Pass 1 to set bit or 0 to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

### 125.2.101 Blog Entries

### 125.2.102 SetStringMBS(str as String, offset as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets a string inside the memoryblock.
**Notes:** With newer RB versions you may better use StringValue.

### 125.2.103 SwapBytes16MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Swaps words inside the given bounds inside the memoryblock.
**Example:**

```
dim numbytes as Integer // number of bytes in MemoryBlock
dim m as MemoryBlock // your memoryblock
dim i as Integer

for i=0 to numbytes step 2
```

```
m.UShort(i)=EndianSwap16MBS(m.UShort(i))
next
```

### 125.2.104 SwapBytes32MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Swaps longs inside the given bounds inside the memoryblock.
**Example:**

```
// Test SwapBytes32MBS and SwapBytes16MBS:

const h11223344=& h11223344
const h22114411=& h22114433 // 16bit swap
const h44332211=& h44332211 // 32bit swap

dim m as memoryBlock
dim ok as Integer

m=NewmemoryBlock(20)
m.Long(00)=h11223344
m.Long(04)=h11223344
m.Long(08)=h11223344
m.Long(12)=h11223344
m.Long(16)=h11223344

m.SwapBytes16MBS(4,4)
m.SwapBytes32MBS(12,4)

if m.Long(00)=h11223344 then
ok=ok+1
else
MsgBox "00: "+hex(m.Long(00))
end if

if m.Long(04)=h22114411 then
ok=ok+1
else
MsgBox "04: "+hex(m.Long(04))
end if

if m.Long(08)=h11223344 then
ok=ok+1
else
MsgBox "08: "+hex(m.Long(08))
end if
```

```
if m.Long(12)=h44332211 then
ok=ok+1
else
MsgBox "12: "+hex(m.Long(12))
end if

if m.Long(16)=h11223344 then
ok=ok+1
else
MsgBox "16: "+hex(m.Long(16))
end if

if ok=5 then
MsgBox "OK"
else
MsgBox "Fail"
end if
```

**Notes:**

It should do something like this:

```
dim m as memoryBlock

for i=0 to numbytes step 2
m.long(i)=EndianSwap32MBS(m.long(i))
next
```

### 125.2.105 SwapBytesMBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Swaps bytes inside the given bounds inside the memoryblock.
**Notes:** Reverses the order of the bytes at the given offset and length in the memoryBlock. This is helpful to change representation of values from Little Endian (used in Windows) to Big Endian (used in Mac OS) and vice versa. Thanks to Franco Vaccari for the code of this routine.

### 125.2.106 Properties

### 125.2.107 OSTypeMBS(offset as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read/Write an OSType.
**Notes:**

Interprets 4 bytes starting at the given offset as a OSType value.
(Read and Write computed property)

## 125.3 class MemoryBlockMBS

### 125.3.1 class MemoryBlockMBS

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class to hold a memoryblock.
**Example:**

```
dim m as new MemoryBlockMBS

if m.Create(2000) then

// copy struing into memory
m.Memory.StringValue(0,5)="Hello"

// and read again
MsgBox m.Memory.StringValue(0,5)

end if
```

**Notes:**

Xojo's memoryblocks have two bad things:
- they are limited to 1 GB on Mac OS X and Mac OS Classic
- they take a lot of time to create them
- they take a lot of real memory

Xojo allocates the memory and fills it with zeros.

The plugin in contrast uses zero filled pages to create the memoryblock which nearly take no time to create them and it does only need virtual memory until the memory is really used which saved swapping space.

### 125.3.2 Blog Entries

- MBS REALbasic plug-ins version 9.4

### 125.3.4 Methods

### 125.3.5 Close

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 125.3.6 Constructor

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** This constructor does nothing, so you can call Create yourself.
See also:

- 125.3.7 Constructor(Mem as MemoryBlock) 20660
- 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 20661
- 125.3.9 Constructor(Size as Int64) 20661
- 125.3.10 Constructor(Str as String) 20662
- 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 20662

### 125.3.7 Constructor(Mem as MemoryBlock)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new MemoryBlockMBS with content of memoryblock.
**Example:**

```
dim s as string = "Hello World"
dim m as MemoryBlock = s

dim x as new MemoryBlockMBS(m)

MsgBox str(x.Size)
```

**Notes:** Raises exception is size is invalid or no memory is available.
See also:

- 125.3.6 Constructor 20660
- 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 20661

- 125.3.10 Constructor(Str as String) 20662
- 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 20662

### 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new MemoryBlockMBS with given size and copies content of memoryblock.
**Example:**

```
dim s as string = "Hello World"
dim m as MemoryBlock = s

dim x as new MemoryBlockMBS(m, 9)

MsgBox str(x.Size)
```

**Notes:** Raises exception is size is invalid or no memory is available.
See also:

- 125.3.6 Constructor 20660
- 125.3.7 Constructor(Mem as MemoryBlock) 20660
- 125.3.9 Constructor(Size as Int64) 20661
- 125.3.10 Constructor(Str as String) 20662
- 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 20662

### 125.3.9 Constructor(Size as Int64)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new MemoryBlockMBS with given size.
**Notes:** Raises exception is size is invalid or no memory is available.
See also:

- 125.3.6 Constructor 20660
- 125.3.7 Constructor(Mem as MemoryBlock) 20660
- 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 20661
- 125.3.10 Constructor(Str as String) 20662
- 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 20662

### 125.3.10 Constructor(Str as String)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new MemoryBlockMBS with content of string.
**Example:**

```
dim s as string = "Hello World"
dim x as new MemoryBlockMBS(s)

MsgBox str(x.Size)
```

**Notes:**

Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 125.3.6 Constructor 20660
- 125.3.7 Constructor(Mem as MemoryBlock) 20660
- 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 20661
- 125.3.9 Constructor(Size as Int64) 20661
- 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 20662

### 125.3.11 Constructor(Str as String, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new MemoryBlockMBS with given size and copies content of string.
**Example:**

```
dim s as string = "Hello World"
dim x as new MemoryBlockMBS(s, 9)

MsgBox str(x.Size)
```

**Notes:**

Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 125.3.6 Constructor 20660
- 125.3.7 Constructor(Mem as MemoryBlock) 20660
- 125.3.8 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 20661
- 125.3.9 Constructor(Size as Int64) 20661
- 125.3.10 Constructor(Str as String) 20662

### 125.3.12 Create(size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new memoryblock.
**Example:**

```
dim m as MemoryBlockMBS
dim n as MemoryBlock
dim t as Integer

const size=2200000000

// RB: up to 1 GigaByte
// Plugin: up to 2 GigaByte - 1 Byte

m=New MemoryBlockMBS

t=ticks
if m.Create(size) then
n=m.Memory

MsgBox str(ticks-t)

end if

t=ticks
n=NewMemoryBlock(size)
if n<>nil then
MsgBox str(ticks-t)
end if
```

**Notes:**

Returns true on success and false on failure.
Size can be any positive value up to & h7FFFFFFF (=2^31-1).

Size became 64bit to avoid integer overflows.

### 125.3.13 Resize(Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tries to resize the memorybock to the new size.
**Example:**

```
dim m as new MemoryBlockMBS

if m.Create(1000) then
MsgBox str(m.Size)

if m.Resize(2000) then
MsgBox str(m.Size)
end if
end if
```

**Notes:**

Returns true on success.
If false is returned, the memoryblockMBS is not touched.

If the new size is smaller, data is lost as the memoryblock is cut.
If the new size is bigger, the memoryblock is resized. Or if that does not work, a new memoryblock is created and data is copied. New bytes will be zero.

### 125.3.14 Properties

### 125.3.15 Address as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address of the memory.

**Notes:**

This value became 64bit to avoid integer overflows.
(Read only property)

### 125.3.16 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The memoryblock to access this memory.
**Notes:**

Keep a reference to the MemoryBlockMBS object as long as you use this memoryblock object.
(Read only property)

### 125.3.17 Size as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of this memoryblock.
**Notes:**

This value became 64bit to avoid integer overflows.
(Read only property)

## 125.4 class MemoryStorageMBS

### 125.4.1 class MemoryStorageMBS

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to store stuff in memory outside of the app memory.
**Notes:**

The memory is stored using mapped memory in the system address space outside of the 32bit app memory of your app.

Normally a 32-bit app can only use 2 to 4 GB of memory. Using blocks of memory outside this address space, you can easily keep 10 GB of data in memory.

Be aware that a some point creating more storages may fail due to out of memory.
The system may decide to swap memory to disk if you run out of physical memory.

Please have your app check free space on boot disk regularly and avoid running out of disk space for swap!

### 125.4.6 Methods

### 125.4.7 Constructor(Size as Int64 = 0)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** If size >0, we allocate the memory for this size right away.

### 125.4.8 Destructor

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 125.4.9 MemoryValue(Offset as Int64, Assigns s as MemoryBlock)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets part of memory storage as string.
**Notes:**

Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.
See also:

- 125.4.14 MemoryValue as MemoryBlock 20668
- 125.4.10 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 20667

### 125.4.10 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries part of memory storage as memory block.
**Notes:** Offset and Size are checked for range and an OutOfBoundsException can be raised.
See also:

- 125.4.14 MemoryValue as MemoryBlock 20668
- 125.4.9 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 20667

### 125.4.11 StringValue(Offset as Int64, Assigns s as String)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries part of memory storage as string.
**Notes:**

Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.
See also:

- 125.4.17 StringValue as String 20669

### 125.4.12 StringValue(Offset as Int64, Size as Int64) as String

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries part of memory storage as string.
**Notes:** Offset and Size are checked for range and an OutOfBoundsException can be raised.
See also:

- 125.4.17 StringValue as String 20669
- 125.4.11 StringValue(Offset as Int64, Assigns s as String) 20668

### 125.4.13 Properties

### 125.4.14 MemoryValue as MemoryBlock

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content of this memory storage as a memoryblock.
**Notes:** (Read and Write property)
See also:

- 125.4.9 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 20667
- 125.4.10 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 20667

### 125.4.15 Size as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of the data in bytes.
**Notes:** (Read and Write property)

### 125.4.16 SizeAllocated as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size of memory allocated.
**Notes:** (Read and Write property)

### 125.4.17 StringValue as String

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The content of this memory storage as a string.
**Notes:** (Read and Write property)
See also:

- 125.4.11 StringValue(Offset as Int64, Assigns s as String) 20668
- 125.4.12 StringValue(Offset as Int64, Size as Int64) as String 20668

# Chapter 126

# Menu

## 126.1 Globals

### 126.1.1 MenuBarHeightMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the height of the menubar in pixels.
**Example:**

msgbox "The menubar is "+str(MenuBarHeightMBS)+" pixels height."

**Notes:**

Requires the appearance manager.

Without plugin, you can use this:

declare function GetThemeMenuBarHeight lib "Carbon" (p as ptr) as Integer

dim l as Integer
dim p as memoryBlock
p=newmemoryBlock(10)

error=GetThemeMenuBarHeight(p) // 0 if okay.
menuheight=p.short(0) // in pixels. 22 on Mac OS X.

Added Cocoa support in plugin version 10.0.

# Chapter 127

# Midi

## 127.1 class AVMIDIPlayerMBS

### 127.1.1 class AVMIDIPlayerMBS

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The AVMIDIPlayer class is a player for music file formats such as MIDI and iMelody.
**Notes:**

Requires Mac OS X 10.10.

See also MidiPlaybackMBS class for playing notes.

### 127.1.2 Blog Entries

- MBS Xojo / Real Studio plug-ins version 16.2

### 127.1.4 Methods

### 127.1.5 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
**Notes:**

Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 127.1.6 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20674
- 127.1.7 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20675

### 127.1.6 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
**Notes:**

Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 127.1.5 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20674
- 127.1.7 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20675

### 127.1.7 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Initializes a newly allocated MIDI player with the contents of the file, using the specified sound bank.
**Notes:**

File: The file to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 127.1.5 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20674
- 127.1.6 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 20674

### 127.1.8 Destructor

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The destructor.

### 127.1.9 play

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Plays the sequence.
**Notes:** If prepareToPlay has not been invoked, play may be delayed while the events are prerolled.

### 127.1.10 prepareToPlay

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Prepares to play the sequence by prerolling all events.
**Notes:** This happens automatically on play if it has not already been called, but may produce a delay in startup.

### 127.1.11 stop

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Stops playing the sequence.

### 127.1.12 Properties

### 127.1.13 CurrentPosition as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The current playback position, in seconds.
**Notes:**

You can set the currentPosition of the player while the player is playing, in which case playback will resume at the new time.

Note: No range checking on the currentPosition value is done when you set it to a new value. It is your responsibility to ensure the position is valid relative to the duration.
(Read and Write property)

### 127.1.14 Duration as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The length of the currently loaded file, in seconds.
**Notes:** (Read only property)

### 127.1.15 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 127.1.16 Playing as Boolean

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** Whether the sequence is playing.
**Notes:**

The player may have reached the end of all the events in any of its tracks, but it will return true until it is stopped.
(Read only property)

### 127.1.17 Rate as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

**Function:** The playback rate of the player.
**Notes:**

The default value is 1.0, normal playback rate.
(Read and Write property)

### 127.1.18 Events

### 127.1.19 Completed

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: .

**Function:** Called when a MIDI playback request is completed.

## 127.2 class MidiClientMBS

### 127.2.1 class MidiClientMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** A class for the global MIDI stuff on Mac OS X.
**Notes:**

Only make one instance of this class in your application.

From Apple's documentation:

History:

Apple's MIDI Manager (ca. 1990) had a simple model of the world. There were application and driver clients, which had MIDI in/out ports, which could be interconnected in arbitrary ways. This model failed to provide a way for applications to make reasonable assumptions about how to make bi-directional connections to a MIDI device. MIDI Manager also had limitations on the number of ports per client, and became very unwieldy with the advent of large studios and multi-port MIDI interfaces such as the MIDI Time Piece and Studio 5.

Opcode's OMS (1991) addressed some of the shortcomings of MIDI Manager. There was the concept of a studio setup document, where drivers detected their devices, and the user could define the characteristics of additional devices connected to the MIDI ports. Applications could view the studio both as a collection of MIDI source and destination "nodes", but also as a collection of devices. OMS collected information about, and made available to its clients, useful characteristics of the devices in the studio, such as their system-exclusive IDs, MIDI channels on which they were listening, which were controllers (as opposed to simple tone generators), etc.

API Overview:
This design expands slightly on OMS's device/node hierarchy, inspired by the USB MIDI spec.

Drivers own and control devices, e.g. USB interfaces, PCI cards, etc. A device is defined as a physical object that would be represented by a single icon if there were a graphical view of the studio.

Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port. These are called Entities.

Entities have any number of Endpoints, sources and destinations of 16-channel MIDI streams. By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is necessary in MIDI librarian applications.

Third-party services like FreeMIDI or OMS can collect and report interesting properties of a device by attaching those properties to the devices' entities – CoreMIDI provides a central database, but no user interfaces.. It's worth noting that some device characteristics are dynamic (e.g. MIDI receive channel and system-exclusive ID's), or a matter of user preference (choice of icon, whether the device should appear in lists of possible controllers), while other properties are static and could be looked up in a database, using the device's manufacturer and model names as a key.

Persistent configurations / Device Information:
There are a number of reasons why CoreMIDI has a persistent state.

Endpoints must have persistent ID's. When a user assigns events in a sequencing application to an endpoint, the application needs a way to retain a permanent reference to the selected endpoint. A brute-force method of generating a persistent ID would be to combine the driver name, device name, entity name, and endpoint type and index into a string, but this is not very friendly to clients even if the system provides services to generate and decode these strings.

Consider a USB MIDI interface driver, in the case where there are two instances of one model of interface present. The driver needs a way to permanently distinguish, to the system and its clients, between the two interfaces. Which is # 1 and which is # 2? If # 1 gets unplugged, # 2 should not automatically become # 1; the user's documents may be referring to devices which were attached to # 2.

The system needs a persistent concept of which driver's device is attached to a serial port.

Some drivers will need to store configuration information about the devices they control. For example, the driver for a standard MIDI interface on a serial port needs to remember which external clocking speed to use (this is a simple, slightly obscure, but hardly unique example). The Alesis QS7 is capable of communicating at a variety of speeds, so its driver needs to remember the correct speed.

These needs for persistent configuration information provide a rationale for having something akin to OMS's studio setup document, a saved configuration for the system. Mobile users who work in multiple environments could select between multiple saved configurations in a Location Manager-compatible manner.

Given services with which to store driver configuration information, we then have built the groundwork for a client studio setup editor application.
Such an application can define external MIDI devices (not to be confused with the driver-owned cards/ interfaces/etc whose presence in the configuration is determined by the driver).

Moreover, since a driver knows exactly what device it is communicating with, it is capable of supplying information to the system about the characteristics of the device, such as its system-exclusive ID, whether it is General MIDI or DLS-compatible, etc.

Implementation overview:
The client API is implemented as the CoreMIDI framework, which uses IPC to communicate with a server process, MIDIServer.

The server process loads, and manages all communication with, MIDI drivers. Most of its implementation is in the CoreMIDIServer framework, which drivers may import in order to access the API.

"Drivers" are not I/O Kit drivers. They are dynamic libraries, using CFPlugin.

But unlike OMS, the system is able to begin functioning immediately, using only the MIDI devices/endpoints detected by the drivers, without forcing the user to go through a somewhat lengthy and confusing intial configuration process. Definition of external MIDI devices can be a completely optional step, only made possible when a client application requests that they be added to the configuration.

Many MIDI drivers can simply be user-side I/O Kit clients (probably for serial, USB, Firewire).

PCI card drivers will need their MIDI drivers to communicate with a separate kernel extension.

If you have an old file named EmagicUSBMIDIDriver.plugin in your /Library/Audio/MIDI Drivers folder, please remove it. It makes trouble with our Midi classes.

See also macOS specific classes AVMIDIPlayerMBS and MidiPlaybackMBS for playback. For Windows see also WindowsMidiMBS class.
See also PortMidiMBS class for cross platform Midi handling.
Subclass of the MidiObjectMBS class.

- MBS Real Studio Plugins, version 11.3fc

### 127.2.3 Blog Entries

- MBS Real Studio Plugins, version 11.3fc

### 127.2.4 Methods

### 127.2.5 Available as boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** True if the MIDI stuff was successfull loaded.

### 127.2.6 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.2.7 CreateDestination(name as CFStringMBS, TargetEndpointObject as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** Create a virtual destination in a client.
**Notes:**

Clients may use this to create virtual destinations.
Lasterror is set.
You must pass a valid new MidiEndpointMBS for TargetEndpointObject. Best is if you make a subclass from MidiEndpointMBS and fill the event. You can add there additional methods and properties. CreateDestination will than fill the handle property on success.

### 127.2.8 CreateInputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Create an input port through which the client may receive incoming MIDI messages from any MIDI source.
**Example:**

```
dim mc as MidiClientMBS
dim mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateInputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

**Notes:**

After creating a port, use MIDIPortConnectSource to establish an input connection from any number of sources to your port.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so

it can be filled.

### 127.2.9 CreateOutputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Create an output port through which the client may send outgoing MIDI messages to any MIDI destination.
**Example:**

```
dim mc as MidiClientMBS
dim mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateOutputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

**Notes:**

Output ports provide a mechanism for MIDI merging. The system assumes that each output port will be responsible for sending only a single MIDI stream to each destination, although a single port may address all of the destinations in the system.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so it can be filled.

### 127.2.10 CreateSource(name as CFStringMBS) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Creates a new virtual Midi source.

**Example:**

```
dim m as MidiClientMBS
dim e as MidiEndpointMBS

m=new MidiClientMBS

// Initialize
m.Init NewCFStringMBS("Hallo")

// Create device:
e=m.CreateSource(NewCFStringMBS("Hallo"))

// if error is 0 and handle is not 0, it's okay
MsgBox "error: "+str(m.Lasterror)+", handle: "+str(e.Handle)
```

**Notes:**

Lasterror is set.
Returns nil on any error.

Clients may use this to create virtual sources.

After creating a virtual source, use Received to transmit MIDI messages from your virtual source to any clients connected to the virtual source.

### 127.2.11 FindObjectByUniqueID(id as Integer) as MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Locate a device, typedefal device, entity, or endpoint by its uniqueID.
**Notes:**

New for CoreMIDI 1.3.
You may cast the returned object to MidiEndpointMBS, MidiEntityMBS or MidiDeviceMBS. RB's "isa" command may help you.
Returns nil on any error. Lasterror is set.

### 127.2.12 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of the destinations in the system.

**Notes:**

The index goes from 0 to NumberOfDestinations-1.
Lasterror is set.
Returns nil on any error.

### 127.2.13 GetDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of the devices in the system.
**Notes:**

To enumerate the entities in the system, you can walk through the devices, then walk through the devices' entities.

Note: If a client iterates through the devices and entities in the system, it will not ever visit any virtual sources and destinations created by other clients. Also, a device iteration will return devices which are "offline" (were present in the past but are not currently present), while iterations through the system's sources and destinations will not include the endpoints of offline devices.

Thus clients should usually prefer NumberOfSources, GetSource, NumberOfDestinations and GetDestination to iterating through devices and entities to locate endpoints.

Lasterror is set.
Returns nil on any error.

### 127.2.14 GetExternalDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of the external devices in the system.
**Notes:**

The index goes from 0 to NumberOfDevices-1.
Lasterror is set.
Returns nil on any error.

### 127.2.15 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of the sources in the system.
**Notes:**

The index goes from 0 to NumberOfSources-1.
Lasterror is set.
Returns nil on any error.

### 127.2.16 Init(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Creates a new Client object with the given client name.
**Notes:** Lasterror is set.

### 127.2.17 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the number of destinations in the system.
**Example:**

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfDestinations

MsgBox "NumberOfDestinations: "+str(n)
```

**Notes:**

Returns 0 on any error.
Lasterror is set.

### 127.2.18 NumberOfDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the number of devices in the system.
**Example:**

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfDevices

MsgBox "NumberOfDevices: "+str(n)
```

**Notes:**

Returns 0 on any error.
Lasterror is set.

### 127.2.19 NumberOfExternalDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the number of typedefal MIDI devices in the system.
**Example:**

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfExternalDevices

MsgBox "NumberOfExternalDevices: "+str(n)
```

**Notes:**

External MIDI devices are MIDI devices connected to endpoints via a standard MIDI cable. Their presence is completely optional, only when a UI somewhere adds them.

New for CoreMIDI 1.1.

Returns 0 on any error.
Lasterror is set.

### 127.2.20 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the number of sources in the system.
**Example:**

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfSources

MsgBox "NumberOfSources: "+str(n)
```

**Notes:**

Returns 0 on any error.
Lasterror is set.

### 127.2.21 Restart as Integer

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

**Function:** Stops and restarts MIDI I/O.
**Notes:**

This is useful for forcing CoreMIDI to ask its drivers to rescan for hardware.
Returns the Mac OS X error code.

### 127.2.22 Send(port as MidiPortMBS, endpoint as MidiEndpointMBS, packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Sends midi data using the port to the given endpoint.
**Example:**

```
// Not 100% if this example works:
dim client as MIDIClientMBS
dim outport as MIDIPortMBS
dim dest as MIDIEndpointMBS
dim pack as MIDIPacketMBS
dim list as MIDIPacketListMBS
dim packs(-1) as MIDIPacketMBS

client = new MidiClientMBS

if client <>nil then
client.Init newcfstringmbs("CoreMIDI")
outport = new MIDIPortMBS
client.CreateOutputPort(NewCFStringMBS("outport"), outport)
dest = client.getDestination(0)
outport.connectSource dest

pack = new MIDIPacketMBS
list = new MIDIPacketListMBS
pack.timeStamp = nil
pack.datastring = chrb(& h90)+chrb(& h5A)+chrb(& h7C)
packs.append pack
if not list.FillList(packs) then
```

```
msgBox "bad"
end

client.Send(outport, dest, list)
end
```

**Notes:**

Events with future timestamps are scheduled for future delivery. The system performs any needed MIDI merging.

Lasterror is set.

### 127.2.23 Events

### 127.2.24 ObjectAdded(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** Called when an object is added to a MidiObject.

### 127.2.25 ObjectRemoved(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** Called when an object is removed from a MidiObject.

### 127.2.26 PropertyChanged(target as MidiObjectMBS, theProperty as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** Called when a property was changed.

### 127.2.27 SerialPortOwnerChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** A persistent MIDI Thru connection was created or destroyed.
**Notes:** New for CoreMIDI 1.3.

### 127.2.28 SetupChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** Some aspect of the current MIDISetup has changed.
**Notes:** You should ignore this message if you handle the other messages.

### 127.2.29 ThruConnectionsChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

**Function:** A persistent MIDI Thru connection was created or destroyed.
**Notes:** New for CoreMIDI 1.3.

### 127.2.30 Constants

### 127.2.31 kMIDIIDNotUnique = -10843

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Attempt to set a non-unique kMIDIPropertyUniqueID on an object.

### 127.2.32 kMIDIInvalidClient = -10830

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** An invalid MIDIClientRef was passed.

### 127.2.33 kMIDIInvalidPort = -10831

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** An invalid MIDIPortRef was passed.

### 127.2.34 kMIDIInvalidUniqueID = 0

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** A constant for an invalid unique ID.

### 127.2.35 kMIDIMessageSendErr = -10838

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Communication with MIDIServer failed.

### 127.2.36 kMIDIMsgIOError = 7

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** A driver I/O error occurred.

### 127.2.37 kMIDIMsgObjectAdded = 2

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** A device, entity or endpoint was added.

### 127.2.38 kMIDIMsgObjectRemoved = 3

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** A device, entity or endpoint was removed.

### 127.2.39 kMIDIMsgPropertyChanged = 4

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** An object's property was changed.

### 127.2.40 kMIDIMsgSerialPortOwnerChanged = 6

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** A persistent MIDI Thru connection was created or destroyed. No data. New for CoreMIDI 1.3.

### 127.2.41 kMIDIMsgSetupChanged = 1

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** Some aspect of the current MIDISetup has changed. No data. Should ignore this message if messages 2-6 are handled.

### 127.2.42 kMIDIMsgThruConnectionsChanged = 5

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI Notification.
**Notes:** A persistent MIDI Thru connection was created or destroyed. No data. New for CoreMIDI 1.3.

### 127.2.43 kMIDINoConnection = -10833

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Attempt to close a non-existant connection.

### 127.2.44 kMIDINoCurrentSetup = -10837

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Internal error; there is no current MIDI setup object.

### 127.2.45 kMIDIObjectNotFound = -10842

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** The requested object does not exist.

### 127.2.46 kMIDIServerStartErr = -10839

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Unable to start MIDIServer.

### 127.2.47 kMIDISetupFormatErr = -10840

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Unable to read the saved state.

### 127.2.48 kMIDIUnknownEndpoint = -10834

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** An invalid MIDIEndpointRef was passed.

### 127.2.49 kMIDIUnknownProperty = -10835

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Attempt to query a property not set on the object.

### 127.2.50 kMIDIWrongEndpointType = -10832

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** A source endpoint was passed to a function expecting a destination, or vice versa.

### 127.2.51 kMIDIWrongPropertyType = -10836

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** Attempt to set a property with a value not of the correct type.

### 127.2.52 kMIDIWrongThread = -10841

MBS MacCF Plugin, Plugin Version: 9.6.

**Function:** One of the type constants for a MIDI error.
**Notes:** A driver is calling a non-I/O function in the server from a thread other than the server's main thread.

## 127.3 class MidiDeviceMBS

### 127.3.1 class MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** A class for a MIDI device.
**Notes:**

A MIDI device, which either attaches directly to the computer and is controlled by a MIDI driver, or which is "external," meaning that it is connected to a driver-controlled device via a standard MIDI cable.
Subclass of the MidiObjectMBS class.

### 127.3.2 Methods

### 127.3.3 GetEntity(index as Integer) as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of a given device's entities.
**Notes:**

The index goes from 0 to NumberOfEntities-1.
Lasterror is set.
Returns nil on any error.

### 127.3.4 NumberOfEntities as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the number of entilities for this device.
**Notes:**

Returns nil on any error.
Lasterror is set.

## 127.4 class MidiEndpointMBS

### 127.4.1 class MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the CoreMidi classes.
**Notes:**

Entities have any number of MIDIEndpointRef's, sources and destinations of 16-channel MIDI streams.
Subclass of the MidiObjectMBS class.

### 127.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

### 127.4.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

### 127.4.4 Methods

### 127.4.5 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:**

Frees the endpoint handle.
There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.4.6 Entity as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Returns an endpoint's entity.
**Notes:**

Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

### 127.4.7 FlushOutput

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Unschedule previously-sent packets.
**Notes:**

Clients may use MIDIFlushOutput to cancel the sending of
packets that were previously scheduled for future delivery.
New for CoreMIDI 1.1.
Lasterror is set.

### 127.4.8 Received(packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** Distribute MIDI from a source to the client input ports which are connected to that source.
**Notes:**

Drivers should call this function when receiving MIDI from a source.
Clients which have created virtual sources, using MIDICreateSource, should call this function when the source is generating MIDI.
Lasterror is set.

### 127.4.9 Events

### 127.4.10 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: .

**Function:** Called when data arrives at an endpoint.
**Notes:**

If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

## 127.5 class MidiEntityMBS

### 127.5.1 class MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the CoreMidi classes.
**Notes:**

Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port.

By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is desirable in MIDI librarian applications.

These sub-components are MIDIEntityRef's.
Subclass of the MidiObjectMBS class.

### 127.5.2 Methods

### 127.5.3 Device as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Returns an entity's device.
**Notes:**

Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

### 127.5.4 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of a given entity's destinations.
**Notes:**

Lasterror is set.
Returns nil on any error.

### 127.5.5 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return one of a given entity's sources.
**Notes:**

Lasterror is set.
Returns nil on any error.

### 127.5.6 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return the number of destinations in a given entity.
**Notes:**

Lasterror is set.
Returns 0 on any error.

### 127.5.7 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Return the number of sources in a given entity.
**Notes:**

Lasterror is set.
Returns 0 on any error.

## 127.6 class MidiObjectMBS

### 127.6.1 class MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** A class for a Mac OS X CoreMidi object.

### 127.6.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr2
- MBS Real Studio Plugins, version 12.5pr2

### 127.6.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr2
- MBS Real Studio Plugins, version 12.5pr2

### 127.6.4 Methods

### 127.6.5 kMIDIPropertyAdvanceScheduleTimeMuSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
If it is >0, then it is a recommendation of how many microseconds in advance clients should schedule output. Clients should treat this value as a minimum. For devices with a >0 advance schedule time, drivers will receive outgoing messages to the device at the time they are sent by the client, via MIDISend, and the driver is responsible for scheduling events to be played at the right times according to their timestamps.
As of CoreMIDI 1.3, this property may also be set on virtual destinations (but only the creator of the destination should do so).
When a client sends to a virtual destination with an advance schedule time of 0, the virtual destination receives its messages at their scheduled delivery time. If a virtual destination has a non-zero advance schedule time, it receives timestamped messages as soon as they are sent, and must do its own scheduling of the events.

### 127.6.6 kMIDIPropertyCanRoute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.7 kMIDIPropertyConnectionUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, integer or CFDataRef

UniqueID of an external device/entity/endpoint attached to this one (strongly recommended that it be an endpoint). This is for the use of a setup editor UI; not currently used internally. A driver-owned entity or endpoint has this property to refer to an external MIDI device that is connected to it.

The property is non-existant or 0 if there is no connection.

New for CoreMIDI 1.1.

Beginning with CoreMIDI 1.3, this property may be a CFDataRef containing an array of big-endian SInt32's, to allow specifying that a driver object connects to multiple external objects (via MIDI thru-ing or splitting).

This property may also exist for external devices/entities/endpoints, in which case it signifies a MIDI Thru connection to another external device/entity/endpoint (again, strongly recommended that it be an edpoint).

### 127.6.8 kMIDIPropertyDeviceID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.

**Notes:**

Only available after you called the Init Method.
device/entity property, integer
The entity's system-exclusive ID, in user-visible form
Drivers may set this property on their devices or entities.
Setup editors may allow the user to set this property on external devices.

### 127.6.9 kMIDIPropertyDisplayName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

device/entity/endpoint property, string.

Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.

For objects other than endpoints, the display name is the same as the name.

New for CoreMIDI 1.5.

### 127.6.10 kMIDIPropertyDriverDeviceEditorApp as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

device property, string, contains the full path to an application which knows how to configure this driver-owned devices. Drivers may set this property on their owned devices. Applications must not write to it.

New for CoreMIDI 1.4.

### 127.6.11 kMIDIPropertyDriverOwner as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, string

Name of the driver that owns a device.
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

### 127.6.12 kMIDIPropertyDriverVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, integer, returns the driver version API of the owning driver (only for driver-owned devices). Drivers need not set this property; applications should not write to it.

New for CoreMIDI 1.3.

### 127.6.13 kMIDIPropertyFactoryPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current factory patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

### 127.6.14 kMIDIPropertyImage as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device property, CFStringRef which is a full POSIX path to a device or external device's icon, stored in any standard graphic file format such as JPEG, GIF, PNG and TIFF are all acceptable. (See CFURL for functions to convert between POSIX paths and other ways of specifying files.) The image's maximum size should be 128x128.

Drivers should set the icon on the devices they add.
A studio setup editor should allow the user to choose icons for external devices.

New for CoreMIDI 1.3.

### 127.6.15 kMIDIPropertyIsBroadcast as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.
entity/endpoint property, integer
1 if the endpoint broadcasts messages to all of the other endpoints in the device, 0 if not. Set by the owning driver; should not be touched by other clients.
New for CoreMIDI 1.3.

### 127.6.16 kMIDIPropertyIsDrumMachine as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.17 kMIDIPropertyIsEffectUnit as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.18 kMIDIPropertyIsEmbeddedEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

entity/endpoint property, integer
0 if there are external MIDI connectors, 1 if not.
New for CoreMIDI 1.1.

### 127.6.19 kMIDIPropertyIsMixer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.20 kMIDIPropertyIsSampler as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.21 kMIDIPropertyManufacturer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Example:**

```
dim m as MidiClientMBS
dim i, n as Integer
dim e as MIDIEndpointMBS
dim d as MIDIDeviceMBS
dim s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

**Notes:**

Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.
Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

### 127.6.22 kMIDIPropertyMaxReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

### 127.6.23 kMIDIPropertyMaxSysExSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.
device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
maximum bytes/second of sysex messages sent to it
(default is 3125, as with MIDI 1.0)

### 127.6.24 kMIDIPropertyMaxTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

### 127.6.25 kMIDIPropertyModel as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.
Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

### 127.6.26 kMIDIPropertyName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Example:**

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as CFStringMBS = source.StringProperty(source.kMIDIPropertyName)
MsgBox "Name: "+s.str
```

**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, string
Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.
A setup editor may allow the user to set the names of both driver-owned and external devices.

### 127.6.27 kMIDIPropertyNameConfiguration as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, CFDictionary

This specifies the device's current patch, note and control name values using the MIDINameDocument XML format. This specification requires the use of higher-level, OS-specific constructs outside of the specification, to fully define the current names for a device.

The MIDINameConfiguration property is implementated as a CFDictionary:

key "master" maps to a CFDataRef containing an AliasHandle referring to the device's master name document.

key "banks" maps to a CFDictionaryRef. This dictionary's keys are CFStringRef names of patchBank elements in the master document, and its values are each a CFDictionaryRef: key "file" maps to a CFDataRef containing an AliasHandle to a document containing patches that override those in the master document, and key "patchNameList" maps to a CFStringRef which is the name of the patchNameList element in the overriding document.

key "currentModes" maps to a 16-element CFArrayRef, each element of which is a CFStringRef of the name of the current mode for each of the 16 MIDI channels.

Clients setting this property must take particular care to preserve dictionary values other than the ones they are interested in changing, and to properly structure the dictionary.

New for CoreMIDI 1.3.

### 127.6.28 kMIDIPropertyOffline as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = device is offline (is temporarily absent), 0 = present
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

### 127.6.29 kMIDIPropertyPanDisruptsStereo as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.30 kMIDIPropertyPrivate as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = endpoint is private, hidden from other clients.
May be set on a device or entity, but they will still appear in the API; only affects whether the owned endpoints are hidden.

New for CoreMIDI 1.3.

### 127.6.31 kMIDIPropertyReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object receives, (1«0)=ch 1...(1«15)=ch 16.
Drivers may set this property on their entities or endpoints.
Setup editors may allow the user to set this property on external endpoints.
Virtual destination may set this property on their endpoints.

### 127.6.32 kMIDIPropertyReceivesBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.33 kMIDIPropertyReceivesBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.34 kMIDIPropertyReceivesClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.35 kMIDIPropertyReceivesMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.36 kMIDIPropertyReceivesNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.37 kMIDIPropertyReceivesProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.38 kMIDIPropertySingleRealtimeEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device property, integer

Some MIDI interfaces cannot route MIDI realtime messages to individual outputs; they are broadcast. On such devices the inverse is usually also true – incoming realtime messages cannot be identified as originating from any particular source.

When this property is set on a driver device, it signifies the 0-based index of the entity on which incoming realtime messages from the device will appear to have originated from.

New for CoreMIDI 1.3.

### 127.6.39 kMIDIPropertySupportsGeneralMIDI as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.40 kMIDIPropertySupportsMMC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.41 kMIDIPropertySupportsShowControl as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

device/entity property, integer (0/1). Indicates whether the device implements the MIDI.
New for CoreMIDI 1.5.

### 127.6.42 kMIDIPropertyTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object transmits, (1«0)=ch 1...(1«15)=ch 16
New for CoreMIDI 1.3.

### 127.6.43 kMIDIPropertyTransmitsBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.44 kMIDIPropertyTransmitsBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.45 kMIDIPropertyTransmitsClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.46 kMIDIPropertyTransmitsMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.47 kMIDIPropertyTransmitsNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.48 kMIDIPropertyTransmitsProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

### 127.6.49 kMIDIPropertyUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Example:**

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)
```

**Notes:**

Only available after you called the Init Method.
devices, entities, endpoints all have unique ID's, integer
The system assigns unique ID's to all objects. Creators of virtual endpoints may set this property on their endpoints, though doing so may fail if the chosen ID is not unique.

### 127.6.50 kMIDIPropertyUserPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** One of the properties for MIDI on Mac OS X.
**Notes:**

Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current user patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

### 127.6.51 Properties(deep as boolean) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Get all of an object's properties.
**Notes:**

Deep parameter: true if the object's child objects are to be included (e.g. a device's entities, or an entity's endpoints).
Properties which an object inherits from its owning object (if any) are not included.

New for CoreMIDI 1.1.

Returns nil on any error.
Lasterror is set.

### 127.6.52 RemoveProperty(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Remove an object's property.
**Notes:** Lasterror is set.

### 127.6.53 Properties

### 127.6.54 DisplayName as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

**Function:** Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.
**Notes:**

For objects other than endpoints, the display name is the same as the name.
(Read only property)

### 127.6.55 Handle as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The handle of this object.
**Notes:** (Read and Write property)

### 127.6.56 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The last error code reported.
**Notes:**

0 if the function was successfull.
-1 if the function is not available or the RB parameters were bad. (e.g. nil)
else a Mac OS error code.

Some Midi specific error codes:

(Read and Write property)

| | | |
|---|---|---|
| kMIDIInvalidClient | -10830 | |
| kMIDIInvalidPort | -10831 | |
| kMIDIWrongEndpointType | -10832 | want source, got destination, or vice versa |
| kMIDINoConnection | -10833 | attempt to close a non-existant connection |
| kMIDIUnknownEndpoint | -10834 | |
| kMIDIUnknownProperty | -10835 | |
| kMIDIWrongPropertyType | -10836 | |
| kMIDINoCurrentSetup | -10837 | there is no current setup, or it contains no devices |
| kMIDIMessageSendErr | -10838 | communication with server failed |
| kMIDIServerStartErr | -10839 | couldn't start the server |
| kMIDISetupFormatErr | -10840 | unparseable saved state |
| kMIDIWrongThread | -10841 | driver is calling non I/O function in server from a thread other than server's main one: |
| kMIDIObjectNotFound | -10842 | |
| kMIDIIDNotUnique | -10843 | |

### 127.6.57 Manufacturer as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

**Function:** Drivers should set this property on their devices.
**Notes:**

Setup editors may allow the user to set this property on external devices.
(Read only property)

### 127.6.58 Model as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

**Function:** The model name.
**Notes:** (Read only property)

### 127.6.59 Name as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

**Function:** The item's name.
**Notes:**

Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.

A setup editor may allow the user to set the names of both driver-owned and external devices.

(Read only property)

### 127.6.60 BinaryProperty(name as CFStringMBS) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Set or Get an object's data-type property.
**Notes:**

Lasterror is set.
Returns nil on any error.
(Read and Write computed property)

### 127.6.61 IntegerProperty(name as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Set or Get an object's integer-type property.
**Example:**

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)

// set it
source.IntegerProperty(source.kMIDIPropertyUniqueID) = 1234

// query again
dim t as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(t)
```

**Notes:**

Returns 0 on any error.
Lasterror is set.
(Read and Write computed property)

### 127.6.62 ObjectProperty(name as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Get or Set an object's dictionary-type property.
**Notes:**

Lasterror is set.
New for CoreMIDI 1.3.
Renamed from Property to ObjectProperty in v4.3 for Xojo 6 compatibility.
(Read and Write computed property)

### 127.6.63 StringProperty(name as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Get or Set an object's string-type property.
**Example:**

```
dim m as MidiClientMBS
dim i, n as Integer
dim e as MIDIEndpointMBS
dim d as MIDIDeviceMBS
dim s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

**Notes:**

Lasterror is set.
(Read and Write computed property)

## 127.7 class MidiPacketListMBS

### 127.7.1 class MidiPacketListMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A class to hold a list of MidiPackets.

### 127.7.2 Methods

### 127.7.3 FillList(packets() as MidiPacketMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Fills the list with the given Xojo array of MidiPackets.
**Example:**

```
Dim packs(-1) As MIDIPacketMBS

Dim pack As New MIDIPacketMBS
Dim list As New MIDIPacketListMBS
Dim data As New MemoryBlock(9)

data.Byte(0) = & hF0
data.Byte(1) = & h00
data.Byte(2) = & h20
data.Byte(3) = & h1C
data.Byte(4) = & h7F
data.Byte(5) = & h04
data.Byte(6) = & h02
data.Byte(7) = & h01
data.Byte(8) = & hF7

pack.datamemory = data
pack.timeStamp = Nil 'now

packs.append pack
If Not list.FillList(packs) Then
Break // problem
Else
// send to current port and destination
client.Send(outport, currentDest, list)
End If
```

### 127.7.4 Item(index as Integer) as MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Returns the item with the given index.

### 127.7.5 Properties

### 127.7.6 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The number of items in the list.
**Notes:** (Read and Write property)

## 127.8 class MidiPacketMBS

### 127.8.1 class MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A class for a midi packet.

### 127.8.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- MBS Plugins 10.3 Release Notes

### 127.8.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr1
- MBS Plugins 10.3 Release Notes

### 127.8.4 Methods

### 127.8.5 AbsoluteToNanoseconds(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** Converts an absolute time value to a nanoseconds time value.
**Example:**

```
dim x as UInt64 = MidiPacketMBS.CurrentTime

dim y as UInt64 = x + MidiPacketMBS.NanosecondsToAbsolute(5)

MsgBox str(x)+" + 5 ns = "+str(Y)
```

### 127.8.6 CurrentTime as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** Returns the current time of the computer as an absolute time value.
**Example:**

```
dim u as uint64 = MidiPacketMBS.CurrentTime
dim n as uint64 = MidiPacketMBS.AbsoluteToNanoseconds(u)
dim x as Double = n / 1000000000.0

MsgBox str(u)+" "+str(n)+" "+str(x)

dim d as new date
d.Minute = 0
d.Hour = 0
d.Second = 0
d.TotalSeconds = d.TotalSeconds + x

MsgBox d.ShortTime // how long the mac is running.
```

**Notes:** While some Macs do have host clock time being in nanoseconds, this is not guaranteed. So use the function AbsoluteToNanoseconds to convert to nanoseconds.

### 127.8.7 NanosecondsToAbsolute(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

**Function:** Converts a nanoseconds value to an absolute time.
**Example:**

```
dim x as UInt64 = MidiPacketMBS.CurrentTime

dim y as UInt64 = MidiPacketMBS.NanosecondsToAbsolute(x)

dim seconds as uint64 = y / 1000000000
dim hours as uint64 = seconds / 3600
seconds = seconds - hours*3600
dim minutes as uint64 = seconds / 60
seconds = seconds - minutes*60

// shows how long the Mac is running:
MsgBox str(hours)+" hours, "+str(minutes)+" minutes, "+str(seconds)+" seconds"
```

### 127.8.8 Properties

### 127.8.9 DataMemory as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The data of the packet as a memoryblock.
**Notes:**

Setting this value will automatically fill the DataString property, so both are in sync.
(Read and Write property)

### 127.8.10 DataString as String

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The data of the packet as a string.
**Notes:**

Setting this value will automatically fill the DataMemory property, so both are in sync.

This will not work:
DataString="90 5A 7C"

But this is better:
DataString=chrb(& h90)+chrb(& h5A)+chrb(& h7C)

or with the DataMemory property:
m=newmemoryblock(3)
m.byte(0)=& h90
m.byte(1)=& h5A
m.byte(2)=& h7C
DataMemory=m
(Read and Write property)

### 127.8.11 TimeStamp as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The timestamp of the packet.
**Example:**

```
dim pack as MIDIPacketMBS
dim m as memoryblock

m=newmemoryblock(8)
m.Long(0) = 2345678 // some time value
m.Long(4) = 3456789
pack = new MIDIPacketMBS
pack.TimeStamp = m
```

**Deprecated:** This item is deprecated and should no longer be used. You can use TimeStampValue instead.
**Notes:**

A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
And using nil for the memoryblock represents a value of zero (=now).
(Read and Write property)

### 127.8.12 TimeStampValue as UInt64

MBS MacCF Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

**Function:** The timestamp of the packet.
**Notes:**

A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
(Read and Write property)

## 127.9 class MidiPlaybackMBS

### 127.9.1 class MidiPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** A class to do Midi playback on Mac OS X.
**Notes:**

With sandbox, you need the com.apple.security.temporary-exception.audio-unit-host entitlement as of September 2013.
see
https://developer.apple.com/library/mac/qa/qa1483/_index.html

See also AVMIDIPlayerMBS class for playing midi files.

### 127.9.2 Blog Entries

- MacOSX plugin for iOS
- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 13.4pr4
- Sandbox and playing Midi
- MBS Real Studio Plugins, version 11.2pr2
- MBS REALbasic plug-ins version 9.4

### 127.9.3 Blog Entries

- MacOSX plugin for iOS
- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 13.4pr4
- Sandbox and playing Midi
- MBS Real Studio Plugins, version 11.2pr2
- MBS REALbasic plug-ins version 9.4

### 127.9.4 Methods

### 127.9.5 Callback as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

**Function:** Needed for the MidiPortMBS class to know which function to call
**Example:**

```
dim p as MidiPlaybackMBS
dim m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

**Notes:**

Return the address of the callback method used to process Midi data.
The method is to be used together with the SetCallback method in the MidiPortMBS class.

### 127.9.6 Constructor(UsesInternalReverb as boolean=false, AutoStart as boolean=true)

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** Initializes the midi playback.
**Notes:**

After calling the constructor the Inited flag is true on success.
If AutoStart is false the midi playback is not started.

### 127.9.7 CPULoad as single

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** The CPU load of the graph.
**Notes:**

Returns a short-term running average of the current CPU load of the graph.

### 127.9.8 InstrumentCount as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** The number of instruments.

### 127.9.9 InstrumentID(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** The ID of the instrument with the given index.

### 127.9.10 InstrumentName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** The name of the instrument with the given index.
**Example:**

```
// show list of all names
dim m as new MidiPlaybackMBS

dim u as Integer = m.InstrumentCount-1
for i as Integer = 0 to u
Listbox1.AddRow m.InstrumentName(i)
next
```

**Notes:** Index from 0 to InstrumentCount-1.

### 127.9.11 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

**Function:** Whether the midi playback is running.
**Notes:** Lasterror is set.

### 127.9.12 LoadSoundBankFile(file as folderitem)

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

**Function:** Loads a sound bank file.
**Example:**

```
Sub LoadSoundFont (SoundFontName as string)
```

```
dim j as Integer
dim f as folderitem
dim e as string

//GET SOUNDFONT
f = Volume(0).Child("Library").Child("Audio").Child("Sounds").Child("Banks").Child(SoundFontName)

if f <>Nil then
//INSTALL SOUNDFONT
me.LoadSoundBankFile(f)
Window1.PopupMenu1.DeleteAllRows
for j = 0 to 127
if me.InstrumentName(j) <>"" then
Window1.PopupMenu1.addrow me.InstrumentName(j)
end if
next
Window1.PopupMenu1.ListIndex = 0
else
e = "Could not locate the SoundFont: "+ SoundFontName
e = e + " Please make sure the file is a valid soundfont file"
e = e + " and is located in the folder YourHardDrive/Library/Audio/Sounds/Banks"
e = e + " and has the extension .sf2"
MsgBox e
end if

End Sub
```

**Notes:**

This function can load files with .sf2 extension placed in the location: Library/Audio/Sounds/Banks.

Lasterror is set.

To avoid crashes on Mac OS X 10.5, the midi playback is stopped before loading is done and restarted if necessary after loading completed.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

### 127.9.13 MaxCPULoad as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** The Maximum CPU load of the graph

**Notes:** Returns the max CPU load of the graph since this call was last made or the graph was last started.

### 127.9.14 SendMidiEvent(Status as Integer, Data1 as Integer, Data2 as Integer, OffsetSampleFrame as Integer)

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** Sends midi data for playback.

### 127.9.15 Start

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

**Function:** Starts the midi playback.
**Notes:** Lasterror is set.

### 127.9.16 Stop

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

**Function:** Stops the midi playback.
**Notes:**

Lasterror is set.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

### 127.9.17 Properties

### 127.9.18 FilterNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** The internal reference for the filter graph node.
**Notes:** (Read only property)

### 127.9.19 GraphHandle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** The handle for the AUGraph.
**Notes:** (Read only property)

### 127.9.20 Inited as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** Whether the constructor was successful.
**Notes:**

This property is false if the constructor failed to initialize.
(Read only property)

### 127.9.21 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read only property)

### 127.9.22 OutputNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** The internal reference for the output graph node.
**Notes:** (Read only property)

### 127.9.23 SynthNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** The internal reference for the synth graph node.
**Notes:** (Read only property)

### 127.9.24 SynthUnitHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** The internal reference for the synth audio unit.
**Notes:** (Read only property)

### 127.9.25 InstrumentIDOnChannel(Channel as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

**Function:** Which instrument is playing on which channel.
**Notes:** (Read and Write computed property)

### 127.9.26 ReverbVolume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** The reverb volume.
**Notes:**

The value range is -120 to 40 dB.
(Read and Write computed property)

### 127.9.27 StreamFromDisk as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** Whether we are streaming from disk.
**Notes:**

Currently setting this value can crash the application.
(Read and Write computed property)

### 127.9.28 Tuning as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** The tuning setting.
**Notes:**

Value is in cents from -1200 to 1200.
(Read and Write computed property)

### 127.9.29 UsesInternalReverb as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** One of the audio unit properties.
**Example:**

```
dim m as new MidiPlaybackMBS

MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
m.UsesInternalReverb=true
MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
```

**Notes:**

Lasterror is set.
(Read and Write computed property)

### 127.9.30 Volume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

**Function:** The volume.
**Notes:**

The value is in dB from -120 to 40.
(Read and Write computed property)

## 127.10 class MidiPortMBS

### 127.10.1 class MidiPortMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** A class for a MIDI port.
**Notes:**

A MIDIPortMBS, which may be an input port or output port, is an object through which a client may communicate with any number of MIDI sources or destinations.
Subclass of the MidiObjectMBS class.

### 127.10.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

### 127.10.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

### 127.10.4 Methods

### 127.10.5 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.10.6 ConnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Establish a connection from a source to a client's input port.
**Notes:** Lasterror is set.

### 127.10.7 DisconnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Close a previously-established source-to-input port connection.
**Notes:** Lasterror is set.

### 127.10.8 SetCallback(callback as Integer, reference as object)

MBS MacCF Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

**Function:** Connects the MidiPort to send data to given MidiPlayback reference.
**Example:**

```
dim p as MidiPlaybackMBS
dim m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

**Notes:**

The method is to be used together with the Callback function in the MidiPlaybackMBS class.
Read event is still being called if needed.

You can call again with 0 as callback to clear it.

### 127.10.9 Events

### 127.10.10 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

**Function:** Called when data arrives at this port.
**Notes:**

If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

## 127.11 class MIDISysexSendRequestMBS

### 127.11.1 class MIDISysexSendRequestMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** An asynchronous request to send a single system-exclusive MIDI event to a MIDI destination.
**Example:**

```
// build a data package
Dim data As New MemoryBlock(9)

data.Byte(0) = & hF0
data.Byte(1) = & h00
data.Byte(2) = & h20
data.Byte(3) = & h1C
data.Byte(4) = & h7F
data.Byte(5) = & h04
data.Byte(6) = & h02
data.Byte(7) = & h01
data.Byte(8) = & hF7

// make new secon request
Dim sendRequest As New MIDISysexSendRequestMBS
sendRequest.Data = data
sendRequest.Destination = currentDest
sendRequest.Send

// store reference for later as send is asynchron
Window1.sendRequest = sendRequest
```

### 127.11.2 Methods

### 127.11.3 close

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.11.4 Send

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** Send a single system-exclusive event, asynchronously.
**Notes:** Keep a reference to this object until the call Completes.

### 127.11.5 Properties

### 127.11.6 BytesToSend as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** Initially set when sending starts to the number of bytes to be sent.
**Notes:**

MIDISendSysex will decrement this counter as bytes are sent.
(Read and Write property)

### 127.11.7 Data as Memoryblock

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The memoryblock with the data you want to send.
**Notes:** (Read and Write property)

### 127.11.8 Destination as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The endpoint to which the event is to be sent.
**Notes:** (Read and Write property)

### 127.11.9 IsComplete as boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The client may set this to true at any time to abort transmission.
**Notes:**

The implementation sets this to true when all bytes have been sent.
Renamed from Complete to IsComplete in v4.3 for Xojo 6 compatibility.

(Read and Write property)

### 127.11.10 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

0 for success.
(Read and Write property)

### 127.11.11 Length as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

**Function:** The length of the memoryblock.
**Notes:**

If 0, the memoryblock.size property is taken, but not all memoryblocks know their size.
(Read and Write property)

### 127.11.12 Events

### 127.11.13 Complete

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

**Function:** An event to notify the client of the completion of a call to MIDISendSysex.

# 127.12 class MidiThruConnectionControlTransformMBS

## 127.12.1 class MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A class for a control transformation midi connection.
**Notes:**

Note: must order control transforms appropriately – first, filter out and remap. Further transforms can follow, and will apply to the remapped control number (if any).
N.B. All transformations are done using 14-bit control values, so, when doing an add/min/max transform on a 7-bit value, the parameter must be a 14-bit value, e.g. to add n, param must be n «7.

## 127.12.2 Properties

## 127.12.3 ControlNumber as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The control number.
**Notes:** (Read and Write property)

## 127.12.4 ControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The control type.
**Notes:**

implementation note: some code tests bits of these values

constants:

| | | |
|---|---|---|
| kMIDIControlType_7Bit | 0 | control numbers may be 0-127 |
| kMIDIControlType_14Bit | 1 | control numbers may be 0-31 |
| kMIDIControlType_7BitRPN | 2 | control numbers may be 0-16383 |
| kMIDIControlType_14BitRPN | 3 | |
| kMIDIControlType_7BitNRPN | 4 | |
| kMIDIControlType_14BitNRPN | 5 | |

(Read and Write property)

### 127.12.5 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The parameter for the transformation.
**Notes:** (Read and Write property)

### 127.12.6 RemappedControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The Remapped Control Type.
**Notes:**

Only used when transform is kMIDITransform_MapControl
(Read and Write property)

### 127.12.7 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The transformation code to apply.
**Notes:**

Some constants:

| | | |
|---|---|---|
| kMIDITransform_None | 0 | no param |
| kMIDITransform_FilterOut | 1 | filter out event type, no param |
| kMIDITransform_MapControl | 2 | param is remapped control number |
| kMIDITransform_Add | 8 | param is value to add |
| kMIDITransform_Scale | 9 | param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb |
| kMIDITransform_MinValue | 10 | |
| kMIDITransform_MaxValue | 11 | |
| kMIDITransform_MapValue | 12 | param is index of map in connection's map array |

(Read and Write property)

## 127.13 class MidiThruConnectionEndpointMBS

### 127.13.1 class MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A class for an endpoint specifications.
**Notes:**

When filling one of these out, clients can leave uniqueID 0 if the endpoint exists.
When when one is provided back to the client, the endpoint may be null if it doesn't exist, but the uniqueID will always be non-zero.

### 127.13.2 Methods

### 127.13.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.13.4 Properties

### 127.13.5 Endpoint as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The endpoint to use for a connection.
**Notes:** (Read and Write property)

### 127.13.6 UniqueID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** An unique ID for an endpoint.
**Notes:** (Read and Write property)

## 127.14 class MidiThruConnectionMBS

### 127.14.1 class MidiThruConnectionMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A class for a midi connection.
**Notes:**

This class defines functions to create MIDI play-through connections between the MIDI sources and destinations. These connections may be persistent or transitory, owned by a client.

By using connections instead of doing MIDI Thru operations themselves, the overhead of moving MIDI messages between the server and the client for thru-ing is reduced.

The aim of these functions is to permit as flexible a set of transformations as possible while keeping the API and data structures relatively simple.

### 127.14.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr4
- MBS Xojo Plugins, version 19.3pr5

### 127.14.4 Methods

### 127.14.5 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.14.6 Create(PersistentOwnerID as CFStringMBS, params as MidiThruConnectionParamsMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Creates a new connection.
**Notes:**

If inPersistentOwnerID is nil, then the connection is marked as owned by the client and will be automatically disposed with the client.
If it is non-nil, then it should be a unique identifier, e.g. "com.mycompany.MyCoolProgram".

### 127.14.7 Properties

### 127.14.8 Handle as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The handle for the Connection.
**Notes:** (Read and Write property)

### 127.14.9 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The last error code reported.
**Notes:** (Read and Write property)

### 127.14.10 Parameter as MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The parameters for the connection.
**Notes:**

Lasterror is set.
(Read and Write computed property)

## 127.15 class MidiThruConnectionParamsMBS

### 127.15.1 class MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The class for the parameters of a midi connection.

### 127.15.2 Blog Entries

### 127.15.4 Methods

### 127.15.5 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.15.6 Properties

### 127.15.7 ChannelPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.8 ControlTransformsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The number of control transformations used.
**Notes:**

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the ControlTransform array.
(Read and Write property)

### 127.15.9 DestinationsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The number of destinations.
**Notes:**

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the destination array.
(Read and Write property)

### 127.15.10 FilterOutAllControls as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Unknown.
**Notes:** (Read and Write property)

### 127.15.11 FilterOutBeatClock as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Unknown.
**Notes:** (Read and Write property)

### 127.15.12 FilterOutMTC as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Unknown.
**Notes:** (Read and Write property)

### 127.15.13 FilterOutSysEx as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Unknown.
**Notes:** (Read and Write property)

### 127.15.14 FilterOutTuneRequest as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** Unknown.
**Notes:** (Read and Write property)

### 127.15.15 HighNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The high note value.
**Notes:**

Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

### 127.15.16 HighVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

**Function:** Higher velocity limit.
**Notes:**

Note events with a velocity greater than this, if it is not 0, are filtered out.
(Read and Write property)

### 127.15.17 KeyPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.18 LowNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The low note value.
**Notes:**

Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

### 127.15.19 LowVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

**Function:** Lower velocity limit.
**Notes:**

Note events with a velocity less than this value are filtered out.
(Read and Write property)

### 127.15.20 MapsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The number of mappings used.
**Notes:**

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the Map array.
(Read and Write property)

### 127.15.21 NoteNumber as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.22 PitchBend as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.23 ProgramChange as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.24 SourcesCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The number of sources used.
**Notes:**

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the Source array.
(Read and Write property)

### 127.15.25 Velocity as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** One of the transformations.
**Notes:** (Read and Write property)

### 127.15.26 ChannelMap(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The array with the value mappings.
**Notes:**

Map each of the source 16 MIDI channels to channel 0-15 (1-16) or 0xFF to filter out.
(Read and Write computed property)

### 127.15.27 ControlTransform(index as Integer) as MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The array of control transformations.
**Notes:** (Read and Write computed property)

### 127.15.28 Destination(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The array of destination endpoints.
**Notes:** (Read and Write computed property)

### 127.15.29 Map(index as Integer) as MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The list of mappings for this midi connection.
**Notes:**

Index is from 0 to 15.
(if you need more, send me an email and I upper the limit.)
(Read and Write computed property)

### 127.15.30 Source(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The array of source endpoints.
**Notes:** (Read and Write computed property)

## 127.16 class MidiThruConnectionTransformMBS

### 127.16.1 class MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The class for a Midi connection transformation.

### 127.16.2 Properties

### 127.16.3 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The parameter of the transformation.
**Notes:** (Read and Write property)

### 127.16.4 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The transformation code.
**Notes:**

Some constants:

| | | |
|---|---|---|
| kMIDITransform_None | 0 | no param |
| kMIDITransform_FilterOut | 1 | filter out event type, no param |
| kMIDITransform_MapControl | 2 | param is remapped control number |
| kMIDITransform_Add | 8 | param is value to add |
| kMIDITransform_Scale | 9 | param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb |
| kMIDITransform_MinValue | 10 | |
| kMIDITransform_MaxValue | 11 | |
| kMIDITransform_MapValue | 12 | param is index of map in connection's map array |

(Read and Write property)

# 127.17 class MidiThruConnectionValueMapMBS

## 127.17.1 class MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** A value map for a Midi connection.
**Notes:** This is an array to map Midi values from 0 to 127 to new values from 0 to 127.

## 127.17.2 Properties

## 127.17.3 Value(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

**Function:** The value Map.
**Notes:**

Index is from 0 to 127.
Use only values from 0 to 127.
(Read and Write computed property)

## 127.18 class PortMidiDeviceInfoMBS

### 127.18.1 class PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for device information.

### 127.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr5

### 127.18.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr5

### 127.18.4 Properties

### 127.18.5 HasInput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** True if input is available.
**Notes:** (Read only property)

### 127.18.6 HasOutput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** True if output is available.
**Notes:** (Read only property)

### 127.18.7 InterfaceName as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Underlying MIDI API.
**Notes:**

e.g. MMSystem, DirectX or CoreMidi.
(Read only property)

### 127.18.8 Name as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The device name.
**Notes:**

e.g. USB MidiSport 1x1
(Read only property)

## 127.19 class PortMidiEventMBS

### 127.19.1 class PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a piece of midi data.
**Notes:**

See this website for a list of Midi status codes:
https://www.midi.org/specifications-old/item/table-2-expanded-messages-list-status-bytes

### 127.19.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr3
- MBS REALbasic Plugins, version 11.0pr14

### 127.19.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr3
- MBS REALbasic Plugins, version 11.0pr14

### 127.19.4 Methods

### 127.19.5 Set(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the value to the given data.

### 127.19.6 SetRaw(data0 as Integer, data1 as Integer, data2 as Integer, data3 as Integer)

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the raw data by setting all 4 bytes together.

### 127.19.7 Properties

### 127.19.8 CurrentEvent as PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current event played.
**Notes:**

You can use this to show current note playing.
(Read only property)

### 127.19.9 Data1 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first data value in the midi event.
**Notes:** (Read and Write property)

### 127.19.10 Data2 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The second data value in the midi event.
**Notes:** (Read and Write property)

### 127.19.11 RawData0 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The first byte of the raw data in this event.
**Notes:**

Same as Status property.
(Read and Write property)

### 127.19.12 RawData1 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The second byte of the raw data in this event.
**Notes:**

Same as Data1 property.
(Read and Write property)

### 127.19.13 RawData2 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The third byte of the raw data in this event.
**Notes:**

Same as Data2 property.
(Read and Write property)

### 127.19.14 RawData3 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The forth byte of the raw data in this event.
**Notes:** (Read and Write property)

### 127.19.15 RawMessage as Integer

MBS Audio Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The raw content of the event as a integer.
**Notes:**

Take care about platform differences like the byte order.
(Read and Write property)

### 127.19.16 Status as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The status value.
**Notes:** (Read and Write property)

### 127.19.17 When as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The time value of this midi data.
**Notes:**

Should be milliseconds.
(Read and Write property)

## 127.20 class PortMidiMBS

### 127.20.1 class PortMidiMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The PortMidi library wrapped for use in Xojo.
**Notes:**

Error codes:

```
const pmNoError              = 0
const pmHostError            = -10000
const pmInvalidDeviceId      = -9999
const pmInsufficientMemory   = -9998
const pmBufferTooSmall       = -9997
const pmBufferOverflow       = -9996
const pmBadPtr               = -9995
const pmBadData              = -9994
const pmInternalError        = -9993
const pmBufferMaxSize        = -9992
```

Requires libasound.so.2 on Linux to be installed.

### 127.20.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr5
- MBS Xojo / Real Studio Plugins, version 16.3pr4

### 127.20.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr5
- MBS Xojo / Real Studio Plugins, version 16.3pr4

### 127.20.4 Methods

### 127.20.5 CountDevices as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Counts the devices.
**Example:**

```
dim pa as new PortMidiMBS

Dim u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
dim d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

**Notes:** Returns 0 on any error.

### 127.20.6 DefaultInputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the default device ID or pmNoDevice (-1) if there are no devices.
**Notes:**

On the PC, the user can specify a default device by setting an environment variable. For example, to use device # 1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".

To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

### 127.20.7 DefaultOutputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the default device ID or pmNoDevice (-1) if there are no devices.
**Notes:**

On the PC, the user can specify a default device by setting an environment variable. For example, to use device # 1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".

To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

### 127.20.8 DeviceInfo(DeviceID as Integer) as PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns information about a certain device.
**Example:**

```
dim pa as new PortMidiMBS

Dim u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
dim d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

**Notes:** Returns nil on any error.

### 127.20.9 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error text for the given error code.
**Notes:** Returns "" on any error.

### 127.20.10 Initialize as Integer

MBS Audio Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the PortMidi functions.
**Notes:**

You call this manually to trigger initialization now.
Or you just let the plugin do it automatically when you call one of the portmidi functions.
Returns the error code. (0 = okay)

### 127.20.11 ReInitialize as Integer

MBS Audio Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Shuts down PortMidi and initializes it again.
**Notes:**

As PortMidi does not recognize the attachment of new MIdi devices, you can only reinitialize.

Returns a PortMidi error code.

### 127.20.12 Constants

### 127.20.13 pmBadData = -9994

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.
**Notes:** illegal midi data, e.g. missing EOX

### 127.20.14 pmBadPtr = -9995

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.15 pmBufferMaxSize = -9992

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.
**Notes:** buffer is already as large as it can be.

### 127.20.16 pmBufferOverflow = -9996

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.17 pmBufferTooSmall = -9997

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.18 pmHostError = -10000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.19 pmInsufficientMemory = -9998

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.20 pmInternalError = -9993

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.21 pmInvalidDeviceId = -9999

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.
**Notes:** out of range or output device when input is requested or input device when output is requested or device is already opened.

### 127.20.22 pmNoDevice = -1

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

### 127.20.23 pmNoError = 0

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi errors.

## 127.21 class PortMidiStreamMBS

### 127.21.1 class PortMidiStreamMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Xojo class to represent a PortMidi stream.
**Notes:**

A single PortMidiStream is a descriptor for an open MIDI device.

See also macOS specific classes AVMIDIPlayerMBS, MidiPlaybackMBS and MidiClientMBS.

- MBS Xojo / Real Studio Plugins, version 17.0pr1

### 127.21.5 Xojo Developer Magazine

- 15.2, page 10: News

### 127.21.6 Methods

### 127.21.7 Abort as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Terminates outgoing messages immediately.
**Notes:**

The caller should immediately close the output port; this call may result in transmission of a partial midi message. There is no abort for Midi input because the user can simply ignore messages in the buffer and close an input device at any time.
Returns an error code.

### 127.21.8 Close

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 127.21.9 currentTimeStamp as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries current time stamp.

### 127.21.10 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The error message for this error number.

### 127.21.11 HostError as string

MBS Audio Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries host error string.
**Example:**

```
dim s as new PortMidiStreamMBS
// do something that causes an error
MsgBox "HostError: "+s.HostError
```

**Notes:** Clears error.

### 127.21.12 OpenInput(DeviceID as Integer, Buffersize as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a device for reading.
**Notes:**

DeviceID is the id of the device used for input.

For input, the buffersize specifies the number of input events to be buffered waiting to be read using Pm_Read().
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

return value:
Upon success OpenInput returns PmNoError.
If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

### 127.21.13 OpenOutput(DeviceID as Integer, Buffersize as Integer, Latency as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a device for writing.
**Notes:**

DeviceID is the id of the device used for input.

For output, buffersize specifies the number of output events to be buffered waiting for output.
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

Latency is the delay in milliseconds applied to timestamps to determine when the output should actually occur. (If latency is <0, 0 is assumed.)
If latency is zero, timestamps are ignored and all output is delivered immediately. If latency is greater than zero, output is delayed until the message timestamp plus the latency. (NOTE: time is measured relative to the time source indicated by time_proc. Timestamps are absolute, not relative delays or offsets.) In some cases, PortMidi can obtain better timing than your application by passing timestamps along to the device driver or hardware. Latency may also help you to synchronize midi data to audio data by matching midi latency to the audio buffer latency.
Due to the may timers work on Windows, the latency is limited there.

return value:

Upon success OpenInput returns PmNoError.
If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

### 127.21.14 Poll as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tests whether input is available,
**Notes:** Returns 1 on success and 0 on failure.

### 127.21.15 Read(byref data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads midi data.
**Notes:**

Returns the number of read items.
(0 for error and 1 for success)

Read retrieves midi data into a buffer, and returns the number of events read. Result is a non-negative number unless an error occurs, in which case a PmError value will be returned.

Buffer Overflow

The problem: if an input overflow occurs, data will be lost, ultimately because there is no flow control all the way back to the data source. When data is lost, the receiver should be notified and some sort of graceful recovery should take place, e.g. you shouldn't resume receiving in the middle of a long sysex message.

With a lock-free fifo, which is pretty much what we're stuck with to enable portability to the Mac, it's tricky for the producer and consumer to synchronously reset the buffer and resume normal operation.

Solution: the buffer managed by PortMidi will be flushed when an overflow occurs. The consumer (Read()) gets an error message (pmBufferOverflow) and ordinary processing resumes as soon as a new message arrives. The remainder of a partial sysex message is not considered to be a "new message" and will be flushed as well.

### 127.21.16 SetChannelMask(mask as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Filters incoming messages based on channel.
**Example:**

```
dim s as PortMidiStreamMBS // your midi stream

call s.SetChannelMask(1+4) // Channel 1 and 3.
```

**Notes:**

The mask is a 16-bit bitfield corresponding to appropriate channels
All channels are allowed by default.
Returns an error code.

### 127.21.17 SetFilter(filters as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** SetFilter() sets filters on an open input stream to drop selected input types.
**Notes:**

By default, only active sensing messages are filtered.
To prohibit, say, active sensing and sysex messages, call SetFilter(FilterActive + FilterSysEx);

Filtering is useful when midi routing or midi thru functionality is being provided by the user application.
For example, you may want to exclude timing messages (clock, MTC, start/stop/continue), while allowing note-related messages to pass.
Or you may be using a sequencer or drum-machine for MIDI clock information but want to exclude any notes it may play.

Returns an error code.

### 127.21.18 Write(data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes midi data from a buffer.
**Notes:**

This may contain:
- short messages or
- sysex messages that are converted into a sequence of PortMidiStreamMBS objects, e.g. sending data from a file or forwarding them from midi input.

Use WriteSysEx() to write a sysex message stored as a contiguous array of bytes.

Sysex data may contain embedded real-time messages.
Returns an error code.

### 127.21.19 WriteShort(When as Integer, message as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes a timestamped non-system-exclusive midi message.
**Notes:** Messages are delivered in order as received, and timestamps must be non-decreasing. (But timestamps are ignored if the stream was opened with latency = 0.)

### 127.21.20 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes a timestamped system-exclusive midi message.
**Notes:**

The data is taken from the memoryblock at the given offset.
The message must be 0 terminated.

This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 127.21.21 WriteSysEx(When as Integer, message as string) as Integer 20769

### 127.21.21 WriteSysEx(When as Integer, message as string) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes a timestamped system-exclusive midi message.
**Notes:** This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 127.21.20 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer 20769

### 127.21.22 Properties

### 127.21.23 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The channel mask used.
**Notes:**

Use SetChannelMask to change it.
(Read only property)

### 127.21.24 DeviceID as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The device ID.
**Notes:**

The ID of the device the stream is connected to.
(Read only property)

### 127.21.25 DeviceName as String

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The device name.
**Notes:**

The name of the device the stream is connected to.
(Read only property)

### 127.21.26 Filters as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The filters setting.
**Notes:**

Use SetFilters to change it.
(Read only property)

### 127.21.27 Constants

### 127.21.28 FilterActive = & h4000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter active sensing messages (& hFE)

### 127.21.29 FilterAftertouch = & h6000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter both channel and poly aftertouch

### 127.21.30 FilterChannelAftertouch = & h20000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter channel aftertouch (most midi controllers use this) (& hD0-& hDF)

### 127.21.31 FilterClock = & h1D00

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter clock messages (CLOCK & hF8, START & hFA, STOP & hFC, and CONTINUE & hFB)

### 127.21.32 FilterControl = & h8000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Control Changes (CC's) (& hB0-& hBF)

### 127.21.33 FilterFD = & h2000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter undefined FD messages

### 127.21.34 FilterMTC = 2

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** MIDI Time Code (& hF1)

### 127.21.35 FilterNote = & h3000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter note-on and note-off (& h90-& h9F and & h80-& h8F

### 127.21.36 FilterPitchBend = & h40000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Pitch Bender (& hE0-& hEF)

### 127.21.37 FilterPlay = & h400

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter play messages (start & hFA, stop & hFC, continue & hFB)

### 127.21.38 FilterPolyAftertouch = & h4000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** per-note aftertouch (& hA0-& hAF)

### 127.21.39 FilterProgram = & h10000000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Program changes (& hC0-& hCF)

### 127.21.40 FilterRealTime = & hFF01

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter all real-time messages

### 127.21.41 FilterReset = & h8000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter reset messages (& hFF)

### 127.21.42 FilterSongPosition = 4

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Song Position (& hF2)

### 127.21.43 FilterSongSelect = 8

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Song Select (& hF3)

### 127.21.44 FilterSysEx = 1

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter system exclusive messages (& hF0)

### 127.21.45 FilterSystemCommon = & h4E

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** All System Common messages (mtc, song position, song select, tune request)

### 127.21.46 FilterTick = & h200

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter tick messages (& hF9)

### 127.21.47 FilterTune = & h40

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** Tuning request (& hF6)

### 127.21.48 FilterUndefined = & h2000

MBS Audio Plugin, Plugin Version: 9.4.

**Function:** One of the PortMidi filter constants.
**Notes:** filter undefined real-time messages

# 127.22 class WindowsMidiInputInfoMBS

## 127.22.1 class WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** A class for information about a certain Midi Device.

## 127.22.2 Properties

## 127.22.3 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Version number of the device driver for the MIDI input device.
**Notes:**

The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

## 127.22.4 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Some flags.
**Notes:**

Currently unused in Windows XP.
(Read only property)

## 127.22.5 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Manufacturer identifier of the device driver for the MIDI input device.
**Notes:** (Read only property)

## 127.22.6 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Product name.
**Notes:**

Currently an ANSI string.
(Read only property)

### 127.22.7 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Product identifier of the MIDI input device.
**Notes:** (Read only property)

# 127.23 class WindowsMidiInputMBS

## 127.23.1 class WindowsMidiInputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** A class to represent an open Midi Input device in Xojo.
**Notes:** Subclass of the WindowsMidiMBS class.

## 127.23.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr2
- MBS Real Studio Plugins, version 13.1pr9

## 127.23.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr2
- MBS Real Studio Plugins, version 13.1pr9

## 127.23.4 Methods

## 127.23.5 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Closes the device.
**Notes:**

First stops recording, second resets midi output device and third Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

## 127.23.6 Idle

MBS Audio Plugin, Plugin Version: 9.7, Platform: Windows, Targets: All.

**Function:** Processes events.
**Notes:**

Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

same as WindowsMidiMBS.Idle

### 127.23.7 InputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Translates an error number into a human readable text.
**Notes:**

Returns "" on unknown errros.
String returned has Windows ANSI text encoding.

### 127.23.8 Open(DeviceID as Integer, BufferSize as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Opens a Midi device.
**Notes:**

DeviceID is from 0 to NumberOfMidiInputDevices-1.
Buffersize is the maximum size to allocate for each SysEx receive buffer.
Minimum is 256 bytes. Windows does not handle SysEx messages bigger than 64K.
Lasterror is set.
On success the handle property is non zero.

### 127.23.9 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Resets the device.
**Notes:** Lasterror is set.

### 127.23.10 Start

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Starts listening for events.
**Notes:**

Lasterror is set.
Please do not call from Open event as that's too early.

### 127.23.11 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Stops recording.
**Notes:**

Lasterror is set.
You should not need this and just call close or let the object die.

### 127.23.12 Events

### 127.23.13 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** An event called whenever the output device is closed.
**Notes:** Called when you call close.

### 127.23.14 DeviceData(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** A simple Midi message has been received.
**Notes:**

Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

### 127.23.15 DeviceError(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** A bad Midi message has been received.
**Notes:**

Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

### 127.23.16 DeviceLongData(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** SysEx data was received.
**Notes:**

If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

### 127.23.17 DeviceLongError(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** Bad SysEx data was received.
**Notes:**

If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

### 127.23.18 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** An event called whenever the output device is opened.
**Notes:**

Called when you call open.
Please do not call Start from Open event as that's too early.

# 127.24 class WindowsMidiMBS

## 127.24.1 class WindowsMidiMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Windows Midi base class.
**Example:**

```
dim midi as WindowsMidiMBS // your midi object

Sub Open()
dim i as WindowsMidiInputInfoMBS
dim o as WindowsMidiOutputInfoMBS
dim c,n as Integer

midi=new WindowsMidiMBS

c=midi.NumberOfMidiInputDevices-1

for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)

next

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next

End Sub
```

**Notes:** See also PortMidiMBS class for cross platform Midi handling.

### 127.24.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

### 127.24.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

### 127.24.4 Methods

### 127.24.5 Connect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The Connect function connects a MIDI input device to a MIDI thru or output device, or connects a MIDI thru device to a MIDI output device.
**Notes:**

self must be a MIDI input device or a MIDI thru device.
output must be the MIDI output or thru device.

After calling this function, the MIDI input device receives event data in an DeviceData event whenever a message with the same event data is sent to the output device driver.

A thru driver is a special form of MIDI output driver. The system will allow only one MIDI output device to be connected to a MIDI input device, but multiple MIDI output devices can be connected to a MIDI thru device. Whenever the given MIDI input device receives event data in an DeviceData event, a message with the same event data is sent to the given output device driver (or through the thru driver to the output drivers).

Lasterror is set.

### 127.24.6 DataLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Number of data blocks lost.
**Notes:**

The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

### 127.24.7 Disconnect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The Disconnect function disconnects a MIDI input device from a MIDI thru or output device, or disconnects a MIDI thru device from a MIDI output device.
**Notes:**

self must be a MIDI input device or a MIDI thru device.
output must be the MIDI output device to be disconnected.

MIDI input, output, and thru devices can be connected by using the Connect function. Thereafter, whenever the MIDI input device receives event data in an DeviceData event, a message with the same event data is sent to the output device driver (or through the thru driver to the output drivers).

Lasterror is set.

### 127.24.8 EventsLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Number of events lost.
**Notes:**

The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

### 127.24.9 Idle

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Processes events.
**Notes:**

Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

### 127.24.10 InputDevice(index as Integer) as WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The InputDevice function queries a specified MIDI input device to determine its capabilities.
**Example:**

```
dim midi as WindowsMidiMBS // your midi object
dim n,c as Integer
dim i as WindowsMidiInputInfoMBS

c=midi.NumberOfMidiInputDevices-1

for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)

next
```

**Notes:** Index is from 0 to NumberOfMidiInputDevices-1.

### 127.24.11 NumberOfMidiInputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Returns the number of MIDI input devices present in the system.
**Example:**

```
dim midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiInputDevices)
```

**Notes:** A return value of zero means that there are no devices.

### 127.24.12 NumberOfMidiOutputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Returns the number of MIDI output devices present in the system.
**Example:**

```
dim midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiOutputDevices)
```

**Notes:** A return value of zero means that there are no devices.

### 127.24.13 OutputDevice(index as Integer) as WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The OutputDevice function queries a specified MIDI output device to determine its capabilities.
**Example:**

```
dim midi as WindowsMidiMBS // your midi object
dim c,n as Integer
dim o as WindowsMidiOutputInfoMBS

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next
```

**Notes:** Index is from 0 to NumberOfMidiOutputDevices-1.

### 127.24.14 Properties

### 127.24.15 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The handle for this Midi input or output port.
**Notes:**

Depending on which Xojo class this is, value is a HMIDI, HMIDIIN or HMIDIOUT handle.
(Read only property)

### 127.24.16 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The last error code reported.
**Notes:**

0 is no error and -1 is parameter error from the plugin.
(Read only property)

# 127.25 class WindowsMidiOutputInfoMBS

## 127.25.1 class WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** A class for information about a certain Midi Device.

## 127.25.2 Properties

## 127.25.3 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Channels that an internal synthesizer device responds to, where the least significant bit refers to channel 0 and the most significant bit to channel 15.
**Notes:**

Port devices that transmit on all channels set this member to & hFFFF.
(Read only property)

## 127.25.4 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Version number of the device driver for the MIDI input device.
**Notes:**

The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

## 127.25.5 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Optional functionality supported by the device.
**Notes:**

It can be one or more of the following:

If a device supports volume changes, the MIDICAPS_VOLUME flag will be set for the dwSupport member. If a device supports separate volume changes on the left and right channels, both the MIDICAPS_VOLUME and the MIDICAPS_LRVOLUME flags will be set for this member.

| | | |
|---|---|---|
| MIDICAPS_CACHE | = 4 | Supports patch caching. |
| MIDICAPS_LRVOLUME | = 2 | Supports separate left and right volume control. |
| MIDICAPS_STREAM | = 8 | Provides direct support for the midiStreamOut function. |
| MIDICAPS_VOLUME | = 1 | Supports volume control. |

(Read only property)

### 127.25.6 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Manufacturer identifier of the device driver for the MIDI input device.
**Notes:** (Read only property)

### 127.25.7 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Product name.
**Notes:**

Currently an ANSI string.
(Read only property)

### 127.25.8 Notes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Maximum number of simultaneous notes that can be played by an internal synthesizer device.
**Notes:**

If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

### 127.25.9 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Product identifier of the MIDI input device.
**Notes:** (Read only property)

### 127.25.10 Technology as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Type of the MIDI output device.
**Notes:**

This value can be one of the following:

```
MOD_MIDIPORT     = 1   // output port
MOD_SYNTH        = 2   // generic internal synth
MOD_SQSYNTH      = 3   // square wave internal synth
MOD_FMSYNTH      = 4   // FM internal synth
MOD_MAPPER       = 5   // MIDI mapper
MOD_WAVETABLE    = 6   // hardware wavetable synth
MOD_SWSYNTH      = 7   // software synth
```

(Read only property)

### 127.25.11 Voices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Number of voices supported by an internal synthesizer device.
**Notes:**

If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

### 127.25.12 Volume as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Whether volume control is available.
**Notes:**

True if yes and False if no.
(Read only property)

### 127.25.13 VolumeStereo as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Whether the device can control volume on two independend channels.
**Notes:**

True if stereo, False if mono.
(Read only property)

# 127.26 class WindowsMidiOutputMBS

## 127.26.1 class WindowsMidiOutputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** A class to represent a Midi Output device.
**Notes:** Subclass of the WindowsMidiMBS class.

## 127.26.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr2

## 127.26.3 Blog Entries

- MBS Xojo Plugins, version 18.5pr2

## 127.26.4 Methods

## 127.26.5 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Closes the output device.
**Notes:**

Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

## 127.26.6 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Opens the midi device with the given index.
**Notes:**

DeviceID is from 0 to NumberOfMidiOutputDevices-1.
Lasterror is set.

### 127.26.7 OpenDefault

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Opens the Midi mapper which opens the device the user selected as the default midi device.
**Notes:**

If only one midi output device is available this one is opened.
On success the handle property is not zero.
Lasterror is set.

### 127.26.8 OutputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Translates an error number into a human readable text.
**Notes:**

Returns "" on unknown errros.
String returned has Windows ANSI text encoding.

### 127.26.9 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Resets the output device.
**Notes:** Lasterror is set.

### 127.26.10 SendData(data as memoryblock)

MBS Audio Plugin, Plugin Version: 12.5, Platform: Windows, Targets: All.

**Function:** Sends sysex data.
**Notes:**

Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
See also:

- 127.26.11 SendData(data as memoryblock, size as Integer) 20793
- 127.26.12 SendData(data as string) 20793

### 127.26.11 SendData(data as memoryblock, size as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends sysex data.
**Example:**

```
dim m as MemoryBlock
dim o as WindowsMidiOutputMBS // your midi output

m=NewMemoryBlock(8)

m.Byte(0)=& hF0
m.Byte(1)=& h7F
m.Byte(2)=& h7F
m.Byte(3)=& h04
m.Byte(4)=& h01
m.Byte(5)=& h7F
m.Byte(6)=& h7F
m.Byte(7)=& hF7

o.SendData m
```

**Notes:**

Lasterror is set.
size is the size of the memoryblock to use. A wrong value will crash the application.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
See also:

- 127.26.10 SendData(data as memoryblock) 20792
- 127.26.12 SendData(data as string) 20793

### 127.26.12 SendData(data as string)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends sysex data.
**Notes:**

Lasterror is set.

See also

http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
The plugin prepares MIDIHDR structure and uses your data there.
See also:

- 127.26.10 SendData(data as memoryblock) 20792
- 127.26.11 SendData(data as memoryblock, size as Integer) 20793

### 127.26.13 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends a short midi message immediately.
**Example:**

```
dim o as WindowsMidiOutputMBS // your windows midi output
// & h90 = Note down
// & h43 = the note number
// & h40 = the velocity
o.SendMessage & h404390
```

**Notes:**

The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.

See also:

- 127.26.14 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 20794

### 127.26.14 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends a short midi message immediately.
**Example:**

```
dim o as WindowsMidiOutputMBS // your windows midi output
// & h90 = Note down
// & h3C = the note number
```

```
// & h40 = the velocity
o.SendMessage & h90, & h3C, & h40
```

**Notes:**

Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.

- 127.26.13 SendMessage(message as Integer) 20794

### 127.26.15 Properties

### 127.26.16 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The volume to be used for this device.
**Example:**

```
dim m as WindowsMidiOutputMBS // your midi output

m.Volume=0 // all silent
m.Volume=& hFFFF0000 // right only
m.Volume=& h0000FFFF // left only or max volume for mono device
m.Volume=& h7FFF7FFF // half volume for both channels
```

**Notes:**

Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of & hFFFF represents full volume, and a value of & h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
(Read and Write computed property)

### 127.26.17 Events

### 127.26.18 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** An event called when the device is closed.
**Notes:** Should be called when you call close or the object dies.

### 127.26.19 DeviceDataSent

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** An event called whenever SysEx data was sent.

### 127.26.20 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** An event called whenever the device was opened successfully.

### 127.26.21 DevicePositionCallback

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** Called when a MEVT_F_CALLBACK Midi event is about to be executed.
**Notes:** A way to track progress in playback.

# 127.27 class WindowsMidiStreamMBS

## 127.27.1 class WindowsMidiStreamMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** A class for a Windows Midi Stream.

## 127.27.2 Methods

## 127.27.3 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Closes the Midi stream.

## 127.27.4 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Opens a MIDI stream for output.
**Notes:**

By default, the device is opened in paused mode.
Lasterror is set.
DeviceID: The device is opened on behalf of the stream and closed again when the stream is closed.

## 127.27.5 Pause

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Pauses playback of a specified MIDI stream.
**Notes:** Lasterror is set.

## 127.27.6 PositionBytes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Position of the stream in bytes.
**Notes:** Lasterror is set.

### 127.27.7 PositionMS as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:**

Position of the stream in milliseconds.

**Notes:** Lasterror is set.

### 127.27.8 PositionSamples as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Position of the stream in samples.
**Notes:** Lasterror is set.

### 127.27.9 PositionTicks as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Position of the stream in ticks.
**Notes:** Lasterror is set.

### 127.27.10 Restart

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The Restart function restarts a paused MIDI stream.
**Notes:** Lasterror is set.

### 127.27.11 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends a short midi message immediately.
**Example:**

```
dim o as WindowsMidiStreamMBS // your midi stream

// & h90 = Note down
// & h43 = the note number
```

```
// & h40 = the velocity
o.SendMessage & h404390
```

**Notes:**

The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.
See also:

- 127.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 20799

### 127.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Sends a short midi message immediately.
**Example:**

```
dim o as WindowsMidiStreamMBS // your midi stream

// & h90 = Note down
// & h3C = the note number
// & h40 = the velocity
o.SendMessage & h90, & h3C, & h40
```

**Notes:**

Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.
See also:

- 127.27.11 SendMessage(message as Integer) 20798

### 127.27.13 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The Stop function turns off all notes on all MIDI channels for the specified MIDI output device.
**Notes:** Lasterror is set.

### 127.27.14 Properties

### 127.27.15 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The handle for the midi stream.
**Notes:**

Type is HMIDISTRM.
(Read only property)

### 127.27.16 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The last error code reported by one of the class functions.
**Notes:** (Read only property)

### 127.27.17 Tempo as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Tempo of the stream, in microseconds per quarter note.
**Notes:**

The tempo is honored only if the time division for the stream is specified in quarter note format.
Lasterror is set.
(Read and Write computed property)

### 127.27.18 TimeDiv as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** Time division for this stream, in the format specified in the Standard MIDI Files 1.0 specification.
**Notes:**

The low 16 bits of this integer value contain the time division.
Lasterror is set.
(Read and Write computed property)

### 127.27.19 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

**Function:** The volume to be used for this stream.
**Example:**

```
dim m as WindowsMidiStreamMBS // your midi stream

m.Volume=0 // all silent
m.Volume=& hFFFF0000 // right only
m.Volume=& h0000FFFF // left only or max volume for mono device
m.Volume=& h7FFF7FFF // half volume for both channels
```

**Notes:**

Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of & hFFFF represents full volume, and a value of & h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
Lasterror is set.
(Read and Write computed property)

# Chapter 128

# Mobile Ads

## 128.1 class GADAdNetworkResponseInfoMBS

### 128.1.1 class GADAdNetworkResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Response metadata for an individual ad network in an ad response.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 128.1.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.1.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.1.4 Methods

### 128.1.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 128.1.6 Properties

### 128.1.7 adNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A class name that identifies the ad network.
**Notes:** (Read only property)

### 128.1.8 adSourceID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad source ID associated with this ad network response.
**Notes:**

Empty if the ad server does not populate this field.
(Read only property)

### 128.1.9 adSourceInstanceID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad source instance ID associated with this ad network response. not populate this field.
**Notes:**

Empty if the ad server does
(Read only property)

### 128.1.10 adSourceInstanceName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad source instance name associated with this ad network response.
**Notes:**

Empty if the ad server does not populate this field.
(Read only property)

### 128.1.11 adSourceName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad source name associated with this ad network response.
**Notes:**

Empty if the ad server does not populate this field.
(Read only property)

### 128.1.12 adUnitMapping as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Network configuration set on the AdMob UI.
**Notes:** (Read only property)

### 128.1.13 dictionaryRepresentation as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** JSON-safe dictionary representation of the ad network response info.
**Notes:** (Read only property)

### 128.1.14 error as NSErrorMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Error associated with the request to the network.
**Notes:**

Nil if the network successfully loaded an ad or if the network was not attempted.
(Read only property)

### 128.1.15 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.1.16 latency as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Amount of time the ad network spent loading an ad. 0 if the network was not attempted.
**Notes:** (Read only property)

## 128.2 class GADAdRewardMBS

### 128.2.1 class GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Ad reward information.

### 128.2.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.2.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.2.4 Methods

### 128.2.5 Constructor(rewardType as string, rewardAmount as String)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns an initialized GADAdReward with the provided reward type and reward amount.

### 128.2.6 Properties

### 128.2.7 amount as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Amount rewarded to the user as string.
**Notes:** (Read only property)

### 128.2.8 amountValue as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Amount rewarded to the user as double.
**Notes:** (Read only property)

### 128.2.9 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.2.10 type as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Type of the reward.
**Notes:** (Read only property)

## 128.3 class GADAdSizeMBS

### 128.3.1 class GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The class for an ad size.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 128.3.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.5

### 128.3.3 Xojo Developer Magazine

- 21.1, page 33

### 128.3.4 Blog Entries

- News from the MBS Xojo Plugins Version 22.5

### 128.3.5 Xojo Developer Magazine

- 21.1, page 33

### 128.3.6 Methods

### 128.3.7 Banner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** iPhone and iPod Touch ad size.
**Notes:** Typically 320x50.

### 128.3.8 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 128.3.9 Fluid as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** An ad size that spans the full width of its container, with a height dynamically determined by the ad.

### 128.3.10 FullBanner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Full Banner size for the iPad (especially in a PopOver or in sheet).
**Notes:** Typically 468x60.

### 128.3.11 Invalid as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Invalid ad size marker.

### 128.3.12 LargeBanner as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Taller version of GADAdSizeBanner.
**Notes:** Typically 320x100.

### 128.3.13 Leaderboard as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Leaderboard size for the iPad.
**Notes:** Typically 728x90.

### 128.3.14 MediumRectangle as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Medium Rectangle size for the iPad (especially in a UISplitView's left pane).
**Notes:** Typically 300x250.

### 128.3.15 Skyscraper as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Skyscraper size for the iPad.
**Notes:** Mediation only. AdMob/Google does not offer this size. Typically 120x600.

### 128.3.16 Properties

### 128.3.17 Flags as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The flags field.
**Notes:** (Read only property)

### 128.3.18 Height as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The height value.
**Notes:** (Read only property)

### 128.3.19 IsFluid as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns true if this is a fluid ad size.
**Notes:** (Read only property)

### 128.3.20 IsValid as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns true if this is a valid size.
**Notes:** (Read only property)

### 128.3.21 StringValue as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns a string describing the provided AdSize.
**Notes:** (Read only property)

### 128.3.22 Width as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The width.
**Notes:** (Read only property)

## 128.4 class GADAdValueMBS

### 128.4.1 class GADAdValueMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The monetary value earned from an ad.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 128.4.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.4.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.4.4 Methods

### 128.4.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 128.4.6 Properties

### 128.4.7 amount as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad's value as string.
**Notes:** (Read only property)

### 128.4.8 amountValue as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad's value as double.
**Notes:** (Read only property)

### 128.4.9 currencyCode as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The value's currency code.
**Notes:** (Read only property)

### 128.4.10 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.4.11 precision as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The precision of the reported ad value.
**Notes:** (Read only property)

### 128.4.12 Constants

### 128.4.13 PrecisionEstimated = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the precision constants.
**Notes:** An ad value estimated from aggregated data.

### 128.4.14 PrecisionPrecise = 3

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the precision constants.
**Notes:** The precise value paid for this ad.

### 128.4.15 PrecisionPublisherProvided = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the precision constants.
**Notes:** A publisher-provided ad value, such as manual CPMs in a mediation group.

### 128.4.16 PrecisionUnknown = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the precision constants.
**Notes:** An ad value with unknown precision.

## 128.5 class GADAppOpenAdMBS

### 128.5.1 class GADAppOpenAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** An app open ad.
**Notes:**

Used to monetize app load screens.

See https://developers.google.com/admob/ios/app-open to get started.

### 128.5.2 Blog Entries

- Google Admob for Xojo

### 128.5.3 Blog Entries

- Google Admob for Xojo

### 128.5.4 Methods

### 128.5.5 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns whether the interstitial ad can be presented from the provided root view controller.
**Notes:**

Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

### 128.5.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.
**Notes:**

Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show

the ad over the current view controller.

### 128.5.7 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.5.8 loadWithAdUnitID(adUnitID as String, orientation as Integer, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Loads an interstitial ad.
**Notes:**

adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

### 128.5.9 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Presents the interstitial ad.
**Notes:** Must be called on the main thread.

### 128.5.10 Properties

### 128.5.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.5.12 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about the ad response that returned the current ad or an error.
**Notes:**

Nil until the first ad request succeeds or fails.
(Read only property)

### 128.5.13 Events

### 128.5.14 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad dismissed full screen content.

### 128.5.15 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad failed to present full screen content.

### 128.5.16 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a click has been recorded for the ad.

### 128.5.17 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when that an impression has been recorded for the ad.

### 128.5.18 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when Load finished.
**Notes:** Next you can call Present when needed.

### 128.5.19 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Handles ad events that are estimated to have earned money.

### 128.5.20 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will dismiss full screen content.

### 128.5.21 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will present full screen content.

### 128.5.22 Constants

### 128.5.23 DeviceOrientationFaceDown = 6

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is held parallel to the ground with the screen facing downwards.

### 128.5.24 DeviceOrientationFaceUp = 5

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is held parallel to the ground with the screen facing upwards.

### 128.5.25 DeviceOrientationLandscapeLeft = 3

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is in landscape mode, with the device held upright and the home button on the right side.

### 128.5.26 DeviceOrientationLandscapeRight = 4

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is in landscape mode, with the device held upright and the home button on the left side.

### 128.5.27 DeviceOrientationPortrait = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is in portrait mode, with the device held upright and the home button at the bottom.

### 128.5.28 DeviceOrientationPortraitUpsideDown = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The device is in portrait mode but upside down, with the device held upright and the home button at the top.

### 128.5.29 DeviceOrientationUnknown = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the orientation constants
**Notes:** The orientation is currently not known.

## 128.6 class GADBannerViewMBS

### 128.6.1 class GADBannerViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A view that displays banner ads.
**Notes:** See https://developers.google.com/admob/ios/banner to get started.

### 128.6.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.5
- Google Admob for Xojo

### 128.6.3 Xojo Developer Magazine

- 21.1, page 33

- 21.1, page 33

### 128.6.6 Methods

### 128.6.7 AddToControl(Control as MobileControl)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Adds the control to the existing mobile control as children.

### 128.6.8 Constructor(AdSize as GADAdSizeMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Initializes and returns a banner view with the specified ad size placed at its superview's origin.

### 128.6.9 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.6.10 loadRequest(request as GADRequestMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Requests an ad. The request object supplies targeting information.

### 128.6.11 setValidAdSizes(sizes() as GADAdSizeMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Sets array of GADAdSizeMBS objects, specifying all valid sizes that are appropriate for this slot.

### 128.6.12 validAdSizes as GADAdSizeMBS()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Optional array of GADAdSizeMBS objects, specifying all valid sizes that are appropriate for this slot.

### 128.6.13 Properties

### 128.6.14 adSize as GADAdSizeMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Required to set this banner view to a proper size.
**Notes:**

If not using mediation, then changing the adSize after an ad has been shown will cause a new request (for an ad of the new size) to be sent. If using mediation, then a new request may not be sent.
(Read and Write property)

### 128.6.15 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad unit ID.
**Notes:**

Required value created on the Ad Manager website. Create a new ad unit for every unique placement of an ad in your application. Set this to the ID assigned for this placement. Ad units are important for targeting and statistics.

Example Ad Manager ad unit ID: "/6499/example/banner"
(Read and Write property)

### 128.6.16 autoloadEnabled as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A Boolean value that determines whether autoloading of ads in the receiver is enabled.
**Notes:**

If enabled, you do not need to call the loadRequest method to load ads.
(Read and Write property)

### 128.6.17 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.6.18 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about the ad response that returned the current ad or an error.
**Notes:**

Nil until the first ad request succeeds or fails.
(Read only property)

### 128.6.19 Events

### 128.6.20 DidDismissScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the full screen view has been dismissed.
**Notes:** You should restart anything paused while handling WillPresentScreen.

### 128.6.21 DidFailToReceiveAdWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called whenan ad request failed.
**Notes:** The failure is normally due to network connectivity or ad availablility (for example, no fill).

### 128.6.22 DidReceiveAd

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when an ad request successfully received an ad.
**Notes:** You may want to add the banner view to the view hierarchy if it hasn't been added yet.

### 128.6.23 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a click has been recorded for the ad.

### 128.6.24 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when an impression has been recorded for an ad.

### 128.6.25 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Handles ad events that are estimated to have earned money.

### 128.6.26 WillDismissScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the full screen view will be dismissed.

### 128.6.27 WillPresentScreen

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a full screen view will be presented in response to the user clicking on an ad.
**Notes:** You may want to pause animations and time sensitive interactions.

## 128.7 class GADInterstitialAdMBS

### 128.7.1 class GADInterstitialAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** An interstitial ad.
**Notes:**

This is a full-screen advertisement shown at natural transition points in your application such as between game levels or news stories.

See https://developers.google.com/admob/ios/interstitial to get started.

### 128.7.2 Blog Entries

- Add Google Ads to your Xojo app
- Google Admob for Xojo

### 128.7.3 Blog Entries

- Add Google Ads to your Xojo app
- Google Admob for Xojo

### 128.7.4 Methods

### 128.7.5 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns whether the interstitial ad can be presented from the provided root view controller.
**Notes:**

Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

### 128.7.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.
**Notes:**

Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

### 128.7.7 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.7.8 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Loads an interstitial ad.
**Notes:**

adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

### 128.7.9 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Presents the interstitial ad.
**Notes:** Must be called on the main thread.

### 128.7.10 Properties

### 128.7.11 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad unit ID.
**Notes:** (Read only property)

### 128.7.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.7.13 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about the ad response that returned the current ad or an error.
**Notes:**

Nil until the first ad request succeeds or fails.
(Read only property)

### 128.7.14 Events

### 128.7.15 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad dismissed full screen content.

### 128.7.16 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad failed to present full screen content.

### 128.7.17 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a click has been recorded for the ad.

### 128.7.18 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when that an impression has been recorded for the ad.

### 128.7.19 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when Load finished.
**Notes:** Next you can call Present when needed.

### 128.7.20 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Handles ad events that are estimated to have earned money.

### 128.7.21 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will dismiss full screen content.

### 128.7.22 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will present full screen content.

## 128.8 class GADMobileAdsMBS

### 128.8.1 class GADMobileAdsMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Google Mobile Ads SDK settings.
**Notes:** You need to load framework first, before using this class.

### 128.8.2 Blog Entries

- Add Google Ads to your Xojo app
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5

### 128.8.3 Blog Entries

- Add Google Ads to your Xojo app
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5

### 128.8.4 Methods

### 128.8.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 128.8.6 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.8.7 disableMediationInitialization

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Disables mediation adapter initialization during initialization of the GMA SDK.
**Notes:** Calling this method may negatively impact your ad performance and should only be called if you

will not use GMA SDK controlled mediation during this app session. This method must be called before initializing the GMA SDK or loading ads and has no effect once the SDK has been initialized.

### 128.8.8 disableSDKCrashReporting

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Disables automated SDK crash reporting.
**Notes:** If not called, the SDK records the original exception handler if available and registers a new exception handler. The new exception handler only reports SDK related exceptions and calls the recorded original exception handler.

### 128.8.9 registerWebView(WKWebViewPtr as Ptr)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Registers a web view with the Google Mobile Ads SDK to improve in-app ad monetization of ads within this web view.
**Notes:**

Please pass handle of HTMLViewer controls or WKWebViewMBS.
If needed, cast from Integer to Ptr.

### 128.8.10 requestTrackingAuthorization

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The request for user authorization to access app-related data.
**Notes:**

The requestTrackingAuthorization: is a one-time request to authorize or deny access to app-related data that can be used for tracking the user or the device. The system remembers the user,Äôs choice and doesn,Äôt prompt again unless a user uninstalls and then reinstalls the app on the device.

Calls to the API only prompt when the application state is UIApplicationStateActive. The authorization prompt doesn,Äôt display if another permission request is pending user confirmation. Concurrent requests aren,Äôt preserved by iOS, and calls to the API through an app extension don,Äôt prompt. Check the trackingAuthorizationStatus for a status of TrackingManagerAuthorizationStatusNotDetermined to determine if you need to make an additional call.

### 128.8.11 sharedInstance as GADMobileAdsMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns the shared GADMobileAds instance.

### 128.8.12 start

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Starts the Google Mobile Ads SDK.
**Notes:** Call this method as early as possible to reduce latency on the session's first ad request. Calls startCompleted event when the GMA SDK and all mediation networks are fully set up or if set-up times out. The Google Mobile Ads SDK starts on the first ad request if this method is not called.

### 128.8.13 Properties

### 128.8.14 applicationMuted as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Indicates whether the application's audio is muted.
**Notes:**

Affects initial mute state for all ads. Use this method only if your application has its own volume controls (e.g., custom music or sound effect muting). Defaults to false.
(Read and Write property)

### 128.8.15 applicationVolume as Single

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The application's audio volume.
**Notes:**

Affects audio volumes of all ads relative to other audio output.
Valid ad volume values range from 0.0 (silent) to 1.0 (current device volume). Use this method only if your application has its own volume controls (e.g., custom music or sound effect volumes). Defaults to 1.0.
(Read and Write property)

### 128.8.16 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.8.17 requestConfiguration as GADRequestConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Request configuration that is common to all requests.
**Notes:** (Read only property)

### 128.8.18 sdkVersion as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns the version of the SDK.
**Notes:** (Read only property)

### 128.8.19 trackingAuthorizationStatus as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The authorization status that is current for the calling application.
**Notes:**

Use the trackingAuthorizationStatus property to check authorization status.
(Read only property)

### 128.8.20 Events

### 128.8.21 requestTrackingAuthorizationCompleted(status as integer)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when requestTrackingAuthorization is done.

### 128.8.22 startCompleted

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called, when start method finishes.

### 128.8.23 Constants

### 128.8.24 TrackingManagerAuthorizationStatusAuthorized = 3

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for tracking authorization status.
**Notes:** The value that returns if the user authorizes access to app-related data for tracking the user or the device.

### 128.8.25 TrackingManagerAuthorizationStatusDenied = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for tracking authorization status.
**Notes:** The value that returns if the user denies authorization to access app-related data for tracking the user or the device.

### 128.8.26 TrackingManagerAuthorizationStatusNotDetermined = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for tracking authorization status.
**Notes:** The value that returns when the app can,Äôt determine the user,Äôs authorization status for access to app-related data for tracking the user or the device.

### 128.8.27 TrackingManagerAuthorizationStatusRestricted = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for tracking authorization status.
**Notes:** The value that returns if authorization to access app-related data for tracking the user or the device has a restricted status.

## 128.9 class GADRequestConfigurationMBS

### 128.9.1 class GADRequestConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Request configuration.
**Notes:**

The settings in this class will apply to all ad requests.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 128.9.2 Methods

### 128.9.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 128.9.4 GADMaxAdContentRatingGeneral as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Rating for content suitable for general audiences, including families.

### 128.9.5 GADMaxAdContentRatingMatureAudience as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Rating for content suitable only for mature audiences.

### 128.9.6 GADMaxAdContentRatingParentalGuidance as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Rating for content suitable for most audiences with parental guidance.

### 128.9.7 GADMaxAdContentRatingTeen as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Rating for content suitable for teen and older audiences.

### 128.9.8 GADSimulatorID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Add this constant to the testDevices property's array to receive test ads on the simulator.

### 128.9.9 setSameAppKeyEnabled(enabled as boolean)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Controls whether the Google Mobile Ads SDK Same App Key is enabled.
**Notes:** The value set persists across app sessions. The key is enabled by default.

### 128.9.10 setTestDeviceIdentifiers(testDeviceIdentifiers() as string)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Sets the identifiers corresponding to test devices which will always request test ads.
**Notes:** The test device identifier for the current device is logged to the console when the first ad request is made.

### 128.9.11 tagForChildDirectedTreatment(childDirectedTreatment as boolean)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Whether this is an app for children.
**Notes:**

[ Optional ] This method lets you specify whether you would like your app to be treated as child-directed for purposes of the Children,Äôs Online Privacy Protection Act (COPPA),
https://www.ftc.gov/business-guidance/privacy-security/childrens-privacy

If you call this method with YES, you are indicating that your app should be treated as
child-directed for purposes of the Children,Äôs Online Privacy Protection Act (COPPA). If you call this method with NO, you are indicating that your app should not be treated as child-directed for purposes of

the Children,Äôs Online Privacy Protection Act (COPPA). If you do not call this method, ad requests will include no indication of how you would like your app treated with
respect to COPPA.

By setting this method, you certify that this notification is accurate and you are authorized to act on behalf of the owner of the app. You understand that abuse of this setting may result in termination of your Google account.

### 128.9.12 tagForUnderAgeOfConsent(underAgeOfConsent as boolean)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** If you call this method with YES, a TFUA parameter will be included in all ad requests.
**Notes:** This parameter disables personalized advertising, including remarketing, for all ad requests. It also disables requests to third-party ad vendors, such as ad measurement pixels and third-party ad servers.

### 128.9.13 testDeviceIdentifiers as string()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Identifiers corresponding to test devices which will always request test ads.
**Notes:** The test device identifier for the current device is logged to the console when the first ad request is made.

### 128.9.14 Properties

### 128.9.15 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.9.16 maxAdContentRating as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The maximum ad content rating. All Google ads will have this content rating or lower.
**Notes:** (Read and Write property)

## 128.10 class GADRequestMBS

### 128.10.1 class GADRequestMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Specifies optional parameters for ad requests.

### 128.10.2 Blog Entries

- Add Google Ads to your Xojo app

### 128.10.3 Blog Entries

- Add Google Ads to your Xojo app

### 128.10.4 Methods

### 128.10.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 128.10.6 request as GADRequestMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns a default request.

### 128.10.7 Properties

### 128.10.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.10.9 publisherProvidedID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Publisher provided user ID.
**Notes:** (Read and Write property)

### 128.10.10 requestAgent as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** String that identifies the ad request's origin.
**Notes:**

Third party libraries that reference the Mobile Ads SDK should set this property to denote the platform from which the ad request originated.
For example, a third party ad network called "CoolAds network" that is mediating requests to the Mobile Ads SDK should set this property as "CoolAds".
(Read and Write property)

## 128.11 class GADResponseInfoMBS

### 128.11.1 class GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about a response to an ad request.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 128.11.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.11.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.11.4 Methods

### 128.11.5 adNetworkInfoArray as GADAdNetworkResponseInfoMBS()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Array of metadata for each ad network included in the response.

### 128.11.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 128.11.7 GADCustomEventAdNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Ad network class name for custom event ads.

### 128.11.8 GADErrorUserInfoKeyResponseInfo as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Key into NSError.userInfo mapping to a GADResponseInfo object.
**Notes:** When ads fail to load, errors returned contain an instance of GADResponseInfoMBS.

### 128.11.9 GADGoogleAdNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Ad network class name for ads returned from Google's ad network.

### 128.11.10 Properties

### 128.11.11 adNetworkClassName as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A class name that identifies the ad network that returned the ad. Nil if no ad was returned.
**Notes:** (Read only property)

### 128.11.12 dictionaryRepresentation as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** JSON-safe dictionary representation of the response info.
**Notes:** (Read only property)

### 128.11.13 extrasDictionary as Dictionary

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Dictionary of extra parameters that may be returned in an ad response.
**Notes:** (Read only property)

### 128.11.14 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.11.15 loadedAdNetworkResponseInfo as GADAdNetworkResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The GADAdNetworkResponseInfo corresponding to the adapter that was used to load the ad.
**Notes:**

Nil if the ad failed to load.
(Read only property)

### 128.11.16 responseIdentifier as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Unique identifier of the ad response.
**Notes:** (Read only property)

## 128.12 class GADRewardedAdMBS

### 128.12.1 class GADRewardedAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A rewarded ad.
**Notes:** Rewarded ads are ads that users have the option of interacting with in exchange for in-app rewards.

### 128.12.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.12.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.12.4 Methods

### 128.12.5 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns whether the ad can be presented from the provided root view controller.
**Notes:**

Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

### 128.12.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.
**Notes:**

Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

### 128.12.7 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.12.8 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Loads a reward ad.
**Notes:**

adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

### 128.12.9 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Presents the interstitial ad.
**Notes:** Must be called on the main thread.

### 128.12.10 Properties

### 128.12.11 adReward as GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The reward earned by the user for interacting with the ad.
**Notes:** (Read only property)

### 128.12.12 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad unit ID.
**Notes:** (Read only property)

### 128.12.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.12.14 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about the ad response that returned the current ad or an error.
**Notes:**

Nil until the first ad request succeeds or fails.
(Read only property)

### 128.12.15 Events

### 128.12.16 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad dismissed full screen content.

### 128.12.17 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad failed to present full screen content.

### 128.12.18 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a click has been recorded for the ad.

### 128.12.19 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when that an impression has been recorded for the ad.

### 128.12.20 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when Load finished.
**Notes:** Next you can call Present when needed.

### 128.12.21 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Handles ad events that are estimated to have earned money.

### 128.12.22 userDidEarnReward

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event to be executed when the user earns a reward.

### 128.12.23 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will dismiss full screen content.

### 128.12.24 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will present full screen content.

## 128.13 class GADRewardedInterstitialAdMBS

### 128.13.1 class GADRewardedInterstitialAdMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A rewarded interstitial ad.
**Notes:** Rewarded Interstitial ads are full screen ads that can be presented without user-opt in and allow you to reward the user with in-app items.

### 128.13.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.13.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr3

### 128.13.4 Methods

### 128.13.5 canPresent(byref error as NSErrorMBS) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns whether the interstitial ad can be presented from the provided root view controller.
**Notes:**

Sets the error out parameter if the ad can't be presented.
Must be called on the main thread.

### 128.13.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.
**Notes:**

Please call Load method first to load the ad in background.
Then later, when loadCompleted was called, the Handle is not zero and finally you can call Present to show the ad over the current view controller.

### 128.13.7 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 128.13.8 loadWithAdUnitID(adUnitID as String, request as GADRequestMBS = nil)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Loads a rewarded interstitial ad.
**Notes:**

adUnitID: An ad unit ID created in the AdMob or Ad Manager UI.
request: An ad request object. If nil, a default ad request object is used.

Calls loadCompleted event later, when the load operation finishes or times out.

### 128.13.9 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Presents the interstitial ad.
**Notes:** Must be called on the main thread.

### 128.13.10 Properties

### 128.13.11 adReward as GADAdRewardMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The reward earned by the user for interacting with the ad.
**Notes:** (Read only property)

### 128.13.12 adUnitID as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The ad unit ID.
**Notes:** (Read only property)

### 128.13.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 128.13.14 responseInfo as GADResponseInfoMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Information about the ad response that returned the current ad or an error.
**Notes:**

Nil until the first ad request succeeds or fails.
(Read only property)

### 128.13.15 Events

### 128.13.16 DidDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad dismissed full screen content.

### 128.13.17 DidFailToPresentFullScreenContentWithError(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad failed to present full screen content.

### 128.13.18 DidRecordClick

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when a click has been recorded for the ad.

### 128.13.19 DidRecordImpression

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when that an impression has been recorded for the ad.

### 128.13.20 loadCompleted(error as NSErrorMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when Load finished.
**Notes:** Next you can call Present when needed.

### 128.13.21 paid(value as GADAdValueMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Handles ad events that are estimated to have earned money.

### 128.13.22 userDidEarnReward

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event to be executed when the user earns a reward.

### 128.13.23 WillDismissFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will dismiss full screen content.

### 128.13.24 WillPresentFullScreenContent

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** The event called when the ad will present full screen content.

# Chapter 129

# MongoDB

## 129.1 class MongoChangeStreamMBS

### 129.1.1 class MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** A MongoDB change stream.
**Example:**

```
Dim pipeline As String = " { } "
Dim stream As MongoChangeStreamMBS = Collection.Watch(pipeline)

// now do inserts

// and now query changes
Dim changeJSON As String

While stream.NextChange(changeJSON)

MessageBox changeJSON

Wend
```

**Notes:**

Use this class to audit a collection, database or client for changes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.1.2 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0

### 129.1.3 Blog Entries

- News from the MBS Xojo Plugins in Version 23.0
- MonkeyBread Software Releases the MBS Xojo Plugins in version 23.0
- Watch changes in MongoDB with Xojo application
- MBS Xojo Plugins, version 22.6pr1

### 129.1.4 Methods

### 129.1.5 Constructor

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.1.6 ErrorDocument(byref ReplyJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks if an error has occurred when creating or iterating over a change stream.
**Notes:**

Similar to ErrorDocument in MongoCursorMBS if the error has occurred client-side then the reply will be set to an empty BSON document. If the error occurred server-side, reply is set to the server,Äôs reply document.

Provides the reply from server about the error.

Returns a boolean indicating if there was an error.

### 129.1.7 NextChange(byref RecordJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Iterates the underlying change stream, setting RecordJSON to the next document.
**Example:**

```
Dim pipeline As String = " { } "
Dim stream As MongoChangeStreamMBS = Collection.Watch(pipeline)

// now do inserts

// and now query changes
Dim changeJSON As String

While stream.NextChange(changeJSON)

MessageBox changeJSON

Wend
```

**Notes:**

This will block for a maximum of maxAwaitTimeMS milliseconds as specified in the options when created, or the default timeout if omitted. Data may be returned before the timeout. If no data is returned this function returns false.

RecordJSON: The location for the resulting document.

This function returns true if a valid bson document was read from the stream. Otherwise, false if there was an error or no document was available.

Raises exception in case of error.

### 129.1.8 StreamResumeToken as String

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the cached resume token, which may be passed as either the resumeAfter or startAfter option of a watch function to start a new change stream from the same point.
**Notes:** Returns "" if no resume token is available. This is possible if the change stream has not been iterated and neither resumeAfter nor startAfter options were specified in the watch function.

### 129.1.9 Properties

### 129.1.10 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.1.11 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

## 129.2 class MongoClientMBS

### 129.2.1 class MongoClientMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** A MongoDB connection.
**Notes:**

This is a class that provides access to a MongoDB server, replica set, or sharded cluster. It maintains management of underlying sockets and routing to individual nodes

The connection is NOT thread-safe and should only be used from one thread at a time.

### 129.2.5 Xojo Developer Magazine

- 21.1, pages 94 to 95

### 129.2.6 Methods

### 129.2.7 Collection(DatabaseName as String, CollectionName as String) as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get a newly allocated MongoCollectionMBS for the collection named collection in the named database.
**Notes:** Collections are automatically created on the MongoDB server upon insertion of the first document. There is no need to create a collection manually.

### 129.2.8 Constructor(URI as MongoURIMBS)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a new client using the URI provided.
**Notes:**

In case of an error, raises MongoExceptionMBS.

Connection is made when you run the first command, so you may want to soon query something or run a ping command.

### 129.2.9 Database(Name as String) as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Opens the given database.
**Notes:** Databases are automatically created on the MongoDB server upon insertion of the first document into a collection. There is no need to create a database manually.

### 129.2.10 DatabasesNames(OptionsJSON as String = "") as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the MongoDB server for a list of known databases.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)
```

```
dim databases() as string = client.DatabasesNames

Break // shows e.g. admin, config and local.
```

**Notes:**

Returns a list of database names.
In case of an error, raises MongoExceptionMBS.

### 129.2.11 DefaultDatabase as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Opens default database.
**Notes:**

Get the database named in the MongoDB connection URI, or "" if the URI specifies none.
Useful when you want to choose which database to use based only on the URI in a configuration file.

### 129.2.12 FindDatabases(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches list of database records.
**Notes:**

Fetches a cursor containing documents, each corresponding to a database on this MongoDB server.

Sets current cursor.

### 129.2.13 LogMessage(Message as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sends message through MongoDB logging system.
See also:

- 129.2.27 LogMessage(Level as Integer, Domain as String, Message as String) 20862

### 129.2.14 NewCursorFromCommandReply(commandReplyJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a cursor object from the reply of a command.
**Notes:**

Some MongoDB commands return a ‚Äúcursor‚Äù document.

commandReplyJSON: The reply to a command, such as ‚Äúaggregate‚Äù, ‚Äúfind‚Äù, or ‚Äúlist Collections‚Äù, that returns a cursor document.

### 129.2.15 ServerDescription(ServerID as UInt32) as MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get information about the server specified by ServerID.
**Example:**

```
Const URL = "mongodb://localhost/"

Dim uri As New MongoURIMBS(URL)
Dim client As New MongoClientMBS(uri)

// do something to trigger connection
Dim names() As String = client.DatabasesNames

// now check first server
Dim des As MongoServerDescriptionMBS = client.ServerDescription(1)
Break // check in debugger
```

### 129.2.16 ServerDescriptions as MongoServerDescriptionMBS()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches an server descroptions for all known servers in the topology.
**Example:**

```
Const URL = "mongodb://localhost/"

Dim uri As New MongoURIMBS(URL)
Dim client As New MongoClientMBS(uri)
```

```
// do something to trigger connection
Dim names() As String = client.DatabasesNames

// now check first server
Dim ServerDescriptions() As MongoServerDescriptionMBS = client.ServerDescriptions
Break // check in debugger
```

**Notes:** Returns no servers until the client connects. Returns a single server if the client is directly connected, or all members of a replica set if the client,Äôs MongoDB URI includes a ,ÄúreplicaSet,Äù option, or all known mongos servers if the MongoDB URI includes a list of them.

### 129.2.17 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a change stream for a client.
**Notes:**

It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the client. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the client which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option

is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ‚Äúinvalidate‚Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ‚Äúdefault‚Äù, ‚Äúupdate Lookup‚Äù, ‚Äúwhen Available‚Äù, or ‚Äúrequired‚Äù, If unset, The string ‚Äúdefault‚Äù is assumed. Set this option to ‚ÄúupdateLookup‚Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ‚ÄúwhenAvailable‚Äù, ‚Äúrequired‚Äù, or ‚Äúoff‚Äù. When unset, the default value is ‚Äúoff‚Äù. Similar to ‚Äúfull Document‚Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

### 129.2.18 Properties

### 129.2.19 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.2.20 LibraryVersion as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries library version.
**Notes:**

This is the version of the mongo client library we use to build the plugin.
(Read only property)

### 129.2.21 MaxBSONSize as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the maximum bson document size allowed by the cluster.
**Notes:**

Until a connection has been made, this will be the default of 16Mb.
(Read only property)

### 129.2.22 MaxMessageSize as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the maximum message size allowed by the cluster.
**Notes:**

Until a connection has been made, this will be the default of 40Mb.
(Read only property)

### 129.2.23 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The parent object reference.
**Notes:** (Read only property)

### 129.2.24 Session as MongoSessionMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The current session.
**Notes:**

Weak reference, which is cleared when the session object is destroyed.
(Read only property)

### 129.2.25 URI as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the URI object used to construct this.
**Notes:** (Read only property)

### 129.2.26 Events

### 129.2.27 LogMessage(Level as Integer, Domain as String, Message as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: .

**Function:** The event called for log messages in MongoDB client.
**Notes:** Trace level is not used by our plugin.
See also:

- 129.2.13 LogMessage(Message as String) 20857

### 129.2.28 Constants

### 129.2.29 LogLevelCritical = 1

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Critical

### 129.2.30 LogLevelDebug = 5

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Debug

### 129.2.31 LogLevelError = 0

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Error

### 129.2.32 LogLevelInfo = 4

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Info

### 129.2.33 LogLevelMessage = 3

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Message

### 129.2.34 LogLevelTrace = 6

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Trace

### 129.2.35 LogLevelWarning = 2

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** One of the log level constants.
**Notes:** Warning

## 129.3 class MongoCollectionMBS

### 129.3.1 class MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** This class provides access to a MongoDB collection.
**Notes:**

This handle is useful for actions for most CRUD operations, I.e. insert, update, delete, find, etc.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.3.6 Methods

### 129.3.7 Aggregate(flags as Integer, pipelineJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates an aggregate collection.
**Example:**

```
dim collection as MongoCollectionMBS // your collection
Dim json As String = " [ "+_
" { ""$ match"" : { ""index"" : 123 } } ,"+_
" { ""$ sort"" : { ""index"" : -1 } } ,"+_
" { ""$ limit"" : 2 } "+_
" ] "

cursor = Collection.Aggregate(Collection.kFlagNone, json)
// loop over cursor
```

**Notes:**

This function creates a cursor which sends the aggregate command on the underlying collection upon the first call to CursorNext. For more information on building aggregation pipelines, see the MongoDB Manual entry on the aggregate command.
Returns a new cursor on success.

Please review the documentation for MongoDB on how to build the JSON for pipeline or options.

In case of an error, raises MongoExceptionMBS.

### 129.3.8 Command(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Execute a command on the server.
**Example:**

```
dim collection as MongoCollectionMBS // your collection
```

| Flag | Value | Description |
|---|---|---|
| None | 0 | Specify no query flags. |
| TailableCursor | 2 | Cursor will not be closed when the last data is retrieved. You can resume this cursor later. |
| SecondaryOk | 4 | Allow query of replica set secondaries. |
| NoCursorTimeout | 16 | The server normally times out an idle cursor after an inactivity period (10 minutes). This prevents that. |
| AwaitData | 32 | Use with TailableCursor. Block rather than returning no data. After a period, time out. |
| Exhaust | 64 | Stream the data down full blast in multiple ,Äúreply,Äù packets. Faster when you are pulling down a lot of data and you know you want to retrieve it all. Only applies to cursors created from a find operation (i.e. find) |
| Partial | 128 | Get partial results from mongos if some shards are down (instead of throwing an error). |

```
dim Reply as String = collection.Command(" { ""hello"": 1 } ")
```

**Notes:**

Consult the MongoDB Manual entry on Database Commands for each command,Äôs arguments.

In case of an error, raises MongoExceptionMBS.

### 129.3.9 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.3.10 Copy as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Performs a deep copy of the collection struct and its configuration.
**Notes:** This function does not copy the contents of the collection on the MongoDB server.

### 129.3.11 DeleteMany(selectorJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Deletes many records.
**Notes:**

This function removes all documents in the given collection that match selector.

To delete at most one matching document, use DeleteOne().
Returns string with JSON about errors on server.

### 129.3.12 DeleteOne(selectorJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Deletes one record.
**Example:**

```
// delete record by object ID

Dim oid As New JSONItem
oid.Value("$ oid") = "632752c4031bafedd50fbf21"

Dim Record As New JSONItem
Record.Value("_id") = oid

Dim Result As String = Collection.DeleteOne(Record.toString)
// e.g. { "deletedCount" : 1 }
```

**Notes:**

This function removes at most one document in the given collection that matches selector.

To delete all matching documents, use DeleteMany().

Returns string with JSON about errors on server.

### 129.3.13 EstimatedDocumentCount(OptionsJSON as String = "") as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Executes a count query on collection.
**Notes:**

The count returned is not guaranteed to be accurate.

see also
http://mongoc.org/libmongoc/current/mongoc_collection_estimated_document_count.html
See also:

- 129.3.14 EstimatedDocumentCount(OptionsJSON as String, byref ReplyJSON as String) as Int64 20868

### 129.3.14 EstimatedDocumentCount(OptionsJSON as String, byref ReplyJSON as String) as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Executes a count query on collection.
**Notes:**

The count returned is not guaranteed to be accurate.

see also

See also:

- 129.3.13 EstimatedDocumentCount(OptionsJSON as String = "") as Int64 20867

### 129.3.15 Find(FilterJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Query on collection, passing arbitrary query options to the server in opts.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.Collection("test")

dim Filter as new JSONItem
'filter.Value("Hello") = "World"

dim sortOrder as new JSONItem
sortOrder.Value("hello") = -1 // descending

dim options as new JSONItem
```

```
options.Value("limit") = 10
options.Value("sort") = sortOrder

dim cursor as MongoCursorMBS = Collection.Find(filter.toString, options.toString)
dim Record as string

while cursor.NextRecord(record)

MessageBox record

wend
```

**Notes:**

See also find command documented here:
https://www.mongodb.com/docs/manual/reference/command/find/

### 129.3.16 FindIndexes(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches a cursor containing documents, each corresponding to an index on this collection.

### 129.3.17 InsertMany(documentArrayJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Insert documents into collection.
**Notes:**

Please pass a JSON array as string for all documents. Each entry in the array should be a JSON object with the document data.

For any document that does not have an "_id" field, a bson_oid_t will be generated locally and added to the document. If you must know the inserted document's _id, generate it in your code and include it in the document. The _id you generate can be a bson_oid_t or any other non-array BSON type.

The reply is filled out with an "insertedCount" field. If there is a server error then reply may contain a "writeErrors" array and/or a "writeConcernErrors" array.
See also:

- 129.3.18 InsertMany(documentJSON() as String, OptionsJSON as String = "") as String 20870

### 129.3.18 InsertMany(documentJSON() as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Insert documents into collection.
**Notes:**

Please pass an array with a JSON object in each entry as string.

For any document that does not have an "_id" field, a bson_oid_t will be generated locally and added to the document. If you must know the inserted document's _id, generate it in your code and include it in the document. The _id you generate can be a bson_oid_t or any other non-array BSON type.

The reply is filled out with an "insertedCount" field. If there is a server error then reply may contain a "writeErrors" array and/or a "writeConcernErrors" array.
See also:

- 129.3.17 InsertMany(documentArrayJSON as String, OptionsJSON as String = "") as String 20869

### 129.3.19 InsertOne(documentJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Inserts a document into collection.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.Collection("test")

dim j as new JSONItem
j.Value("Hello") = "World"

dim reply as string = Collection.InsertOne(j.ToString)

// reply is { "insertedCount" : 1 }
```

Break

**Notes:**

To insert an array of documents, see MongoDB.InsertMany.

If no _id element is found in document, then an oid will be generated locally and added to the document. If you must know the inserted document,Äôs _id, generate it in your code and include it in the document. The _id you generate can be an old or any other non-array BSON type.

The reply is filled out with an ,ÄúinsertedCount,Äù field. If there is a server error then reply contains either a ,ÄúwriteErrors,Äù array with one subdocument or a ,ÄúwriteConcernErrors,Äù array.

In case of an error, raises MongoExceptionMBS.

OptionsJSON may be empty or a JSON document with additional command options:

writeConcern: the write concern.
sessionId: The session ID.
validate: The validation flags.
bypassDocumentValidation: Set to true to skip server-side schema validation of the provided BSON documents.

### 129.3.20 Keys as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries current collection to find all the key names.
**Notes:**

You may store different JSON documents in the collection with different keys.
This function scans all documents to get the root keys and returns the list.

### 129.3.21 Rename(NewDatabaseName as String, NewCollectionName as String, DropTargetBeforeRename as Boolean = false, OptionsJSON as String = "") as boolean

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** This function is a helper to rename an existing collection on a MongoDB server.
**Notes:**

The name of the collection will also be updated internally so it is safe to continue using this collection after the rename. Additional operations will occur on renamed collection.

NewDatabaseName: The name of the new database.
NewCollectionName: The new name for the collection.
DropTargetBeforeRename: If an existing collection matches the new name, drop it before the rename.

Returns true if successful. Returns false and raises exception in case of an error.

### 129.3.22 ReplaceOne(selectorJSON as String, replacementJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** This replaces documents in collection that match selector with replacement.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
dim j as new JSONItem
j.Value("Hello") = "World"

// the new values
dim u as new JSONItem
u.Value("OtherField") = 456
u.Value("Hello") = "World"

dim reply as string = Collection.ReplaceOne(j.ToString, u.ToString)

Break
```

**Notes:**

selectorJSON: A JSON containing the query to match the document for updating.
updateJSON: A JSON containing the replacement document.

The reply JSON is populated with the fields matchedCount, modifiedCount, upsertedCount, and optionally upsertedId if applicable. If there is a server error then reply contains either a writeErrors array with one subdocument or a writeConcernErrors array.

In case of an error, raises MongoExceptionMBS.

### 129.3.23 UpdateMany(selectorJSON as String, updateJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Updates all documents in collection that match selector.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
dim j as new JSONItem
j.Value("Hello") = "World"

// the new values
dim u as new JSONItem
u.Value("OtherField") = 123

// and the update, where we define to set those values
dim s as new JSONItem
s.Value("$ set") = u

dim reply as string = Collection.UpdateMany(j.ToString, s.ToString)

// reply: { "modifiedCount" : 1, "matchedCount" : 1, "upsertedCount" : 0 }
Break
```

**Notes:**

In case of an error, raises MongoExceptionMBS.

To update at most one document see UpdateOne().

The result JSON is filled out with fields matchedCount, modifiedCount, and optionally upsertedId if applicable. If there is a server error then reply contains either a ‚ÄúwriteErrors‚Äù array with one subdocument or a ‚ÄúwriteConcernErrors‚Äù array.

### 129.3.24 UpdateOne(selectorJSON as String, updateJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Updates at most one document in collection that matches selector.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.Collection("test")

// the conditions to match records
dim j as new JSONItem
j.Value("Hello") = "World"

// the new values
dim u as new JSONItem
u.Value("OtherField") = 123

// and the update, where we define to set those values
dim s as new JSONItem
s.Value("$ set") = u

dim reply as string = Collection.UpdateOne(j.ToString, s.ToString)

// reply: { "modifiedCount" : 1, "matchedCount" : 1, "upsertedCount" : 0 }
break
```

**Notes:**

In case of an error, raises MongoExceptionMBS.

To update multiple documents see UpdateMany().

Return is a JSON filled out with fields matchedCount, modifiedCount, and optionally upsertedId if applicable. If there is a server error then reply contains either a ,ÄúwriteErrors,Äù array with one subdocument or a ,ÄúwriteConcernErrors,Äù array.

for Options you may e.g. pass { "upsert":true } to create a new record if the old one doesn't exist.

### 129.3.25 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a change stream for a collection.
**Notes:**

It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the collection. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the collection which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ,Äúinvalidate,Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ,Äúdefault,Äù, ,ÄúupdateLookup,Äù, ,ÄúwhenAvailable,Äù, or ,Äúrequired,Äù, If unset, The string ,Äúdefault,Äù is assumed. Set this option to ,ÄúupdateLookup,Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ,ÄúwhenAvailable,Äù, ,Äúrequired,Äù, or ,Äúoff,Äù. When unset, the default value is ,Äúoff,Äù. Similar to ,ÄúfullDocument,Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

### 129.3.26 Properties

### 129.3.27 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.3.28 Name as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries name of the collection.
**Notes:** (Read only property)

### 129.3.29 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The parent object reference.
**Notes:**

Points to the related database or client and avoids you free those before this object gets destructed.
(Read only property)

### 129.3.30 Constants

### 129.3.31 kFlagAwaitData = 32

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Use with kFlagTailableCursor. Block rather than returning no data. After a period, time out.

### 129.3.32 kFlagExhaust = 64

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Stream the data down full blast in multiple ,Äúreply,Äù packets. Faster when you are pulling down a lot of data and you know you want to retrieve it all. Only applies to cursors created from a find operation (i.e. find).

### 129.3.33 kFlagNoCursorTimeout = 16

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** The server normally times out an idle cursor after an inactivity period (10 minutes). This prevents that.

### 129.3.34 kFlagNone = 0

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Specify no query flags.

### 129.3.35 kFlagPartial = 128

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Get partial results from mongos if some shards are down (instead of throwing an error).

### 129.3.36 kFlagSecondaryOk = 4

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Allow query of replica set secondaries.

### 129.3.37 kFlagTailableCursor = 2

MBS MongoDB Plugin, Plugin Version: 23.1.

**Function:** One of the flag constants.
**Notes:** Cursor will not be closed when the last data is retrieved. You can resume this cursor later.

## 129.4 class MongoCursorMBS

### 129.4.1 class MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** This class provides access to a MongoDB query cursor.
**Notes:**

It wraps up the wire protocol negotiation required to initiate a query and retrieve an unknown number of documents.

Cursors are lazy, meaning that no connection is established and no network traffic occurs until the first call to NextRecord().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.4.2 Blog Entries

### 129.4.5 Xojo Developer Magazine

- 21.1, page 95

### 129.4.6 Methods

### 129.4.7 Clone as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a copy of a cursor.
**Notes:** The cloned cursor will be reset to the beginning of the query, and therefore the query will be re-executed on the MongoDB server when Next is called.

### 129.4.8 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.4.9 ErrorDocument(byref ReplyJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.4, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks to see if an error has occurred while iterating the cursor.
**Notes:** If an error occurred server-side, the ReplyJSON is set to the server,Äôs reply document with information about the error.

### 129.4.10 NextRecord(byref RecordJSON as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the next record as JSON.
**Notes:**

This function shall iterate the underlying cursor, setting bson to the next document.
Returns false if there is no other record.

In case of an error, raises MongoExceptionMBS.

### 129.4.11 Properties

### 129.4.12 BatchSize as UInt32

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The cursor,Äôs batch size.
**Notes:** (Read and Write property)

### 129.4.13 Current as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries current record as JSON.
**Notes:**

Fetches the cursors current document or "" if there has been an error.
(Read only property)

### 129.4.14 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.4.15 Host as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the MongoDB host that the cursor is communicating with in the host out parameter.
**Notes:** (Read only property)

### 129.4.16 ID as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Retrieves the cursor id used by the server to track the cursor.
**Notes:**

This number is zero until the driver actually uses a server when executing the query, and after it has fetched all results from the server.
(Read only property)

### 129.4.17 Limit as Int64

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Limits the number of documents in the result set.
**Notes:**

This function is useful for setting the limit on a cursor after the cursor is created, but before any calls to NextRecord().

Calling this function after NextRecord() has no effect.
(Read and Write property)

### 129.4.18 MaxAwaitTimeMS as UInt32

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The maximum amount of time for the server to wait on new documents to satisfy a tailable cursor query.
**Notes:**

Only applies if the cursor is created from Find() with ‚Äútailable‚Äù and ‚ÄúawaitData‚Äù options, and the server is MongoDB 3.2 or later.

The max await time ms cannot be changed after the first call to NextRecord().

This is not applicable to all cursors. Setting batch size on a cursor returned by FindDatabases(), FindCollections(), or FindIndexes() will not change the results.
(Read and Write property)

### 129.4.19 More as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether there may be more data.
**Notes:**

This function shall indicate if there is potentially more data to be read from the cursor.
This is only useful with tailable cursors. Use NextRecord() for regular cursors.

Details: mongoc_cursor_more is unreliable because it does not contact the server to see if there are actually more documents in the result set. It simply returns true if the cursor has not begun, or if it has begun and there are buffered documents in the client-side cursor, or if it has begun and the server has not yet told the cursor it is completely iterated.

This is unreliable with regular queries because it returns true for a new cursor before iteration, even if the cursor will match no documents. It is also true if the collection has been dropped on the server since the previous fetch, or if the cursor has finished its final batch and the next batch will be empty.

Returns true if the cursor has locally-buffered documents, or if a round-trip to the server might fetch additional documents.
(Read only property)

### 129.4.20 Parent as Variant

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The parent object reference.
**Notes:**

Points to the related database or collection and avoids you free those before this object gets destructed.
(Read only property)

## 129.5 class MongoDatabaseMBS

### 129.5.1 class MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** MongoDB Database Abstraction.
**Notes:**

This class provides access to a MongoDB database. This handle is useful for actions a particular database object. It is not a container for collection objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.5.2 Blog Entries

### 129.5.4 Methods

### 129.5.5 Aggregate(pipelineJSON as String, OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates an aggregate database.
**Example:**

```
dim database as MongoDatabaseMBS // your database

dim Cursor as MongoCursorMBS = database.Aggregate(" [ { ""$ listLocalSessions"": { } } ] ")
// loop over cursor
```

**Notes:**

This function creates a cursor which sends the aggregate command on the underlying database upon the first call to MongoDB.CursorNext. For more information on building aggregation pipelines, see the MongoDB Manual entry on the aggregate command. Note that the pipeline must start with a compatible stage that does not require an underlying collection (e.g. ,Äú$ currentOp,Äù, ,Äú$ listLocalSessions,Äù).
Returns a new cursor on success.

Please review the documentation for MongoDB on how to build the JSON for pipeline or options.

In case of an error, raises MongoExceptionMBS.

### 129.5.6 Collection(Name as String) as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Gets the collection with given name.

### 129.5.7 CollectionNames(OptionsJSON as String = "") as String()

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the list of the names of all of the collections in database.
**Example:**

```
const URL = "mongodb://192.168.2.102/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collections() as string = database.CollectionNames

Break // see in debugger
```

**Notes:**

see MongoDB documentation for list of options:
https://www.mongodb.com/docs/manual/reference/command/listCollections/

In case of an error, raises MongoExceptionMBS.

### 129.5.8 Command(commandJSON as String, OptionsJSON as String = "") as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Execute a command on the server, interpreting opts according to the MongoDB server version.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)
dim database as MongoDatabaseMBS = client.Database("local")

dim ping as new JSONItem
ping.Value("ping") = 1

dim reply as string = database.Command(ping.ToString)

Break // { "ok" : 1.0 }
```

**Notes:**

Returns the reply from the server.

In case of an error, raises MongoExceptionMBS.

### 129.5.9 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.5.10 Copy as MongoDatabaseMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Performs a deep copy of the database struct and its configuration.

### 129.5.11 CreateCollection(Name as String, OptionsJSON as String = "") as MongoCollectionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a collection in the database.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")
dim Collection as MongoCollectionMBS = database.CreateCollection("testing2")

MessageBox Collection.Name

Break
```

**Notes:**

If no write concern is provided in opts, the database,Äôs write concern is used.

For a list of all options, see the MongoDB Manual entry on the create command.
In case of an error, raises MongoExceptionMBS.

### 129.5.12 FindCollections(OptionsJSON as String = "") as MongoCursorMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches a cursor containing documents, each corresponding to a collection on this database.
**Example:**

```
const URL = "mongodb://localhost/"

dim uri as new MongoURIMBS(URL)
dim client as new MongoClientMBS(uri)

dim database as MongoDatabaseMBS = client.Database("local")

dim cursor as MongoCursorMBS = database.FindCollections
dim Record as string

while cursor.NextRecord(record)
```

MessageBox record

wend

Break

**Notes:** In case of an error, raises MongoExceptionMBS.

### 129.5.13 HasCollection(Name as String) as Boolean

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks to see if a collection exists on the MongoDB server within database.
**Notes:**

If the function succeeds, it returns true if the collection exists and false if not.
Raises exception in case of an invalid arguments or a server or network error.

In case of an error, raises MongoExceptionMBS.

### 129.5.14 Watch(pipelineJSON as String, OptionsJSON as String = "") as MongoChangeStreamMBS

MBS MongoDB Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a change stream for a database.
**Notes:**

It is preferred to call this function over using a raw aggregation to create a change stream.

This function uses the read preference and read concern of the database. If the change stream needs to re-establish connection, the same read preference will be used. This may happen if the change stream encounters a resumable error.

Warning A change stream is only supported with majority read concern.
This function is considered a retryable read operation. Upon a transient error (a network error, errors due to replica set failover, etc.) the operation is safely retried once. If retryreads is false in the URI the retry behavior does not apply.

Call this method on the database which the change stream listens to.

pipelineJSON: A JSON representing an aggregation pipeline appended to the change stream. This may be

an empty document.

OptionsJSON: A JSON containing change stream options. options may be "" or a JSON document with additional command options:

batchSize: An integer representing number of documents requested to be returned on each call to NextChange()

resumeAfter: A Document representing the logical starting point of the change stream. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with startAfter and startAtOperationTime.

startAfter: A Document representing the logical starting point of the change stream. Unlike resumeAfter, this can resume notifications after an ,Äúinvalidate,Äù event. The result of StreamResumeToken() or the _id field of any change received from a change stream can be used here. This option is mutually exclusive with resumeAfter and startAtOperationTime.

startAtOperationTime: A Timestamp. The change stream only provides changes that occurred at or after the specified timestamp. Any command run against the server will return an operation time that can be used here. This option is mutually exclusive with resumeAfter and startAfter.

maxAwaitTimeMS: An int64 representing the maximum amount of time a call to StreamResumeToken() will block waiting for data

fullDocument: An optional UTF-8 string. Set this option to ,Äúdefault,Äù, ,ÄúupdateLookup,Äù, ,ÄúwhenAvailable,Äù, or ,Äúrequired,Äù, If unset, The string ,Äúdefault,Äù is assumed. Set this option to ,ÄúupdateLookup,Äù to direct the change stream cursor to lookup the most current majority-committed version of the document associated to an update change stream event.

fullDocumentBeforeChange: An optional UTF-8 string. Set this option to ,ÄúwhenAvailable,Äù, ,Äúrequired,Äù, or ,Äúoff,Äù. When unset, the default value is ,Äúoff,Äù. Similar to ,ÄúfullDocument,Äù, but returns the value of the document before the associated change.

comment: A JSON specifying the comment to attach to this command. The comment will appear in log messages, profiler output, and currentOp output. Only string values are supported prior to MongoDB 4.4.

### 129.5.15 Properties

### 129.5.16 Client as MongoClientMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The current client for this database.
**Notes:** (Read only property)

### 129.5.17 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.5.18 Name as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries name of the database.
**Notes:** (Read only property)

## 129.6 class MongoExceptionMBS

### 129.6.1 class MongoExceptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class to report errors in MongoDB.
**Notes:**

Subclass of the RuntimeException class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.6.2 Blog Entries

- Insert record to MongoDB in Xojo

### 129.6.3 Blog Entries

- Insert record to MongoDB in Xojo

### 129.6.4 Methods

### 129.6.5 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

## 129.7 class MongoHostListMBS

### 129.7.1 class MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The host entry for a MongoDB server.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.7.2 Methods

### 129.7.3 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.7.4 Properties

### 129.7.5 Family as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The protocol family.
**Notes:** (Read only property)

### 129.7.6 Host as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The host.
**Notes:** (Read only property)

### 129.7.7 HostAndPort as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The host and port together.
**Notes:** (Read only property)

### 129.7.8 NextHost as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The next entry in the list.
**Notes:** (Read only property)

### 129.7.9 Port as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The port number.
**Notes:** (Read only property)

## 129.8 class MongoServerDescriptionMBS

### 129.8.1 class MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The server description class.
**Example:**

```
Const URL = "mongodb://localhost/"

Dim uri As New MongoURIMBS(URL)
Dim client As New MongoClientMBS(uri)

// do something to trigger connection
Dim names() As String = client.DatabasesNames

// now check first server
Dim ServerDescriptions() As MongoServerDescriptionMBS = client.ServerDescriptions
Break // check in debugger
```

**Notes:**

Holds information about a mongod or mongos the driver is connected to.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 129.8.2 Methods

### 129.8.3 Constructor

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 129.8.4 Properties

### 129.8.5 CompressorID as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the compressor ID used here.
**Notes:** (Read only property)

### 129.8.6 helloResponse as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The hello response from the server.
**Notes:** (Read only property)

### 129.8.7 HostList as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The server's host and port.
**Notes:** (Read only property)

### 129.8.8 ID as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the server's id, an opaque identifier generated by the client or client pool.
**Notes:** (Read only property)

### 129.8.9 LastUpdateTime as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The last timestamp when the server description was updated.
**Notes:** (Read only property)

### 129.8.10 NextDescription as MongoServerDescriptionMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The next server in the list.
**Notes:** (Read only property)

### 129.8.11 RTT as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the server's round trip time in milliseconds.
**Notes:**

This is the client's measurement of the duration of an "ismaster" command.
(Read only property)

### 129.8.12 Type as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns a string, one of the server types defined in the Server Discovery And Monitoring Spec
**Notes:**

Possible types:

- Standalone
- Mongos
- PossiblePrimary
- RSPrimary
- RSSecondary
- RSArbiter
- RSOther
- RSGhost
- Unknown

(Read only property)

## 129.9 class MongoSessionMBS

### 129.9.1 class MongoSessionMBS

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for organizing a transaction session.

### 129.9.2 Blog Entries

- News from the MBS Xojo Plugins Version 22.5
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5
- MBS Xojo Plugins, version 22.5pr1

### 129.9.3 Blog Entries

- News from the MBS Xojo Plugins Version 22.5
- MonkeyBread Software Releases the MBS Xojo Plugins in version 22.5
- MBS Xojo Plugins, version 22.5pr1

### 129.9.4 Methods

### 129.9.5 AbortTransaction

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Abort a multi-document transaction.
**Example:**

```
Dim Client as MongoClientMBS // your connection
Dim Collection as MongoClientMBS // your collection

// count before
Dim count1 As Integer = Collection.EstimatedDocumentCount

Dim session As New MongoSessionMBS(Client)
session.StartTransaction

Dim NewRecord As New JSONItem

NewRecord.Value("firstName") = "Bob"
NewRecord.Value("lastName") = "Jones"
```

```
NewRecord.Value("phone") = "555-1234-567"

Dim Result As String = Collection.InsertOne(NewRecord.toString)

// should be count1 + 1
Dim count2 As Integer = Collection.EstimatedDocumentCount

details.Text = result

session.AbortTransaction
Dim count3 As Integer = Collection.EstimatedDocumentCount
// should be back to count1

Break // see in debugger
```

**Notes:** Raises exception if there are invalid arguments, such as a session with no transaction in progress. Network or server errors are ignored.

### 129.9.6 CommitTransaction as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Commit a multi-document transaction.
**Example:**

```
Dim Client as MongoClientMBS // your connection
Dim Collection as MongoClientMBS // your collection

Dim session As New MongoSessionMBS(Client)

session.StartTransaction

Dim NewRecord As New JSONItem

NewRecord.Value("firstName") = "Bob"
NewRecord.Value("lastName") = "Jones"
NewRecord.Value("phone") = "555-1234-567"

Dim Result As String = Collection.InsertOne(NewRecord.toString)
Break // see in debugger
```

**Notes:** Returns JSON if the transaction was committed. Raises exception if there are invalid arguments, such as a session with no transaction in progress, or if there is a server or network error.

### 129.9.7 Constructor(client as MongoClientMBS)

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Create a session for a sequence of operations.

### 129.9.8 StartTransaction

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Start a multi-document transaction for all following operations in this session.
**Notes:**

The transaction must be completed with CommitTransaction or AbortTransaction. An in-progress transaction is automatically aborted by destructor.

Raises exception if there are invalid arguments, such as a session with a transaction already in progress.

If you run MongoDB server locally, you may need to configure a replication. Otherwise you get an error like this: "Error 17:20: Transaction numbers are only allowed on a replica set member or mongos".

### 129.9.9 Properties

### 129.9.10 Client as Variant

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The reference to the client object.
**Notes:** (Read only property)

### 129.9.11 ClusterTime as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the session's clusterTime, as a JSON document.
**Notes:**

If the session has not been used for any operation and you have not called AdvanceClusterTime, then the returned value is NULL.
(Read only property)

### 129.9.12 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.9.13 InTransaction as Boolean

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Check whether a multi-document transaction is in progress for this session.
**Notes:**

Returns true if a transaction was started and has not been committed or aborted, otherwise false.
(Read only property)

### 129.9.14 ServerID as UInt32

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the "server ID" of the mongos this session is pinned to.
**Notes:**

A server ID or 0 if this session is not pinned.
(Read only property)

### 129.9.15 SessionID as String

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the server-side "logical session ID" associated with this session as a JSON document.
**Notes:** (Read only property)

### 129.9.16 TransactionState as Integer

MBS MongoDB Plugin, Plugin Version: 22.5, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the current transaction state for this session.
**Notes:**

See transaction* constants.
(Read only property)

### 129.9.17 Constants

### 129.9.18 TransactionAborted = 4

MBS MongoDB Plugin, Plugin Version: 22.5.

**Function:** One of the transaction state constants.
**Notes:** Aborted

### 129.9.19 TransactionCommitted = 3

MBS MongoDB Plugin, Plugin Version: 22.5.

**Function:** One of the transaction state constants.
**Notes:** Committed

### 129.9.20 TransactionInProgress = 2

MBS MongoDB Plugin, Plugin Version: 22.5.

**Function:** One of the transaction state constants.
**Notes:** In Progress

### 129.9.21 TransactionNone = 0

MBS MongoDB Plugin, Plugin Version: 22.5.

**Function:** One of the transaction state constants.
**Notes:** Not yet initialized.

### 129.9.22 TransactionStarting = 1

MBS MongoDB Plugin, Plugin Version: 22.5.

**Function:** One of the transaction state constants.
**Notes:** Starting transaction

## 129.10 class MongoURIMBS

### 129.10.1 class MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** MongoURIMBS provides an abstraction on top of the MongoDB connection URI format.
**Example:**

```
Dim URL As String = "mongodb://myuser:mypass@localhost/"
Dim URI As New MongoURIMBS(URL)

MessageBox URI.URI
```

**Notes:** It provides standardized parsing as well as convenience methods for extracting useful information such as replica hosts or authorization information.

### 129.10.2 Blog Entries

- MBS Xojo Plugins, version 22.3pr2

### 129.10.5 Xojo Developer Magazine

- 21.1, pages 94 to 95

### 129.10.6 Methods

### 129.10.7 Constructor(URI as String)

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Parses a string containing a MongoDB style URI connection string.
**Example:**

```
dim URL as string = "mongodb://localhost/"
dim URI as new MongoURIMBS(URI)

MessageBox URI.URI
```

**Notes:**

Raises a MongoExceptionMBS in case of a parsing error.
Examples of some valid MongoDB connection strings can be seen below.

- "mongodb://localhost/"
- "mongodb://localhost/?replicaSet=myreplset"
- "mongodb://myuser:mypass@localhost/"
- "mongodb://kerberosuser% 40EXAMPLE.COM@example.com/?authMechanism=GSSAPI"
- "mongodb:// [ ::1 ] :27017/"
- "mongodb://10.0.0.1:27017,10.0.0.1:27018, [ ::1 ] :27019/?tls=true"
- "mongodb://% 2Ftmp% 2Fmongodb-27017.sock"
- "mongodb://user:pass@% 2Ftmp% 2Fmongodb-27017.sock"
- "mongodb://localhost, [ ::1 ] /mydb?authSource=mydb"

### 129.10.8 Copy as MongoURIMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Copies the entire contents of a URI.

### 129.10.9 Properties

### 129.10.10 AuthMechanism as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Authentication mechanism.
**Notes:**

Sets the ,ÄúauthMechanism,Äù URI option, such as ,ÄúSCRAM-SHA-1,Äù or ,ÄúGSSAPI,Äù, after the URI has been parsed from a string.
Updates the option in-place if already set, otherwise appends it to the URI,Äôs of options.
(Read and Write property)

### 129.10.11 AuthSource as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Authentication source.
**Notes:**

Sets the ,ÄúauthSource,Äù URI option, after the URI has been parsed from a string.
Updates the option in-place if already set, otherwise appends it to the URI,Äôs options.
(Read and Write property)

### 129.10.12 Compressors as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Gets or sets compressors to use.
**Notes:**

Sets the URI,Äôs compressors, after the URI has been parsed from a string. Will overwrite any previously set value.

Value is a text consisting of one or more comma (,) separated compressors (e.g. ,Äúsnappy,zlib,Äù) or "".
Passing "" clears any existing compressors set on uri.
(Read and Write property)

### 129.10.13 DatabaseName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the database portion of an URI if provided.
**Notes:**

This is the portion after the / but before the ?.

Sets the URI's database, after the URI has been parsed from a string.

The driver authenticates to this database if the connection string includes authentication credentials. This database is used when you open the default database with DefaultDatabase function.
(Read and Write property)

### 129.10.14 Handle as Integer

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 129.10.15 Hosts as MongoHostListMBS

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches a linked list of hosts that were defined in the URI (the comma-separated host section).
**Notes:** (Read only property)

### 129.10.16 Options as String

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the options from the URL.
**Notes:**

Fetches a JSON document containing all of the options provided after the ? of a URI.
Can be empty if not set.
(Read only property)

### 129.10.17 Password as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the password portion of an URI.
**Example:**

```
Dim URL As String = "mongodb://myuser:mypass@localhost/"
Dim URI As New MongoURIMBS(URL)

MessageBox URI.Password
```

**Notes:** (Read and Write property)

### 129.10.18 ServiceHostName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the hostname for the service.
**Notes:** (Read only property)

### 129.10.19 ServiceName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the service name.
**Notes:** (Read only property)

### 129.10.20 TLS as Boolean

MBS MongoDB Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether this connection is set to be encrypted.
**Notes:**

Fetches a boolean indicating if TLS was specified for use in the URI.

Returns a boolean, true indicating that TLS should be used. This returns true if any TLS option is specified. (Read only property)

### 129.10.21 URI as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the URI as a string.
**Example:**

```
dim URL as string = "mongodb://localhost/"
dim URI as new MongoURIMBS(URL)

MessageBox URI.URI
```

**Notes:** (Read only property)

### 129.10.22 UserName as String

MBS MongoDB Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Fetches the username portion of a URI.
**Example:**

```
dim URL as string = "mongodb://myuser:mypass@localhost/"
dim URI as new MongoURIMBS(URL)

MessageBox URI.UserName+EndOfLine+uri.Password
```

**Notes:** (Read and Write property)

### 129.10.23 Constants

### 129.10.24 DefaultPort = 27017

MBS MongoDB Plugin, Plugin Version: 22.3.

**Function:** The default port number.

# Chapter 130

# Navigation

## 130.1 class NSOpenPanelMBS

### 130.1.1 class NSOpenPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The class for the Cocoa Open Panel.
**Notes:** Subclass of the NSSavePanelMBS class.

### 130.1.4 Methods

### 130.1.5 beginForDirectory(path as folderitem, name as string, filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Presents a modeless Open panel.
**Notes:**

path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in absoluteDirectoryPath that is selected when the Open panel is presented to the user. When nil, no file is initially selected.

fileTypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in path selectable by the user.

This method will later called the savePanelDidEnd event.

### 130.1.6 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as DesktopWindow)

MBS MacCocoa Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

**Function:** Presents a sheet Open panel on a given window.
**Notes:**

path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in path that is selected when the Open panel is presented to the user. When "",

no file is initially selected.

filetypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in absoluteDirectoryPath selectable by the user.

targetWindow:
Window to open the sheet on.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 130.1.7 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as window) 20911

### 130.1.7 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Presents a sheet Open panel on a given window.
**Notes:**

path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in path that is selected when the Open panel is presented to the user. When "", no file is initially selected.

filetypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in absoluteDirectoryPath selectable by the user.

targetWindow:
Window to open the sheet on.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 130.1.6 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as DesktopWindow) 20910

### 130.1.8 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The constructor which initializes the panel with default values.

### 130.1.9 Files as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries all folderitems.
See also:

- 130.1.10 Files(index as UInt32) as folderitem 20912

### 130.1.10 Files(index as UInt32) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The array of files.
**Notes:** Index is zero based.
See also:

- 130.1.9 Files as FolderItem() 20912

### 130.1.11 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A convenience version of the runModalForDirectory function which passes one filetype instead of an array of file types.
**Notes:** See NSCancelButton and NSOkButton constants for return values.
See also:

- 130.1.12 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer 20913

### 130.1.12 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Runs the panel as a modal dialog with the given filetypes.
**Notes:**

path is the directory to use as a start point. Pass nil to use the last directory which has been used.

filetypes:
The filetypes you want to allow.

See NSCancelButton and NSOkButton constants for return values.
See also:

- 130.1.11 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer 20912

### 130.1.13 runModalForTypes(filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A convenience version of the runModalForTypes function which passes one filetype instead of an array of file types.
**Example:**

```
Dim dlg As New NSOpenPanelMBS
Dim iResult as Integer = dlg.runModalForTypes("jpg")
```

**Notes:** See NSCancelButton and NSOkButton constants for return values.
See also:

- 130.1.14 runModalForTypes(filetypes() as string) as Integer 20913

### 130.1.14 runModalForTypes(filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Runs the panel as a modal dialog with the given filetypes.
**Example:**

```
Dim dlg As New NSOpenPanelMBS
dim types() as string = array("jpg", "tif")
Dim iResult as Integer = dlg.runModalForTypes(types)
```

**Notes:** See NSCancelButton and NSOkButton constants for return values.
See also:

- 130.1.13 runModalForTypes(filetypes as string) as Integer 20913

### 130.1.15 URL(index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The array of file URLs.
**Notes:** Index is zero based.

### 130.1.16 URLs as String()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries all URLs.

### 130.1.17 Properties

### 130.1.18 AccessoryViewDisclosed as Boolean

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that indicates whether the panel's accessory view is visible.
**Notes:**

The value of this property is true when the accessory view is visible, and false when it isn't. Setting the value of this property programmatically changes the visibility of the accessory panel. If no accessory panel is present, setting this property does nothing.
(Read and Write property)

### 130.1.19 allowsMultipleSelection as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the panel's browser allows the user to open multiple files (and directories) at a time.
**Notes:** (Read and Write property)

### 130.1.20 canChooseDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the user can select directories in the pane's browser.
**Notes:**

When a directory is selected, the OK button is enabled only if flag is true.
(Read and Write property)

### 130.1.21 canChooseFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the panel allows the user to choose files to open.
**Notes:** (Read and Write property)

### 130.1.22 canDownloadUbiquitousContents as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Controls how the receiver responds to ubiquitous documents that aren't yet fully downloaded locally.
**Notes:**

If true, then the receiver will disallow opening non-local ubiquitous files. Also, if the user attempts to select a non-local file, the receiver will trigger or reprioritize downloading for that file so that it can be opened as soon as possible. If false, then the receiver will allow the user to select and open non-local files, giving your application responsibility for downloading and reporting progress. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and download the file's contents (with NSFileCoordinator) and show downloading progress (with NSProgress or NSMetadataQuery) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

### 130.1.23 canResolveUbiquitousConflicts as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

**Function:** Controls how the receiver responds to ubiquitous documents with conflicting versions.
**Notes:**

If true, then when the user attempts to open one or more documents with conflicts, the receiver will first display conflict resolution UI, requiring the user to resolve those conflicts before the documents can be opened. If false, then the receiver does nothing in response to conflicts, allowing your application to handle them. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and do conflict detection and resolution (using NSURLUbiquitousItemHasUnresolvedConflictsKey and NSFileVersion) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

### 130.1.24 FilesCount as UInt32

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The number of selected files.
**Notes:** (Read only property)

### 130.1.25 resolvesAliases as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the receiver resolves aliases.
**Notes:**

If true, the effect is that dropping an alias on the panel or asking for filenames returns the resolved aliases. The default is true.
(Read and Write property)

## 130.2 class NSSavePanelMBS

### 130.2.1 class NSSavePanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The class for a Cocoa Save Panel.
**Example:**

```
dim n as new NSSavePanelMBS

dim e as integer = n.runModal

if e = n.NSCancelButton then
// cancelled
Break
elseif e = n.NSOKButton then
// got file
dim file as FolderItem = n.file
Break
end if
```

**Notes:** Subclass of the NSPanelMBS class.

### 130.2.6 Methods

### 130.2.7 allowedFileTypes as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of the allowed file types.
**Notes:**

If the user specifies a file whose type is in the array of allowed types, the user is not presented with another dialog (see allowsOtherFileTypes for details about this dialog) when trying to save. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this attribute. A nil return value, which is the default, indicates that the user can save to any ASCII file.

Available in Mac OS X v10.3 and later.

### 130.2.8 beginSheetForDirectory(path as folderitem, name as string, targetWindow as DesktopWindow)

MBS MacCocoa Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

**Function:** Presents a Save panel as a sheet with the directory specified by path and optionally, the file specified by name selected.
**Notes:**

If targetWindow is nil, the panel will be a modal dialog.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 130.2.9 beginSheetForDirectory(path as folderitem, name as string, targetWindow as window) 20919

### 130.2.9 beginSheetForDirectory(path as folderitem, name as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Presents a Save panel as a sheet with the directory specified by path and optionally, the file specified by name selected.
**Notes:**

If targetWindow is nil, the panel will be a modal dialog.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.
See also:

- 130.2.8 beginSheetForDirectory(path as folderitem, name as string, targetWindow as DesktopWindow) 20919

### 130.2.10 Cancel

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** You can cancel the dialog using this method.

### 130.2.11 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The constructor which initializes the panel with default values.

### 130.2.12 File as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The file currently shown in the panel.
**Notes:** May be nil.

### 130.2.13 FileTypeForHFSType(hfstype as string) as string

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns a string encoding a file type code.
**Example:**

```
dim n as new NSSavePanelMBS

MsgBox n.FileTypeForHFSType("TEXT") // shows 'TEXT'
```

**Notes:** When using Mac Type codes, you need to use this function to convert them in a string the file manager understands.

### 130.2.14 HideNSNavNodePopUpButton

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

**Function:** Hides the nagivation popup menu.
**Notes:** This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.

### 130.2.15 Ok

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** You can click ok in the dialog using this method.

### 130.2.16 runModal as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Displays the panel and begins its event loop with the current working (or last selected) directory as the default starting point.
**Example:**

```
dim n as new NSSavePanelMBS

dim e as integer = n.runModal

if e = n.NSCancelButton then
// cancelled
Break
elseif e = n.NSOKButton then
// got file
dim file as FolderItem = n.file
Break
end if
```

**Notes:** Returns NSOKButton or NSCancelButton or -1 on any error.

### 130.2.17 runModalForDirectory(path as folderitem, name as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Initializes the panel to the directory specified by path and, optionally, the file specified by filename, then displays it and begins its modal event loop; path and filename can be empty strings.
**Notes:**

If path is nil, the previous directory the Save panel was in is used.
See NSCancelButton and NSOkButton constants for return values.

### 130.2.18 setAllowedFileTypes(filetype as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A convenience method for setAllowedFileTypes with only one file type.
See also:

• 130.2.19 setAllowedFileTypes(filetypes() as string) 20922

### 130.2.19 setAllowedFileTypes(filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the allowed file types.
**Notes:** A file type is an extension to be appended to any selected files that don't already have that extension; "nib" and "rtf" are examples. The items in types should not include the period that begins the extension. File type strings encoding HFS file types are not valid values. Pass an empty array, to allow any file type, which is the default.
See also:

• 130.2.18 setAllowedFileTypes(filetype as string) 20921

### 130.2.20 setTagNames(tagNames() as string)

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

**Function:** Sets the tag names that you want to include on a saved file.
**Example:**

```
dim n as new NSSavePanelMBS
n.showsTagField = true
n.setTagNames array("test")
```

**Notes:** When the value of showsTagField is true, use this property to provide an array of strings that represent the initial tag names to display in the panel. If you set the property to nil or an empty array, the panel displays no initial tag names.

### 130.2.21 tagNames as string()

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

**Function:** The tag names that you want to include on a saved file.
**Notes:** When the value of showsTagField is true, use this property to provide an array of strings that represent the initial tag names to display in the panel. If you set the property to nil or an empty array, the panel displays no initial tag names.

### 130.2.22 validateVisibleColumns

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Validates and possibly reloads the browser columns visible in the receiver by invoking the delegate method shouldShowFilename.
**Notes:** You might use this method if you want the browser to only allow selection of files with certain extensions based on the selection made in an accessory-view pop-up list. When the user changes the selection, you would invoke this method to revalidate the visible columns.

### 130.2.23 Properties

### 130.2.24 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The custom accessory view for the current application.
**Notes:**

You can place any Cocoa control on that panel.
(Read and Write property)

### 130.2.25 allowsOtherFileTypes as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that indicates whether the receiver allows the user to save files with an extension that's not in the list of allowed types.
**Notes:**

If the user tries to save a filename with a recognized extension that's not in the list of allowed types they are presented with a dialog. If this property is true, then the dialog presents the option of using the extension the user specified.

The default setting is false.
(Read and Write property)

### 130.2.26 canCreateDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the receiver allows the user to create directories.
**Notes:** (Read and Write property)

### 130.2.27 canSelectHiddenExtension as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that indicates whether the receiver allows the user to hide or show extensions.
**Notes:** (Read and Write property)

### 130.2.28 Directory as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The path of the directory currently shown in the panel.
**Notes:**

May be nil on any error.
(Read and Write property)

### 130.2.29 directoryURL as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The directory shown in the panel as a URL.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 130.2.30 isExpanded as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the panel is expanded.
**Notes:** (Read only property)

### 130.2.31 isExtensionHidden as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** Whether the extension-hiding checkbox is visible and checked.
**Notes:**

True to show the checkbox and false to hide.
(Read and Write property)

### 130.2.32 Message as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The message displayed in the panel.
**Notes:**

The default message text is an empty string.
(Read and Write property)

### 130.2.33 NameFieldLabel as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The string displayed in front of the filename text field.
**Notes:**

By default the label is "Save As:".
(Read and Write property)

### 130.2.34 nameFieldStringValue as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The user-editable filename currently shown in the name field.
**Notes:**

Available in Mac OS X v10.6 and later.
(Read and Write property)

### 130.2.35 Prompt as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The prompt of the default button.
**Notes:**

This prompt appears on all SavePanel objects (or all OpenPanel objects if the panel of this message is an NSOpenPanel instance) in your application. By default the text in the default button is "Open" for an Open panel and "Save" for a Save panel.

It is intended that short words or phrases, such as "Open", "Save", "Set", or "Choose", be used on the button. The button is not resized to accommodate long prompts.

Since this method previously affected a title field, any colon at the end of prompt is removed.
(Read and Write property)

### 130.2.36 requiredFileType as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The required file type (if any).
**Notes:**

A file specified in the Save panel is saved with the designated filename and this file type as an extension. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this attribute. An "" return value indicates that the user can save to any ASCII file.

This method is equivalent to calling allowedFileTypes and returning the first element of the list of allowed types, or "" if there are none.
(Read and Write property)

### 130.2.37 showsHiddenFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether to show or hide the invisible files.
**Notes:**

This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.
(Read and Write property)

### 130.2.38 showsTagField as Boolean

MBS MacCocoa Plugin, Plugin Version: 23.0, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that indicates whether the panel displays the Tags field.
**Example:**

```
dim n as new NSSavePanelMBS
n.showsTagField = true
n.setTagNames array("test")
```

**Notes:**

When the value of this property is true, the panel displays the Tags field; if NO, the panel doesn,Äôt display the Tags field. The default value is true. (Note that the Tags field is appropriate only in a Save panel.)
If you set this property to true, you are responsible for setting tag names on the resulting file after saving is complete. If you don,Äôt set this property, macOS will automatically show the tag field and attempt to apply the tags to the file. To set tags on files, use the NSURLTagNamesKey.
(Read and Write property)

### 130.2.39 Title as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** The title of the panel.
**Notes:** (Read and Write property)

### 130.2.40 treatsFilePackagesAsDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that indicates whether the panel displays file packages to the user as directories.
**Notes:** (Read and Write property)

### 130.2.41 Events

### 130.2.42 compareFilename(name1 as string, name2 as string, caseSensitive as boolean) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Controls the ordering of files presented by the NSSavePanel.
**Notes:**

If this event has no code, the default behavior is used.

The caseSensitive argument, if true, indicates that the ordering is to be case-sensitive.

Don't reorder filenames in the Save panel without good reason, because it may confuse the user to have files in one Save panel or Open panel ordered differently than those in other such panels or in the Finder. The default behavior of Save and Open panels is to order files as they appear in the Finder. Note also that by implementing this method you will reduce the operating performance of the panel.

Constants:
const NSOrderedAscending=-1 // The left operand is smaller than the right operand.
const NSOrderedSame=0 // The two operands are equal.
const NSOrderedDescending=1 // The left operand is greater than the right operand.

### 130.2.43 directoryDidChange(path as string, folder as folderitem)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Sent when the user has changed the selected directory in the panel.
**Notes:** If this event has no code, the default behavior is used.

### 130.2.44 isValidFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Gives the delegate the opportunity to validate selected items.
**Notes:**

If this event has no code, the default behavior is used.

The NSSavePanel object sender sends this event just before the end of a modal session for each filename displayed or selected (including filenames in multiple selections). The event determines whether it wants the file identified by filename; it returns true if the filename is valid, or false if the save panel should stay in its modal loop and wait for the user to type in or select a different filename or names. If the event refuses a filename in a multiple selection, none of the filenames in the selection is accepted.

### 130.2.45 panelSelectionDidChange

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** The event called whenever the selection changed in the dialog.
**Notes:** If this event has no code, the default behavior is used.

### 130.2.46 savePanelDidEnd(ReturnCode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** The save panel finished in sheet mode.
**Notes:** Returncode is NSOKButton or NSCancelButton.

### 130.2.47 shouldShowFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Gives the delegate the opportunity to filter items that it doesn't want the user to choose.
**Notes:**

If this event has no code, the default behavior is used.

The NSSavePanel sends this event for each file or directory (filename) it is about to load in the browser. The delegate returns true if filename should be selectable, and false if the save panel should disable the file or directory.

### 130.2.48 userEnteredFilename(filename as string, confirmed as boolean) as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Sent when the user confirms a filename choice by hitting OK or Return in the NSSavePanel.
**Notes:**

You can either leave the filename alone, return a new filename, or return "" to cancel the save (and leave the Save panel as is). This method is sent before any required extension is appended to the filename and before the Save panel asks the user whether to replace an existing file.

Note that in the future, this method may be called multiple times in the sessions as the user types. In those cases, okFlag will be false until the user confirms the choice, in which case okFlag will become true. If the delegate does extensive validation or puts up alerts, it should do so only when okFlag is true.

If this event has no code, the default behavior is used.

### 130.2.49 willExpand(expanding as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

**Function:** Sent when the NSSavePanel is about to expand or collapse because the user clicked the disclosure triangle that displays or hides the file browser.
**Notes:** If this event has no code, the default behavior is used.

### 130.2.50 Constants

### 130.2.51 NSCancelButton = 0

MBS MacCocoa Plugin, Plugin Version: 7.8.

**Function:** One of the result codes you may need with this class.

### 130.2.52 NSOKButton = 1

MBS MacCocoa Plugin, Plugin Version: 7.8.

**Function:** One of the result codes you may need with this class.

## 130.3 class OpenDialogFileTypeMBS

### 130.3.1 class OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A class for a file type for the OpenDialog class.
**Notes:** For Cocoa, only the type field is used and can be an UTI or file extension.

### 130.3.2 Methods

### 130.3.3 Close

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 130.3.4 Properties

### 130.3.5 Extension as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The extension for this filetype.
**Notes:**

Currently this value is only used on Windows.
Value e.g. "*.TXT" or "*.TXT;*.BMP".

Use a value like "*.TXT" or to match multiple types, list multiple extensions separated by semicolons like this: "*.TXT;*.BMP".

With version 8.2, we use extensions also for MacOS.
(Read and Write property)

### 130.3.6 Name as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The name of this file type.
**Notes:**

Currently this value is only used on Windows.
(Read and Write property)

### 130.3.7 Type as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The Mac OS type code for this file type.
**Notes:**

Currently this value is only used on Mac OS.
And check the documenation on the Navigation Manager if you use it as you will need a KIND Resource for this.

For Cocoa, only the type field is used and can be an UTI or file extension.
(Read and Write property)

## 130.4 class OpenDialogItemMBS

### 130.4.1 class OpenDialogItemMBS

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The class for an item selected via open dialog.
**Notes:** Currently only used for Windows.

### 130.4.2 Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0r7

### 130.4.3 Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0r7

### 130.4.4 Methods

### 130.4.5 ReadData as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Reads the data.
**Notes:** We try to get a stream for the data from Windows and then read all available data.

### 130.4.6 Properties

### 130.4.7 Handle as Integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The internal object handle.
**Notes:**

Points to an IShellItem object.
(Read and Write property)

### 130.4.8 Name as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The display name of the file.
**Notes:** (Read and Write property)

### 130.4.9 Path as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The file path of the file.
**Notes:**

Not available for virtual files.
(Read and Write property)

### 130.4.10 URL as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The URL of the file.
**Notes:**

Not available for virtual files.
(Read and Write property)

## 130.5 class OpenDialogMBS

### 130.5.1 class OpenDialogMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** A class for a multiple selection open dialog.
**Example:**

```
dim o as OpenDialogMBS
dim i,c as Integer
dim f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.ShowDialog

c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next

else
// MsgBox "no file was selected."
quit
end if
```

**Notes:** OpenDialogMBS does not yet use NSOpenPanel yet. So for Cocoa applications you can use NSOpenPanelMBS class directly. For the Mac App Store, you must use NSOpenPanelMBS and avoid OpenDialogMBS.

### 130.5.6 Methods

### 130.5.7 AddType(t as OpenDialogFileTypeMBS)

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Adds a file type to the list.

### 130.5.8 ClearTypes

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Clears the file type list.

### 130.5.9 CountTypes as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the number of file types in the file type list.

### 130.5.10 Files as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries an array with all files picked.
See also:

- 130.5.11 Files(index as Integer) as folderitem 20937

### 130.5.11 Files(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The array with the selected files.
**Notes:** Index goes from 0 to filecount-1.
See also:

- 130.5.10 Files as FolderItem() 20937

### 130.5.12 GetCustomImageHeight as Integer

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

**Function:** Returns the heigh of the custom picture in pixels.
**Example:**

```
dim o as new OpenDialogMBS
msgbox "GetCustomImageHeight: "+str(o.GetCustomImageHeight) // could show 72 as value.
```

**Notes:**

The height depends on the size of the Windows system font, so it's variable and this function calculates the size for you.

Returns 0 on any error.

### 130.5.13 GetType(index as Integer) as OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Returns the file type with the given index.
**Notes:** Returns nil on any error.

### 130.5.14 Items as OpenDialogItemMBS()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries items picked.
**Notes:** Currently only provided for Windows to get name, path, URL or data for items, which may not always have a file path.

### 130.5.15 RefreshCustomImage

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

**Function:** Call this method after you set the custompicture property to update the window.
**Notes:** The control is asked to redraw and will use the CustomPicture property for the picture content. Space around is colored with window background color.

### 130.5.16 ShowDialog

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Shows the dialog.
**Example:**

```
dim o as new OpenDialogMBS
o.ShowDialog
```

**Notes:** Check the FileCount property to see whether something was selected.

### 130.5.17 Properties

### 130.5.18 accessoryView as Variant

MBS Util Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

**Function:** Customizes the panel for the application by adding a custom view to the panel.
**Notes:**

Only for Cocoa target. Must be a NSViewMBS or subclass.

The custom object that is added appears just above the OK and Cancel buttons at the bottom of the panel. The open panel automatically resizes itself to accommodate the view. You can invoke this method repeatedly to change the accessory view as needed. If view is nil, the panel removes the current accessory view.
(Read and Write property)

### 130.5.19 ActionButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The label of the action button.
**Example:**

```
dim o as new OpenDialogMBS

o.ActionButtonLabel = "Hello"
o.ShowDialog
```

**Notes:**

Used only on Mac OS.
For RB 4.5 and earlier you need to make sure the encoding is set correctly.
Can be set to "" to use the default value.
(Read and Write property)

### 130.5.20 AllowFolderSelection as Boolean

MBS Util Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether folders can be selected.
**Example:**

```
dim o as OpenDialogMBS
dim i,c as Integer
dim f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files/folders:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files/folders"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.AllowFolderSelection=true
o.ShowDialog

c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next
end if
```

**Notes:**

Default is false.
Setting this to true on Windows or Linux has no effect there.
(Read and Write property)

### 130.5.21 CancelButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The text for the cancel button.
**Example:**

```
dim o as new OpenDialogMBS

o.CancelButtonLabel = "Hello"
o.ShowDialog
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

### 130.5.22 ClientName as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The name of the client.
**Example:**

```
dim o as new OpenDialogMBS
o.ClientName = "Hello"
o.ShowDialog
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

### 130.5.23 Creator as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The creator code of your application.
**Notes:**

This property is only used Mac OS if you specify one or more file types.
(Read and Write property)

### 130.5.24 CustomPicture as Picture

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

**Function:** The custom picture content.
**Notes:**

You need to call RefreshCustomImage to refresh the picture visible to the user.
(Read and Write property)

### 130.5.25 File as FolderItem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The first file selected.
**Example:**

```
dim o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog

MsgBox o.File.displaypathmbs
```

**Notes:**

file = files(0)
Just for the cases where you only need the first file.
(Read only property)

### 130.5.26 FileCount as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The number of files selected.
**Example:**

```
dim o as new OpenDialogMBS
```

```
o.MultipleSelection = true
o.ShowDialog

MsgBox str(o.FileCount)
```

**Notes:** (Read only property)

### 130.5.27 InitialDirectory as FolderItem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The initial directory.
**Example:**

```
dim o as new OpenDialogMBS
o.InitialDirectory = SpecialFolder.Desktop
o.ShowDialog
```

**Notes:**

Set to nil to get the last directory used.
(Read and Write property)

### 130.5.28 Lasterror as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The last error code reported.
**Notes:** (Read and Write property)

### 130.5.29 Left as Integer

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The horizontal position of the dialog.
**Notes:**

-1 is for the default position.
Used only on the Mac side.
(Read and Write property)

### 130.5.30 MultipleSelection as Boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether you want to allow multiple file selection.
**Example:**

```
dim o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog
```

**Notes:** (Read and Write property)

### 130.5.31 ParentWindow as Variant

MBS Util Plugin, Plugin Version: 6.3, Platforms: Linux, Windows, Targets: Desktop only.

**Function:** The parent window of the dialog.
**Example:**

```
dim o as new OpenDialogMBS
o.ParentWindow = window1
o.ShowDialog
```

**Notes:**

Only implemented for Windows and Linux.
Can reference a Window or DesktopWindow object.
(Read and Write property)

### 130.5.32 PromptText as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The prompt text.
**Example:**

```
dim o as new OpenDialogMBS

o.PromptText = "Hello"
o.ShowDialog
```

**Notes:**

For RB 4.5 and earlier you need to make sure the encoding is set correctly.
Can be set to "" to use the default value.
(Read and Write property)

### 130.5.33 ResolveAliases as Boolean

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether aliases should be resolved.
**Example:**

```
dim o as new OpenDialogMBS
o.ResolveAliases = false
o.ShowDialog
```

**Notes:**

This property is only used on Mac OS X.
Default is true.

Flag seems to be broken on Mac OS X 10.7.
(Read and Write property)

### 130.5.34 ShowHiddenFiles as Boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Whether hidden files should be shown.
**Example:**

```
dim o as new OpenDialogMBS
o.ShowHiddenFiles = true
o.ShowDialog
```

**Notes:**

Default is false.
(Read and Write property)

### 130.5.35 Top as Integer

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

**Function:** The vertical position of the dialog.
**Notes:**

-1 is for the default position.
Used only on the Mac side.
(Read and Write property)

### 130.5.36 TreatFilePackagesAsDirectories as Boolean

MBS Util Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

**Function:** Sets the panel's behavior for displaying file packages (for example, MyApp.app) to the user.
**Notes:**

If true, the panel will display file packages as directories; if false, it will not.
(Read and Write property)

### 130.5.37 UseCustomPicture as Integer

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

**Function:** Whether to add a custom picture control.
**Notes:**

Specify the size of the area you want. As the size is relative to the font size of the system font on windows, the results can be interesting. For example a value of 50 gives here a 72 pixel height area. Value can be from 1 to 100. Or zero to disable.

This method was added for a client who needed to show a small preview of a project file in the open dialog on Windows.
For Mac OS X you can use the NSSavePanelMBS/NSOpenPanelMBS with an accessory view.
(Read and Write property)

### 130.5.38 WindowTitle as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** The window title to use.
**Example:**

```
dim o as new OpenDialogMBS

o.WindowTitle = "Hello World"
o.ShowDialog
```

**Notes:**

Can be set to "" to use the default value.
Not shown on MacOS.
(Read and Write property)

### 130.5.39 Events

### 130.5.40 FilterItem(file as folderitem, filterMode as Integer) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: .

**Function:** An event where you can filter the file list.
**Notes:**

Return true to disable the file.
The result of the event is ignored by Windows. But on Mac OS it works.
So use the event on Mac and the filetype objects on Windows.

### 130.5.41 SelectionChanged(file as folderitem)

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: .

**Function:** Called when the selection changes in the window.
**Notes:** This is currently only implemented for Windows and gives you only one file name.

## 130.6 class UIDocumentPickerMBS

### 130.6.1 class UIDocumentPickerMBS

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** A view controller that provides access to documents or destinations outside your app,Äôs sandbox.
**Notes:**

Use a document picker view controller to select a document to open or export, and optionally copy. Don,Äôt copy the document if you can avoid it. The document picker operates in two modes:

Open a document. The user selects a document. The document picker provides access to the document, and the user can edit the document in place. Optionally, you can specify that the document picker makes a copy of the document, leaving the original unchanged.

Export a local document. The user selects a destination. The document picker moves the document, and the user can access it and edit it in place. Optionally, you can specify that the document picker makes a copy of the document, leaving the original unchanged.

Working with External Documents
Both the open and export operations grant access to documents outside your app,Äôs sandbox. This access gives users an unprecedented amount of flexibility when working with their documents. However, it also adds a layer of complexity to your file handling. External documents have the following additional requirements: The open and move operations provide security-scoped URLs for all external documents. Call the startAccessingSecurityScopedResource method to access or bookmark these documents, and the stopAccessingSecurityScopedResource method to release them (see NSURLMBS class). If you,Äôre using a UIDocument subclass to manage your document, it automatically manages the security-scoped URL for you.

Always use file coordinators (see NSFileCoordinatorMBS) to read and write to external documents.
Always use a file presenter (see NSFilePresenterMBS) when displaying the contents of an external document.

Don,Äôt save URLs that the open and move operations provide. You can, however, save a bookmark to these URLs after calling startAccessingSecurityScopedResource to ensure you have access. Call the bookmarkDataWithOptions method and pass in the NSURLBookmarkCreationWithSecurityScope option, creating a bookmark that contains a security-scoped URL.

For more information about working with external documents, see Providing Access to Directories and Adding a Document Browser to Your App.

### 130.6.2 Blog Entries

- MBS Xojo Plugins, version 22.3pr6
- MBS Xojo Plugins, version 22.3pr5

### 130.6.4 Methods

### 130.6.5 Constructor(Mode as Integer, contentTypesOrURLs() as String, asCopy as Boolean = true)

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** Initializes and a document picker/exporter.
**Notes:**

For Mode = ModeImport or ModeOpen, please pass array of content types. That may be mime types (e.g. "image/jpeg"), file extensions with dot prefix (e.g. ".jpg") or UTIs (e.g. "public.archive"). For iOS 13 and older, please pass only UTIs.

For Mode = ModeExportToService or ModeMoveToService takes in contentTypesOrURLs an array of file URLs to export.

AsCopy defines whether you like to get a copy on import (copied to temp folder) and copies your file for export. This way you can use temporary folders and later delete them when you are done.

### 130.6.6 Destructor

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 130.6.7 Dismiss

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** Dismisses the controller.

### 130.6.8 Present

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** Presents the controller.

### 130.6.9 Properties

### 130.6.10 allowsMultipleSelection as Boolean

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** A Boolean value that determines whether the user can select more than one document at a time.
**Notes:**

By default, this property is false.
(Read and Write property)

### 130.6.11 directoryURL as String

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** The initial directory that the document picker displays.
**Notes:**

Set this property to specify the starting directory for the document picker. This property defaults to "". If you specify a value, the document picker tries to start at the specified directory. Otherwise, it starts with the last directory chosen by the user.
The directoryURL property only returns a value when you explicitly set it. For example, it doesn,Äôt calculate the default URL presented to the user when the property isn,Äôt set.

For a folderItem, please pass URLPath property.
(Read and Write property)

### 130.6.12 documentPickerMode as Integer

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** The type of file transfer operation that the document picker uses.
**Notes:** (Read only property)

### 130.6.13 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 130.6.14 isBeingPresented as Boolean

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** Whether the controller is presented.
**Notes:**

Returns true if the dialog is visible.
(Read only property)

### 130.6.15 shouldShowFileExtensions as Boolean

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: iOS only.

**Function:** A Boolean value that determines whether the browser always shows file extensions.
**Notes:**

The default value is false.
(Read and Write property)

### 130.6.16 Events

### 130.6.17 documentPickerDidPickDocuments(URLs() as String)

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

**Function:** Event called when documents were picked.
**Notes:**

The array may have one or more URLs.

The meaning of the provided URLs varies depending on the document picker,Äôs mode:

Import:
The URLs refer to a copy of the selected documents. These documents are temporary files. They remain available only until your application terminates. To keep a permanent copy, move these files to a permanent location inside your sandbox.

Open:
The URLs refer to the selected documents.

ExportToService:
The URLs refer to new copies of the exported documents at the selected destination.

MoveToService:
The URLs refer to the documents' new locations.
The provided URLs are security-scoped, referring to files outside your app,Äôs sandbox. For more about working with external, security-scoped URLs, see Requirements in the Document Picker Programming Guide.

### 130.6.18 documentPickerWasCancelled

MBS iOS Plugin, Plugin Version: 22.3, Platform: iOS, Targets: .

**Function:** The user canceled the document picker.

### 130.6.19 Constants

### 130.6.20 ModeExportToService = 2

MBS iOS Plugin, Plugin Version: 22.3.

**Function:** The of the types of file transfer operation that the document picker uses.
**Notes:** The document picker exports a local file to a destination outside the app,Äôs sandbox.

### 130.6.21 ModeImport = 0

MBS iOS Plugin, Plugin Version: 22.3.

**Function:** The of the types of file transfer operation that the document picker uses.

**Notes:** The document picker imports a file from outside the app,Äôs sandbox.

### 130.6.22 ModeMoveToService = 3

MBS iOS Plugin, Plugin Version: 22.3.

**Function:** The of the types of file transfer operation that the document picker uses.
**Notes:** The document picker moves a local file outside the app,Äôs sandbox and provides access to it as an external file.

### 130.6.23 ModeOpen = 1

MBS iOS Plugin, Plugin Version: 22.3.

**Function:** The of the types of file transfer operation that the document picker uses.
**Notes:** The document picker opens an external file outside the app,Äôs sandbox.

## 130.7 class WinFileDialogExceptionMBS

### 130.7.1 class WinFileDialogExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for an error exception in our WinFileDialog classes.
**Notes:** Subclass of the RuntimeException class.

### 130.7.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr3
- Customized File Open and Save Dialogs for Windows

## 130.8 class WinFileDialogMBS

### 130.8.1 class WinFileDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for a file dialog.
**Notes:**

All methods may raise WinFileDialogExceptionMBS in case of errors.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 130.8.6 Methods

### 130.8.7 AddCheckButton(ControlID as Integer, label as String, Checked as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a check button (check box) to the dialog.
**Notes:**

ControlID: The ID of the check button to add.
Label: the button text.
Checked: A boolean indicating the current state of the check button. True if checked; false otherwise.

The default state for this control is enabled and visible.

### 130.8.8 AddComboBox(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a combo box to the dialog.
**Notes:**

ControlID: The ID of the combo box to add.

The default state for this control is enabled and visible.

### 130.8.9 AddControlItem(ControlID as Integer, ItemID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds an item to a container control in the dialog.
**Notes:**

ControlID: The ID of the container control to which the item is to be added.
ItemID: The ID of the item.
Label: The item's text, which can be either a label or, in the case of a drop-down list, the item itself.

The default state for this item is enabled and visible. Items in control groups cannot be changed after they have been created, with the exception of their enabled and visible states.
Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

### 130.8.10 AddEditBox(ControlID as Integer, Text as String = "")

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds an edit box control to the dialog.

**Notes:**

ControlID: The ID of the edit box to add.
Text: The default text displayed in the edit box.

The default state for this control is enabled and visible.
To add a label next to the edit box, place it in a visual group with StartVisualGroup.

### 130.8.11 AddMenu(ControlID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a menu to the dialog.
**Notes:**

ControlID: The ID of the menu to add.
Label: The menu name.

The default state for this control is enabled and visible.
To add items to this control, use AddControlItem.

### 130.8.12 AddPlace(Item as WinShellItemMBS, top as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a folder to the list of places available for the user to open or save items.
**Notes:**

Item: the folder to be made available to the user. This can only be a folder.
Top: Specifies where the folder is placed within the list. Pass true for top or false for bottom.

### 130.8.13 AddPushButton(ControlID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a button to the dialog.
**Notes:**

ControlID: The ID of the button to add.
Label: the button text

The default state for this control is enabled and visible..

### 130.8.14 AddRadioButtonList(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds an option button (also known as radio button) group to the dialog.
**Notes:**

ControlID: The ID of the option button group to add.
The default state for this control is enabled and visible.

### 130.8.15 AddSeparator(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds a separator to the dialog, allowing a visual separation of controls.
**Notes:**

ControlID: The control ID of the separator.

The default state for this control is enabled and visible.

### 130.8.16 AddText(ControlID as Integer, Text as String = "")

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Adds text content to the dialog.
**Notes:**

ControlID: The ID of the text to add.
Text: The text to show.

The default state for this control is enabled and visible.

### 130.8.17 ClearClientData

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Instructs the dialog to clear all persisted state information.
**Notes:** Persisted information can be associated with an application or a GUID. If a GUID was set by using SetClientGuid, that GUID is used to clear persisted information.

### 130.8.18 Close(cancel as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Closes the dialog.
**Notes:**

Pass or false/true for cancel parameter to have that being returned by Show method.

An application can call this method from an event while the dialog is open. The dialog will close and the Show method will return with the result given by cancel parameter.

If this method is called, there is no result available for the Result or Results methods, and they will fail if called.

### 130.8.19 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

### 130.8.20 EnableOpenDropDown(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Enables a drop-down list on the Open or Save button in the dialog.
**Notes:**

ControlID: The ID of the drop-down list.

The Open or Save button label takes on the text of the first item in the drop-down. This overrides any label set by OkButtonLabel.
Use AddControlItem to add items to the drop-down.

### 130.8.21 EndVisualGroup

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Stops the addition of elements to a visual group in the dialog.

### 130.8.22 RemoveAllControlItems(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Removes all items from a container control in the dialog.
**Notes:**

ControlID: The ID of the container control from which to remove the items.

Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

### 130.8.23 RemoveControlItem(ControlID as Integer, ItemID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Removes an item from a container control in the dialog.
**Notes:**

ControlID: The ID of the container control from which the item is to be removed.
ItemId: The ID of the item.

Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

### 130.8.24 SetFileTypes(FileTypes() as WinFileTypeMBS)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The file types that the dialog can open or save.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim FileTypes() As WinFileTypeMBS

FileTypes.Append New WinFileTypeMBS("JPEG image", "*.jpg")
FileTypes.Append New WinFileTypeMBS("PNG image", "*.png")
FileTypes.Append New WinFileTypeMBS("Tiff image", "*.tif;*.tiff")

d.SetFileTypes FileTypes
```

**Notes:**

When using the Open dialog, the file types declared there are used to filter the view. When using the Save

dialog, these values determine which file name extension is appended to the file name.
This method must be called before the dialog is shown and can only be called once for each dialog instance.
File types cannot be modified once the Common Item dialog box is displayed.

### 130.8.25 Show as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Launches the modal window.
**Notes:** Returns true on success or false on failure.
See also:

- 130.8.26 Show(parent as DesktopWindow) as Boolean 20961
- 130.8.27 Show(parent as window) as Boolean 20961

### 130.8.26 Show(parent as DesktopWindow) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Launches the modal window.
**Notes:**

parent: The handle of the owner window. This value can be nil.
Returns true on success or false on failure.
See also:

- 130.8.25 Show as Boolean 20961
- 130.8.27 Show(parent as window) as Boolean 20961

### 130.8.27 Show(parent as window) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Launches the modal window.
**Notes:**

parent: The handle of the owner window. This value can be nil.
Returns true on success or false on failure.
See also:

- 130.8.25 Show as Boolean 20961
- 130.8.26 Show(parent as DesktopWindow) as Boolean 20961

### 130.8.28 StartVisualGroup(ControlID as Integer, label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Declares a visual group in the dialog. Subsequent calls to any "add" method add those elements to this group.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog

d.StartVisualGroup 1, "Metadata"
d.AddText 2, "Author:"
d.AddEditBox 3, CustomValue.Text
d.AddText 4, "Subject:"
d.AddEditBox 5, "Hello World"
d.EndVisualGroup
```

**Notes:**

ControlID: The ID of the visual group.
Label: text that appears next to the visual group.

Controls will continue to be added to this visual group until you call EndVisualGroup.
A visual group can be hidden and disabled like any other control, except that doing so affects all of the controls within it. Individual members of the visual group can also be hidden and disabled singly.

### 130.8.29 Properties

### 130.8.30 ClientGuid as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The client GUID.
**Notes:**

A dialog's state can include factors such as the last visited folder and the position and size of the dialog. Typically, this state is persisted based on the name of the executable file. By specifying a GUID, an application can have different persisted states for different versions of the dialog within the same application (for example, an import dialog and an open dialog).

SetClientGuid should be called immediately after creation of the dialog object.

Enables a calling application to associate a GUID with a dialog's persisted state.
(Read and Write property)

### 130.8.31 CurrentSelection as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The user's current selection in the dialog.
**Notes:**

The item currently selected in the dialog. This item can be a file or folder selected in the view window, or something that the user has entered into the dialog's edit box. The latter case may require a parsing operation (cancelable by the user) that blocks the current thread.

If not result exists, the plugin returns nil and raises no failed exceptions.
(Read only property)

### 130.8.32 DefaultExtension as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The default extension to be added to file names.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.DefaultExtension = "jpg"
```

**Notes:**

The extension text. This string should not include a leading period. For example, "jpg" is correct, while ".jpg" is not.

If this method is called before showing the dialog, the dialog will update the default extension automatically when the user chooses a new file type (see SetFileTypes).
(Read and Write property)

### 130.8.33 DefaultFolder as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The folder used as a default if there is not a recently used folder value available.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
```

```
d.DefaultFolder = New WinShellItemMBS(SpecialFolder.Desktop)
```

**Notes:** (Read and Write property)

### 130.8.34 FileName as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The text currently entered in the dialog's File name edit box.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.FileName = "New Document"
```

**Notes:**

The text in the File name edit box does not necessarily reflect the item the user chose. To get the item the user chose, use Result property.

If not result exists, the plugin returns "" and raises no failed exceptions.
(Read and Write property)

### 130.8.35 FileNameLabel as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The text of the label next to the file name edit box.
**Notes:** (Read and Write property)

### 130.8.36 FileTypeIndex as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The currently selected file type.
**Notes:**

The index of the selected file type in the file type array passed to SetFileTypes.

This is a one-based index rather than zero-based.
FileTypeIndex can be called either while the dialog is open or after it has closed.

(Read and Write property)

### 130.8.37 Folder as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** A folder that is always selected when the dialog is opened, regardless of previous user action.
**Notes:**

Gets either the folder currently selected in the dialog, or, if the dialog is not currently displayed, the folder that is to be selected when the dialog is opened.

This folder overrides any "most recently used" folder. If this method is called while the dialog is displayed, it causes the dialog to navigate to the specified folder.
In general, we do not recommended the use of this method. If you call SetFolder before you display the dialog box, the most recent location that the user saved to or opened from is not shown. Unless there is a very specific reason for this behavior, it is not a good or expected user experience and should therefore be avoided. In almost all instances, SetDefaultFolder is the better method.

As of Windows 7, if the path of the folder specified through psi is the default path of a known folder, the known folder's current path is used in the dialog. That path might not be the same as the path specified in psi; for instance, if the known folder has been redirected. If the known folder is a library (virtual folders Documents, Music, Pictures, and Videos), the library's path is used in the dialog. If the specified library is hidden (as they are by default as of Windows 8.1), the library's default save location is used in the dialog, such as the Microsoft OneDrive Documents folder for the Documents library. Because of these mappings, the folder location used in the dialog might not be exactly as you specified when you called this method.
(Read and Write property)

### 130.8.38 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 130.8.39 OkButtonLabel as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The text of the Open or Save button.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OkButtonLabel = "Export"
```

**Notes:** (Read and Write property)

### 130.8.40 OptionAllNonStorageItems as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Enables the user to choose any item in the Shell namespace, not just those with SFGAO_STREAM or SFAGO_FILESYSTEM attributes. #
**Notes:**

This flag cannot be combined with OptionForceFileSystem.
(Read and Write property)

### 130.8.41 OptionAllowMultiSelect as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Enables the user to select multiple items in the open dialog.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionAllowMultiSelect = true
```

**Notes:**

Note that when this flag is set, the WinFileOpenDialogMBS class must be used to retrieve those items.
(Read and Write property)

### 130.8.42 OptionCreatePrompt as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Prompt for creation if the item returned in the save dialog does not exist.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionCreatePrompt = true
```

**Notes:**

Note that this does not actually create the item.
(Read and Write property)

### 130.8.43 OptionDefaultNoMiniMode as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Indicates to the Save As dialog box that it should open in expanded mode.
**Notes:**

Expanded mode is the mode that is set and unset by clicking the button in the lower-left corner of the Save As dialog box that switches between Browse Folders and Hide Folders when clicked. This value is not supported as of Windows 7.
(Read and Write property)

### 130.8.44 OptionDontAaddToRecent as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Do not add the item being opened or saved to the recent documents list.
**Notes:** (Read and Write property)

### 130.8.45 OptionFileMustExist as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The item returned must exist.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionFileMustExist = true
```

**Notes:**

This is a default value for the Open dialog.
(Read and Write property)

### 130.8.46 OptionForceFileSystem as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Ensures that returned items are file system items.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionForceFileSystem = true
```

**Notes:**

Note that this does not apply to items returned by CurrentSelection.
(Read and Write property)

### 130.8.47 OptionForcePreviewPaneOn as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Indicates to the Open dialog box that the preview pane should always be displayed.
**Notes:** (Read and Write property)

### 130.8.48 OptionForceShowHidden as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Include hidden and system items.
**Notes:** (Read and Write property)

### 130.8.49 OptionHideMRUPlaces as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Hide the list of places from which the user has recently opened or saved items. This value is not supported as of Windows 7.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionHideMRUPlaces = true
```

**Notes:** (Read and Write property)

### 130.8.50 OptionHidePinnedPlaces as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Hide items shown by default in the view's navigation pane.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionHidePinnedPlaces = true
```

**Notes:**

This flag is often used in conjunction with the AddPlace method, to hide standard locations and replace them with custom locations.

Windows 7 and later. Hide all of the standard namespace locations (such as Favorites, Libraries, Computer, and Network) shown in the navigation pane.

Windows Vista. Hide the contents of the Favorite Links tree in the navigation pane. Note that the category itself is still displayed, but shown as empty.
(Read and Write property)

### 130.8.51 OptionNoChangeDir as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Don't change the current working directory.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionNoChangeDir = true
```

**Notes:** (Read and Write property)

### 130.8.52 OptionNoDereferenceLinks as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Shortcuts should not be treated as their target items.
**Notes:**

This allows an application to open a .lnk file rather than what that file is a shortcut to.
(Read and Write property)

### 130.8.53 OptionNoReadOnlyReturn as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Do not return read-only items.
**Notes:**

This is a default value for the Save dialog.
(Read and Write property)

### 130.8.54 OptionNoTestFileCreate as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Do not test whether creation of the item as specified in the Save dialog will be successful.
**Notes:**

If this flag is not set, the calling application must handle errors, such as denial of access, discovered when the item is created.
(Read and Write property)

### 130.8.55 OptionNoValidate as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Do not check for situations that would prevent an application from opening the selected file, such as sharing violations or access denied errors.
**Notes:** (Read and Write property)

### 130.8.56 OptionOKButtonNeedsInteraction as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** OKButton needs interaction?
**Notes:** (Read and Write property)

### 130.8.57 OptionOverwritePrompt as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** When saving a file, prompt before overwriting an existing file of the same name.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionOverwritePrompt = true
```

**Notes:**

This is a default value for the Save dialog.
(Read and Write property)

### 130.8.58 OptionPathMustExist as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The item returned must be in an existing folder.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionPathMustExist = true
```

**Notes:**

This is a default value.
(Read and Write property)

### 130.8.59 OptionPickFolders as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Present an Open dialog that offers a choice of folders rather than files.
**Notes:** (Read and Write property)

### 130.8.60 Options as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The current flags that are set to control dialog behavior.
**Notes:**

See kOptions* constants.

Generally, you should read the property, modify it to include or exclude options by setting the appropriate flags and assign it again.
(Read and Write property)

### 130.8.61 OptionShareaware as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** In the case of a sharing violation when an application is opening a file, call the application back through ShareViolation event for guidance.
**Notes:**

This flag is overridden by kOptionsNoValidate.
(Read and Write property)

### 130.8.62 OptionStrictFileTypes as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** In the Save dialog, only allow the user to choose a file that has one of the file name extensions specified through SetFileTypes.
**Notes:** (Read and Write property)

### 130.8.63 OptionSupportsStreamableItems as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Indicates that the caller is opening a file as a stream (BHID_Stream), so there is no need to download that file.
**Notes:** (Read and Write property)

### 130.8.64 ProminentControlID as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Places a control in the dialog so that it stands out compared to other added controls.
**Notes:**

Setting this property causes the control to be placed near the Open or Save button instead of being grouped with the rest of the custom controls.
Only check buttons (check boxes), push buttons, combo boxes, and menus,Äîor a visual group that contains only a single item of one of those types,Äîcan be made prominent.
Only one control can be marked in this way. If a dialog has only one added control, that control is marked as prominent by default.
(Read and Write property)

### 130.8.65 Result as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The choice that the user made in the dialog.
**Notes:**

Result can be called after the dialog has closed or during the handling of an OnFileOk event. Calling this method at any other time will fail. If multiple items were chosen, this method will fail. In the case of multiple items, call Results method.
Show must return a success code for a result to be available to Result.

If not result exists, the plugin returns nil and raises no failed exceptions.
(Read only property)

### 130.8.66 Title as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The title of the dialog.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
d.title = "Export database"
```

**Notes:** (Read and Write property)

### 130.8.67 WindowHandle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries window handle.
**Notes:**

Value is a HWND and may be used in declares.
(Read only property)

### 130.8.68 CheckButtonState(ControlID as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The current state of a check button (check box) in the dialog.
**Notes:**

ControlID: The ID of the check box.

True means checked; false, unchecked.
(Read and Write computed property)

### 130.8.69 ControlItemState(ControlID as Integer, ItemID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The current state of an item in a container control found in the dialog.
**Notes:**

ControlID: The ID of the container control.
ItemID: The ID of the item.

See kControlState* flags.
(Read and Write computed property)

### 130.8.70 ControlItemText(ControlID as Integer, ItemID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The text of a control item.
**Notes:**

For example, the text that accompanies a radio button or an item in a menu.

ControlID: The ID of the container control.
ItemID: The ID of the item.

The default state of a control item is enabled and visible. Items in control groups cannot be changed after they have been created, with the exception of their enabled and visible states.

Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.
(Read and Write computed property)

### 130.8.71 ControlLabel(ControlID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The text associated with a control, such as button text or an edit box label.
**Notes:**

ControlID: The ID of the control whose text is to be changed.

Control labels can be changed at any time, including when the dialog is visible.
(Read and Write computed property)

### 130.8.72 ControlState(ControlID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the current visibility and enabled states of a given control.
**Notes:**

ControlID: The ID of the control in question.

See kControlState* flags.
(Read and Write computed property)

### 130.8.73 EditBoxText(ControlID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The current text in an edit box control.
**Notes:**

ControlID: The ID of the edit box.
(Read and Write computed property)

### 130.8.74 SelectedControlItem(ControlID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Item index from specified container controls in the dialog.
**Notes:**

ControlID: The ID of the container control.

Value is the ID of the item that the user selected in the control.

To determine the user's final choice, this method can be called on option button groups, combo boxes, and drop-down lists on the Open or Save button after the dialog has closed. This method cannot be called on menus.
For option button groups and combo boxes, this method can also be called while the dialog is showing, to determine the current choice.

When you query, the plugin does not raise error for failure, but returns 0.
(Read and Write computed property)

### 130.8.75 Events

### 130.8.76 ButtonClicked(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when the user clicks a command button.
**Notes:** ControlID: The ID of the button that the user clicked.

### 130.8.77 CheckButtonToggled(ControlID as Integer, Checked as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when the user changes the state of a check button (check box).
**Notes:**

ControlID: The ID of the button that the user clicked.
Checked: A boolean indicating the current state of the check button. true if checked; false otherwise.

### 130.8.78 ControlActivating(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when an Open button drop-down list customized through EnableOpenDropDown or a Tools menu is about to display its contents.
**Notes:**

ControlID: The ID of the list or menu about to display.

In response to this notification, an application can update the contents of the menu or list about to be displayed, based on the current state of the dialog.

### 130.8.79 FileOk as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called just before the dialog is about to return with a result.
**Notes:**

Implementations should return true to accept the current result in the dialog or false to refuse it. In the case of false, the dialog should remain open.

When this method is called, the Result and Results methods can be called.
The application can use this callback method to perform additional validation before the dialog closes, or to prevent the dialog from closing. If the application prevents the dialog from closing, it should display a UI to indicate a cause.

An application can also use this method to perform all of its work surrounding the opening or saving of files.

### 130.8.80 FileTypeChanged

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when the dialog is opened to notify the application of the initial chosen filetype.
**Notes:** This method is called when the dialog is opened to notify the application of the initially chosen filetype. If the application has code in this event that responds to type changes, it can respond to the type. For example, it could hide certain controls. The application controls the initial file type and could do its own checks, so this method is provided as a convenience.

### 130.8.81 FolderChanged

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when the user navigates to a new folder.

### 130.8.82 FolderChanging(Folder as WinShellItemMBS) as boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called before FolderChanged.
**Notes:**

This allows the implementer to stop navigation to a particular location.

Folder: the folder to which the dialog is about to navigate.

Return true to accept or false to decline.

The calling application can set Folder during this callback to redirect navigation to an alternate folder. The actual navigation does not occur until FolderChanging has returned.

If the calling application simply prevents navigation to a particular folder, UI should be displayed with an explanation of the restriction. To obtain a parent HWND for the UI, use WindowHandle property.

Warning: If you implement this, add "return true" to allow folders to change.

### 130.8.83 ItemSelected(ControlID as Integer, ItemID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when an item is selected in a combo box, when a user clicks an option button (also known as a radio button), or an item is chosen from the Tools menu.
**Notes:**

ControlID: The ID of the control in which the user made a selection.
ItemID: The ID of the selection.

This notification is not sent when the user chooses an item from the drop-down menu attached to the Open button, because the action taken in that case is always the same: close the dialog as if the user had simply clicked the Open button. For that situation, the application can call SelectedControlItem to obtain the item the user chose from that menu.

### 130.8.84 Overwrite(item as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called from the save dialog when the user chooses to overwrite a file.

**Notes:**

item: the item that will be overwritten.

Return one of the kResponse* constants.

### 130.8.85 SelectionChange

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Called when the user changes the selection in the dialog's view.

### 130.8.86 ShareViolation(item as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

**Function:** Enables an application to respond to sharing violations that arise from Open or Save operations.
**Notes:**

item: the item that has the sharing violation.
Return one of the kShareViolation* constants.

The kOptionsShareaware flag must be set through Options before this method is called.
A sharing violation could possibly arise when the application attempts to open a file, because the file could have been locked between the time that the dialog tested it and the application opened it.

### 130.8.87 Constants

### 130.8.88 kControlStateEnabled = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the control states.
**Notes:** The control is active.

### 130.8.89 kControlStateEnableVisible = 3

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the control states.
**Notes:** The control is visible and enabled.

### 130.8.90 kControlStateInactive = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the control states.
**Notes:** The control is inactive and cannot be accessed by the user.

### 130.8.91 kControlStateVisible = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the control states.
**Notes:** The control is visible. The absence of this value indicates that the control is hidden.

### 130.8.92 kOptionsAllNonStorageItems = & h80

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Enables the user to choose any item in the Shell namespace, not just those with SFGAO_STREAM or SFAGO_FILESYSTEM attributes. This flag cannot be combined with kOptionsForceFileSystem.

### 130.8.93 kOptionsAllowMultiSelect = & h200

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Enables the user to select multiple items in the open dialog. Note that when this flag is set, the WinFileOpenDialogMBS class must be used to retrieve those items.

### 130.8.94 kOptionsCreatePrompt = & h2000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Prompt for creation if the item returned in the save dialog does not exist. Note that this does not actually create the item.

### 130.8.95 kOptionsDefaultNoMiniMode = & h20000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Indicates to the Save As dialog box that it should open in expanded mode. Expanded mode is the mode that is set and unset by clicking the button in the lower-left corner of the Save As dialog box that switches between Browse Folders and Hide Folders when clicked. This value is not supported as of Windows 7.

### 130.8.96 kOptionsDontAaddToRecent = & h2000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Do not add the item being opened or saved to the recent documents list.

### 130.8.97 kOptionsFileMustExist = & h1000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** The item returned must exist. This is a default value for the Open dialog.

### 130.8.98 kOptionsForceFileSystem = & h40

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Ensures that returned items are file system items. Note that this does not apply to items returned by CurrentSelection.

### 130.8.99 kOptionsForcePreviewPaneOn = & h40000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Indicates to the Open dialog box that the preview pane should always be displayed.

### 130.8.100 kOptionsForceShowHidden = & h10000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Include hidden and system items.

### 130.8.101 kOptionsHideMRUPlaces = & h20000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Hide the list of places from which the user has recently opened or saved items. This value is not supported as of Windows 7.

### 130.8.102 kOptionsHidePinnedPlaces = & h40000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:**

Hide items shown by default in the view's navigation pane. This flag is often used in conjunction with the AddPlace method, to hide standard locations and replace them with custom locations.

Windows 7 and later. Hide all of the standard namespace locations (such as Favorites, Libraries, Computer, and Network) shown in the navigation pane.

Windows Vista. Hide the contents of the Favorite Links tree in the navigation pane. Note that the category itself is still displayed, but shown as empty.

### 130.8.103 kOptionsNoChangeDir = 8

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Don't change the current working directory.

### 130.8.104 kOptionsNoDereferenceLinks = & h100000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Shortcuts should not be treated as their target items. This allows an application to open a .lnk file rather than what that file is a shortcut to.

### 130.8.105 kOptionsNoReadOnlyReturn = & h8000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Do not return read-only items. This is a default value for the Save dialog.

### 130.8.106 kOptionsNoTestFileCreate = & h10000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Do not test whether creation of the item as specified in the Save dialog will be successful. If this flag is not set, the calling application must handle errors, such as denial of access, discovered when the item is created.

### 130.8.107 kOptionsNoValidate = & h100

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Do not check for situations that would prevent an application from opening the selected file, such as sharing violations or access denied errors.

### 130.8.108 kOptionsOKButtonNeedsInteraction = & h200000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** OKButton needs interaction?

### 130.8.109 kOptionsOverwritePrompt = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** When saving a file, prompt before overwriting an existing file of the same name. This is a default value for the Save dialog.

### 130.8.110 kOptionsPathMustExist = & h800

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** The item returned must be in an existing folder. This is a default value.

### 130.8.111 kOptionsPickFolders = & h20

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Present an Open dialog that offers a choice of folders rather than files.

### 130.8.112 kOptionsShareaware = & h4000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** In the case of a sharing violation when an application is opening a file, call the application back through ShareViolation event for guidance. This flag is overridden by kOptionsNoValidate.

### 130.8.113 kOptionsStrictFileTypes = 4

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** In the Save dialog, only allow the user to choose a file that has one of the file name extensions specified through SetFileTypes.

### 130.8.114 kOptionsSupportsStreamableItems = & h80000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the option flags.
**Notes:** Indicates that the caller is opening a file as a stream (BHID_Stream), so there is no need to download that file.

### 130.8.115 kOverwriteAccept = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the overwrite responses.
**Notes:** The application has determined that the file should be returned from the dialog.

### 130.8.116 kOverwriteDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the overwrite responses.
**Notes:** The application has not handled the event. The dialog displays a UI asking the user whether the file should be overwritten and returned from the dialog.

### 130.8.117 kOverwriteRefuse = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the overwrite responses.
**Notes:** The application has determined that the file should not be returned from the dialog.

### 130.8.118 kShareViolationAccept = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the share violation response constants.
**Notes:** The application has determined that the file should be returned from the dialog.

### 130.8.119 kShareViolationDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the share violation response constants.
**Notes:** The application has not handled the event. The dialog displays a UI that indicates that the file is in use and a different file must be chosen.

### 130.8.120 kShareViolationRefuse = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the share violation response constants.
**Notes:** The application has determined that the file should not be returned from the dialog.

## 130.9 class WinFileDialogObserverMBS

### 130.9.1 class WinFileDialogObserverMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop only.

**Function:** Intercepts save and open dialogs on Windows to provide events to customize.
**Notes:**

You can only have one instance of this class at a time.
First time you create an object, we initialize the necessary feature.

See also NSSavePanelObserverMBS class for Windows.

### 130.9.6 Properties

### 130.9.7 Enabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop only.

**Function:** Whether the feature is enabled.
**Notes:**

If value is false, no events will be called.
(Read and Write property)

### 130.9.8 Events

### 130.9.9 DidShowDialog(dialog as WinFileDialogMBS, Result as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: .

**Function:** Event called after dialog showed.
**Notes:** You can read results from whatever modification you made.

### 130.9.10 WillShowDialog(dialog as WinFileDialogMBS)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: .

**Function:** Event called before dialog shows.
**Notes:** You can do customization just before the dialog shows.

## 130.10 class WinFileOpenDialogMBS

### 130.10.1 class WinFileOpenDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Extends the WinFileDialogMBS interface by adding methods specific to the open dialog.
**Notes:**

Requires Windows Vista or newer.
All methods may raise WinFileDialogExceptionMBS in case of errors.
Subclass of the WinFileDialogMBS class.

### 130.10.6 Methods

### 130.10.7 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 130.10.8 Results as WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the user's choices in a dialog that allows multiple selection.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim items As WinShellItemArrayMBS = d.Results

Dim c As Integer = items.Count
For i As Integer = 0 To c-1
Dim item As WinShellItemMBS = items.Item(i)

Listbox1.AddRow item.NativePath
Next
```

**Notes:**

This method can be used whether the selection consists of a single item or multiple items.

Result property can be called after the dialog has closed or during the handling of an OnFileOk event. Calling this method at any other time will fail.
Show must return a success code for a result to be available to Result/Results.

### 130.10.9 SelectedItems as WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the currently selected items in the dialog. These items may be items selected in the view, or text selected in the file name edit box.
**Notes:** This method can be used for single item or multiple item selections. If the user has entered new text in the file name field, this can be a time-consuming operation. When the application calls this method, the application parses the text in the filename field. For example, if this is a network share, the operation could take some time. However, this operation will not block the UI, since the user should able to stop the operation, which will result in SelectedItems raising an exception).

## 130.11 class WinFileSaveDialogMBS

### 130.11.1 class WinFileSaveDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Extends the WinFileDialogMBS class by adding methods specific to the save dialog, which include those that provide support for the collection of metadata to be persisted with the file.
**Notes:**

All methods may raise WinFileDialogExceptionMBS in case of errors.
Subclass of the WinFileDialogMBS class.

### 130.11.6 Methods

### 130.11.7 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 130.11.8 Properties

### 130.11.9 SaveAsItem as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The item to be used as the initial entry in a Save As dialog.
**Notes:**

he name of the item is displayed in the file name edit box, and the containing folder is opened in the view. This would generally be used when the application is saving an item that already exists. For new items, use FileName property.
(Read and Write property)

## 130.12 class WinFileTypeMBS

### 130.12.1 class WinFileTypeMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for a file type.
**Example:**

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim FileTypes() As WinFileTypeMBS

FileTypes.Append New WinFileTypeMBS("JPEG image", "*.jpg")
FileTypes.Append New WinFileTypeMBS("PNG image", "*.png")
FileTypes.Append New WinFileTypeMBS("Tiff image", "*.tif;*.tiff")

d.SetFileTypes FileTypes
```

### 130.12.4 Methods

### 130.12.5 Constructor(Name as string, Spec as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 130.12.6 Properties

### 130.12.7 Name as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The name of the entry.
**Notes:** (Read and Write property)

### 130.12.8 Spec as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The file type specification.
**Notes:**

e.g. "*.jpg;*.jpeg", "*.bmp" or "*.*".
(Read and Write property)

## 130.13 class WinShellItemArrayMBS

### 130.13.1 class WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for an array of shell items.
**Notes:**

All methods may raise WinFileDialogExceptionMBS in case of errors.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 130.13.4 Methods

### 130.13.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

### 130.13.6 Item(index as Integer) as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the item at the given index in the IShellItemArray.

### 130.13.7 Properties

### 130.13.8 Count as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the number of items in the given IShellItem array.
**Notes:** (Read only property)

### 130.13.9 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 130.14 class WinShellItemMBS

### 130.14.1 class WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for a Shell item.
**Notes:** All methods may raise WinFileDialogExceptionMBS in case of errors.

### 130.14.2 Blog Entries

### 130.14.4 Methods

### 130.14.5 Compare(other as WinShellItemMBS, Mode as Integer = 0) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Compares two shell items.
**Notes:**

Default mode is to compare display names.
Returns 0 if equal or non-null value if not.

### 130.14.6 Constructor(item as folderItem)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Creates new shell item based on a folderitem.
See also:

- 130.14.7 Constructor(path as String)

### 130.14.7 Constructor(path as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Creates new shell item based on a path.
See also:

- 130.14.6 Constructor(item as folderItem) 20998

### 130.14.8 Operator_Compare(other as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Compares two shell items.
**Notes:**

Returns 0 if equal or non-null value if not.
Compares display name.
This method is called by Xojo when you use = operator on items to compare.

### 130.14.9 ReadData as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Utility function to read data from item.
**Notes:**

A shell item may not point necessarily to a real file.
This method can read it even if it is not a real file, but still can be opened as IStream.

### 130.14.10 Thumbnail(preferredSize as Integer) as Picture

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries thumbnail for item.
**Notes:**

preferredSize is the size you'd like to have. Resulting image can be smaller or bigger.
Returns nil on any error.
If user disabled thumbnails for explorer, the shell also provides none for us, just icons.
Requires Windows Vista or newer.

### 130.14.11 Properties

### 130.14.12 DisplayName as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the display name of the shell item.
**Notes:**

Returns the display name relative to the parent folder. In UI this name is generally ideal for display to the user.

If no path is available, the plugin does not raise exception, but returns "".
(Read only property)

### 130.14.13 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 130.14.14 Item as FolderItem

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries folderitem for the item.
**Notes:**

Queries internally native path and builds folderitem for it.

If no path is available, the plugin does not raise exception, but returns nil.
(Read only property)

### 130.14.15 NativePath as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the native path of the shell item.
**Notes:**

Returns the item's file system path, if it has one.

If no path is available, the plugin does not raise exception, but returns "".
(Read only property)

### 130.14.16 Parent as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the parent of an IShellItem object.
**Notes:** (Read only property)

### 130.14.17 URLPath as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

**Function:** Gets the URL of the shell item.
**Notes:**

Returns the item's URL, if it has one.
Some items do not have a URL, and in those cases a call to DisplayName will fail. This name is suitable for display to the user in some cases, but note that it might not be specified for all items.

If no path is available, the plugin does not raise exception, but returns "".
(Read only property)

### 130.14.18 Constants

### 130.14.19 kCompareAllFields = & h80000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the comparison mode constants.
**Notes:** Exact comparison of two instances of a Shell item.

### 130.14.20 kCompareCanonical = & h10000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the comparison mode constants.
**Notes:** Comparison is based on a canonical name.

### 130.14.21 kCompareDisplayName = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the comparison mode constants.
**Notes:** Comparison based on the display name in a folder view.

### 130.14.22 kCompareTestFileSystemPathIfNotEqual = & h20000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

**Function:** One of the comparison mode constants.
**Notes:** Windows 7 and later. If the Shell items are not the same, test the file system paths.

# Chapter 131

# Network

## 131.1 class AvahiBrowserMBS

### 131.1.1 class AvahiBrowserMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to browse for services.

### 131.1.2 Blog Entries

- Bonjour on Linux

### 131.1.3 Blog Entries

- Bonjour on Linux

### 131.1.4 Methods

### 131.1.5 Browse(InterfaceIndex as Integer, Protocol as Integer, servicetype as string, domain as string = """, flags as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Browse for services of a type on the network.
**Notes:**

In most cases you probably want to pass kInterfaceAny and kProtocolAny in InterfaceIndex, resp. protocol

to browse on all local networks. The specified events will be called whenever a new service appears or is removed from the network. Please note that events may be collapsed to minimize traffic (i.e. a REMOVED followed by a NEW for the same service data is dropped because redundant). If you want to subscribe to service data changes, you should use AvahiResolverMBS class and keep it open, in which case you will be notified via Found event everytime the service data changes.

Only one browse call per AvahiBrowserMBS object please.
Returns true on success and false on failure.

### 131.1.6 Constructor(client as AvahiClientMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 131.1.7 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.1.8 Properties

### 131.1.9 Client as AvahiClientMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The reference to the parent client object.
**Notes:** (Read only property)

### 131.1.10 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 131.1.11 Events

### 131.1.12 AllForNow(type as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that more records will probably not show up in the near future, i.e. all cache entries have been read and all static servers been queried.

### 131.1.13 CacheExhausted(type as string)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that all entries from the caches have been sent.

### 131.1.14 Failure(error as string, errorcode as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Some error occurred.

### 131.1.15 ServiceFound(InterfaceIndex as Integer, protocol as Integer, name as string, type as string, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Found a new object on the network.

### 131.1.16 ServiceRemoved(InterfaceIndex as Integer, protocol as Integer, name as string, type as string, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** The service has been removed from the network.

### 131.1.17 Constants

### 131.1.18 kInterfaceAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** Special constant to use any interface available.
**Notes:** Otherwise you would pass the index of the network interface you want to use.

### 131.1.19 kProtocolAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Any protocol.

### 131.1.20 kProtocolIPv4 = 0

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv4.

### 131.1.21 kProtocolIPv6 = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv6.

## 131.2 class AvahiClientMBS

### 131.2.1 class AvahiClientMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The base class for avahi.
**Notes:**

Typically you create an object of your subclass of AvahiClientMBS at application launch and keep it running. If events are too slow in GUI events, please use a timer with 50ms and call the AvahiClientMBS.Poll method there.

### 131.2.2 Methods

### 131.2.3 Available as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether the avahi library has been found and loaded.

### 131.2.4 Constructor(flags as Integer = 0)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Initializes the client.

### 131.2.5 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.2.6 DomainName as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Get domain name.

### 131.2.7 HostName as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Get host name.

### 131.2.8 Poll

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Polls for events.
**Example:**

```
// in a timer with 50ms
AvahiClientMBS.Poll
```

**Notes:**

This is automatically called by the plugin for GUI applications. If you call it in a timer, you can speedup avahi.
Console applications with their own event loop need to call Poll method regularly.

### 131.2.9 Version as string

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Get the version of the server.

### 131.2.10 Properties

### 131.2.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 131.2.12 Events

### 131.2.13 Collision

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** We're still connecting.
**Notes:** This state is only entered when kClientNoFail has been passed to Constructor() and the daemon is not yet available.

### 131.2.14 Connecting

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Client is connecting.

### 131.2.15 Failure(error as string, errorcode as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Some kind of error happened on the client side.

### 131.2.16 Registering

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Client is registering.

### 131.2.17 Running

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Client is running.

### 131.2.18 Constants

### 131.2.19 kClientIgnoreUserConfig = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the client initialization flags.
**Notes:** Don't read user configuration

### 131.2.20 kClientNoFail = 2

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the client initialization flags.
**Notes:** Don't fail if the daemon is not available when avahi_client_new() is called, instead enter AVAHI_CLIENT_CONNECTING state and wait for the daemon to appear.

## 131.3 class AvahiDomainBrowserMBS

### 131.3.1 class AvahiDomainBrowserMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to browse for domains.

### 131.3.2 Methods

### 131.3.3 BrowseDomains(InterfaceIndex as Integer, Protocol as Integer, domain as string = """, BrowserType as Integer = 0, flags as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Browse for domains on the local network.
**Notes:**

Only one BrowseDomains call per AvahiDomainBrowserMBS object please.
Returns true on success and false on failure.

### 131.3.4 Constructor(client as AvahiClientMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 131.3.5 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.3.6 Properties

### 131.3.7 Client as AvahiClientMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The reference to the parent client object.
**Notes:** (Read only property)

### 131.3.8 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 131.3.9 Events

### 131.3.10 AllForNow

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that more records will probably not show up in the near future, i.e. all cache entries have been read and all static servers been queried.

### 131.3.11 CacheExhausted

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that all entries from the caches have been sent.

### 131.3.12 DomainFound(InterfaceIndex as Integer, protocol as Integer, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Found a new domain on the network.

### 131.3.13 DomainRemoved(InterfaceIndex as Integer, protocol as Integer, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** The domain has been removed from the network.

### 131.3.14 Failure(error as string, errorcode as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Some error occurred.

### 131.3.15 Constants

### 131.3.16 kBrowseTypeBrowse = 0

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the browse modes for domain browsing.
**Notes:** Browse for a list of available browsing domains.

### 131.3.17 kBrowseTypeBrowseDefault = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the browse modes for domain browsing.
**Notes:** Browse for the default browsing domain.

### 131.3.18 kBrowseTypeBrowseLegacy = 4

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the browse modes for domain browsing.
**Notes:** Legacy browse domain - see DNS-SD spec for more information.

### 131.3.19 kBrowseTypeRegister = 2

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the browse modes for domain browsing.
**Notes:** Browse for a list of available registering domains.

### 131.3.20 kBrowseTypeRegisterDefault = 3

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the browse modes for domain browsing.
**Notes:** Browse for the default registering domain.

### 131.3.21 kInterfaceAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** Special constant to use any interface available.
**Notes:** Otherwise you would pass the index of the network interface you want to use.

### 131.3.22 kProtocolAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Any protocol.

### 131.3.23 kProtocolIPv4 = 0

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv4.

### 131.3.24 kProtocolIPv6 = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv6.

## 131.4 class AvahiResolverMBS

### 131.4.1 class AvahiResolverMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to resolve service name to IP address.

### 131.4.2 Methods

### 131.4.3 Constructor(client as AvahiClientMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 131.4.4 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.4.5 Resolve(InterfaceIndex as Integer, Protocol as Integer, name as string, servicetype as string, domain as string, flags as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Create a new service resolver object.
**Notes:**

Please make sure to pass all the service data you received via Found event, especially interface and protocol. The protocol argument specifies the protocol (IPv4 or IPv6) to use as transport for the queries which are sent out by this resolver. The protocol argument specifies the adress family (IPv4 or IPv6) of the address of the service we are looking for. Generally, on "protocol" you should only pass what was supplied to you as parameter to your Browse function. In protocol you should pass what your application code can deal with when connecting to the service. Or, more technically speaking: protocol specifies if the mDNS queries should be sent as UDP/IPv4 resp. UDP/IPv6 packets. protocol specifies whether the query is for a A resp. AAAA resource record.

Only one resolve call per AvahiResolverMBS object please.
Returns true on success and false on failure.

### 131.4.6 Properties

### 131.4.7 Client as AvahiClientMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The reference to the parent client object.
**Notes:** (Read only property)

### 131.4.8 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 131.4.9 Events

### 131.4.10 Failure(error as string, errorcode as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Some error occurred.

### 131.4.11 Found(interfaceIndex as Integer, Protocol as Integer, name as string, type as string, domain as string, hostname as string, port as Integer, address as string, txt as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** An address was found.

### 131.4.12 Constants

### 131.4.13 kResultCached = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** This response originates from the cache.

### 131.4.14 kResultLocal = 8

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** This record/service resides on and was announced by the local host. Only available in service and record browsers and only on Found event.

### 131.4.15 kResultMultiCast = 4

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** This response originates from multicast DNS.

### 131.4.16 kResultOurOwn = 16

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** This service belongs to the same local client as the browser object. Only available in avahi-client, and only for service browsers and only on Found event.

### 131.4.17 kResultStatic = 32

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** The returned data has been defined statically by some configuration option.

### 131.4.18 kResultWideArea = 2

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the flags for events.
**Notes:** This response originates from wide area DNS.

## 131.5 class AvahiTypeBrowserMBS

### 131.5.1 class AvahiTypeBrowserMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to browse for types.

### 131.5.2 Methods

### 131.5.3 BrowseTypes(InterfaceIndex as Integer, Protocol as Integer, domain as string = """, flags as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Browse for service types on the local network.
**Notes:**

Only one BrowseTypes call per AvahiTypeBrowserMBS object please.
Returns true on success and false on failure.

### 131.5.4 Constructor(client as AvahiClientMBS)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 131.5.5 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.5.6 Properties

### 131.5.7 Client as AvahiClientMBS

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The reference to the parent client object.
**Notes:** (Read only property)

### 131.5.8 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 131.5.9 Events

### 131.5.10 AllForNow

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that more records will probably not show up in the near future, i.e. all cache entries have been read and all static servers been queried.

### 131.5.11 CacheExhausted

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** One-time event, to notify the user that all entries from the caches have been sent.

### 131.5.12 Failure(error as string, errorcode as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Some error occurred.

### 131.5.13 TypeFound(InterfaceIndex as Integer, protocol as Integer, type as string, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** Found a new type on the network.

### 131.5.14 TypeRemoved(InterfaceIndex as Integer, protocol as Integer, type as string, domain as string, flags as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Platform: Linux, Targets: .

**Function:** The type has been removed from the network.

### 131.5.15 Constants

### 131.5.16 kInterfaceAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** Special constant to use any interface available.
**Notes:** Otherwise you would pass the index of the network interface you want to use.

### 131.5.17 kProtocolAny = -1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Any protocol.

### 131.5.18 kProtocolIPv4 = 0

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv4.

### 131.5.19 kProtocolIPv6 = 1

MBS Linux Plugin, Plugin Version: 12.4.

**Function:** One of the IP protocol constants.
**Notes:** Only IPv6.

## 131.6 class CWChannelMBS

### 131.6.1 class CWChannelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The CoreWLAN class for a channel.
**Notes:**

Encapsulates an IEEE 802.11 channel.

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the CWChannel class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 131.6.2 Methods

### 131.6.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 131.6.4 copy as CWChannelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the object.

### 131.6.5 isEqualToChannel(channel as CWChannelMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compares two channels.
**Notes:** Returns true if both are equal.

### 131.6.6 Operator_Compare(channel as CWChannelMBS) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compares two channels.

### 131.6.7 Properties

### 131.6.8 channelBand as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The channel band.
**Notes:** (Read only property)

### 131.6.9 channelNumber as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The channel number.
**Notes:** (Read only property)

### 131.6.10 channelWidth as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The channel width.
**Notes:** (Read only property)

### 131.6.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference for this object.
**Notes:** (Read and Write property)

## 131.7 class CWConfigurationMBS

### 131.7.1 class CWConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN configuration.
**Notes:**

Encapsulates a static configuration for a given IEEE 802.11 wireless interface.

Requires Mac OS X 10.6 or newer.

### 131.7.2 Methods

### 131.7.3 configuration as CWConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting an CWConfiguration object.
**Notes:**

dim c as CWConfigurationMBS = CWConfigurationMBS.configuration
MsgBox hex(c.Handle)
See also:

- 131.7.4 configuration(config as CWConfigurationMBS) as CWConfigurationMBS 21023

### 131.7.4 configuration(config as CWConfigurationMBS) as CWConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting a CWConfiguration object initialized with the given CWConfiguration object.
**Notes:** Available on Mac OS X 10.7 or later.
See also:

- 131.7.3 configuration as CWConfigurationMBS 21023

### 131.7.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an CWConfiguration.
See also:

- 131.7.6 Constructor(configuration as CWConfigurationMBS) 21024

### 131.7.6 Constructor(configuration as CWConfigurationMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a CWConfigurationMBS object initialized with the given CWConfigurationMBS object.
**Notes:** Available on Mac OS X 10.7 or later.
See also:

- 131.7.5 Constructor 21023

### 131.7.7 copy as CWConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of this object.

### 131.7.8 isEqualToConfiguration(configuration as CWConfigurationMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Test whether two configurations are equal.
**Notes:** Two CWConfiguration objects are considered equal if all their corresponding properties are equal.

### 131.7.9 mutableCopy as CWMutableConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a mutable copy of this object.
**Notes:** Available on Mac OS X 10.7 or later.

### 131.7.10 networkProfiles as CWNetworkProfileMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An array of remembered CWNetworkProfileMBS objects.
**Notes:**

The order of this array corresponds to the order in which the the CWNetworkProfile objects participate in the auto-join process.

Available on Mac OS X 10.7 or later.

### 131.7.11 Operator_Compare(configuration as CWConfigurationMBS) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compares two profiles.

### 131.7.12 Properties

### 131.7.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.7.14 rememberJoinedNetworks as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** AirPort client will remember all joined networks.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.7.15 requireAdministratorForAssociation as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to change networks.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.7.16 requireAdministratorForIBSSMode as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to create a computer-to-computer network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.7.17 requireAdministratorForPower as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to change the interface power state.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

## 131.8 module CWGlobalsMBS

### 131.8.1 module CWGlobalsMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The module for the global constants.
**Notes:** Please note that MBS Plugin implements all methods from 10.6 to 10.9 in CoreWLAN. But Apple changes things often, so some methods are only for older system, some only for newer. e.g. kCWErrorDomain is for 10.6 and CWErrorDomain for 10.7 and newer.

### 131.8.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr2

### 131.8.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.4pr2

### 131.8.4 Methods

### 131.8.5 CWBSSIDDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the BSSID of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.6 CWCountryCodeDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the country code of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.7 CWErrorDomain as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN Error Domain.

### 131.8.8 CWLinkDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the link state of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.9 CWLinkQualityDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the link quality for any WLAN interface changes. The object for this notification is the corresponding BSD interface name. The userInfo dictionary for this notification contains the current RSSI and current transmit rate for the given CoreWLAN interface.

### 131.8.10 CWLinkQualityNotificationRSSIKey as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Dictionary key for link quality change details.
**Notes:** Number containing the current RSSI value for the WLAN interface. Found in the userInfo dictionary for the CWLinkQualityChangedNotification.

### 131.8.11 CWLinkQualityNotificationTransmitRateKey as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Dictionary key for link quality change details.

**Notes:** Number containing the current transmit rate value for the WLAN interface. Found in the userInfo dictionary for the CWLinkQualityChangedNotification.

### 131.8.12 CWModeDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.

Posted when the mode of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.13 CWPowerDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the power state of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.14 CWScanCacheDidUpdateNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when new entries are added to the scan cache, or existing entries are updated with more current information. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.15 CWSSIDDidChangeNotification as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the notification names for CoreWLAN.
**Notes:**

Please use with NSNotificationObserverMBS class.
Posted when the SSID of any WLAN interface changes. The object for this notification is the corresponding BSD interface name. This notification does not contain a userInfo dictionary.

### 131.8.16 KeychainDeleteEAPUsernameAndPassword(ssidData as memoryblock) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Deletes the 802.1X username and password for the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainDeleteWiFiEAPUsernameAndPassword instead.

### 131.8.17 KeychainDeletePassword(ssidData as memoryblock) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Deletes the password for the specified SSID and keychain domain.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainDeleteWiFiPassword instead.

### 131.8.18 KeychainDeleteWiFiEAPUsernameAndPassword(KeychainDomain as Integer, ssidData as memoryblock) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Deletes the 802.1X username and password for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.19 KeychainDeleteWiFiPassword(KeychainDomain as Integer, ssidData as memoryblock) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Deletes the password for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.20 KeychainFindWiFiEAPUsernameAndPassword(KeychainDomain as Integer, ssidData as memoryblock, byref username as string, byref password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns the 802.1X username and password stored for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.

ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
username: a string passed by reference, which upon return will contain the 802.1X username for the specified SSID.
password: a string passed by reference, which upon return will contain the 802.1X password for the specified SSID.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.21 KeychainFindWiFiPassword(KeychainDomain as Integer, ssidData as memoryblock, byref password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns (by reference) the password for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
password: An string passed by reference, which upon return will contain the Wi-Fi keychain password for the specified SSID. This parameter is optional.

Returns an error code indicating whether or not a failure occurred. errSecSuccess indicates no error occurred.
Available on Mac OS X 10.9 or newer.

### 131.8.22 KeychainGetEAPIdentity(ssidData as memoryblock, byref SecIdentityRef as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns the identity stored for the specified SSID and keychain domain.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
identity: An Integer passed by reference, which upon return will contain the SecIdentityRef associated with the specified SSID.
The returned value must be released by the caller.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainGetWiFiEAPIdentity instead.

### 131.8.23 KeychainGetEAPIdentityList(byref ListSecIdentityRef() as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns all available identities.
**Notes:**

ListSecIdentityRef: An array passed by reference, which upon return will be populated with a list of integers (SecIdentityRef).

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.24 KeychainGetEAPUsernameAndPassword(ssidData as memoryblock, byref username as string, byref password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns the 802.1X username and password stored for the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
username: A string passed by reference, which upon return will contain the 802.1X username for the specified SSID.
password: A string passed by reference, which upon return will contain the 802.1X password for the specified SSID.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain.

Available in Mac OS X 10.7, deprecated in 10.9. Please use FindWiFiEAPUsernameAndPassword instead.

### 131.8.25 KeychainGetPassword(ssidData as memoryblock, byref password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns (by reference) the password for the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
password: A string passed by reference, which upon return will contain the Wi-Fi keychain password for the specified SSID.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainFindWiFiPassword instead.

### 131.8.26 KeychainGetWiFiEAPIdentity(KeychainDomain as Integer, ssidData as memoryblock, byref SecIdentityRef as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Finds and returns the identity stored for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
identity: An Integer passed by reference, which upon return will contain the SecIdentityRef associated with the specified SSID.
The returned value must be released by the caller.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.27 KeychainSetEAPIdentity(ssidData as memoryblock, SecIdentityRef as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Associates an identity to the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
identity: The identity containing the certificate to use for 802.1X authentication.
Passing 0 clears any identity association for the specified SSID.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainSetWiFiEAPIdentity instead.

### 131.8.28 KeychainSetEAPUsernameAndPassword(ssidData as memoryblock, username as string, password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the 802.1X username and password for the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
username: The 802.1X username.
password: The 802.1X password. This parameter is optional.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use SetWiFiEAPUsernameAndPassword instead.

### 131.8.29 KeychainSetPassword(ssidData as memoryblock, password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the Wi-Fi network keychain password for the specified SSID.
**Notes:**

ssidData: The service set identifier (SSID) which is used to uniquely identify the keychain item.
password: The Wi-Fi network password.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

The keychain used is determined by the SecPreferencesDomain of the caller as returned by KeychainManagerMBS.PreferenceDomain().
Available in Mac OS X 10.7, deprecated in 10.9. Please use KeychainSetWiFiPassword instead.

### 131.8.30 KeychainSetWiFiEAPIdentity(KeychainDomain as Integer, ssidData as memoryblock, SecIdentityRef as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Associates an identity to the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
identity: The identity containing the certificate to use for 802.1X authentication. a SecIdentityRef passed as Integer.

Passing 0 clears any identity association for the specified SSID.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.31 KeychainSetWiFiEAPUsernameAndPassword(KeychainDomain as Integer, ssidData as memoryblock, Username as string, Password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the 802.1X username and password for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
username: The 802.1X username.
password: The 802.1X password. This parameter is optional.

Returns an OSStatus error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.

Available on Mac OS X 10.9 or newer.

### 131.8.32 KeychainSetWiFiPassword(KeychainDomain as Integer, ssidData as memoryblock, password as string) as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the Wi-Fi network keychain password for the specified SSID and keychain domain.
**Notes:**

domain: The keychain domain, which determines which keychain will be used.
ssid: The service set identifier (SSID) which is used to uniquely identify the keychain item.
password: The Wi-Fi network password.

Returns an error code indicating whether or not a failure occurred.
errSecSuccess indicates no error occurred.
Available on Mac OS X 10.9 or newer.

### 131.8.33 MergeNetworks(networks() as CWNetworkMBS) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Merges the specified set of CWNetwork objects.
**Notes:**

networks: The set of networks to merge.

Duplicate networks are defined as networks with the same SSID, security type, and BSS type (IBSS or Infrastructure).
When duplicate networks exist, the network with the best RSSI value will be chosen.

### 131.8.34 Constants

### 131.8.35 kCWAPFullErr = -3913

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.

**Notes:** Access point is unable to handle another associated station.

### 131.8.36 kCWAssociationDeniedErr = -3909

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Association was denied for an unspecified reason.

### 131.8.37 kCWAuthAlgUnsupportedErr = -3910

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Specified authentication algorithm is not supported.

### 131.8.38 kCWAuthenticationAlgorithmUnsupportedErr = -3910

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Specified authentication algorithm is not supported.

### 131.8.39 kCWChallengeFailureErr = -3912

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Authentication was rejected because of a challenge failure.

### 131.8.40 kCWChannelBand2GHz = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel bands used for CWChannel.
**Notes:** 2 GHz channel band.

### 131.8.41 kCWChannelBand5GHz = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel bands used for CWChannel.
**Notes:** 5 GHz channel band.

### 131.8.42 kCWChannelBandUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel bands used for CWChannel.
**Notes:** Unknown channel band.

### 131.8.43 kCWChannelWidth160MHz = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel widths used for CWChannel.
**Notes:** 160MHz channel width.

### 131.8.44 kCWChannelWidth20MHz = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel widths used for CWChannel.
**Notes:** 20MHz channel width.

### 131.8.45 kCWChannelWidth40MHz = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel widths used for CWChannel.
**Notes:** 40MHz channel width.

### 131.8.46 kCWChannelWidth80MHz = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel widths used for CWChannel.
**Notes:** 80MHz channel width.

### 131.8.47 kCWChannelWidthUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN channel widths used for CWChannel.
**Notes:** Unknown channel width.

### 131.8.48 kCWCipherKeyFlagsMulticast = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN chipher key flags.
**Notes:** Cipher key will be used for multicast packets.

### 131.8.49 kCWCipherKeyFlagsNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN chipher key flags.
**Notes:** Open System authentication.

### 131.8.50 kCWCipherKeyFlagsRx = 16

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN chipher key flags.
**Notes:** Cipher key will be used for packets received by the interface.

### 131.8.51 kCWCipherKeyFlagsTx = 8

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN chipher key flags.
**Notes:** Cipher key will be used for packets sent from the interface.

### 131.8.52 kCWCipherKeyFlagsUnicast = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN chipher key flags.
**Notes:** Cipher key will be used for unicast packets.

### 131.8.53 kCWCipherSuiteRejectedErr = -3923

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Cipher suite rejected due to network security policy.

### 131.8.54 kCWDSSSOFDMUnsupportedErr = -3916

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Association denied because DSSS-OFDM is not supported by requesting station.

### 131.8.55 kCWEAPOLErr = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** EAPOL-related error.

### 131.8.56 kCWErr = -3931

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Generic error, no specific error code exists to describe the error condition.

### 131.8.57 kCWError = -3931

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Generic error.

### 131.8.58 kCWFormatErr = -3904

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid protocol element field detected.

### 131.8.59 kCWHTFeaturesNotSupported = -3926

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Association was denied because the requesting station does not support HT features.

### 131.8.60 kCWHTFeaturesNotSupportedErr = -3926

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Association was denied because the requesting station does not support HT features.

### 131.8.61 kCWIBSSModeSecurityNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the IBSS mode security types.
**Notes:** Open System authentication.

### 131.8.62 kCWIBSSModeSecurityWEP104 = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the IBSS mode security types.
**Notes:** WPA Personal authentication.

### 131.8.63 kCWIBSSModeSecurityWEP40 = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the IBSS mode security types.
**Notes:** WEP security.

### 131.8.64 kCWInterfaceModeHostAP = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN interface operation modes.
**Notes:** Interface is participating in an infrastructure network as an access point.

### 131.8.65 kCWInterfaceModeIBSS = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN interface operation modes.
**Notes:** Interface is participating in an IBSS network.

### 131.8.66 kCWInterfaceModeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN interface operation modes.
**Notes:** Interface is not in any mode.

### 131.8.67 kCWInterfaceModeStation = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN interface operation modes.
**Notes:** Interface is participating in an infrastructure network as a non-AP station.

### 131.8.68 kCWInterfaceStateAssociating = 3

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface state constants in CoreWLAN.
**Notes:** CoreWLAN interface is associating.

### 131.8.69 kCWInterfaceStateAuthenticating = 2

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface state constants in CoreWLAN.
**Notes:** CoreWLAN interface is authenticating.

### 131.8.70 kCWInterfaceStateInactive = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface state constants in CoreWLAN.
**Notes:** CoreWLAN interface is in the initial, inactive state.

### 131.8.71 kCWInterfaceStateRunning = 4

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface state constants in CoreWLAN.
**Notes:** CoreWLAN interface is running.

### 131.8.72 kCWInterfaceStateScanning = 1

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface state constants in CoreWLAN.
**Notes:** CoreWLAN interface is scanning.

### 131.8.73 kCWInvalidAKMPErr = -3920

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid authentication selector requested.

### 131.8.74 kCWInvalidAuthenticationSequenceNumberErr = -3911

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Authentication frame received with an authentication sequence number out of expected sequence.

### 131.8.75 kCWInvalidAuthSeqNumErr = -3911

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Authentication frame received with an authentication sequence number out of expected sequence.

### 131.8.76 kCWInvalidFormatErr = -3904

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Invalid protocol element field detected.

### 131.8.77 kCWInvalidGroupCipherErr = -3918

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid group cipher requested.

### 131.8.78 kCWInvalidInfoElementErr = -3917

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid information element included in association request.

### 131.8.79 kCWInvalidInformationElementErr = -3917

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Invalid information element included in association request.

### 131.8.80 kCWInvalidPairwiseCipherErr = -3919

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid pairwise cipher requested.

### 131.8.81 kCWInvalidParameterErr = -3900

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Parameter error.

### 131.8.82 kCWInvalidPMKErr = -3924

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** PMK rejected by the access point.

### 131.8.83 kCWInvalidRSNCapabilitiesErr = -3922

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid RSN capabilities specified in association request.

### 131.8.84 kCWIPCError = -3929

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Error communicating with a separate process.

### 131.8.85 kCWIPCFailureErr = -3929

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Error communicating with a separate process.

### 131.8.86 kCWKeychainDomainNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN keychain domains used in the CWKeychain API.
**Notes:** No keychain domain specified.

### 131.8.87 kCWKeychainDomainSystem = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN keychain domains used in the CWKeychain API.
**Notes:** The system keychain domain.

### 131.8.88 kCWKeychainDomainUser = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN keychain domains used in the CWKeychain API.
**Notes:** The login (user) keychain domain.

### 131.8.89 kCWNoErr = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Success.

### 131.8.90 kCWNoMemErr = -3901

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Memory allocation failed.

### 131.8.91 kCWNoMemoryErr = -3901

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Memory allocation failed.

### 131.8.92 kCWNotSupportedErr = -3903

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Operation not supported.

### 131.8.93 kCWOperationNotPermittedErr = -3930

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Calling process does not have permission to perform this operation.

### 131.8.94 kCWOpModeHostAP = 3

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface operation mode constants in CoreWLAN.
**Notes:** Interface is participating in an infrastructure network as an access point.

### 131.8.95 kCWOpModeIBSS = 1

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface operation mode constants in CoreWLAN.
**Notes:** Interface is participating in an IBSS network.

### 131.8.96 kCWOpModeMonitorMode = 2

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface operation mode constants in CoreWLAN.
**Notes:** Interface is in 802.11 monitor mode.

### 131.8.97 kCWOpModeStation = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the interface operation mode constants in CoreWLAN.
**Notes:** Interface is participating in an infrastructure network as a non-AP station.

### 131.8.98 kCWOpNotPermitted = -3930

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Calling process does not have permission to perform this operation.

### 131.8.99 kCWParamErr = -3900

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Parameter error.

### 131.8.100 kCWPCOTransitionTimeNotSupported = -3927

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Association was denied because the requesting station does not support the PCO transition time required by the AP.

### 131.8.101 kCWPCOTransitionTimeNotSupportedErr = -3927

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Association was denied because the requesting station does not support the PCO transition time required by the AP.

### 131.8.102 kCWPHYMode11a = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** IEEE 802.11a PHY.

### 131.8.103 kCWPHYMode11ac = 5

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** IEEE 802.11ac PHY.

### 131.8.104 kCWPHYMode11b = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** IEEE 802.11b PHY.

### 131.8.105 kCWPHYMode11g = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** IEEE 802.11g PHY.

### 131.8.106 kCWPHYMode11n = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** IEEE 802.11n PHY.

### 131.8.107 kCWPHYModeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN physical layer modes.
**Notes:** No PHY mode.

### 131.8.108 kCWReassociationDeniedErr = -3908

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Reassociation was denied because the access point was unable to determine that an association exists.

### 131.8.109 kCWReferenceNotBoundErr = -3928

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** No interface is bound to the CWInterface.

### 131.8.110 kCWRefNotBoundErr = -3928

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** No interface is bound to the CWInterface.

### 131.8.111 kCWScanTypeActive = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the scan type constants in CoreWLAN.
**Notes:** In accordance with the supported channels for the active country code, the interface will transmit probe request frames and listen for probe responses.

### 131.8.112 kCWScanTypeFast = 2

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the scan type constants in CoreWLAN.
**Notes:** The scan will return cached scan results.

### 131.8.113 kCWScanTypePassive = 1

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the scan type constants in CoreWLAN.
**Notes:** The interface will listen for beacon frames on each channel irrespective of country code.

### 131.8.114 kCWSecurityDynamicWEP = 6

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** Dynamic WEP security.

### 131.8.115 kCWSecurityEnterprise = 10

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** Enterprise authentication.

### 131.8.116 kCWSecurityModeDynamicWEP = 7

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** Dynamic WEP 802.1X authentication.

### 131.8.117 kCWSecurityModeOpen = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** Open System authentication.

### 131.8.118 kCWSecurityModeWEP = 1

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WEP authentication.

### 131.8.119 kCWSecurityModeWPA2_Enterprise = 5

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WPA2 Enterprise authentication.

### 131.8.120 kCWSecurityModeWPA2_PSK = 3

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WPA2 Personal authentication.

### 131.8.121 kCWSecurityModeWPA_Enterprise = 4

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WPA Enterprise authentication.

### 131.8.122 kCWSecurityModeWPA_PSK = 2

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WPA Personal authentication.

### 131.8.123 kCWSecurityModeWPS = 6

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the security mode constants in CoreWLAN.
**Notes:** WiFi Protected Setup authentication.

### 131.8.124 kCWSecurityNone = 0

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** Open System authentication.

### 131.8.125 kCWSecurityPersonal = 5

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** Personal authentication.

### 131.8.126 kCWSecurityUnknown = & h7FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** Unknown security type.

### 131.8.127 kCWSecurityWEP = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WEP security.

### 131.8.128 kCWSecurityWPA2Enterprise = 9

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA2 Enterprise authentication.

### 131.8.129 kCWSecurityWPA2Personal = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA2 Personal authentication.

### 131.8.130 kCWSecurityWPAEnterprise = 7

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA Enterprise authentication.

### 131.8.131 kCWSecurityWPAEnterpriseMixed = 8

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA/WPA2 Enterprise authentication.

### 131.8.132 kCWSecurityWPAPersonal = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA Personal authentication.

### 131.8.133 kCWSecurityWPAPersonalMixed = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN security types.
**Notes:** WPA/WPA2 Personal authentication.

### 131.8.134 kCWShortSlotUnsupportedErr = -3915

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Association denied because short slot time option is not supported by requesting station.

### 131.8.135 kCWSupplicantTimeoutErr = -3925

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** WPA/WPA2 handshake timed out.

### 131.8.136 kCWTimeoutErr = -3905

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Authentication/Association timed out.

### 131.8.137 kCWUknownErr = -3902

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Unexpected error condition encountered for which no error code exists.

### 131.8.138 kCWUnknownErr = -3902

MBS MacFrameworks Plugin, Plugin Version: 13.5.

**Function:** One of the CoreWLAN Errors.
**Notes:** Unexpected error condition encountered for which no error code exists.

### 131.8.139 kCWUnspecifiedFailureErr = -3906

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Access point did not specify a reason for authentication/association failure.

### 131.8.140 kCWUnsupportedCapabilitiesErr = -3907

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Access point cannot support all requested capabilities.

### 131.8.141 kCWUnsupportedRateSetErr = -3914

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Interface does not support all of the rates in the access point's basic rate set.

### 131.8.142 kCWUnsupportedRSNVersionErr = -3921

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the error constants in CoreWLAN.
**Notes:** Invalid WPA/WPA2 version specified.

### 131.8.143 kOldCWPHYMode11A = 0

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the physical layer mode constants in CoreWLAN.
**Notes:** IEEE 802.11a

### 131.8.144 kOldCWPHYMode11B = 1

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the physical layer mode constants in CoreWLAN.
**Notes:** IEEE 802.11b

### 131.8.145 kOldCWPHYMode11G = 2

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the physical layer mode constants in CoreWLAN.
**Notes:** IEEE 802.11g

### 131.8.146 kOldCWPHYMode11N = 3

MBS MacFrameworks Plugin, Plugin Version: 11.0.

**Function:** One of the physical layer mode constants in CoreWLAN.
**Notes:** IEEE 802.11n

## 131.9 class CWInterfaceMBS

### 131.9.1 class CWInterfaceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface.
**Notes:**

Encapsulates an CoreWLAN interface providing controlled access to various interface operations such as scanning, assocation, and IBSS creation, and providing a means to query and manipulate interface parameters.

Requires Mac OS X 10.6 or newer.

Please note that MBS Plugin implements all methods from 10.6 to 10.9 in CoreWLAN. But Apple changes things often, so some methods are only for older system, some only for newer. e.g. kCWErrorDomain is for 10.6 and CWErrorDomain for 10.7 and newer.

### 131.9.2 Methods

### 131.9.3 associateToEnterpriseNetwork(network as CWNetworkMBS, SecIdentityRef as Integer, username as string, password as string, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Connects to the given enterprise network.
**Notes:**

network: The network to which the interface will associate.
username: The username to use for IEEE 802.1X authentication.
password: The password to use for IEEE 802.1X authentication.
identity: The identity to use for IEEE 802.1X authentication. Holds the corresponding client certificate.
error: An NSError object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method.

Returns a Boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

This method will block for the duration of the association. This operation may require an administrator password.

### 131.9.4 associateToNetwork(network as CWNetworkMBS, parameters as dictionary, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to associate to the given CWNetworkMBS, with the given association parameters.
**Notes:**

parameters: A dicitonary object containing association parameters.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

See the association parameters defined in CWGlobalsMBS for more information. Certain networks will require specific authentication credentials for association (i.e. a network using WPA2 Personal authentication will require a passphrase). This method will block for the duration of the association. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.5 associateToNetwork(network as CWNetworkMBS, password as string, byref error as NSErrorMBS) as boolean 21060

### 131.9.5 associateToNetwork(network as CWNetworkMBS, password as string, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Associates to a given network using the given network passphrase.
**Notes:**

network: The network to which the interface will associate.
password: The network passphrase or key. Required for association to WEP, WPA Personal, and WPA2 Personal networks.
error: An NSErrorMBS object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method. This parameter is optional and can be passed as nil.

Returns a boolean value which will indicate whether or not a failure occurred during execution. true indicates no error occurred.

This method will block for the duration of the association. This operation may require an administrator password.

Available on Mac OS X 10.7 or later.

See also:

- 131.9.4 associateToNetwork(network as CWNetworkMBS, parameters as dictionary, byref error as NSErrorMBS) as boolean 21060

### 131.9.6 cachedScanResults as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The networks currently in the scan cache for the WLAN interface.
**Notes:**

Returns empty array in the case of an error.
Available on Mac OS X 10.7 or later.

### 131.9.7 commitConfiguration(config as CWConfigurationMBS, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Changing the interface configuration.
**Notes:**

config: An CWConfiguration object containing the desired changes to the current CW configuration preferences.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

This method uses the SFAuthorization property of the given CWInterface object to commit the given configuration. The SFAuthorization property must be authorized with administrative privileges.
See also:

- 131.9.8 commitConfiguration(config as CWConfigurationMBS, SFAuthorizationRef as Integer, byref error as NSErrorMBS) as boolean 21061

### 131.9.8 commitConfiguration(config as CWConfigurationMBS, SFAuthorizationRef as Integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Commit a configuration for the given WLAN interface.
**Notes:**

configuration: The configuration to commit.
authorization: An SFAuthorization object to use for authorizing the commit. This parameter is optional and can be passed as 0.
error: An NSError object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method.

Returns a Boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

This method requires the caller have root privileges or obtain administrator privileges with the authorization parameter.
See also:

- 131.9.7 commitConfiguration(config as CWConfigurationMBS, byref error as NSErrorMBS) as boolean 21061

### 131.9.9 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an CWInterface for the primary interface.
**Example:**

```
dim c as new CWInterfaceMBS

MsgBox c.description
```

See also:

- 131.9.10 Constructor(name as string) 21062

### 131.9.10 Constructor(name as string)

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an interface object linked to the interface of the given name.
**Example:**

```
dim c as new CWInterfaceMBS("en0")

MsgBox c.description
```

See also:

• 131.9.9 Constructor 21062

### 131.9.11 disassociate

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Disassociates the CoreWLAN interface from the currently associated network.
**Notes:** This method is a no-op if the given CoreWLAN interface is not associated to a network. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.

### 131.9.12 enableIBSSWithParameters as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to create a computer-to-computer network with the given parameters.
**Notes:**

parameters: A dictionary object containing optional parameters for creating an IBSS network. This parameter is optional and may be passed as nil.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional and can be passed as nil.

Return a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

See the IBSS creation parameters defined in CWGlobals.h for more information. If no IBSS creation parameters are present, the default behavior is to create an open authentication computer-to-computer network using the machine name as the network name. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

• 131.9.13 enableIBSSWithParameters(byref error as NSErrorMBS) as boolean 21063

• 131.9.14 enableIBSSWithParameters(parameters as dictionary) as boolean 21064

• 131.9.15 enableIBSSWithParameters(parameters as dictionary, byref error as NSErrorMBS) as boolean 21065

### 131.9.13 enableIBSSWithParameters(byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to create a computer-to-computer network with the given parameters.
**Notes:**

parameters: A dictionary object containing optional parameters for creating an IBSS network. This parameter is optional and may be passed as nil.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional and can be passed as nil.

Return a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

See the IBSS creation parameters defined in CWGlobals.h for more information. If no IBSS creation parameters are present, the default behavior is to create an open authentication computer-to-computer network using the machine name as the network name. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.12 enableIBSSWithParameters as boolean 21063
- 131.9.14 enableIBSSWithParameters(parameters as dictionary) as boolean 21064
- 131.9.15 enableIBSSWithParameters(parameters as dictionary, byref error as NSErrorMBS) as boolean 21065

### 131.9.14 enableIBSSWithParameters(parameters as dictionary) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to create a computer-to-computer network with the given parameters.
**Notes:**

parameters: A dictionary object containing optional parameters for creating an IBSS network. This parameter is optional and may be passed as nil.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional and can be passed as nil.

Return a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

See the IBSS creation parameters defined in CWGlobals.h for more information. If no IBSS creation parameters are present, the default behavior is to create an open authentication computer-to-computer network using the machine name as the network name. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.12 enableIBSSWithParameters as boolean 21063
- 131.9.13 enableIBSSWithParameters(byref error as NSErrorMBS) as boolean 21063
- 131.9.15 enableIBSSWithParameters(parameters as dictionary, byref error as NSErrorMBS) as boolean 21065

### 131.9.15 enableIBSSWithParameters(parameters as dictionary, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to create a computer-to-computer network with the given parameters.
**Notes:**

parameters: A dictionary object containing optional parameters for creating an IBSS network. This parameter is optional and may be passed as nil.
error: An error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional and can be passed as nil.

Return a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

See the IBSS creation parameters defined in CWGlobals.h for more information. If no IBSS creation parameters are present, the default behavior is to create an open authentication computer-to-computer network using the machine name as the network name. This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.12 enableIBSSWithParameters as boolean 21063
- 131.9.13 enableIBSSWithParameters(byref error as NSErrorMBS) as boolean 21063
- 131.9.14 enableIBSSWithParameters(parameters as dictionary) as boolean 21064

### 131.9.16 interfaceNames as String()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of BSD names for WLAN interfaces available on the current system.
**Example:**

```
dim names() as string = CWInterfaceMBS.interfaceNames
MsgBox Join(names,EndOfLine)
```

**Notes:**

Returns an array of strings representing the supported WLAN BSD interface names avaliable on the current system (i.e. "en1", "en2"). If there are no supported interfaces for the current system, then this method will return an empty NSArray object.
Returns empty array in the case of an error.

Available on Mac OS X 10.7 or later.

### 131.9.17 interfaceWithName(name as string) as CWInterfaceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the interface with the given name.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")

MsgBox c.description
```

**Notes:** name: A string representing the name of an Airport interface.

### 131.9.18 isEqualToInterface(otherInterface as CWInterfaceMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Comparing interfaces.
**Notes:**

Two CWInterface objects are considered equal if their corresponding nameand capabilities properties are equal.

Returns true if both interfaces are equal.

### 131.9.19 primaryInterface as CWInterfaceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting an CWInterface object for the primary interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.primaryInterface

MsgBox c.name
```

### 131.9.20 scanForNetworksWithName(networkName as string, byref error as NSErrorMBS) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Scans for networks.
**Notes:**

networkName: The name (SSID) of the network for which to scan.
error: An NSErrorMBS object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method. This parameter is optional and can be passed as nil.

Returns an array of CWNetworkMBS objects.

If ssid parameter is present, a directed scan will be performed by the interface, otherwise a broadcast scan will be performed. This method will block for the duration of the scan.

Available on Mac OS X 10.7 or later.

### 131.9.21 scanForNetworksWithParameters as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a scan with the given CoreWLAN interface, returning any found networks.
**Notes:**

parameters: A dicitonary object containing optional scan parameters which can be used to control the behavior of the scan. This parameter is optional.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns an array containing CWNetworkMBS objects representing the networks found in the scan.

See the scan parameters defined in CWGlobalsMBS for controlling scan behavior. If no scan parameters are present, the default behavior is to perform a broadcast scan on active channels, for all supported PHY modes. This method will block for the duration of the scan.
See also:

- 131.9.22 scanForNetworksWithParameters(byref error as NSErrorMBS) as CWNetworkMBS() 21068
- 131.9.23 scanForNetworksWithParameters(parameters as dictionary) as CWNetworkMBS() 21068
- 131.9.24 scanForNetworksWithParameters(parameters as dictionary, byref error as NSErrorMBS) as CWNetworkMBS() 21069

### 131.9.22 scanForNetworksWithParameters(byref error as NSErrorMBS) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a scan with the given CoreWLAN interface, returning any found networks.
**Notes:**

parameters: A dicitonary object containing optional scan parameters which can be used to control the behavior of the scan. This parameter is optional.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns an array containing CWNetworkMBS objects representing the networks found in the scan.

See the scan parameters defined in CWGlobalsMBS for controlling scan behavior. If no scan parameters are present, the default behavior is to perform a broadcast scan on active channels, for all supported PHY modes. This method will block for the duration of the scan.

- 131.9.23 scanForNetworksWithParameters(parameters as dictionary) as CWNetworkMBS() 21068
- 131.9.24 scanForNetworksWithParameters(parameters as dictionary, byref error as NSErrorMBS) as CWNetworkMBS() 21069

### 131.9.23 scanForNetworksWithParameters(parameters as dictionary) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a scan with the given CoreWLAN interface, returning any found networks.
**Notes:**

parameters: A dicitonary object containing optional scan parameters which can be used to control the behavior of the scan. This parameter is optional.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns an array containing CWNetworkMBS objects representing the networks found in the scan.

See the scan parameters defined in CWGlobalsMBS for controlling scan behavior. If no scan parameters

are present, the default behavior is to perform a broadcast scan on active channels, for all supported PHY modes. This method will block for the duration of the scan.
See also:

- 131.9.21 scanForNetworksWithParameters as CWNetworkMBS() 21067
- 131.9.22 scanForNetworksWithParameters(byref error as NSErrorMBS) as CWNetworkMBS() 21068
- 131.9.24 scanForNetworksWithParameters(parameters as dictionary, byref error as NSErrorMBS) as CWNetworkMBS() 21069

### 131.9.24 scanForNetworksWithParameters(parameters as dictionary, byref error as NSErrorMBS) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a scan with the given CoreWLAN interface, returning any found networks.
**Notes:**

parameters: A dicitonary object containing optional scan parameters which can be used to control the behavior of the scan. This parameter is optional.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns an array containing CWNetworkMBS objects representing the networks found in the scan.

See the scan parameters defined in CWGlobalsMBS for controlling scan behavior. If no scan parameters are present, the default behavior is to perform a broadcast scan on active channels, for all supported PHY modes. This method will block for the duration of the scan.
See also:

- 131.9.21 scanForNetworksWithParameters as CWNetworkMBS() 21067
- 131.9.22 scanForNetworksWithParameters(byref error as NSErrorMBS) as CWNetworkMBS() 21068
- 131.9.23 scanForNetworksWithParameters(parameters as dictionary) as CWNetworkMBS() 21068

### 131.9.25 scanForNetworksWithSSID(ssid as memoryblock, byref error as NSErrorMBS) as CWNetworkMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Scans for networks.
**Notes:**

ssid The SSID for which to scan.
error: An NSErrorMBS object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method. This parameter is optional and can be passed as nil.

Returns an array of CWNetworkMBS objects.

If ssid parameter is present, a directed scan will be performed by the interface, otherwise a broadcast scan will be performed. This method will block for the duration of the scan.

Available on Mac OS X 10.7 or later.

### 131.9.26 setChannel(channel as UInt32) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the channel for the given CoreWLAN interface.
**Notes:**

channel: An integer representing the channel to which the CoreWLAN interface should be tuned.
error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

The current channel cannot be changed if the CoreWLAN interface is associated to a network. channel must be supported by the given interface.
See also:

- 131.9.27 setChannel(channel as UInt32, byref error as NSErrorMBS) as boolean 21070

### 131.9.27 setChannel(channel as UInt32, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the channel for the given CoreWLAN interface.
**Notes:**

channel: An integer representing the channel to which the CoreWLAN interface should be tuned.
error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

The current channel cannot be changed if the CoreWLAN interface is associated to a network. channel must be supported by the given interface.
See also:

- 131.9.26 setChannel(channel as UInt32) as boolean 21070

### 131.9.28 setPairwiseMasterKey(key as Memoryblock, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the interface pairwise master key (PMK).
**Notes:**

key: A memoryblock containing the pairwise master key (PMK).
error: An NSError object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method.
Returns a Boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

Key must be 32 octets. If key is nil, this method clears the PMK for the interface.

### 131.9.29 setPower(p as boolean) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the power state for the given CoreWLAN interface.
**Notes:**

power: A boolean value indicating the power state to which the CoreWLAN interface should be set. False indicates the "OFF" state.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.30 setPower(p as boolean, byref error as NSErrorMBS) as boolean 21072

### 131.9.30 setPower(p as boolean, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the power state for the given CoreWLAN interface.
**Notes:**

power: A boolean value indicating the power state to which the CoreWLAN interface should be set. False indicates the "OFF" state.

error: A error object passed by reference, which will be populated with error code and error description if an error occurs during the execution of the method. This parameter is optional.

Returns a boolean value which will indicate whether or not a failure occured. True indicates no error occured.

This method may prompt for an administrator password if the corresponding preference is enabled in the current configuration.
See also:

- 131.9.29 setPower(p as boolean) as boolean 21071

### 131.9.31 setWEPKey(key as Memoryblock, flags as Integer, index as Integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the interface WEP key.
**Notes:**

key: A memoryblock containing the WEP key.
flags: The cipher key flags to use for the specified key. Combination of kCWCipherKeyFlagsNone, kCWCipherKeyFlagsUnicast, kCWCipherKeyFlagsMulticast, kCWCipherKeyFlagsTx or kCWCipherKeyFlagsRx.
index: Integer which default key index to use for the specified key.
error An NSError object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method.

Returns a boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

Key must be 5 octets for WEP-40 or 13 octets for WEP-104. if key is nil, this method clears the WEP key for the interface. index must correspond to default key index 1-4.

### 131.9.32 setWLANChannel(channel as CWChannelMBS, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the interface channel.
**Notes:**

channel: A CWChannel object corresponding to the channel.
error: An NSErrorMBS object passed by reference, which will be populated with the error code and the error description if an error occurs during the execution of this method. This parameter is optional and can be passed as nil.

A Boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

The channel cannot be changed if the interface is associated to a network.

Available on Mac OS X 10.7 or later.

### 131.9.33 startIBSSModeWithSSID(ssidData as MemoryBlock, security as Integer, channel as Integer, password as string, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a computer-to-computer (ad-hoc) network with the given network name, security type, and password on the specified channel.
**Notes:**

security: The security type to be used. kCWIBSSModeSecurityNone, kCWIBSSModeSecurityWEP40 or kCWIBSSModeSecurityWEP104.
channel: The channel on which the network will be created.
password: The password to be used. This paramter is not applicable to open system authentication.

Returns a Boolean value which will indicate whether or not a failure occurred during execution. True indicates no error occurred.

This operation may require an administrator password.

### 131.9.34 supportedChannels as Integer()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of channels supported by the CoreWLAN interface for the active country code.
**Notes:** Dynamically queries the interface for the supported channels.

### 131.9.35 supportedInterfaces as String()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Getting all supported interfaces
**Notes:** Returns an array containing strings representing the supported CoreWLAN interface names avaliable on the current system (i.e. "en1", "en2"). If there are no supported interfaces for the current system, then this method will return an empty array.

### 131.9.36 supportedPHYModes as Integer()

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of PHY modes supported by the CoreWLAN interface.
**Notes:** Dynamically queries the interface for the supported PHY modes.

### 131.9.37 supportedWLANChannels as CWChannelMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An array of channels supported by the interface for the active country code.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
dim channels() as CWChannelMBS = c.supportedWLANChannels
dim lines() as string
for each ch as CWChannelMBS in channels
lines.append str(ch.channelNumber) + ": "+ str(ch.channelBand)
next
MsgBox join(lines,", ")
```

**Notes:**

Dynamically queries the interface for the supported channels. Returns an array of CWChannel objects, or nil in the case of an error.

Available on Mac OS X 10.7 or later.

### 131.9.38 Properties

### 131.9.39 activePHYMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current active PHY modes for the interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.activePHYMode)
```

**Notes:**

Dynamically queries the interface for the current active PHY mode.
Returns kCWPHYModeNone in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.40 bssid as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current BSSID of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current BSSID.
(Read only property)

### 131.9.41 bssidData as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current BSSID of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current BSSID.

(Read only property)

### 131.9.42 channel as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current channel of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current channel.
(Read only property)

### 131.9.43 configuration as CWConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current stored configuration for the CoreWLAN interface.
**Notes:** (Read only property)

### 131.9.44 countryCode as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Country code (ISO/IEC 3166-1:1997) of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current country code.
(Read only property)

### 131.9.45 description as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The object description.
**Notes:** (Read only property)

### 131.9.46 deviceAttached as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The interface has its corresponding hardware attached.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.deviceAttached)
```

**Notes:**

Returns false in the case of an error.
Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.47 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.9.48 hardwareAddress as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The hardware media access control (MAC) address for the interface, returned as a UTF-8 string.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox c.hardwareAddress
```

**Notes:**

The standard format for printing a MAC-48 address <00:00:00:00:00:00>is used to represent the MAC address as a string. Returns "" in the case of an error.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.49 interfaceMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current mode for the interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.interfaceMode)
```

**Notes:**

Dynamically queries the interface for the current mode. Returns kCWInterfaceModeNone in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.50 interfaceName as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The BSD name of the interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox c.interfaceName
MsgBox str(c.noiseMeasurement)
```

**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.51 interfaceState as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current state of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current interface state.
(Read only property)

### 131.9.52 name as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** BSD name for the CoreWLAN interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.primaryInterface

MsgBox c.name
```

**Notes:** (Read only property)

### 131.9.53 noise as Double

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current aggregate noise measurement (dBm) of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current aggregate noise measurement.
(Read only property)

### 131.9.54 noiseMeasurement as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current aggregate noise measurement (dBm) for the interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.noiseMeasurement)
```

**Notes:**

Dynamically queries the interface for the current aggregate noise measurement.
Returns 0 in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.55 opMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current operation mode of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current operation mode.
(Read only property)

### 131.9.56 phyMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current active PHY mode of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current active PHY mode.
(Read only property)

### 131.9.57 power as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current power state for the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current power state.
(Read only property)

### 131.9.58 powerOn as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The interface power state is set to "ON".
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.rssiValue)
```

**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.59 powerSave as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current power save state for the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current power save state.
Introduced in 10.6, deprecated in 10.7 and gone in 10.9.
(Read only property)

### 131.9.60 rssi as Double

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current aggregate RSSI measurement (dBm) of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current aggregate RSSI measurement.
(Read only property)

### 131.9.61 rssiValue as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current aggregate received signal strength indication (RSSI) measurement (dBm) for the interface.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.rssiValue)
```

**Notes:**

Dynamically queries the interface for the current aggregate RSSI measurement.
Returns 0 in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.62 security as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current security mode for the interface.
**Notes:**

Dynamically queries the interface for the security mode. Returns kCWSecurityUnknown in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.63 securityMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current security mode of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current security mode.
(Read only property)

### 131.9.64 serviceActive as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The interface has its corresponding network service enabled.
**Example:**

```
dim c as CWInterfaceMBS = CWInterfaceMBS.interfaceWithName("en0")
MsgBox str(c.serviceActive)
```

**Notes:**

Returns false in the case of an error.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.65 ssid as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current SSID of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current SSID.
(Read only property)

### 131.9.66 ssidData as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current service set identifier (SSID) for the interface, returned as data.
**Notes:**

Dynamically queries the interface for the current SSID. The SSID is 1-32 octets.
Returns nil in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.67 supportsAES_CCM as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports AES-CCM (IEEE 802.11i Advanced Encryption Standard - Counter Mode with Cipher-Block Chaining Message Authentication Code).
**Notes:** (Read only property)

### 131.9.68 supportsHostAP as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports host access point mode.
**Notes:** (Read only property)

### 131.9.69 supportsIBSS as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports IBSS networks (IEEE 802.11 Independent Basic Service Set).
**Notes:** (Read only property)

### 131.9.70 supportsMonitorMode as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports monitor mode.
**Notes:** (Read only property)

### 131.9.71 supportsPMGT as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports power save modes.
**Notes:** (Read only property)

### 131.9.72 supportsShortGI20MHz as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports short guard interval in 20MHz channels.
**Notes:** (Read only property)

### 131.9.73 supportsShortGI40MHz as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports short guard interval in 40MHz channels.
**Notes:** (Read only property)

### 131.9.74 supportsTKIP as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports TKIP (IEEE 802.11i Temporal Key Integrity Protocol).
**Notes:** (Read only property)

### 131.9.75 supportsTSN as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports TSN authentication (Transitional Security Network).
**Notes:** (Read only property)

### 131.9.76 supportsWEP as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports WEP authentication (IEEE 802.11 Wired Equivalent Privacy).
**Notes:** (Read only property)

### 131.9.77 supportsWME as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports WME (IEEE 802.11e Wireless Multimedia Extensions).
**Notes:** (Read only property)

### 131.9.78 supportsWoW as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports wake on wireless capability.
**Notes:** (Read only property)

### 131.9.79 supportsWPA as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports WPA (Wi-Fi Alliance Wi-Fi Protected Access).
**Notes:** (Read only property)

### 131.9.80 supportsWPA2 as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN interface supports WPA2 (Wi-Fi Alliance Wi-Fi Protected Access 2).
**Notes:** (Read only property)

### 131.9.81 transmitPower as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current transmit power (mW) for the interface.
**Notes:**

Dynamically queries the interface for the current transmit power.
Returns 0 in the case of an error.

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.82 transmitRate as Double

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current transmit rate (Mbps) for the interface.
**Notes:**

Dynamically queries the interface for the current transmit rate.
Returns 0 in the case of an error, or if the interface is not participating in a network.
Available on Mac OS X 10.7 or later.
(Read only property)

### 131.9.83 txPower as Double

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current target transmit power (mW) of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current transmit power.
(Read only property)

### 131.9.84 txRate as Double

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Current transmit rate (Mbps) of the CoreWLAN interface.
**Notes:**

Dynamically queries the interface for the current transmit rate.
(Read only property)

### 131.9.85 wlanChannel as CWChannelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current channel for the interface.
**Notes:**

Dynamically queries the interface for the current channel. Returns nil in the case of an error, or if the interface is not participating in a network.

Available on Mac OS X 10.7 or later.
(Read only property)

## 131.10 class CWMutableConfigurationMBS

### 131.10.1 class CWMutableConfigurationMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Encapsulates a mutable configuration for an AirPort WLAN interface.
**Notes:**

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the CWMutableConfiguration class.
Subclass of the CWConfigurationMBS class.

### 131.10.2 Methods

### 131.10.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new mutable configuration.

### 131.10.4 setNetworkProfiles(values() as CWNetworkProfileMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An array of remembered CWNetworkProfileMBS objects.
**Notes:** The order of this array corresponds to the order in which the the CWNetworkProfileMBS objects participate in the auto-join process.

### 131.10.5 setRememberJoinedNetworks(value as boolean)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** AirPort client will remember all joined networks.

### 131.10.6 setRequireAdministratorForAssociation(value as boolean)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to change networks.

### 131.10.7 setRequireAdministratorForIBSSMode(value as boolean)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to create a computer-to-computer network.

### 131.10.8 setRequireAdministratorForPower(value as boolean)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Require an administrator password to change the interface power state.

## 131.11 class CWMutableNetworkProfileMBS

### 131.11.1 class CWMutableNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Encapsulates a mutable network profile entry.
**Notes:**

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the CWMutableNetworkProfile class.
Subclass of the CWNetworkProfileMBS class.

### 131.11.2 Methods

### 131.11.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 131.11.4 setSecurity(value as Integer)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the security mode for the network profile.
**Notes:** See kCWSecurity* constants.

### 131.11.5 setSsidData(data as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the service set identifier (SSID) for the network profile, returned as data.
**Notes:** The SSID is 1-32 octets.

## 131.12 class CWNetworkMBS

### 131.12.1 class CWNetworkMBS

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** CoreWLAN wireless (IEEE 802.11) network.
**Notes:**

Encapsulates a wireless network providing read-only accessors to various properties of the network.

Requires Mac OS X 10.6 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 131.12.2 Methods

### 131.12.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 131.12.4 copy as CWNetworkMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of this object.

### 131.12.5 isEqualToNetwork(network as CWNetworkMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Comparing wireless networks.
**Notes:**

Returns true if the network objects are equal.

Two CWNetworkMBS objects are considered equal if their corresponding ssid, securityMode, and isIBSS properties are equal.

### 131.12.6 Operator_Compare(profile as CWNetworkMBS) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compares two networks.

### 131.12.7 supportsPHYMode(phyMode as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Method for determining which PHY modes a network supports.
**Notes:**

True if the network supports the specified PHY mode.

Available on Mac OS X 10.7 or later.

### 131.12.8 supportsSecurity(security as Integer) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Getting supported security types
**Notes:**

True if the network supports the specified security type.

Method for determining which security types a network supports.

Available on Mac OS X 10.7 or later.

### 131.12.9 Properties

### 131.12.10 beaconInterval as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The beacon interval (ms) for the network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.11 bssid as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Basic service set identifier for the given CWNetworkMBS.
**Notes:** (Read only property)

### 131.12.12 countryCode as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The country code (ISO/IEC 3166-1:1997) for the network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.13 description as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The object description.
**Notes:** (Read only property)

### 131.12.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.12.15 ibss as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The network is an IBSS network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.16 informationElementData as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Information element data included in beacon or probe response frames.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.17 noiseMeasurement as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The aggregate noise measurement (dBm) for the network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.18 rssiValue as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The aggregate received signal strength indication (RSSI) measurement (dBm) for the network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

### 131.12.19 ssid as string

MBS MacFrameworks Plugin, Plugin Version: 11.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Service set identifier for the given CWNetworkMBS.
**Notes:** (Read only property)

### 131.12.20 ssidData as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The service set identifier (SSID) for the network, returned as data.
**Notes:**

The SSID is defined as 1-32 octets.
(Read only property)

### 131.12.21 wlanChannel as CWChannelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The channel for the network.
**Notes:**

Available on Mac OS X 10.7 or later.
(Read only property)

## 131.13 class CWNetworkProfileMBS

### 131.13.1 class CWNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a network profile.
**Notes:**

Encapsulates an immutable network profile entry.

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the CWNetworkProfile class.

### 131.13.2 Methods

### 131.13.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting a CWNetworkProfile object.
See also:

- 131.13.4 Constructor(networkProfile as CWNetworkProfileMBS) 21096

### 131.13.4 Constructor(networkProfile as CWNetworkProfileMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting a CWNetworkProfile object initialized with the given CWNetworkProfile object.
See also:

- 131.13.3 Constructor 21096

### 131.13.5 copy as CWNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the object.

### 131.13.6 isEqualToNetworkProfile(networkProfile as CWNetworkProfileMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Comparing network profiles.
**Notes:**

networkProfile: The CWNetworkProfile object with which to compare the receiver.

CWNetworkMBS objects are considered equal if their corresponding ssidData and securityType properties are equal.

### 131.13.7 mutableCopy as CWMutableNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a mutable copy of the object.

### 131.13.8 networkProfile as CWNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting a CWNetworkProfile object.

### 131.13.9 networkProfileWithNetworkProfile(networkProfile as CWNetworkProfileMBS) as CWNetworkProfileMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience method for getting a CWNetworkProfile object initialized with the given CWNetworkProfile object.
**Notes:** networkProfile: The CWNetworkProfile object to use to initialize a new CWNetworkProfile object.

### 131.13.10 Operator_Compare(networkProfile as CWNetworkProfileMBS) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Compares two network profiles.

### 131.13.11 Properties

### 131.13.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.13.13 security as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The security mode for the network profile.
**Notes:**

See kCWSecurity* constants.
(Read only property)

### 131.13.14 ssid as string

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The service set identifier (SSID) for the network profile, encoded as a string.
**Notes:**

If the SSID can not be encoded as a valid UTF-8 or WinLatin1 string, this method returns "".
(Read only property)

### 131.13.15 ssidData as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The service set identifier (SSID) for the network profile, returned as data.
**Notes:**

The SSID is 1-32 octets.
(Read only property)

## 131.14 class CWWiFiClientMBS

### 131.14.1 class CWWiFiClientMBS

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The interface to the Wi-Fi subsystem on OS X.
**Notes:**

Provides access to all Wi-Fi interfaces and allows Wi-Fi clients to setup event notifications.

CWWiFiClientMBS objects are heavy objects, therefore, clients of the CoreWLAN framework should use a single, long-running instance rather than creating several short-lived instances.

The CWWiFiClientMBS object should be used to instantiate CWInterfaceMBS objects rather than using a CWInterfaceMBS initializer directly.

MBS Plugin make sure that all events are routed to main thread.

Available on MacOS 10.10 or newer.

### 131.14.8 Methods

### 131.14.9 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether this class is available.
**Notes:** Returnes true on MacOS 10.10 or newer.

### 131.14.10 Constructor

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a CWWiFiClient object.
**Notes:** Available on MacOS 10.10 or newer.

### 131.14.11 Destructor

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 131.14.12 interfaceNames as String()

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of available Wi-Fi interface names (e.g. "en0").
**Notes:**

An Array of string corresponding to Wi-Fi interface names.
If no Wi-Fi interfaces are available, this method will return an empty array.
Returns nil if an error occurs.

### 131.14.13 interfaces as CWInterfaceMBS()

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns all available Wi-Fi interfaces.
**Notes:**

If no Wi-Fi interfaces are available, this method will return an empty array.
Returns nil if an error occurs.

### 131.14.14 interfaceWithName(name as string) as CWInterfaceMBS

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Get the CWInterface object bound to the Wi-Fi interface with a specific interface name.
**Notes:**

interfaceName: The name of an available Wi-Fi interface.

Use interfaceNames function to get a list of available Wi-Fi interface names.
Returns a CWInterface object for the default Wi-Fi interface if no interface name is specified.

### 131.14.15 startMonitoring(EventType as integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Register for specific Wi-Fi event notifications.
**Notes:**

type: A CWEventType value.
error: An NSError object passed by reference, which upon return will contain the error if an error occurs.

Return a boolean value indicating whether or not an error occurred. True indicates no error occurred.

### 131.14.16 stopMonitoring(EventType as integer, byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Unregister for specific Wi-Fi event notifications.
**Notes:**

type: A CWEventType value.

error: An NSError object passed by reference, which upon return will contain the error if an error occurs.

Returns a boolean value indicating whether or not an error occurred. true indicates no error occurred.

### 131.14.17 stopMonitoringAllEvents(byref error as NSErrorMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Unregister for all Wi-Fi event notifications.
**Notes:**

error: An NSError object passed by reference, which upon return will contain the error if an error occurs.

Returns a boolean value indicating whether or not an error occurred. true indicates no error occurred.

### 131.14.18 Properties

### 131.14.19 CWInterface as CWInterfaceMBS

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the CWInterface object for the default Wi-Fi interface.
**Notes:**

This method is named CWInterface as the name interface would cause an error in Xojo.
(Read only property)

### 131.14.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.14.21 Events

### 131.14.22 bssidDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the current BSSID changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeBSSIDDidChange event type to register for BSSID event notifications.
Use CWInterfaceMBS.bssid to query the current BSSID.

### 131.14.23 clientConnectionInterrupted

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked if the connection to the Wi-Fi subsystem is temporarily interrupted.
**Notes:**

All event notifications for which the Wi-Fi client has registered will be automatically re-registered if the connection is interrupted.
The Wi-Fi client should re-sync any local state which is updated as a result of Wi-Fi event notifications.

### 131.14.24 clientConnectionInvalidated

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked if the connection to the Wi-Fi subsystem is permanently invalidated.

### 131.14.25 countryCodeDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the currently adopted country code changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeCountryCodeDidChange event type to register for country code

event notifications.
Use CWInterfaceMBS.countryCode to query the currently adopted country code.

### 131.14.26 linkDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the Wi-Fi link state changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeLinkDidChange event type to register for link event notifications.

### 131.14.27 linkQualityDidChangeForWiFiInterfaceWithName(interfaceName as String, rssi as Integer, transmitRate as double)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the Wi-Fi link quality changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.
rssi: The RSSI value for the currently associated network on the Wi-Fi interface.
transmitRate: The transmit rate for the currently associated network on the Wi-Fi interface.

Use startMonitoring with the CWEventTypeLinkQualityDidChange event type to register for link quality event notifications.
Use CWInterfaceMBS.rssiValue and CWInterfaceMBS.transmitRate to query the current RSSI and transmit rate, respectively.

### 131.14.28 modeDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the Wi-Fi operating mode changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeModeDidChange event type to register for interface mode event

notifications.
Use CWInterfaceMBS.interfaceMode to query the current operating mode.

### 131.14.29 powerStateDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the Wi-Fi power state changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypePowerDidChange event type to register for power event notifications.
Use CWInterfaceMBS.powerOn to query the current Wi-Fi power state.

### 131.14.30 rangingReportEventForWiFiInterfaceWithName(interfaceName as String, rangingData() as Dictionary, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when WiFi ranging measurement completed.
**Notes:**

interfaceName: The name of the Wi-Fi interface.
rangingData: Dictionary containing distance measurement data.

Use startMonitoring with the CWEventTypeRangingReportEvent event type to register for ranging event notifications.

### 131.14.31 scanCacheUpdatedForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the Wi-Fi interface scan cache is updated with new scan results.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeScanCacheUpdated event type to register for scan cache event notifications.

Use CWInterfaceMBS.cachedScanResults to query scan cache results from the last scan.

### 131.14.32 ssidDidChangeForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when the current SSID changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeSSIDDidChange event type to register for SSID event notifications.
Use CWInterfaceMBS.ssidData or CWInterfaceMBS.ssid to query the current SSID.

### 131.14.33 virtualInterfaceStateChangedForWiFiInterfaceWithName(interfaceName as String)

MBS MacFrameworks Plugin, Plugin Version: 18.2, Platform: macOS, Targets: .

**Function:** Invoked when any state of WiFi virtual interface changes.
**Notes:**

interfaceName: The name of the Wi-Fi interface.

Use startMonitoring with the CWEventTypeVirtualInterfaceStateChanged event type to register for virtual interface state changed notifications.

### 131.14.34 Constants

### 131.14.35 CWEventTypeBSSIDDidChange = 3

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the current BSSID of any Wi-Fi interface changes.

### 131.14.36 CWEventTypeCountryCodeDidChange = 4

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the adopted country code of any Wi-Fi interface changes.

### 131.14.37 CWEventTypeLinkDidChange = 5

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the link state for any Wi-Fi interface changes.

### 131.14.38 CWEventTypeLinkQualityDidChange = 6

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the RSSI or transmit rate for any Wi-Fi interface changes.

### 131.14.39 CWEventTypeModeDidChange = 7

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the operating mode of any Wi-Fi interface changes.

### 131.14.40 CWEventTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** No event type specified.

### 131.14.41 CWEventTypePowerDidChange = 1

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the power state of any Wi-Fi interface changes.

### 131.14.42 CWEventTypeRangingReportEvent = 10

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when WiFi ranging measurement completed.

### 131.14.43 CWEventTypeScanCacheUpdated = 8

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the scan cache of any Wi-Fi interface is updated with new scan results.

### 131.14.44 CWEventTypeSSIDDidChange = 2

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when the current SSID of any Wi-Fi interface changes.

### 131.14.45 CWEventTypeVirtualInterfaceStateChanged = 9

MBS MacFrameworks Plugin, Plugin Version: 18.2.

**Function:** One of the Wi-Fi event types used in CWWiFiClientMBS.startMonitoring.
**Notes:** Posted when any state of any Wi-Fi virtual interface changes.

## 131.15 class DatagramMBS

### 131.15.1 class DatagramMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a datagram.

### 131.15.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 131.15.3 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

### 131.15.4 Properties

### 131.15.5 Address as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address of the datagram.
**Notes:**

This is an IPv4.
(Read and Write property)

### 131.15.6 Data as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data of the datagram.
**Notes:** (Read and Write property)

### 131.15.7 Length as Integer

MBS Network Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Length of Data in bytes.
**Notes:** (Read and Write property)

### 131.15.8 Port as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The port of the datagram.
**Notes:** (Read and Write property)

### 131.15.9 rawAddress as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The raw address.
**Notes:**

This is socket address structure as used in C.
(Read and Write property)

# 131.16 class DNSLookupMBS

## 131.16.1 class DNSLookupMBS

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for the result of a Lookup query.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox DNSLookupMBS.FormatIP(d.Address)
end if
```

### 131.16.4 Methods

### 131.16.5 Addresses(index as Integer) as string

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the address with the given index for this host.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
dim c as Integer = d.AddressesCount-1
for i as Integer = 0 to c
MsgBox d.FormatIP(d.Addresses(i))
next
end if
```

**Notes:** Index from 0 to count-1.

### 131.16.6 Aliases(index as Integer) as string

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the aliasname for the given index.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
dim c as Integer = d.AliasCount-1
for i as Integer = 0 to c
MsgBox d.Aliases(i)
next

end if
```

**Notes:** Index is from 0 to count-1.

### 131.16.7 FormatIP(ip as string) as string

MBS Network Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Formats an IP from binary representation into string representation.
**Example:**

```
dim s as string = DNSLookupMBS.ParseIPv4("65.66.67.68")

MsgBox s // in binary representation of that IP

dim t as string = DNSLookupMBS.FormatIP(s)

MsgBox t
```

**Notes:**

Formats both IPv4 and IPv6 IP addresses in binary representation into human readable text.
On Windows IPv6 is only supported on Windows Vista and newer.
Returns empty string on failure.

### 131.16.8 LookupHostbyAddress(HostAddressBinary as string) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host IP address.
**Example:**

```
dim l as DNSLookupMBS
dim a as string

a = DNSLookupMBS.ParseIPv4("17.254.0.91")

// try it...
l = DNSLookupMBS.LookupHostbyAddress(a)

// success...
MsgBox l.Name
```

**Notes:**

The address must be a 4 byte IP address like the ones returned by DNSLookupMBS.Address.
Returns nil on any error.

### 131.16.9 LookupHostbyAddressMT(HostAddressBinary as string) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host IP address.
**Example:**

```
dim l as DNSLookupMBS
dim a as string

a = DNSLookupMBS.ParseIPv4("17.254.0.91")

// try it...
l = DNSLookupMBS.LookupHostbyAddressMT(a)

// success...
MsgBox l.Name
```

**Notes:**

Same as LookupHostbyAddress, but with additional multithreading.

The address must be a 4 byte IP address like the ones returned by DNSLookupMBS.Address.
Returns nil on any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 131.16.10 LookupHostbyName(HostName as string) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host name.
**Example:**

```
dim s as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.monkeybreadsoftware.de")

dim c as Integer = s.AddressesCount-1
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
```

**Notes:**

Will fail if you pass an IP as an host. (e.g. 10.20.30.40)
Returns nil on any error.
See also:

- 131.16.11 LookupHostbyName(HostName as string, AddressType as Integer) as DNSLookupMBS 21115

### 131.16.11 LookupHostbyName(HostName as string, AddressType as Integer) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host name.
**Example:**

```
dim s as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("ipv6.google.com", DNSLookupMBS.AddressTypeIPv6)

if s<>nil then
dim c as Integer = s.AddressesCount-1
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
end if

s = DNSLookupMBS.LookupHostbyName("www.six.heise.de", DNSLookupMBS.AddressTypeIPv6)

if s<>nil then
dim c as Integer = s.AddressesCount-1
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
end if
```

**Notes:**

Will fail if you pass an IP as an host. (e.g. 10.20.30.40)
Returns nil on any error.

IPv6 on Windows does not work with this method.
See also:

- 131.16.10 LookupHostbyName(HostName as string) as DNSLookupMBS 21114

### 131.16.12 LookupHostbyNameMT(HostName as string) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host name.
**Example:**

```
dim s as DNSLookupMBS = DNSLookupMBS.LookupHostbyNameMT("www.monkeybreadsoftware.de")

dim c as Integer = s.AddressesCount-1
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
```

**Notes:**

Same as LookupHostbyName, but with additional multithreading.

Will fail if you pass an IP as an host. (e.g. 10.20.30.40)
Returns nil on any error.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 131.16.13 LookupHostbyNameMT(HostName as string, AddressType as Integer) as DNSLookupMBS 21116

### 131.16.13 LookupHostbyNameMT(HostName as string, AddressType as Integer) as DNSLookupMBS

MBS Network Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the DNS server for information about a host name.
**Example:**

```
dim s as DNSLookupMBS = DNSLookupMBS.LookupHostbyNameMT("ipv6.google.com", DNSLookupMBS.AddressTypeIPv6)

if s<>nil then
dim c as Integer = s.AddressesCount-1
```

```
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
end if

s = DNSLookupMBS.LookupHostbyNameMT("www.six.heise.de", DNSLookupMBS.AddressTypeIPv6)

if s<>nil then
dim c as Integer = s.AddressesCount-1
for i as Integer = 0 to c
dim ss as string = s.Addresses(i)
print str(s.FormatIP(ss))
next
end if
```

**Notes:**

Same as LookupHostbyName, but with additional multithreading.

Will fail if you pass an IP as an host. (e.g. 10.20.30.40)
Returns nil on any error.

IPv6 on Windows does not work with this method.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 131.16.12 LookupHostbyNameMT(HostName as string) as DNSLookupMBS 21116

### 131.16.14 ParseIPv4(ip as string) as string

MBS Network Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an IP address in IPv4 format.
**Example:**

```
dim s as string = DNSLookupMBS.ParseIPv4("65.66.67.68")

MsgBox s // in binary representation of that IP

dim t as string = DNSLookupMBS.FormatIP(s)
```

```
MsgBox t
```

**Notes:**

Returns empty string on failure.
Works only for IPv4 strings.

### 131.16.15 ParseIPv6(ip as string) as string

MBS Network Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Parses an IP address in IPv6 format.
**Example:**

```
dim s as string = DNSLookupMBS.ParseIPv6("2001:0db8:85a3:08d3:1319:8a2e:0370:7344")

MsgBox s // in binary representation of that IP

dim t as string = DNSLookupMBS.FormatIP(s)

MsgBox t
```

**Notes:**

Returns empty string on failure.
Works only for IPv6 strings.

### 131.16.16 Properties

### 131.16.17 Address as String

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The primary address of the host.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox DNSLookupMBS.FormatIP(d.Address)
end if
```

**Notes:**

On TCP/IP based system the address is 4 bytes long binary string.
(Read and Write property)

### 131.16.18 AddressesCount as Integer

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of addresses for this host.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox str(d.AddressesCount)
end if
```

**Notes:** (Read and Write property)

### 131.16.19 AddressType as Integer

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of the address format.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox str(d.AddressType) // shows 2 for IPv4
end if
```

**Notes:**

2 for IPv2

10 for IPv10
(Read and Write property)

### 131.16.20 AliasCount as Integer

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The number of aliases for this host.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox str(d.AliasCount)
end if
```

**Notes:** (Read and Write property)

### 131.16.21 Name as String

MBS Network Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the host.
**Example:**

```
dim d as DNSLookupMBS = DNSLookupMBS.LookupHostbyName("www.apple.com")

if d=nil then
MsgBox "No DNS Server available?"
else
MsgBox d.Name
end if
```

**Notes:** (Read and Write property)

### 131.16.22 Constants

### 131.16.23 AddressTypeIPv4 = 2

MBS Network Plugin, Plugin Version: 10.4.

**Function:** One of the address types.
**Notes:** An IPv4 address.

### 131.16.24 AddressTypeIPv6 = 10

MBS Network Plugin, Plugin Version: 10.4.

**Function:** One of the address types.
**Notes:** An IPv6 address.

## 131.17 class DNSServiceAddrInfoMBS

### 131.17.1 class DNSServiceAddrInfoMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: All.

**Function:** The class to query IP Address for hostname asynchronously.
**Notes:**

Queries for the IP address of a hostname by using either Multicast or Unicast DNS.
Subclass of the DNSServiceBaseMBS class.

### 131.17.4 Methods

### 131.17.5 AddrInfo(InterfaceIndex as Integer, protocol as Integer, HostName as string) as boolean

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: All.

**Function:** Queries for the IP address of a hostname by using either Multicast or Unicast DNS.
**Notes:**

interfaceIndex: The interface on which to issue the query. Passing 0 causes the query to be sent on all active interfaces via Multicast or the primary interface via Unicast.
protocol: Pass in kDNSServiceProtocol_IPv4 to look up IPv4 addresses, or kDNSServiceProtocol_IPv6 to look up IPv6 addresses, or both to look up both kinds. If neither flag is set, the system will apply an intelligent heuristic, which is (currently) that it will attempt to look up both, except:

If "hostname" is a wide-area unicast DNS hostname (i.e. not a ".local." name) but this host has no routable IPv6 address, then the call will not try to look up IPv6 addresses for "hostname", since any addresses it found would be unlikely to be of any use anyway. Similarly, if this host has no routable IPv4 address, the call will not try to look up IPv4 addresses for "hostname".

hostname: The fully qualified domain name of the host to be queried for.

Lasterror is set to kDNSServiceErr_NoError (0) on success (any subsequent, asynchronous errors are delivered to the callback), otherwise returns an error code indicating the error that occurred.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.17.6 Available as boolean

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: All.

**Function:** Whether this class is available for use.
**Notes:** Older versions of Bonjour did not have such functions, so there it may not be available.

### 131.17.7 Events

### 131.17.8 ServiceAddrInfo(Flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, AddressFamily as Integer, IP as string, SockAddr as MemoryBlock, HostName as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: .

**Function:** The event called when something is found.
**Notes:**

Flags: Possible values are kDNSServiceFlagsMoreComing and kDNSServiceFlagsAdd.
interfaceIndex: The interface to which the answers pertain.
errorCode: Will be kDNSServiceErr_NoError (0) on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.
hostname: The fully qualified domain name of the host to be queried for.
address: IPv4 or IPv6 address.
ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.

### 131.17.9 Constants

### 131.17.10 kAddressFamilyIPv4 = 2

MBS Network Plugin, Plugin Version: 15.0.

**Function:** One of the address family constants.
**Notes:** IPv4 protocol

### 131.17.11 kAddressFamilyIPv6 = 30

MBS Network Plugin, Plugin Version: 15.0.

**Function:** One of the address family constants.
**Notes:** IPv6 protocol

### 131.17.12 kProtocolAuto = 0

MBS Network Plugin, Plugin Version: 15.0.

**Function:** One of the protocols constants.
**Notes:** Automatic decide.

### 131.17.13 kProtocolIPv4 = 1

MBS Network Plugin, Plugin Version: 15.0.

**Function:** One of the protocols constants.
**Notes:** IPv4 protocol

### 131.17.14 kProtocolIPv6 = 2

MBS Network Plugin, Plugin Version: 15.0.

**Function:** One of the protocols constants.
**Notes:** IPv6 protocol

## 131.18 class DNSServiceBaseMBS

### 131.18.1 class DNSServiceBaseMBS

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** The base DNS Service class.

### 131.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr1
- MBS Xojo / Real Studio Plugins, version 14.2pr4

### 131.18.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr1
- MBS Xojo / Real Studio Plugins, version 14.2pr4

### 131.18.4 Methods

### 131.18.5 Available as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Whether Bonjour (zeroconfig) is installed and useable.
**Notes:** If this function returns true, all the needed stuff is installed and the function have been loaded.

### 131.18.6 Close

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Stops the current request and releases all used memory.
**Notes:** This is done automatically for you by the destructor.

### 131.18.7 ConstructFullName(Service as string, regtype as string, domain as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Concatenate a three-part domain name (as returned by the above callbacks) into a properly-escaped full domain name.
**Notes:**

Note that events in the above functions ALREADY ESCAPE strings where necessary.

service: The service name - any dots or backslashes must NOT be escaped. May be "" (to construct a PTR record name, e.g. "_ftp._tcp.apple.com.").
regtype: The service type followed by the protocol, separated by a dot (e.g. "_ftp._tcp").
domain: The domain name, e.g. "apple.com.". Literal dots or backslashes, if any, must be escaped, e.g. "1st\. Floor.apple.com."

Returns 0 on success, -1 on error.

### 131.18.8 GetDaemonVersion as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Queries the version of the daemon.
**Notes:** Value is zero on any error.

### 131.18.9 Initialize

MBS Network Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

**Function:** Initializes API.
**Notes:**

On Windows the plugin calls this internally at startup of application.
Now if your app installs Bonjour while running, you can call this method to let the plugin load the bonjour dll.
After successful call, the available functions return true.

Does nothing on Mac OS X or Linux.

### 131.18.10 Running as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** True if there is a running request.

### 131.18.11 Properties

### 131.18.12 Handle as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** The handle for this request.
**Notes:** (Read and Write property)

### 131.18.13 Lasterror as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** The last error code reported.
**Notes:**

0 if the function succeeded.
-1 if the function used was not available.
See the kError constants for possible errors.
(Read and Write property)

### 131.18.14 Constants

### 131.18.15 kClassIN = 1

MBS Network Plugin, Plugin Version: 10.1.

**Function:** The DNS class for Internet services.

### 131.18.16 kErrorAlreadyRegistered = -65547

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.17 kErrorBadFlags = -65543

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.18 kErrorBadInterfaceIndex = -65552

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.19 kErrorBadParam = -65540

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.20 kErrorBadReference = -65541

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.21 kErrorBadState = -65542

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.22 kErrorBadTime = -65559

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.23 kErrorDoubleNAT = -65558

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.24 kErrorFirewall = -65550

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.25 kErrorIncompatible = -65551

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.26 kErrorInvalid = -65549

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.27 kErrorNameConflict = -65548

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.28 kErrorNATTraversal = -65557

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.29 kErrorNoAuth = -65555

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.30 kErrorNoError = 0

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.31 kErrorNoMemory = -65539

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.32 kErrorNoSuchKey = -65556

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.33 kErrorNoSuchName = -65538

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.34 kErrorNoSuchRecord = -65554

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.35 kErrorNotInitialized = -65545

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.36 kErrorRefused = -65553

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.37 kErrorUnknown = -65537

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.38 kErrorUnsupported = -65544

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the error constants.

### 131.18.39 kFlagsAdd = 2

MBS Network Plugin, Plugin Version: 10.1.

**Function:** A flag for domain enumeration and browse/query events.
**Notes:** "Default" applies only to enumeration and is only valid in conjuction with "Add". An enumeration callback with the "Add" flag NOT set indicates a "Remove", i.e. the domain is no longer valid.

### 131.18.40 kFlagsAllowRemoteQuery = & h200

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flag for creating a record for which we will answer remote queries (queries from hosts more than one hop away; hosts not directly connected to the local link).

### 131.18.41 kFlagsBrowseDomains = & h40

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flags for specifying domain enumeration type in DNSServiceEnumerateDomains.
**Notes:** BrowseDomains enumerates domains recommended for browsing, RegistrationDomains enumerates

domains recommended for registration.

### 131.18.42 kFlagsDefault = 4

MBS Network Plugin, Plugin Version: 10.1.

**Function:** A flag for domain enumeration and browse/query events.
**Notes:** "Default" applies only to enumeration and is only valid in conjuction with "Add". An enumeration callback with the "Add" flag NOT set indicates a "Remove", i.e. the domain is no longer valid.

### 131.18.43 kFlagsForceMulticast = & h400

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the flags.
**Notes:** Flag for signifying that a query or registration should be performed exclusively via multicast DNS, even for a name in a domain (e.g. foo.apple.com.) that would normally imply unicast DNS.

### 131.18.44 kFlagsLongLivedQuery = & h100

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flag for creating a long-lived unicast query for the QueryRecord call.

### 131.18.45 kFlagsMoreComing = 1

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the flags used for the events.
**Notes:** MoreComing indicates to a callback that at least one more result is queued and will be delivered following immediately after this one. Applications should not update their UI to display browse results when the MoreComing flag is set, because this would result in a great deal of ugly flickering on the screen. Applications should instead wait until until MoreComing is not set, and then update their UI. When MoreComing is not set, that doesn't mean there will be no more answers EVER, just that there are no more answers immediately available right now at this instant. If more answers become available in the future they will be delivered as usual.

### 131.18.46 kFlagsNoAutoRename = 8

MBS Network Plugin, Plugin Version: 10.1.

**Function:** The flag for specifying renaming behavior on name conflict when registering non-shared records.
**Notes:** By default, name conflicts are automatically handled by renaming the service. NoAutoRename overrides this behavior - with this flag set, name conflicts will result in a callback. The NoAutorename flag is only valid if a name is explicitly specified when registering a service (i.e. the default name is not used.)

### 131.18.47 kFlagsRegistrationDomains = & h80

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flags for specifying domain enumeration type in DNSServiceEnumerateDomains.
**Notes:** BrowseDomains enumerates domains recommended for browsing, RegistrationDomains enumerates domains recommended for registration.

### 131.18.48 kFlagsShared = & h10

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flag for registering individual records on a connected DNSService.
**Notes:** Shared indicates that there may be multiple records with this name on the network (e.g. PTR records). Unique indicates that the record's name is to be unique on the network (e.g. SRV records).

### 131.18.49 kFlagsUnique = & h20

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Flag for registering individual records on a connected DNSService.
**Notes:** Shared indicates that there may be multiple records with this name on the network (e.g. PTR records). Unique indicates that the record's name is to be unique on the network (e.g. SRV records).

### 131.18.50 kInterfaceIndexAny = 0

MBS Network Plugin, Plugin Version: 10.1.

**Function:** The constant to use for interface index to target any interface.

### 131.18.51 kInterfaceIndexLocalOnly = -1

MBS Network Plugin, Plugin Version: 10.1.

**Function:** The constant to use for interface index to target the local interface.

### 131.18.52 kMaxDomainName = 1005

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Maximum length, in bytes, of a domain name represented as an *escaped* C-String including the final trailing dot, and the C-String terminating NULL at the end.

### 131.18.53 kMaxServiceName = 64

MBS Network Plugin, Plugin Version: 10.1.

**Function:** Maximum length, in bytes, of a service name represented as a literal C-String, including the terminating NULL at the end.

### 131.18.54 kTypeA = 1

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Host address.

### 131.18.55 kTypeA6 = 38

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** IPv6 address (deprecates AAAA)

### 131.18.56 kTypeAAAA = 28

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Ip6 Address.

### 131.18.57 kTypeAFSDB = 18

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** AFS cell database.

### 131.18.58 kTypeANY = 255

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Wildcard match.

### 131.18.59 kTypeATMA = 34

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** ATM Address

### 131.18.60 kTypeAXFR = 252

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Transfer zone of authority.

### 131.18.61 kTypeCERT = 37

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Certification record.

### 131.18.62 kTypeCNAME = 5

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Canonical name.

### 131.18.63 kTypeDNAME = 39

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Non-terminal DNAME (for IPv6)

### 131.18.64 kTypeEID = 31

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Endpoint identifier.

### 131.18.65 kTypeGPOS = 27

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Geographical position (withdrawn).

### 131.18.66 kTypeHINFO = 13

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Host information.

### 131.18.67 kTypeISDN = 20

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** ISDN calling address.

### 131.18.68 kTypeIXFR = 251

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Incremental zone transfer.

### 131.18.69 kTypeKEY = 25

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Security key.

### 131.18.70 kTypeKX = 36

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Key Exchange

### 131.18.71 kTypeLOC = 29

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Location Information.

### 131.18.72 kTypeMAILA = 254

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Transfer mail agent records.

### 131.18.73 kTypeMAILB = 253

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Transfer mailbox records.

### 131.18.74 kTypeMB = 7

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mailbox domain name.

### 131.18.75 kTypeMD = 3

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mail destination.

### 131.18.76 kTypeMF = 4

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mail forwarder.

### 131.18.77 kTypeMG = 8

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mail group member.

### 131.18.78 kTypeMINFO = 14

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mailbox information.

### 131.18.79 kTypeMR = 9

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mail rename name.

### 131.18.80 kTypeMX = 15

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Mail routing information.

### 131.18.81 kTypeNAPTR = 35

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Naming Authority PoinTeR

### 131.18.82 kTypeNIMLOC = 32

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Nimrod Locator.

### 131.18.83 kTypeNS = 2

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Authoritative server.

### 131.18.84 kTypeNSAP = 22

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** NSAP address.

### 131.18.85 kTypeNSAP_PTR = 23

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Reverse NSAP lookup (deprecated).

### 131.18.86 kTypeNULL = 10

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Null resource record.

### 131.18.87 kTypeNXT = 30

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Next domain (security).

### 131.18.88 kTypeOPT = 41

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** EDNS0 option (meta-RR)

### 131.18.89 kTypePTR = 12

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Domain name pointer.

### 131.18.90 kTypePX = 26

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** X.400 mail mapping.

### 131.18.91 kTypeRP = 17

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Responsible person.

### 131.18.92 kTypeRT = 21

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Router.

### 131.18.93 kTypeSIG = 24

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Security signature.

### 131.18.94 kTypeSINK = 40

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Kitchen sink (experimentatl)

### 131.18.95 kTypeSOA = 6

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Start of authority zone.

### 131.18.96 kTypeSRV = 33

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Server Selection.

### 131.18.97 kTypeTKEY = 249

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Transaction key.

### 131.18.98 kTypeTSIG = 250

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Transaction signature.

### 131.18.99 kTypeTXT = 16

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** One or more text strings.

### 131.18.100 kTypeWKS = 11

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** Well known service.

### 131.18.101 kTypeX25 = 19

MBS Network Plugin, Plugin Version: 10.1.

**Function:** One of the DNS Service type constants.
**Notes:** X-25 calling address.

# 131.19 class DNSServiceBrowseMBS

## 131.19.1 class DNSServiceBrowseMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Notes:**

This class allows you to browse for services on the local network using Rendezvous.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

```
kDNSServiceErr_NoError              = 0
kDNSServiceErr_Unknown              = -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName           = -65538
kDNSServiceErr_NoMemory             = -65539
kDNSServiceErr_BadParam             = -65540
kDNSServiceErr_BadReference         = -65541
kDNSServiceErr_BadState             = -65542
kDNSServiceErr_BadFlags             = -65543
kDNSServiceErr_Unsupported          = -65544
kDNSServiceErr_NotInitialized       = -65545
kDNSServiceErr_AlreadyRegistered    = -65547
kDNSServiceErr_NameConflict         = -65548
kDNSServiceErr_Invalid              = -65549
kDNSServiceErr_Incompatible         = -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex    = -65552
```

Subclass of the DNSServiceBaseMBS class.

## 131.19.2 Methods

## 131.19.3 Browse(InterfaceIndex as Integer, servicetype as string, domain as string) as boolean

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** Asynchronously create a DNS Service browser to search for matching services in the local network.
**Notes:**

servicetype:

The type of service.

domain:
The domain in which to find the service.

Returns true if successfull.
The ServiceBrowse event may be called till this browse request is closed.

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.

In a perfect application you use DNSServiceDomainEnumerationMBS class to enumerate which domains you should use.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.19.4 Events

### 131.19.5 ServiceBrowse(Flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, ServiceName as string, RegType as string, Domain as string)

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: .

**Function:** New service found or lost one.
**Example:**

```
sub ServiceBrowse(Flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, ServiceName as string,
RegType as string, Domain as string)
// example for event implementation

const kDNSServiceFlagsAdd = 2
const kDNSServiceFlagsRemove = 0
const kDNSServiceFlagsMoreComing = 1
const kDNSServiceFlagsFinished = 0

dim Added as boolean = bitwiseAnd(flags, kDNSServiceFlagsAdd) = kDNSServiceFlagsAdd
dim Removed as boolean = bitwiseAnd(flags, kDNSServiceFlagsAdd) = kDNSServiceFlagsRemove

dim MoreComing as boolean = bitwiseAnd(flags, kDNSServiceFlagsMoreComing) = kDNSServiceFlagsMore-
Coming
dim Finished as boolean = bitwiseAnd(flags, kDNSServiceFlagsMoreComing) = kDNSServiceFlagsFinished
```

```
// work with the booleans to decide what to do.

end sub
```

**Notes:**

Values for flags:

| | |
|---|---|
| kDNSServiceFlagsAdd | = 2 |
| kDNSServiceFlagsRemove | = 0 (i.e. bit not set) |
| kDNSServiceFlagsMoreComing | = 1 |
| kDNSServiceFlagsFinished | = 0 (i.e. bit not set) |

MoreComing indicates to a Browse callback that another result is queued. Applications should not update their UI to display browse results when the MoreComing flag is set, instead deferring the update until the callback's flag is Finished.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

InterfaceIndex can be kInterfaceIndexLocalOnly, kInterfaceIndexAny or a positive index for the interface index (1 = first device).
For interface indexes, please also check NetworkInterfaceMBS class.

# 131.20 class DNSServiceDiscoveryBrowseMBS

## 131.20.1 class DNSServiceDiscoveryBrowseMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Deprecated:** This item is deprecated and should no longer be used. You can use DNSServiceBrowseMBS instead. **Notes:**

This class allows you to browse for services on the local network using Bonjour.

Common error codes for Rendevouz:

| | |
|---|---|
| kDNSServiceDiscoveryUnknownErr | -65537 |
| kDNSServiceDiscoveryNoSuchNameErr | -65538 |
| kDNSServiceDiscoveryNoMemoryErr | -65539 |
| kDNSServiceDiscoveryBadParamErr | -65540 |
| kDNSServiceDiscoveryBadReferenceErr | -65541 |
| kDNSServiceDiscoveryBadStateErr | -65542 |
| kDNSServiceDiscoveryBadFlagsErr | -65543 |
| kDNSServiceDiscoveryUnsupportedErr | -65544 |
| kDNSServiceDiscoveryNotInitializedErr | -65545 |
| kDNSServiceDiscoveryNoCache | -65546 |
| kDNSServiceDiscoveryAlreadyRegistered | -65547 |
| kDNSServiceDiscoveryNameConflict | -65548 |
| kDNSServiceDiscoveryInvalid | -65549 |
| kDNSServiceDiscoveryMemFree | -65792 |

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceBrowseMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

## 131.20.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

## 131.20.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 131.20.4 Methods

### 131.20.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether Bonjour (zeroconfig) is installed.
**Notes:** If this function returns true, all the needed stuff is installed and the function have been loaded.

### 131.20.6 Browse(servicetype as string, domain as string) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Asynchronously create a DNS Service browser to search for matching services in the local network.
**Notes:**

servicetype:
The type of service.

domain:
The domain in which to find the service.

Returns true if successfull.
The ServiceBrowse event may be called till this browse request is closed.

### 131.20.7 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops the current request and releases all used memory.

### 131.20.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if there is a running request.

### 131.20.9 Properties

### 131.20.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle for this request.
**Notes:** (Read only property)

### 131.20.11 Events

### 131.20.12 ServiceBrowse(message as Integer, name as string, type as string, domain as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

**Function:** New service found or lost one.
**Notes:**

If message=0 a new service was found. Message=1 means that a service was removed.
Flags=1 means that more data is coming. Flags=0 means the end of the current list of services. But several minutes later when a new Mac connects to the network another ServiceBrowse Event may inform you, even if flags was 0.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

## 131.21 class DNSServiceDiscoveryDomainEnumerationMBS

### 131.21.1 class DNSServiceDiscoveryDomainEnumerationMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Deprecated:** This item is deprecated and should no longer be used. You can use DNSServiceDomainEnumerationMBS instead. **Notes:**

This class allows you to enumerate domains.

Common error codes for Rendevouz:

| | |
|---|---|
| kDNSServiceDiscoveryUnknownErr | -65537 |
| kDNSServiceDiscoveryNoSuchNameErr | -65538 |
| kDNSServiceDiscoveryNoMemoryErr | -65539 |
| kDNSServiceDiscoveryBadParamErr | -65540 |
| kDNSServiceDiscoveryBadReferenceErr | -65541 |
| kDNSServiceDiscoveryBadStateErr | -65542 |
| kDNSServiceDiscoveryBadFlagsErr | -65543 |
| kDNSServiceDiscoveryUnsupportedErr | -65544 |
| kDNSServiceDiscoveryNotInitializedErr | -65545 |
| kDNSServiceDiscoveryNoCache | -65546 |
| kDNSServiceDiscoveryAlreadyRegistered | -65547 |
| kDNSServiceDiscoveryNameConflict | -65548 |
| kDNSServiceDiscoveryInvalid | -65549 |
| kDNSServiceDiscoveryMemFree | -65792 |

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceDomainEnumerationMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

### 131.21.2 Blog Entries

### 131.21.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 131.21.4 Methods

### 131.21.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether Bonjour (zeroconfig) is installed.
**Notes:** If this function returns true, all the needed stuff is installed and the function have been loaded.

### 131.21.6 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops the current request and releases all used memory.

### 131.21.7 EnumerateDomains(domaintype as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Asynchronously create a DNS Domain Enumerator to search for domains in the local network.
**Notes:**

domaintype:
A flag indicating whether you are looking for recommended registration domains (value=1, e.g. equivalent to the AppleTalk zone list in the AppleTalk Control Panel) or recommended browsing domains (value=0, e.g. equivalent to the AppleTalk zone list in the Chooser).

Returns true if successfull.
The ServiceDomainEnumeration event may be called till this enumerate request is closed.

### 131.21.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if there is a running request.

### 131.21.9 Properties

### 131.21.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle for this request.
**Notes:** (Read only property)

### 131.21.11 Events

### 131.21.12 ServiceDomainEnumeration(message as Integer, domain as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

**Function:** Domains changed.
**Notes:**

Meaning of message:

0: Domain found.
1: Domain found (and should be selected by default).
2: Domain has been removed from network.

Flags=1 means that more data is coming. Flags=0 means the end of the current list of services. But several minutes later when a new Mac connects to the network another ServiceLookup Event may inform you, even if flags was 0.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

# 131.22 class DNSServiceDiscoveryRegisterMBS

## 131.22.1 class DNSServiceDiscoveryRegisterMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Deprecated:** This item is deprecated and should no longer be used. You can use DNSServiceRegisterMBS instead. **Notes:**

This class allows you to register names on the local network using Bonjour.

Common error codes for Rendevouz:

| | |
|---|---|
| kDNSServiceDiscoveryUnknownErr | -65537 |
| kDNSServiceDiscoveryNoSuchNameErr | -65538 |
| kDNSServiceDiscoveryNoMemoryErr | -65539 |
| kDNSServiceDiscoveryBadParamErr | -65540 |
| kDNSServiceDiscoveryBadReferenceErr | -65541 |
| kDNSServiceDiscoveryBadStateErr | -65542 |
| kDNSServiceDiscoveryBadFlagsErr | -65543 |
| kDNSServiceDiscoveryUnsupportedErr | -65544 |
| kDNSServiceDiscoveryNotInitializedErr | -65545 |
| kDNSServiceDiscoveryNoCache | -65546 |
| kDNSServiceDiscoveryAlreadyRegistered | -65547 |
| kDNSServiceDiscoveryNameConflict | -65548 |
| kDNSServiceDiscoveryInvalid | -65549 |
| kDNSServiceDiscoveryMemFree | -65792 |

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceRegisterMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

## 131.22.2 Blog Entries

## 131.22.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 131.22.4 Methods

### 131.22.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether Bonjour (zeroconfig) is installed.
**Notes:** If this function returns true, all the needed stuff is installed and the function have been loaded.

### 131.22.6 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops the current request and releases all used memory.

### 131.22.7 Register(servicename as string, servicetype as string, domain as string, port as Integer, text as string) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Register a named service with DNS Service Discovery.
**Notes:**

servicename:
The name of this service instance (e.g. "Steve's Printer")

servicetype:
The service type (e.g. "_printer._tcp."
See RFC 2782 (DNS SRV) and this website:
http://www.iana.org/assignments/port-numbers

domain:
The domain in which to register the service (e.g. "apple.com.")

port:
The local port on which this service is being offered (in network byte order)

text:
Optional protocol-specific additional information

Returns true if successfull.
The ServiceRegistration event may be called till this registration request is closed.

### 131.22.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if there is a running request.

### 131.22.9 UpdateText(data as string, ttl as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Changes the TXT Record.
**Notes:**

data is the TXT Record composed of Pascal Strings.
ttl = time to live.
Returns an error code. (0=success)

### 131.22.10 Properties

### 131.22.11 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle for this request.
**Notes:** (Read only property)

### 131.22.12 Text as String

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last TXT Record text used.
**Notes:** (Read only property)

### 131.22.13 Events

### 131.22.14 ServiceRegistration(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

**Function:** Registration was done.
**Notes:**

errorcode is 0 if successfull.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

# 131.23 class DNSServiceDiscoveryResolveMBS

## 131.23.1 class DNSServiceDiscoveryResolveMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Deprecated:** This item is deprecated and should no longer be used. You can use DNSServiceResolveMBS instead. **Notes:**

This class allows you to lookup names on the local network using Bonjour.

Common error codes for Rendevouz:

| | |
|---|---|
| kDNSServiceDiscoveryUnknownErr | -65537 |
| kDNSServiceDiscoveryNoSuchNameErr | -65538 |
| kDNSServiceDiscoveryNoMemoryErr | -65539 |
| kDNSServiceDiscoveryBadParamErr | -65540 |
| kDNSServiceDiscoveryBadReferenceErr | -65541 |
| kDNSServiceDiscoveryBadStateErr | -65542 |
| kDNSServiceDiscoveryBadFlagsErr | -65543 |
| kDNSServiceDiscoveryUnsupportedErr | -65544 |
| kDNSServiceDiscoveryNotInitializedErr | -65545 |
| kDNSServiceDiscoveryNoCache | -65546 |
| kDNSServiceDiscoveryAlreadyRegistered | -65547 |
| kDNSServiceDiscoveryNameConflict | -65548 |
| kDNSServiceDiscoveryInvalid | -65549 |
| kDNSServiceDiscoveryMemFree | -65792 |

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceResolveMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

## 131.23.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

## 131.23.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

### 131.23.4 Methods

### 131.23.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether Bonjour (zeroconfig) is installed.
**Notes:** If this function returns true, all the needed stuff is installed and the function have been loaded.

### 131.23.6 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Stops the current request and releases all used memory.

### 131.23.7 Lookup(servicename as string, servicetype as string, domain as string) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Resolved a named instance of a service to its address, port, and (optionally) a text description.
**Notes:**

servicename:
The name of the service instance.

servicetype:
The type of service.

domain:
The domain in which to find the service.

Returns true if successfull.
The ServiceLookup event may be called till this lookup request is closed.

### 131.23.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** True if there is a running request.

### 131.23.9 Properties

### 131.23.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle for this request.
**Notes:** (Read only property)

### 131.23.11 Events

### 131.23.12 ServiceLookup(ip as string, port as Integer, text as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

**Function:** Lookup got something.
**Notes:**

IP is a string like "192.168.1.14".
Flags=1 means that more data is coming. Flags=0 means the end of the current list of services. But several minutes later when a new Mac connects to the network another ServiceLookup Event may inform you, even if flags was 0.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

# 131.24 class DNSServiceDomainEnumerationMBS

## 131.24.1 class DNSServiceDomainEnumerationMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Notes:**

This class allows you to enumerate domains.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

```
kDNSServiceErr_NoError              = 0
kDNSServiceErr_Unknown              = -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName           = -65538
kDNSServiceErr_NoMemory             = -65539
kDNSServiceErr_BadParam             = -65540
kDNSServiceErr_BadReference         = -65541
kDNSServiceErr_BadState             = -65542
kDNSServiceErr_BadFlags             = -65543
kDNSServiceErr_Unsupported          = -65544
kDNSServiceErr_NotInitialized       = -65545
kDNSServiceErr_AlreadyRegistered    = -65547
kDNSServiceErr_NameConflict         = -65548
kDNSServiceErr_Invalid              = -65549
kDNSServiceErr_Incompatible         = -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex    = -65552
```

Subclass of the DNSServiceBaseMBS class.

## 131.24.2 Methods

## 131.24.3 EnumerateDomains(Flags as Integer, InterfaceIndex as Integer) as boolean

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** Asynchronously enumerate domains available for browsing and registration.
**Notes:**

Note that the names returned are (like all of DNS-SD) UTF-8 strings, and are escaped using standard DNS

escaping rules.
A graphical browser displaying a hierarchical tree-structured view should cut the names at the bare dots to yield individual labels, then de-escape each label according to the escaping rules, and then display the resulting UTF-8 text.

Flags for specifying domain enumeration type in DNSServiceEnumerateDomains.
BrowseDomains enumerates domains recommended for browsing, RegistrationDomains enumerates domains recommended for registration:

```
kDNSServiceFlagsBrowseDomains        = 64
kDNSServiceFlagsRegistrationDomains  = 128
```

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.24.4 Events

### 131.24.5 ServiceDomainEnumeration(flags as Integer, interfaceIndex as Integer, errorcode as Integer, Domain as string)

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: .

**Function:** Domains changed.
**Notes:**

Flags uses this flags: kFlagsAdd, kFlagsDefault.

"Default" applies only to enumeration and is only valid in conjuction with "Add"

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.
For interface indexes, please also check NetworkInterfaceMBS class.

## 131.25 class DNSServiceMetaQueryMBS

### 131.25.1 class DNSServiceMetaQueryMBS

MBS MacOSX Plugin, Plugin Version: 12.0, Platforms: macOS, iOS, Targets: All.

**Function:** Queries all Bonjour services.
**Notes:** Useful to learn what services are available. This queries the bonjour cache.

### 131.25.2 Blog Entries

### 131.25.6 Properties

### 131.25.7 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.0, Platforms: macOS, iOS, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 131.25.8 Events

### 131.25.9 AddService(type as string, domain as string, interfaceName as string, rrtype as Integer, rrclass as Integer)

MBS MacOSX Plugin, Plugin Version: 12.0, Platforms: macOS, iOS, Targets: .

**Function:** A service was found.

### 131.25.10 RemoveService(type as string, domain as string, interfaceName as string, rrtype as Integer, rrclass as Integer)

MBS MacOSX Plugin, Plugin Version: 12.0, Platforms: macOS, iOS, Targets: .

**Function:** A service was removed.
**Notes:** Remove is only called when a network interface is disabled or if the record expires from the cache. For network efficiency reasons, clients do not send goodbye packets for meta-query PTR records when deregistering a service.

## 131.26 class DNSServiceRegisterMBS

### 131.26.1 class DNSServiceRegisterMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Notes:**

This class allows you to register names on the local network using Bonjour.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

| | |
|---|---|
| kDNSServiceErr_NoError | = 0 |
| kDNSServiceErr_Unknown | = -65537 (=& hFFFE FFFF) |
| kDNSServiceErr_NoSuchName | = -65538 |
| kDNSServiceErr_NoMemory | = -65539 |
| kDNSServiceErr_BadParam | = -65540 |
| kDNSServiceErr_BadReference | = -65541 |
| kDNSServiceErr_BadState | = -65542 |
| kDNSServiceErr_BadFlags | = -65543 |
| kDNSServiceErr_Unsupported | = -65544 |
| kDNSServiceErr_NotInitialized | = -65545 |
| kDNSServiceErr_AlreadyRegistered | = -65547 |
| kDNSServiceErr_NameConflict | = -65548 |
| kDNSServiceErr_Invalid | = -65549 |
| kDNSServiceErr_Incompatible | = -65551 (client library incompatible with daemon) |
| kDNSServiceErr_BadinterfaceIndex | = -65552 |

Subclass of the DNSServiceBaseMBS class.

### 131.26.2 Blog Entries

- Using ServerSocket with a system chosen port

### 131.26.3 Blog Entries

- Using ServerSocket with a system chosen port

### 131.26.4 Methods

### 131.26.5 AddRecord(rrType as Integer, TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

**Function:** Add a record to a registered service.
**Notes:**

Lasterror is set.

The name of the record will be the same as the registered service's name. The record can later be updated or deregistered by UpdateRecord() or RemoveRecord().

rrtype: The type of the record (e.g. kTypeTXT, kTypeSRV, etc)
data: The raw rdata to be contained in the added resource record.
ttl: The time to live of the resource record, in seconds. Pass 0 to use a default value.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.26.6 Register(Flags as Integer, interfaceIndex as Integer, servicename as string, servicetype as string, domain as string, host as string, port as Integer, txtRecord as string) as boolean

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** Register a service that is discovered via Browse() and Resolve() calls.
**Notes:**

Flag for specifying renaming behavior on name conflict when registering non-shared records. NoAutorename is only valid if a name is explicitly specified when registering a service (ie the default name is not used.)

kDNSServiceFlagsNoAutoRename = 8,
kDNSServiceFlagsAutoRename = 0 (i.e. bit not set)

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.

In a perfect application you use DNSServiceDomainEnumerationMBS class to enumerate which domains you should use.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.26.7 RemoveRecord

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

**Function:** Remove a record previously added to a service record set via AddTextRecord.
**Notes:** Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.26.8 UpdateRecord(TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Changes the TXT Record.
**Notes:**

data is the TXT Record composed of Pascal Strings.
ttl = time to live.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.26.9 Events

### 131.26.10 ServiceRegistration(flags as Integer, errorcode as Integer, Name as string, RegType as string, Domain as string)

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: .

**Function:** Registration was done.
**Notes:** Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

# 131.27 class DNSServiceRegisterRecordMBS

## 131.27.1 class DNSServiceRegisterRecordMBS

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Notes:**

This class is to register a name record with the dns service.
Subclass of the DNSServiceBaseMBS class.

## 131.27.2 Methods

## 131.27.3 RegisterRecord(Flags as Integer, interfaceIndex as Integer, fullname as string, rrtype as Integer, rrClass as Integer, data as string, ttl as Integer) as boolean

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

**Function:** Registers a record on the DNS system.
**Example:**

```
const kDNSServiceClass_IN = 1
const kDNSServiceType_SRV = 33
const kDNSServiceFlagsShared = & h10
const kDNSServiceFlagsUnique = & h20
```

**Notes:**

flags: Possible values are kDNSServiceFlagsShared or kDNSServiceFlagsUnique (see flag type definitions for details).
interfaceIndex: If non-zero, specifies the interface on which to register the record (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the record to be registered on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record.
rrtype: The numerical type of the resource record (e.g. kDNSServiceType_PTR, kDNSServiceType_SRV, etc)
rrclass: The class of the resource record (usually kDNSServiceClass_IN)
data: the raw rdata, as it is to appear in the DNS record.
ttl: The time to live of the resource record, in seconds. Pass 0 to use a default value.

Lasterror is set. kDNSServiceErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred (the event is never invoked)

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.27.4 UpdateRecord(TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

**Function:** Changes the TXT Record.
**Notes:**

data is the TXT Record composed of Pascal Strings.
ttl = time to live.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.27.5 Events

### 131.27.6 ServiceRegistration(flags as Integer, errorcode as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: .

**Function:** Registration was done.
**Notes:** Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

# 131.28 class DNSServiceResolveMBS

## 131.28.1 class DNSServiceResolveMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

**Function:** A class for Apple's implementation of ZeroConfig named Bonjour.
**Notes:**

This class allows you to lookup names on the local network using Bonjour.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

```
kDNSServiceErr_NoError              = 0
kDNSServiceErr_Unknown              = -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName           = -65538
kDNSServiceErr_NoMemory             = -65539
kDNSServiceErr_BadParam             = -65540
kDNSServiceErr_BadReference         = -65541
kDNSServiceErr_BadState             = -65542
kDNSServiceErr_BadFlags             = -65543
kDNSServiceErr_Unsupported          = -65544
kDNSServiceErr_NotInitialized       = -65545
kDNSServiceErr_AlreadyRegistered    = -65547
kDNSServiceErr_NameConflict         = -65548
kDNSServiceErr_Invalid              = -65549
kDNSServiceErr_Incompatible         = -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex    = -65552
```

Subclass of the DNSServiceBaseMBS class.

## 131.28.2 Methods

## 131.28.3 Resolve(InterfaceIndex as Integer, servicename as string, servicetype as string, domain as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Resolves a named instance of a service to its address, port, and (optionally) a text description.
**Notes:**

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can

receive events.

If you call this method in response to a browse call, please pass the domain string you got in the ServiceBrowse event and do not replace it with something else.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

### 131.28.4 Events

### 131.28.5 ServiceResolve(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, Hosttarget as string, Port as Integer, TxtRecord as string)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: .

**Function:** Resolve got something.
**Notes:**

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.
For interface indexes, please also check NetworkInterfaceMBS class.

# 131.29 class NetSNMPMBS

## 131.29.1 class NetSNMPMBS

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The class to do SNMP queries.
**Example:**

```
dim s as new NetSNMPMBS

s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

**Notes:**

Performs a SNMP GET query.
Using version 1, no authentication and no security options.

### 131.29.8 Methods

### 131.29.9 Constructor

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The constructor.

### 131.29.10 Destructor

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The destructor.

### 131.29.11 Query(ObjectID as String) as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** Peforms a SNMP Get Query
**Example:**

```
dim s as new NetSNMPMBS

s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

**Notes:**

Please set community and IP properties before.
Lasterror and ErrorMessage properties are set.

### 131.29.12 QueryMT(ObjectID as String) as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** Peforms a SNMP Get Query
**Example:**

```
dim s as new NetSNMPMBS

s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

**Notes:**

Please set community and IP properties before.
Lasterror and ErrorMessage properties are set.

Same as Query, but thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 131.29.13 Properties

### 131.29.14 Community as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The community name to use.
**Notes:**

e.g. "public"
(Read and Write property)

### 131.29.15 ErrorMessage as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The last error message as text.
**Notes:** (Read and Write property)

### 131.29.16 IP as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The IP and port to connect to.
**Notes:**

e.g. "192.168.2.5:1234"
(Read and Write property)

### 131.29.17 LastError as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 131.29.18 MaximumReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** The maximum bytes to allocate for receiving buffer.
**Notes:**

By default 100000 bytes.
(Read and Write property)

### 131.29.19 Retries as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** Number of retries.
**Notes:**

Default is -1 to use system default.
(Read and Write property)

### 131.29.20 TimeOut as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

**Function:** Timeout in seconds.
**Notes:**

Default is -1 to use system default.
(Read and Write property)

## 131.30 Globals

### 131.30.1 DNSAddressToNameIPv6MBS(HostAddress as string) as string

MBS Network Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolves an IP to it's name.
**Notes:**

Only for IPv6.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

### 131.30.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr13

### 131.30.3 DNSAddressToNameMBS(HostAddress as string) as string

MBS Network Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolves an IP to it's name.
**Notes:**

Only for IPv4.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

### 131.30.4 Blog Entries

- MBS Real Studio Plugins, version 13.1pr13

### 131.30.5 DNSNameToAddressIPv6MBS(HostName as string) as string

MBS Network Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolves the IP address for this name.
**Example:**

msgBox dnsnameToAddressIPv6MBS("localhost") + endofLine + dnsnameToAddressMBS("localhost")

**Notes:**

Only for IPv6.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

### 131.30.6 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.3pr1
- MBS Real Studio Plugins, version 13.1pr13

### 131.30.7 DNSNameToAddressMBS(HostName as string) as string

MBS Network Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resolves the IP address for this name.
**Example:**

msgBox dnsnameToAddressIPv6MBS("localhost") + endofLine + dnsnameToAddressMBS("localhost")

**Notes:**

Only for IPv4.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

This may not work on Windows or Linux with Bonjour host names!

### 131.30.9 OptionReuseAddressMBS(extends s as SocketCore) as Boolean

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries whether to allow reuse of same port.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEADDR option.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.10 OptionReuseAddressMBS(extends s as SocketCore, assigns value as Boolean) 21178

### 131.30.10 OptionReuseAddressMBS(extends s as SocketCore, assigns value as Boolean)

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets whether to allow reuse of same port.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Raises UnsupportedOperationException in case of failure.

### 131.30.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.0pr1

See also:

- 131.30.9 OptionReuseAddressMBS(extends s as SocketCore) as Boolean 21177

### 131.30.12 OptionReusePortMBS(extends s as SocketCore) as Boolean

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Query whether reuse of same port and IP is allowed.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.13 OptionReusePortMBS(extends s as SocketCore, assigns value as Boolean) 21179

### 131.30.13 OptionReusePortMBS(extends s as SocketCore, assigns value as Boolean)

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets whether to allow reuse of same port and IP.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Raises UnsupportedOperationException in case of failure.

### 131.30.14 Blog Entries

See also:

- 131.30.12 OptionReusePortMBS(extends s as SocketCore) as Boolean 21178

### 131.30.15 VerifyEmailMBS(email as string, NetworkCheck as boolean) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

**Function:** Checks if an email can be valid.
**Example:**

```
// should be okay
dim r1 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.de", true)

// should fail
dim r2 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.test", true)

MsgBox str(r1)+EndOfLine+str(r2)
```

**Notes:**

If NetworkCheck is true, the DNS server is queries for whether an email service is available (MX Record).
Else we only do a syntax check.

Result is zero for scuccess or one of this error codes:

IDN support is not included. You may need to preprocess email if you need that.

1 Invalid character in local part of email address.
2 Missing dot in local part of email address.
3 Invalid character in local part of email address.
4 Unescaped special character in local part of email address.
5 No local part in email address.
6 Dot found before @ character.
7 No domain in email address.
8 Domain starting with dot.
9 Domain is not allowed to have two dots.
10 Invalid character in domain of email address.
11 Special character in domain of email address.
12 No dot in domain in email address.
13 Domain longer than allowed in email address.
14 DNS failed to find mail server for the domain in email address. (Windows)
15 DNS failed to find mail server for the domain in email address. (Mac/Linux)
16 DNS did not find a mail server for the domain in email address.
17 DNS failed to find mail server for the domain in email address
18 DNS server answers try again too often.

If you have a DNS server, which will redirect all mistyped domain names to a search website, this won,Äôt really work well and detect too many valid domain names.

### 131.30.18 ClearOptionsMBS(extends s as SocketCore)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Clears all options.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.

### 131.30.19 OptionKeepAliveMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the keep alive.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Returns -1 on any error.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.
See also:

- 131.30.20 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer) 21181

### 131.30.20 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the keep alive.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.

### 131.30.22 OptionMaximumSegmentSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the maximum segment size.
**Example:**

```
dim s as new TCPSocket

s.Port = 0
s.listen

MsgBox str(s.OptionMaximumSegmentSizeMBS)
```

**Notes:**

Only for TCP sockets.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.23 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer) 21182

### 131.30.23 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adjusts the maximum segment size.
**Notes:** Raises UnsupportedOperationException in case of failure.

### 131.30.25 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the multicast time to live value.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.26 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer) 21183

### 131.30.26 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the multicast time to live value.
**Example:**

```
dim t as new UDPSocket

// create a socket
t.Port=80
t.Connect

// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionMutliCastTTLMBS)
t.OptionMutliCastTTLMBS=10

// shows new value
MsgBox str(t.OptionMutliCastTTLMBS)
```

**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.25 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer 21182

### 131.30.27 OptionReceiveBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the receiving buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.28 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer) 21184

### 131.30.28 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adjusts the receiving buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

### 131.30.29 Blog Entries

### 131.30.30 OptionSendBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the sending buffer size.
**Example:**

```
dim s as new UDPSocket

s.Port = 0
s.Connect
```

MsgBox str(s.OptionSendBufferSizeMBS)

**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.31 OptionSendBufferSizeMBS(extends s as SocketCore, assigns value as Integer) 21185

### 131.30.31 OptionSendBufferSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adjusts the sending buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

### 131.30.32 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

See also:

- 131.30.30 OptionSendBufferSizeMBS(extends s as SocketCore) as Integer 21184

### 131.30.33 OptionTOSMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the type of service value.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.34 OptionTOSMBS(extends s as SocketCore, assigns value as Integer) 21186

### 131.30.34 OptionTOSMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the type of service value.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

You may want to set it after connecting.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.33 OptionTOSMBS(extends s as SocketCore) as Integer 21185

### 131.30.35 OptionTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Gets the time to live value.
**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.36 OptionTTLMBS(extends s as SocketCore, assigns value as Integer) 21186

### 131.30.36 OptionTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the time to live value.
**Example:**

```
dim t as new TCPSocket

// create a socket
t.Port=80
t.Address="www.apple.com"
t.Connect
```

```
// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionTTLMBS)
t.OptionTTLMBS=10

// shows new value
MsgBox str(t.OptionTTLMBS)
```

**Notes:**

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 131.30.35 OptionTTLMBS(extends s as SocketCore) as Integer 21186

### 131.30.37 OptionTypeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the type of socket.
**Example:**

```
dim u as new UDPSocket

u.Port = 9000
u.Connect

// shows 2 for UDP
MsgBox str(u.OptionTypeMBS)
```

**Notes:**

Type is 1 for stream socket, 2 for datagram socket, 3 for raw socket, 4 for reliably-delivered message socket and 5 for a sequenced packet stream.
Raises UnsupportedOperationException in case of failure.

### 131.30.38 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

## 131.31 class NetworkInterfaceMBS

### 131.31.1 class NetworkInterfaceMBS

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The class for unix network interfaces.
**Example:**

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

**Notes:**

For Windows, please use WindowsEthernetMBS class.
The values are not updated for this class. Just when you create the interface objects, you get a snapshot of the current state.

- MBS Real Studio Plugins, version 13.0pr2

### 131.31.4 Methods

### 131.31.5 AllInterfaces(Merge as boolean = true) as NetworkInterfaceMBS()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Returns array with all interfaces.
**Example:**

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

**Notes:**

By default we merge several records for the same interface.
You may see one record for each protocol (IPv4, IPv6, LINK layer).

### 131.31.6 IndexMap as Dictionary

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** Builds a dictionary to map indexes to names.
**Example:**

```
dim d as Dictionary = NetworkInterfaceMBS.IndexMap
dim lines() as string

for each key as Variant in d.keys
lines.Append key+": "+d.Value(key)
next

MsgBox Join(lines,EndOfLine)
```

**Notes:**

This is convenient method for the case you need to show list to user.

On Windows requires Windows Vista or newer.

### 131.31.7 IndexToName(Index as Integer) as string

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** Queries name for network interface with index.
**Example:**

```
dim Name as string
Name = NetworkInterfaceMBS.IndexToName(1)
msgbox Name
```

**Notes:** On Windows requires Windows Vista or newer.

### 131.31.8 IPv4s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** All IPv4 addresses for this interface.

### 131.31.9 IPv6s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** All IPv6 addresses for this interface.

### 131.31.10 NameToIndex(Name as String) as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** Queries index for network interface with given name..
**Example:**

```
dim index as Integer
index = NetworkInterfaceMBS.NameToIndex("en0")
```

**Notes:** On Windows requires Windows Vista or newer.

### 131.31.11 Properties

### 131.31.12 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Whether a broadcast address exists for this interface.
**Notes:** (Read and Write property)

### 131.31.13 BroadcastAddress as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The broadcast address.
**Notes:** (Read and Write property)

### 131.31.14 Flags as Integer

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

**Function:** The interface flags.
**Notes:**

See if.h file in C system headers.
(Read and Write property)

### 131.31.15 Index as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The index of this interface.
**Notes:** (Read and Write property)

### 131.31.16 InterfaceIndex as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

**Function:** The index of this interface.
**Notes:**

Index counts by plugin from 0 on the interfaces.
But this is real index from operation system.

On Windows requires Windows Vista or newer.
(Read and Write property)

### 131.31.17 IPv4 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The IPv4 address for this interface.
**Example:**

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

**Notes:** (Read and Write property)

### 131.31.18 IPv4count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Returns the number of IPv4 addresses for this interface.
**Notes:** (Read and Write property)

### 131.31.19 IPv6 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The IPv6 address for this interface.
**Notes:** (Read and Write property)

### 131.31.20 IPv6count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Returns the number of IPv6 addresses for this interface.
**Notes:** (Read and Write property)

### 131.31.21 Loopback as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Whether this interface is the loopback interface.
**Notes:** (Read and Write property)

### 131.31.22 MAC as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The ethernet hardware address (MAC).
**Notes:** (Read and Write property)

### 131.31.23 Multicast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Whether this interface supports multicast.
**Notes:** (Read and Write property)

### 131.31.24 Name as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The name of the network interface.
**Notes:** (Read and Write property)

### 131.31.25 Netmask as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** The network mask.
**Notes:**

Returns the IPv4 netmask.
if that one is undefined, returns the IPv6 netmask.
This property is just kept for compatibility.
(Read only property)

### 131.31.26 NetmaskIPv4 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

**Function:** The network mask for IPv4.
**Notes:** (Read and Write property)

### 131.31.27 NetmaskIPv6 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

**Function:** The network mask for IPv6.
**Notes:** (Read and Write property)

### 131.31.28 Running as Boolean

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

**Function:** Whether the interface is running (resources allocated).
**Notes:** (Read and Write property)

### 131.31.29 Up as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

**Function:** Whether the interface is up.
**Notes:** (Read and Write property)

# 131.32 class PacketSocketMBS

## 131.32.1 class PacketSocketMBS

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An extension to the socket class for easy sending packets through the net.
**Notes:**

A packet is made like this:
+0: Size of data block
+4: 4 byte code string
+8: 4 byte for ID
+12: variable data.

The numbers are send in low endian format so this is crossplatform.

This socket subclass can be easily made in Xojo code itself. I did it for several of my applications, so if you like it decide between making it yourself or using this one which may even be faster, because it is written in C?

This class is only available in RB 4.0 or newer, because it crashes on RB 3.5.

As the strings are transferred as binary data you need to take care that you send text e.g. as UTF8 and restore this encoding setting on receiving.
Subclass of the TCPSocket class.

### 131.32.4 Methods

### 131.32.5 SendPacket(data as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a packet.
**Notes:** Uses ID=0 and code="" as a shortcut for the long SendPacket call.
See also:

- 131.32.6 SendPacket(data as string,code as string) 21196
- 131.32.7 SendPacket(data as string,code as string,ID as Integer) 21196

### 131.32.6 SendPacket(data as string,code as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a packet.
**Notes:** Uses ID=0 as a shortcut for the long SendPacket call.
See also:

- 131.32.5 SendPacket(data as string) 21196
- 131.32.7 SendPacket(data as string,code as string,ID as Integer) 21196

### 131.32.7 SendPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a packet.
**Notes:**

code and ID are optional.
Code is a 4 byte string to identify the content.
(e.g. "mess" for a message or "link" for a link.)
See also:

- 131.32.5 SendPacket(data as string) 21196
- 131.32.6 SendPacket(data as string,code as string) 21196

### 131.32.8 Events

### 131.32.9 ReceivedPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A packet was received.

## 131.33 class RAWSocketMBS

### 131.33.1 class RAWSocketMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for low level and raw sockets.
**Example:**

```
dim sock as RAWSocketMBS

// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

**Notes:**

Similar to Xojo's built in Socket class, but more low level and with more options.
Raw sockets for things like PING may need root permissions.

### 131.33.7 Videos

- Presentation from Munich conference about MBS Plugins.

### 131.33.8 Methods

### 131.33.9 Accept(byref RemoteAddress as String, byref RemotePort as Integer, NewSocket as RAWSocketMBS) as RAWSocketMBS

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Listens for connections on this socket.
**Notes:** Lasterror is set.

### 131.33.10 AddressFamilyINet6 as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the address family constants.
**Notes:**

IPv6
This is a method as value is different.
Mac 30, Windows 23 and Linux 10.

### 131.33.11 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Binds the socket to the given destination address.
**Notes:**

Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where to bind against.
Structure of DestAddress is OS and address family dependent.
See also:

- 131.33.12 Bind(Port as Integer, IP as string = "") 21200

### 131.33.12 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Binds the socket to the given port.
**Notes:**

If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
See also:

- 131.33.11 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 21200

### 131.33.13 CalcChecksum(data as ptr, ByteCount as Integer) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates checksum for IP header.

### 131.33.14 Close

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes socket.
**Notes:** Same as destructor.

### 131.33.15 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience method to connect.
**Notes:**

Will parse IPv4/IPv6 or query DNS server for IP and connect.
Returns true on success.
See also:

- 131.33.16 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 21201

### 131.33.16 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Connects to destination address.
**Notes:**

lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where package is sent to.
Structure of DestAddress is OS and address family dependent.
See also:

- 131.33.15 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean 21201

### 131.33.17 Constructor(AddressFamily as Integer, SocketType as Integer, Protocol as Integer)

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Example:**

```
dim sock as RAWSocketMBS
```

```
// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

**Notes:**

Please pass valid combination of OS supported sockets.
Raises exception if creation is not possible.
Raw socket requires root access.

### 131.33.18 Destructor

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** Closes the socket.

### 131.33.19 htonl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert 32bit Integer from network to host byte order.

### 131.33.20 htons(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert 16bit Integer from network to host byte order.

### 131.33.21 inet_addr(IPv4 as String) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts IPv4 to numerical representation.

### 131.33.22 inet_ntoa(IPv4 as UInt32) as String

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts IPv4 to string representation.

### 131.33.23 Listen(BackLog as Integer = 2)

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Accepts a new incoming connection.
**Notes:**

Sockets uses the accept function to enable incoming connection attempts on a socket.
RemoteAddress and RemotePort are set to address of remote peer.

If you like to pass in your own subclass object for NewSocket, we can use that socket object. Otherwise, we make a new RAWSocketMBS object.

Lasterror is set.

### 131.33.24 ntohl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert 32bit Integer from host to network byte order.

### 131.33.25 ntohs(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convert 16bit Integer from host to network byte order.

### 131.33.26 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Polls for activity.
**Notes:**

Calls events if needed.
This is called automatically via timer by the plugin.

### 131.33.27 Read(ByteSize as Integer, peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read at maximum the given number of bytes in buffer.
**Notes:**

Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

### 131.33.28 ReadAll(peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read all bytes in buffer.
**Example:**

```
dim sock as RAWSocketMBS
dim data as MemoryBlock = sock.ReadAll
if data = nil then
// nothing read
else

end if
```

**Notes:**

Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

### 131.33.29 ReadDatagram(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a datagram.
**Notes:**

If peek is true, the data is not removed from read buffer.

On error returns nil.

### 131.33.30 Send(Data as Ptr, DataByteSize as Integer, Flags as Integer = 0) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data.
**Notes:**

Data is sent to address passed with Connect method.
Returns number of bytes sent.
Lasterror is set.

For TCP sockets and similar, which have a stream of data.

### 131.33.31 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a datagram.
**Notes:**

Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.

For UDP sockets and similar.
See also:

- 131.33.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21205
- 131.33.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21206

### 131.33.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a datagram.
**Notes:**

Please specify with port and IP where package is sent to.
Returns number of bytes sent.

Lasterror is set.

For UDP sockets and similar.
See also:

- 131.33.31 SendMessage(Data as DatagramMBS) as Integer 21205
- 131.33.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21206

### 131.33.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data to target.
**Notes:**

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.

For UDP sockets and similar.
See also:

- 131.33.31 SendMessage(Data as DatagramMBS) as Integer 21205
- 131.33.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21205

### 131.33.34 SendTo(Data as Ptr, DataByteSize as Integer, Flags as Integer, DestAddr as Ptr, DestAddrByteSize as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends data to dest address.
**Example:**

```
dim sock as RawSocketMBS
dim Flags as integer
dim r as Integer

// port
dim port as integer = val(iPort.Text)
if port <= 0 or port >= 65535 then
break
MsgBox "Wrong port: "+iPort.Text
Return
end if
```

```
// dest address

'/*
'* Socket address, internet style. C declaration for Mac
'*/
'struct sockaddr_in {
'__uint8_t sin_len; // 1 byte, Mac only
'sa_family_t sin_family; // 1 byte
'in_port_t sin_port; // 2 byte in Network byte order
'struct in_addr sin_addr; // 4 byte
'char sin_zero [ 8 ] ; // 8 bytes filler

' } ;

// convert IPv4 from text to numeric value
dim IP as Uint32 = RAWSocketMBS.inet_addr(iIP.Text)

// create destination address. This is for Mac! Windows and Linux have different structures
dim dest as new MemoryBlock(16)
dest.UInt8Value(0) = dest.size
dest.UInt8Value(1) = RAWSocketMBS.AddressFamilyINet
dest.UInt16Value(2) = RAWSocketMBS.htons(port)
dest.UInt32Value(4) = IP

// message
dim m as string = ConvertEncoding(iMessage.Text, encodings.UTF8)
dim data as MemoryBlock = m

// send
r = sock.SendTo(data, data.size, Flags, dest, dest.size)
```

**Notes:**

Please specify with port and IP in destAddress where package is sent to.
Returns number of bytes sent. Structure of DestAddress is OS and address family dependent.
Lasterror is set.

For UDP sockets and similar.

### 131.33.35 Properties

### 131.33.36 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address family of the socket.
**Notes:**

This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFamilyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

### 131.33.37 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns number of bytes available for reading.
**Notes:**

Lasterror is set.
(Read only property)

### 131.33.38 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether broadcasts are allowed.
**Notes:**

Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

### 131.33.39 Handle as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal socket handle.
**Notes:** (Read and Write property)

### 131.33.40 IPHeaderIncluded as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the OS provides IP header or you.
**Notes:**

Default is false.
Set to true when you include IP header in data.
(Read and Write property)

### 131.33.41 Lasterror as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

Platform dependent.
(Read and Write property)

### 131.33.42 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries local IP.
**Notes:**

Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.
(Read only property)

### 131.33.43 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries local port.
**Notes:**

Lasterror is set.
Can be -1 if unknown.
(Read only property)

### 131.33.44 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The socket protocol.
**Notes:**

The value from constructor.
(Read and Write property)

### 131.33.45 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the receiving buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.
(Read and Write property)

### 131.33.46 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allows reuse of same port.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

### 131.33.47 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allow reuse of same port and IP.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

### 131.33.48 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sending buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

### 131.33.49 SocketError as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The native socket error.
**Notes:**

Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

### 131.33.50 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The socket type.
**Notes:**

The value from constructor.
(Read and Write property)

### 131.33.51 Events

### 131.33.52 DataAvailable

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when new data is available.
**Notes:** Requires the socket to be bound.

### 131.33.53 Error

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called if socket is in error state.

### 131.33.54 SendComplete

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The last write operation is done.

### 131.33.55 Constants

### 131.33.56 AddressFamilyINet = 2

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the address family constants.
**Notes:** IPv4

### 131.33.57 ProtocolICMP = 1

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** ICMP

### 131.33.58 ProtocolIP = 0

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** IPv4

### 131.33.59 ProtocolIPv6 = 41

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** IPv6

### 131.33.60 ProtocolRaw = 255

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** Raw protocol

### 131.33.61 ProtocolTCP = 6

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** TCP

### 131.33.62 ProtocolUDP = 17

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the protocol constants.
**Notes:** UDP

### 131.33.63 SocketTypeDatagram = 2

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the socket types.
**Notes:** Datagram, e.g. UDP.

### 131.33.64 SocketTypeRaw = 3

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the socket types.
**Notes:** Raw socket, requires root permissions.

### 131.33.65 SocketTypeStream = 1

MBS Network Plugin, Plugin Version: 17.4.

**Function:** One of the socket types.
**Notes:** Stream socket, e.g. TCP/IP.

## 131.34 class SSH2ChannelMBS

### 131.34.1 class SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a SSH2 channel.

### 131.34.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.5
- MBS Xojo Plugins in version 20.5
- MBS Xojo Plugins, version 20.5pr3

- MBS Xojo Plugins, version 20.5pr3
- SSH Terminal example for Xojo
- SSH tunnel in Xojo

### 131.34.4 Methods

### 131.34.5 Close(Wait as Boolean = true)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Close a channel.
**Notes:**

Lasterror is set.
Close an active data channel. In practice this means sending an SSH_MSG_CLOSE packet to the remote host which serves as instruction that no further data will be sent to it. The remote host may still send data back until it sends its own close message in response. To wait for the remote end to close its connection as well, follow this command with WaitClosed.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't

really a failure per se.

If wait parameter is true, the plugin does a loop to try close until it receives an okay (and not EAGAIN).

### 131.34.6 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.
See also:

- 131.34.7 Constructor(session as SSH2SessionMBS) 21216

### 131.34.7 Constructor(session as SSH2SessionMBS)

MBS Network Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor to create new channel.
**Notes:** May raise UnsupportedOperationException if channel creation fails.
See also:

- 131.34.6 Constructor 21216

### 131.34.8 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 131.34.9 EOF as boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Check a channel's EOF status.
**Example:**

```
dim s as string
dim channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
```

```
dim r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
// done?
MsgBox "Result: " + s
exit
end if
else
exit
end if
loop
```

**Notes:**

Check if the remote host has sent an EOF status for the selected stream.
Returns true if the remote host has sent EOF, otherwise false.
Lasterror is set. On error, this function returns true.

### 131.34.10 Execute(command as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Executes something on the server.
**Notes:**

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.11 Flush

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush stream for this channel.
**Notes:** Lasterror is set.

### 131.34.12 FlushAll

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush all streams for this channel.
**Notes:** Lasterror is set.

### 131.34.13 FlushExtendedData

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush extended data stream for this channel.
**Notes:** Lasterror is set.

### 131.34.14 FlushStdErr

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Flush stderr stream for this channel.
**Notes:** Lasterror is set.

### 131.34.15 Read(length as Integer = 65536) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read data from a channel stream.
**Example:**

```
dim s as string
dim channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
dim r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
```

```
// done?
MsgBox "Result: " + s
exit
end if
else
exit
end if
loop
```

**Notes:**

Lasterror is set.
Attempt to read data from a stdout channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.
Version up to 18.2 return text marked as UTF-8, but in 18.3 we change to return text without encoding marking. So if you expect UTF-8, you can apply UTF-8 encoding with DefineEncoding.

### 131.34.16 ReadStdErr(length as Integer = 65536) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Read data from a channel stream.
**Notes:**

Lasterror is set.
Attempt to read data from a stderr channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.17 RequestPTY(term as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Request a PTY on an established channel.
**Notes:**

Lasterror is set.
Note that this does not make sense for all channel types and may be ignored by the server despite returning success.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.18 SendEOF

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Send EOF to remote server.
**Notes:**

Lasterror is set.
Tell the remote host that no further data will be sent on the specified channel. Processes typically interpret this as a closed stdin descriptor.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.19 SetBlocking(blocking as boolean)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set or clear blocking mode on channel.

### 131.34.20 SetEnv(name as string, value as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set an environment variable on the channel.
**Notes:**

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.21 Shell

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Request a shell on a channel.
**Notes:**

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.22 WaitClosed

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Wait for the remote to close the channel.
**Notes:**

Lasterror is set.

Enter a temporary blocking state until the remote host closes the named channel. Typically sent after Close in order to examine the exit status.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

### 131.34.23 WaitEOF

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Wait for the remote end to acknowledge an EOF request.
**Notes:**

Lasterror is set.
May give kErrorEAgain error which means you should try again later.

### 131.34.24 Write(data as MemoryBlock) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write data to a channel stdout stream.
**Notes:**

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 131.34.25 Write(text as string) as Integer 21222

### 131.34.25 Write(text as string) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write data to a channel stdout stream.
**Notes:**

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 131.34.24 Write(data as MemoryBlock) as Integer 21221

### 131.34.26 WriteStdErr(data as MemoryBlock) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write data to a channel stderr stream.
**Notes:**

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 131.34.27 WriteStdErr(text as string) as Integer 21222

### 131.34.27 WriteStdErr(text as string) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Write data to a channel stderr stream.
**Notes:**

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 131.34.26 WriteStdErr(data as MemoryBlock) as Integer 21222

### 131.34.28 Properties

### 131.34.29 ExitStatus as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the remote exit code.
**Notes:**

Returns the exit code raised by the process running on the remote host at the other end of the named channel. Note that the exit status may not be available if the remote end has not yet set its status to closed. Returns 0 on failure, otherwise the Exit Status reported by remote host.
(Read only property)

### 131.34.30 Handle as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 131.34.31 LastError as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

See SSH2SessionMBS.kError* constants.
(Read and Write property)

### 131.34.32 Session as SSH2SessionMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The session this channel belongs to.
**Notes:** (Read and Write property)

### 131.34.33 Tag as Variant

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag value.
**Notes:**

A property where you can store any value you like.
(Read and Write property)

### 131.34.34 Events

### 131.34.35 DataAvailable(Data as string, ErrorChannel as boolean)

MBS Network Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event for new data coming in.
**Notes:**

For console app with DoEvents loop or for GUI apps.
Works starting with running Execute as that initializes the DataAvailable event.

ErrorChannel is true, if we got data from the stderr channel instead of stdout channel.

# 131.35 class SSH2ConnectFailedExceptionMBS

## 131.35.1 class SSH2ConnectFailedExceptionMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception for an error in the SSH2SessionMBS.Constructor.
**Notes:** Subclass of the RuntimeException class.

### 131.36.6 Methods

### 131.36.7 Banner as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the remote banner.
**Notes:** Once the session has been setup and Handshake has completed successfully, this function can be used to get the server id from the banner each server presents.

### 131.36.8 CipherNames as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all ciphers.
**Example:**

```
// see hash and encryption algorithms available
dim CipherNames() as string = SSH2SessionMBS.CipherNames
dim DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

**Notes:** The list may not be the same for Mac, Windows and Linux.

### 131.36.9 ConfigureKeepAlive(WantReply as Boolean = true, Interval as Integer = 2)

MBS Network Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Configures keep alive probes.
**Notes:**

Set how often keepalive messages should be sent.
WantReply indicates whether the keepalive messages should request a response from the server.
Interval is number of seconds that can pass without any I/O, use 0 to disable keepalives. To avoid some busy-loop corner-cases, if you specify an interval of 1 it will be treated as 2.

### 131.36.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor for using a new socket.
**Notes:**

The plugin creates a new socket, connects to the given IP& Port and than creates a new session for it.
Lasterror is set.
Please check if Handle property is non zero after constructor finishes.

Timeout defines timeout for connection in seconds. While waiting, the plugin yields time to other threads.
If timeout is zero, the connection will not yield and take up to the default TCP/IP timeout.

IPv4, IPv6 address or domain name with version 18.3 or newer.
See also:

- 131.36.11 Constructor(socket as TCPSocket) 21228
- 131.36.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 21229

### 131.36.11 Constructor(socket as TCPSocket)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor for using an existing socket.
**Notes:**

Initializes a new session.
socket: The socket to use. The plugin keeps reference to this socket in socket property.

You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
If you connect the xojo socket in a loop on a thread, be sure to call poll method of socket, so it processes events like connecting. In main thread with timer, you would get this automatically.
See also:

- 131.36.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 21228
- 131.36.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 21229

### 131.36.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor for using an existing socket.
**Notes:**

Initializes a new session.
socketHandle: The socket to use. Can be TCPSocket's handle property for a Xojo socket. Or a socket connected via declares.
You can put the socket in the socket property to keep it alive as long as session is in memory.

Set CloseSocketLater = true if you pass a socket which can be closed in destructor. For Xojo socket, pass false as Xojo closes socket later.
You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
See also:

- 131.36.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 21228
- 131.36.11 Constructor(socket as TCPSocket) 21228

### 131.36.13 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 131.36.14 DigestNames as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries list of all digest algorithms.
**Example:**

```
// see hash and encryption algorithms available
dim CipherNames() as string = SSH2SessionMBS.CipherNames
dim DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

**Notes:** The list may not be the same for Mac, Windows and Linux.

### 131.36.15 Disconnect(description as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Terminate transport layer.
**Notes:**

Lasterror is set.
description: Human readable reason for disconnection.
See also:

- 131.36.16 Disconnect(reason as Integer, description as string, lang as string = "") 21230

### 131.36.16 Disconnect(reason as Integer, description as string, lang as string = "")

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Terminate transport layer.
**Notes:**

Lasterror is set.

reason: One of the Disconnect Reason constants.
description: Human readable reason for disconnection.
lang: Localization string describing the langauge/encoding of the description provided.
See also:

- 131.36.15 Disconnect(description as string) 21230

### 131.36.17 HostKey(byref Type as Integer) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the remote key.

### 131.36.18 HostKeyHash(HashType as Integer) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return a hash of the remote host's key.
**Notes:**

HashType: kHostKeyHashSHA1 or kHostKeyHashMD5.
Returns the computed digest of the remote system's hostkey. The length of the returned string is hash_type

specific (e.g. 16 bytes for MD5, 20 bytes for SHA1).
Computed hostkey hash value, or empty string if the information is not available (either the session has not yet been started up, or the requested hash algorithm was not available). The hash consists of raw binary bytes, not hex digits, so it is not directly printable.

### 131.36.19 OpenDirectTCPIPChannel(host as string, port as integer, sourceHost as string = "127.0.0.1", sourcePort as Integer = 22) as SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tunnel a TCP connection through an SSH session.
**Notes:**

host: Third party host to connect to using the SSH host as a proxy.
port: Port on third party host to connect to.
SourceHost: Host to tell the SSH server the connection originated on.
SourcePort: Port to tell the SSH server the connection originated from.

Tunnel a TCP/IP connection through the SSH transport via the remote host to a third party. Communication from the client to the SSH server remains encrypted, communication from the server to the 3rd party host travels in cleartext.

This is not a replacement for ssh in command line with -L option.

Returns a newly allocated channel object, or nil on errors.

### 131.36.20 OpenSession as SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Establish a generic session channel.
**Notes:**

Lasterror is set.
Returns nil if the session start fails.

### 131.36.21 SessionFlag(Flag as Integer, Value as boolean)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get/Set a session flag.
**Notes:**

See kFlag* constants.
Lasterror is set.

### 131.36.22 SessionHandshake

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Perform the SSH handshake.
**Notes:** Lasterror is set.

### 131.36.23 SetBanner(Banner as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the SSH prococol banner for the local client.
**Notes:**

Set the banner that will be sent to the remote host when the SSH session is started with Handshake. This is optional; a banner corresponding to the protocol and libssh2 version will be sent by default.
Lasterror is set.

### 131.36.24 SetMethodPreference(methodType as Integer, Pref as string) as Boolean

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set preferred key exchange method.
**Example:**

```
// set preferences for key exchange method:
dim r as Boolean = s.SetMethodPreference(SSH2SessionMBS.kMethodKEX, "diffie-hellman-group-exchange-sha256")
```

**Notes:**

methodType: One of the Method Type constants.
Pref: Coma delimited list of preferred methods to use with the most preferred listed first and the least preferred listed last. If a method is listed which is not supported by libssh2 it will be ignored and not sent to the remote host during protocol negotiation.

Set preferred methods to be negotiated. These preferences must be set prior to calling SessionHandshake, as they are used during the protocol initiation phase.

Return true on success or false on failure. Lasterror is set. Lasterror is set to LIBSSH2_ERROR_EAGAIN (-37) when it would otherwise block. While LIBSSH2_ERROR_EAGAIN is a negative number, it isn't really a failure per se.

### 131.36.25 SupportedAlgorithms(methodType as Integer) as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get list of supported algorithms.
**Example:**

```
dim s as new SSH2SessionMBS("localhost")

dim KeyExchange() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodKEX)
dim HostKey() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodHostKey)
dim CryptCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptCS)
dim CryptSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptSC)
dim MacCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacCS)
dim MacSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacSC)
dim CompCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompCS)
dim CompSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompSC)
dim LangCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangCS)
dim LangSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangSC)

Break
```

**Notes:**

Method type: see kMethod* constants.

Get a list of supported algorithms for the given methodType. The methodType parameter is equivalent to methodType in SetMethodPreference.

In order to get a list of all supported compression algorithms, SessionFlag(SSH2SessionMBS.kFlagCompress, true) must be called before calling this function, otherwise only "none" will be returned.

On success, returns array with algorithms
Lasterror is set with error code.

### 131.36.26 UserAuthKeyboardInteractive(UserName as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Authenticate a session using keyboard-interactive authentication.
**Notes:**

username: Name of user to attempt keyboard-interactive authentication for.
Lasterror is set.
Calls KeyboardCallback callback to query input from user.

### 131.36.27 UserAuthList(username as string) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** List supported authentication methods.
**Notes:**

username: Username which will be used while authenticating. Note that most server implementations do not permit attempting authentication with different usernames between requests. Therefore this must be the same username you will use on later userauth calls.

Send a SSH_USERAUTH_NONE request to the remote host. Unless the remote host is configured to accept none as a viable authentication scheme (unlikely), it will return SSH_USERAUTH_FAILURE along with a listing of what authentication schemes it does support. In the unlikely event that none authentication succeeds, this method with return NULL. This case may be distinguished from a failing case by examining Authenticated.

### 131.36.28 UserAuthPassword(UserName as string, Password as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Authenticate a session with username and password.
**Notes:**

username: Name of user to attempt plain password authentication for.
password: Password to use for authenticating username.

Attempt basic password authentication. Note that many SSH servers which appear to support ordinary password authentication actually have it disabled and use Keyboard Interactive authentication (routed via PAM or another authentication backed) instead.
Lasterror is set.

### 131.36.29 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Authenticate a session with a public key, read from a file.
**Notes:**

Lasterror is set.
username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 131.36.30 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string) 21235

### 131.36.30 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Authenticate a session with a public key, read from a file.
**Notes:**

Lasterror is set.
username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 131.36.29 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string) 21235

### 131.36.31 UserAuthPublicKeyFromMemory(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS Network Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Authenticate a session with a public key, read from memory
**Notes:**

This function allows to authenticate a session with a public key read from memory.
Lasterror is set.

username - Remote user name to authenticate as.
publickeydata - Buffer containing the contents of a public key file. Optional.
privatekeydata - Buffer containing the contents of a private key file.
passphrase - Passphrase to use when decoding private key file.

Keys must have LF as line ending, not CR.

Attempt public key authentication using a PEM encoded private key file stored in memory.

### 131.36.32 Version as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the version for the SSH library.
**Example:**

MsgBox SSH2SessionMBS.Version

### 131.36.33 WaitSocket(TimeOut as Double = 0.1)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Waits on the socket for sending or receiving.
**Notes:** Default used to be 10 seconds, but that may be to much, so since v22.3 the value can be customized and is now 1/10th of a second.

### 131.36.34 Properties

### 131.36.35 Authenticated as Boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return authentication status.
**Notes:**

Indicates whether or not the named session has been successfully authenticated.
Returns true if authenticated and false if not.
(Read only property)

### 131.36.36 Blocking as Boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The blocking mode on session.
**Notes:**

blocking: Set to a non-zero value to make the channel block, or zero to make it non-blocking.

Set or clear blocking mode on the selected on the session. This will instantly affect any channels associated with this session. If a read is performed on a session with no data currently available, a blocking session will wait for data to arrive and return what it receives. A non-blocking session will return immediately with an empty buffer. If a write is performed on a session with no room for more data, a blocking session will wait for room. A non-blocking session will return immediately without writing anything.
(Read and Write property)

### 131.36.37 Handle as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

### 131.36.38 LastErrNo as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the most recent error number.
**Notes:**

Returns a numeric error code corresponding to the the Error Code constants.
(Read only property)

### 131.36.39 LastError as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 131.36.40 Socket as TCPSocket

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The socket value.
**Notes:**

This is set by constructor if you base the session on an existing session.
But you can assign a socket here if you like.
(Read and Write property)

### 131.36.41 Tag as Variant

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag value.
**Notes:**

A property where you can store any value you like.
(Read and Write property)

### 131.36.42 TimeOut as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The timeout for blocking functions.
**Notes:**

In milliseconds.
(Read and Write property)

### 131.36.43 Events

### 131.36.44 KeyboardCallback(Name as string, Instruction as string, PromptCount as Integer, Prompts() as SSH2UserAuthKeyboardInteractivePromptMBS, responses() as SSH2UserAuthKeyboardInteractiveResponseMBS)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event to ask for user input on a UserAuthKeyboardInteractive run.
**Notes:**

You can ask user for password, e.g. with a modal dialog.
You find prompt text in SSH2UserAuthKeyboardInteractivePromptMBS object and place answer in SSH2UserAuthKeyboardInteractiveResponseMBS objects.

### 131.36.45 Constants

### 131.36.46 kErrorAgentProtocol = -42

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Invalid agent protocol.

### 131.36.47 kErrorAlloc = -6

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Out of memory.

### 131.36.48 kErrorAuthenticationFailed = -18

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Authentication failed.

### 131.36.49 kErrorBadSocket = -45

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Bad socket handle.

### 131.36.50 kErrorBadUse = -39

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Bad use.

### 131.36.51 kErrorBannerRecv = -2

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Failed to receive banner.

### 131.36.52 kErrorBannerSend = -3

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Failed to send banner.

### 131.36.53 kErrorBufferTooSmall = -38

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Memory buffer is too small.

### 131.36.54 kErrorChannelClosed = -26

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Channel is already closed.

### 131.36.55 kErrorChannelEofSent = -27

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Chanel sent EOF.

### 131.36.56 kErrorChannelFailure = -21

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Generic error on a channel.

### 131.36.57 kErrorChannelOutoforder = -20

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Channel commands out of order.

### 131.36.58 kErrorChannelPacketExceeded = -25

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Channel packet exceeded.

### 131.36.59 kErrorChannelRequestDenied = -22

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Channel request denied.

### 131.36.60 kErrorChannelUnknown = -23

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Unknown channel.

### 131.36.61 kErrorChannelWindowExceeded = -24

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Channel window exceeded.

### 131.36.62 kErrorChannelWindowFull = -47

MBS Network Plugin, Plugin Version: 19.5.

**Function:** One of the SSH error codes.
**Notes:** Channel window is full.

### 131.36.63 kErrorCompress = -40

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Compression error.

### 131.36.64 kErrorDecrypt = -12

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Error with decryption.

### 131.36.65 kErrorEagain = -37

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Please try again later.

### 131.36.66 kErrorEncrypt = -44

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Error on encrypting.

### 131.36.67 kErrorFile = -16

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** File IO error.

### 131.36.68 kErrorHostkeyInit = -10

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Failed to init host key.

### 131.36.69 kErrorHostkeySign = -11

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Failed to sign host key.

### 131.36.70 kErrorInval = -34

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Input value error.

### 131.36.71 kErrorInvalidMac = -4

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Invalid MAC address.

### 131.36.72 kErrorInvalidPollType = -35

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Invalid poll type.

### 131.36.73 kErrorKexFailure = -5

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Key exchange failed.

### 131.36.74 kErrorKeyExchangeFailure = -8

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Key exchange failed.

### 131.36.75 kErrorKeyfileAuthFailed = -48

MBS Network Plugin, Plugin Version: 19.5.

**Function:** One of the SSH error codes.
**Notes:** Authorization with key file failed.

### 131.36.76 kErrorKnownHosts = -46

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Unknown host.

### 131.36.77 kErrorMethodNone = -17

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** No method.

### 131.36.78 kErrorMethodNotSupported = -33

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Method not supported.

### 131.36.79 kErrorNone = 0

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** No error.

### 131.36.80 kErrorOutOfBoundary = -41

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Out of Boundary.

### 131.36.81 kErrorPasswordExpired = -15

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Password expired.

### 131.36.82 kErrorProto = -14

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Protocol error.

### 131.36.83 kErrorPublickeyProtocol = -36

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Publickey protocol failed.

### 131.36.84 kErrorPublickeyUnverified = -19

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Publickey is not verified.

### 131.36.85 kErrorRequestDenied = -32

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Request denied.

### 131.36.86 kErrorScpProtocol = -28

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Error with SCP protocol.

### 131.36.87 kErrorSftpProtocol = -31

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Error with SFTP protocol.

### 131.36.88 kErrorSocketDisconnect = -13

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Socket got disconnected.

### 131.36.89 kErrorSocketNone = -1

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** No socket error.

### 131.36.90 kErrorSocketRecv = -43

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Socket receive failed.

### 131.36.91 kErrorSocketSend = -7

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Socket send failed.

### 131.36.92 kErrorSocketTimeout = -30

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Socket timeout.

### 131.36.93 kErrorTimeout = -9

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Timeout.

### 131.36.94 kErrorZlib = -29

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the SSH error codes.
**Notes:** Error with zlib (Compression).

### 131.36.95 kFlagCompress = 2

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the session flag constants.
**Notes:**

Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option.
If set - before the connection negotiation is performed - libssh2 will try to negotiate compression enabling for this connection. By default libssh2 will not attempt to use compression.

### 131.36.96 kFlagSigPipe = 1

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the session flag constants.
**Notes:**

Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option.
If set, libssh2 will not attempt to block SIGPIPEs but will let them trigger from the underlying socket layer.

### 131.36.97 kHostKeyHashMD5 = 1

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the hash types.

**Notes:** MD5

### 131.36.98 kHostKeyHashSHA1 = 2

MBS Network Plugin, Plugin Version: 14.0.

**Function:** One of the hash types.
**Notes:** SHA1

### 131.36.99 kHostKeyHashSHA256 = 3

MBS Network Plugin, Plugin Version: 19.5.

**Function:** One of the hash types.
**Notes:** SHA256

### 131.36.100 kMethodCompCS = 6

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Compression method.
e.g. zlib, zlib@openssh.com, none

### 131.36.101 kMethodCompSC = 7

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Compression method.
e.g. zlib, zlib@openssh.com, none

### 131.36.102 kMethodCryptCS = 2

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Crypt Method.
e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc.

### 131.36.103 kMethodCryptSC = 3

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Crypt Method.
e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc

### 131.36.104 kMethodHostKey = 1

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Host key method.
e.g. ssh-rsa, ssh-dss

### 131.36.105 kMethodKEX = 0

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

Key Exchange Method.
e.g. diffie-hellman-group-exchange-sha256, diffie-hellman-group-exchange-sha1, diffie-hellman-group14-sha1 or diffie-hellman-group1-sha1.

### 131.36.106 kMethodLangCS = 8

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:** Language.

### 131.36.107 kMethodLangSC = 9

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:** Language.

### 131.36.108 kMethodMacCS = 4

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

MAC method (hash)
e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com

### 131.36.109 kMethodMacSC = 5

MBS Network Plugin, Plugin Version: 18.5.

**Function:** One of the method constants for SetMethodPreference and SupportedAlgorithms.
**Notes:**

MAC method (hash)
e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com

## 131.37 class SSH2TunnelMBS

### 131.37.1 class SSH2TunnelMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a SSH tunnel.
**Notes:**

The MBS Plugin can spin of a new preemptive thread to run a tunnel to forward a SSH connection from local socket to remote server via SSH tunnel.
This works well for database access with MySQL.
By using our own thread, we are not blocking or blocked by your Xojo code.

The tunnel allows currently one connection through it, e.g. run one tunnel per MySQL connection to go through the tunnel. If you need multiple tunnels, please create multiple SSH tunnels.

### 131.37.2 Blog Entries

### 131.37.5 Videos

- Presentation from Munich conference about MBS Plugins.
- Presentation from Xojo Developer Conference 2019 in Miami.

### 131.37.6 Methods

### 131.37.7 Constructor(session as SSH2SessionMBS)

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Please pass connected SSH session.

### 131.37.8 Destructor

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 131.37.9 Run

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs the thread with the tunnel.

### 131.37.10 Properties

### 131.37.11 BytesReceived as Int64

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of bytes received.
**Notes:** (Read only property)

### 131.37.12 BytesSent as Int64

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of bytes sent.
**Notes:** (Read only property)

### 131.37.13 Cancel as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to cancel tunnel.
**Notes:**

This property can be set to request end of the thread.
(Read and Write property)

### 131.37.14 Connected as Boolean

MBS Network Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries whether tunnel is connected and transfers data.
**Notes:**

Returns true if connected or false if not.
(Read only property)

### 131.37.15 KeepAlive as Boolean

MBS Network Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to sent keep-alive packets.
**Example:**

```
dim tunnel as SSH2TunnelMBS // your tunnel

// avoid timeing out in Socket and SSH layers
tunnel.KeepAlive = True
session.ConfigureKeepAlive
```

**Notes:**

If set to true, TCP keep alive probes will be sent to avoid TCP/IP timeouts.

Set to false (default behavior) to disable keep alive probes.

You may also need to use ConfigureKeepAlive on the SSH2SessionMBS class.
(Read and Write property)

### 131.37.16 LocalAddress as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The local address to use.
**Notes:**

Defines where we wait for a connection to forward.
IPv4 or IPv6 address.
(Read and Write property)

### 131.37.17 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The local port to use.
**Notes:** (Read and Write property)

### 131.37.18 Messages as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Log messages.
**Notes:**

Filled by thread to tell you about errors.
(Read only property)

### 131.37.19 RemoteAddress as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The remote address to use.
**Notes:**

When connecting through tunnel this address is used from server to connect to.
IPv4 or IPv6 address.

(Read and Write property)

### 131.37.20 RemotePort as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The remote port to use.
**Notes:**

When connecting through tunnel this port is used from server to connect to.
(Read and Write property)

### 131.37.21 Running as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether tunnel is running.
**Notes:**

True if running, false if not.
(Read only property)

### 131.37.22 Session as SSH2SessionMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The session used for the tunnel.
**Notes:** (Read only property)

# 131.38 class SSH2UserAuthKeyboardInteractivePromptMBS

## 131.38.1 class SSH2UserAuthKeyboardInteractivePromptMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an interactive keyboard authentication prompt.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.38.2 Methods

## 131.38.3 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 131.38.4 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

## 131.38.5 Properties

## 131.38.6 Echo as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The echo flag.
**Notes:**

(not sure what this is)
(Read and Write property)

## 131.38.7 Length as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of the text.
**Notes:** (Read and Write property)

### 131.38.8 Text as String

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text message.
**Notes:** (Read and Write property)

# 131.39 class SSH2UserAuthKeyboardInteractiveResponseMBS

## 131.39.1 class SSH2UserAuthKeyboardInteractiveResponseMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a response with interactive keyboard login.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.39.2 Methods

## 131.39.3 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

## 131.39.4 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destrutor.

## 131.39.5 Properties

## 131.39.6 Text as String

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The response text.
**Notes:**

Usually a password.
(Read and Write property)

## 131.40 class TCPSocket

### 131.40.1 class TCPSocket

Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The Socket class in Xojo which is the superclass of the PacketSocketMBS class.

# 131.41 class TXTRecordMBS

## 131.41.1 class TXTRecordMBS

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** The class to represent a DNS-SD TXT record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.Bytes // show complete record
MsgBox t.Value("Hello") // lookup value
```

**Notes:** The constructor creates an empty TXTRecord where you can add values using TXTRecordSetValue.

## 131.41.2 Methods

## 131.41.3 Bytes as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to retrieve a copy of to the raw bytes within a TXTRecord.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

**Notes:** Returns a string with the raw bytes inside the TXTRecord which you can pass directly to DNSServiceRegisterMBS.Register() or to DNSServiceRegisterMBS.UpdateRecord().

## 131.41.4 ContainsKey(key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to determine if a given TXT Record contains a specified key.
**Example:**

```
dim t as new TXTRecordMBS
```

```
call t.SetValue "Hello", "World"

if t.ContainsKey("Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if t.ContainsKey("hallo") then
MsgBox "hallo found ->bug."
else
MsgBox "hallo not found."
end if
```

**Notes:**

key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 131.41.5 ContainsKey(txtRecord as string, key as string) as boolean 21262

### 131.41.5 ContainsKey(txtRecord as string, key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to determine if a given TXT Record contains a specified key.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.Bytes // copy record to string

// now search in that string:
if TXTRecordMBS.ContainsKey(s, "Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if TXTRecordMBS.ContainsKey(s, "hallo") then
MsgBox "hallo found ->bug."
```

```
else
MsgBox "hallo not found."
end if
```

**Notes:**

txtRecord: The txt record to search in as a string.
key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 131.41.4 ContainsKey(key as string) as boolean 21261

### 131.41.6 Count as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the number of keys stored in the TXT Record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Count)
```

See also:

- 131.41.7 Count(txtRecord as string) as Integer 21263

### 131.41.7 Count(txtRecord as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the number of keys stored in the TXT Record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
```

```
call t.SetValue "Hello3", "World3"

dim s as string = t.Bytes // copy record

// now count in that record
MsgBox str(TXTRecordMBS.Count(s))
```

See also:

- 131.41.6 Count as Integer 21263

### 131.41.8 KeyAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the key with the given index from the txt record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

**Notes:**

index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 131.41.9 KeyAtIndex(txtRecord as string, index as Integer) as string 21264

### 131.41.9 KeyAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the key with the given index from the txt record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

```
dim s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

**Notes:**

txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 131.41.8 KeyAtIndex(index as Integer) as string 21264

### 131.41.10 Length as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to determine the length of the raw bytes within a TXTRecord.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Length) // shows 42
```

### 131.41.11 RemoveValue(key as string)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Removes a key from a TXTRecordRef. The "key" must be an ASCII string which exists in the TXTRecord.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
```

```
call t.SetValue "Hello3", "World3"

t.RemoveValue "Hello2"

MsgBox t.Bytes
```

**Notes:**

key: A key name which exists in the TXTRecord.

Lasterror is kErrorNoError on success or kErrorNoSuchKey if the "key" does not exist in the TXTRecord.

### 131.41.12 SetValue(key as string, value as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Adds a key (optionally with value) to a TXTRecordRef.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"
```

**Notes:**

If the "key" already exists in the TXTRecord, then the current value will be replaced with the new value.

Keys may exist in four states with respect to a given TXT record:

- Absent (key does not appear at all)
- Present with no value ("key" appears alone)
- Present with empty value ("key=" appears in TXT record)
- Present with non-empty value ("key=value" appears in TXT record)

For more details refer to "Data Syntax for DNS-SD TXT Records" in

http://files.dns-sd.org/draft-cheshire-dnsext-dns-sd.txt

key: A string which only contains printable ASCII values (& h20-& h7E), excluding '=' (& h3D). Keys should be 8 characters or less.
value: Any binary value. For values that represent textual data, UTF-8 is STRONGLY recommended.

Returns kErrorNoError on success. Returns kErrorInvalid if the "key" string contains illegal characters. Returns kErrorNoMemory if adding this key would exceed the available storage.

The plugin currently does not create keys with empty value. If you need that, please email us.

### 131.41.13 Value(key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to retrieve the value for a given key from a TXT Record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
MsgBox t.Value("Hello") // lookup value
```

**Notes:**

key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 131.41.14 Value(txtRecord as string, key as string) as string 21267

### 131.41.14 Value(txtRecord as string, key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Allows you to retrieve the value for a given key from a TXT Record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.bytes
```

```
MsgBox TXTRecordMBS.Value(s, "Hello") // lookup value
```

**Notes:**

txtRecord: Pointer to the received TXT Record bytes.
key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 131.41.13 Value(key as string) as string 21267

### 131.41.15 ValueAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the key with the given index from the txt record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

**Notes:**

index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling ValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 131.41.16 ValueAtIndex(txtRecord as string, index as Integer) as string 21268

### 131.41.16 ValueAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

**Function:** Returns the key with the given index from the txt record.
**Example:**

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

**Notes:**

txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling GetValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 131.41.15 ValueAtIndex(index as Integer) as string 21268

## 131.42 class UDPSocketMBS

### 131.42.1 class UDPSocketMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for UDP sockets.
**Notes:** Similar to Xojo's built in UDPSocket class, but more low level and with more options.

### 131.42.6 Methods

### 131.42.7 AddMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds this socket to a multicast group.
**Notes:**

Internally this uses IPPROTO_IP/IP_ADD_MEMBERSHIP option.
Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

### 131.42.8 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Binds the socket to the given port.
**Notes:**

If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.

### 131.42.9 Constructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.

### 131.42.10 Destructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** Closes the socket.

### 131.42.11 DropMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes this socket from a multicast group.
**Notes:**

Internally this uses IPPROTO_IP/IP_DROP_MEMBERSHIP option.
Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

### 131.42.12 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Polls for activity.
**Notes:**

Calls events if needed.
This is called automatically via timer by the plugin.

### 131.42.13 Read(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a datagram.
**Notes:**

If peek is true, the data is not removed from read buffer.
On error returns nil.

### 131.42.14 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a datagram.
**Notes:**

Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 131.42.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21273
- 131.42.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21273

### 131.42.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a datagram.
**Notes:**

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 131.42.14 SendMessage(Data as DatagramMBS) as Integer 21273
- 131.42.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21273

### 131.42.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a datagram.
**Notes:**

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 131.42.14 SendMessage(Data as DatagramMBS) as Integer 21273

• 131.42.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21273

### 131.42.17 Properties

### 131.42.18 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The address family of the socket.
**Notes:**

This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFamilyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

### 131.42.19 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns number of bytes available for reading.
**Notes:**

Lasterror is set.
(Read only property)

### 131.42.20 BindAddress as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The IP used for bind operation.
**Notes:**

This is set by Bind on success.
(Read and Write property)

### 131.42.21 BindPort as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The port used for bind operation.
**Notes:**

This is set by Bind on success.
(Read and Write property)

### 131.42.22 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether broadcasts are allowed.
**Notes:**

Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

### 131.42.23 Handle as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal socket handle.
**Notes:** (Read and Write property)

### 131.42.24 Lasterror as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code.
**Notes:**

Platform dependent.
(Read and Write property)

### 131.42.25 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries local IP.
**Notes:**

Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.
(Read only property)

### 131.42.26 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries local port.
**Notes:**

Lasterror is set.
Can be -1 if unknown.
(Read only property)

### 131.42.27 MulticastInterface as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The interface to use for multicast.
**Notes:**

Internally this uses IPPROTO_IP/IP_MULTICAST_IF option.
Lasterror is set.

Assign empty string to use all interfaces.
May return 0.0.0.0 to indicate all interfaces.
(Read and Write property)

### 131.42.28 MulticastLoop as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether multicast packets are also sent to the sending socket.
**Notes:**

Internally this uses IPPROTO_IP/IP_MULTICAST_LOOP option.
Lasterror is set.
(Read and Write property)

### 131.42.29 MulticastTimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The multicast time to live value.
**Notes:**

Internally this uses IPPROTO_IP/IP_MULTICAST_TTL option.

Lasterror is set.
Range from 0 to 255.
(Read and Write property)

### 131.42.30 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The socket protocol.
**Notes:**

Is ProtocolUDP (17) for UDP sockets.
(Read and Write property)

### 131.42.31 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the receiving buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.
(Read and Write property)

### 131.42.32 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allows reuse of same port.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

### 131.42.33 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allow reuse of same port and IP.
**Notes:**

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

### 131.42.34 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The sending buffer size.
**Notes:**

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

### 131.42.35 SocketError as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The native socket error.
**Notes:**

Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

### 131.42.36 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The socket type.
**Notes:**

Is SocketTypeDatagram (2) for UDP sockets.
(Read and Write property)

### 131.42.37 TimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The time to live value.
**Notes:**

Internally this uses IPPROTO_IP/IP_TTL option.
Lasterror is set.
Range from 0 to 255.
(Read and Write property)

### 131.42.38 Type as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Socket type.
**Notes:**

Always 2 as this is a datagram socket.
Internally this uses SOL_SOCKET/SO_TYPE option.
Lasterror is set.
(Read only property)

### 131.42.39 TypeOfService as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type of service value.
**Notes:**

Works only on BSD Sockets.

Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

Internally this uses IPPROTO_IP/IP_TOS option.
(May not work on Windows.

Lasterror is set.
(Read and Write property)

### 131.42.40 Events

### 131.42.41 DataAvailable

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when new data is available.
**Notes:** Requires the socket to be bound.

### 131.42.42 Error

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called if socket is in error state.

### 131.42.43 SendComplete

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The last write operation is done.

# 131.43 module WebSocketHelperMBS

## 131.43.1 module WebSocketHelperMBS

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Helper functions for implementing web sockets.
**Example:**

```
// short packet
dim s as string = WebSocketHelperMBS.AddHeader("Hello")
dim b as Boolean = WebSocketHelperMBS.FrameMasked(s)
dim t as string = WebSocketHelperMBS.Unmask(s)

// long packet
dim text as string = "Hello World. This is just a sample text with a little bit more characters to make it at least 127 characters long for this test."
dim s2 as string = WebSocketHelperMBS.AddHeader(text)
dim b2 as Boolean = WebSocketHelperMBS.FrameMasked(s2)
dim t2 as string = WebSocketHelperMBS.Unmask(s2)

Break // look in debugger
```

**Deprecated:** This item is deprecated and should no longer be used.

## 131.43.4 Methods

## 131.43.5 AddHeader(data as Memoryblock, opCode as Integer = 7) as Memoryblock

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds header to a frame.
**Notes:** Depending on the length of the frame we add two to ten bytes in front with the opcode included and the length information.
See also:

- 131.43.6 AddHeader(data as string, opCode as Integer = 7) as string 21282

### 131.43.6 AddHeader(data as string, opCode as Integer = 7) as string

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds header to a frame.
**Notes:** Depending on the length of the frame we add two to ten bytes in front with the opcode included and the length information.
See also:

- 131.43.5 AddHeader(data as Memoryblock, opCode as Integer = 7) as Memoryblock 21281

### 131.43.7 FrameMasked(data as Memoryblock) as boolean

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the frame is masked or not.
**Notes:** Returns true if the first bit of the first byte is set.
See also:

- 131.43.8 FrameMasked(data as string) as boolean 21282

### 131.43.8 FrameMasked(data as string) as boolean

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the frame is masked or not.
**Notes:** Returns true if the first bit of the first byte is set.
See also:

- 131.43.7 FrameMasked(data as Memoryblock) as boolean 21282

### 131.43.9 Unmask(data as Memoryblock) as Memoryblock

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unmasks a data packet.
**Notes:**

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
See also:

- 131.43.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21283
- 131.43.11 Unmask(data as string) as string 21283
- 131.43.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21284

### 131.43.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock

MBS Network Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unmasks a data packet.
**Notes:**

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
This method also sets Offset, Length and TotalLength parameters.
See also:

- 131.43.9 Unmask(data as Memoryblock) as Memoryblock 21282
- 131.43.11 Unmask(data as string) as string 21283
- 131.43.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21284

### 131.43.11 Unmask(data as string) as string

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unmasks a data packet.
**Notes:**

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
See also:

- 131.43.9 Unmask(data as Memoryblock) as Memoryblock 21282

- 131.43.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21283
- 131.43.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21284

### 131.43.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string

MBS Network Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unmasks a data packet.
**Notes:**

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
This method also sets Offset, Length and TotalLength parameters.
See also:

- 131.43.9 Unmask(data as Memoryblock) as Memoryblock 21282
- 131.43.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21283
- 131.43.11 Unmask(data as string) as string 21283

### 131.43.13 Constants

### 131.43.14 kOpCodeBinaryFrame = 2

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Binary Frame

### 131.43.15 kOpCodeClose = 8

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Close

### 131.43.16 kOpCodeContinuation = 0

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Continuation

### 131.43.17 kOpCodeEnd = 7

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** End

### 131.43.18 kOpCodePing = 9

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Ping

### 131.43.19 kOpCodePong = 10

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Pong

### 131.43.20 kOpCodeTextFrame = 1

MBS Network Plugin, Plugin Version: 12.5.

**Function:** One of the OpCode values.
**Notes:** Text frame

# 131.44 class WindowsDNSRecordAAAAMBS

## 131.44.1 class WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS IPv6 (AAAA) record.
**Notes:**

Be aware that IPv6 is not available on Windows XP and older.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.44.2 Methods

## 131.44.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordAAAAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.44.4 Properties

## 131.44.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The address in a human readable format.
**Notes:** (Read and Write property)

## 131.44.6 RawAddress as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The raw address as a 16byte string.
**Notes:** (Read and Write property)

# 131.45 class WindowsDNSRecordAMBS

## 131.45.1 class WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS address (A) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.45.2 Methods

## 131.45.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.45.4 Properties

## 131.45.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The IPv4 address as a string.
**Notes:** (Read and Write property)

## 131.45.6 IPAddress as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The raw address as an integer.
**Notes:** (Read and Write property)

# 131.46 class WindowsDNSRecordMBS

## 131.46.1 class WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for DNS query results on Windows.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.46.2 Methods

## 131.46.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.46.4 Query(name as string, type as Integer, options as Integer = 0) as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Performs a DNS query on Windows.
**Notes:**

The DnsQuery function type is the generic query interface to the DNS namespace, and provides application developers with a DNS query resolution interface.

name: a string that represents the name of the owner of the record set that is queried.
type: A value that represents the RR DNS Record Type that is queried.
Options: A value that contains a combination of kDNSQuery* constants.

Returns the record chain on success.

Applications that call the DnsQuery function build a query using a fully-qualified DNS name and Resource Record (RR) type, and set query options depending on the type of service desired. When the kDNSQuery-

Standard option is set, DNS uses the resolver cache, queries first with UDP, then retries with TCP if the response is truncated, and requests that the server to perform recursive resolution on behalf of the client to resolve the query.

Note When calling one of the DnsQuery function types, be aware that a DNS server may return multiple records in response to a query. A computer that is multihomed, for example, will receive multiple A records for the same IP address. The caller must use as many of the returned records as necessary.

Consider the following scenario, in which multiple returned records require additional activity on behalf of the application: A Query function call is made for a multihomed computer and the application finds that the address associated with the first A record is not responding. The application should then attempt to use other IP addresses specified in the (additional) A records returned from the Query function call.

### 131.46.5 Properties

### 131.46.6 A as WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The address record.
**Notes:** (Read and Write property)

### 131.46.7 AAAA as WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The IPv6 address record.
**Notes:** (Read and Write property)

### 131.46.8 AFSDB as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.9 CharSet as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This value specifies the character set used in the associated function call.
**Notes:** (Read and Write property)

### 131.46.10 CNAME as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.11 DataLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The length, in bytes, of Data.
**Notes:** (Read and Write property)

### 131.46.12 HINFO as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.13 ISDN as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.14 MB as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.15 MD as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.16 MF as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.17 MG as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.18 MINFO as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.19 MR as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.20 MX as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.21 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A pointer to a string that represents the domain name of the record set.
**Notes:** (Read and Write property)

### 131.46.22 NextRecord as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The next record in the answer.
**Notes:** (Read and Write property)

### 131.46.23 NS as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.24 Null as WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.25 RawData as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** the RAW data of this record.
**Notes:**

For debugging.
(Read and Write property)

### 131.46.26 RP as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.27 RT as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.28 Section as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This value specifies the section of interest returned from the DnsQuery function call.
**Notes:** (Read and Write property)

### 131.46.29 SOA as WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.30 TTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The DNS RR's Time To Live value (TTL), in seconds.
**Notes:** (Read and Write property)

### 131.46.31 TXT as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.32 Type as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The DNS record type for this record.
**Notes:**

If type is kDNSTypeA, the A property is filled.
(Read and Write property)

### 131.46.33 X25 as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The data record.
**Notes:** (Read and Write property)

### 131.46.34 Constants

### 131.46.35 kCharSetAnsi = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the CharSet property.
**Notes:** The character set is ANSI.

### 131.46.36 kCharSetUnicode = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the CharSet property.
**Notes:** The character set is Unicode.

### 131.46.37 kCharSetUnknown = 0

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the CharSet property.
**Notes:** The character set is unknown.

### 131.46.38 kCharSetUtf8 = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the CharSet property.
**Notes:** The character set is UTF8.

### 131.46.39 kDNSClassAll = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.40 kDNSClassAny = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.41 kDNSClassCHAOS = & h0003

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.42 kDNSClassCSNET = & h0002

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.43 kDNSClassHESIOD = & h0004

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.44 kDNSClassInternet = & h0001

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.45 kDNSClassNone = & h00fe

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in native byte order (little endian on Windows).

### 131.46.46 kDNSQueryAcceptTruncatedResponse = & h00000001

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Returns truncated results. Does not retry under TCP.

### 131.46.47 kDNSQueryBypassCache = & h00000008

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Bypasses the resolver cache on the lookup.

### 131.46.48 kDNSQueryDontResetTTLValues = & h00100000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** If set, and if the response contains multiple records, records are stored with the TTL corresponding to the minimum value TTL from among all records. When this option is set, "Do not change the TTL of

individual records" in the returned record set is not modified.

### 131.46.49 kDNSQueryMulticastOnly = & h00000400

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Prevents the query from using DNS and uses only Local Link Multicast Name Resolution (LLMNR).
Windows Vista and Windows Server 2008 or later.: This value is supported.

### 131.46.50 kDNSQueryNoHostsFile = & h00000040

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Prevents the DNS query from consulting the HOSTS file.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

### 131.46.51 kDNSQueryNoLocalName = & h00000020

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Directs DNS to ignore the local name.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

### 131.46.52 kDNSQueryNoMulticast = & h00000800

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.

### 131.46.53 kDNSQueryNoNetBT = & h00000080

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Prevents the DNS query from using NetBT for resolution.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

### 131.46.54 kDNSQueryNoRecursion = & h00000004

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Directs the DNS server to perform an iterative query (specifically directs the DNS server not to perform recursive resolution to resolve the query).

### 131.46.55 kDNSQueryNoWireQuery = & h00000010

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Directs DNS to perform a query on the local cache only.

### 131.46.56 kDNSQueryReserved = & hff000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Reserved.

### 131.46.57 kDNSQueryReturnMessage = & h00000200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Directs DNS to return the entire DNS response message.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

### 131.46.58 kDNSQueryStandard = & h00000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Standard query.

### 131.46.59 kDNSQueryTreatAsFQDN = & h00001000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Prevents the DNS response from attaching suffixes to the submitted name in a name resolution process

### 131.46.60 kDNSQueryUseTCPOnly = & h00000002

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:** Uses TCP only for the query.

### 131.46.61 kDNSQueryWireOnly = & h00000100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible flags for the Query function.
**Notes:**

Directs DNS to perform a query using the network only, bypassing local information.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

### 131.46.62 kDNSRClassAll = & hff00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.63 kDNSRClassAny = & hff00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.64 kDNSRClassCHAOS = & h0300

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.65 kDNSRClassCSNET = & h0200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.66 kDNSRClassHESIOD = & h0400

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.67 kDNSRClassInternet = & h0100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.68 kDNSRClassNone = & hfe00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the DNS classes in network byte order.

### 131.46.69 kDNSRTypeA = & h0100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.70 kDNSRTypeAAAA = & h1c00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.71 kDNSRTypeAFSDB = & h1200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.72 kDNSRTypeALL = & hff00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.73 kDNSRTypeANY = & hff00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.74 kDNSRTypeATMA = & h2200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.75 kDNSRTypeAXFR = & hfc00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.76 kDNSRTypeCNAME = & h0500

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.77 kDNSRTypeGPOS = & h1b00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.78 kDNSRTypeHINFO = & h0d00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.79 kDNSRTypeISDN = & h1400

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.80 kDNSRTypeIXFR = & hfb00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.81 kDNSRTypeKEY = & h1900

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.82 kDNSRTypeLOC = & h1d00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.83 kDNSRTypeMAILA = & hfe00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.84 kDNSRTypeMAILB = & hfd00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.85 kDNSRTypeMB = & h0700

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.86 kDNSRTypeMD = & h0300

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.87 kDNSRTypeMF = & h0400

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.88 kDNSRTypeMG = & h0800

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.89 kDNSRTypeMINFO = & h0e00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.90 kDNSRTypeMR = & h0900

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.91 kDNSRTypeMX = & h0f00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.92 kDNSRTypeNS = & h0200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.93 kDNSRTypeNSAP = & h1600

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.94 kDNSRTypeNSAPPTR = & h1700

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.95 kDNSRTypeNULL = & h0a00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.96 kDNSRTypeNXT = & h1e00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.97 kDNSRTypePTR = & h0c00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.98 kDNSRTypePX = & h1a00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.99 kDNSRTypeRP = & h1100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.100 kDNSRTypeRT = & h1500

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.101 kDNSRTypeSIG = & h1800

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.102 kDNSRTypeSOA = & h0600

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.103 kDNSRTypeSRV = & h2100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.104 kDNSRTypeTEXT = & h1000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.105 kDNSRTypeTKEY = & hf900

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.106 kDNSRTypeTSIG = & hfa00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.107 kDNSRTypeWINS = & h01ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.108 kDNSRTypeWINSR = & h02ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.109 kDNSRTypeWKS = & h0b00

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.110 kDNSRTypeX25 = & h1300

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in network byte order).

### 131.46.111 kDNSTypeA = & h0001

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.112 kDNSTypeAAAA = & h001c

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.113 kDNSTypeAFSDB = & h0012

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.114 kDNSTypeALL = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.115 kDNSTypeANY = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.116 kDNSTypeATMA = & h0022

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.117 kDNSTypeAXFR = & h00fc

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.118 kDNSTypeCNAME = & h0005

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.119 kDNSTypeGPOS = & h001b

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.120 kDNSTypeHINFO = & h000d

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.121 kDNSTypeISDN = & h0014

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.122 kDNSTypeIXFR = & h00fb

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.123 kDNSTypeKEY = & h0019

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.124 kDNSTypeLOC = & h001d

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.125 kDNSTypeMAILA = & h00fe

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.126 kDNSTypeMAILB = & h00fd

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.127 kDNSTypeMB = & h0007

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.128 kDNSTypeMD = & h0003

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.129 kDNSTypeMF = & h0004

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.130 kDNSTypeMG = & h0008

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.131 kDNSTypeMINFO = & h000e

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.132 kDNSTypeMR = & h0009

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.133 kDNSTypeMX = & h000f

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.134 kDNSTypeNBSTAT = & hff02

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.135 kDNSTypeNS = & h0002

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.136 kDNSTypeNSAP = & h0016

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.137 kDNSTypeNSAPPTR = & h0017

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.138 kDNSTypeNULL = & h000a

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.139 kDNSTypeNXT = & h001e

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.140 kDNSTypePTR = & h000c

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.141 kDNSTypePX = & h001a

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.142 kDNSTypeRP = & h0011

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.143 kDNSTypeRT = & h0015

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.144 kDNSTypeSIG = & h0018

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.145 kDNSTypeSOA = & h0006

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.146 kDNSTypeSRV = & h0021

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.147 kDNSTypeTEXT = & h0010

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.148 kDNSTypeTKEY = & h00f9

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.149 kDNSTypeTSIG = & h00fa

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.150 kDNSTypeWINS = & hff01

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.151 kDNSTypeWINSR = & hff02

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.152 kDNSTypeWKS = & h000b

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.153 kDNSTypeX25 = & h0013

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.154 kDNSTypeZERO = & h0000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the possible DNS record type constants (in native byte order).

### 131.46.155 kSectionAddtional = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the Section Property.
**Notes:** The DNS section specified is additional DNS information.

### 131.46.156 kSectionAnswer = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the Section Property.
**Notes:** The DNS section specified is a DNS answer.

### 131.46.157 kSectionAuthority = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the Section Property.
**Notes:** The DNS section specified indicates a DNS authority.

### 131.46.158 kSectionQuestion = 0

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the constants for the Section Property.
**Notes:** The DNS section specified is a DNS question.

# 131.47 class WindowsDNSRecordMInfoMBS

## 131.47.1 class WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS mail information (MINFO) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.47.2 Methods

## 131.47.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordMInfoMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.47.4 Properties

## 131.47.5 NameErrorsMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that represents the FQDN of the mailbox to receive error messages related to the mailing list.
**Notes:** (Read and Write property)

## 131.47.6 NameMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that represents the fully qualified domain name (FQDN) of the mailbox responsible for the mailing list or mailbox specified in the record's owner name.
**Notes:** (Read and Write property)

# 131.48 class WindowsDNSRecordMXMBS

## 131.48.1 class WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS mail exchanger (MX) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.48.2 Methods

## 131.48.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordMXMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.48.4 Properties

## 131.48.5 NameExchange as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that represents the fully qualified domain name (FQDN) of the host willing to act as a mail exchange.
**Notes:** (Read and Write property)

## 131.48.6 Preference as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A preference given to this resource record among others of the same owner. Lower values are preferred.
**Notes:** (Read and Write property)

## 131.49 class WindowsDNSRecordNullMBS

### 131.49.1 class WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a NULL data DNS resource record
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 131.49.2 Methods

### 131.49.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordNullMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 131.49.4 Properties

### 131.49.5 ByteCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of bytes represented in Data.
**Notes:** (Read and Write property)

### 131.49.6 Data as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The raw data as a string.
**Notes:** (Read and Write property)

# 131.50 class WindowsDNSRecordPTRMBS

## 131.50.1 class WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS pointer (PTR) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.50.2 Methods

## 131.50.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordPTRMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.50.4 Properties

## 131.50.5 NameHost as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The named host.
**Notes:** (Read and Write property)

# 131.51 class WindowsDNSRecordSOAMBS

## 131.51.1 class WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS start of authority (SOA) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.51.2 Methods

## 131.51.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordSOAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

## 131.51.4 Properties

## 131.51.5 DefaultTTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The lower limit on the time, in seconds, that a DNS server or caching resolver are allowed to cache any resource records (RR) from the zone to which this record belongs.
**Notes:** (Read and Write property)

## 131.51.6 Expire as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time, in seconds, before an unresponsive zone is no longer authoritative.
**Notes:** (Read and Write property)

### 131.51.7 NameAdministrator as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that represents the name of the responsible party for the zone to which the record belongs.
**Notes:** (Read and Write property)

### 131.51.8 NamePrimaryServer as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The string that represents the name of the authoritative DNS server for the zone to which the record belongs.
**Notes:** (Read and Write property)

### 131.51.9 Refresh as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time, in seconds, before the zone containing this record should be refreshed.
**Notes:** (Read and Write property)

### 131.51.10 Retry as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time, in seconds, before retrying a failed refresh of the zone to which this record belongs.
**Notes:** (Read and Write property)

### 131.51.11 SerialNo as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The serial number of the SOA record.
**Notes:** (Read and Write property)

## 131.52 class WindowsDNSRecordTXTMBS

### 131.52.1 class WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a DNS text (TXT) record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 131.52.2 Methods

### 131.52.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This constructor makes sure you don't create useless WindowsDNSRecordTXTMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 131.52.4 Strings as String()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** An array of strings representing the descriptive text of the TXT resource record.

### 131.52.5 Properties

### 131.52.6 StringCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of strings represented in Strings array.
**Notes:** (Read and Write property)

# 131.53 class WindowsEthernetAdapterMBS

## 131.53.1 class WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** A class for the properties of an ethernet adapter.

## 131.53.2 Methods

## 131.53.3 Gateway(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Returns one of the IP address of the default gateway for this adapter.
**Notes:** Index goes from 0 to GatewayGount-1.

## 131.53.4 IP(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Returns one of the IP addresses associated with this adapter.
**Notes:** Index goes from 0 to IPcount-1.

## 131.53.5 Properties

## 131.53.6 AdapterName as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Name of the adapter.
**Notes:** (Read and Write property)

## 131.53.7 Address as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Hardware address for the adapter.
**Notes:** (Read and Write property)

### 131.53.8 CurrentIpAddress as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** The current IP from within the IP list.
**Notes:**

This field is currently normally nil, but in the future it may point to the current IP inside the IP list.
But currently on Windows 2000 it seems to be always nil.
(Read and Write property)

### 131.53.9 Description as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Description for the adapter.
**Notes:** (Read and Write property)

### 131.53.10 DhcpEnabled as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Specifies whether dynamic host configuration protocol (DHCP) is enabled for this adapter.
**Notes:** (Read and Write property)

### 131.53.11 DhcpServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** IP address of the DHCP server for this adapter.
**Notes:** (Read and Write property)

### 131.53.12 Gatewaycount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** How many gateway IPs are allocated for this adapter.
**Notes:** (Read and Write property)

### 131.53.13 HaveWins as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Specifies whether this adapter uses Windows Internet Name Service (WINS).
**Notes:** (Read and Write property)

### 131.53.14 Index as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Adapter index.
**Notes:** (Read and Write property)

### 131.53.15 IPcount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** How many IPs are allocated for this adapter.
**Notes:** (Read and Write property)

### 131.53.16 LeaseExpires as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Time when the current DHCP lease expires.
**Notes:** (Read and Write property)

### 131.53.17 LeaseObtained as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Time when the current DHCP lease was obtained.
**Notes:** (Read and Write property)

### 131.53.18 PrimaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** IP address of the primary WINS server.
**Notes:** (Read and Write property)

### 131.53.19 SecondaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** IP address of the secondary WINS server.
**Notes:** (Read and Write property)

### 131.53.20 Type as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Adapter type.
**Notes:**

The type must be of the following values:

| | |
|---|---|
| MIB_IF_TYPE_OTHER | 1 |
| MIB_IF_TYPE_ETHERNET | 6 |
| MIB_IF_TYPE_TOKENRING | 9 |
| MIB_IF_TYPE_FDDI | 15 |
| MIB_IF_TYPE_PPP | 23 |
| MIB_IF_TYPE_LOOPBACK | 24 |
| MIB_IF_TYPE_SLIP | 28 |

(Read and Write property)

# 131.54 class WindowsEthernetMBS

## 131.54.1 class WindowsEthernetMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** A list of the Windows Ethernet Interfaces.
**Notes:**

Requires Windows 98 or 2000 or newer.
Reports count=0 on Windows 95 and NT 4.0.

Only activate adapters are listed.

## 131.54.2 Methods

## 131.54.3 Item(index as Integer) as WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Returns the Ethernet Adapter object for the given index.
**Notes:** Index goes from 0 to count-1.

## 131.54.4 Update

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** Updates the list.
**Notes:** Calls the Destructor and than the Constructor so the list is completly rebuilt.

## 131.54.5 Properties

## 131.54.6 Count as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** How much ethernet adapters are available.
**Notes:**

Note that there may be dummy or virtual adapters.
(Read and Write property)

## 131.55 class WindowsIPAddressMBS

### 131.55.1 class WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** An IP address.

### 131.55.2 Properties

### 131.55.3 IP as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** The IP as a string.
**Notes:**

Maximum 15 bytes long.
e.g. "192.168.0.1"
(Read and Write property)

### 131.55.4 Mask as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

**Function:** The mask for the IP.
**Notes:**

e.g. "255.255.255.0"
(Read and Write property)

# 131.56 class WindowsProxyMBS

## 131.56.1 class WindowsProxyMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to query the current windows proxy settings.

## 131.56.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- Need Proxy Settings?

## 131.56.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- Need Proxy Settings?

## 131.56.4 Properties

## 131.56.5 ByPass as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The proxy
**Notes:**

Example values:
"testserver:1234 apple.de <local>"
or
"testserver3:1234 testserver4:1234 testserver1:1234 testserver2:1234 apple.de <local>"
(Read and Write property)

## 131.56.6 Proxy as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current proxy setting.
**Notes:**

Example values:
"testserver:1234"

or
”https=testserver2:1234 http=testserver1:1234 gopher=testserver4:1234 ftp=testserver3:1234”
(Read and Write property)

### 131.56.7 UsingProxy as Boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether a proxy is in use.
**Notes:** (Read and Write property)

# 131.57 class WindowsQOSMBS

## 131.57.1 class WindowsQOSMBS

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for Quality Windows Audio/Video Experience (qWAVE).
**Notes:**

Quality Windows Audio/Video Experience (qWAVE) is the next generation Quality of Service (QOS) platform introduced in Windows Vista.
qWAVE provides new features focused on streaming multimedia and real-time content over variable bandwidth networks. These features include the following.

- Auto-discovery of end-to-end QOS compatibility.
- End-to-end bandwidth estimation of maximum link capacity (bottleneck bandwidth) and real-time available bandwidth.
- Intelligent packet prioritization.
- Congestion notification.
- Flow shaping.
- Distributed admission control, including caching to improve performance and minimize latency.

Requires Windows 6 (Vista).

### 131.57.6 Methods

### 131.57.7 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds a socket to a flow.
**Notes:**

Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.
After calling this function adaptive A/V applications should call the SetFlowRate function to affect network traffic.
A non-adaptive application either does not adapt to changing network characteristics or is sending traffic to an endpoint that does not support adaptive capabilities as indicated by ERROR_NOT_SUPPORTED.
Non-adaptive applications, or adaptive applications making non-adaptive flows, should call this function with the QOSNonAdaptiveFlow flag. After calling this function A/V applications should call the setOutgoingDSCPValue, setOutgoingRate or setTrafficType function with a Operation. They do not need to be called unless shaping is desired.

- 131.57.8 AddSocketToFlow(Socket as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean 21333

### 131.57.8 AddSocketToFlow(Socket as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds a socket to a flow.
**Notes:**

Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow

identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.
After calling this function adaptive A/V applications should call the SetFlowRate function to affect network traffic.
A non-adaptive application either does not adapt to changing network characteristics or is sending traffic to an endpoint that does not support adaptive capabilities as indicated by ERROR_NOT_SUPPORTED.
Non-adaptive applications, or adaptive applications making non-adaptive flows, should call this function with the QOSNonAdaptiveFlow flag. After calling this function A/V applications should call the setOutgoingDSCPValue, setOutgoingRate or setTrafficType function with a Operation. They do not need to be called unless shaping is desired.
See also:

- 131.57.7 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean 21332

### 131.57.9 Constructor

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This function initializes the QOS subsystem.
**Notes:**

On success Handle property is not zero.
Lasterror is set.

Every process intending to use qWAVE must first call Constructor.
If a machine enters a power save mode that interrupts connectivity such as sleep or standby, existing and

active network experiments such as QOSStartTrackingClient must be reinitiated. This recreation of the flow mirrors the cleanup and creation activities also necessary for existing sockets. A new handle must be created, and the flow must be recreated and readmitted.

### 131.57.10 getFlowFundamentals(FlowID as Integer, byref BottleneckBandwidthSet as boolean, byref BottleneckBandwidth as UInt64, byref AvailableBandwidthSet as boolean, byref AvailableBandwidth as UInt64, byref RTTSet as boolean, byref RTT as UInt32, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries flow fundamentals.
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.
BottleneckBandwidthSet: This Boolean value is set to true if the BottleneckBandwidth field contains a value.
BottleneckBandwidth: Indicates the maximum end-to-end link capacity between the source and sink device, in bits.
AvailableBandwidthSet: Set to true if the AvailableBandwidth field contains a value.
AvailableBandwidth: Indicates how much bandwidth is available for submitting traffic on the end-to-end network path between the source and sink device, in bits.
RTTSet: Set to true if the RTT field contains a value.
RTT: Measures the round-trip time between the source and sink device, in microseconds.

Lasterror is set. Returns true on success or false on failure.

### 131.57.11 getOutgoingRate(FlowID as Integer, byref Bandwidth as UInt64, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries flow rate.
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: will contain a UINT64 value that indicates the flow rate specified when requesting the contract, in bits per second.
Flags: Optional, can be QOSQueryFlowFresh.
Lasterror is set. Returns true on success or false on failure.

### 131.57.12 getPacketPriority(FlowID as Integer, byref ConformantDSCPValue as Integer, byref NonConformantDSCPValue as Integer, byref ConformantL2Value as Integer, byref NonConformantL2Value as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries packet priorities.
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.

ConformantDSCPValue: Differential Services Code Point (DSCP) mark used for flow traffic that conforms to the specified flow rate.
NonConformantDSCPValue: DSCP marking used for flow traffic that exceeds the specified flow rate. Non-conformant DSCP values are only applicable only if value is QOSUseNonConformantMarkings.
ConformantL2Value: Layer-2 (L2) tag used for flow traffic that conforms to the specified flow rate. L2 tags will not be added to packets if the end-to-end path between source and sink does not support them.
NonConformantL2Value: L2 tag used for flow traffic that exceeds the specified flow rate. Non-conformant L2 values are only applicable if value is QOSUseNonConformantMarkings.

Lasterror is set. Returns true on success or false on failure.

### 131.57.13 RemoveAllSocketsFromFlow(FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
**Notes:**

FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

### 131.57.14 RemoveSocketFromFlow(socketHandle as Integer, FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
**Notes:**

Socket: Socket to be removed from the flow.
Only flows created with the QOSNonAdaptiveFlow flag may have multiple sockets added to the same flow. By passing the Socket parameter in this call, each socket can be removed individually. If the Socket parameter is not passed, the entire flow will be destroyed. If only one socket was attached to the flow, passing this socket as a parameter to this function and passing 0 as a socket are equivalent calls.
FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

### 131.57.15 setOutgoingDSCPValue(FlowID as Integer, OutgoingDSCPValue as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets the outgoing DSCP value.
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.

### 131.57.16 setOutgoingRate(FlowID as Integer, Bandwidth as UInt64, ShapingBehavior as Integer, Reason as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets a new outgoing rate.
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: The rate at which data should be sent, in units of bits per second.
Note Traffic on the network is measured at the IP level, and not at the application level. The rate that is specified should account for the IP and protocol headers.
ShapingBehavior: A shaping constant that defines the shaping behavior of the flow.
Reason: A QOSFlowRate* constant that indicates the reason for a flow rate change.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

### 131.57.17 setTrafficType(FlowID as Integer, TrafficType as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets the type of traffic
**Notes:**

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
TrafficType: One of the traffic type constants.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

### 131.57.18 StartTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StartTrackingClient function notifies the QOS subsystem of the existence of a new client.
**Notes:**

Calling this function increases the likelihood that the QOS subsystem will have gathered sufficient information on the network path to assist when calling QOSSetFlow to set the flow.
Note This call is not required to add a flow with the QOSAddSocketToFlow function although it is highly recommended. Not calling this function may require network experiments to be started during the QOSSetFlow call and can result in QOSSetFlow failing with ERROR_NETWORK_BUSY on initial use.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. Any port number specified in the sockaddr structure will be ignored.
Flags: Reserved for future use. Must be set to 0.

On receipt of a QOSStartTrackingClient call the QoS subsystem begins gathering information about the client such as the QoS capabilities and available bandwidth on the end-to-end path.
An application should call this function as soon as it becomes aware of a client device that may need QoS flow. For example this function should be called when a media player device first connects to a media server application.
Network experiments performed by QOSStartTrackingClient do not introduce noteworthy load on the network even if no stream is started for a long period of time. The qWAVE service dynamically adjusts experiment traffic based on QoS subsystem activity.
Link Layer Topology Discovery (LLTD) must be implemented on the sink PC or device for this function to work.

Lasterror is set. Returns true on success or false on failure.

### 131.57.19 StopTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StopTrackingClient function notifies the QoS subsystem to stop tracking a client that has previously used the StartTrackingClient function.
**Notes:**

If a flow is currently in progress, this function will not affect it.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. A port number is not required and will be ignored.
Flags: Reserved for future use.

Lasterror is set. Returns true on success or false on failure.

### 131.57.20 Properties

### 131.57.21 Handle as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 131.57.22 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 131.57.23 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The generic window error message for the error in lasterror property.
**Notes:** (Read and Write property)

### 131.57.24 Constants

### 131.57.25 QOSFlowRateCongestion = 2

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flow reason constants.
**Notes:** Indicates that the flow has changed due to congestion.

### 131.57.26 QOSFlowRateContentChange = 1

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flow reason constants.
**Notes:** Indicates that the content of a flow has changed.

### 131.57.27 QOSFlowRateHigherContentEncoding = 3

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flow reason constants.
**Notes:** Indicates that the user has caused the flow to change.

### 131.57.28 QOSFlowRateNotApplicable = 0

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flow reason constants.
**Notes:** Indicates that there has not been a change in the flow.

### 131.57.29 QOSFlowRateUserCaused = 4

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flow reason constants.
**Notes:** Indicates that the user has caused the flow to change.

### 131.57.30 QOSNonAdaptiveFlow = 2

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flags.
**Notes:** If specified, the QoS subsystem will not gather data about the network path for this flow. As a result, functions which rely on bandwidth estimation techniques will not be available. For example, this would block QOSQueryFlow with an Operation value of QOSQueryFlowFundamentals and QOSNotifyFlow with an Operation value of QOSNotifyCongested, QOSNotifyUncongested, and QOSNotifyAvailable.

### 131.57.31 QOSQueryFlowFresh = 1

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the flags.
**Notes:**

The QOS subsystem will only return fresh, not cached, data. If fresh data is unavailable, it will try to obtain such data, at the expense of possibly taking more time. If this is not possible, the call will fail with the error code ERROR_RETRY.

This flag is only applicable when the Operation parameter is set to QOSQueryFlowFundamentals.

### 131.57.32 QOSShapeAndMark = 1

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the constants for shaping behavior of a flow.
**Notes:** Indicates that the Windows Scheduler will be used to enforce the requested flow rate. Data packets exceeding the rate are delayed accordingly. Packets receive conformant priority values.

### 131.57.33 QOSShapeOnly = 0

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the constants for shaping behavior of a flow.
**Notes:** Indicates that the Windows packet scheduler (Pacer) will be used to enforce the requested flow rate. Data packets that exceed the rate are delayed until appropriate in order to maintain the specified flow rate. If the network supports prioritization, packets will always receive conformant priority values when QOSShapeFlow is specified.

### 131.57.34 QOSTrafficTypeAudioVideo = 3

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has a network priority higher than QOSTrafficTypeExcellentEffort, yet lower than QOSTrafficTypeVoice. This traffic type should be used for A/V streaming scenarios such as MPEG2 streaming.
Sent traffic will contain a DSCP mark with a value of 0x28 and an 802.1p tag with a value of 5.

### 131.57.35 QOSTrafficTypeBackground = 1

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has a network priority lower than that of QOSTrafficTypeBestEffort. This traffic type could be used for traffic of an application doing data backup.
Sent traffic will contain a DSCP mark with a value of 0x08 and an 802.1p tag with a value of 2.

### 131.57.36 QOSTrafficTypeBestEffort = 0

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has the same network priority as regular traffic not associated with QOS.
This traffic type is the same as not specifying priority, and as a result, the DSCP mark and 802.1p tag are not added to sent traffic.

### 131.57.37 QOSTrafficTypeControl = 5

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has the highest network priority. This traffic type should only be used for the most critical of data. For example, it may be used for data carrying user inputs.
Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.

### 131.57.38 QOSTrafficTypeExcellentEffort = 2

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has a network priority higher than QOSTrafficTypeBestEffort, yet lower than QOSTrafficTypeAudioVideo. This traffic type should be used for data traffic that is more important than normal end-user scenarios, such as email.
Sent traffic will contain a DSCP mark with value of 0x28 and 802.1p tag with a value of 5.

### 131.57.39 QOSTrafficTypeVoice = 4

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the traffic type constants.
**Notes:**

Flow traffic has a network priority higher than QOSTrafficTypeAudioVideo, yet lower than QOSTrafficTypeControl. This traffic type should be used for realtime voice streams such as VOIP.
Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.

### 131.57.40 QOSUseNonConformantMarkings = 2

MBS Win Plugin, Plugin Version: 13.5.

**Function:** One of the constants for shaping behavior of a flow.
**Notes:** Indicates that the flow rate requested will not be enforced. Data packets that would exceed the flow rate will receive a priority that indicates they are non-conformant. This may lead to lost and reordered packets.

# 131.58 class WinHTTPClientAutoProxyOptionsMBS

## 131.58.1 class WinHTTPClientAutoProxyOptionsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The WinHTTPClientAutoProxyOptionsMBS class is used to indicate to the WinHttpGetProxyForURL function whether to specify the URL of the Proxy Auto-Configuration (PAC) file or to automatically locate the URL with DHCP or DNS queries to the network.
**Notes:**

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384123(v=vs.85).aspx

## 131.58.2 Methods

## 131.58.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 131.58.4 Properties

## 131.58.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The URL for the config URL.
**Notes:**

If Flags includes the kAutoProxyConfigURL flag, the AutoConfigUrl contains the URL of the proxy auto-configuration (PAC) file.
If Flags does not include the kAutoProxyConfigURL flag, then AutoConfigUrl must be "".
(Read and Write property)

## 131.58.6 AutoDetectFlags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The flags for auto detecting.
**Notes:**

If Flags includes the kAutoProxyAutoDetect flag, then AutoDetectFlags specifies what protocols are to be used to locate the PAC file. If both the DHCP and DNS auto detect flags are specified, then DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.
If Flags does not include the kAutoProxyAutoDetect flag, then AutoDetectFlags must be zero.

| Value | Meaning |
|---|---|
| kAutoDetectTypeDHCP | Use DHCP to locate the proxy auto-configuration file. |
| kAutoDetectTypeDNSA | Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer. |

(Read and Write property)

### 131.58.7 AutoLogonIfChallenged as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies whether the client's domain credentials should be automatically sent in response to an NTLM or Negotiate Authentication challenge when WinHTTP requests the PAC file.
**Notes:**

If this flag is true, credentials should automatically be sent in response to an authentication challenge. If this flag is false and authentication is required to download the PAC file, the WinHttpGetProxyForUrl function fails.
(Read and Write property)

### 131.58.8 Flags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Flags for detecting proxy.
**Notes:** (Read and Write property)

### 131.58.9 Constants

### 131.58.10 kAutoDetectTypeDHCP = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** The flags for auto detection types.
**Notes:** Use DHCP to locate the proxy auto-configuration file.

### 131.58.11 kAutoDetectTypeDNSA = 2

MBS Win Plugin, Plugin Version: 14.1.

**Function:** The flags for auto detection types.
**Notes:** Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

### 131.58.12 kAutoProxyAutoDetect = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy flags.
**Notes:** Attempt to automatically discover the URL of the PAC file using both DHCP and DNS queries to the local network.

### 131.58.13 kAutoProxyConfigURL = 2

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy flags.
**Notes:** Download the PAC file from the URL specified by AutoConfigUrl in the WinHTTPClientAutoProxyOptionsMBS class.

# 131.59 class WinHTTPClientCurrentUserIEProxyConfigMBS

## 131.59.1 class WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for Internet Explorer proxy configuration information.
**Notes:**

http://msdn.microsoft.com/en-us/library/windows/desktop/aa384250(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.59.2 Methods

## 131.59.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

## 131.59.4 Properties

## 131.59.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The auto-configuration URL.
**Notes:**

The auto-configuration URL if the Internet Explorer proxy configuration for the current user specifies "Use automatic proxy configuration".
(Read and Write property)

## 131.59.6 AutoDetect as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether to auto detect proxy settings.
**Notes:**

If true, indicates that the Internet Explorer proxy configuration for the current user specifies "automatically detect settings".

(Read and Write property)

### 131.59.7 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Contains the proxy URL if the Internet Explorer proxy configuration for the current user specifies "use a proxy server".
**Notes:** (Read and Write property)

### 131.59.8 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Optional proxy by-pass server list.
**Notes:** (Read and Write property)

## 131.60 class WinHTTPClientMBS

### 131.60.1 class WinHTTPClientMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for Windows to do http requests.
**Notes:**

The plugin only implements proxy related functions.
But this class could be extended to work like HTTPSocket.

### 131.60.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

### 131.60.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

### 131.60.4 Methods

### 131.60.5 Close as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Closes the session.

### 131.60.6 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 131.60.7 CrackUrl(URL as string, Flags as Integer = 0) as WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Separates a URL into its component parts such as host name and path.
**Notes:**

URL: the canonical URL to separate. WinHttpCrackUrl does not check this URL for validity or correct format before attempting to crack it.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384092(v=vs.85).aspx

### 131.60.8 DetectAutoProxyConfigUrl(AutoDetectFlags as Integer, byref AutoConfigUrl as string) as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Finds the URL for the Proxy Auto-Configuration (PAC) file.
**Notes:**

This function reports the URL of the PAC file, but it does not download the file.

AutoDetectFlags: A data type that specifies what protocols to use to locate the PAC file. If both the DHCP and DNS auto detect flags are set, DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.

| Value | Meaning |
|---|---|
| kAutoDetectTypeDHCP | Use DHCP to locate the proxy auto-configuration file. |
| kAutoDetectTypeDNSA | Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer. |

AutoConfigUrl: String that contains the configuration URL that receives the proxy data.

Returns true if successful, or false otherwise. For extended error information, call LastError. Among the error codes returned are the following.

WinHTTP implements the Web Proxy Auto-Discovery (WPAD) protocol, often referred to as autoproxy. For more information about well-known locations, see the Discovery Process section of the WPAD protocol document.
Note that because the DetectAutoProxyConfigUrl function takes time to complete its operation, it should not be called from a UI thread.

### 131.60.9 GetDefaultProxyConfiguration as WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves the default WinHTTP proxy configuration from the registry.
**Notes:** Returns the default proxy configuration.

### 131.60.10 GetIEProxyConfigForCurrentUser as WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves the Internet Explorer proxy configuration for the current user.
**Notes:**

Queries the Internet Explorer proxy settings for the current active network connection (for example, LAN, dial-up, or VPN connection).

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384096(v=vs.85).aspx

### 131.60.11 GetProxyForHost(URL as string, Host as string, byref proxy as string, byref proxyPort as string, AutoConfigURL as string = "") as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries the proxy for a host.
**Notes:**

This is an universal functions using InternetGetProxyInfo, DetectAutoProxyUrl and InternetQueryOption.

URL: The target URL.
Host: The hostname of the target server.

Returns true on success and sets proxy and port. Returns false on failure.
AutoConfigURL is only used on first call instead of a configured auto config URL in Internet Explorer.

### 131.60.12 GetProxyForUrl(URL as string, AutoProxyOptions as WinHTTPClientAutoProxyOptionsMBS, byref ProxyInfo as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves the proxy data for the specified URL.
**Notes:**

Url: Contains the URL of the HTTP request that the application is preparing to send.
AutoProxyOptions: Specifies the auto-proxy options to use.
ProxyInfo: Receives the proxy setting.

If the function succeeds, the function returns true.
If the function fails, it returns false. Lasterror is set.

This function implements the Web Proxy Auto-Discovery (WPAD) protocol for automatically configuring the proxy settings for an HTTP request. The WPAD protocol downloads a Proxy Auto-Configuration (PAC) file, which is a script that identifies the proxy server to use for a given target URL. PAC files are typically deployed by the IT department within a corporate network environment. The URL of the PAC file can either be specified explicitly or GetProxyForUrl can be instructed to automatically discover the location of the PAC file on the local network.

GetProxyForUrl supports only ECMAScript-based PAC files.
GetProxyForUrl must be called on a per-URL basis, because the PAC file can return a different proxy server for different URLs. This is useful because the PAC file enables an IT department to implement proxy server load balancing by mapping (hashing) the target URL (specified by the lpcwszUrl parameter) to a certain proxy in a proxy server array.
GetProxyForUrl caches the autoproxy URL and the autoproxy script when auto-discovery is specified in the dwFlags member of the pAutoProxyOptions structure. For more information, see Autoproxy Cache.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384097(v=vs.85).aspx

### 131.60.13 InternetGetProxyInfo(URL as string, Host as string) as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Retrieves proxy data for accessing specified resources.
**Notes:**

This function can only be called by dynamically linking to "JSProxy.dll" (plugin loads this for you). For better autoproxy support, use HTTP Services (WinHTTP) version 5.1 instead.

Url: Secifies the URL of the target HTTP resource.
HostName: Specifies the host name of the target URL.

Returns the URL of the proxy to use in an HTTP request for the specified resource.
Returns empty string on any error.

### 131.60.14 Open(UserAgent as string, AccessType as Integer, ProxyName as string = ””, ProxyByPass as string = ””) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Initializes an application's use of the WinINet functions.
**Notes:**

lUserAgent: Specifies the name of the application or entity calling the WinINet functions. This name is used as the user agent in the HTTP protocol.
AccessType: Type of access required. This parameter can be one of the following values.

| Value | Meaning |
|---|---|
| INTERNET_OPEN_TYPE_DIRECT | Resolves all host names locally. |
| INTERNET_OPEN_TYPE_PRECONFIG | Retrieves the proxy or direct configuration from the registry. |
| INTERNET_OPEN_TYPE_PRECONFIG_WITH_NO_AUTOPROXY | Retrieves the proxy or direct configuration from the registry and prevents the use of a startup Microsoft JScript or Internet Setup (INS) file. |
| INTERNET_OPEN_TYPE_PROXY | Passes requests to the proxy unless a proxy bypass list is supplied and the name to be resolved bypasses the proxy. In this case, the function uses INTERNET_OPEN_TYPE_DIRECT. |

ProxyName: String that specifies the name of the proxy server(s) to use when proxy access is specified by setting dwAccessType to INTERNET_OPEN_TYPE_PROXY. Do not use an empty string, because InternetOpen will use it as the proxy name. The WinINet functions recognize only CERN type proxies (HTTP only) and the TIS FTP gateway (FTP only). If Microsoft Internet Explorer is installed, these functions also support SOCKS proxies. FTP requests can be made through a CERN type proxy either by changing them to an HTTP request or by using InternetOpenUrl. If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL. For more information about listing proxy servers, see the Listing Proxy Servers section of Enabling Internet Functionality.
ProxyBypass: Specifies an optional list of host names or IP addresses, or both, that should not be routed through the proxy when dwAccessType is set to INTERNET_OPEN_TYPE_PROXY. The list can contain wildcards. Do not use an empty string, because InternetOpen will use it as the proxy bypass list. If this parameter specifies the ”<local>” macro, the function bypasses the proxy for any host name that does not contain a period.
By default, WinINet will bypass the proxy for requests that use the host names ”localhost”, ”loopback”, ”127.0.0.1”, or ” [ ::1 ] ”. This behavior exists because a remote proxy server typically will not resolve these addresses properly.
Internet Explorer 9: You can remove the local computer from the proxy bypass list using the ”<-loopback>” macro.
If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL.

Flags: Options. This parameter can be a combination of the following values.

| Value | Meaning |
|---|---|
| INTERNET_FLAG_ASYNC | Makes only asynchronous requests on handles descended from the handle returned from this function. |
| INTERNET_FLAG_FROM_CACHE | Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned. |
| INTERNET_FLAG_OFFLINE | Identical to INTERNET_FLAG_FROM_CACHE. Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned. |

Returns a valid handle that the application passes to subsequent WinINet functions. If Open fails, it returns false. To retrieve a specific error message, call GetLastError.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa385096(v=vs.85).aspx

### 131.60.15 SetDefaultProxyConfiguration(info as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** Sets the default WinHTTP proxy configuration in the registry.
**Notes:**

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384113(v=vs.85).aspx

SetDefaultProxyConfiguration changes the proxy configuration set by ProxyCfg.exe.
The default proxy configuration set by this function can be overridden for an existing WinHTTP session by calling SetOption and specifying the OptionProxy flag. The default proxy configuration can be overridden for a new session by specifying the configuration with the WinHttpOpen function.
The dwAccessType member of the WinHTTPClientProxyInfoMBS structure pointed to by pProxyInfo should be set to kAccessTypeNamedProxy if a proxy is specified. Otherwise, it should be set to kAccessTypeDefaultProxy.
Any new sessions created after calling this function use the new default proxy configuration.
Even when WinHTTP is used in asynchronous mode (that is, when WINHTTP_FLAG_ASYNC has been set in WinHttpOpen), this function operates synchronously. The return value indicates success or failure. To get extended error information, call GetLastError.
Note For Windows XP and Windows 2000, see the Run-Time Requirements section of the WinHTTP start page.

### 131.60.16 Properties

### 131.60.17 Handle as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal reference.
**Notes:**

This is a HINTERNET type.
(Read and Write property)

### 131.60.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error.
**Notes:**

see also error list:
http://msdn.microsoft.com/en-us/library/aa383770(VS.85).aspx
(Read and Write property)

### 131.60.19 LasterrorString as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The error message for the last error.
**Notes:** (Read and Write property)

### 131.60.20 OptionConnectTimeOut as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Get or set the connect timeout.
**Notes:**

Lasterror is set.

Sets or retrieves an unsigned long integer value that contains the time-out value, in milliseconds. Setting this option to infinite (-1) will disable this timer.
If a TCP connection request takes longer than this time-out value, the request is canceled. The default timeout is 60 seconds. When you are attempting to connect to multiple IP addresses for a single host (a

multihomed host), the timeout limit is for each individual connection.
(Read and Write property)

### 131.60.21 OptionProxyPassword as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Get or set the proxy password.
**Notes:**

Sets or retrieves a string value that contains the password used to access the proxy.
Lasterror is set.
(Read and Write property)

### 131.60.22 OptionProxyUsername as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Get or set the proxy user name.
**Notes:**

Sets or retrieves a string value that contains the user name used to access the proxy.
Lasterror is set.
(Read and Write property)

### 131.60.23 Constants

### 131.60.24 kAccessTypeDefaultProxy = 0

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Applies only when setting proxy information.

### 131.60.25 kAccessTypeNamedProxy = 3

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Internet accessed using a proxy.

### 131.60.26 kAccessTypeNoProxy = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Internet accessed through a direct connection.

### 131.60.27 kAutoDetectTypeDHCP = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the auto detect type flags.
**Notes:** Use DHCP to locate the proxy auto-configuration file.

### 131.60.28 kAutoDetectTypeDNSA = 2

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the auto detect type flags.
**Notes:** Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

### 131.60.29 kInternetSchemeHTTP = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the scheme type constants.
**Notes:** HTTP scheme.

### 131.60.30 kInternetSchemeHTTPS = 2

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the scheme type constants.
**Notes:** HTTPS scheme.

# 131.61 class WinHTTPClientProxyInfoMBS

## 131.61.1 class WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for the session or default proxy configuration.
**Notes:**

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa383912(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.61.2 Methods

## 131.61.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

## 131.61.4 Properties

## 131.61.5 AccessType as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The access type.
**Notes:**

Can be kAccessTypeDefaultProxy, kAccessTypeNamedProxy or kAccessTypeNoProxy.
(Read and Write property)

## 131.61.6 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The proxy server list.
**Notes:** (Read and Write property)

### 131.61.7 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The proxy bypass list.
**Notes:** (Read and Write property)

### 131.61.8 Constants

### 131.61.9 kAccessTypeDefaultProxy = 0

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Applies only when setting proxy information.

### 131.61.10 kAccessTypeNamedProxy = 3

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Internet accessed using a proxy.

### 131.61.11 kAccessTypeNoProxy = 1

MBS Win Plugin, Plugin Version: 14.1.

**Function:** One of the proxy access types.
**Notes:** Internet accessed through a direct connection.

# 131.62 class WinHTTPClientURLComponentsMBS

## 131.62.1 class WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class containing the constituent parts of an URL.
**Notes:**

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384078(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 131.62.2 Methods

## 131.62.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

**Function:** The private constructor.

## 131.62.4 Properties

## 131.62.5 ExtraInfo as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The extra information, for example, ?something or # something.
**Notes:** (Read and Write property)

## 131.62.6 ExtraInfoLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The length of the extra information, in characters.
**Notes:** (Read and Write property)

## 131.62.7 HostName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The host name.
**Notes:** (Read and Write property)

### 131.62.8 HostNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Length of the host name, in characters.
**Notes:** (Read and Write property)

### 131.62.9 Password as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The password.
**Notes:** (Read and Write property)

### 131.62.10 PasswordLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Length of the password, in characters.
**Notes:** (Read and Write property)

### 131.62.11 Port as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Port number.
**Notes:** (Read and Write property)

### 131.62.12 Scheme as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The scheme name.
**Notes:** (Read and Write property)

### 131.62.13 SchemeID as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Internet protocol scheme.
**Notes:**

Normally 1 for HTTP and 2 for HTTPS.
(Read and Write property)

### 131.62.14 SchemeLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Length of the scheme name, in characters.
**Notes:** (Read and Write property)

### 131.62.15 UrlPath as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The URL path.
**Notes:** (Read and Write property)

### 131.62.16 UrlPathLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Length of the URL path, in characters.
**Notes:** (Read and Write property)

### 131.62.17 UserName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The user name.
**Notes:** (Read and Write property)

### 131.62.18 UserNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Length of the user name, in characters.
**Notes:** (Read and Write property)

# Chapter 132

# Nikon Cameras

## 132.1 class NikonCapInfoMBS

### 132.1.1 class NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for Capability Information.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 132.1.2 Methods

### 132.1.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 132.1.4 Properties

### 132.1.5 Description as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The description of this capability.
**Notes:** (Read only property)

### 132.1.6 ID as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The ID of this property.
**Notes:**

See eNkMAIDCapability in Nikon's documentation.
(Read only property)

### 132.1.7 Operations as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The supported operations for this capability.
**Notes:**

See eNkCapOperations in Nikon's documentation.
(Read only property)

### 132.1.8 OperationsString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The operation value as a string for displaying.
**Notes:** (Read only property)

### 132.1.9 Type as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The type of this capability.
**Notes:**

See eNkMAIDCababilityType in Nikon's documentation.
(Read only property)

### 132.1.10 TypeString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The type value as a string for displaying.
**Notes:** (Read only property)

### 132.1.11 Visibility as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The visibility of this capability.
**Notes:**

See eNkCapVisibility in Nikon's documentation.
(Read only property)

### 132.1.12 VisibilityString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The visibility value as a string for displaying.
**Notes:** (Read only property)

## 132.2 class NikonFileInfoMBS

### 132.2.1 class NikonFileInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for the File Data Delivery Structure.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 132.2.2 Methods

### 132.2.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 132.2.4 Properties

### 132.2.5 DiskFile as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** True if the file is delivered on disk.
**Notes:** (Read and Write property)

### 132.2.6 FileDataType as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** One of eNkMAIDFileDataTypes.
**Notes:**

Possible values:

(Read and Write property)

| | |
|---|---|
| kNkMAIDFileDataType_NotSpecified | 0 |
| kNkMAIDFileDataType_JPEG | 1 |
| kNkMAIDFileDataType_TIFF | 2 |
| kNkMAIDFileDataType_FlashPix | 3 |
| kNkMAIDFileDataType_NIF | 4 |
| kNkMAIDFileDataType_QuickTime | 5 |
| kNkMAIDFileDataType_UserType | & h100 |

### 132.2.7 Length as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Number of bytes in this delivery.
**Notes:** (Read and Write property)

### 132.2.8 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** True if the object should be removed.
**Notes:** (Read and Write property)

### 132.2.9 Start as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Index of starting byte (0-based)
**Notes:** (Read and Write property)

### 132.2.10 TotalLength as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Total number of bytes to be transferred.
**Notes:** (Read and Write property)

## 132.3 class NikonImageInfoMBS

### 132.3.1 class NikonImageInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for the Image Data Delivery structure.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 132.3.2 Methods

### 132.3.3 Bits(index as Integer) as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Number of bits per plane per pixel.
**Notes:** Index from 0 to 3.

### 132.3.4 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The private constructor.

### 132.3.5 Properties

### 132.3.6 ColorSpace as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The colorspace.
**Notes:**

Possible values:

(Read and Write property)

| | |
|---|---|
| kNkMAIDColorSpace_LineArt | 0 |
| kNkMAIDColorSpace_Grey | 1 |

### 132.3.7 Plane as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The plane configuration.
**Notes:** (Read and Write property)

### 132.3.8 Rect as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The rectangle.
**Notes:** (Read and Write property)

### 132.3.9 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** True if the object should be removed.
**Notes:** (Read and Write property)

### 132.3.10 RowBytes as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Number of bytes per row of pixels.
**Notes:** (Read and Write property)

### 132.3.11 TotalPixels as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Total size of image to be transfered.
**Notes:** (Read and Write property)

## 132.4 class NikonLiveImageMBS

### 132.4.1 class NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for the live image data structure.
**Notes:** As there are 5 variants of the data structure for the different camera SDKs, some fields may not be filled for the camera you have.

### 132.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr10

### 132.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr10

### 132.4.4 Methods

### 132.4.5 AFframes(index as UInt32) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The auto focus frames array.
**Notes:**

Index from 0 to 34 (fixed to 0 for D5100)
Area of the AF frame size and the AF frame center coordinates for thirty-five persons

### 132.4.6 Properties

### 132.4.7 AFAreaIndex as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The Autofocus area index.
**Notes:**

From 0 to 34 (fixed to 0 for D5100)
(Read and Write property)

### 132.4.8 AFstate as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** AF mode status of the face detection system.
**Notes:**

0: The face detection system is not set to AF.
1: The face detection system is set to AF.
(Read and Write property)

### 132.4.9 Aperture as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The aperture value.
**Notes:**

Aperture = F number*100
Only for type 2 and 3.
(Read only property)

### 132.4.10 AutoFocusHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The height of the auto focus area.
**Notes:** (Read and Write property)

### 132.4.11 AutoFocusWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The width of the auto focus area.
**Notes:** (Read and Write property)

### 132.4.12 AutoFocusX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The x coordinate of the auto focus area.
**Notes:** (Read and Write property)

### 132.4.13 AutoFocusY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The y coordinate of the auto focus area.
**Notes:** (Read and Write property)

### 132.4.14 CountDownTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The Countdown time.
**Notes:**

Countdown every one second starting from 3600 (one hour); countdown starting from thirty seconds with a rise in temperature.
(Read and Write property)

### 132.4.15 DirectionOfRotation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The Rotation direction.
**Notes:** (Read and Write property)

### 132.4.16 DisplayCenterX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Display center coordinate.
**Notes:** (Read and Write property)

### 132.4.17 DisplayCenterY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Display center coordinate.
**Notes:** (Read and Write property)

### 132.4.18 DisplayHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The height of the display area size.
**Notes:** (Read and Write property)

### 132.4.19 DisplayWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The width of the display area size.
**Notes:** (Read and Write property)

### 132.4.20 FaceDetectionCount as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The number of persons whose faces are detected by the system.
**Notes:**

From 0 to 35 (Thirty-five is the maximum number of persons for D5100.)
(Read and Write property)

### 132.4.21 FacePriorityAFMode as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Face priority AF mode.
**Notes:**

0: Face priority AF is not active.
1: Face priority AF is active.
(Read and Write property)

### 132.4.22 FocusDriveState as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Focus driving status.
**Notes:**

0: Not driving
1: Driving
(Read and Write property)

### 132.4.23 FocusResult as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Focusing judgment result.
**Notes:**

0: No information
1: Not focused
2: Focused
(Read and Write property)

### 132.4.24 Height as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Height of the JPEG image.
**Notes:** (Read and Write property)

### 132.4.25 JPEGData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The JPEG data of the live image.
**Notes:**

You can use JPEGStringToPictureMBS to decode it.
(Read and Write property)

### 132.4.26 MovieRecordingInformation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Movie recording information.
**Notes:**

0: During LV execution
1: During movie recording

(Read and Write property)

### 132.4.27 RawData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The raw data used to build this image object and the fill the properties.
**Notes:** (Read and Write property)

### 132.4.28 RemainingMovieRecordingTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Remaining time of movie recording.
**Notes:**

From 0 to 1200000 [ msec ] .
It is valid during the movie recording state.
(Read and Write property)

### 132.4.29 SelectedFocusPoint as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The number of the selected focus area.
**Notes:**

Range from 0 to 11.
(Read and Write property)

### 132.4.30 ShutterSpeed as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The shutter speed.
**Notes:**

Only for type 2 and 3.
(Read only property)

### 132.4.31 TotalHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The total size of the image.
**Notes:** (Read and Write property)

### 132.4.32 TotalWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The total size of the image.
**Notes:** (Read and Write property)

### 132.4.33 Width as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Width of the JPEG image.
**Notes:** (Read and Write property)

### 132.4.34 Constants

### 132.4.35 kAFStateDriveImpossibility = 0

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the values for state that AF can be driven.
**Notes:** AF drive impossibility.

### 132.4.36 kAFStateDrivePossible = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the values for state that AF can be driven.
**Notes:** AF drive possible.

### 132.4.37 kDirectionClockWise = 2

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the constants for rotation direction.
**Notes:** Rotate clockwise

### 132.4.38 kDirectionCounterClockWise = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the constants for rotation direction.
**Notes:** Rotate counterclockwise

### 132.4.39 kDirectionNone = 0

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the constants for rotation direction.
**Notes:** No rotation

### 132.4.40 kFacePriorityAFModeActive = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the auto focus modes.
**Notes:** Active

### 132.4.41 kFacePriorityAFModeNotActive = 0

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the auto focus modes.
**Notes:** Inactive

### 132.4.42 kFocusDriveStateDriving = 0

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the focus driving values.
**Notes:** Driving

### 132.4.43 kFocusDriveStateNotDriving = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the focus driving values.
**Notes:** Not driving.

### 132.4.44 kFocusResultInFocus = 2

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the focus result values.
**Notes:** In Focus

### 132.4.45 kFocusResultNoInformation = 0

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the focus result values.
**Notes:** Focused

### 132.4.46 kFocusResultOutOfFocus = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the focus result values.
**Notes:** Not focused.

## 132.5 class NikonMBS

### 132.5.1 class NikonMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class to talk to a Nikon camera.
**Notes:** You need to get the SDKs yourself for the various cameras, so you have the PDF manuals, the C header files and the shared libraries.

### 132.5.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr1

### 132.5.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr1

### 132.5.4 Methods

### 132.5.5 Acquire as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Acquires an image.

### 132.5.6 Async_ as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Performs an asynchronously operation.

### 132.5.7 AutoFocus as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Performs autofocus.
**Notes:** Performs operation kNkMAIDCapability_AutoFocus.

### 132.5.8 AvailableDatatypes as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns available data types.

### 132.5.9 Capabilities(what as Integer) as NikonCapInfoMBS()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the list of capabilities.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.10 CapabilitiesCount(what as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the number of capabilities.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.11 Capability(what as Integer, ID as Integer) as NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the capability with given ID.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.12 Capture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Performs a capture.
**Notes:** Performs operation kNkMAIDCapability_Capture.

### 132.5.13 CloseData

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Closes current data object.

### 132.5.14 CloseItem

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Closes current item.

### 132.5.15 CloseModule

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Closes current module.

### 132.5.16 CloseSource

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Closes current source.

### 132.5.17 GetCapBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a boolean value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.18 GetCapDefaultBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a boolean value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.19 GetCapDefaultDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a double value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.20 GetCapDefaultInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with an Int32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.21 GetCapDefaultPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a point value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.22 GetCapDefaultRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a rectangle value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.23 GetCapDefaultSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a size value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.24 GetCapDefaultString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the default value for a capability with a string value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.25 GetCapDefaultUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with an UInt32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.26 GetCapDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a double value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.27 GetCapEnumPacketString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a packet string enum value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.28 GetCapEnumString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a string enum value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.29 GetCapEnumUInt32(what as Integer, ID as Integer, byref current as UInt32) as UInt32()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with an enum UInt32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.30 GetCapInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with an Int32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.31 GetCapPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a point value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.32 GetCapRange(what as Integer, ID as Integer, byref Value as Double, byref DefaultValue as Double, byref ValueIndex as UInt32, byref DefaultIndex as UInt32, byref LowerValue as Double, byref UpperValue as Double, byref Steps as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a range value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.33 GetCapRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a rectangle value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.34 GetCapSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a size value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.35 GetCapString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with a string value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.36 GetCapUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a capability with an UInt32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.37 GetItemCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries number of items.

### 132.5.38 GetLiveViewImage(type as Integer) as NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries a live image.
**Notes:**

Performs kNkMAIDCapability_GetLiveViewImage and decodes data returned into a NikonLiveImageMBS object.
Type: Which type of device you have. Value from 1 to 5.

### 132.5.39 GetSourceCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries the number of sources (cameras).

### 132.5.40 GetVideoImageData(Offset as UInt32, BlockSize as UInt32) as String

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries data of a video file.
**Notes:** Please use OpenData before to open the video.

### 132.5.41 GetVideoImageDataSize as UInt32

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Queries data size of a video.
**Notes:** Please use OpenData before to open the video.

### 132.5.42 LoadLibrary(file as folderitem) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Loads the Nikon shard library.
**Notes:**

Returns true on success.
Please pass folderitem pointing to dll on Windows and dylib on Mac OS X.
See also:

- 132.5.43 LoadLibrary(path as string) as boolean 21389

### 132.5.43 LoadLibrary(path as string) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Loads the Nikon shard library.
**Notes:**

Returns true on success.
Please pass string path pointing to dll on Windows and dylib on Mac OS X.
See also:

- 132.5.42 LoadLibrary(file as folderitem) as boolean 21389

### 132.5.44 OpenData(type as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens data of given type.

### 132.5.45 OpenItem(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens the item with the given index.
**Notes:** Index is zero based.

### 132.5.46 OpenModule as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens the module.

### 132.5.47 OpenSource(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Opens the source with the given index.
**Notes:** Index is zero based.

### 132.5.48 PreCapture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Prepares a capture.
**Notes:** Performs operation kNkMAIDCapability_PreCapture.

### 132.5.49 SetCapBoolean(what as Integer, ID as Integer, value as Boolean)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with a boolean value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.50 SetCapDouble(what as Integer, ID as Integer, value as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an double value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.51 SetCapEnumPackedString(what as Integer, ID as Integer, EnumIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an enum of PacketString values.
**Notes:**

What: Selects what to query. Can be kModule, kSource, kItem or kData.
You first query the enum to get the list of options, than you can set a new one by passing index here.

### 132.5.52 SetCapEnumUInt32(what as Integer, ID as Integer, Value as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an enum UInt32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.53 SetCapInt32(what as Integer, ID as Integer, value as Int32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an Int32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.54 SetCapPoint(what as Integer, ID as Integer, value as NikonPointMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with a point value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.55 SetCapRange(what as Integer, ID as Integer, Value as Double, ValueIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with a range value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.56 SetCapRect(what as Integer, ID as Integer, value as NikonRectMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with a rectangle value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.57 SetCapSize(what as Integer, ID as Integer, value as NikonSizeMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an size value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.58 SetCapString(what as Integer, ID as Integer, value as String)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with a string value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.59 SetCapUInt32(what as Integer, ID as Integer, value as UInt32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets a capability with an UInt32 value.
**Notes:** What: Selects what to query. Can be kModule, kSource, kItem or kData.

### 132.5.60 Properties

### 132.5.61 FunctionPtr as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The main entry function pointer for the Nikon library.
**Notes:** (Read only property)

### 132.5.62 Lasterror as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The last error code.
**Notes:** (Read only property)

### 132.5.63 LoadErrorMessage as String

MBS Cameras Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The error message from loading library.
**Notes:**

Set by LoadLibrary methods to help debugging.

Windows error 193 means that 64-bit Xojo app tried to load 32-bit library or 32-bit Xojo app tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.
(Read only property)

### 132.5.64 Events

### 132.5.65 FileDownloadComplete(info as NikonFileInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

**Function:** Informs you about a finished file download.

### 132.5.66 ImageDownloadComplete(info as NikonImageInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

**Function:** This event informs you about a finished event.

### 132.5.67 Progress(Command as Integer, Param as Integer, Done as UInt32, Total as UInt32, Percent as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

**Function:** This event informs you about progress of an ongoing operation.

### 132.5.68 Constants

### 132.5.69 kData = 8

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the selector constants.
**Notes:** Apply to data.

### 132.5.70 kDataObjTypeFile = 16

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the data object types.
**Notes:** Other file

### 132.5.71 kDataObjTypeImage = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the data object types.
**Notes:** Image file

### 132.5.72 kDataObjTypeSound = 2

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the data object types.
**Notes:** Sound file

### 132.5.73 kDataObjTypeThumbnail = 8

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the data object types.
**Notes:** Picture thumbnail

### 132.5.74 kDataObjTypeVideo = 4

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the data object types.
**Notes:** Video file

### 132.5.75 kDevice = 2

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the selector constants.
**Notes:** Apply to device/source.

### 132.5.76 kItem = 4

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the selector constants.
**Notes:** Apply to item.

### 132.5.77 kModule = 1

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the selector constants.
**Notes:** Apply to module.

### 132.5.78 kSource = 2

MBS Cameras Plugin, Plugin Version: 13.1.

**Function:** One of the selector constants.
**Notes:** Apply to device/source.

## 132.6 class NikonPointMBS

### 132.6.1 class NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for a point.

### 132.6.2 Methods

### 132.6.3 Constructor(x as Integer = 0, y as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The constructor.

### 132.6.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Converts the point to a string for displaying.

### 132.6.5 Properties

### 132.6.6 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The x coordinate.
**Notes:** (Read and Write property)

### 132.6.7 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The y coordinate.
**Notes:** (Read and Write property)

## 132.7 class NikonRectMBS

### 132.7.1 class NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for a rectangle.

### 132.7.2 Methods

### 132.7.3 Constructor(x as Integer = 0, y as Integer = 0, w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The constructor.

### 132.7.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Converts the rectangle to a string for displaying.

### 132.7.5 Properties

### 132.7.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The height of the rectangle.
**Notes:** (Read and Write property)

### 132.7.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The width of the rectangle.
**Notes:** (Read and Write property)

### 132.7.8 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The x coordinate of the rectangle.
**Notes:** (Read and Write property)

### 132.7.9 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The y coordinate of the rectangle.
**Notes:** (Read and Write property)

## 132.8 class NikonSizeMBS

### 132.8.1 class NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The class for a size.

### 132.8.2 Methods

### 132.8.3 Constructor(w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The constructor.

### 132.8.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Converts the size to a string for displaying.

### 132.8.5 Properties

### 132.8.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The height of the size object.
**Notes:** (Read and Write property)

### 132.8.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The width of the size object.
**Notes:** (Read and Write property)

# Chapter 133

# Notifications

## 133.1 class NotificationCenterMBS

### 133.1.1 class NotificationCenterMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for notifications sent on Mac OS X.
**Notes:**

From Apple's help, but modified:

Distributed notifications allow an application to broadcast a message to any number of other applications without needing to know who those other applications are, or even if the other applications exist. Every application type ,Äî Cocoa, Carbon, BSD ,Äî can use distributed notifications.

An application, the target application in this case, expresses an interest in receiving a broadcasted message by registering itself with the system's distributed notification center, identifying exactly what message, or notification type, it wants to receive. The notification type is defined by an arbitrary string agreed upon by the sender and receiver of the notification. As an example, Cocoa's NSWindow class defines the notification type "NSWindowDidCloseNotification", which an NSWindow instance broadcasts when its window closes. Any other object can register to receive this notification. (This notification, however, is internal to a single application and is not distributed to the rest of the system.)

In addition to the message, the application can identify the particular object sending the message. When the sender and receiver are in the same application,Äîin other words, using nondistributed notifications,Äîthe observed object can be anything. When using distributed notifications, though, the object must be a string. A useful choice for the observed string is the bundle identifier of the target application.

In registering for the notification, the application provides a class with an Receive event, which will later be called.

Next, the broadcasting application ‚Äî your preference pane ‚Äî sends the notification. It calls the system's notification center, tells the center what notification to send, and optionally passes a dictionary containing additional information. The dictionary can be used to pass the modified preferences directly to the application. Or, the preference pane can choose not to use the dictionary and instead write the changes out to disk. The notification is then used to tell the application to update its preferences from the disk.

The notification center looks up all the applications that registered to receive the given notification type from the particular instance. It then notifies each application's run loop of the notification and gives it a copy of the dictionary. The selected callback function or method is executed during the application's next pass through its run loop.

When using Preference Services, be certain to flush changes to the disk with the appropriate synchronize functions before sending notifications of changes. Otherwise, due to the caching performed by Preference Services, the disk may not accurately reflect the changes when the target receives the notification. Likewise, the target application must resynchronize its preferences after receiving the notification.

### 133.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr10

### 133.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr10

### 133.1.4 Methods

### 133.1.5 Add(name as CFStringMBS, obj as CFObjectMBS, flags as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds a new callback.
**Notes:**

This function costs around 24 bytes of memory per call which are never released (needed for the callback between framework and RB).

Values for the flags:

| | | |
|---|---|---|
| CFNotificationSuspensionBehaviorDrop | 1 | The server will not queue any notifications with this name and object while the process/app is in the background. |
| CFNotificationSuspensionBehaviorCoalesce | 2 | The server will only queue the last notification of the specified name and object; earlier notifications are dropped. |
| CFNotificationSuspensionBehaviorHold | 3 | The server will hold all matching notifications until the queue has been filled (queue size determined by the server) at which point the server may flush queued notifications. |
| CFNotificationSuspensionBehaviorDeliverImmediately | 4 | The server will deliver notifications matching this registration whether or not the process is in the background. When a notification with this suspension behavior is matched, it has the effect of first flushing any queued notifications. |

### 133.1.6 close(name as CFStringMBS, obj as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Closes the given callback.

### 133.1.7 closeAll

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Closes all registered callbacks.
**Notes:** This is called by the destructor.

### 133.1.8 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Posts a new notification.
**Notes:** Obj and userinfo may be nil.
See also:

- 133.1.9 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer) 21403

### 133.1.9 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer)

MBS MacCF Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Posts a new notification.
**Example:**

```
dim n as new NotificationCenterMBS
```

n.Post(NewCFStringMBS("test"), nil, nil, n.kCFNotificationPostToAllSessions + n.kCFNotificationDeliverImmediately)

**Notes:**

Obj and userinfo may be nil.
Requires Mac OS X 10.3.
For options you can use a combination with kCFNotificationDeliverImmediately=1 and kCFNotificationPostToAllSessions=2.
See also:

- 133.1.8 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean) 21403

### 133.1.10 Properties

### 133.1.11 Available as boolean

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the needed framework was successfull loaded.
**Notes:** (Read only property)

### 133.1.12 Events

### 133.1.13 Received(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS)

MBS MacCF Plugin, Platform: macOS, Targets: .

**Function:** A notification was received.
**Notes:** All parameters may be for any reason nil.

### 133.1.14 Constants

### 133.1.15 kCFNotificationDeliverImmediately = 1

MBS MacCF Plugin, Plugin Version: 7.4.

**Function:** One of the constant you can use for the Post Method.

### 133.1.16 kCFNotificationPostToAllSessions = 2

MBS MacCF Plugin, Plugin Version: 7.4.

**Function:** One of the constant you can use for the Post Method.

## 133.2 class NotificationMBS

### 133.2.1 class NotificationMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for an application internal notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

**Notes:**

The point of notifications is to inform some other part of your application about something. For example a chart updating if the user enters data in textfields.

So you register for notifications in existing classes/windows with the NotificationReceiverMBS interface. Or you create a subclass of the NotificationObserverMBS class to receive notifications

All notifications are delivered on the same thread as the send method. If needed we could have an asyncron notification system. Please email for that.

Other notifications:

NSNotification: Notifications send from the Cocoa frameworks within your application over NSNotificationCenterMBS class or send across all applications with NSDistributedNotificationCenterMBS.

MacNotificationMBS: A notification message to the user which may have a sound, a message box and/or a jumping dock icon.

### 133.2.2 Blog Entries

### 133.2.5 Xojo Developer Magazine

- 12.1, page 9: News

### 133.2.6 Methods

### 133.2.7 Constructor(name as string = "", ref as Variant = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new notification with the given values.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

### 133.2.8 RegisterReceiver(target as NotificationReceiverMBS, name as string = "", ref as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Registers a receiver.
**Notes:**

You have a class/window and you add NotificationReceiverMBS to the interfaces. Xojo will add a ReceivedNotification method which looks like this:

```
ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)
```

Don't forget to call UnregisterReceiver later in the Close event or destructor.

If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

### 133.2.9 Send(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a notification.
**Example:**

NotificationMBS.Send("DatabaseChangedNotification")

**Notes:**

This is a convenience method which creates a new NSNotificationMBS object and sends it.

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 133.2.10 Send(notification as NotificationMBS) 21408

### 133.2.10 Send(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

**Notes:**

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 133.2.9 Send(name as string, ref as object = nil, tag as Variant = nil) 21408

### 133.2.11 SendDelayed(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a notification.
**Example:**

NotificationMBS.SendDelayed("DatabaseChangedNotification")

**Notes:** Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 133.2.12 SendDelayed(notification as NotificationMBS) 21409

### 133.2.12 SendDelayed(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
NotificationMBS.SendDelayed(n)
```

**Notes:** Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 133.2.11 SendDelayed(name as string, ref as object = nil, tag as Variant = nil) 21408

### 133.2.13 SendNotification

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends this notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotification
```

**Notes:**

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.

### 133.2.14 SendNotificationDelayed

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sends a notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotificationDelayed
```

**Notes:** Same as SendNotification method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.

### 133.2.15 UnregisterReceiver(target as NotificationReceiverMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unregisters an receiver.

### 133.2.16 Properties

### 133.2.17 Name as String

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name for the notification.
**Example:**

```
dim n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
MsgBox n.Name
```

**Notes:** (Read and Write property)

### 133.2.18 Ref as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The reference object.
**Notes:**

Defines which object the notification references. If nil, you target all objects.

(Read and Write property)

### 133.2.19 Tag as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The attached value.
**Example:**

```
dim n as new NotificationMBS
n.Tag = "Hello World"
```

**Notes:**

You can use this property as you like.
This value is sent to the receivers. It allows you to pass an additional value without needing to write a subclass of the NotificationMBS class.
(Read and Write property)

## 133.3 class NotificationObserverMBS

### 133.3.1 class NotificationObserverMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for receiving notifications.

### 133.3.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr8

### 133.3.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr8

### 133.3.4 Methods

### 133.3.5 Constructor(name as string = """, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new notification observer.
**Notes:** If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

### 133.3.6 Properties

### 133.3.7 Name as String

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the notification to listen for.
**Notes:** (Read only property)

### 133.3.8 Ref as Object

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The target object to listen for.
**Notes:** (Read only property)

### 133.3.9 Events

### 133.3.10 ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called if a notification was received.
**Notes:**

This event is registered automatically, so do not call RegisterReceiver with the NotificationObserverMBS object.

If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

## 133.4 class NSDistributedNotificationCenterMBS

### 133.4.1 class NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The NSDistributedNotificationCenter class provides a way to send notifications to objects in other tasks.
**Notes:**

It takes NSNotification objects and broadcasts them to any objects in other tasks that have registered for the notification with their task's default distributed notification center.

The NSDistributedNotificationCenter class implements a notification center that can distribute notifications asynchronously to tasks other than the one in which the notification was posted. An instance of this class are known as a distributed notification center.

Each task has a default distributed notification center that you access with the defaultCenter class method. There may be different types of distributed notification centers. Currently there is a single type,ÄîNSLocalNotificationCenterType. This type of distributed notification center handles notifications that can be sent between tasks on a single computer. For communication between tasks on different computers, use Distributed Objects Programming Topics.

Posting a distributed notification is an expensive operation. The notification gets sent to a system-wide server that distributes it to all the tasks that have objects registered for distributed notifications. The latency between posting the notification and the notification's arrival in another task is unbounded. In fact, when too many notifications are posted and the server's queue fills up, notifications may be dropped.
Subclass of the NSNotificationCenterMBS class.

### 133.4.2 Blog Entries

### 133.4.4 Methods

### 133.4.5 addObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant, suspensionBehavior as Integer)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds an entry to the receiver's dispatch table with a specific observer and suspended-notifications behavior, and optional notification name and sender.
**Notes:**

observer: Object registering as an observer. Must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. When nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. When nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.
suspensionBehavior: Notification posting behavior when notification delivery is suspended.

The receiver does not retain notificationObserver. Therefore, you should always send removeObserver to the receiver before releasing notificationObserver.

### 133.4.6 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new instance with the default distributed notification center, representing the local notification center for the computer.
**Notes:**

Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

### 133.4.7 defaultCenter as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the default distributed notification center, representing the local notification center for the computer.
**Notes:**

Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

### 133.4.8 notificationCenterForType(name as string) as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the distributed notification center for a particular notification center type.
**Notes:**

name: Notification center type being inquired about.

Currently only one type, NSLocalNotificationCenterType, is supported.

### 133.4.9 NSLocalNotificationCenterType as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** This constant specifies the notification center type.
**Notes:** Distributes notifications to all tasks on the sender's computer.

### 133.4.10 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a notification with information and an immediate-delivery specifier, and posts it to the receiver.
**Notes:**

name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
deliverImmediately: Specifies when to deliver the notification. When false, the receiver delivers notifications to their observers according to the suspended-notification behavior specified in the corresponding dispatch table entry. When true, the receiver delivers the notification immediately to its observers.

This is the preferred method for posting notifications.
The notificationInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the

objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 133.4.11 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32) 21417

### 133.4.11 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a notification with information, and posts it to the receiver.
**Example:**

```
dim notifyData as string = "Hello World"
dim notifyName as string = "Test"

Dim notifyDict As New Dictionary
notifyDict.Value("nData")=notifyData
NSDistributedNotificationCenterMBS.DefaultCenter.postNotificationName(notifyName, "", notifyDict, 2)
```

**Notes:**

name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
options: Specifies how the notification is posted to the task and when to deliver it to its observers.

The userInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 133.4.10 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean) 21416

### 133.4.12 Properties

### 133.4.13 suspended as boolean

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A boolean value that indicates whether notification delivery is suspended.
**Notes:**

The NSApplication class automatically suspends distributed notification delivery when the application is not active. Applications based on the Application Kit framework should let AppKit manage the suspension of notification delivery. Foundation-only programs may have occasional need to use this method.
(Read and Write computed property)

### 133.4.14 Constants

### 133.4.15 NSNotificationDeliverImmediately = 1

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the option constants to specify the behavior of notifications posted using the postNotificationName method.
**Notes:** When set, the notification is delivered immediately to all observers, regardless of their suspension behavior or suspension state. When not set, allows the normal suspension behavior of notification observers to take place.

### 133.4.16 NSNotificationPostToAllSessions = 2

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the option constants to specify the behavior of notifications posted using the postNotificationName method.
**Notes:** When set, the notification is posted to all sessions. When not set, the notification is sent only to applications within the same login session as the posting task.

### 133.4.17 NSNotificationSuspensionBehaviorCoalesce = 2

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the constants to specify the types of notification delivery suspension behaviors.
**Notes:** The server only queues the last notification of the specified name and object; earlier notifications are dropped. In cover methods for which suspension behavior is not an explicit argument, NSNotificationSuspensionBehaviorCoalesce is the default.

### 133.4.18 NSNotificationSuspensionBehaviorDeliverImmediately = 4

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the constants to specify the types of notification delivery suspension behaviors.
**Notes:** The server delivers notifications matching this registration irrespective of whether Suspended is set

to true. When a notification with this suspension behavior is matched, it has the effect of first flushing any queued notifications. The effect is as if setSuspended: with an argument of false were first called if the application is suspended, followed by the notification in question being delivered, followed by a transition back to the previous suspended or unsuspended state.

### 133.4.19 NSNotificationSuspensionBehaviorDrop = 1

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the constants to specify the types of notification delivery suspension behaviors.
**Notes:** The server does not queue any notifications with this name and object until Suspended is set to false.

### 133.4.20 NSNotificationSuspensionBehaviorHold = 3

MBS MacBase Plugin, Plugin Version: 9.7.

**Function:** One of the constants to specify the types of notification delivery suspension behaviors.
**Notes:** The server holds all matching notifications until the queue has been filled (queue size determined by the server), at which point the server may flush queued notifications.

## 133.5 class NSNotificationCenterMBS

### 133.5.1 class NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** An NSNotificationCenter object (or simply, notification center) provides a mechanism for broadcasting information within a task.
**Notes:**

An NSNotificationCenter object is essentially a notification dispatch table.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.

### 133.5.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr11

### 133.5.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr11

### 133.5.4 Methods

### 133.5.5 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
**Notes:**

observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

### 133.5.6 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The constructor to create a new instance of notification center pointing to the default notification center.
**Notes:** The current task's default notification center, which is used for system notifications.

### 133.5.7 defaultCenter as NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Returns the task's default notification center.
**Notes:** The current task's default notification center, which is used for system notifications.

### 133.5.8 postNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Posts a given notification to the receiver.
**Notes:** notification: The notification to post. This value must not be nil.

### 133.5.9 postNotificationName(name as string)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Creates a notification with a given name and sender and posts it to the receiver.
**Notes:**

name: The name of the notification.
theObject: The object posting the notification.
See also:

- 133.5.10 postNotificationName(name as string, theObject as Variant) 21421
- 133.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 21422

### 133.5.10 postNotificationName(name as string, theObject as Variant)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Creates a notification with a given name and sender and posts it to the receiver.
**Notes:**

name: The name of the notification.
theObject: The object posting the notification.
See also:

- 133.5.9 postNotificationName(name as string) 21421
- 133.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 21422

### 133.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Creates a notification with a given name, sender, and information and posts it to the receiver.
**Notes:**

name: The name of the notification.
theObject: The object posting the notification.
userInfo: Information about the the notification. May be nil.

This method is the preferred method for posting notifications.
See also:

- 133.5.9 postNotificationName(name as string) 21421
- 133.5.10 postNotificationName(name as string, theObject as Variant) 21421

### 133.5.12 removeObserver(observer as NSNotificationObserverMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Removes all the entries specifying a given observer from the receiver's dispatch table.
**Notes:**

observer: The observer to remove. Must not be nil.

Be sure to invoke this method before notificationObserver or any object specified in addObserver is deallocated.
See also:

- 133.5.13 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil) 21423

### 133.5.13 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Removes matching entries from the receiver's dispatch table.
**Notes:**

notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.
See also:

- 133.5.12 removeObserver(observer as NSNotificationObserverMBS) 21422

### 133.5.14 Properties

### 133.5.15 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The internal reference to the notification center.
**Notes:** (Read and Write property)

## 133.6 class NSNotificationMBS

### 133.6.1 class NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** NSNotification objects encapsulate information so that it can be broadcast to other objects by an NSNotificationCenter object.
**Notes:**

An NSNotification object (referred to as a notification) contains a name, an object, and an optional dictionary. The name is a tag identifying the notification. The object is any object that the poster of the notification wants to send to observers of that notification (typically, it is the object that posted the notification). The dictionary stores other related objects, if any. NSNotification objects are immutable objects.

You can create a notification object with the class method notificationWithName. However, you don't usually create your own notifications directly. The NSNotificationCenter method postNotificationName allow you to conveniently post a notification without creating it first.

On Windows you can use WinNotificationMBS class for similar functionality.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.

### 133.6.4 Methods

### 133.6.5 Constructor(handle as Integer)

MBS MacBase Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

**Function:** Creates a notification object with a NSNotification reference.
**Notes:** The object is retained and later in destructor it is released.
See also:

- 133.6.6 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil) 21425

### 133.6.6 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil)

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Creates a notification object with a specified name, object, and user information.
**Example:**

```
dim n as new NSNotificationMBS("Hello")
MsgBox n.name
```

**Notes:**

name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.
See also:

- 133.6.5 Constructor(handle as Integer) 21425

### 133.6.7 notificationWithName(name as string, theObject as Variant = nil, userInfo as dictionary = nil) as NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

**Function:** Returns a notification object with a specified name, object, and user information.
**Example:**

```
dim n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.name
```

**Notes:**

name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.

### 133.6.8 Print

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

**Function:** Writes description for this event descriptor to the console.
**Notes:** You can see result in Console.app.

### 133.6.9 Properties

### 133.6.10 description as string

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

**Function:** The descriptor for this notification.
**Example:**

```
dim n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.description
```

**Notes:**

This is a text representation for debugging.
(Read only property)

### 133.6.11 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The internal reference to the NSNotification object.
**Notes:** (Read and Write property)

### 133.6.12 name as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Returns the name of the notification.
**Notes:**

The name of the notification. Typically you use this method to find out what kind of notification you are dealing with when you receive a notification.
Notification names can be any string. To avoid name collisions, you might want to use a prefix that's specific to your application.
(Read only property)

### 133.6.13 objectHandle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The reference to the object.
**Notes:**

May be useful for declares.
(Read only property)

### 133.6.14 objectVariant as Variant

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Returns the object associated with the notification.
**Notes:**

The object associated with the notification. This is often the object that posted this notification. It may be nil.
Typically you use this method to find out what object a notification applies to when you receive a notification.

See the FAQ for the list of supported NSObject types for variant conversion.
(Read only property)

### 133.6.15 userInfo as dictionary

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** Returns the user information dictionary associated with the receiver.
**Example:**

```
// tests dictionary conversion:

dim d as new Dictionary
```

```
dim x as new Dictionary
x.Value("Hello") = "World"

dim b as Boolean = true
dim s as Single = 2.3
dim dd as Double = 3.4
dim h as int64 = 1234

d.Value(1) = 1
d.Value(2) = 2.0
d.Value(3) = x
d.Value(4) = "Hello"
d.Value(5) = b
d.Value(6) = s
d.Value(7) = dd
d.Value(8) = h

dim n as new NSNotificationMBS("test", nil, d)

dim nd as Dictionary = n.userInfo

// check nd object
break
```

**Notes:**

Returns the user information dictionary associated with the receiver. May be nil.
The user information dictionary stores any additional objects that objects receiving the notification might use.
(Read only property)

## 133.7 class NSNotificationObserverMBS

### 133.7.1 class NSNotificationObserverMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The notification class which you use to receive notifications.
**Notes:**

To use this class, please create a subclass. There you can put code in the event handler to do whatever you need in case your notification is received.

Than you create in code objects form this class. Normally only one. And you call addObserver on the NSNotificationCenterMBS or NSDistributedNotificationCenterMBS objects you have to tell the system which notifications you want to receive.

Do not forget to call removeObserver on the notification center for all your observers to avoid crashes.

### 133.7.2 Blog Entries

- Tip of the day: Windows Notifications
- MBS Real Studio Plugins, version 12.3pr11

### 133.7.3 Blog Entries

- Tip of the day: Windows Notifications
- MBS Real Studio Plugins, version 12.3pr11

### 133.7.4 Methods

### 133.7.5 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The constructor which creates the observer.
**Notes:** On success the handle property is not zero.

### 133.7.6 Destructor

MBS MacBase Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

**Function:** The Destructor.
**Notes:** Removes in plugin version 12.3 and newer the observer from the NSNotificationCenterMBS and NSDistributedNotificationCenterMBS to avoid crashes.

### 133.7.7 Properties

### 133.7.8 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

**Function:** The internal handle to the observer object.
**Notes:** (Read and Write property)

### 133.7.9 Events

### 133.7.10 GotNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: .

**Function:** The event called if a new notification is received.
**Notes:** The MBS Plugin makes sure you receive this event always on the main thread.

## 133.8 class WinNotificationMBS

### 133.8.1 class WinNotificationMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This is a class to send broadcast message to all windows applications listening for this notification.
**Notes:**

If you have several applications, you can send notifications from one to another.

Windows Desktop application: Sending and receiving notification works.
Windows Console application: Sending works.
Windows Web application: Sending works. Receives notification of own application, but of others.

This class is useful to tell other instance of your application or other application about something. Like for example whether background process is done.

On Mac OS X you can use NSNotificationMBS class for similar functionality.

With 14.2 plugins we added possibility to listen for any windows broadcast message. Like for example for WM_TIMECHANGE.

- 15.3, page 11: News

### 133.8.6 Methods

### 133.8.7 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The default constructor.
**Notes:** Creates an invisible dummy window to listen for notifications.
See also:

- 133.8.8 Constructor(Control as DesktopUIControl) 21433
- 133.8.9 Constructor(control as RectControl) 21433
- 133.8.10 Constructor(Window as DesktopWindow) 21433
- 133.8.11 Constructor(Window as window) 21434
- 133.8.12 Constructor(WindowHandle as Integer) 21434

### 133.8.8 Constructor(Control as DesktopUIControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** The control constructor.
**Notes:**

Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 133.8.7 Constructor 21432
- 133.8.9 Constructor(control as RectControl) 21433
- 133.8.10 Constructor(Window as DesktopWindow) 21433
- 133.8.11 Constructor(Window as window) 21434
- 133.8.12 Constructor(WindowHandle as Integer) 21434

### 133.8.9 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

**Function:** The control constructor.
**Notes:**

Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 133.8.7 Constructor 21432
- 133.8.8 Constructor(Control as DesktopUIControl) 21433
- 133.8.10 Constructor(Window as DesktopWindow) 21433
- 133.8.11 Constructor(Window as window) 21434
- 133.8.12 Constructor(WindowHandle as Integer) 21434

### 133.8.10 Constructor(Window as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** The window constructor.
**Notes:**

Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 133.8.7 Constructor 21432
- 133.8.8 Constructor(Control as DesktopUIControl) 21433
- 133.8.9 Constructor(control as RectControl) 21433
- 133.8.11 Constructor(Window as window) 21434
- 133.8.12 Constructor(WindowHandle as Integer) 21434

### 133.8.11 Constructor(Window as window)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

**Function:** The window constructor.
**Notes:**

Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 133.8.7 Constructor 21432
- 133.8.8 Constructor(Control as DesktopUIControl) 21433
- 133.8.9 Constructor(control as RectControl) 21433
- 133.8.10 Constructor(Window as DesktopWindow) 21433
- 133.8.12 Constructor(WindowHandle as Integer) 21434

### 133.8.12 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop only.

**Function:** The window constructor.
**Notes:**

Takes an existing window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 133.8.7 Constructor 21432
- 133.8.8 Constructor(Control as DesktopUIControl) 21433
- 133.8.9 Constructor(control as RectControl) 21433
- 133.8.10 Constructor(Window as DesktopWindow) 21433
- 133.8.11 Constructor(Window as window) 21434

### 133.8.13 IsListeningFor(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether this object is listening for the given message ID.
**Example:**

```
dim w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
MsgBox str(w.IsListeningFor(WM_TIMECHANGE))
end if
```

**Notes:** Returns true if we listen for this notification name or false if not.
See also:

- 133.8.14 IsListeningFor(name as string) as boolean 21435

### 133.8.14 IsListeningFor(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether this object is listening for the given notification.
**Example:**

```
dim w as new WinNotificationMBS

if w.ListenForMessage("Hello") then
MsgBox str(w.IsListeningFor("Hello"))
end if
```

**Notes:** Returns true if we listen for this notification name or false if not.
See also:

- 133.8.13 IsListeningFor(MessageID as Integer) as boolean 21435

### 133.8.15 ListenForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Listens for given notification message id.
**Notes:** Returns true on success and false on failure.
See also:

- 133.8.16 ListenForMessage(name as string) as boolean 21436

### 133.8.16 ListenForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Listens for given notification name.
**Notes:** Returns true on success and false on failure.
See also:

- 133.8.15 ListenForMessage(MessageID as Integer) as boolean 21436

### 133.8.17 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a message to all applications listening for it.
**Example:**

```
dim w as new WinNotificationMBS
dim Result as Integer

// send a message and wait for result
if w.SendMessage(Result, 1234567, 123, 456) then
// okay
else
// failed
end if
```

**Notes:**

Sends a message with given message ID.
You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.

Timeout is in milliseconds and counts per receiving window.
Result returns the result code from the message.
See also:

- 133.8.18 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 21437

### 133.8.18 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a message to all applications listening for it.
**Example:**

```
dim w as new WinNotificationMBS

if w.SendMessage(Result, "Hello", 123, 456) then
// okay
else
// failed
end if
```

**Notes:**

You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.
See also:

- 133.8.17 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 21436

### 133.8.19 SendMessageToWindow(WindowHandle as Integer, byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a message to all applications listening for it.
**Notes:**

Like SendMessage, but with a target window.
You can pass two integer parameters.

Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.

### 133.8.20 StopListeningForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Stops listening for a given message ID.
**Example:**

```
dim w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
if w.StopListeningForMessage(WM_TIMECHANGE) then
MsgBox "OK"
end if
end if
```

See also:

- 133.8.21 StopListeningForMessage(name as string) as boolean 21438

### 133.8.21 StopListeningForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Stops listening for a given notification name.
**Example:**

```
dim w as new WinNotificationMBS

if w.ListenForMessage("Hello") then
if w.StopListeningForMessage("Hello") then
MsgBox "OK"
end if
end if
```

See also:

- 133.8.20 StopListeningForMessage(MessageID as Integer) as boolean 21438

### 133.8.22 Properties

### 133.8.23 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal window handle.
**Notes:** (Read only property)

### 133.8.24 Events

### 133.8.25 GotNotification(Message as Integer, Name as string, Value1 as Integer, Value2 as Integer, byref Result as Integer, byref Handled as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: .

**Function:** A notification was received.
**Notes:**

Message: The message ID.
Name: If you registered by name, this is the name for the message ID.
Value1 and Value2 are parameters provided with message. (WPARAM and LPARAM)

If Handled is set to true, we pass back Result to the Windows system (LRESULT).
Else the default handler is called.

# Chapter 134

# OCR

## 134.1 class TessChoiceIteratorMBS

### 134.1.1 class TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Class to iterate over the classifier choices for a single symbol.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 134.1.2 Methods

### 134.1.3 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 134.1.4 MoveNext as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Moves to the next choice for the symbol and returns false if there are none left.

### 134.1.5 Properties

### 134.1.6 Confidence as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the confidence of the current choice depending on the used language data.
**Notes:**

If only LSTM traineddata is used the value range is 0.0 - 1.0. All choices for one symbol should roughly add up to 1.0. If only traineddata of the legacy engine is used, the number should be interpreted as a percent probability. (0.0 - 100.0) In this case probabilities won't add up to 100. Each one stands on its own.
(Read only property)

### 134.1.7 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 134.1.8 Text as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the null terminated UTF-8 encoded text string for the current choice.
**Notes:** (Read only property)

## 134.2 class TessEngineMBS

### 134.2.1 class TessEngineMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for OCR recognition using tesseract library.
**Example:**

```
Dim OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim p As Picture = f.OpenAsPicture
OCR.SetImage(p)

// get the text
Dim OCRText As String = OCR.GetText
```

**Notes:**

This replaces the older TesseractMBS class.

The new class is for Tesseract 4.x and 5.x versions.

### 134.2.2 Blog Entries

- MBS Xojo Plugins in version 22.3
- News from the MBS Xojo Plugins Version 21.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.3

- News from the MBS Xojo Plugins Version 21.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.3

- Introducing Tesseract 4 to Xojo

### 134.2.4 Methods

### 134.2.5 AllWordConfidences as Integer()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns all word confidences (between 0 and 100) in an array.
**Notes:** The number of confidences should correspond to the number of space-delimited words in GetText.

### 134.2.6 AnalyseLayout as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Runs page layout analysis in the mode set by SetPageSegMode.
**Notes:**

May optionally be called prior to Recognize to get access to just the page layout results. Returns an iterator to the results.

Returns nil on error or an empty page.

### 134.2.7 Clear

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Free up recognition results and any stored image data, without actually freeing any recognition data that would be time-consuming to reload.
**Notes:** Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

### 134.2.8 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.
**Notes:** Please call Initialize after this to get started.

### 134.2.9 GetAltoText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Make an XML-formatted string with Alto markup from the internal data structures.

### 134.2.10 GetAvailableLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the available languages as array.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract
Dim AvailableLanguages() As String = OCR.GetAvailableLanguages
```

### 134.2.11 GetBoolVariable(Name as String, byref value as boolean) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries boolean variable value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.2.12 GetBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The recognized text is returned as a char* which is coded in the same format as a box file used in training.
**Notes:**

Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

### 134.2.13 GetDoubleVariable(Name as String, byref value as Double) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries double variable value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.2.14 GetHOCRText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Make a HTML-formatted string with hOCR markup from the internal data structures.
**Notes:** PageNumber is 0-based but will appear in the output as 1-based.

### 134.2.15 GetIntVariable(Name as String, byref value as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries integer variable value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.2.16 GetLoadedLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the loaded languages as array.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract
Dim LoadedLanguages() As String = OCR.GetLoadedLanguages
```

**Notes:** Includes all languages loaded by the last Init, including those loaded as dependencies of other loaded languages.

### 134.2.17 GetLSTMBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Make a box file for LSTM training from the internal data structures.
**Notes:**

Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

### 134.2.18 GetStringVariable(Name as String) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries string variable value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.2.19 GetText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The recognized text is returned as UTF-text.

### 134.2.20 GetTsvText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Make a TSV-formatted string from the internal data structures.
**Notes:** PageNumber is 0-based but will appear in the output as 1-based.

### 134.2.21 GetUNLVText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The recognized text is returned as a char* which is coded as UNLV format Latin-1 with specific reject and suspect codes.

### 134.2.22 GetWordStrBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The recognized text is returned as a char* which is coded in the same format as a WordStr box file used in training.
**Notes:** PageNumber is a 0-based page index that will appear in the box file.

### 134.2.23 Initialize(dataPath as String, language as String, Mode as Integer = 3, configs() as String = nil) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Initializes tesseract.
**Example:**

```
Dim OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If
```

**Notes:**

Returns true on success and false on failure.

The datapath must be the name of the tessdata directory.
The language is (usually) an ISO 639-3 string or "" will default to eng.
It is entirely safe (and eventually will be efficient too) to call Initialize multiple times on the same instance to change language, or just to reset the classifier.

The language may be a string of the form [
textasciitilde ] <lang>[ + [
textasciitilde ] <lang>] * indicating that multiple languages are to be loaded. Eg hin+eng will load Hindi and English. Languages may specify internally that they want to be loaded with one or more other languages, so the
textasciitilde sign is available to override that. Eg if hin were set to load eng by default, then hin+
textasciitilde eng would force loading only hin. The number of loaded languages is limited only by memory, with the caveat that loading additional languages will impact both speed and accuracy, as there is more work to do to decide on the applicable language, and there is more chance of hallucinating incorrect words.

Warning: On changing languages, all Tesseract parameters are reset back to their default values. (Which may vary between languages.)
If you have a rare need to set a Variable that controls initialization for a second call to Init you should explicitly call End() and then use SetVariable before Init. This is only a very rare use case, since there are very few uses that require any parameters to be set before Init.

### 134.2.24 IsValidWord(Word as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Check whether a word is valid according to Tesseract's language model.
**Notes:** Return false if the word is invalid, true if valid.

### 134.2.25 LibraryLoaded as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether the tesseract library was loaded.
**Notes:** Should be true after succesful call to LoadLibrary.

### 134.2.26 LibraryLoadError as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The last error from LoadLibrary as number.

### 134.2.27 LibraryLoadErrorMessage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The last error from LoadLibrary as text.

### 134.2.28 LoadLibrary(file as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Loads the tesseract library.
**Notes:**

Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.
See also:

- 134.2.29 LoadLibrary(path as string) as boolean 21450

### 134.2.29 LoadLibrary(path as string) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Loads the tesseract library.
**Notes:**

Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.

For Windows load the DLL, for Linux the tesseract.so file and for macOS the dylib file.
You may need to first load leptonica library and second the tesseract library.
See example project for sample code.
See also:

- 134.2.28 LoadLibrary(file as folderitem) as boolean 21449

### 134.2.30 PrintVariablesToFile(File as FolderItem) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Print Tesseract parameters to the given file.
**Notes:**

Returns true on success.
Fails if the file can't be created.

### 134.2.31 PrintVariablesToPath(Path as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Print Tesseract parameters to the given file.
**Notes:**

Returns true on success.
Fails if the file can't be created.

### 134.2.32 Recognize as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Recognize the image from SetAndThresholdImage, generating Tesseract internal structures.
**Notes:**

Returns true on success.

Optional. The Get*Text functions below will call Recognize if needed.

After Recognize, the output is kept internally until the next SetImage.

### 134.2.33 ResultIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries a result iterator.
**Notes:**

Loop over it to query details.
The result iterator is only valid until you end the engine.

### 134.2.34 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets current working directory.
**Notes:** Returns true on success.
See also:

- 134.2.35 SetCurrentWorkingDirectory(path as String) as boolean 21451

### 134.2.35 SetCurrentWorkingDirectory(path as String) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets current working directory.
**Notes:** Returns true on success.
See also:

- 134.2.34 SetCurrentWorkingDirectory(path as folderitem) as boolean 21451

### 134.2.36 SetImage(pic as picture)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets input image via picture.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim p As Picture = f.OpenAsPicture
OCR.SetImage(p)
```

**Notes:**

Pass Xojo picture and we copy the pixels.
Mask or alpha channel is ignored.

### 134.2.37 SetImageData(Data as MemoryBlock)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets input image via data.
**Notes:**

Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 134.2.38 SetImageData(Data as String) 21452

### 134.2.38 SetImageData(Data as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets input image via data.
**Notes:**

Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 134.2.37 SetImageData(Data as MemoryBlock) 21452

### 134.2.39 SetImageFile(File as FolderItem)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets input image via folderitem.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
OCR.SetImageFile(f)
```

**Notes:**

Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 134.2.40 SetImageFile(Path as String) 21453

### 134.2.40 SetImageFile(Path as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets input image via file path.
**Notes:**

Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 134.2.39 SetImageFile(File as FolderItem) 21452

### 134.2.41 SetRectangle(Left as Integer, Top as Integer, Width as Integer, Height as Integer)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Restrict recognition to a sub-rectangle of the image.
**Notes:**

Call after SetImage.
Each SetRectangle clears the recogntion results so multiple rectangles can be recognized with the same image.

### 134.2.42 SetVariable(Name as String, Value as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Set the value of an internal "parameter."
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract

OCR.SetVariable("tessedit_char_blacklist", "xyz")
```

**Notes:**

Supply the name of the parameter and the value as a string, just as you would in a config file.
Returns false if the name lookup failed.
e.g.
SetVariable("tessedit_char_blacklist", "xyz") to ignore x, y and z.
Or
SetVariable("classify_bln_numeric_mode", "1") to set numeric-only mode.

SetVariable may be used before Init, but settings will revert to defaults on End().

Note: Must be called after Initialize(). Only works for non-init variables (init variables should be passed to Initialize()).

### 134.2.43 Properties

### 134.2.44 DeadlineMSecs as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The deadline in milliseconds.
**Notes:** (Read and Write property)

### 134.2.45 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 134.2.46 InitLanguagesAsString as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the languages string used in the last valid initialization.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract

MsgBox OCR.InitLanguagesAsString
```

**Notes:**

If the last initialization specified "deu+hin" then that will be returned. If hin loaded eng automatically as well, then that will not be included in this list. To find the languages actually loaded use GetLoadedLanguages function.
(Read only property)

### 134.2.47 InputImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries input image for debugging.
**Notes:** (Read only property)

### 134.2.48 InputName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The name of the input file.
**Notes:**

Needed for training and reading a UNLV zone file, and for searchable PDF output.
(Read and Write property)

### 134.2.49 MeanTextConf as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the (average) confidence value between 0 and 100.
**Notes:** (Read only property)

### 134.2.50 PageSegMode as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The current page segmentation mode.
**Example:**

```
Dim OCR As TessEngineMBS // your instance of tesseract

OCR.PageSegMode = OCR.kPageSegModeAuto
```

**Notes:**

Defaults to kPageSegModeSingleBlock.
The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_page-seg_mode", mode as string).
(Read and Write property)

### 134.2.51 Resolution as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The resolution of the source image in pixels per inch so font size information can be calculated in results.
**Notes:**

Call this after SetImage functions.
(Read and Write property)

### 134.2.52 ThresholdedImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get a copy of the internal thresholded image from Tesseract.
**Notes:** (Read only property)

### 134.2.53 Version as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries version of tesseract library.
**Example:**

```
MsgBox TessEngineMBS.Version
```

**Notes:**

e.g. "4.1.1"

(Read only property)

### 134.2.54 Events

### 134.2.55 Cancel(words as integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: .

**Function:** Event called regularly to allow you to cancel.
**Notes:** Return true to cancel current job.

### 134.2.56 Progress(Left as integer, Right as Integer, Top as Integer, Bottom as Integer, Progress as Integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: .

**Function:** Event called regularly to allow you to monitor progress.
**Notes:** Return true to cancel current job.

### 134.2.57 Constants

### 134.2.58 kOcrEngineModeDefault = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the OCR engine modes.
**Notes:** Specify this mode when calling init_*(), to indicate that any of the above modes should be automatically inferred from the variables in the language-specific config, command-line configs, or if not specified in any of the above should be set to the default kOcrEngineModeTesseractOnly.

### 134.2.59 kOcrEngineModeLstmOnly = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the OCR engine modes.
**Notes:** Run just the LSTM line recognizer.

### 134.2.60 kOcrEngineModeTesseractLstmCombined = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the OCR engine modes.
**Notes:** Run the LSTM recognizer, but allow fallback to Tesseract when things get difficult. deprecated

### 134.2.61 kOcrEngineModeTesseractOnly = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the OCR engine modes.
**Notes:** Run Tesseract only - fastest; deprecated

### 134.2.62 kPageSegModeAuto = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Fully automatic page segmentation, but no OSD.

### 134.2.63 kPageSegModeAutoOnly = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Automatic page segmentation, but no OSD, or OCR.

### 134.2.64 kPageSegModeAutoOsd = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Automatic page segmentation with orientation and script detection. (OSD)

### 134.2.65 kPageSegModeCircleWord = 9

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Treat the image as a single word in a circle.

### 134.2.66 kPageSegModeOsdOnly = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Orientation and script detection only.

### 134.2.67 kPageSegModeRawLine = 13

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Treat the image as a single text line, bypassing hacks that are Tesseract-specific.

### 134.2.68 kPageSegModeSingleBlock = 6

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Assume a single uniform block of text. (Default.)

### 134.2.69 kPageSegModeSingleBlockVertText = 5

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Assume a single uniform block of vertically aligned text.

### 134.2.70 kPageSegModeSingleChar = 10

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Treat the image as a single character.

### 134.2.71 kPageSegModeSingleColumn = 4

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Assume a single column of text of variable sizes.

### 134.2.72 kPageSegModeSingleLine = 7

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Treat the image as a single text line.

### 134.2.73 kPageSegModeSingleWord = 8

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Treat the image as a single word.

### 134.2.74 kPageSegModeSparseText = 11

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Find as much text as possible in no particular order.

### 134.2.75 kPageSegModeSparseTextOsd = 12

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the page layout modes.
**Notes:** Sparse text with orientation and script det.

## 134.3 class TesseractChoiceIteratorMBS

### 134.3.1 class TesseractChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Class to iterate over the classifier choices for a single symbol.
**Deprecated:** This item is deprecated and should no longer be used. You can use TessChoiceIteratorMBS class instead.

### 134.3.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr7

### 134.3.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr7

### 134.3.4 Methods

### 134.3.5 Confidence as Double

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the confidence of the current choice.
**Notes:** The number should be interpreted as a percent probability. (0.0 - 100.0)

### 134.3.6 Constructor(result as TesseractResultIteratorMBS)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:** Construction is from a ResultIterator that points to the symbol of interest. The ChoiceIterator allows a one-shot iteration over the choices for this symbol and after that is is useless.

### 134.3.7 NextItem as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves to the next choice for the symbol and returns false if there are none left.

### 134.3.8 Text as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the text string for the current choice.

### 134.3.9 Properties

### 134.3.10 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 134.3.11 Parent as TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent result iterator.
**Notes:** (Read only property)

## 134.4 class TesseractErrorExceptionMBS

### 134.4.1 class TesseractErrorExceptionMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception subclass raised for errors in OCR process.
**Notes:** Subclass of the RuntimeException class.

## 134.5 class TesseractMBS

### 134.5.1 class TesseractMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The plugin class to provide OCR by using the tesseract open source library.
**Deprecated:** This item is deprecated and should no longer be used. You can use TessEngineMBS class instead. **Notes:** See example projects on how to use it.

### 134.5.4 Methods

### 134.5.5 Clear

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Free up recognition results and any stored image data, without actually freeing any recognition data that would be time-consuming to reload.
**Notes:** Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

### 134.5.6 ClearAdaptiveClassifier

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Call between pages or documents etc to free up memory and forget adaptive data.

### 134.5.7 Constructor

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Constructor which calls only InitForAnalysePage.
See also:

- 134.5.8 Constructor(folder as folderitem, lang as string) 21465
- 134.5.9 Constructor(path as string, lang as string) 21466

### 134.5.8 Constructor(folder as folderitem, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes tesseract.
**Notes:**

Same as Init method.
Pass folderitem to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
To use multiple languages, please concat them with plus sign: e.g. "eng+deu"
See also:

- 134.5.7 Constructor 21465
- 134.5.9 Constructor(path as string, lang as string) 21466

### 134.5.9 Constructor(path as string, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes tesseract.
**Notes:**

Same as Init method.
Pass path to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
To use multiple languages, please concat them with plus sign: e.g. "eng+deu"
See also:

- 134.5.7 Constructor 21465
- 134.5.8 Constructor(folder as folderitem, lang as string) 21465

### 134.5.10 GetBoolVariable(name as string, byref value as boolean) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a variable as boolean value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.5.11 GetBoxText(page as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The recognized text is returned as a char* which is coded in the same format as a box file used in training.
**Notes:** Constructs coordinates in the original image - not just the rectangle. page is a 0-based page index that will appear in the box file.

### 134.5.12 GetDoubleVariable(name as string, byref value as Double) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a variable as Double value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.5.13 GetHOCRText(page as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Make a HTML-formatted string with hOCR markup from the internal data structures.
**Notes:** Page is 0-based but will appear in the output as 1-based.

### 134.5.14 GetIntVariable(name as string, byref value as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a variable as Integer value.
**Notes:**

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

### 134.5.15 GetLastInitLanguage as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the language used in the last valid initialization.

### 134.5.16 GetStringVariable(name as string) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries variable's value as string.

### 134.5.17 GetText as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns recognized text.
**Notes:** Calls Recognize if needed internally.

### 134.5.18 GetVariableAsString(name as string) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get value of named variable as a string, if it exists.

### 134.5.19 Init(folder as folderitem, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes tesseract.
**Notes:**

Pass folderitem to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Start tesseract. Returns zero on success and -1 on failure.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
See also:

- 134.5.20 Init(path as string, lang as string)

### 134.5.20 Init(path as string, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes tesseract.
**Notes:**

Pass path to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Start tesseract. Returns zero on success and -1 on failure.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
See also:

- 134.5.19 Init(folder as folderitem, lang as string) 21468

### 134.5.21 InitForAnalysePage

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Init only for page layout analysis.
**Notes:** Use only for calls to SetImage and AnalysePage. Calls that attempt recognition will generate an error.

### 134.5.22 MeanTextConf as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the (average) confidence value between 0 and 100.

### 134.5.23 NumDawgs as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Return the number of dawgs loaded.

**Notes:** Should be bigger than 0 if data files have been loaded.

### 134.5.24 PrintVariablesToStdErr

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print Tesseract parameters to standard error.

### 134.5.25 PrintVariablesToStdOut

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Print Tesseract parameters to standard output.

### 134.5.26 Recognize as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Recognize the image.
**Notes:**

Returns 0 on success.
Optional. The Get*Text functions below will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

### 134.5.27 RecognizeMT as Integer

MBS OCR Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Recognize the image.
**Notes:**

Returns 0 on success.
Optional. The Get*Text functions below will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

Same as Recognize, but thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

### 134.5.28 ResultIterator as TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get an iterator to the results of LayoutAnalysis and/or Recognize.
**Notes:** This object points to data held within the TesseractMBS class, and therefore can only be used while the TesseractMBS class still exists and has not been subjected to a call of Init, SetImage, Recognize, Clear, End, DetectOS, or anything else that changes the internal PAGE_RES.

### 134.5.29 SetImage(buffer as memoryblock, width as Integer, height as Integer, BytesPerPixel as Integer, BytesPerLine as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Provide an image for Tesseract to recognize as a memoryblock.
**Notes:** Returns true on success and false on failure.
See also:

- 134.5.30 SetImage(Pic as Picture) as boolean 21471

### 134.5.30 SetImage(Pic as Picture) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Provide an image for Tesseract to recognize.
**Notes:**

The plugin makes a copy of the picture.
Returns true on success and false on failure.
See also:

- 134.5.29 SetImage(buffer as memoryblock, width as Integer, height as Integer, BytesPerPixel as Integer, BytesPerLine as Integer) as boolean 21471

### 134.5.31 SetInputName(name as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the name of the input file. Needed only for training and reading a UNLV zone file.

### 134.5.32 SetOutputName(name as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the name of the bonus output files. Needed only for debugging.

### 134.5.33 SetRectangle(left as Integer, top as Integer, width as Integer, height as Integer)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Restrict recognition to a sub-rectangle of the image.
**Notes:** Call after SetImage. Each SetRectangle clears the recogntion results so multiple rectangles can be recognized with the same image.

### 134.5.34 SetResolution(Resolution as Integer)

MBS OCR Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the resolution of the source image in pixels per inch so font size information can be calculated in results.
**Notes:** Call this after SetImage.

### 134.5.35 SetVariable(name as string, value as string) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Set the value of an internal "parameter."
**Notes:**

Supply the name of the parameter and the value as a string, just as you would in a config file.
Returns false if the name lookup failed.
E.g. SetVariable("tessedit_char_blacklist", "xyz"); to ignore x, y and z.
Or SetVariable("classify_bln_numeric_mode", "1"); to set numeric-only mode.
SetVariable may be used before Init, but settings will revert to defaults on End().

Note: Must be called after Init(). Only works for non-init variables (init variables should be passed to Init()).

### 134.5.36 Version as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the version identifier.

### 134.5.37 Properties

### 134.5.38 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Internal Object reference.
**Notes:** (Read only property)

### 134.5.39 PageSegMode as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The current page segmentation mode.
**Notes:**

Defaults to kPageSegModeSingleBlock.
The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_page-seg_mode", mode as string).
(Read and Write computed property)

### 134.5.40 Constants

### 134.5.41 kPageSegModeAuto = 3

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Fully automatic page segmentation, but no OSD.

### 134.5.42 kPageSegModeAutoOnly = 2

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Automatic page segmentation, but no OSD, or OCR.

### 134.5.43 kPageSegModeAutoOSD = 1

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Automatic page segmentation with orientation and script detection. (OSD)

### 134.5.44 kPageSegModeCircleWord = 9

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Treat the image as a single word in a circle.

### 134.5.45 kPageSegModeOSDOnly = 0

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Orientation and script detection only.

### 134.5.46 kPageSegModeSingleBlock = 6

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Assume a single uniform block of text. (Default.)

### 134.5.47 kPageSegModeSingleBlockVerticalText = 5

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Assume a single uniform block of vertically aligned text.

### 134.5.48 kPageSegModeSingleChar = 10

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Treat the image as a single character.

### 134.5.49 kPageSegModeSingleColumn = 4

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Assume a single column of text of variable sizes.

### 134.5.50 kPageSegModeSingleLine = 7

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Treat the image as a single text line.

### 134.5.51 kPageSegModeSingleWord = 8

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the page segmentation mode constants.
**Notes:** Treat the image as a single word.

## 134.6 class TesseractNotInitializedExceptionMBS

### 134.6.1 class TesseractNotInitializedExceptionMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The exception to report about calling tesseract methods without initialization.
**Notes:** Subclass of the TesseractErrorExceptionMBS class.

## 134.7 class TesseractResultIteratorMBS

### 134.7.1 class TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
**Deprecated:** This item is deprecated and should no longer be used. You can use TessResultIteratorMBS class instead. **Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 134.7.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr7

### 134.7.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr7

### 134.7.4 Methods

### 134.7.5 Begin

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves the iterator to point to the start of the page to begin an iteration.

### 134.7.6 BoundingBox(Level as Integer, byref left as Integer, byref top as Integer, byref right as Integer, byref bottom as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the bounding rectangle of the current object at the given level.
**Notes:**

Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See GetImage.

Coordinate system:
Integer coordinates are at the cracks between the pixels.
The top-left corner of the top-left pixel in the image is at (0,0).
The bottom-right corner of the bottom-right pixel in the image is at (width, height).
Every bounding box goes from the top-left of the top-left contained pixel to the bottom-right of the bottom-right contained pixel, so the bounding box of the single top-left pixel in the image is: (0,0)->(1,1).
If an image rectangle has been set in the API, then returned coordinates relate to the original (full) image, rather than the rectangle.

### 134.7.7 Confidence(Level as Integer) as Double

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the mean confidence of the current object at the given level.
**Notes:** The number should be interpreted as a percent probability. (0.0 - 100.0)

### 134.7.8 Constructor

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 134.7.9 IsAtBeginningOf(Level as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the iterator is at the start of an object at the given level.
**Notes:** Possible uses include determining if a call to Next(kLevelWord) moved to the start of a kLevelParagraph.

### 134.7.10 IsAtFinalElement(Level as Integer, element as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns whether the iterator is positioned at the last element in a given level.
**Notes:** (e.g. the last word in a line, the last line in a block)

### 134.7.11 NextItem(Level as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
**Notes:**

NOTE that kLevelSymbol will skip non-text blocks, but all other level values will visit each non-text block once.
Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word.
Calls to Next with different levels may be freely intermixed.
This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded into Tesseract.

### 134.7.12 SymbolIsDropcap as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the current symbol is a dropcap.
**Notes:** If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

### 134.7.13 SymbolIsSubscript as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the current symbol is a subscript.
**Notes:** If iterating at a higher level object than symbols, e.g. words, then this will return the attributes of the first symbol in that word.

### 134.7.14 SymbolIsSuperscript as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the current symbol is a superscript.
**Notes:** If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

### 134.7.15 Text(Level as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the text string for the current object at the given level.

### 134.7.16 WordFontAttributes(byref bold as boolean, byref italic as boolean, byref underlined as boolean, byref monospace as boolean, byref serif as boolean, byref smallcaps as boolean, byref pointsize as Integer, byref fontid as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the font attributes of the current word.
**Notes:**

If iterating at a higher level object than words, e.g. textlines, then this will return the attributes of the first word in that textline.
The actual return value is a string representing a font name.
Pointsize is returned in printers points (1/72 inch.)

### 134.7.17 WordIsFromDictionary as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the current word was found in a dictionary.

### 134.7.18 WordIsNumeric as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if the current word is numeric.

### 134.7.19 Properties

### 134.7.20 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Internal Object reference.
**Notes:** (Read only property)

### 134.7.21 Parent as TesseractMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent tesseract object.
**Notes:** (Read only property)

### 134.7.22 Constants

### 134.7.23 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the level constants.
**Notes:** Block of text/image/separator line.

### 134.7.24 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the level constants.
**Notes:** Paragraph within a block.

### 134.7.25 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the level constants.
**Notes:** Symbol/character within a word.

### 134.7.26 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the level constants.
**Notes:** Line within a paragraph.

### 134.7.27 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 12.3.

**Function:** One of the level constants.
**Notes:** Word within a textline.

## 134.8 class TessPageIteratorMBS

### 134.8.1 class TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The iterator to walk over page content.
**Notes:**

Class to iterate over tesseract page structure, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 134.8.2 Methods

### 134.8.3 Baseline(Level as Integer, byref x1 as Integer, byref y1 as Integer, byref x2 as Integer, byref y2 as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the baseline of the current object at the given level.
**Notes:**

The baseline is the line that passes through (x1, y1) and (x2, y2).

Warning: with vertical text, baselines may be vertical!

Returns false if there is no baseline at the current position.

### 134.8.4 Begin

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Moves the iterator to point to the start of the page to begin an iteration.

### 134.8.5 BinaryImage(Level as Integer) as PIcture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns a binary image of the current object at the given level.
**Notes:** The position and size match the return from BoundingBoxInternal, and so this could be upscaled

with respect to the original input image.

### 134.8.6 BoundingBox(Level as Integer, byref Left as Integer, byref Top as Integer, byref Right as Integer, byref Bottom as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the bounding rectangle of the current object at the given level.
**Notes:**

Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See BinaryImage below.

### 134.8.7 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 134.8.8 CopyIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a copy of the iterator.

### 134.8.9 IsAtBeginningOf(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the iterator is at the start of an object at the given level.

### 134.8.10 IsAtFinalElement(Level as Integer, element as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns whether the iterator is positioned at the last element in a given level. (e.g. the last word in a line, the last line in a block)

### 134.8.11 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
**Notes:** NOTE that symbol will skip non-text blocks, but all other PageIteratorLevel level values will visit each non-text block once. Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word. Calls to Next with different levels may be freely intermixed. This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded into Tesseract.

### 134.8.12 Properties

### 134.8.13 BlockType as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the type of the current block.
**Notes:** (Read only property)

### 134.8.14 DeskewAngle as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The deskew angle.
**Notes:**

After rotating the block so the text orientation is upright, how many radians does one have to rotate the block anti-clockwise for it to be level?
-Pi/4 <= deskew_angle <= Pi/4
(Read only property)

### 134.8.15 FirstLineIndent as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The first line indent.
**Notes:**

For LEFT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the left edge of the rest of the paragraph.
for RIGHT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the right edge of the rest of the paragraph.

This value may be negative.

if IsCrown is true, the first line of this paragraph is actually flush, and first_line_indent is set to the "common" first line indent for subsequent paragraphs in this block of text.
(Read only property)

### 134.8.16 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 134.8.17 IsCrown as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether the current item is a crown.
**Notes:**

True if the first line of the paragraph is aligned with the other lines of the paragraph even though subsequent paragraphs have first line indents. This typically indicates that this is the continuation of a previous paragraph or that it is the very first paragraph in the chapter.
(Read only property)

### 134.8.18 IsListItem as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether current item is a list item.
**Notes:**

True if we believe this is a member of an ordered or unordered list.
(Read only property)

### 134.8.19 Justification as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries justification for current block.
**Notes:**

LEFT if ragged right, or fully justified and script is left-to-right.
RIGHT if ragged left, or fully justified and script is right-to-left.
unknown if it looks like source code or we have very few lines.
(Read only property)

### 134.8.20 Orientation as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The orientation of the current block.
**Notes:** (Read only property)

### 134.8.21 TextlineOrder as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The text orientation of the current block.
**Notes:** (Read only property)

### 134.8.22 WritingDirection as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The writing direction of the current block.
**Notes:** (Read only property)

### 134.8.23 Constants

### 134.8.24 kBlockTypeCaptionText = 8

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Text that belongs to an image.

### 134.8.25 kBlockTypeEquation = 4

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Partition belonging to an equation region.

### 134.8.26 kBlockTypeFlowingImage = 9

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Image that lives inside a column.

### 134.8.27 kBlockTypeFlowingText = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Text that lives inside a column.

### 134.8.28 kBlockTypeHeadingImage = 10

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Image that spans more than one column.

### 134.8.29 kBlockTypeHeadingText = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Text that spans more than one column.

### 134.8.30 kBlockTypeHorzLine = 12

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Horizontal Line.

### 134.8.31 kBlockTypeInlineEquation = 5

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Partition has inline equation.

### 134.8.32 kBlockTypeNoise = 14

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Lies outside of any column.

### 134.8.33 kBlockTypePulloutImage = 11

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Image that is in a cross-column pull-out region.

### 134.8.34 kBlockTypePulloutText = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Text that is in a cross-column pull-out region.

### 134.8.35 kBlockTypeTable = 6

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Partition belonging to a table region.

### 134.8.36 kBlockTypeUnknown = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Type is not yet known. Keep as the first element.

### 134.8.37 kBlockTypeVerticalText = 7

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Text-line runs vertically.

### 134.8.38 kBlockTypeVertLine = 13

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the block types.
**Notes:** Vertical Line.

### 134.8.39 kJustificationCenter = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the justification constants.
**Notes:** The text lines of the paragraph are centered about a line going down through their middle of the text lines.

### 134.8.40 kJustificationLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the justification constants.
**Notes:** Each line, except possibly the first, is flush to the same left tab stop.

### 134.8.41 kJustificationRight = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the justification constants.
**Notes:** Each line, except possibly the first, is flush to the same right tab stop.

### 134.8.42 kJustificationUnknown = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the justification constants.
**Notes:** Unknown.

### 134.8.43 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Block

### 134.8.44 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Paragraph

### 134.8.45 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Symbol

### 134.8.46 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Textline

### 134.8.47 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Word

### 134.8.48 kOrientationPageDown = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the orientations.
**Notes:** Orientation is down.

### 134.8.49 kOrientationPageLeft = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the orientations.
**Notes:** Orientation is left.

### 134.8.50 kOrientationPageRight = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the orientations.
**Notes:** Orientation is right.

### 134.8.51 kOrientationPageUp = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the orientations.
**Notes:** Orientation is up.

### 134.8.52 kTextlineOrderLefttoRight = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** The text lines are read in the given sequence.
**Notes:** Mongolian is written in vertical columns top to bottom like Chinese, but the lines order left-to right.

### 134.8.53 kTextlineOrderRighttoLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** The text lines are read in the given sequence.
**Notes:** In Chinese, vertical text lines are read right-to-left.

### 134.8.54 kTextlineOrderToptoBottom = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** The text lines are read in the given sequence.
**Notes:** In English, the order is top-to-bottom.

### 134.8.55 kWritingDirectionLefttoRight = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the writing direction constants.
**Notes:** For English text, the writing direction is left-to-right.

### 134.8.56 kWritingDirectionRighttoLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the writing direction constants.
**Notes:** For Arabic the text direction is right to left.

### 134.8.57 kWritingDirectionToptoBottom = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the writing direction constants.
**Notes:** For the Chinese text in the above example, the writing direction is top-to-bottom.

## 134.9 class TessResultIteratorMBS

### 134.9.1 class TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
**Notes:**

WARNING! This class points to data held within the TessEngineMBS class, and therefore can only be used while the TessBaseAPI class still exists and has not been subjected to a call of Init, SetImage, Recognize, Clear, End DetectOS, or anything else that changes the internal PAGE_RES.

See also base class TessPageIteratorMBS class, which contains the bulk of the interface. TessResultIteratorMBS adds text-specific methods for access to OCR output.
Subclass of the TessPageIteratorMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 134.9.2 Methods

### 134.9.3 ChoiceIterator as TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries choice iterator for current object.

### 134.9.4 Confidence(Level as Integer) as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the mean confidence of the current object at the given level.
**Notes:** The number should be interpreted as a percent probability. (0.0 - 100.0)

### 134.9.5 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 134.9.6 CopyIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Copies the result iterator.

### 134.9.7 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Moves to the next choice for the symbol and returns false if there are none left.

### 134.9.8 PageIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Gets the page iterator for this result.

### 134.9.9 Text(Level as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the UTF-8 encoded text string for the current object at the given level.

### 134.9.10 Properties

### 134.9.11 FontID as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The font ID.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.12 FontName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The font name.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.13 IsBold as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The bold font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.14 IsItalic as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The italic font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.15 IsMonoSpace as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The monospace font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.16 IsSerif as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The serif font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.17 IsSmallCaps as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The smallcaps font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.18 IsUnderlined as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The underlined font attribute.
**Notes:**

The font attributes of the current word.
(Read only property)

### 134.9.19 PointSize as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The point size font attribute.
**Notes:**

The font attributes of the current word.
Pointsize is returned in printers points (1/72 inch.)
(Read only property)

### 134.9.20 SymbolIsDropcap as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the current symbol is a dropcap.
**Notes:**

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

(Read only property)

### 134.9.21 SymbolIsSubscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the current symbol is a subscript.
**Notes:**

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

### 134.9.22 SymbolIsSuperscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the current symbol is a superscript.
**Notes:**

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

### 134.9.23 WordIsFromDictionary as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the current word was found in a dictionary.
**Notes:** (Read only property)

### 134.9.24 WordIsNumeric as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns true if the current word is numeric.
**Notes:** (Read only property)

### 134.9.25 WordRecognitionLanguage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return the name of the language used to recognize this word.
**Notes:**

On error, this is empty.
(Read only property)

### 134.9.26 Constants

### 134.9.27 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Block

### 134.9.28 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Paragraph

### 134.9.29 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Symbol

### 134.9.30 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Textline

### 134.9.31 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 21.3.

**Function:** One of the levels.
**Notes:** Word

# Chapter 135

# Open Directory

## 135.1 class ODNodeMBS

### 135.1.1 class ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An Open Directory node.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 135.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.3
- MBS Xojo Plugins, version 19.3pr2

- MBS Xojo Plugins, version 19.3pr2
- OpenDirectory Framework for Xojo

### 135.1.5 Xojo Developer Magazine

- 17.5, page 9: News

### 135.1.6 Methods

### 135.1.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 135.1.8 nodeDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary containing details about a node.
**Notes:**

Error: An error reference for error details. Can be nil.

Returns a dictionary containing details.

### 135.1.9 nodeDetailsForKeys(keys() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary containing details about a node.
**Notes:**

Keys: An array of keys corresponding to the values returned in the dictionary.
Error: An error reference for error details. Can be nil.

Returns a dictionary containing details about the node corresponding to keys specified by Keys.

### 135.1.10 nodeWithName(session as ODSessionMBS, name as string, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a node object with a specified session and name.
**Notes:**

Session: The session.
Name: The name of the node.
Error: An error reference for error details. Can be nil.

Returns the created node object.

### 135.1.11 nodeWithType(session as ODSessionMBS, type as integer, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a node object with a specified session and type.
**Notes:**

Session: The session.
Type: The node type.
Error: An error reference for error details.

Returns the created node object.

### 135.1.12 subnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the names of subnodes for the node.

### 135.1.13 supportedAttributesForRecordType(RecordType as String, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of attribute types supported by the node,Äôs records.
**Notes:**

RecordType: The record type to list supported attribute types for. Can be nil.
Error: An error reference for error details. Can be nil.

Returns an array of supported attribute types.

### 135.1.14 supportedRecordTypes(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of the record types supported by the node.
**Notes:** If the node does not support checking for supported record types, all possible record types are returned.

### 135.1.15 unreachableSubnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of the subnodes of a given node that are currently unreachable.

### 135.1.16 Properties

### 135.1.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 135.1.18 nodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The node,Äôs name.
**Notes:** (Read only property)

### 135.1.19 Constants

### 135.1.20 kODNodeTypeAuthentication = & h2201

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the Open Directory node types.
**Notes:** A node used for authentication or record lookups.

### 135.1.21 kODNodeTypeConfigure = & h2202

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the Open Directory node types.
**Notes:** A node that specifically refers to the Directory Services configuration.

### 135.1.22 kODNodeTypeContacts = & h2204

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the Open Directory node types.
**Notes:** A node used for applications that handle contact data.

### 135.1.23 kODNodeTypeLocalNodes = & h2200

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the Open Directory node types.
**Notes:** A node that specifically looks at the local directory.

### 135.1.24 kODNodeTypeNetwork = & h2205

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the Open Directory node types.
**Notes:** A node used for looking up network resource type data.

## 135.2 class ODQueryMBS

### 135.2.1 class ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An Open Directory query.
**Notes:** Currently only partially implemented for Xojo for reading values. If you need more, please contact Monkeybread Software.

### 135.2.6 Methods

### 135.2.7 Constructor(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an query object created with provided parameters.
**Notes:**

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

### 135.2.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 135.2.9 queryWithNode(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS) as ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an query object created with provided parameters.
**Notes:**

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.

inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

### 135.2.10 resultsAllowingPartial(AllowPartialResults as Boolean, byref error as NSErrorMBS) as ODRecordMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns results from a query synchronously.
**Notes:**

AllowPartialResults: If true, only immediately available results are returned; otherwise, the function waits until all results are available.
Error: An error reference for error details. Can be nil.

Returns the results of the query in an array of ODRecordMBS objects.

### 135.2.11 start

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Starts asynchronous search.

### 135.2.12 synchronize

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Restarts a query, disposing of any results it has obtained.
**Notes:** If the query was originally started asynchronously, the event is called with inResults set to nil, error.code set to kODErrorQuerySynchronize, and error.domain set to kODErrorDomainFramework.

### 135.2.13 Properties

### 135.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 135.2.15 Constants

### 135.2.16 kODMatchAny = 1

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is used to search for any records (typically passed with nil search value)

### 135.2.17 kODMatchBeginsWith = & h2002

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values that begin with the provided value

### 135.2.18 kODMatchContains = & h2004

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values that contain the provided value

### 135.2.19 kODMatchEndsWith = & h2003

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values that end with the provided value

### 135.2.20 kODMatchEqualTo = & h2001

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values that are equal to the provided value

### 135.2.21 kODMatchGreaterThan = & h2006

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values greater than the provided value

### 135.2.22 kODMatchLessThan = & h2007

MBS MacFrameworks Plugin, Plugin Version: 19.3.

**Function:** One of the match types.
**Notes:** is searching values less than the provided value

## 135.3 class ODRecordMBS

### 135.3.1 class ODRecordMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An Open Directory record.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 135.3.6 Methods

### 135.3.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 135.3.8 kODAttributeTypeAccessControlEntry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute type which stores directory access control directives.

### 135.3.9 kODAttributeTypeAddressLine1 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Line one of multiple lines of address data for a user.

### 135.3.10 kODAttributeTypeAddressLine2 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Line two of multiple lines of address data for a user.

### 135.3.11 kODAttributeTypeAddressLine3 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Line three of multiple lines of address data for a user.

### 135.3.12 kODAttributeTypeAdminLimits as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** XML plist indicating what an admin user can edit. Found in kODRecordTypeUsers records.

### 135.3.13 kODAttributeTypeAdvertisedServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.14 kODAttributeTypeAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Alias attribute, contain pointer to another node/record/attribute.

### 135.3.15 kODAttributeTypeAllAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used in requesting all attribute types in a search.

### 135.3.16 kODAttributeTypeAllTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to indicated recommended attribute types for a record type in the Config node.

### 135.3.17 kODAttributeTypeAltSecurityIdentities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Used to store alternate identities for the record. Values will have standardized form as specified by Microsoft LDAP schema (1.2.840.113556.1.4.867).

Kerberos:user\@REALM

### 135.3.18 kODAttributeTypeAreaCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Area code of a user's phone number.

### 135.3.19 kODAttributeTypeAttrListRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute List reference count for a process.

### 135.3.20 kODAttributeTypeAttrListRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** All the attribute list references for a process.

### 135.3.21 kODAttributeTypeAttrListValueRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attr List Value reference count for a process.

### 135.3.22 kODAttributeTypeAttrListValueRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** All the attribute list value references for a process.

### 135.3.23 kODAttributeTypeAuthCredential as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** An authentication credential, to be used to authenticate to a Directory.

### 135.3.24 kODAttributeTypeAuthenticationAuthority as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Determines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

Authentication authorities are a multi-part string separated by semi-colons.
One component is the "type" of authority, such as those listed below:

| | |
|---|---|
| "basic" | - is a crypt password |
| "ShadowHash" | - is a hashed password stored in a secure location |
| "ApplePasswordServer" | - is a password server-based account |
| "Kerberosv5" | - is a Kerberosv5 based |
| "LocalCachedUser" | - is a cached account based on an account from another node, using a ShadowHash password |
| "DisabledUser" | - is an account that has been disabled |

### 135.3.25 kODAttributeTypeAuthenticationHint as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to identify the authentication hint phrase.

### 135.3.26 kODAttributeTypeAuthMethod as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Authentication method for an authentication capable record.

### 135.3.27 kODAttributeTypeAuthorityRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of the authority revocation list.
A certificate revocation list that defines certificate authority certificates which are no longer trusted. No user certificates are included in this list.
Usually found in kODRecordTypeCertificateAuthorities records.

### 135.3.28 kODAttributeTypeAutomaticSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Automatic search path defined by the search node.

### 135.3.29 kODAttributeTypeAutomountInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

xDetermines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

### 135.3.30 kODAttributeTypeBirthday as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Single-valued attribute that defines the user's birthday.
Format is x.208 standard YYYYMMDDHHMMSSZ which we will require as GMT time.

### 135.3.31 kODAttributeTypeBootParams as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute type in host or machine records for storing boot params.

### 135.3.32 kODAttributeTypeBuilding as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the building name for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.33 kODAttributeTypeBuildVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Build version for reference.

### 135.3.34 kODAttributeTypeCACertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of the certificate of a certificate authority.
Its corresponding private key is used to sign certificates.
Usually found in kODRecordTypeCertificateAuthority records.

### 135.3.35 kODAttributeTypeCapacity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the capacity of a resource.
found in resource records (kODRecordTypeResources).
Example: 50

### 135.3.36 kODAttributeTypeCertificateRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of the certificate revocation list.
This is a list of certificates which are no longer trusted.
Usually found in kODRecordTypeCertificateAuthority records.

### 135.3.37 kODAttributeTypeCity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Usually, city for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.38 kODAttributeTypeComment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute used for unformatted comment.

### 135.3.39 kODAttributeTypeCompany as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines the user's company.
Example: Apple Inc.

### 135.3.40 kODAttributeTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of computers.

### 135.3.41 kODAttributeTypeConfigAvailable as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Config avail tag.

### 135.3.42 kODAttributeTypeConfigFile as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Config file name.

### 135.3.43 kODAttributeTypeContactGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the contact GUID of a group.
Usually found in group records (kODRecordTypeGroups)

### 135.3.44 kODAttributeTypeContactPerson as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the contact person of the machine.
Found in host or machine records.

### 135.3.45 kODAttributeTypeCopyTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Timestamp used in local account caching.

### 135.3.46 kODAttributeTypeCoreFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Core FW version for reference.

### 135.3.47 kODAttributeTypeCountry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents country of a record entry.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.48 kODAttributeTypeCreationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute showing date/time of record creation.
Format is x.208 standard YYYYMMDDHHMMSSZ which should be GMT time.

### 135.3.49 kODAttributeTypeCrossCertificatePair as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of a pair of certificates which verify each other. Both certificates have the same level of authority.
Usually found in kODRecordTypeCertificateAuthority records.

### 135.3.50 kODAttributeTypeCustomSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Admin user configured custom search path defined by the search node.

### 135.3.51 kODAttributeTypeDataStamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute for checksum/meta data

### 135.3.52 kODAttributeTypeDateRecordCreated as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Date of record creation.

### 135.3.53 kODAttributeTypeDepartment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the department name of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.54 kODAttributeTypeDirRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Directory reference count for a process.

### 135.3.55 kODAttributeTypeDirRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** All the directory references for a process.

### 135.3.56 kODAttributeTypeDNSDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** DNS Resolver domain attribute.

### 135.3.57 kODAttributeTypeDNSName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** DNS Resolver nameserver attribute.

### 135.3.58 kODAttributeTypeDNSNameServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** DNS Resolver nameserver attribute.

### 135.3.59 kODAttributeTypeEMailAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Email address of usually a user record.

### 135.3.60 kODAttributeTypeEMailContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute that defines a record's custom email addresses.
found in user records (kODRecordTypeUsers).

Example: home:johndoe\@mymail.com

### 135.3.61 kODAttributeTypeENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute for hardware Ethernet address (MAC address).
Found in computer records (kODRecordTypeComputers).

### 135.3.62 kODAttributeTypeExpire as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for expiration date or time depending on association.

### 135.3.63 kODAttributeTypeFaxNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the FAX numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.64 kODAttributeTypeFirstName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for first name of user or person record.

### 135.3.65 kODAttributeTypeFullName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Full name of a record (e.g., "John Doe", "John Doe's Computer")

### 135.3.66 kODAttributeTypeFunctionalState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Functional state of plugin for example.

### 135.3.67 kODAttributeTypeFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Framework version for reference.

### 135.3.68 kODAttributeTypeGroup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of groups.

### 135.3.69 kODAttributeTypeGroupMembers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute type in group records containing lists of GUID values for members other than groups.

### 135.3.70 kODAttributeTypeGroupMembership as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Usually a list of users that below to a given group record.

### 135.3.71 kODAttributeTypeGroupServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

xml-plist attribute that defines a group's services.
Found in group records (kODRecordTypeGroups).

### 135.3.72 kODAttributeTypeGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for 36 character (128 bit) unique ID. An example value is "A579E95E-CDFE-4EBC-B7E7-F2158562170F". The standard format contains 32 uppercase hex characters and four hyphen characters.

### 135.3.73 kODAttributeTypeHardwareUUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to store hardware UUID in string form for a record. Typically found in kODRecordTypeComputers.

### 135.3.74 kODAttributeTypeHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Network home directory URL.

### 135.3.75 kODAttributeTypeHomeDirectoryQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the allowed usage for a user's home directory in bytes.
Found in user records (kODRecordTypeUsers).

### 135.3.76 kODAttributeTypeHomeDirectorySoftQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to define home directory size limit in bytes when user is notified that the hard limit is approaching.

### 135.3.77 kODAttributeTypeHomeLocOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the owner of a workgroup's shared home directory.
Typically found in kODRecordTypeGroups records.

### 135.3.78 kODAttributeTypeHomePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Home telephone number of a user or person.

### 135.3.79 kODAttributeTypeHTML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** HTML location.

### 135.3.80 kODAttributeTypeIMHandle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the Instant Messaging handles of a user.
Values should be prefixed with the appropriate IM type
(i.e., AIM:, Jabber:, MSN:, Yahoo:, or ICQ:).
Usually found in user records (kODRecordTypeUsers).

### 135.3.81 kODAttributeTypeInternetAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to track internet alias.

### 135.3.82 kODAttributeTypeIPAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** IP address expressed either as domain or IP notation.

### 135.3.83 kODAttributeTypeIPAddressAndENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** A pairing of IPv4 or IPv6 addresses with Ethernet addresses (e.g., "10.1.1.1/00:16:cb:92:56:41").
Usually found on kODRecordTypeComputers for use by services that need specific pairing of the two values.
This should be in addition to kODAttributeTypeIPAddress, kODAttributeTypeIPv6Address and kODAttributeTypeENetAddress. This is necessary because not all directories return attribute values in a guaranteed order.

### 135.3.84 kODAttributeTypeIPv6Address as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

IPv6 address expressed in the standard notation (e.g., "fe80::236:caff:fcc2:5641")
Usually found on kODRecordTypeComputers and kODRecordTypeHosts.

### 135.3.85 kODAttributeTypeJobTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the job title of a user.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.86 kODAttributeTypeJPEGPhoto as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Used to store binary picture data in JPEG format.
Usually found in user, people or group records (kODRecordTypeUsers, kODRecordTypePeople, kODRecordTypeGroups).

### 135.3.87 kODAttributeTypeKDCAuthKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** KDC master key RSA encrypted with realm public key.

### 135.3.88 kODAttributeTypeKDCConfigData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Contents of the kdc.conf file.

### 135.3.89 kODAttributeTypeKerberosRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Supports Kerberized SMB Server services.

### 135.3.90 kODAttributeTypeKerberosServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** This is used to store the principals in host records (i.e., "host", "vnc", etc.)

### 135.3.91 kODAttributeTypeKeywords as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Keywords using for searching capability.

### 135.3.92 kODAttributeTypeLastName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for the last name of user or person record.

### 135.3.93 kODAttributeTypeLDAPReadReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of LDAP server URLs which can each be used to read directory data.

### 135.3.94 kODAttributeTypeLDAPSearchBaseSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Search base suffix for a LDAP server.

### 135.3.95 kODAttributeTypeLDAPWriteReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of LDAP server URLs which can each be used to write directory data.

### 135.3.96 kODAttributeTypeLocaleRelay as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.97 kODAttributeTypeLocaleSubnets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.98 kODAttributeTypeLocalOnlySearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Local only search path defined by the search node.

### 135.3.99 kODAttributeTypeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the location a service is available from (usually domain name).
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

### 135.3.100 kODAttributeTypeMailAttribute as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Holds the mail account config data.

### 135.3.101 kODAttributeTypeMapCoordinates as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines coordinates for a user's location.
found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).
Example: 7.7,10.6

### 135.3.102 kODAttributeTypeMapGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Represents the GUID for a record's map.

### 135.3.103 kODAttributeTypeMapURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines the URI of a user's location.
Usually found in user records (kODRecordTypeUsers).
Example: http://example.com/bldg1

### 135.3.104 kODAttributeTypeMCXFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used by ManagedClient.

### 135.3.105 kODAttributeTypeMCXSettings as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used by ManagedClient.

### 135.3.106 kODAttributeTypeMetaAmbiguousName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Searches a configured list of attributes; by default: RecordName, FullName, EMailAddress.

### 135.3.107 kODAttributeTypeMetaAugmentedAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attributes that have been augmented.

### 135.3.108 kODAttributeTypeMetaAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to query for kODRecordTypeAutomount entries associated with a specific kODRecordTypeAutomountMap.

### 135.3.109 kODAttributeTypeMetaNodeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Meta attribute returning registered node name by directory node plugin.

### 135.3.110 kODAttributeTypeMetaRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Native record name, e.g. LDAP DN

### 135.3.111 kODAttributeTypeMiddleName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for the middle name of user or person record.

### 135.3.112 kODAttributeTypeMIME as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Data contained in this attribute type is a fully qualified MIME Type.

### 135.3.113 kODAttributeTypeMobileNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the mobile numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.114 kODAttributeTypeModificationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute showing date/time of record modification.
Format is x.208 standard YYYYMMDDHHMMSSZ which is required as GMT time.

### 135.3.115 kODAttributeTypeNamePrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the title prefix of a user or person. ie. Mr., Ms., Mrs., Dr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.116 kODAttributeTypeNameSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the name suffix of a user or person.
i.e., Jr., Sr., etc.

Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.117 kODAttributeTypeNativeOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used in requesting all native attribute types in a search.

### 135.3.118 kODAttributeTypeNestedGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute type in group records for the list of GUID values for nested groups.

### 135.3.119 kODAttributeTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type that indicates which netgroups its record is a member of.
Found in user and host records.

### 135.3.120 kODAttributeTypeNetGroupTriplet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute that defines the host, user and domain triplet combinations to support NetGroups. Each attribute value is comma separated string to maintain the triplet (e.g., host,user,domain).

### 135.3.121 kODAttributeTypeNetworkInterfaces as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.122 kODAttributeTypeNetworkNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute that defines a network number. Usually found in network records (kODRecordTypeNetworks)

### 135.3.123 kODAttributeTypeNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Defines a user's home directory mount point on the local machine.

### 135.3.124 kODAttributeTypeNickName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the nickname of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.125 kODAttributeTypeNodeOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Any extended options supported by the node during creation

### 135.3.126 kODAttributeTypeNodePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute type in Neighborhood records describing the DS Node to search while looking up aliases in this neighborhood.

### 135.3.127 kODAttributeTypeNodeRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Node reference count for a process.

### 135.3.128 kODAttributeTypeNodeRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** All the node references for a process.

### 135.3.129 kODAttributeTypeNodeSASLRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Contains the SASL realm associated with this node (if any)

### 135.3.130 kODAttributeTypeNote as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Note attribute.

### 135.3.131 kODAttributeTypeNTDomainComputerAccount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Supports Kerberized SMB Server services.

### 135.3.132 kODAttributeTypeNumTableList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Summary of the reference table entries presented as attribute values from the Configure node.

### 135.3.133 kODAttributeTypeOperatingSystem as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Returns the operating system type where the daemon is running, e.g., Mac OS X or Mac OS X Server

### 135.3.134 kODAttributeTypeOperatingSystemVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Returns the operating system version where the daemon is running, e.g., 10.6

### 135.3.135 kODAttributeTypeOrganizationInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Usually the organization info of a user.

### 135.3.136 kODAttributeTypeOrganizationName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Usually the organization of a user.

### 135.3.137 kODAttributeTypeOriginalHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Home directory URL used in local account caching.

### 135.3.138 kODAttributeTypeOriginalNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** NFS home directory used in local account caching.

### 135.3.139 kODAttributeTypeOriginalNodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Nodename used in local account caching.

### 135.3.140 kODAttributeTypeOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the owner of a record.
Typically the value is a LDAP distinguished name.

### 135.3.141 kODAttributeTypeOwnerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the owner GUID of a group.
Found in group records (kODRecordTypeGroups).

### 135.3.142 kODAttributeTypePagerNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the pager numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.143 kODAttributeTypeParentLocales as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.144 kODAttributeTypePassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Holds the password or credential value.

### 135.3.145 kODAttributeTypePasswordPlus as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Holds marker data to indicate possible authentication redirection.

### 135.3.146 kODAttributeTypePasswordPolicyOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Collection of password policy options in single attribute.
Used in user presets record.

### 135.3.147 kODAttributeTypePasswordServerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Represents the attribute for storing the password server's replication information.

### 135.3.148 kODAttributeTypePasswordServerLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Specifies the IP address or domain name of the Password Server associated with a given directory node. Found in a config record named PasswordServer.

### 135.3.149 kODAttributeTypePGPPublicKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Pretty Good Privacy public encryption key.

### 135.3.150 kODAttributeTypePhoneContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines a record's custom phone numbers.
found in user or people records.
Example: home fax:408-555-4444

### 135.3.151 kODAttributeTypePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Telephone number of a user.

### 135.3.152 kODAttributeTypePicture as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the path of the picture for each user displayed in the login window.
Found in user records (kODRecordTypeUsers).

### 135.3.153 kODAttributeTypePIDValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** PID value.

### 135.3.154 kODAttributeTypePluginIndex as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Plugin index for reference.

### 135.3.155 kODAttributeTypePlugInInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Information (version, signature, about, credits, etc.) about the plug-in that is actually servicing a particular directory node.
Has never been supported.

### 135.3.156 kODAttributeTypePort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the port number a service is available on.
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

### 135.3.157 kODAttributeTypePostalAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** The postal address usually excluding postal code.

### 135.3.158 kODAttributeTypePostalAddressContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines a record's alternate postal addresses.
Found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).

### 135.3.159 kODAttributeTypePostalCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** The postal code such as zip code in the USA.

### 135.3.160 kODAttributeTypePresetUserIsAdmin as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Flag to indicate whether users created from this preset are administrators by default. Found in kODRecordTypePresetUsers records.

### 135.3.161 kODAttributeTypePrimaryComputerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

An attribute that defines a primary computer of the computer group.
Added to computer group record type (kODRecordTypeComputerGroups)

### 135.3.162 kODAttributeTypePrimaryComputerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** The GUID of the computer list with which this computer record is associated.

### 135.3.163 kODAttributeTypePrimaryGroupID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** This is the 32 bit unique ID that represents the primary group a user is part of, or the ID of a group. Format is a signed 32 bit integer represented as a string.

### 135.3.164 kODAttributeTypePrimaryLocale as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.165 kODAttributeTypePrimaryNTDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Supports Kerberized SMB Server services.

### 135.3.166 kODAttributeTypePrinter1284DeviceID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute that defines the IEEE 1284 DeviceID of a printer.
This is used when configuring a printer.

### 135.3.167 kODAttributeTypePrinterLPRHost as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Standard attribute type for kODRecordTypePrinters.

### 135.3.168 kODAttributeTypePrinterLPRQueue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Standard attribute type for kODRecordTypePrinters.

### 135.3.169 kODAttributeTypePrinterMakeAndModel as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute for definition of the Printer Make and Model. An example value would be "HP LaserJet 2200". This would be used to determine the proper PPD file to be used when configuring a printer from the Directory. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

### 135.3.170 kODAttributeTypePrinterType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Standard attribute type for kODRecordTypePrinters.

### 135.3.171 kODAttributeTypePrinterURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute that defines the URI of a printer "ipp://address" or "smb://server/queue". This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

### 135.3.172 kODAttributeTypePrinterXRISupported as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines additional URIs supported by a printer.
This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

### 135.3.173 kODAttributeTypePrintServiceInfoText as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Standard attribute type for kODRecordTypePrinters.

### 135.3.174 kODAttributeTypePrintServiceInfoXML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Standard attribute type for kODRecordTypePrinters.

### 135.3.175 kODAttributeTypePrintServiceUserData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute for print quota configuration or statistics (XML data).
Found in user records (kODRecordTypeUsers) or print service statistics records (kODRecordTypePrintServiceUser).

### 135.3.176 kODAttributeTypeProcessName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Process Name.

### 135.3.177 kODAttributeTypeProfiles as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Profiles associated with the record.

### 135.3.178 kODAttributeTypeProfilesTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Timestamp for the profiles associated with the record.

### 135.3.179 kODAttributeTypeProtocolNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute that defines a protocol number. Usually found in protocol records (kODRecordTypeProtocols)

### 135.3.180 kODAttributeTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of protocols.

### 135.3.181 kODAttributeTypePwdAgingPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Contains the password aging policy data for an authentication capable record.

### 135.3.182 kODAttributeTypeReadOnlyNode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Can be found using dsGetDirNodeInfo and will return one of
ReadOnly, ReadWrite, or WriteOnly strings.
Note that ReadWrite does not imply fully readable or writable

### 135.3.183 kODAttributeTypeRealUserID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used by Managed Client

### 135.3.184 kODAttributeTypeRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of names/keys for this record.

### 135.3.185 kODAttributeTypeRecordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute for a Record or a Directory Node.

### 135.3.186 kODAttributeTypeRecRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Record reference count for a process.

### 135.3.187 kODAttributeTypeRecRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** All the record references for a process.

### 135.3.188 kODAttributeTypeRelationships as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines the relationship to the record type.
found in user records (kODRecordTypeUsers).
Example: brother:John

### 135.3.189 kODAttributeTypeRelativeDNPrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to map the first native LDAP attribute type required in the building of the Relative Distinguished Name for LDAP record creation.

### 135.3.190 kODAttributeTypeResourceInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** attribute that defines a resource record's info.

### 135.3.191 kODAttributeTypeResourceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute type for the kind of resource.
found in resource records (kODRecordTypeResources).

Example: ConferenceRoom

### 135.3.192 kODAttributeTypeRPCNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute that defines an RPC number. Usually found in RPC records (kODRecordTypeRPC)

### 135.3.193 kODAttributeTypeSchema as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of attribute types.

### 135.3.194 kODAttributeTypeSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Search path used by the search node.

### 135.3.195 kODAttributeTypeSearchPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Search policy for the search node.

### 135.3.196 kODAttributeTypeServicesLocator as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** the URI for a record's calendar

### 135.3.197 kODAttributeTypeServiceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Represents the service type for the service. This is the raw service type of the service. For example a service record type of kODRecordTypeWebServer might have a service type of "http" or "https".

### 135.3.198 kODAttributeTypeSetupAdvertising as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for Setup Assistant automatic population.

### 135.3.199 kODAttributeTypeSetupAutoRegister as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for Setup Assistant automatic population.

### 135.3.200 kODAttributeTypeSetupLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for Setup Assistant automatic population.

### 135.3.201 kODAttributeTypeSetupOccupation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used for Setup Assistant automatic population.

### 135.3.202 kODAttributeTypeSMBAcctFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Account control flag.

### 135.3.203 kODAttributeTypeSMBGroupRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Constant for supporting PDC SMB interaction with DirectoryService.

### 135.3.204 kODAttributeTypeSMBHome as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** UNC address of Windows homedirectory mount point (\server\sharepoint).

### 135.3.205 kODAttributeTypeSMBHomeDrive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Drive letter for homedirectory mount point.

### 135.3.206 kODAttributeTypeSMBKickoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute in support of SMB interaction.

### 135.3.207 kODAttributeTypeSMBLogoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute in support of SMB interaction.

### 135.3.208 kODAttributeTypeSMBLogonTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** SMB Primary Group Security ID, stored as a string attribute of up to 64 bytes. Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

### 135.3.209 kODAttributeTypeSMBPrimaryGroupSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

### 135.3.210 kODAttributeTypeSMBProfilePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Desktop management info (dock, desktop links, etc).

### 135.3.211 kODAttributeTypeSMBPWDLastSet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute in support of SMB interaction.

### 135.3.212 kODAttributeTypeSMBRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute in support of SMB interaction.

### 135.3.213 kODAttributeTypeSMBScriptPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Login script path.

### 135.3.214 kODAttributeTypeSMBSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

SMB Security ID, stored as a string attribute of up to 64 bytes.
Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

### 135.3.215 kODAttributeTypeSMBUserWorkstations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of workstations user can login from (machine account names).

### 135.3.216 kODAttributeTypeStandardOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used in requesting all standard attribute types in a query.

### 135.3.217 kODAttributeTypeState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** The state or province of a country.

### 135.3.218 kODAttributeTypeStreet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Represents the street address of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

### 135.3.219 kODAttributeTypeSubNodes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute of a node which lists the available subnodes of that node.

### 135.3.220 kODAttributeTypeTimePackage as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Data of Create, Modify, Backup time in UTC.

### 135.3.221 kODAttributeTypeTimeToLive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute recommending how long to cache the record's attribute values.
Format is an unsigned 32 bit representing seconds. ie. 300 is 5 minutes.

### 135.3.222 kODAttributeTypeTotalRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Total count of references for a process.

### 135.3.223 kODAttributeTypeTotalSize as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** checksum/meta data.

### 135.3.224 kODAttributeTypeTrustInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to describe a node's trust information.

### 135.3.225 kODAttributeTypeUniqueID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

This is the 32 bit unique ID that represents the user in the legacy manner.
Format is a signed integer represented as a string.

### 135.3.226 kODAttributeTypeURL as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** List of URLs.

### 135.3.227 kODAttributeTypeUserCertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of the user's certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party.

### 135.3.228 kODAttributeTypeUserPKCS12Data as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing binary data in PKCS # 12 format.
Usually found in user records. The value can contain keys, certificates, and other related information and is encrypted with a passphrase.

### 135.3.229 kODAttributeTypeUserShell as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used to represent the user's shell setting.

### 135.3.230 kODAttributeTypeUserSMIMECertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

Attribute containing the binary of the user's SMIME certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party. SMIME certificates are often used for signed or encrypted emails.

### 135.3.231 kODAttributeTypeVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Version label.

### 135.3.232 kODAttributeTypeVFSDumpFreq as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.

**Notes:** Attribute used to support mount records.

### 135.3.233 kODAttributeTypeVFSLinkDir as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute used to support mount records.

### 135.3.234 kODAttributeTypeVFSOpts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Used in support of mount records.

### 135.3.235 kODAttributeTypeVFSPassNo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute used to support mount records.

### 135.3.236 kODAttributeTypeVFSType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** Attribute used to support mount records.

### 135.3.237 kODAttributeTypeWeblogURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:**

attribute that defines the URI of a user's weblog.
Usually found in user records (kODRecordTypeUsers).

Example: http://example.com/blog/jsmith

### 135.3.238 kODAttributeTypeXMLPlist as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the attribute type constants.
**Notes:** XML plist used.

### 135.3.239 kODRecordTypeAFPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record type of AFP server records.

### 135.3.240 kODRecordTypeAliases as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Used to represent alias records.

### 135.3.241 kODRecordTypeAttributeTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies records that represent each possible attribute type.

### 135.3.242 kODRecordTypeAugments as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Used to store augmented record data.

### 135.3.243 kODRecordTypeAutomount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Used to store automount record data.

### 135.3.244 kODRecordTypeAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Used to store automountMap record data.

### 135.3.245 kODRecordTypeAutoServerSetup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Used to discover automated server setup information.

### 135.3.246 kODRecordTypeBootp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the local node for storing bootp info.

### 135.3.247 kODRecordTypeCertificateAuthorities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record type that contains certificate authority informatio

### 135.3.248 kODRecordTypeComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies computer group records.

### 135.3.249 kODRecordTypeComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies computer list records.

### 135.3.250 kODRecordTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies computer records.

### 135.3.251 kODRecordTypeConfiguration as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies configuration records.

### 135.3.252 kODRecordTypeEthernets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the node for storing ethernets.

### 135.3.253 kODRecordTypeFileMakerServers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** FileMaker servers record type that describes available FileMaker servers, used for service discovery.

### 135.3.254 kODRecordTypeFTPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies ftp server records.

### 135.3.255 kODRecordTypeGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies group records.

### 135.3.256 kODRecordTypeHosts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies host records.

### 135.3.257 kODRecordTypeHostServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the local node for storing host services.

### 135.3.258 kODRecordTypeLDAPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies LDAP server records.

### 135.3.259 kODRecordTypeLocations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Location record type.

### 135.3.260 kODRecordTypeMounts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies mount records.

### 135.3.261 kODRecordTypeNetDomains as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the local node for storing net domains.

### 135.3.262 kODRecordTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the local node for storing net groups.

### 135.3.263 kODRecordTypeNetworks as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies network records.

### 135.3.264 kODRecordTypeNFS as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies NFS records.

### 135.3.265 kODRecordTypePeople as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record type that contains "People" records used for contact information.

### 135.3.266 kODRecordTypePresetComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** The computer group record type used for presets in record creation.

### 135.3.267 kODRecordTypePresetComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** The computer list record type used for presets in record creation.

### 135.3.268 kODRecordTypePresetComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** The computer record type used for presets in record creation.

### 135.3.269 kODRecordTypePresetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** The group record type used for presets in record creation.

### 135.3.270 kODRecordTypePresetUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** The user record type used for presets in record creation.

### 135.3.271 kODRecordTypePrinters as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies printer records.

### 135.3.272 kODRecordTypePrintService as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies print service records.

### 135.3.273 kODRecordTypePrintServiceUser as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Record in the local node for storing quota usage for a user.

### 135.3.274 kODRecordTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies protocol records.

### 135.3.275 kODRecordTypeQTSServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies quicktime streaming server records.

### 135.3.276 kODRecordTypeQueryInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Specifically to return query information inline such as skipped nodes

### 135.3.277 kODRecordTypeRecordTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies records that represent each possible record type.

### 135.3.278 kODRecordTypeResources as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies resources used in group services.

### 135.3.279 kODRecordTypeRPC as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies remote procedure call records.

### 135.3.280 kODRecordTypeServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies generic server records.

### 135.3.281 kODRecordTypeServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies directory based service records.

### 135.3.282 kODRecordTypeSharePoints as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Share point record type.

### 135.3.283 kODRecordTypeSMBServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies SMB server records.

### 135.3.284 kODRecordTypeUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies user records.

### 135.3.285 kODRecordTypeWebServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the record type constants.
**Notes:** Identifies web server records.

### 135.3.286 recordDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary of attributes with their respective values.
**Notes:**

Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

### 135.3.287 recordDetailsForAttributes(inAttributes() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary of attributes with their respective values.
**Notes:**

inAttributes: An array of attributes. Can be nil.
Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

If inAttributes is nil, all currently retrieved attributes are returned.

### 135.3.288 synchronize(byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Synchronizes the record from the directory to get current data and commit changes.
**Notes:**

Returns true if the record successfully synchronizes; otherwise, false.

This method only fetches those attributes that have been fetched before.

### 135.3.289 valuesForAttribute(inAttribute as String, byref error as NSErrorMBS) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the values of an attribute of the record.
**Notes:**

inAttribute: The attribute.
Error: An error reference for error details. Can be nil.

Returns an array of attribute values. Elements are of type String or MemoryBlock.

### 135.3.290 Properties

### 135.3.291 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 135.3.292 recordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The official name of the record.
**Notes:** (Read only property)

### 135.3.293 recordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The record,Äôs type.
**Notes:** (Read only property)

## 135.4 class ODSessionMBS

### 135.4.1 class ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for an Open Directory session.

### 135.4.2 Blog Entries

### 135.4.6 Methods

### 135.4.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** gets default session.

### 135.4.8 defaultSession as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a shared instance of the local session.

### 135.4.9 nodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the node names that are registered with this session.

### 135.4.10 ODSessionProxyAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys for the options dictionary.
**Notes:** The address to connect to via proxy. The value is of type string.

### 135.4.11 ODSessionProxyPassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys for the options dictionary.
**Notes:** The password to connect with via proxy. The value is of type string.

### 135.4.12 ODSessionProxyPort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys for the options dictionary.
**Notes:** The port to connect to via proxy. The value is of type integer.

### 135.4.13 ODSessionProxyUsername as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the keys for the options dictionary.
**Notes:** The username to connect with via proxy. The value is of type string.

### 135.4.14 session(options as dictionary, byref Error as NSErrorMBS) as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a session object directed over proxy to another host.
**Notes:**

Options: A dictionary of options to associate with the session. Can be nil.
Error: An error reference for error details. Can be nil.

Returns the initialized session object.

### 135.4.15 UserName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries user name.
**Notes:** Convenience function to query user name of current user.

### 135.4.16 Properties

### 135.4.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Internal object reference.
**Notes:** (Read and Write property)

# Chapter 136

# OpenCL

## 136.1 class CLCommandQueueMBS

### 136.1.1 class CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for an OpenCL command queue.
**Example:**

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

**Deprecated:** This item is deprecated and should no longer be used.

### 136.1.2 Blog Entries

- OpenCL support in our plugins

### 136.1.3 Blog Entries

- OpenCL support in our plugins

### 136.1.4 Methods

### 136.1.5 Constructor(context as CLContextMBS, device as CLDeviceMBS, flags as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Create a command-queue on a specific device.
**Example:**

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

**Notes:**

context: Must be a valid OpenCL context.
device: Must be a device associated with context. It can either be in the list of devices specified when context is created using CLContextMBS Constructor or have the same device type as the device type specified when the context is created.
flags: Specifies a list of properties for the command-queue. This is a bit-field. Only command-queue properties specified in the table below can be set in properties; otherwise the value specified in properties is considered to be not valid.

| Command-Queue Properties | Description |
|---|---|
| kQueueOutOfOrderExecModeEnable | Determines whether the commands queued in the command-queue are executed in-order or out-of-order. If set, the commands in the command-queue are executed out-of-order. Otherwise, commands are executed in-order. |
| kQueueProfilingEnable | Enable or disable profiling of commands in the command-queue. If set, the profiling of commands is enabled. Otherwise profiling of commands is disabled. See clGetEventProfilingInfo for more information. |

The OpenCL functions that are submitted to a command-queue are enqueued in the order the calls are made but can be configured to execute in-order or out-of-order. The properties argument in clCreateCommandQueue can be used to specify the execution order.

If the kQueueOutOfOrderExecModeEnable property of a command-queue is not set, the commands enqueued to a command-queue execute in order. For example, if an application calls EnqueueNDRangeKernel to execute kernel A followed by a EnqueueNDRangeKernel to execute kernel B, the application can assume that kernel A finishes first and then kernel B is executed. If the memory objects output by kernel A are

inputs to kernel B then kernel B will see the correct data in memory objects produced by execution of kernel A. If the kQueueOutOfOrderExecModeEnable property of a commandqueue is set, then there is no guarantee that kernel A will finish before kernel B starts execution.

Applications can configure the commands enqueued to a command-queue to execute out-of-order by setting the kQueueOutOfOrderExecModeEnable property of the command-queue. This can be specified when the command-queue is created or can be changed dynamically using this Constructor. In out-of-order execution mode there is no guarantee that the enqueued commands will finish execution in the order they were queued. As there is no guarantee that kernels will be executed in order, i.e. based on when the EnqueueNDRangeKernel calls are made within a command-queue, it is therefore possible that an earlier EnqueueNDRangeKernel call to execute kernel A identified by event A may execute and/or finish later than a EnqueueNDRangeKernel call to execute kernel B which was called by the application at a later point in time. To guarantee a specific order of execution of kernels, a wait on a particular event (in this case event A) can be used. The wait for event A can be specified in the event_wait_list argument to EnqueueNDRangeKernel for kernel B.

In addition, a wait for events or a barrier command can be enqueued to the command-queue. The wait for events command ensures that previously enqueued commands identified by the list of events to wait for have finished before the next batch of commands is executed. The barrier command ensures that all previously enqueued commands in a command-queue have finished execution before the next batch of commands is executed.

Similarly, commands to read, write, copy or map memory objects that are enqueued after EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel commands are not guaranteed to wait for kernels scheduled for execution to have completed (if the kQueueOutOfOrderExecModeEnable property is set). To ensure correct ordering of commands, the event object returned by EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel can be used to enqueue a wait for event or a barrier command can be enqueued that must complete before reads or writes to the memory object(s) occur.

Lasterror is set.

### 136.1.6 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the context specified when the command-queue is created.
**Notes:** Lasterror is set.

### 136.1.7 Device as CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the device specified when the command-queue is created.

**Notes:** Lasterror is set.

### 136.1.8 EnqueueBarrier

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A synchronization point that enqueues a barrier operation.
**Notes:**

EnqueueBarrier is a synchronization point that ensures that all queued commands in command_queue have finished execution before the next batch of commands can begin execution.

Lasterror is set.

### 136.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy a buffer object to another buffer object.
**Notes:**

sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 136.1.10 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

### 136.1.10 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy a buffer object to another buffer object.
**Notes:**

sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 136.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer) 21576

### 136.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy a buffer object to an image object.
**Notes:**

SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.
See also:

- 136.1.12 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21578

### 136.1.12 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy a buffer object to an image object.
**Notes:**

SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.
See also:

- 136.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer) 21577

### 136.1.13 EnqueueCopyImage(sourceImage as CLMemMBS, destImage as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy image objects.
**Notes:**

sourceImage: Source image.
destImage: Dest image.

sourceOrigin: Defines the starting (x, y, z) location in pixels in src_image from where to start the data copy. If src_image is a 2D image object, the z value given by sourceOriginZ must be 0.

sourceOrigin: Defines the starting (x, y, z) location in pixels in dst_image from where to start the data copy. If dst_image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If src_image or dst_image is a 2D image object, the depth value given by RegionDepth must be 1.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with

events in EventWaitList and CommandQueue must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

It is currently a requirement that the sourceImage and destImage image memory objects for EnqueueCopyImage must have the exact same image format (i.e. the cl_image_format descriptor specified when sourceImage and destImage are created must match).

sourceImage and destImage can be 2D or 3D image objects allowing us to perform the following actions:

- Copy a 2D image object to a 2D image object.
- Copy a 2D image object to a 2D slice of a 3D image object.
- Copy a 2D slice of a 3D image object to a 2D image object.
- Copy a 3D image object to a 3D image object.

Lasterror is set.

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to copy an image object to a buffer object.
**Notes:**

sourceImage: A valid image object.
destBuffer: A valid buffer object.

sourceOrigin: Defines the (x, y, z) offset in pixels in the image from where to copy. If sourceImage is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If sourceImage is a 2D image object, the depth value given by RegionDepth must be 1.

destOffset: The offset where to begin copying data into destBuffer. The size in bytes of the region to be copied referred to as dst_cb is computed as width * height * depth * bytes/image element if sourceImage is a 3D image object and is computed as width * height * bytes/image element if sourceImage is a 2D image object.

EventWaitList: Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

### 136.1.17 EnqueueMapBuffer(buffer as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, offset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
**Notes:**

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.

buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

Lasterror is set.

### 136.1.18 EnqueueMapBuffer(buffer as CLMemMBS, MapFlags as Integer, offset as Integer, size as Integer) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
**Notes:**

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the

application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.
buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). ### 136.1.19 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
**Notes:**

image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

### 136.1.21 EnqueueMarker(byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a marker command.
**Notes:**

Enqueues a marker command to the command queue. The marker command returns an event which can be used to queue a wait on this marker event i.e. wait for all commands queued before the marker command to complete.

Lasterror is set.

### 136.1.22 EnqueueNativeKernel(FunctionPtr as ptr, args as memoryblock, argsSize as Integer, NumberOfMemoryObjects as Integer, MemList as memoryblock, ArgsMemoryLocations as memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to execute a native C/C++ function not compiled using the OpenCL compiler.
**Notes:**

First a warning: Don't use this with Xojo methods. You can point to a function written in C which you made thread safe.

self: A valid command-queue. A native user function can only be executed on a command-queue created on a device that has kExceNativeKernel capability set in ExecutionCapabilities property.

FunctionPtr: A pointer to a host-callable user function.

args: A pointer to the args list that FunctionPtr should be called with.
argsSize: The size in bytes of the args list that args points to.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

NumberOfMemoryObjects: The number of buffer objects that are passed in args.

MemList: A list of valid buffer objects, if NumberOfMemoryObjects is greater than 0. The buffer object values specified in MemList are memory object handles (CLMemMBS.handle values) or nil.

ArgsMemoryLocations: A pointer to appropriate locations that args points to where memory object handles (CLMemMBS.handle values) are stored. Before the user function is executed, the memory object handles are replaced by pointers to global memory.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optionally, Returns an event object that identifies this particular kernel execution instance.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

Lasterror is set.

### 136.1.24 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to execute a kernel on a device.
**Notes:**

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

### 136.1.25 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to execute a kernel on a device.
**Notes:**

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

### 136.1.26 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueue commands to read from a buffer object to host memory.
**Notes:**

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.

- 136.1.27 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memo-

ryblock) 21595

### 136.1.27 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueue commands to read from a buffer object to host memory.
**Notes:**

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.
See also:

- 136.1.26 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21594

### 136.1.28 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to read from a 2D or 3D image object to host memory.
**Notes:**

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

### 136.1.29 EnqueueReadImage(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to read from a 2D or 3D image object to host memory..
**Notes:**

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

- 136.1.28 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21596

### 136.1.30 EnqueueReadPicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** Enqueues a command to read from a 2D or 3D image object to a Xojo picture object.
**Example:**

```
const size = 500

// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)
```

```
// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

**Notes:**

image: Refers to a valid 2D or 3D image object.

origin: Defines the (x, y) offset in pixels in the image from where to read.
region: Defines the (width, heigh) in pixels of the 2D or 3D rectangle being read.

pic: The Xojo picture object to write pixel data to.

This command is always blocking.
Lasterror is set.

### 136.1.31 EnqueueTask(kernel as CLKernelMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to execute a kernel on a device.
**Notes:**

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.
See also:

- 136.1.32 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21601

### 136.1.32 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to execute a kernel on a device.
**Notes:**

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.
See also:

- 136.1.31 EnqueueTask(kernel as CLKernelMBS) 21600

### 136.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to unmap a previously mapped region of a memory object.
**Notes:**

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.
See also:

- 136.1.34 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21602

### 136.1.34 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to unmap a previously mapped region of a memory object.
**Notes:**

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.
See also:

- 136.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock) 21601

### 136.1.35 EnqueueWaitForEvents(EventWaitList() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a wait for a specific event or a list of events to complete before any future commands queued in the command-queue are executed.
**Notes:**

EventWaitList: Events specified in EventWaitList act as synchronization points.

The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

Lasterror is set.

### 136.1.36 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueue commands to write to a buffer object from host memory.
**Notes:**

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

- 136.1.37 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock) 21604

### 136.1.37 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueue commands to write to a buffer object from host memory.
**Notes:**

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

### 136.1.38 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to write from a 2D or 3D image object to host memory.
**Notes:**

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

- 136.1.39 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock) 21607

### 136.1.39 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Enqueues a command to write from a 2D or 3D image object to host memory.
**Notes:**

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row

pitch and slice pitch.

- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

- 136.1.38 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21606

### 136.1.40 EnqueueWritePicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

**Function:** Enqueues a command to write from a 2D or 3D image object to a Xojo Picture.
**Example:**

```
const size = 500

// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)
```

```
// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

**Notes:**

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

origin: Defines the (x, y) offset in pixels in the image from where to write or write.

region: Defines the (width, height) in pixels of the 2D or 3D rectangle being write or written.

pic: The target Xojo picture object. This must match in the image format for the image object and the size you specified in region.

This operation is always performed blocked.
Lasterror is set.

### 136.1.41 Finish

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Blocks until all previously queued OpenCL commands in a command-queue are issued to the associated device and have completed.
**Notes:**

Blocks until all previously queued OpenCL commands in command_queue are issued to the associated device and have completed.

Finish does not return until all queued commands in command_queue have been processed and completed. clFinish is also a synchronization point.

Lasterror is set.

### 136.1.42 Flush

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Issues all previously queued OpenCL commands in a command-queue to the device associated with the command-queue.
**Notes:**

Issues all previously queued OpenCL commands in command_queue to the device associated with command_queue.

Flush only guarantees that all queued commands to command_queue get issued to the appropriate device. There is no guarantee that they will be complete after Flush returns.

Lasterror is set.

Any blocking commands queued in a command-queue such as EnqueueReadImage or EnqueueReadBuffer with BlockingRead set to true, EnqueueWriteImage or EnqueueWriteBuffer with BlockingWrite set to true, EnqueueMapImage or EnqueueMapBuffer with BlockingMap set to true or WaitForEvents perform an implicit flush of the command-queue.

To use event objects that refer to commands enqueued in a command-queue as event objects to wait on by commands enqueued in a different command-queue, the application must call a Flush or any blocking commands that perform an implicit flush of the command-queue where the commands that refer to these event objects are enqueued.
Lasterror is set.

### 136.1.43 Properties as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the currently specified properties for the command-queue.
**Notes:** Lasterror is set.

### 136.1.44 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the command-queue reference count.
**Notes:** Lasterror is set.

### 136.1.45 Properties

### 136.1.46 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.1.47 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

## 136.2 class CLContextMBS

### 136.2.1 class CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The OpenCL class for a context.
**Example:**

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Contexts are used by the OpenCL runtime for managing objects such as command-queues, memory, program and kernel objects and for executing kernels on one or more devices specified in the context.

### 136.2.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.2.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.2.4 Methods

### 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates an OpenCL context.
**Example:**

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one
```

```
// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

**Notes:**

Platform: Optional, Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.

- 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21614
- 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21615
- 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21617

### 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates an OpenCL context.
**Notes:**

Platform: Optional, specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21613
- 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21615
- 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616

- 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21617

### 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Create an OpenCL context from a device type that identifies the specific device(s) to use.
**Example:**

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)
```

**Notes:**

Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

| Constants | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

Lasterror is set.
See also:

- 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21613
- 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21614
- 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616

- 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21617

### 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates an OpenCL context.
**Notes:**

Platform: Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21613
- 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21614
- 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21615
- 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21617

### 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates an OpenCL context.
**Notes:**

Platform: Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21613
- 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21614
- 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21615
- 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21617

### 136.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Create an OpenCL context from a device type that identifies the specific device(s) to use.
**Notes:**

Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

| Constants | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

Lasterror is set.
See also:

- 136.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21613
- 136.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21614
- 136.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21615
- 136.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616
- 136.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21616

### 136.2.11 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the list of devices in context.
**Example:**

```
// create context for all devices
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

// and query it for it's devices
for each d as CLDeviceMBS in co.Devices
MsgBox d.Name
next
```

### 136.2.12 GetSupportedImageFormats(flags as UInt64, type as UInt32) as CLImageFormatMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Get the list of image formats supported by an OpenCL implementation.
**Example:**

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

dim formats(-1) as CLImageFormatMBS = co.GetSupportedImageFormats(CLMemMBS.kMemoryReadWrite, CLMemMBS.kMemoryTypeImage2D)
dim lines(-1) as string

for each f as CLImageFormatMBS in formats
// see constants for what this values mean
lines.Append hex(f.ImageChannelOrder)+" - "+hex(f.ImageChannelDataType)
next

MsgBox Join(lines,EndOfLine)
```

**Notes:**

self: A valid OpenCL context on which the image object(s) will be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created and is described in the List of supported cl_mem_flags values for clCreateBuffer
type: Describes the image type and must be either kMemoryTypeImage2D or kMemoryTypeImage3D.

Returns an array of imageformat objects.

### 136.2.13 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the context reference count.
**Example:**

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

MsgBox str(context.ReferenceCount) // 1

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)

MsgBox str(context.ReferenceCount) // 2 as the command queue points to the context, too.
```

### 136.2.14 Properties

### 136.2.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.2.16 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.

(Read and Write property)

### 136.2.17 Constants

### 136.2.18 kErrorModeIgnore = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the error mode constants.

### 136.2.19 kErrorModeLogMessagesToStderr = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the error mode constants.
**Notes:** Sends all log messages to the file descriptor stderr.

### 136.2.20 kErrorModeLogMessagesToStdout = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the error mode constants.
**Notes:** Sends all log messages to the file descriptor stdout.

### 136.2.21 kErrorModeLogMessagesToSystemLog = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the error mode constants.
**Notes:** Fowards on all log messages to the Apple System Logger.

## 136.3 class CLDeviceMBS

### 136.3.1 class CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for an OpenCL Device.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.3.2 Methods

### 136.3.3 AddressBits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The default compute device address space size specified as an unsigned integer value in bits.
**Example:**

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name+": "+str(p.AddressBits)
next
```

**Notes:**

Currently supported values are 32 or 64 bits.
Lasterror is set.

### 136.3.4 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns true if the device is available and false if the device is not available.
**Notes:** Lasterror is set.

### 136.3.5 CompilerAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns false if the implementation does not have a compiler available to compile the program source.
**Notes:**

Is true if the compiler is available. This can be false for the embededed platform profile only.
Lasterror is set.

### 136.3.6 DeviceType as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The OpenCL device type.
**Notes:**

Currently supported values are one of or a combination of: kDeviceTypeCPU, kDeviceTypeGPU, kDeviceTypeAccelerator, or kDeviceTypeDefault.
Lasterror is set.

### 136.3.7 DeviceVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** OpenCL version string.
**Notes:**

Returns the OpenCL version supported by the device. This version string has the following format:

OpenCL<space><major_version.minor_version><space><vendor-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

### 136.3.8 DriverVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** OpenCL software driver version string in the form major_number.minor_number.
**Notes:** Lasterror is set.

### 136.3.9 EndianLittle as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns true if the OpenCL device is a little endian device and false otherwise.
**Notes:** Lasterror is set.

### 136.3.10 ErrorCorrectionSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns true if the device implements error correction for the memories, caches, registers etc. in the device.
**Notes:**

Returns false if the device does not implement error correction. This can be a requirement for certain clients of OpenCL.
Lasterror is set.

### 136.3.11 ExecutionCapabilities as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes the execution capabilities of the device.
**Notes:**

This is a bit-field that describes one or more of the following values:

kExecKernel - The OpenCL device can execute OpenCL kernels.
kExceNativeKernel - The OpenCL device can execute native kernels.

The mandated minimum capability is kExecKernel.
Lasterror is set.

### 136.3.12 Extensions as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns a space separated list of extension names.
**Example:**

```
// show msgbox with all extensions for first device

dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

dim extensions(-1) as string = split(device.Extensions," ")

dim lines(-1) as string
```

```
for each extension as string in extensions
lines.append extension
next

MsgBox Join(lines,EndOfLine)
```

**Notes:**

(the extension names themselves do not contain any spaces).
The list of extension names returned currently can include one or more of the following approved extension names:

cl_khr_fp64
cl_khr_select_fprounding_mode
cl_khr_global_int32_base_atomics
cl_khr_global_int32_extended_atomics
cl_khr_local_int32_base_atomics
cl_khr_local_int32_extended_atomics
cl_khr_int64_base_atomics
cl_khr_int64_extended_atomics
cl_khr_3d_image_writes
cl_khr_byte_addressable_store
cl_khr_fp16

Lasterror is set.

### 136.3.13 GlobalMemoryCacheLineSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Size of global memory cache line in bytes.
**Notes:** Lasterror is set.

### 136.3.14 GlobalMemoryCacheSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Size of global memory cache in bytes.
**Notes:** Lasterror is set.

### 136.3.15 GlobalMemoryCacheType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Type of global memory cache supported.
**Notes:**

See kCacheMemType* constants.
Lasterror is set.

### 136.3.16 GlobalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Size of global device memory in bytes.
**Notes:** Lasterror is set.

### 136.3.17 Image2DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max height of 2D image in pixels.
**Notes:**

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

### 136.3.18 Image2DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max width of 2D image in pixels.
**Notes:**

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

### 136.3.19 Image3DMaxDepth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max depth of 3D image in pixels.
**Notes:**

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

### 136.3.20 Image3DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max height of 3D image in pixels.
**Notes:**

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

### 136.3.21 Image3DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max width of 3D image in pixels.
**Notes:**

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

### 136.3.22 ImageSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns true if images are supported by the OpenCL device and false otherwise.
**Notes:** Lasterror is set.

### 136.3.23 LocalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Size of local memory arena in bytes.
**Notes:**

The minimum value is 16 KB.
Lasterror is set.

### 136.3.24 LocalMemType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Type of local memory supported.
**Notes:**

This can be set to kMemTypeLocal implying dedicated local memory storage such as SRAM, or kMemTypeGlobal.
Lasterror is set.

### 136.3.25 MaxClockFrequency as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Maximum configured clock frequency of the device in MHz.
**Notes:** Lasterror is set.

### 136.3.26 MaxComputeUnits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The number of parallel compute cores on the OpenCL device.
**Notes:**

The minimum value is 1.
Lasterror is set.

### 136.3.27 MaxConstantArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max number of arguments declared with the __constant qualifier in a kernel.
**Notes:**

The minimum value is 8.
Lasterror is set.

### 136.3.28 MaxConstantBufferSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max size in bytes of a constant buffer allocation.
**Notes:**

The minimum value is 64 KB.
Lasterror is set.

### 136.3.29 MaxMemoryAllocSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max size of memory object allocation in bytes.
**Notes:**

The minimum value is max (1/4th of GlobalMemorySize, 128*1024*1024)
Lasterror is set.

### 136.3.30 MaxParameterSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max size in bytes of the arguments that can be passed to a kernel.
**Notes:**

The minimum value is 256.
Lasterror is set.

### 136.3.31 MaxReadImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max number of simultaneous image objects that can be read by a kernel.
**Notes:**

Lasterror is set.
The minimum value is 128 if ImageSupport is true.

### 136.3.32 MaxSamplers as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Maximum number of samplers that can be used in a kernel.
**Notes:**

The minimum value is 16 if ImageSupport is true.
Lasterror is set.

### 136.3.33 MaxWorkGroupSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Maximum number of work-items in a work-group executing a kernel using the data parallel execution model.
**Notes:**

(Refer to EnqueueNDRangeKernel). The minimum value is 1.
Lasterror is set.

### 136.3.34 MaxWorkItemDimensions as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Maximum dimensions that specify the global and local work-item IDs used by the data parallel execution model.
**Notes:**

(Refer to EnqueueNDRangeKernel). The minimum value is 3.
Lasterror is set.

### 136.3.35 MaxWriteImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Max number of simultaneous image objects that can be written to by a kernel.
**Notes:**

The minimum value is 8 if ImageSupport is true.
Lasterror is set.

### 136.3.36 MemoryBaseAddressAlign as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes the alignment in bits of the base address of any allocated memory object.
**Notes:** Lasterror is set.

### 136.3.37 MinDataTypeAlignSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The smallest alignment in bytes which can be used for any data type.
**Notes:** Lasterror is set.

### 136.3.38 Name as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Device name string.
**Example:**

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

**Notes:** Lasterror is set.

### 136.3.39 Platform as CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The platform associated with this device.
**Notes:** Lasterror is set.

### 136.3.40 PreferredVectorWidthChar as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

### 136.3.41 PreferredVectorWidthDouble as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.

If the cl_khr_fp64 extension is not supported, this function must return 0.
Lasterror is set.

### 136.3.42 PreferredVectorWidthFloat as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

### 136.3.43 PreferredVectorWidthInt as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

### 136.3.44 PreferredVectorWidthLong as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

### 136.3.45 PreferredVectorWidthShort as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Preferred native vector width size for built-in scalar types that can be put into vectors.
**Notes:**

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

### 136.3.46 Profile as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** OpenCL profile string.
**Notes:**

Returns the profile name supported by the device (see note). The profile name returned can be one of the following strings:

FULL_PROFILE - if the device supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the device supports the OpenCL embedded profile.
Lasterror is set.

### 136.3.47 ProfilingTimerResolution as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes the resolution of device timer. This is measured in nanoseconds.
**Notes:** Lasterror is set.

### 136.3.48 QueueProperties as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes the command-queue properties supported by the device.
**Notes:**

See kQueueOutOfOrderExecModeEnable and kQueueProfilingEnable.
Lasterror is set.

### 136.3.49 SingleFPConfig as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes single precision floating-point capability of the device.
**Notes:**

The mandated minimum floating-point capability is kFPRoundToNearest+kFPInfNAN.
Lasterror is set.

### 136.3.50 Vendor as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Vendor name string.
**Notes:** Lasterror is set.

### 136.3.51 VendorID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A unique device vendor identifier.
**Notes:**

An example of a unique device identifier could be the PCIe ID.
Lasterror is set.

### 136.3.52 Properties

### 136.3.53 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.3.54 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

### 136.3.55 Constants

### 136.3.56 kCacheMemTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the cache memory type constants.

### 136.3.57 kCacheMemTypeReadOnlyCache = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the cache memory type constants.
**Notes:** Read Only Cache.

### 136.3.58 kCacheMemTypeReadWriteCache = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the cache memory type constants.
**Notes:** Read/Write Cache.

### 136.3.59 kDeviceTypeAccelerator = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the device type constants.
**Notes:** Accelerator = some special acceleration device

### 136.3.60 kDeviceTypeAll = & Hffffffff

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the device type constants.
**Notes:** This is the bitmask to catch all possible types.

### 136.3.61 kDeviceTypeCPU = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the device type constants.
**Notes:** CPU = your processor

### 136.3.62 kDeviceTypeDefault = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the device type constants.
**Notes:** Default device.

### 136.3.63 kDeviceTypeGPU = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the device type constants.
**Notes:** GPU = your graphics card

### 136.3.64 kExceNativeKernel = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the execution capabilities constants.
**Notes:** The OpenCL device can execute native kernels.

### 136.3.65 kExecKernel = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the execution capabilities constants.
**Notes:** The OpenCL device can execute OpenCL kernels.

### 136.3.66 kFPDenorm = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** denorms are supported

### 136.3.67 kFPFMA = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** IEEE754-2008 fused multiply-add is supported

### 136.3.68 kFPInfNAN = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** INF and quiet NaNs are supported

### 136.3.69 kFPRoundToInf = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** Round to +ve and -ve infinity rounding modes supported

### 136.3.70 kFPRoundToNearest = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** Round to nearest even rounding mode supported

### 136.3.71 kFPRoundToZero = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the floating point capabilities constants.
**Notes:** Round to zero rounding mode supported

### 136.3.72 kMemTypeGlobal = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the memory type constants.
**Notes:** Dedicated local memory storage such as SRAM.

### 136.3.73 kMemTypeLocal = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the memory type constants.

### 136.3.74 kQueueOutOfOrderExecModeEnable = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the queue properties constants.
**Notes:** Out of order execution mode enabled.

### 136.3.75 kQueueProfilingEnable = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the queue properties constants.
**Notes:** Profiling enabled.

## 136.4 class CLEventMBS

### 136.4.1 class CLEventMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for an OpenCL event.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** You can chain several operations together inside a command queue. With events you can have an item execute after another item.

### 136.4.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.4.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.4.4 Methods

### 136.4.5 CommandExecutionStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the execution status of the command identified by event.
**Notes:**

See kCommandExecutionStatus* constants.
Lasterror is set.

### 136.4.6 CommandQueue as CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the command-queue associated with event.
**Notes:** Lasterror is set.

### 136.4.7 CommandType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the command associated with event.
**Notes:**

See kCommand* constants.
Lasterror is set.

### 136.4.8 ProfilingCommandEnd as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event has finished execution on the device.
**Notes:** Lasterror is set.

### 136.4.9 ProfilingCommandQueued as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event is enqueued in a command-queue by the host.
**Notes:** Lasterror is set.

### 136.4.10 ProfilingCommandStart as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event starts execution on the device.
**Notes:** Lasterror is set.

### 136.4.11 ProfilingCommandSubmit as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event that has been enqueued is submitted by the host to the device associated with the commandqueue.

**Notes:** Lasterror is set.

### 136.4.12 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the event reference count.
**Notes:**

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

### 136.4.13 Properties

### 136.4.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.4.15 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

### 136.4.16 Constants

### 136.4.17 kCommandAcquireGLObjects = & h11FF

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Acquire GL objects

### 136.4.18 kCommandCopyBuffer = & h11F5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Copy Buffer

### 136.4.19 kCommandCopyBufferToImage = & h11FA

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Copy Buffer to Image

### 136.4.20 kCommandCopyImage = & h11F8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Copy Image

### 136.4.21 kCommandCopyImageToBuffer = & h11F9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Copy Image to Buffer

### 136.4.22 kCommandExecutionStatusComplete = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command excecution status constants.
**Notes:** The command has completed.

### 136.4.23 kCommandExecutionStatusQueued = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command excecution status constants.
**Notes:** command has been enqueued in the command-queue.

### 136.4.24 kCommandExecutionStatusRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command excecution status constants.
**Notes:** Device is currently executing this command.

### 136.4.25 kCommandExecutionStatusSubmitted = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command excecution status constants.
**Notes:** enqueued command has been submitted by the host to the device associated with the command-queue.

### 136.4.26 kCommandMapBuffer = & h11FB

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Map Buffer

### 136.4.27 kCommandMapImage = & h11FC

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Map Image

### 136.4.28 kCommandMarker = & h11FE

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Marker

### 136.4.29 kCommandNativeKernel = & h11F2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Execute Native Kernel

### 136.4.30 kCommandNDRangeKernel = & h11F0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Execute a ND Range Kernel

### 136.4.31 kCommandReadBuffer = & h11F3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Read Buffer

### 136.4.32 kCommandReadImage = & h11F6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Read Image

### 136.4.33 kCommandReleaseGLObjects = & h1200

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Release GL objects

### 136.4.34 kCommandTask = & h11F1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Execute task

### 136.4.35 kCommandUnmapMemObject = & h11FD

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Unmap memory object

### 136.4.36 kCommandWriteBuffer = & h11F4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Write Buffer

### 136.4.37 kCommandWriteImage = & h11F7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the command type constants.
**Notes:** Write Image

## 136.5 class CLImageFormatMBS

### 136.5.1 class CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** the OpenCL class for an image format.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.5.2 Properties

### 136.5.3 ImageChannelDataType as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Describes the size of the channel data type.
**Notes:**

The number of bits per element determined by the ImageChannelDataType and ImageChannelOrder must be a power of two. The list of supported values is described in the table below.

| Image Channel Data Type | Description |
|---|---|
| kChannelTypeSNormInt8 | Each channel component is a normalized signed 8-bit integer value. |
| kChannelTypeSNormInt16 | Each channel component is a normalized signed 16-bit integer value. |
| kChannelTypeUNormInt8 | Each channel component is a normalized unsigned 8-bit integer value. |
| kChannelTypeUNormInt16 | Each channel component is a normalized unsigned 16-bit integer value. |
| kChannelTypeUNormShort565 | Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrderRGB. |
| kChannelTypeUNormShort555 | Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrderRGB. |
| kChannelTypeUNormInt101010 | Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB. |
| kChannelTypeSignedInt8 | Each channel component is an unnormalized signed 8-bit integer value. |
| kChannelTypeSignedInt16 | Each channel component is an unnormalized signed 16-bit integer value. |
| kChannelTypeSignedInt32 | Each channel component is an unnormalized signed 32-bit integer value. |
| kChannelTypeUnsignedInt8 | Each channel component is an unnormalized unsigned 8-bit integer value. |
| kChannelTypeUnsignedInt16 | Each channel component is an unnormalized unsigned 16-bit integer value. |
| kChannelTypeUnsignedInt32 | Each channel component is an unnormalized unsigned 32-bit integer value. |
| kChannelTypeHalfFloat | Each channel component is a 16-bit half-float value. |
| kChannelTypeFloat | Each channel component is a single precision floating-point value. |

(Read and Write property)

### 136.5.4 ImageChannelOrder as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Specifies the number of channels and the channel layout i.e. the memory layout in which channels are stored in the image.
**Notes:**

Valid values are described in the table below.

| Format | Description |
|---|---|
| kChannelOrderR, or kChannelOrderA | |
| kChannelOrderIntensity | This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat. |
| kChannelOrderLuminance | This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat. |
| kChannelOrderRG, or kChannelOrderRA | |
| kChannelOrderRGB | This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010. |
| kChannelOrderRGBA | |
| kChannelOrderARGB, kChannelOrderBGRA. | This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeSNormInt8, kChannelTypeSignedInt8 or kChannelTypeUnsignedInt8. |

(Read and Write property)

### 136.5.5 Constants

### 136.5.6 kChannelOrderA = & h10B1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.7 kChannelOrderARGB = & h10B7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.8 kChannelOrderBGRA = & h10B6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.9 kChannelOrderIntensity = & h10B8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants
**Notes:** This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

### 136.5.10 kChannelOrderLuminance = & h10B9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants
**Notes:** This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

### 136.5.11 kChannelOrderR = & h10B0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.12 kChannelOrderRA = & h10B3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.13 kChannelOrderRG = & h10B2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.14 kChannelOrderRGB = & h10B4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants
**Notes:** This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.

### 136.5.15 kChannelOrderRGBA = & h10B5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel order constants

### 136.5.16 kChannelTypeFloat = & h10DE

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a single precision floating-point value.

### 136.5.17 kChannelTypeHalfFloat = & h10DD

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a 16-bit half-float value.

### 136.5.18 kChannelTypeSignedInt16 = & h10D8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized signed 16-bit integer value.

### 136.5.19 kChannelTypeSignedInt32 = & h10D9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized signed 32-bit integer value.

### 136.5.20 kChannelTypeSignedInt8 = & h10D7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized signed 8-bit integer value.

### 136.5.21 kChannelTypeSNormInt16 = & h10D1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a normalized signed 16-bit integer value.

### 136.5.22 kChannelTypeSNormInt8 = & h10D0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a normalized signed 8-bit integer value.

### 136.5.23 kChannelTypeUNormInt101010 = & h10D6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.

### 136.5.24 kChannelTypeUNormInt16 = & h10D3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a normalized unsigned 16-bit integer value.

### 136.5.25 kChannelTypeUNormInt8 = & h10D2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is a normalized unsigned 8-bit integer value.

### 136.5.26 kChannelTypeUNormShort555 = & h10D5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrder-RGB.

### 136.5.27 kChannelTypeUNormShort565 = & h10D4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrder-RGB.

### 136.5.28 kChannelTypeUnsignedInt16 = & h10DB

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized unsigned 16-bit integer value.

### 136.5.29 kChannelTypeUnsignedInt32 = & h10DC

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized unsigned 32-bit integer value.

### 136.5.30 kChannelTypeUnsignedInt8 = & h10DA

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the channel data type constants.
**Notes:** Each channel component is an unnormalized unsigned 8-bit integer value.

## 136.6 class CLKernelMBS

### 136.6.1 class CLKernelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for an OpenCL Kernel.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.6.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.6.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.6.4 Methods

### 136.6.5 Constructor(Program as CLProgramMBS, KernelName as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a kernal object.
**Notes:**

Program: A program object with a successfully built executable.
KernelName: A function name in the program declared with the __kernel qualifier

A kernel is a function declared in a program. A kernel is identified by the __kernel qualifier applied to any function in a program. A kernel object encapsulates the specific __kernel function declared in a program and the argument values to be used when executing this __kernel function.
Lasterror is set.

### 136.6.6 FunctionName as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the kernel function name.
**Notes:** Lasterror is set.

### 136.6.7 GetKernelCompileWorkGroupSize(device as CLDeviceMBS, byref X as Int64, byref Y as Int64, byref Z as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the work-group size specified by the __attribute__((reqd_work_gr oup_size(X, Y, Z))) qualifier.
**Notes:**

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

If the work-group size is not specified using the above attribute qualifier (0, 0, 0) is returned.
Lasterror is set.

### 136.6.8 GetKernelLocalMemorySize(device as CLDeviceMBS = nil) as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the amount of local memory in bytes being used by a kernel.
**Notes:**

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

This includes local memory that may be needed by an implementation to execute the kernel, variables declared inside the kernel with the __local address qualifier and local memory to be allocated for arguments to the kernel declared as pointers with the __local address qualifier and whose size is specified with clSetKernelArg.

If the local memory size, for any pointer argument to the kernel declared with the __local address qualifier, is not specified, its size is assumed to be 0.
Lasterror is set.

### 136.6.9 GetKernelWorkGroupSize(device as CLDeviceMBS = nil) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** This provides a mechanism for the application to query the work-group size that can be used to execute a kernel on a specific device given by device.
**Notes:**

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

The OpenCL implementation uses the resource requirements of the kernel (register usage etc.) to determine what this work-group size should be.
Lasterror is set.

### 136.6.10 NumberOfArguments as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the number of arguments to kernel.
**Notes:** Lasterror is set.

### 136.6.11 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the kernel reference count.
**Notes:**

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

### 136.6.12 SetKernelArgDouble(index as Integer, value as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Sets the kernel argument with the given index.
**Notes:**

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.

value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

### 136.6.13 SetKernelArgFloat(index as Integer, value as Single)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Sets the kernel argument with the given index.
**Notes:**

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

### 136.6.14 SetKernelArgInt32(index as Integer, value as Int32)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Sets the kernel argument with the given index.
**Notes:**

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

### 136.6.15 SetKernelArgInt64(index as Integer, value as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Sets the kernel argument with the given index.
**Notes:**

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.

value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

### 136.6.16 SetKernelArgMem(index as Integer, mem as CLMemMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Sets the kernel argument with the given index.
**Notes:**

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the memory object to set for argument.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

### 136.6.17 Properties

### 136.6.18 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the context associated with kernel.
**Notes:**

Lasterror is set.
(Read and Write property)

### 136.6.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.6.20 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

### 136.6.21 Program as CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the program object associated with kernel.
**Notes:**

Lasterror is set.
(Read and Write property)

## 136.7 class CLMemMBS

### 136.7.1 class CLMemMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for a OpenCL memory block.
**Example:**

```
const Size = 4096
dim context as CLContextMBS // your context
dim input as new CLMemMBS(context, CLMEMMBS.kMemoryReadOnly, 4096)
```

**Deprecated:** This item is deprecated and should no longer be used.

### 136.7.2 Blog Entries

### 136.7.4 Methods

### 136.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a 3D image object.
**Notes:**

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: the image format properties of the image to be allocated.
Width, Height: The width and height of the image in pixels. These must be values greater than or equal to

1.
Depth: The depth of the image in pixels. This must be a value greater than 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
SlicePitch: The size in bytes of each 2D slice in the 3D image. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to RowPitch * Height if HostPtr is not nil. If HostPtr is not nil and SlicePitch equal to 0, SlicePitch is calculated as RowPitch * Height. If SlicePitch is not 0, it must be a multiple of the RowPitch.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to SlicePitch * image_depth. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent 2D slices. Each 2D slice is a linear sequence of adjacent scanlines. Each scanline is a linear sequence of image elements.

Lasterror is set.

### 136.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a 2D image object.
**Notes:**

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: The format properties of the image to be allocated.
Width and Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to RowPitch * Height. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent

scanlines. Each scanline is stored as a linear sequence of image elements.

Lasterror is set.
See also:

- 136.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 21658
- 136.7.7 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil) 21660

### 136.7.7 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a new buffer object.
**Notes:**

context: A valid OpenCL context used to create the buffer object.
flags: A bit-field that is used to specify allocation and usage information such as the memory arena that should be used to allocate the buffer object and how it will be used. The following table describes the possible values for flags:
size: The size in bytes of the buffer memory object to be allocated.
HostPtr: A memoryblock that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to the size bytes.

Lasterror is set.
See also:

- 136.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 21658
- 136.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil) 21659

### 136.7.8 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return context specified when memory object is created.
**Notes:** Lasterror is set.

| Flags | Description |
|---|---|
| kMemoryReadWrite | This flag specifies that the memory object will be read and written by a kernel. This is the default. |
| kMemoryWriteOnly | This flags specifies that the memory object will be written but not read by a kernel. Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined. |
| kMemoryReadOnly | This flag specifies that the memory object is a read-only memory object when used inside a kernel. Writing to a buffer or image object created with kMemoryReadOnly inside a kernel is undefined. |
| kMemoryUseHostPtr | This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to use memory referenced by HostPtr as the storage bits for the memory object. OpenCL implementations are allowed to cache the buffer contents pointed to by HostPtr in device memory. This cached copy can be used when kernels are executed on a device. The result of OpenCL commands that operate on multiple buffer objects created with the same HostPtr or overlapping host regions is considered to be undefined. |
| kMemoryAllocHostPtr | This flag specifies that the application wants the OpenCL implementation to allocate memory from host accessible memory. kMemoryAllocHostPtr and kMemoryUseHostPtr are mutually exclusive. |
| kMemoryCopyHostPtr | This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to allocate memory for the memory object and copy the data from memory referenced by HostPtr. kMemoryCopyHostPtr and kMemoryUseHostPtr are mutually exclusive. kMemoryCopyHostPtr can be used with kMemoryAllocHostPtr to initialize the contents of the cl_mem object allocated using host-accessible (e.g. PCIe) memory. |

### 136.7.9 Flags as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the flags argument value specified with Constructor.
**Notes:** Lasterror is set.

### 136.7.10 ImageDepth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return depth of the image in pixels.
**Notes:**

For a 2D image, depth equals 0.
Lasterror is set.

### 136.7.11 ImageElementSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return size of each element of the image memory object given by image.
**Notes:**

An element is made up of n channels. The value of n is given with image format descriptor.
Lasterror is set.

### 136.7.12 ImageFormat as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return image format descriptor.
**Notes:** Lasterror is set.

### 136.7.13 ImageHeight as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return height of image in pixels.
**Notes:** Lasterror is set.

### 136.7.14 ImageRowPitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return size in bytes of a row of elements of the image object given by image.
**Notes:** Lasterror is set.

### 136.7.15 ImageSlicePitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return size in bytes of a 2D slice for the 3D image object given by image.
**Notes:**

For a 2D image object this value will be 0.
Lasterror is set.

### 136.7.16 ImageWidth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return width of image in pixels.
**Notes:** Lasterror is set.

### 136.7.17 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return memory object reference count.
**Notes:**

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

### 136.7.18 Size as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return actual size of memory object in bytes.
**Notes:** Lasterror is set.

### 136.7.19 Type as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the memory type.
**Notes:**

Either normal buffer, image 2D or image 3D.
Lasterror is set.

### 136.7.20 Properties

### 136.7.21 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.7.22 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

### 136.7.23 Target as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The reference to the memoryblock if you used kMemoryUseHostPtr to create this memory object.
**Notes:** (Read and Write property)

### 136.7.24 Constants

### 136.7.25 kMapRead = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the mapping mode constants.

### 136.7.26 kMapWrite = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the mapping mode constants.

### 136.7.27 kMemoryAllocHostPtr = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.

### 136.7.28 kMemoryCopyHostPtr = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.

### 136.7.29 kMemoryReadOnly = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.

### 136.7.30 kMemoryReadWrite = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.

### 136.7.31 kMemoryTypeBuffer = & h10F0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the memory object types.
**Notes:** A normal memory buffer.

### 136.7.32 kMemoryTypeImage2D = & h10F1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the memory object types.
**Notes:** 2D Image

### 136.7.33 kMemoryTypeImage3D = & h10F2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the memory object types.
**Notes:** 3D Image

### 136.7.34 kMemoryUseHostPtr = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.

### 136.7.35 kMemoryWriteOnly = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the flag constants for creating a memory block.
**Notes:**

This flags specifies that the memory object will be written but not read by a kernel.

Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.

## 136.8 class CLPlatformMBS

### 136.8.1 class CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The OpenCL class for a platform.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.8.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.8.4 Methods

### 136.8.5 DeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries number of devices with given types.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+str(p.DeviceCount(CLDeviceMBS.kDeviceTypeAll))+" devices"
next
```

**Notes:**

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

| cl_device_type | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

### 136.8.6 Devices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries devices with given types.
**Example:**

```
// check all platforms
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
dim lines(-1) as string

lines.Append p.Name
lines.Append ""

// and show device names
for each d as CLDeviceMBS in p.Devices(CLDeviceMBS.kDeviceTypeAll)
lines.Append d.name
next

MsgBox Join(lines,EndOfLine)
next
```

**Notes:**

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

| cl_device_type | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

### 136.8.7 Extensions as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns a space-separated list of extension names (the extension names themselves do not contain any spaces) supported by the platform.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Extensions
next
```

**Notes:**

Extensions defined here must be supported by all devices associated with this platform.
Lasterror is set.

### 136.8.8 Name as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Platform name string.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

**Notes:** Lasterror is set.

### 136.8.9 Profile as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** OpenCL profile string.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Profile
next
```

**Notes:**

Returns the profile name supported by the implementation. The profile name returned can be one of the following strings:

FULL_PROFILE - if the implementation supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the implementation supports the OpenCL embedded profile. The embedded profile is defined to be a subset for each version of OpenCL.

Lasterror is set.

### 136.8.10 Vendor as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Platform vendor string.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Vendor
next
```

**Notes:** Lasterror is set.

### 136.8.11 Version as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** OpenCL version string.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Version
next
```

**Notes:**

Returns the OpenCL version supported by the implementation. This version string has the following format:

OpenCL<space><major_version.minor_version><space><platform-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

### 136.8.12 Properties

### 136.8.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.8.14 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.

**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

## 136.9 class CLProgramMBS

### 136.9.1 class CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The OpenCL class for a program.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.9.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.9.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

### 136.9.4 Methods

### 136.9.5 Binaries as String()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the program binaries for all devices associated with program.
**Notes:**

For each device in program, the binary returned can be the binary specified for the device when program is created with Constructor or it can be the executable binary generated by BuildProgram. If program is created with Constructor (with Source code), the binary returned is the binary generated by BuildProgram. The bits returned can be an implementation-specific intermediate representation (a.k.a. IR) or device specific executable bits or both. The decision on which information is returned in the binary is up to the OpenCL implementation.

Each entry in this array is used by the implementation as the location in memory where to copy the program binary for a specific device, if there is a binary available.

Lasterror is set.

### 136.9.6 BinarySizes as UInt64()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns an array that contains the size in bytes of the program binary for each device associated with program.
**Notes:**

The size of the array is the number of devices associated with program. If a binary is not available for a device(s), a size of zero is returned.

Lasterror is set.

### 136.9.7 BuildLog(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the build log when BuildProgram was called for device.
**Notes:**

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

### 136.9.8 BuildOptions(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the build options specified by the options argument in BuildProgram for device.
**Notes:**

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

### 136.9.9 BuildProgram(device as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Builds (compiles and links) a program executable from the program source or binary.
**Notes:** See other BuildProgram method for details
See also:

- 136.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "") 21675
- 136.9.11 BuildProgram(options as string = "") 21677

### 136.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Builds (compiles and links) a program executable from the program source or binary.
**Notes:**

| | |
|---|---|
| devices | Optional, a list of devices you want to build for. If you specify no device, you build for all devices. |
| device | Optional, the device you want to build for. If you specify no device, you build for all devices. |
| options | A string that describes the build options to be used for building the program executable. The list of supported options is described in "Build Options" below. |

OpenCL allows program executables to be built using the source or the binary.

The build options are categorized as pre-processor options, options for math intrinsics, options that control optimization and miscellaneous options. This specification defines a standard set of options that must be supported by an OpenCL compiler when building program executables online or offline. These may be extended by a set of vendor- or platform-specific options.

Preprocessor Options

These options control the OpenCL preprocessor which is run on each program source before actual compilation. -D options are processed in the order they are given in the options argument to clBuildProgram.
-D name
Predefine name as a macro, with definition 1.

-D name=definition
The contents of definition are tokenized and processed as if they appeared during translation phase three in a '# define' directive. In particular, the definition will be truncated by embedded newline characters.

-I dir
Add the directory dir to the list of directories to be searched for header files.

Math Intrinsics Options

These options control compiler behavior regarding floating-point arithmetic. These options trade off between speed and correctness.

-cl-single-precision-constant

Treat double precision floating-point constant as single precision constant.

-cl-denorms-are-zero
This option controls how single precision and double precision denormalized numbers are handled. If specified as a build option, the single precision denormalized numbers may be flushed to zero and if the optional extension for double precision is supported, double precision denormalized numbers may also be flushed to zero. This is intended to be a performance hint and the OpenCL compiler can choose not to flush denorms to zero if the device supports single precision (or double precision) denormalized numbers.

This option is ignored for single precision numbers if the device does not support single precision denormalized numbers i.e. kFPDenorm bit is not set in SingleFPConfig.

This option is ignored for double precision numbers if the device does not support double precision or if it does support double precison but CL_FP_DENORM bit is not set in CL_DEVICE_DOUBLE_FP_CONFIG.

This flag only applies for scalar and vector single precision floating-point variables and computations on these floating-point variables inside a program. It does not apply to reading from or writing to image objects.

Optimization Options

These options control various sorts of optimizations. Turning on optimization flags makes the compiler attempt to improve the performance and/or code size at the expense of compilation time and possibly the ability to debug the program.
-cl-opt-disable
This option disables all optimizations. The default is optimizations are enabled.

-cl-strict-aliasing
This option allows the compiler to assume the strictest aliasing rules.

The following options control compiler behavior regarding floating-point arithmetic. These options trade off between performance and correctness and must be specifically enabled. These options are not turned on by default since it can result in incorrect output for programs which depend on an exact implementation of IEEE 754 rules/specifications for math functions.

-cl-mad-enable
Allow a * b + c to be replaced by a mad. The mad computes a * b + c with reduced accuracy. For example, some OpenCL devices implement mad as truncate the result of a * b before adding it to c.

-cl-no-signed-zeros
Allow optimizations for floating-point arithmetic that ignore the signedness of zero. IEEE 754 arithmetic specifies the behavior of distinct +0.0 and -0.0 values, which then prohibits simplification of expressions such

as x+0.0 or 0.0*x (even with -clfinite-math only). This option implies that the sign of a zero result isn't significant.

-cl-unsafe-math-optimizations
Allow optimizations for floating-point arithmetic that (a) assume that arguments and results are valid, (b) may violate IEEE 754 standard and (c) may violate the OpenCL numerical compliance requirements as defined in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option includes the -cl-no-signed-zeros and -cl-mad-enable options.

-cl-finite-math-only
Allow optimizations for floating-point arithmetic that assume that arguments and results are not NaNs or ¬±,àû. This option may violate the OpenCL numerical compliance requirements defined in in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5.

-cl-fast-relaxed-math
Sets the optimization options -cl-finite-math-only and -cl-unsafe-math-optimizations. This allows optimizations for floating-point arithmetic that may violate the IEEE 754 standard and the OpenCL numerical compliance requirements defined in the specification in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option causes the preprocessor macro __FAST_RELAXED_MATH__ to be defined in the OpenCL program.

Options to Request or Suppress Warnings

Warnings are diagnostic messages that report constructions which are not inherently erroneous but which are risky or suggest there may have been an error. The following languageindependent options do not enable specific warnings but control the kinds of diagnostics produced by the OpenCL compiler.
-w
Inhibit all warning messages.

-Werror
Make all warnings into errors.

Lasterror is set.

- 136.9.9 BuildProgram(device as CLDeviceMBS, options as string = "") 21674
- 136.9.11 BuildProgram(options as string = "") 21677

### 136.9.11 BuildProgram(options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Builds (compiles and links) a program executable from the program source or binary.
**Notes:**

See other BuildProgram method for details
Lasterror is set.
See also:

- 136.9.9 BuildProgram(device as CLDeviceMBS, options as string = "") 21674
- 136.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "") 21675

### 136.9.12 BuildStatus(device as CLDeviceMBS) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the build status of program for a specific device as given by device.
**Notes:**

See kBuild* constants.
Lasterror is set.

### 136.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a program object for a context, and loads specified binary data into the program object.
**Notes:**

context: Must be a valid OpenCL context.
devices: a list of devices that are in context. The binaries are loaded for devices specified in this list.

The devices associated with the program object will be the list of devices specified by devices. The list of devices specified by devices must be devices associated with context.

binaries: An array of strings containing the program binaries to be loaded for devices specified by devices. For each device given by devices(i), the string with the program binary for that device is given by binaries(i).

The program binaries specified by binaries contain the bits that describe the program executable that will be run on the device(s) associated with context. The program binary can consist of either or both of device-specific executable(s), and/or implementation-specific intermediate representation (IR) which will be converted to the device-specific executable.

sttaus: Returns whether the program binary for each device specified in devices was loaded successfully or

not. It is an array of ubound -1 and is filled by the plugin.

Lasterror is set.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.
See also:

- 136.9.14 Constructor(context as CLContextMBS, line as string) 21679
- 136.9.15 Constructor(context as CLContextMBS, lines() as string) 21680

### 136.9.14 Constructor(context as CLContextMBS, line as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a program object for a context, and loads the source code specified by the line string into the program object.
**Notes:**

context: Must be a valid OpenCL context.
line: A string with all the lines of the program.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.
See also:

- 136.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 21678

- 136.9.15 Constructor(context as CLContextMBS, lines() as string) 21680

### 136.9.15 Constructor(context as CLContextMBS, lines() as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates a program object for a context, and loads the source code specified by the text strings in the lines array into the program object.
**Notes:**

context: Must be a valid OpenCL context.
lines: An array of strings that make up the source code.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.

- 136.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 21678

- 136.9.14 Constructor(context as CLContextMBS, line as string) 21679

### 136.9.16 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The context for this program.
**Notes:** Lasterror is set.

### 136.9.17 CreateKernelsInProgram(maxKernels as Integer = 100) as CLKernelMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Creates kernel objects for all kernel functions in program.
**Notes:**

maxKernels: maximum number of kernels to return.

Kernel objects are not created for any ___kernel functions in program that do not have the same function definition across all devices for which a program executable has been successfully built.

Kernel objects can only be created once you have a program object with a valid program source or binary loaded into the program object and the program executable has been successfully built for one or more devices associated with program. No changes to the program executable are allowed while there are kernel objects associated with a program object. This means that calls to BuildProgram return kInvalidOperation (in lasterror) if there are kernel objects attached to a program object. The OpenCL context associated with program will be the context associated with kernel. The list of devices associated with program are the devices associated with kernel. Devices associated with a program object for which a valid program executable has been built can be used to execute kernels declared in the program object.

Lasterror is set.

### 136.9.18 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the list of devices associated with the program object.
**Notes:** This can be the devices associated with context on which the program object has been created or can be a subset of devices that are specified when a progam object is created.

### 136.9.19 NumDevices as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the number of devices associated with program.
**Notes:** Lasterror is set.

### 136.9.20 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the program reference count.
**Notes:** Lasterror is set.

### 136.9.21 Source as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Return the program source code specified in the Constructor.
**Notes:** The source string returned is a concatenation of all source strings specified to Constructor.

### 136.9.22 Properties

### 136.9.23 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.9.24 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.

(Read and Write property)

### 136.9.25 Constants

### 136.9.26 kBuildError = -2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the build status constants
**Notes:** The build status returned if the last call to BuildProgram on the specified program object for device generated an error.

### 136.9.27 kBuildInProgress = -3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the build status constants
**Notes:** The build status returned if the last call to BuildProgram on the specified program object for device has not finished.

### 136.9.28 kBuildNone = -1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the build status constants
**Notes:** The build status returned if no build has been performed on the specified program object for device.

### 136.9.29 kBuildSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the build status constants
**Notes:** The build status returned if the last call to BuildProgram on the specified program object for device was successful.

## 136.10 class CLSamplerMBS

### 136.10.1 class CLSamplerMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The class for a Sampler.
**Deprecated:** This item is deprecated and should no longer be used.

### 136.10.2 Blog Entries

### 136.10.4 Methods

### 136.10.5 AddressingMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Return the value specified by addressingmode argument to Constructor.

### 136.10.6 Constructor(Context as CLContextMBS, NormalizedCoords as Boolean, AddressingMode as UInt32, FilterMode as UInt32)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Creates a sampler object.
**Notes:**

context: Must be a valid OpenCL context.

NormalizedCoords: Determines if the image coordinates specified are normalized (if normalized_coords is true) or not (if normalized_coords is false).

AddressingMode: Specifies how out-of-range image coordinates are handled when reading from an image. This can be set to kAddressRepeat, kAddressClampToEdge, kAddressClamp, and kAddressNone.

FilterMode: Specifies the type of filter that must be applied when reading an image. This can be kFilterNearest or kFilterLinear.

Lasterror is set.

A sampler object describes how to sample an image when the image is read in the kernel. The built-in functions to read from an image in a kernel take a sampler as an argument. The sampler arguments to the image read function can be sampler objects created using OpenCL functions and passed as argument values to the kernel or can be samplers declared inside a kernel. In this section we discuss how sampler objects are created using OpenCL functions.

### 136.10.7 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Return the context specified when the sampler is created.

### 136.10.8 FilterMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Return the value specified by filterMode argument to Constructor.

### 136.10.9 NormalizedCoords as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Return the value specified by normalizedCoords argument to Constructor.

### 136.10.10 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Return the sampler reference count.
**Notes:** The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.

### 136.10.11 Properties

### 136.10.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The internel object reference.
**Notes:**

Not zero if this object is valid.
(Read and Write property)

### 136.10.13 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Notes:**

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

### 136.10.14 Constants

### 136.10.15 kAddressClamp = & h1132

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the address modes.

### 136.10.16 kAddressClampToEdge = & h1131

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the address modes.

### 136.10.17 kAddressNone = & h1130

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the address modes.

### 136.10.18 kAddressRepeat = & h1133

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the address modes.

### 136.10.19 kFilterLinear = & h1141

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the filter mode constants.

### 136.10.20 kFilterNearest = & h1140

MBS MacFrameworks Plugin, Plugin Version: 11.1.

**Function:** One of the filter mode constants.

## 136.11 module OpenCLMBS

### 136.11.1 module OpenCLMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The module for OpenCL.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

from wikipedia:

OpenCL (Open Computing Language) is a framework for writing programs that execute across heterogeneous platforms consisting of CPUs, GPUs, and other processors. OpenCL includes a language (based on C99) for writing kernels (functions that execute on OpenCL devices), plus APIs that are used to define and then control the platforms. OpenCL provides parallel computing using task-based and data-based parallelism.

### 136.11.6 Methods

### 136.11.7 AllDeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries number of devices with given types.
**Example:**

```
dim c as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeCPU)
dim g as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeGPU)
MsgBox str(c)+" CPU and "+str(g)+" GPU"
```

**Notes:**

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

| cl_device_type | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

Lasterror is set.

### 136.11.8 AllDevices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries devices with given types.
**Example:**

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

**Notes:**

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

| cl_device_type | Description |
|---|---|
| kDeviceTypeCPU | An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU. |
| kDeviceTypeGPU | An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX. |
| kDeviceTypeAccelerator | Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe. |
| kDeviceTypeDefault | The default OpenCL device in the system. |
| kDeviceTypeAll | All OpenCL devices available in the system. |

Lasterror is set.

### 136.11.9 GetExtensionFunctionAddress(name as string) as ptr

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Returns the address of the extension function named by funcname.
**Notes:**

The function GetExtensionFunctionAddress returns the address of the extension function named by funcname. The pointer returned should be cast to a function pointer type matching the extension function's definition defined in the appropriate extension specification and header file. A return value of nil indicates that the specified function does not exist for the implementation. A non-nil return value for GetExtensionFunctionAddress does not guarantee that an extension function is actually supported. The application must also make a corresponding query using CLPlatformMBS.Extensions or CLDeviceMBS.Extensions to determine if an extension is supported by the OpenCL implementation.

GetExtensionFunctionAddress may not be queried for core (non-extension) functions in OpenCL. For functions that are queryable with clGetExtensionFunctionAddress, implementations may choose to also export those functions statically from the object libraries implementing those functions. However, portable applications cannot rely on this behavior.

Since there is no way to qualify the query with a device, the function pointer returned must work for all implementations of that extension on different devices. The behavior of calling a device extension function

on a device not supporting that extension is undefined.

### 136.11.10 GetPictureImageFormat(pic as picture, byref RowPitch as Integer) as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries the image format this picture would need when creating a storage object with CLMemMBS.
**Example:**

```
dim p as new Picture(100,100,32)
dim rowbytes as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(p, rowbytes)

MsgBox hex(format.ImageChannelOrder)+" "+hex(format.ImageChannelDataType)+" "+str(rowbytes)
// shows 10B7 and 10D2 and 416 on Mac OS X Carbon
```

**Notes:** As Xojo uses 4 bytes per pixel on Mac and Windows, the plugin returns ARGB (or other byte order). The alpha channel is not used as Xojo stores

### 136.11.11 isAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Whether OpenCL is available.
**Example:**

```
if not OpenCLMBS.isAvailable then
if TargetMachO and TargetX86 then
MsgBox "OpenCL not available. Please install Mac OS X 10.6 to use it."
else
MsgBox "OpenCL not available. You need a Mac with Intel processor running Mac OS X 10.6."
end if
end if
```

**Notes:** Should return true on Mac OS X 10.6 and false everywhere else.

### 136.11.12 PlatformCount as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Queries number of platforms available.
**Example:**

```
MsgBox str(OpenCLMBS.PlatformCount)
```

**Notes:**

Typically you have two with modern Macs as you get both CPU and GPU listed.
Lasterror is set.

### 136.11.13 Platforms as CLPlatformMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Obtain the list of platforms available.
**Example:**

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

**Notes:** Lasterror is set.

### 136.11.14 UnloadCompiler

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Allows the implementation to release the resources allocated by the OpenCL compiler.
**Example:**

```
OpenCLMBS.UnloadCompiler
MsgBox OpenCLMBS.LastErrorMessage
```

**Notes:**

This is a hint from the application and does not guarantee that the compiler will not be used in the future or that the compiler will actually be unloaded by the implementation. Calls to BuildProgram after UnloadCompiler will reload the compiler, if necessary, to build the appropriate program executable.
Lasterror is set.

### 136.11.15 WaitForEvents(events() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** Waits on the host thread for commands identified by event objects to complete.
**Notes:**

events: The events specified in event_list act as synchronization points.

Waits on the host thread for commands identified by event objects in event_list to complete. A command is considered complete if its execution status is kCommandExecutionStatusComplete or a negative value.

Lasterror is set.

### 136.11.16 Properties

### 136.11.17 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The last error code.
**Example:**

MsgBox str(OpenCLMBS.LastError)

**Notes:**

All the functions in all the OpenCL classes set this property, too.
(Read only property)

### 136.11.18 LastErrorMessage as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

**Function:** The text message for the last error code.
**Example:**

MsgBox OpenCLMBS.LastErrorMessage

**Notes:** (Read only property)

### 136.11.19 Constants

### 136.11.20 kBuildProgramFailure = -11

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.21 kCompilerNotAvailable = -3

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.22 kDeviceNotAvailable = -2

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.23 kDeviceNotFound = -1

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.24 kImageFormatMismatch = -9

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.25 kImageFormatNotSupported = -10

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.26 kInvalidArgIndex = -49

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.27 kInvalidArgSize = -51

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.28 kInvalidArgValue = -50

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.29 kInvalidBinary = -42

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.30 kInvalidBufferSize = -61

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.31 kInvalidBuildOptions = -43

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.32 kInvalidCommandQueue = -36

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.33 kInvalidContext = -34

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.34 kInvalidDevice = -33

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.35 kInvalidDeviceType = -31

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.36 kInvalidEvent = -58

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.37 kInvalidEventWaitList = -57

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.38 kInvalidGlobalOffset = -56

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.39 kInvalidGlObject = -60

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.40 kInvalidHostPtr = -37

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.41 kInvalidImageFormatDescriptor = -39

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.42 kInvalidImageSize = -40

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.43 kInvalidKernel = -48

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.44 kInvalidKernelArgs = -52

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.45 kInvalidKernelDefinition = -47

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.46 kInvalidKernelName = -46

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.47 kInvalidMemObject = -38

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.48 kInvalidMipLevel = -62

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.49 kInvalidOperation = -59

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.50 kInvalidPlatform = -32

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.51 kInvalidProgram = -44

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.52 kInvalidProgramExecutable = -45

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.53 kInvalidQueueProperties = -35

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.54 kInvalidSampler = -41

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.55 kInvalidValue = -30

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.56 kInvalidWorkDimension = -53

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.57 kInvalidWorkGroupSize = -54

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.58 kInvalidWorkItemSize = -55

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.59 kMapFailure = -12

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.60 kMemCopyOverlap = -8

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.61 kMemObjectAllocationFailure = -4

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.62 kOutOfHostMemory = -6

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.63 kOutOfResources = -5

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.64 kProfilingInfoNotAvailable = -7

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

### 136.11.65 kSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 9.6.

**Function:** One of the constants for OpenCL errors.

# Chapter 137

# PDFKit

## 137.1 class CustomPDFViewMBS

### 137.1.1 class CustomPDFViewMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** The class for a custom PDFView.
**Notes:** Subclass of the PDFViewMBS class.

### 137.1.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr2
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 12.5pr5
- MBS Real Studio Plugins, version 12.0pr7
- Gestures on Mac OS X
- Have you checked out PDFViewMBS class?
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

### 137.1.3 Blog Entries

### 137.1.4 Methods

### 137.1.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear overlay item for this page.
**Notes:**

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.1.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear all overlays.
**Notes:** The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.1.7 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new custom PDFView object.
See also:

- 137.1.8 Constructor(Handle as Integer) 21705
- 137.1.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21705

### 137.1.8 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.
See also:

- 137.1.7 Constructor 21704
- 137.1.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21705

### 137.1.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new custom PDFView object.
See also:

- 137.1.7 Constructor 21704
- 137.1.8 Constructor(Handle as Integer) 21705

### 137.1.10 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

### 137.1.11 Properties

### 137.1.12 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Get/Set overlay item.
**Notes:**

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

### 137.1.13 Events

### 137.1.14 acceptsFirstMouse(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** Overridden by subclasses to return true if the receiver should be sent a mouseDown event for an initial mouse-down event, false if not.
**Notes:**

The receiver can either return a value unconditionally or use the location of event e to determine whether or not it wants the event. The default implementation ignores the event and returns false.

Implement this event in a subclass to allow instances to respond to click-through. This allows the user to click on a view in an inactive window, activating the view with one click, instead of clicking first to make the window active and then clicking the view. Most view objects refuse a click-through attempt, so the event simply activates the window. Many control objects, however, such as instances of NSButton and NSSlider, do accept them, so the user can immediately manipulate the control without having to release the mouse button.

### 137.1.15 acceptsFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Whether to accept first responder.
**Notes:** Return true if your control can have the focus and false if not.

### 137.1.16 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The draw event called after a page was drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.17 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The draw event called after a page annotations were drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.18 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The draw event called after something was drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.19 becomeFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Called when the object gets focus.
**Notes:** Return true to accept.

### 137.1.20 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The draw event called before a page was drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.21 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The draw event called before a page annotations were drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.22 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The draw event called before a something was drawn.
**Notes:**

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.1.23 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Informs the receiver that the user has begun a touch gesture.
**Notes:**

e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

### 137.1.24 canBecomeKeyView as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** Returns whether the receiver can become key view.
**Notes:** Returns true if the receiver can become key view, false otherwise.

### 137.1.25 Close

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The event called when the custom NSView is destroyed.

### 137.1.26 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

### 137.1.27 draggingEnded(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Implement this event to be notified when a drag operation ends in some other destination.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

### 137.1.28 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-

DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated and draggingExited even if NSDragOperationNone is returned by this method.

### 137.1.29 draggingExited(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
**Notes:** sender: The object sending the message; use it to get details about the dragging operation.

### 137.1.30 draggingSessionEndedAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS, operation as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the dragging session has completed.
**Notes:**

session: The dragging session.
screenPoint: The point where the drag ended, in screen coordinates.
operation: The drag operation. See constants for drag operation types.

Available in OS X v10.7 and later.

### 137.1.31 draggingSessionMovedToPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the drag moves on the screen.
**Notes:**

session: The dragging session.
screenPoint: The point where the drag moved to, in screen coordinates.

Available in OS X v10.7 and later.

### 137.1.32 draggingSessionSourceOperationMaskForDraggingContext(session as NSDraggingSessionMBS, context as Integer) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Declares the types of operations the source allows to be performed. (required)
**Notes:**

session: The dragging session.
context: The dragging context. See NSDraggingContext constants for the supported values.

Return the appropriate dragging operation as defined in constants.

In the future Apple may provide more specific "within" values in the future. To account for this, for unrecognized localities, return the operation mask for the most specific context that you are concerned with.

### 137.1.33 draggingSessionWillBeginAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the drag will begin.
**Notes:**

session: The dragging session.
screenPoint: The point where the drag will begin, in screen coordinates.

Available in OS X v10.7 and later.

### 137.1.34 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

### 137.1.35 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Informs the receiver that the user has ended a touch gesture.
**Notes:**

e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

### 137.1.36 ignoreModifierKeysForDraggingSession(session as NSDraggingSessionMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Returns whether the modifier keys will be ignored for this dragging session.
**Notes:**

session: The dragging session.

Return true if the modifier keys will be ignored, false otherwise.
Available in OS X v10.7 and later.

### 137.1.37 isOpaque as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Whether this view is opaque.

### 137.1.38 keyDown(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the key events.
**Notes:** Return true if you handled this event.

### 137.1.39 keyUp(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the key events.
**Notes:** Return true if you handled this event.

### 137.1.40 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Informs the receiver that the user has begun a pinch gesture.
**Notes:**

e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.

Available in Mac OS X v10.6 and later.
Return true if you handled this event.

### 137.1.41 menuForEvent(e as NSEventMBS, defaultMenu as NSMenuMBS) as NSMenuMBS

MBS MacControls Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

**Function:** Overridden by subclasses to return a context-sensitive pop-up menu for a given mouse-down event.
**Notes:**

theEvent: An object representing a mouse-down event.
defaultMenu: The menu as constructed by super class.

The receiver can use information in the mouse event, such as its location over a particular element of the receiver, to determine what kind of menu to return. For example, a text object might display a text-editing menu when the cursor lies over text and a menu for changing graphics attributes when the cursor lies over an embedded image.

The default implementation returns the default menu.

### 137.1.42 mouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.43 mouseDownCanMoveWindow as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** This event is called so you can decide what happens with mouse down.
**Notes:**

Return true if you do not need to handle a mouse down and it can pass through to superviews; False if you need to handle the mouse down.

This allows iApp-type applications to determine the region by which a window can be moved. By default, this method returns false if the view is opaque; otherwise, it returns true. Subclasses can override this

method to return a different value.

### 137.1.44 mouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.45 mouseEntered(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.46 mouseExited(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.47 mouseMoved(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.48 mouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.49 Open

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** The event called when the custom NSView is created.

### 137.1.50 otherMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:**

Return true if you handled this event.
Third mouse button.

### 137.1.51 otherMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:**

Return true if you handled this event.
Third mouse button.

### 137.1.52 otherMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:**

Return true if you handled this event.
Third mouse button.

### 137.1.53 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Return if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

### 137.1.54 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.
Returns true if the receiver agrees to perform the drag operation and false if not.
This method is invoked only if the most recent draggingEntered or draggingUpdated message returned an acceptable drag-operation value.
If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this method.

### 137.1.55 pressureChange(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:** Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
**Notes:**

This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

### 137.1.56 resignFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Focus is going away.
**Notes:** Return true to accept.

### 137.1.57 rightMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.58 rightMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.59 rightMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** One of the mouse events.
**Notes:** Return true if you handled this event.

### 137.1.60 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Informs the receiver that the user has begun a rotation gesture.
**Notes:**

e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

### 137.1.61 scrollWheel(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.0, Platform: macOS, Targets: .

**Function:** Informs the subclass that the mouse's scroll wheel has moved.
**Notes:**

e: An object encapsulating information about the wheel-scrolling event.

The default implementation simply passes this message to the next responder.
Return true to not pass the event.

### 137.1.62 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

**Function:** Informs the receiver that the user has begun a swipe gesture.
**Notes:**

e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

### 137.1.63 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Invoked when the dragging images should be changed.
**Notes:**

sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

### 137.1.64 viewDidMoveToWindow

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** Informs the receiver that it has been added to a new view hierarchy.
**Notes:**

The default implementation does nothing; subclasses can implement this event to perform whatever actions are necessary.

window may return nil when this method is invoked, indicating that the receiver does not currently reside in any window. This occurs when the receiver has just been removed from its superview or when the receiver has just been added to a superview that does not itself have a window. Overrides of this method may choose to ignore such cases if they are not of interest.

### 137.1.65 wantsPeriodicDraggingUpdates as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

**Function:** Asks the destination object whether it wants to receive periodic draggingUpdated messages.
**Notes:**

Return true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated messages even if nothing changes.

## 137.2 control DesktopPDFThumbnailViewControlMBS

### 137.2.1 control DesktopPDFThumbnailViewControlMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a PDFThumbnailView.
**Notes:**

This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

### 137.2.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 13.4pr7

### 137.2.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 13.4pr7

### 137.2.4 Properties

### 137.2.5 View as PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 137.2.6 Events

### 137.2.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 137.2.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 137.2.9 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 137.2.10 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 137.2.11 FocusLost

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.

**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.2.12 FocusReceived

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.2.13 FrameChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 137.2.14 MenuBarSelected

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 137.2.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 137.2.16 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 137.2.17 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 137.2.18 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 137.2.19 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 137.3 control DesktopPDFViewControlMBS

### 137.3.1 control DesktopPDFViewControlMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a PDFView.
**Notes:**

This control embeds a special PDFView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

### 137.3.4 Methods

### 137.3.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear overlay item for this page.
**Notes:**

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.3.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear all overlays.
**Notes:** The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.3.7 Properties

### 137.3.8 View as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 137.3.9 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Get/Set overlay item.
**Notes:**

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

### 137.3.10 Events

### 137.3.11 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called after something was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.3.12 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called after a page annotations were drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.3.13 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called after a page was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.3.14 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called before a page was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.3.15 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called before a page annotations were drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.3.16 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The draw event called before a something was drawn.

### 137.3.17 BoundsChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 137.3.18 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 137.3.19 CocoaMouseDown(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:** This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

### 137.3.20 CocoaMouseDrag(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:** This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

### 137.3.21 CocoaMouseUp(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

### 137.3.22 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 137.3.23 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 137.3.24 FocusLost

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.3.25 FocusReceived

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.3.26 FrameChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 137.3.27 MenuBarSelected

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 137.3.28 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 137.3.29 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 137.3.30 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 137.3.31 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 137.3.32 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Opens a specified page.
**Notes:** This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

### 137.3.33 PerformFind

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Performs a find operation.
**Notes:**

Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

### 137.3.34 PerformGoToPage

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Performs a go-to operation.
**Notes:** Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

### 137.3.35 PerformPrint

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Prints the current document.
**Notes:** Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

### 137.3.36 PrintJobTitle as String

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Overrides the job title used when the PDFView is printed.
**Notes:** Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

### 137.3.37 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 137.3.38 WillChangeScaleFactor(scale as Double) as Double

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Overrides changes to the scale factor.
**Notes:**

Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

### 137.3.39 WillClickOnLink(URL as String)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Handle clicks on URL links in a view.
**Notes:**

If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

## 137.4 class PDFActionGoToMBS

### 137.4.1 class PDFActionGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFActionGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action.
**Notes:**

A PDFActionGoTo object represents the action of going to a specific location within the PDF document.
Subclass of the PDFActionMBS class.

### 137.4.2 Blog Entries

### 137.4.4 Methods

### 137.4.5 Constructor(destination as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the go-to action.
**Notes:**

destination: The destination with which to initialize the go-to action.
Available in Mac OS X v10.5 and later.

### 137.4.6 Properties

### 137.4.7 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destination associated with the action.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

## 137.5 class PDFActionMBS

### 137.5.1 class PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFAction represents an action that is performed when, for example, a PDF annotation is activated or an outline item is clicked.
**Notes:**

A PDFAction object represents an action associated with a PDF element, such as an annotation or a link, that the viewer application can perform. See the Adobe PDF Specification for more about actions and action types.

PDFAction is an abstract superclass of the following concrete classes:

- PDFActionGoToMBS
- PDFActionNamedMBS
- PDFActionRemoteGoToMBS
- PDFActionResetFormMBS
- PDFActionURLMBS

### 137.5.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

### 137.5.3 Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

### 137.5.4 Methods

### 137.5.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFActionMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.
See also:

- 137.5.6 Constructor(Handle as Integer) 21737

### 137.5.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFAction handle.
**Notes:**

Please pass in a non zero handle which points to a PDFAction object.
For use with declares.
See also:

- 137.5.5 Constructor 21736

### 137.5.7 copy as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the action object.

### 137.5.8 Properties

### 137.5.9 Handle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference tot he PDF action object.
**Notes:** (Read and Write property)

### 137.5.10 type as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the type of the action.
**Notes:**

The PDF action type returned by this method may not correspond precisely to the name of a PDFAction subclass. For example, a PDFActionURL object might return ”URI” or ”Launch,” depending on the original action as defined by the Adobe PDF Specification. In the PDF Kit, these two actions are handled in the single PDFActionURL subclass, and the more familiar term ”URL” is used instead.

Available in Mac OS X v10.5 and later.
(Read only property)

## 137.6 class PDFActionNamedMBS

### 137.6.1 class PDFActionNamedMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFActionNamed defines methods used to work with actions in PDF documents, some of which are named in the Adobe PDF Specification.
**Notes:**

A PDFActionNamed object represents an action with a defined name, such as "Go back" or "Zoom in."
Subclass of the PDFActionMBS class.

### 137.6.2 Methods

### 137.6.3 Constructor(name as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the PDFActionName object with the specified named action.
**Notes:** Available in Mac OS X v10.5 and later.

### 137.6.4 Properties

### 137.6.5 name as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the named action.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.6.6 Constants

### 137.6.7 kPDFActionNamedFind = 8

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Find action.
Available in Mac OS X v10.5 and later.

### 137.6.8 kPDFActionNamedFirstPage = 3

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The First Page action.
Available in Mac OS X v10.5 and later.

### 137.6.9 kPDFActionNamedGoBack = 5

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Go Back action.
Available in Mac OS X v10.5 and later.

### 137.6.10 kPDFActionNamedGoForward = 6

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Go Forward action.
Available in Mac OS X v10.5 and later.

### 137.6.11 kPDFActionNamedGoToPage = 7

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Go to Page action.
Available in Mac OS X v10.5 and later.

### 137.6.12 kPDFActionNamedLastPage = 4

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Last Page action.
Available in Mac OS X v10.5 and later.

### 137.6.13 kPDFActionNamedNextPage = 1

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Next Page action.
Available in Mac OS X v10.5 and later.

### 137.6.14 kPDFActionNamedNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The action has no name.
Available in Mac OS X v10.5 and later.

### 137.6.15 kPDFActionNamedPreviousPage = 2

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Previous Page action.
Available in Mac OS X v10.5 and later.

### 137.6.16 kPDFActionNamedPrint = 9

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Print action.
Available in Mac OS X v10.5 and later.

### 137.6.17 kPDFActionNamedZoomIn = 10

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Zoom In action.
Available in Mac OS X v10.5 and later.

### 137.6.18 kPDFActionNamedZoomOut = 11

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the name constants for the action.
**Notes:**

The Zoom Out action.
Available in Mac OS X v10.5 and later.

## 137.7 class PDFActionRemoteGoToMBS

### 137.7.1 class PDFActionRemoteGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFActionRemoteGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action that targets another document.
**Notes:**

Available in Mac OS X v10.5 and later.
Subclass of the PDFActionMBS class.

### 137.7.2 Methods

### 137.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the remote go-to action with the specified page index, point, and document URL.
**Notes:**

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
file: The file of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 137.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string) 21743

### 137.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the remote go-to action with the specified page index, point, and document URL.
**Notes:**

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
url: The URL of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 137.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem) 21743

### 137.7.5 Properties

### 137.7.6 pageIndex as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The zero-based page index referenced by the remote go-to action.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.7.7 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The point, in page space, on the page referenced by the remote go-to action.
**Notes:**

The point on the page of the remote document referenced by the action. If either the x value or the y value of the point is kPDFDestinationUnspecifiedValue, no position on the page is specified.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.7.8 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The URL of the document referenced by the remote go-to action.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

## 137.8 class PDFActionResetFormMBS

### 137.8.1 class PDFActionResetFormMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFActionResetForm, a subclass of PDFAction, defines methods for getting and clearing fields in a PDF form.
**Notes:**

A PDFActionResetForm object represents an action associated with a PDF form.
Subclass of the PDFActionMBS class.

### 137.8.2 Methods

### 137.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a reset form action.
**Notes:**

Initially, there are no fields and fieldsIncludedAreCleared returns true.

Available in Mac OS X v10.5 and later.

### 137.8.4 fields as string()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of fields associated with the reset action.
**Notes:**

An array of strings that corresponds to the fieldNames property of widget annotations (such as PDFAnnotationButtonWidget) on the PDF page. This method can return an empty array.

Available in Mac OS X v10.5 and later.

### 137.8.5 setFields(fields() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the array of fields associated with the reset action.
**Notes:** Available in Mac OS X v10.5 and later.

### 137.8.6 Properties

### 137.8.7 fieldsIncludedAreCleared as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the fields associated with the reset action are cleared when the action is performed.
**Notes:**

If true, the reset action's fields are cleared when the action is performed. If false, the fields are excluded from the reset action; that is, they are not cleared, but all other fields in the document are cleared.

Available in Mac OS X v10.5 and later.
(Read and Write property)

## 137.9 class PDFActionURLMBS

### 137.9.1 class PDFActionURLMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFActionURL, a subclass of PDFAction, defines methods for getting and setting the URL associated with a URL action.
**Notes:** Subclass of the PDFActionMBS class.

### 137.9.2 Methods

### 137.9.3 Constructor(url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a URL action with the specified URL.
**Notes:** Available in Mac OS X v10.5 and later.

### 137.9.4 Properties

### 137.9.5 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The URL associated with the URL action.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

## 137.10 class PDFAnnotationButtonWidgetMBS

### 137.10.1 class PDFAnnotationButtonWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for an annotation button widget.
**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.10.2 Methods

### 137.10.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor which creates a new annotation widget.
See also:

- 137.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21749

### 137.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor which creates a new annotation widget.
See also:

- 137.10.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21749

### 137.10.5 Properties

### 137.10.6 allowsToggleToOff as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a Boolean value indicating whether a radio button behaves in a toggling manner.
**Notes:**

True if clicking a radio button control that is already in the on state toggles it to the off state; otherwise false.

Available in Mac OS X v10.5 and later.
(Read only property)

### 137.10.7 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The background color.
**Notes:** (Read and Write property)

### 137.10.8 caption as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The text of the label on a push button control.
**Notes:**

This method applies only to the label drawn on a control of type kPDFWidgetPushButtonControl.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.9 controlType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The control type of this widget.
**Notes:**

Value is one of the following constants:

kPDFWidgetUnknownControl
kPDFWidgetPushButtonControl
kPDFWidgetRadioButtonControl
kPDFWidgetCheckBoxControl
(Read and Write property)

### 137.10.10 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal name of a field (used for reset-form actions).
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.11 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font used in the control's label.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.12 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font color used in the control's label.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.13 Highlighted as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value that indicates whether the control is highlighted when it is drawn.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.14 onStateValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The string associated with the on state of a radio button or checkbox control.
**Notes:**

This is a required string for controls of types kPDFWidgetRadioButtonControl and kPDFWidgetCheckBoxControl. The off state is always labeled "Off".

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.10.15 state as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The state value.
**Notes:** (Read and Write property)

### 137.10.16 Events

### 137.10.17 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

### 137.10.18 Constants

### 137.10.19 kPDFWidgetCheckBoxControl = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the control types for this widget.

### 137.10.20 kPDFWidgetMixedState = -1

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the state constants.
**Notes:** The corresponding feature is in mixed state.

### 137.10.21 kPDFWidgetOffState = 0

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the state constants.
**Notes:** The corresponding feature is in effect nowhere.

### 137.10.22 kPDFWidgetOnState = 1

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the state constants.
**Notes:** The corresponding feature is in effect everywhere.

### 137.10.23 kPDFWidgetPushButtonControl = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the control types for this widget.

### 137.10.24 kPDFWidgetRadioButtonControl = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the control types for this widget.

### 137.10.25 kPDFWidgetUnknownControl = -1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the control types for this widget.

### 137.10.26 NSOffState = 0

MBS MacControls Plugin, Plugin Version: 12.5.

**Function:** One of the state constants.
**Notes:** The corresponding feature is in effect nowhere.

### 137.10.27 NSOnState = 1

MBS MacControls Plugin, Plugin Version: 12.5.

**Function:** One of the state constants.
**Notes:** The corresponding feature is in effect everywhere.

# 137.11 class PDFAnnotationChoiceWidgetMBS

## 137.11.1 class PDFAnnotationChoiceWidgetMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A PDFAnnotationChoiceWidget object provides user interactivity on a page of a PDF document, in the form of pop-up menus and lists.
**Notes:**

PDFAnnotationChoiceWidget inherits general annotation behavior from the PDFAnnotation class. If you use a PDFAnnotationChoiceWidget object, your application must handle hit testing, unless you are simply using PDFView to display content. This is because PDFView automatically handles hit testing for you.
Subclass of the PDFAnnotationMBS class.

## 137.11.2 Methods

## 137.11.3 choices as string()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of strings that represent the items available in the list or pop-up menu of the choice widget annotation.
**Notes:** Available in Mac OS X v10.5 and later.

## 137.11.4 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a PDF annotation object.
**Notes:**

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.4 and later.
See also:

- 137.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21756

### 137.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a PDF annotation object.
See also:

- 137.11.4 Constructor(left as Double, top as Double, width as Double, height as Double) 21755

### 137.11.6 setChoices(choices() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the items available in the list or pop-up menu of the choice widget annotation.
**Notes:**

choices: Send an array of strings, each of which represents an item in the list or pop-up menu of the choice annotation widget.

Available in Mac OS X v10.5 and later.

### 137.11.7 Properties

### 137.11.8 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The color of the widget annotation background.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.9 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal field name associated with the widget annotation's value.
**Notes:**

If the widget annotation is backed by PDF form data, it can associate an optional field name with a value or other data.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.10 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font used to display the text in the widget annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.11 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font color used to display the text in the widget annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.12 isListChoice as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the widget annotation is a list.
**Notes:**

A choice widget annotation can be either a list or a pop-up menu.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.13 stringValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The selection in the widget annotation.
**Notes:**

If the widget annotation object is backed by PDF form data, this method returns the value associated with the appropriate field in the form object, if possible.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.11.14 Events

### 137.11.15 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

## 137.12 class PDFAnnotationCircleMBS

### 137.12.1 class PDFAnnotationCircleMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for an annotation circle.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.12.2 Methods

### 137.12.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation circle.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

```
o.Launch
```

See also:

- 137.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21760

### 137.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation circle.
See also:

- 137.12.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21759

### 137.12.5 Properties

### 137.12.6 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Fill color used for drawing annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)
a.interiorColor = NSColorMBS.magentaColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** (Read and Write property)

### 137.12.7 Events

### 137.12.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

## 137.13 class PDFAnnotationFreeTextMBS

### 137.13.1 class PDFAnnotationFreeTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a free text annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationFreeTextMBS then
dim ft as PDFAnnotationFreeTextMBS = PDFAnnotationFreeTextMBS(a)
MsgBox ft.contents
end if
next
```

**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.13.2 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

### 137.13.3 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

### 137.13.4 Methods

### 137.13.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new free text annotation.
See also:

- 137.13.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

### 137.13.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new free text annotation.
See also:

- 137.13.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21762

### 137.13.7 NSCenterTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

**Function:** The Cocoa text alignment constant for center.

### 137.13.8 NSRightTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

**Function:** The Cocoa text alignment constant for right.

### 137.13.9 Properties

### 137.13.10 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Alignment of text within annotation bounds.
**Example:**

```
dim a as PDFAnnotationFreeTextMBS // an annotation

if a.alignment=a.NSLeftTextAlignment then
// left aligned
end if
```

**Notes:**

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

### 137.13.11 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Font associated with the text field.
**Notes:** (Read and Write property)

### 137.13.12 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font color used in the text field of the annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.13.13 Events

### 137.13.14 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

### 137.13.15 Constants

### 137.13.16 NSJustifiedTextAlignment = 3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for justified.

### 137.13.17 NSLeftTextAlignment = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for left.

### 137.13.18 NSNaturalTextAlignment = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for natural.

## 137.14 class PDFAnnotationInkMBS

### 137.14.1 class PDFAnnotationInkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for an ink annotation.
**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

### 137.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

### 137.14.4 Methods

### 137.14.5 addBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds a Bezier path to an annotation.

### 137.14.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new ink annotation.
See also:

- 137.14.7 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21766

### 137.14.7 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new ink annotation.
See also:

- 137.14.6 Constructor(left as Double, top as Double, width as Double, height as Double) 21766

### 137.14.8 paths as NSBezierPathMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array containing the Bezier paths that make up an annotation.
**Example:**

```
dim a as new PDFAnnotationInkMBS(0, 0, 100, 100)

dim b1 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(10, 10, 10, 10))
a.addBezierPath b1

dim b2 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(50, 50, 20, 30))
a.addBezierPath b2

dim paths() as NSBezierPathMBS = a.paths
break
```

### 137.14.9 removeBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes a Bezier path from an annotation.

### 137.14.10 Events

### 137.14.11 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

## 137.15 class PDFAnnotationLineMBS

### 137.15.1 class PDFAnnotationLineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for a line annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.15.2 Methods

### 137.15.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor for a new annotation line.
**Example:**

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
```

See also:

- 137.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

### 137.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor for a new annotation line.
See also:

- 137.15.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21768

### 137.15.5 Properties

### 137.15.6 endLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Style used for ornaments at the line end.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

**Notes:** (Read and Write property)

### 137.15.7 endPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A point specifying the end point for line annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

**Notes:** (Read and Write property)

### 137.15.8 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The color used to fill the ornament at the ends of the line.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.15.9 startLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Style used for ornaments at the line start.
**Example:**

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleSquare
```

**Notes:** (Read and Write property)

### 137.15.10 startPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A point specifying the start pointfor line annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

**Notes:** (Read and Write property)

### 137.15.11 Events

### 137.15.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

### 137.15.13 Constants

### 137.15.14 kPDFLineStyleCircle = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleCircle
```

```
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

### 137.15.15 kPDFLineStyleClosedArrow = 5

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleClosedArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

### 137.15.16 kPDFLineStyleDiamond = 3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.
**Example:**

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleDiamond
```

### 137.15.17 kPDFLineStyleNone = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.

### 137.15.18 kPDFLineStyleOpenArrow = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

### 137.15.19 kPDFLineStyleSquare = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** On of the constants for the styles used for line end caps.
**Example:**

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.endLineStyle = a.kPDFLineStyleSquare
```

## 137.16 class PDFAnnotationLinkMBS

### 137.16.1 class PDFAnnotationLinkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for a link annotation.
**Example:**

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.16.2 Methods

### 137.16.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor for a new annotation link.

See also:

- 137.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21775

### 137.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor for a new annotation link.
See also:

- 137.16.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21774

### 137.16.5 setHighlighted(value as boolean)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The highlight state dictates how the annotation is drawn.
**Notes:** If a user has clicked on a "Link" annotation, you should set highlighted to true and redraw it. When the user lets up, set highlighted to false and redraw again.

### 137.16.6 Properties

### 137.16.7 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Destination for the link.
**Notes:** (Read and Write property)

### 137.16.8 URL as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** URL for the link.
**Notes:** (Read and Write property)

### 137.16.9 Events

### 137.16.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

# 137.17 class PDFAnnotationMarkupMBS

## 137.17.1 class PDFAnnotationMarkupMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a markup annotation.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** Subclass of the PDFAnnotationMBS class.

## 137.17.2 Blog Entries

## 137.17.4 Methods

## 137.17.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new markup annotation.
**Example:**

```
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
```

See also:

- 137.17.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21778

### 137.17.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new markup annotation.
See also:

- 137.17.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21777

### 137.17.7 quadrilateralPoints as NSPointMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Get the quadrilateral points.
**Example:**

```
dim m as new PDFAnnotationMarkupMBS(10, 20, 30, 40)
dim points() as NSPointMBS = m.quadrilateralPoints
break // see points in debugger
```

**Notes:**

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

### 137.17.8 setQuadrilateralPoints(points() as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Set the quadrilateral points.
**Notes:**

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

### 137.17.9 Properties

### 137.17.10 markupType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Type of mark-up (highlight, strike-out or underline).
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:**

Changing the markup type also changes the annotations type to one of: "Highlight", "Strikeout", or "Underline" (these are three seperate annotation types treated here as three seperate flavors of the one PDFAnnotationMarkup class).
(Read and Write property)

### 137.17.11 Events

### 137.17.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.

Return true to disable the default drawing from PDFKit.

### 137.17.13 Constants

### 137.17.14 kPDFMarkupTypeHighlight = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** A constant for the markup type.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeHighlight
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** Highlight

### 137.17.15 kPDFMarkupTypeRedact = 3

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** A constant for the markup type.
**Notes:** Redact

### 137.17.16 kPDFMarkupTypeStrikeOut = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** A constant for the markup type.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeStrikeOut
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** StrikeOut

### 137.17.17 kPDFMarkupTypeUnderline = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** A constant for the markup type.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** Underline

## 137.18 class PDFAnnotationMBS

### 137.18.1 class PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** This is the base class for all annotations.
**Notes:** A PDFAnnotation object by itself is not useful, only the subclasses (like PDFAnnotationCircle, PDFAnnotationText) are interesting. In parsing a PDF however, any unknown or unsupported annotations will be represented as this base class. Its drawRect method merely frames the bounds of the annotation and prints the annotation type (like "TrapNet") within the box.

### 137.18.4 Methods

### 137.18.5 addBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Add paths from the annotation.
**Notes:**

Path points are specified in annotation space.
Used by annotations type(s): /Ink.

### 137.18.6 choices as string()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
**Notes:** Used by annotations type(s): /Widget (field type(s): /Ch).

### 137.18.7 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFAnnotationMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

- 137.18.8 Constructor(Handle as Integer) 21783
- 137.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21784
- 137.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21784

### 137.18.8 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFAnnotation handle.
**Notes:**

Please pass in a non zero handle which points to a PDFAnnotation object.
For use with declares.
See also:

- 137.18.7 Constructor 21783
- 137.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21784
- 137.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21784

### 137.18.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation.
**Notes:** You need to set type once.
See also:

- 137.18.7 Constructor 21783
- 137.18.8 Constructor(Handle as Integer) 21783
- 137.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21784

### 137.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation of given type.
See also:

- 137.18.7 Constructor 21783
- 137.18.8 Constructor(Handle as Integer) 21783
- 137.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21784

### 137.18.11 copy as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the annotation object.
**Notes:**

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the annotation.

### 137.18.12 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 137.18.13 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Draws the annotation on its associated page.
**Notes:**

The annotation is drawn relative to the origin of box in page space.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

For additional information see the "Constants" section in the PDFPage class.

Available in Mac OS X v10.4 and later.

### 137.18.14 lineStyleFromName(Name as String) as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries line style for given name.
**Notes:**

Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

### 137.18.15 nameForLineStyle(LineStyle as Integer) as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries name for line style.
**Notes:**

Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

### 137.18.16 paths as NSBezierPathMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of NSBezierPathsMBS that comprise the annotation.
**Notes:**

Paths are specified in annotation space.

Used by annotations type(s): /Ink.

### 137.18.17 PDFAnnotationHighlightingModeInvert as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the highlighting mode constants.
**Notes:** Invert

### 137.18.18 PDFAnnotationHighlightingModeNone as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the highlighting mode constants.
**Notes:** No

### 137.18.19 PDFAnnotationHighlightingModeOutline as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the highlighting mode constants.
**Notes:** Outline

### 137.18.20 PDFAnnotationHighlightingModePush as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the highlighting mode constants.
**Notes:** Push

### 137.18.21 PDFAnnotationKeyAction as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.22 PDFAnnotationKeyAdditionalActions as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.23 PDFAnnotationKeyAppearanceDictionary as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.24 PDFAnnotationKeyAppearanceState as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.25 PDFAnnotationKeyBorder as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.26 PDFAnnotationKeyBorderStyle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.27 PDFAnnotationKeyColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.28 PDFAnnotationKeyContents as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.29 PDFAnnotationKeyDate as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.30 PDFAnnotationKeyDefaultAppearance as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.31 PDFAnnotationKeyDestination as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.32 PDFAnnotationKeyFlags as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.33 PDFAnnotationKeyHighlightingMode as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.34 PDFAnnotationKeyIconName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.35 PDFAnnotationKeyInklist as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.36 PDFAnnotationKeyInteriorColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.37 PDFAnnotationKeyLineEndingStyles as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.38 PDFAnnotationKeyLinePoints as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.39 PDFAnnotationKeyName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.40 PDFAnnotationKeyOpen as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.41 PDFAnnotationKeyPage as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.42 PDFAnnotationKeyParent as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.43 PDFAnnotationKeyPopup as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.44 PDFAnnotationKeyQuadding as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.45 PDFAnnotationKeyQuadPoints as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.46 PDFAnnotationKeyRect as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.47 PDFAnnotationKeySubtype as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.48 PDFAnnotationKeyTextLabel as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the annotation property keys.

### 137.18.49 PDFAnnotationKeyWidgetAppearanceDictionary as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.50 PDFAnnotationKeyWidgetBackgroundColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.51 PDFAnnotationKeyWidgetBorderColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.52 PDFAnnotationKeyWidgetCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.53 PDFAnnotationKeyWidgetDefaultValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.54 PDFAnnotationKeyWidgetDownCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.55 PDFAnnotationKeyWidgetFieldFlags as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.56 PDFAnnotationKeyWidgetFieldType as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.57 PDFAnnotationKeyWidgetMaxLen as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.58 PDFAnnotationKeyWidgetOptions as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.59 PDFAnnotationKeyWidgetRolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.60 PDFAnnotationKeyWidgetRotation as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.61 PDFAnnotationKeyWidgetTextLabelUI as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.62 PDFAnnotationKeyWidgetValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the key widget property keys.

### 137.18.63 PDFAnnotationLineEndingStyleCircle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** Circle

### 137.18.64 PDFAnnotationLineEndingStyleClosedArrow as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** Closed Arrow

### 137.18.65 PDFAnnotationLineEndingStyleDiamond as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** Diamond

### 137.18.66 PDFAnnotationLineEndingStyleNone as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** No

### 137.18.67 PDFAnnotationLineEndingStyleOpenArrow as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** Open Arrow

### 137.18.68 PDFAnnotationLineEndingStyleSquare as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the line ending style constants.
**Notes:** Square

### 137.18.69 PDFAnnotationSubtypeCircle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Circle

### 137.18.70 PDFAnnotationSubtypeFreeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Freetext

### 137.18.71 PDFAnnotationSubtypeHighlight as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Highlight

### 137.18.72 PDFAnnotationSubtypeInk as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Ink

### 137.18.73 PDFAnnotationSubtypeLine as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Line

### 137.18.74 PDFAnnotationSubtypeLink as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Link

### 137.18.75 PDFAnnotationSubtypePopup as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Popup

### 137.18.76 PDFAnnotationSubtypeSquare as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Square

### 137.18.77 PDFAnnotationSubtypeStamp as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Stamp

### 137.18.78 PDFAnnotationSubtypeStrikeOut as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Strike out

### 137.18.79 PDFAnnotationSubtypeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Text

### 137.18.80 PDFAnnotationSubtypeUnderline as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Underline

### 137.18.81 PDFAnnotationSubtypeWidget as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the subtypes.
**Notes:** Widget

### 137.18.82 PDFAnnotationTextIconTypeComment as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Comment

### 137.18.83 PDFAnnotationTextIconTypeHelp as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Help

### 137.18.84 PDFAnnotationTextIconTypeInsert as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Insert

### 137.18.85 PDFAnnotationTextIconTypeKey as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Key

### 137.18.86 PDFAnnotationTextIconTypeNewParagraph as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** New Paragraph

### 137.18.87 PDFAnnotationTextIconTypeNote as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Note

### 137.18.88 PDFAnnotationTextIconTypeParagraph as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the icon type constants.
**Notes:** Paragraph

### 137.18.89 PDFAnnotationWidgetSubtypeButton as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget subtypes.
**Notes:** Button

### 137.18.90 PDFAnnotationWidgetSubtypeChoice as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget subtypes.
**Notes:** Choice

### 137.18.91 PDFAnnotationWidgetSubtypeSignature as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget subtypes.
**Notes:** Signature

### 137.18.92 PDFAnnotationWidgetSubtypeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget subtypes.
**Notes:** Text

### 137.18.93 quadrilateralPoints as NSPointMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
**Notes:**

The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

### 137.18.94 removeAllAppearanceStreams

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** All appearance streams for the target annotation are removed.
**Notes:**

Without an appearance stream, annotations are drawn strictly according to their parameters (color, border, font, etc.). When a PDF is saved, PDF Kit will always write out an appearance stream(s) for each annotation. If the PDF is reloaded, you will need to remove the appearance streams in order to continue to edit the annotations parameters.

Requires Mac OS X 10.5.

### 137.18.95 removeBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Remove paths from the annotation.

### 137.18.96 removeValueForAnnotationKey(Key as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Remove the key-value pair from the annotation dictionary. Returns true on successful removal.

### 137.18.97 setBooleanValue(Key as String, value as Boolean) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets a boolean value.
**Notes:** See also setValue.

### 137.18.98 setChoices(choices() as string)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
**Notes:** Used by annotations type(s): /Widget (field type(s): /Ch).

### 137.18.99 setQuadrilateralPoints(points() as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
**Notes:**

The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

### 137.18.100 setRectValue(Key as String, value as NSRectMBS) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets a rectangle value.
**Notes:** See also setValue.

### 137.18.101 setValue(Key as String, value as Variant) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Allows you to set a key-value pair in this annotation's dictionary.
**Notes:** Returns true on successful assignment, false on error. Key must be valid for a PDF annotation's object type, and must have a value that is acceptable for the key type. These values can either be a string, number, array of strings or numbers, or an dictionary of the previously listed types. Some keys expect a complex type, for example the key "/C" expects a color in the format of an array of 0, 1, 3, or 4 elements, with each element being a floating-point number in the range of 0.0 - 1.0 ). As a convenience, these kind of keys will directly accept NSColorMBS values. Other convenience functions provide similar support can be found in PDFAnnotationUtilities header file. Note that you can set the environment variable "PDFKIT_LOG_ANNOTATIONS" to log any key-value assignment failures.

### 137.18.102 setValues(values() as string)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The choices are an array of strings indicating the option,Äôs export values in either a list or pop-up menu.
**Notes:** Used by annotations type(s): /Widget (field type(s): /Ch).

### 137.18.103 valueForAnnotationKey(Key as String) as Variant

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Retrieves a deep copy of the key-value pair based on the given key; key can either be from the keys PDFAnnotationKey, or an appropriate string from the PDF specification.

### 137.18.104 values as string()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The choices are an array of strings indicating the option,Äôs export values in either a list or pop-up menu.
**Notes:** Used by annotations type(s): /Widget (field type(s): /Ch).

### 137.18.105 Properties

### 137.18.106 Action as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Optional action performed when a user clicks / taps an annotation.
**Notes:**

PDF readers ignore actions except for those associated with Link or button Widget annotations.

Available in macOS 10.5 or newer
(Read and Write property)

### 137.18.107 alignment as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Alignment of text within annotation bounds. Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
**Notes:**

Used by annotations type(s): /FreeText, /Widget (field type(s): /Tx).
(Read and Write property)

### 137.18.108 allowsToggleToOff as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For radio buttons, indicates whether clicking on widget whose state is already On toggles it Off.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.109 annotationKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** List all key-value pairs for this annotation; returns a deep copy of all pairs.
**Notes:**

Note that this method will not include a copy of the value for /Parent. This is by design as to avoid introducing a memory cycle. If you would like to get the /Parent propery, use valueForAnnotationKey with key

PDFAnnotationKeyParent.
(Read only property)

### 137.18.110 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Background color characteristics.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

### 137.18.111 border as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Optional border or border style that describes how to draw the annoation border (if any).
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** (Read and Write property)

### 137.18.112 bounds as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The bounding box for the annotation in page space.
**Notes:**

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
(Read and Write property)

### 137.18.113 buttonWidgetState as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The current state of a button widget annotation.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.114 buttonWidgetStateString as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The string that represents the ON state of a button widget annotation.
**Notes:**

This should be set when trying to, for example, group together a set of radio buttons with the same field name.
When buttons share the same field name, their individual state strings set them apart from one another.
Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.115 caption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Label for the button. Applies to kPDFWidgetPushButtonControl only.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.116 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For many annotations ("Circle", "Square") the stroke color.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

**Notes:**

Used for other annotations as well.
(Read and Write property)

### 137.18.117 comb as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Used to configure combing for PDF text fields.
**Notes:**

If set, the field is automatically divided into as many equally spaced positions, or combs, as the value of the maximum length of the field. To get the maximum length, use annotaiton key: PDFAnnotationKeyWidgetMaxLen.
Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

### 137.18.118 contents as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A string of text associated with an annotation.

**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationTextMBS(100,100,100,100)

a.contents="Hello"
a.colorValue = NSColorMBS.redColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:**

Often to be displayed in a pop-up when the annotation is clicked on ("FreeText" and "Text" especially).
(Read and Write property)

### 137.18.119 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Destination for the link. May be nil if no destination associated with link; in this case the URL may be valid.
**Notes:**

The preferred way though is to use action property.
Used by annotations type(s): /Link.
(Read and Write property)

### 137.18.120 endLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Style used for ornaments at the lines end (optional, PDF 1.4).
**Notes:**

Used by annotations type(s): /Line.
(Read and Write property)

### 137.18.121 endPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Points specifying end points for line annotation (required).
**Notes:**

Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

### 137.18.122 fieldName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Widget annotations backed by form data have (internal) field names with which to associate a value or data.
**Notes:**

Can also be used for ResetForm actions.
Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

### 137.18.123 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Font and font color associated with the text field.
**Notes:**

Used by annotations type(s): /FreeText, /Popup, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

### 137.18.124 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Width of line used to stroke border.
**Notes:**

Used by annotations type(s): /FreeText, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

### 137.18.125 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle used internally for the object reference.
**Notes:** (Read and Write property)

### 137.18.126 hasAppearanceStream as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if the annotation has an appearance stream.
**Notes:**

Annotations with appearance streams are drawn using their stream. As a result, setting many parameters (like 'setColor' above), will have no visible effect.
(Read only property)

### 137.18.127 iconType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The type of icon displayed in the PDF. Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
**Notes:**

Used by annotations type(s): /Text.
(Read and Write property)

### 137.18.128 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Interior color of the annotation.
**Notes:**

Used by annotations type(s): /Circle, /Line, /Square.
(Read and Write property)

### 137.18.129 isHighlighted as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The highlight state dictates how the annotation is drawn.
**Notes:**

For example, if a user has clicked on a "Link" annotation, you should set highlighted to YES and redraw it. When the user lets up, set highlighted to false and redraw again.

Available in macOS 10.13 or newer or iOS 11.0 or newer.
(Read and Write property)

### 137.18.130 isPasswordField as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Used to determine if a PDF text field is a password field.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read only property)

### 137.18.131 ListChoice as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** There are two flavors of Choice widget annotations, lists and pop-up menus. This method allow you to differentiate.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Ch).
(Read and Write property)

### 137.18.132 markupType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Type of mark-up (highlight, strike-out or underline). Changing the markup type also changes the annotations type.
**Notes:**

Used by annotations type(s): /Highlight, /StrikeOut, /Underline.
(Read and Write property)

### 137.18.133 maximumLength as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Maximum characters allowed (optional, zero indicates no specified maximum).
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

### 137.18.134 modificationDate as date

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The modification date of the annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.18.135 modificationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The modification date of the annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.18.136 mouseUpAction as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The action performed when a user releases the mouse button within an annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.18.137 multiline as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Used to configure multiline PDF text fields.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

### 137.18.138 Open as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Used to tell if an annotation is open or closed.
**Notes:**

Used by annotations type(s): /Popup.
(Read and Write property)

### 137.18.139 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the page the annotation is associated with.
**Notes:** (Read only property)

### 137.18.140 popup as Variant

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The pop-up annotation associated with an annotation.
**Notes:**

The variant is a PDFAnnotationPopupMBS.

Pop-up annotations are not used with links or widgets. The bounds and open state of the pop-up annotation indicate the placement and open state of the pop-up window.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.18.141 radiosInUnison as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For radio buttons, indicates whether a group of radio buttons will turn on and off in unison; that is if one is checked, they are all checked. If clear, the buttons are mutually exclusive.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.142 ReadOnly as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Determines if a text field should be editable or not.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

### 137.18.143 shouldDisplay as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies whether it should be drawn to the display or not.
**Notes:** (Read and Write property)

### 137.18.144 shouldPrint as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies whether it should be printed or not.
**Notes:** (Read and Write property)

### 137.18.145 stampName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Name of stamp annotation.
**Notes:**

Standard stamps include names like, "Approved", "Draft", "TopSecret", etc.
The name must be representable as ASCII. Very little is rendered if the annotation has no appearance stream.
Used by annotations type(s): /Stamp

(Read and Write property)

### 137.18.146 startLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Style used for ornaments at the lines start (optional, PDF 1.4).
**Notes:**

Used by annotations type(s): /Line.
(Read and Write property)

### 137.18.147 startPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Points specifying start points for line annotation (required).
**Notes:**

Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

### 137.18.148 toolTip as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String used for tooltips.
**Notes:**

The base class returns contents, sub-classes may override as appropriate.
(Read only property)

### 137.18.149 type as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the annotation type (called "Subtype" in the PDF specification since "Annot" is the type).
**Example:**

```
dim a as new PDFAnnotationTextMBS(100,100,100,100)
MsgBox a.type // Text
```

**Notes:**

Examples include: "Text", "Link", "Line", etc.
(Read and Write property)

### 137.18.150 URL as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** URL for the link. May be nil if no URL action associated with link; in this case the destination may be valid.
**Notes:**

The preferred way though is to via action property.
Used by annotations type(s): /Link.
(Read and Write property)

### 137.18.151 userName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the user who created the annotation.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.18.152 widgetControlType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The type of button widget control type (radio button, push button, or checkbox).
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

### 137.18.153 widgetDefaultStringValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The string value for a widget annotation.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

### 137.18.154 widgetFieldType as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The specific field type of a widget annotation (button, choice, or text).
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

### 137.18.155 widgetStringValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The string value for a widget annotation.
**Notes:**

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

## 137.19 class PDFAnnotationPopupMBS

### 137.19.1 class PDFAnnotationPopupMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A PDFAnnotationPopup object provides user interactivity on a PDF page in the form of a pop-up menu.
**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.19.2 Methods

### 137.19.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation popup annotation with the given size.
See also:

- 137.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21816

### 137.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation popup annotation with the given size.
See also:

- 137.19.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21816

### 137.19.5 Properties

### 137.19.6 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether the pop-up is open.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.19.7 Events

### 137.19.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

## 137.20 class PDFAnnotationSquareMBS

### 137.20.1 class PDFAnnotationSquareMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a square annotation.
**Example:**

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.20.2 Methods

### 137.20.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a square annotation.

**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

See also:

- 137.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21819

### 137.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a square annotation.
See also:

- 137.20.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21818

### 137.20.5 Properties

### 137.20.6 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Fill color used for drawing annotation.
**Example:**

```
dim a as new PDFAnnotationSquareMBS(100,100,100,100)
a.interiorColor = NSColorMBS.greenColor
```

**Notes:** (Read and Write property)

### 137.20.7 Events

### 137.20.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

# 137.21 class PDFAnnotationStampMBS

## 137.21.1 class PDFAnnotationStampMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A PDFAnnotationStamp object allows you to display a word or phrase, such as "Confidential," in a PDF page.
**Example:**

```
// create new document with blank page
dim doc as new PDFDocumentMBS
dim page as new PDFPageMBS
doc.appendPage page

// make new stamp annotation
dim stamp as new PDFAnnotationStampMBS(100, 100, 100, 100)

// Name of stamp annotation.  Standard stamps include names like, "Approved", "Draft", "TopSecret",
etc.
// The name must be representable as ASCII.
// Very little is rendered if the annotation has no appearance stream.
stamp.name = "Approved"

page.addAnnotation stamp

// save to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.Launch
else
MsgBox "write failed"
end if
```

**Notes:**

A PDFAnnotationStamp object should have an appearance stream associated with it; otherwise, nothing useful is rendered.
Subclass of the PDFAnnotationMBS class.

## 137.21.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

### 137.21.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

### 137.21.4 Methods

### 137.21.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation stamp with the given size.
See also:

- 137.21.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21822

### 137.21.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new annotation stamp with the given size.
See also:

- 137.21.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21822

### 137.21.7 Properties

### 137.21.8 name as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name associated with the stamp annotation.
**Notes:**

The name must be representable in ASCII. You can set a stamp annotation's name to help you identify it, but that name is not displayed on the PDF page. You must provide the string you want displayed on the page, such as "Draft" or "Top Secret", in the appearance stream for the annotation.

Note that the name value of the stamp annotation is not necessarily identical to the user-visible appearance of the stamp annotation. For example, a stamp annotation that displays "Confidential" on a PDF page may not have a name value of "Confidential".

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.21.9 Events

### 137.21.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

## 137.22 class PDFAnnotationTextMBS

### 137.22.1 class PDFAnnotationTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for an annotation text.
**Notes:** Subclass of the PDFAnnotationMBS class.

### 137.22.2 Methods

### 137.22.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation text.
See also:

- 137.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21824

### 137.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation text.
See also:

- 137.22.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21824

### 137.22.5 Properties

### 137.22.6 iconType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The type of icon displayed in the PDF.
**Notes:**

Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
(Read and Write property)

### 137.22.7 Events

### 137.22.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

### 137.22.9 Constants

### 137.22.10 kPDFTextAnnotationIconComment=0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.11 kPDFTextAnnotationIconHelp=3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.12 kPDFTextAnnotationIconInsert=6

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.13 kPDFTextAnnotationIconKey=1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.14 kPDFTextAnnotationIconNewParagraph=4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.15 kPDFTextAnnotationIconNote=2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

### 137.22.16 kPDFTextAnnotationIconParagraph=5

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for use with the icontype property.

# 137.23 class PDFAnnotationTextWidgetMBS

## 137.23.1 class PDFAnnotationTextWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for a text widget annotation.
**Notes:** Subclass of the PDFAnnotationMBS class.

## 137.23.2 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

## 137.23.3 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

## 137.23.4 Methods

## 137.23.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation.
See also:

- 137.23.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21827

## 137.23.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new annotation.
See also:

- 137.23.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21827

### 137.23.7 NSCenterTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

**Function:** The Cocoa text alignment constant for center.

### 137.23.8 NSRightTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

**Function:** The Cocoa text alignment constant for right.

### 137.23.9 Properties

### 137.23.10 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Alignment of text.
**Notes:**

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

### 137.23.11 attributedStringValue as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attributed string associated with text field ( font / fontColor).
**Notes:**

Available on Mac OS X 10.8 or newer.
(Read and Write property)

### 137.23.12 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The background color of the annotation text field.
**Notes:**

Available in Mac OS X v10.5 and later.

(Read and Write property)

### 137.23.13 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal name for the annotation text field.
**Notes:**

Field names are optional, internal names that identify text fields in a PDF form. You use field names with the PDFActionResetForm action.
Note that multiple PDFAnnotationTextWidget objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that field name is changed in all objects. If you need to ensure unique text for a PDFAnnotationTextWidget object, you must give it a unique field name.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.23.14 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Font associated with the text field.
**Notes:** (Read and Write property)

### 137.23.15 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The font color used for the annotation's text field.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.23.16 isMultiline as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Configuring multiline PDF text fields.
**Notes:** (Read and Write property)

### 137.23.17 maximumLength as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The maximum number of characters allowed in the annotations string.
**Notes:**

A value of 0 means that there is no specified maximum.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.23.18 rotation as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The rotation angle of the annotation text field in degrees.
**Notes:**

The rotation angle to be applied to the annotation text field, in degrees. The rotation angle must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example -90 is changed to 270).
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.23.19 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String value associated with text field.
**Notes:** (Read and Write property)

### 137.23.20 Events

### 137.23.21 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

**Function:** The event called for a custom drawing.
**Notes:**

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

### 137.23.22 Constants

### 137.23.23 NSJustifiedTextAlignment = 3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for justified.

### 137.23.24 NSLeftTextAlignment = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for left.

### 137.23.25 NSNaturalTextAlignment = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** The Cocoa text alignment constant for natural.

## 137.24 class PDFAppearanceCharacteristicsMBS

### 137.24.1 class PDFAppearanceCharacteristicsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFAppearanceCharacteristics represents a dictionary that is specific to widget annotation types, containing additional information for constructing the annotation,Äôs appearance.
**Notes:** It is designed to be a representation of the /MK appearance characteristics entry in the annotation dictionary. Because the /MK entry is optional, all properties of PDFAppearanceCharacteristics are optional as well.

### 137.24.4 Methods

### 137.24.5 Constructor

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
See also:

- 137.24.6 Constructor(Handle as Integer) 21832

### 137.24.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** Handle must point to an existing PDFAppearanceCharacteristics object.
See also:

- 137.24.5 Constructor 21832

### 137.24.7 copy as PDFAppearanceCharacteristicsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the object.

### 137.24.8 PDFAppearanceCharacteristicsKeyBackgroundColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.9 PDFAppearanceCharacteristicsKeyBorderColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.10 PDFAppearanceCharacteristicsKeyCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.11 PDFAppearanceCharacteristicsKeyDownCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.12 PDFAppearanceCharacteristicsKeyRolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.13 PDFAppearanceCharacteristicsKeyRotation as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the widget appearance characteristics keys.

### 137.24.14 Properties

### 137.24.15 appearanceCharacteristicsKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** List all appearance characteristics properties as key-value pairs; returns a deep copy of all pairs.
**Notes:**

Helpful for debugging.
(Read only property)

### 137.24.16 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The background color of the widget annotation.
**Notes:** (Read and Write property)

### 137.24.17 borderColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The border color of the widget annotation.
**Notes:** (Read and Write property)

### 137.24.18 caption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The widget annotation,Äôs normal caption, displayed when it is not interacting with the user.
**Notes:** (Read and Write property)

### 137.24.19 controlType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For button widget annotations, need to specify the control type for PDFAppearanceCharacteristicsMBS as certain attributes, i.e. captions, are only available for certain flavors.
**Notes:**

Control type does not need to be set for text or choice widget annotations.
(Read and Write property)

### 137.24.20 downCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The widget's caption displayed when the user holds the mouse button while over the annotation.
**Notes:**

Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

### 137.24.21 Handle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 137.24.22 rolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The widget's caption displayed when the user moves the mouse over the annotation.
**Notes:**

Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

### 137.24.23 rotation as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The number of *degrees* by which the widget annotation is rotated counterclockwise relative to the page.
**Notes:**

The value must be a multiple of 90. Default value: 0.
(Read and Write property)

# 137.25 class PDFBorderMBS

## 137.25.1 class PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for PDFKit borders.

## 137.25.2 Blog Entries

- MBS Xojo Plugins, version 21.1pr1
- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

## 137.25.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr1
- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3
- MBS Real Studio Plugins, version 12.5pr5

## 137.25.4 Methods

## 137.25.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** Updated for version 21.1 to be public. Used to be private.
See also:

- 137.25.6 Constructor(Handle as Integer) 21837

## 137.25.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFBorder handle.
**Notes:**

Please pass in a non zero handle which points to a PDFBorder object.
For use with declares.
See also:

- 137.25.5 Constructor 21837

### 137.25.7 copy as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the border object.
**Notes:** Not available in Mac OS X 10.6.

### 137.25.8 dashPattern as Double()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Gets the dash pattern for the border.
**Notes:** Refer to the description for NSBezierPath for more information.

### 137.25.9 PDFBorderKeyDashPattern as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Key for the dash pattern property.

### 137.25.10 PDFBorderKeyLineWidth as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Key for the line width property.

### 137.25.11 PDFBorderKeyStyle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Key for the style property.

### 137.25.12 setDashPattern(values() as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the dash pattern for the border.
**Notes:** Refer to the description for NSBezierPath for more information.

### 137.25.13 Properties

### 137.25.14 borderKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** List all border properties as key-value pairs; returns a deep copy of all pairs.
**Notes:**

Helpful for debugging.
(Read only property)

### 137.25.15 horizontalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For rounded-rect borders, the corner radius.
**Notes:**

Deprecated in Mac OS X 10.7.
(Read and Write property)

### 137.25.16 lineWidth as Double

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Width of line used to strok border.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
```

```
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:** (Read and Write property)

### 137.25.17 style as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether border is drawn solid, dashed etc.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

**Notes:**

Use this constants:

```
kPDFBorderStyleSolid      = 0
kPDFBorderStyleDashed     = 1
kPDFBorderStyleBeveled    = 2
kPDFBorderStyleInset      = 3
kPDFBorderStyleUnderline  = 4
```

(Read and Write property)

### 137.25.18 verticalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** For rounded-rect borders, the corner radius.
**Notes:**

Deprecated in Mac OS X 10.7.
(Read and Write property)

### 137.25.19 Constants

### 137.25.20 kPDFBorderStyleBeveled = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the border style.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

### 137.25.21 kPDFBorderStyleDashed = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the border style.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

### 137.25.22 kPDFBorderStyleInset = 3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the border style.

### 137.25.23 kPDFBorderStyleSolid = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the border style.

### 137.25.24 kPDFBorderStyleUnderline = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants for the border style.

# 137.26 class PDFDestinationMBS

## 137.26.1 class PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a pdf destination.

## 137.26.2 Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

## 137.26.3 Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

## 137.26.4 Methods

## 137.26.5 compare(dest as PDFDestinationMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a comparison result that indicates the location of the destination in the document, relative to the current position.
**Notes:**

A comparison result, indicating the position of the passed-in destination relative to the current position.

If destination is between the receiver's position and the end of the document, compare returns NSOrderedAscending; if it is between the receiver's position and the beginning of the document, compare returns NSOrderedDescending. Otherwise, if destination matches the receiver's position, compare returns NSOrderedSame.

This method ignores the horizontal component of the destination point (the x value). If the destination's vertical component (or y value) is kPDFDestinationUnspecifiedValue, compare treats the destination as if its y value is the top point on the destination page.

An exception is raised if destination does not have a page associated with it or if its page is associated with a document other than the receiver's document.

Available in Mac OS X v10.5 and later.

### 137.26.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFDestination handle.
**Notes:**

Please pass in a non zero handle which points to a PDFDestination object.
For use with declares.
See also:

- 137.26.7 Constructor(page as PDFPageMBS, point as NSPointMBS) 21844

### 137.26.7 Constructor(page as PDFPageMBS, point as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes the destination.
**Notes:**

page: The page of the destination.
point: The point of the destination, in page space.

Specify point in page space. Typically, there's no need to initialize destinations. Instead, you get them from PDFAnnotationLink, PDFOutline, or PDFView objects.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
See also:

- 137.26.6 Constructor(Handle as Integer) 21844

### 137.26.8 copy as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the destination object.

### 137.26.9 kPDFDestinationUnspecifiedValue as Double

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Value used for unspecified destination.
**Example:**

MsgBox str(PDFDestinationMBS.kPDFDestinationUnspecifiedValue)

**Notes:**

Unspecified value used when a destination's actual x or y value is unimportant.
Available in Mac OS X v10.5 and later.

### 137.26.10 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the point, in page space, that the destination refers to.
**Notes:**

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.

### 137.26.11 Properties

### 137.26.12 Handle as Integer

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 137.26.13 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Page the destination refers to (destination page).
**Notes:** (Read only property)

### 137.26.14 Zoom as Double

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specify the scale factor the PDF viewer should assume for this destination.
**Notes:**

kPDFDestinationUnspecifiedValue indicates the scale factor is unaffected.
Available in Mac OS X 10.7 and later.
(Read and Write property)

# 137.27 class PDFDocumentDelegateMBS

## 137.27.1 class PDFDocumentDelegateMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a document delegate.
**Notes:** Subclass this class to handle document events.

## 137.27.2 Events

## 137.27.3 Close

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** Called when the delegate is destroyed.

## 137.27.4 didMatchString(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The event for an item found.
**Notes:** If implemented by the delegate, called for every search instance found during a find. PDFDocument's implentation accumulates each PDFSelection in an array.

## 137.27.5 documentDidBeginDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The search started on the document.

## 137.27.6 documentDidBeginPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The page search started on this page.
**Notes:** PageIndex is zero based.

### 137.27.7 documentDidEndDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The search finished on this document.

### 137.27.8 documentDidEndPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The page search finished on this page.
**Notes:** PageIndex is zero based.

### 137.27.9 documentDidFindMatch(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The search found an item.

### 137.27.10 documentDidUnlock

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The document has been unlocked.

### 137.27.11 Open

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** Called when the delegate is installed.

# 137.28 class PDFDocumentMBS

## 137.28.1 class PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for a PDF document.
**Notes:**

Basicly this is the code used by Preview.app by Apple.

Destructor is dispatched to main thread to avoid bugs in OS X 10.12.

### 137.28.6 Methods

### 137.28.7 appendPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Appends a page to the document.

### 137.28.8 beginFindString(text as string, options as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Begins a find, searching the document for string.
**Notes:** Search results are handled via a DidFindMatch event in the delegate. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

### 137.28.9 beginFindStrings(texts() as string, options as integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Like beginFindString but it accepts an array of strings to search for.

### 137.28.10 cancelFindString

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Method to cancel a search.
**Notes:** Can be called from a user method being serviced by a find notification.

### 137.28.11 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new pdf document in memory.
**Example:**

```
dim doc as new PDFDocumentMBS // new empty document
dim page as new PDFPageMBS // new empty page

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

dim f as FolderItem=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

See also:

- 137.28.12 Constructor(data as memoryblock) 21851
- 137.28.13 Constructor(data as String) 21852
- 137.28.14 Constructor(file as folderitem) 21852
- 137.28.15 Constructor(Handle as Integer) 21853

### 137.28.12 Constructor(data as memoryblock)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new pdf document based on a string.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim b as BinaryStream = f.OpenAsBinaryFile(false)
dim s as string = b.Read(b.Length)

dim doc as new PDFDocumentMBS(s)

MsgBox doc.Title
```

- 137.28.13 Constructor(data as String) 21852
- 137.28.14 Constructor(file as folderitem) 21852
- 137.28.15 Constructor(Handle as Integer) 21853

### 137.28.13 Constructor(data as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new pdf document based on a string.
See also:

- 137.28.11 Constructor 21851
- 137.28.12 Constructor(data as memoryblock) 21851
- 137.28.14 Constructor(file as folderitem) 21852
- 137.28.15 Constructor(Handle as Integer) 21853

### 137.28.14 Constructor(file as folderitem)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a new pdf document based on a file.
**Example:**

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

See also:

- 137.28.11 Constructor 21851
- 137.28.12 Constructor(data as memoryblock) 21851
- 137.28.13 Constructor(data as String) 21852
- 137.28.15 Constructor(Handle as Integer) 21853

### 137.28.15 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFDocument handle.
**Notes:**

Please pass in a non zero handle which points to a PDFDocument object.
For use with declares.
See also:

- 137.28.11 Constructor 21851
- 137.28.12 Constructor(data as memoryblock) 21851
- 137.28.13 Constructor(data as String) 21852
- 137.28.14 Constructor(file as folderitem) 21852

### 137.28.16 copy as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the document object.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a copy
dim c as PDFDocumentMBS = p.copy

// remove second page
c.removePageAtIndex 1

// c has one page less
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

**Notes:**

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the document.

### 137.28.17 dataRepresentation(QuartzFilter as Variant = nil) as memoryblock

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Methods to record the current state of the PDFDocument as data string.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim o as FolderItem = SpecialFolder.Desktop.Child("out.pdf")
dim b as BinaryStream = o.CreateBinaryFile("")

b.Write doc.dataRepresentation
```

**Notes:**

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

### 137.28.18 exchangePageAtIndexWithPageAtIndex(indexA as Integer, indexB as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Exchanges the two pages with the given index.
**Notes:** Index is zero based.

### 137.28.19 findString(text as string, options as Integer) as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Searches entire document for string and returns an array of PDFSelections representing all

instances found.
**Example:**

```
dim p as PDFDocumentMBS
dim f as FolderItem
dim sa() as PDFSelectionMBS
dim i,c as Integer
dim s as PDFSelectionMBS

const NSCaseInsensitiveSearch=1

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

if p.pageCount=0 then
MsgBox "Failed to load the PDF."
Return
end if

sa=p.findString("Plugin",NSCaseInsensitiveSearch)

if ubound(sa)<0 then
MsgBox "no item found."
else
MsgBox str(ubound(sa)+1)+" items found."
end if

s=sa(0)
s.extendSelectionAtEnd(50)
s.extendSelectionAtStart(50)

MsgBox s.stringValue // shows a bit more text before and after the location found
```

**Notes:**

May return an empty array if nothing is found.
Returns nil on any error.

Supported options are:
NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

### 137.28.20 findStringFromSelection(text as string, selection as PDFSelectionMBS, options as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Searches for only the next instance of string beginning after the last character of selection with options (or preceding the first character of the selection if NSBackwardsSearch is specified as a search option).
**Notes:** Returns next instance as a PDFSelection or nil if the end of the document is reached. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch. Passing in nil for selection will start the search from the beginning of the document (or end if NSBackwardsSearch is specified).

### 137.28.21 indexForPage(page as PDFPageMBS) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a PDFPage, returns the pages index within the document.
**Notes:** Indicees are zero-based.

### 137.28.22 insertPage(page as PDFPageMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Inserts a page in the pdf on the given index.
**Example:**

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture
```

```
page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

**Notes:** Index is zero based.

### 137.28.23 Keywords as string()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of Strings containing document keywords.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox join(doc.Keywords)
```

### 137.28.24 outlineItemForSelection(selection as PDFSelectionMBS) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a PDFSelection, this method returns the child outline item the selection most closely falls beneath.
**Notes:**

Since a selection may span multiple outline items, only the point representing the first character of the PDFSelection is considered. Typically, outline's indicate things like chapters for the PDF. Therefore, this method would help you identify the chapter the selection falls within.

For some PDFs this method returns nil.

### 137.28.25 pageAtIndex(index as Integer) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a PDFPage object representing the page at index.
**Example:**

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

**Notes:** Will raise an exception if index is out of bounds. Indicees are zero-based.

### 137.28.26 PDFDocumentAuthorAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the name of the author of the document.

### 137.28.27 PDFDocumentCreationDateAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the document,Äôs creation date.

### 137.28.28 PDFDocumentCreatorAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the name of the application that created the document content.

### 137.28.29 PDFDocumentDidBeginFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that the beginFindString or findString method begins finding.
**Notes:**

The notification object is the PDFDocument object itself.
Use with NSNotificationObserverMBS class.

### 137.28.30 PDFDocumentDidBeginPageFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a find operation begins working on a new page of a document.
**Notes:**

You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

### 137.28.31 PDFDocumentDidBeginPageWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a write operation begins working on a page in a document.
**Notes:**

The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

### 137.28.32 PDFDocumentDidBeginWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a write operation begins working on a document.
**Notes:**

The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

### 137.28.33 PDFDocumentDidEndFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that the beginFindString or findString method returns.
**Notes:**

The beginFindString method returns immediately, so this notification is posted when the ,Äúfind,Äù operation is finished.
You can use this notification to know when to close or hide a progress bar.
The notification object is the PDFDocument object itself.

Use with NSNotificationObserverMBS class.

### 137.28.34 PDFDocumentDidEndPageFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a find operation finishes working on a page in a document.
**Notes:**

You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

### 137.28.35 PDFDocumentDidEndPageWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a write operation finishes working on a page in a document.
**Notes:**

The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

### 137.28.36 PDFDocumentDidEndWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a write operation finishes working on a document.
**Notes:**

The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

### 137.28.37 PDFDocumentDidFindMatchNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a string match is found in a document.
**Notes:**

The notification object is the PDFDocumentMBS object itself. To determine the string selection found, use the PDFDocumentFoundSelection key to obtain userinfo of type PDFSelectionMBS.

Use with NSNotificationObserverMBS class.

### 137.28.38 PDFDocumentDidUnlockNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** A notification that a document unlocks after a unlockWithPassword message.
**Notes:**

Use with NSNotificationObserverMBS class.
The notification object is the PDFDocument object itself.

### 137.28.39 PDFDocumentKeywordsAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional array of text strings containing keywords for the document.

### 137.28.40 PDFDocumentModificationDateAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the document,Äôs last-modified date.

### 137.28.41 PDFDocumentOwnerPasswordOption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the options for writing a PDF.
**Notes:** A string object for the owner's password which is required for encryption.

### 137.28.42 PDFDocumentProducerAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the name of the application that produced the PDF data for the document.

### 137.28.43 PDFDocumentSubjectAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing a description of the subject of the document.

### 137.28.44 PDFDocumentTitleAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the property keys.
**Notes:** An optional text string containing the title of the document.

### 137.28.45 PDFDocumentUserPasswordOption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the options for writing a PDF.
**Notes:** A string for the user's password which is optional for encryption.

### 137.28.46 PrintOperation(PrintInfo as Variant, AutoRotate as boolean = true, scalingMode as Integer = 0) as Variant

MBS MacControls Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates print operation for PDF document.
**Example:**

```
// select a PDF
dim f as FolderItem = GetOpenFolderItem("")
if f = nil then Return

// open PDF
dim doc as new PDFDocumentMBS(f)

// define some print setting via PrintInfo
dim PrintInfo as new NSPrintInfoMBS

// start print operation
dim printOperation as NSPrintOperationMBS = doc.PrintOperation(printinfo)

printOperation.showsPrintPanel = true
printOperation.showsProgressPanel = true

call printOperation.runOperation
```

**Notes:** Returns NSPrintOperationMBS object.

### 137.28.47 removePageAtIndex(index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes a page in the pdf on the given index.
**Notes:** Index is zero based.

### 137.28.48 selectionForEntireDocument as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a selection representing text for the entire document.

### 137.28.49 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a selection representing text from page startPage and point StartCharacterIndex to page endPage and to point EndCharacterIndex on that page.
**Notes:** Start and end page can be the same.
See also:

- 137.28.50 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS 21864

### 137.28.50 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a selection representing text from page startPage and point startPt to page endPage and to point endPt on that page.
**Notes:** Points are in page-space and relative to their respective pages. Start and end page can be the same (and are then equivalent to calling selectionFromPointToPoint).
See also:

- 137.28.49 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS 21864

### 137.28.51 SetDelegate(d as PDFDocumentDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** If a PDFDocument has a delegate, delegate methods may be called for this document.

### 137.28.52 SetKeywords(keywords() as string)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets the array of strings containing document keywords.

### 137.28.53 unlockWithPassword(password as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Unlocks an encrypted PDF with the given password.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

if doc.unlockWithPassword("mypassword") then
MsgBox "OK"
end if
```

**Notes:** Means of passing in a password to unlock encrypted PDF's. Calling unlockWithPassword will attempt to unlock the PDF. If successful, a DidUnlockDocument event is sent to the delegate. You cannot "re-lock" a PDF by passing in a bogus password. Returns true if the document is now unlocked, false otherwise (isLocked = false).

### 137.28.54 write(file as folderitem, QuartzFilter as Variant = nil) as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Methods to record the current state of the PDFDocument as a file.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

// modify here

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

**Notes:**

Returns true on success and false on failure.

There is a bug known in Mac OS X 10.4 that this function may return true even if the saving failed. So you may prefer to check the file whether it exists after write.

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

### 137.28.55 writeWithOptions(file as folderitem, options as dictionary) as boolean

MBS MacControls Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Writes PDF to file with options.
**Notes:**

Returns true on success and false on failure.

Some keys to use include:
CGPDFContextMBS.kCGPDFContextUserPassword
CGPDFContextMBS.kCGPDFContextTitle
CGPDFContextMBS.kCGPDFContextSubject
CGPDFContextMBS.kCGPDFContextOwnerPassword
CGPDFContextMBS.kCGPDFContextOutputIntents
CGPDFContextMBS.kCGPDFContextOutputIntent
CGPDFContextMBS.kCGPDFContextKeywords
CGPDFContextMBS.kCGPDFContextEncryptionKeyLength
CGPDFContextMBS.kCGPDFContextCreator
CGPDFContextMBS.kCGPDFContextAuthor
CGPDFContextMBS.kCGPDFContextAllowsPrinting
CGPDFContextMBS.kCGPDFContextAllowsCopying

### 137.28.56 Properties

### 137.28.57 allowsCommenting as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether you can create or modify document annotations, including form field entries.
**Notes:**

Available in macOS 10.13 or newer.
(Read only property)

### 137.28.58 allowsContentAccessibility as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether you can extract content from the document, but only for

the purpose of accessibility.
**Notes:**

Available in macOS 10.13 or newer.
(Read only property)

### 137.28.59 allowsCopying as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether copying is allowed.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsCopying)
```

**Notes:**

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

### 137.28.60 allowsDocumentAssembly as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether you can manage a document by inserting, deleting, and rotating pages.
**Notes:**

Available in macOS 10.13 or newer.
(Read only property)

### 137.28.61 allowsDocumentChanges as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether you can modify the document contents except for document attributes.
**Notes:**

Available in macOS 10.13 or newer.

(Read only property)

### 137.28.62 allowsFormFieldEntry as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value indicating whether you can modify form field entries even if you can't edit document annotations.
**Notes:**

Available in macOS 10.13 or newer.
(Read only property)

### 137.28.63 allowsPrinting as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether printing is allowed.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsPrinting)
```

**Notes:**

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

### 137.28.64 Author as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String containing document author.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Author
```

**Notes:** (Read and Write property)

### 137.28.65 CreationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Date representing document creation date.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.CreationDate.LongDate
```

**Notes:** (Read and Write property)

### 137.28.66 CreationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Date representing document creation date.
**Notes:** (Read and Write property)

### 137.28.67 Creator as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String containing name of app that created document content.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Creator
```

**Notes:** (Read and Write property)

### 137.28.68 documentRef as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a CGPDFDocumentRef value for this document.
**Notes:**

This is the CGPDFDocument associated with the PDFDocument object. With this object you can call many CoreGraphics API. May return 0 if the document was not created from an existing PDF file or data.

Use CGPDFDocumentMBS with Constructor taking a handle to call functions on this CGPDFDocument object.
(Read only property)

### 137.28.69 documentURL as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The document location.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.documentURL
```

**Notes:**

May return nil if the document was created from data.
(Read only property)

### 137.28.70 Handle as Integer

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference to the PDF Document.
**Notes:** (Read and Write property)

### 137.28.71 isEncrypted as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the PDF is encrypted.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
MsgBox str(doc.isEncrypted)
```

**Notes:**

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

### 137.28.72 isFinding as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if document is currently searching for a string.
**Notes:** (Read only property)

### 137.28.73 isLocked as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the PDF is locked.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.isLocked)
```

**Notes:**

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

### 137.28.74 majorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

**Notes:** (Read only property)

### 137.28.75 minorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

**Notes:** (Read only property)

### 137.28.76 ModificationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Date representing last document modification date.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.ModificationDate.LongDate
```

**Notes:** (Read and Write property)

### 137.28.77 ModificationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Date representing last document modification date.
**Notes:** (Read and Write property)

### 137.28.78 outlineRoot as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the root outline object for the PDF (or nil if none).
**Notes:** (Read and Write property)

### 137.28.79 pageCount as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The number of pages in the document.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(Doc.pageCount)
```

**Notes:** (Read only property)

### 137.28.80 permissionsStatus as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the permissions status of the PDF document.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

**Notes:**

You have kPDFDocumentPermissionsNone status for an encrypted document that you have not supplied either a valid user or owner password. For a document with no encryption, you automatically have kPDF-

DocumentPermissionsOwner status.

Requires Mac OS X 10.6.
(Read only property)

### 137.28.81 Producer as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String containing name of app that produced PDF data.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Producer
```

**Notes:** (Read and Write property)

### 137.28.82 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The text of the document.
**Example:**

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from PDF Document:"+EndOfLine+EndOfLine+p.stringValue
```

**Notes:**

Convenience method. Returns a string representing the entire document (each page's string concatenated with line feeds between pages).

If you need to extract the text of a PDF document cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

### 137.28.83 Subject as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String containing document subject.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Subject
```

**Notes:** (Read and Write property)

### 137.28.84 Title as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String containing document title.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Title
```

**Notes:** (Read and Write property)

### 137.28.85 documentAttributes as Dictionary

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDF meta data as a Xojo Dictionary object.
**Notes:**

Returns a dictionary with PDF metadata. Metadata is optional for PDF's and so some of the keys may be missing or the entire dictionary may be empty.

(Read and Write computed property)

### 137.28.86 Constants

### 137.28.87 kPDFDocumentPermissionsNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the permission status constants.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

**Notes:** Document permissions status. For encrypted PDF's, supplying the owner password will enable owner permission status.

### 137.28.88 kPDFDocumentPermissionsOwner = 2

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the permission status constants.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

### 137.28.89 kPDFDocumentPermissionsUser = 1

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the permission status constants.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

### 137.28.90 kPDFPrintPageScaleDownToFit = 2

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants for printing page-scaling modes.

### 137.28.91 kPDFPrintPageScaleNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants for printing page-scaling modes.

### 137.28.92 kPDFPrintPageScaleToFit = 1

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants for printing page-scaling modes.

### 137.28.93 NSBackwardsSearch = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the search flag constants.
**Notes:** Performs searching from the end of the range toward the beginning.

### 137.28.94 NSCaseInsensitiveSearch = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the search flag constants.
**Notes:** Ignores case distinctions among characters.

### 137.28.95 NSLiteralSearch = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the search flag constants.
**Notes:** Performs a byte-for-byte comparison. Differing literal sequences (such as composed character sequences) that would otherwise be considered equivalent are considered not to match. Using this option can speed some operations dramatically.

# 137.29 class PDFOutlineMBS

## 137.29.1 class PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for a pdf outine object.

## 137.29.2 Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

## 137.29.3 Blog Entries

- New in the MBS Xojo Plugins Version 20.2
- MBS Xojo Plugins, version 20.2pr3

## 137.29.4 Methods

## 137.29.5 childAtIndex(index as Integer) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** PDFOutline child at index.
**Notes:** Will throw exception if index is out of range.

## 137.29.6 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a PDFOutline object.
**Notes:**

If you want the PDFOutline object returned by this method to be the outline root, you must add additional PDFOutline objects to create the outline hierarchy you desire. Then, you must add the root outline object to your PDF document by assigning it to the PDFDocument OutlineRoot.

If you want the PDFOutline object returned by this method to be a child of an existing outline, you must use setLabel: to give it a label and give it either a destination or action using setDestination: or setAction:, respectively. In addition, you must add this outline object to the existing PDFOutline object as a new child,

using insertChild.

Available in Mac OS X v10.4 and later.
See also:

- 137.29.7 Constructor(Handle as Integer) 21880

### 137.29.7 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFOutline handle.
**Notes:**

Please pass in a non zero handle which points to a PDFOutline object.
For use with declares.
See also:

- 137.29.6 Constructor 21879

### 137.29.8 insertChild(child as PDFOutlineMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Inserts the specified outline object at the specified index.
**Notes:**

To build a PDF outline hierarchy, use this method to add child outline objects. Before you call this method on a PDFOutline object that already has a parent, you should retain the object and call removeFromParent on it first.

Available in Mac OS X v10.5 and later.

### 137.29.9 removeFromParent

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Removes the outline object from its parent (does nothing if outline object is the root outline object).
**Notes:** Available in Mac OS X v10.5 and later.

### 137.29.10 Properties

### 137.29.11 action as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The action performed when users click the outline.
**Notes:**

The root outline serves only as a container for the outlines it owns; it does not have an action. Note that a PDFOutline object can have either an action or a destination, not both.

If the PDFOutline object has a destination, instead of an action, action returns a PDFActionGoTo object (this is equivalent to calling destination on the PDFOutline object). For other action types, action returns the appropriate PDF Kit action type object, such as PDFActionURL.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.29.12 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destination asscoiated with the outline item.
**Notes:**

The root PDFOutline has no destination.
(Read and Write property)

### 137.29.13 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFDocument the outline is asscoiated with.
**Notes:** (Read only property)

### 137.29.14 index as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the index of the outline.
**Notes:**

The index of the outline object is relative to its siblings and from the perspective of the parent of the outline object. The root outline object, and any outline object without a parent, has an index value of 0.

Available in Mac OS X v10.5 and later.
(Read only property)

### 137.29.15 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether the outline object is initially disclosed.
**Notes:**

Calling isOpen on an outline object that has no children always returns false. Calling isOpen on the root outline object always returns true.

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.29.16 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The label for the outline.
**Notes:**

The root PDFOutline has no label and is only a container for children PDFOutlines.
(Read and Write property)

### 137.29.17 numberOfChildren as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Number of PDFOutline children this PDFOutline has.
**Notes:** (Read only property)

### 137.29.18 parent as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The parent outline object of the outline.
**Notes:**

Can be nil for the root object.
Available in Mac OS X v10.5 and later.
(Read only property)

## 137.30 class PDFPageMBS

### 137.30.1 class PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for a page in a pdf document.
**Example:**

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture

page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

### 137.30.6 Methods

### 137.30.7 addAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Methods allowing annotations to be added.

### 137.30.8 annotationAtPoint(x as single, y as single) as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Hit-testing method returns the annotation at point (or nil if none).
**Notes:** The point is in page-space.

### 137.30.9 annotations as PDFAnnotationMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array containing the page's annotations.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show a msgbox with the types of all annotations
dim types(-1) as string

for each a as PDFAnnotationMBS in annotations
types.Append a.type
next

MsgBox Join(types)
```

**Notes:**

The elements of the array will most likely be typed to subclasses of the PDFAnnotation class.

Available in Mac OS X v10.4 and later.

### 137.30.10 CalcTransformForBox(box as Integer) as Variant

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** An utility function to calculate the transform needed to draw into a page.
**Notes:** Returns NSAffineTransformMBS object.

### 137.30.11 characterBoundsAtIndex(index as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the bounds in page-space of the character at index.
**Notes:** In the unlikely event that more than one character are at the specified point, only the first character encountered is returned.

### 137.30.12 characterIndexAtPoint(x as single, y as single) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the index of the character at point (in page space).
**Notes:** Returns -1 if no character at point.

### 137.30.13 Constructor

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor to create a custom PDF page.
**Example:**

```
dim doc as new PDFDocumentMBS
dim page as PDFPageMBS
dim f as FolderItem

page=new MyPDFPageMBS

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

f=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
```

end if

**Notes:** You draw the content using drawRect event.
See also:

- 137.30.14 Constructor(Handle as Integer) 21888
- 137.30.15 Constructor(image as NSImageMBS) 21888

### 137.30.14 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFPage handle.
**Notes:**

Please pass in a non zero handle which points to a PDFPage object.
For use with declares.
See also:

- 137.30.13 Constructor 21887
- 137.30.15 Constructor(image as NSImageMBS) 21888

### 137.30.15 Constructor(image as NSImageMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a PDFPage for the NSImage passed in.
**Notes:**

An easy way to create a PDFPage from an image to add to a PDFDocument.

Mac OS X 10.5 only.
See also:

- 137.30.13 Constructor 21887
- 137.30.14 Constructor(Handle as Integer) 21888

### 137.30.16 copy as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the page object.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a new PDF
dim c as new PDFDocumentMBS

// get first page
dim page as PDFPageMBS = p.pageAtIndex(0)

// add copy of page to new pdf
c.insertPage page.copy, 0

// c now has one page
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

### 137.30.17 Destructor

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 137.30.18 Draw(g as NSGraphicsMBS, box as Integer = 0)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Draws PDF page into graphics environment.
**Notes:** Use kPDFDisplay*Box constants for box parameter.

### 137.30.19 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Draws the page within the specified box.
**Notes:** This method takes into account the page rotation and draws clipped to the specified box. If the page is set to display annotations, this method also draws them. This method does not clear the background. To clear the background before drawing, use NSRectFill with NSColor set (typically) to white.

### 137.30.20 removeAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Methods allowing annotations to be removed.

### 137.30.21 Render(dpi as Double = 72.0, box as Integer = 0, background as NSColorMBS = nil) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Renders a PDF Page into an image.
**Example:**

```
dim f as FolderItem = GetFolderItem("Castles.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim image as NSImageMBS = page.Render

Backdrop = image.CopyPicture
```

**Notes:**

dpi: The resolution you want to have on the image. Default 72.0. To get a scaled image with factor x, pass 72.0*x.
box: The display box. Use one of the kPDFDisplayBox* constants.
background: optional NSColorMBS object to fill the background before drawing the PDF. This will affect only PDFs with transparent background.

Returns nil on any error.

Version 11.1pr8 adds code here to handle rotation better.
Due to bugs in Apple,Äôs PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

### 137.30.22 selectionForLineAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a point in page-space, returns a selection representing a whole line at that point.
**Notes:** May return nil if no character (and by extension no line) under point.

### 137.30.23 selectionForRange(position as Integer, length as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a range, returns a selection representing text within that range.
**Example:**

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

**Notes:** Will raise an exception if the range length is zero or if the range is outside the range of the characters on the page.

### 137.30.24 selectionForRect(left as single, top as single, width as single, height as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a rect in page-space, returns a selection representing enclosed text on page.

### 137.30.25 selectionForWordAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a point in page-space, returns a selection representing a whole word at that point.
**Notes:** May return nil if no character (and by extension no word) under point.

### 137.30.26 selectionFromPointToPoint(startleft as single, starttop as single, endleft as single, endtop as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a selection representing text between startPt and endPt.
**Notes:** Point are sorted first top to bottom, left to right.

### 137.30.27 thumbnailOfSize(size as NSSizeMBS, box as integer) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Convenience function that returns an image of this page, with annotations, that fits the given size.
**Notes:**

Note that the produced image is "size to fit": it retains the original page aspect-ratio. The size you give may not match the size of the returned image, but the returned image is guaranteed to be equal or less.

Available in macOS 10.13 or newer.

### 137.30.28 transformContextForBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Given a display box, will transform the current context to take into account the rotation of the page as well as the origin of the box with repect to the page's base coordinates system.
**Notes:**

This is a convenient method to call from within drawPage or from within the draw method a PDFAnnotation subclass.

Mac OS X 10.5 only.

### 137.30.29 transformForBox(box as integer) as variant

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** This transform correctly rotates and offsets based on the given page's rotation property and the display box type.
**Notes:** Available in macOS 10.13 or newer.

### 137.30.30 Properties

### 137.30.31 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String (with linefeeds and in some cases spaces inserted) representing the text on the page.
**Notes:** (Read only property)

### 137.30.32 CGPDFPageHandle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The CoreGraphics PDFPage handle.
**Notes:** (Read only property)

### 137.30.33 dataRepresentation as memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns PDF data (a proper PDF document) consisting of a single page (this page).
**Notes:**

Note, external page links are not preserved.
(Read only property)

### 137.30.34 displaysAnnotations as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Method to turn on or off the display of annotations when the page is drawn.
**Notes:** (Read and Write property)

### 137.30.35 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFDocument the page is associated with.
**Notes:** (Read only property)

### 137.30.36 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The page label. Usually "1" for the first page, "2" for the second, etc.
**Notes:** (Read only property)

### 137.30.37 numberOfCharacters as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Number of characters on the page (including linefeeds and spaces inserted).
**Notes:** (Read only property)

### 137.30.38 rotation as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Rotation on a page.
**Notes:**

Must be 0, 90, 180 or 270 (negative rotations will be "normalized" to one of 0, 90, 180 or 270).
Some PDF's have an inherent rotation and so rotation may be non-zero when a PDF is first opened.
(Read and Write property)

### 137.30.39 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String (with linefeeds and in some cases spaces inserted) representing the text on the page.
**Example:**

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

**Notes:**

If you need to extract the text of a PDF document page cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

### 137.30.40 boundsForBox(box as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the bounds for the specified PDF display box.
**Notes:**

The PDFDisplayBox enumeration defines the various box types.

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

boundsForBox throws a range exception if box is not in range.
(Read and Write computed property)

### 137.30.41 Events

### 137.30.42 drawRect(box as Integer, g as NSGraphicsMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** The event called when the PDFPage needs to be drawn.
**Example:**

```
Sub drawRect(box as Integer, g as NSGraphicsMBS)

if g.Valid then
System.DebugLog "is valid"
else
System.DebugLog "not valid"
end if

g.SetColorRGB 0,1,0

g.drawRect 200,200,200,200

g.SetColorRGB 1,0,0

g.fillRect 100,100,100,100
End Sub
```

**Notes:**

Do not store the graphics reference as it is only valid in this event.
Use the kPDFDisplayBox* constants for the box value.
You can draw another PDF page here with Draw command.

To avoid drawRect causing StackOverflowException when showing in a control, please have PDF produced as file or MemoryBlock, then read it back to a new PDFDocumentMBS object and show that in a control.

### 137.30.43 Constants

### 137.30.44 kPDFDisplayBoxArtBox = 4

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants to use for page boxes.

### 137.30.45 kPDFDisplayBoxBleedBox = 2

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants to use for page boxes.

### 137.30.46 kPDFDisplayBoxCropBox = 1

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants to use for page boxes.

### 137.30.47 kPDFDisplayBoxMediaBox = 0

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants to use for page boxes.

### 137.30.48 kPDFDisplayBoxTrimBox = 3

MBS MacControls Plugin, Plugin Version: 8.0.

**Function:** One of the constants to use for page boxes.

## 137.31 class PDFSelectionMBS

### 137.31.1 class PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The PDFKit class for selections.
**Example:**

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

### 137.31.4 Methods

### 137.31.5 addSelection(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Add a selection to this selection.
**Notes:** Selections do not have to be contiguous. If the selection added overlaps with this selection, overlaps are removed.

### 137.31.6 addSelections(selection() as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Adds the specified array of selections to the receiving selection.
**Notes:**

This method provides better performance than multiple calls to addSelection if you need to add several selections to an existing selection. This is because the normalization of the selection (the removal of any overlaps between selections) occurs only once, after all selections have been added.
Available in Mac OS X v10.5 and later.

### 137.31.7 boundsForPage(page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the bounds of the selection on the specified page.
**Notes:**

The selection rectangle is given in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

### 137.31.8 Constructor(doc as PDFDocumentMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an empty PDFSelection object.
**Notes:**

Typically, you don't need to create a PDFSelection object, but you can use an empty PDFSelection object as a container into which you can place selections, using addSelection: and addSelections.
Available in Mac OS X v10.5 and later.
See also:

- 137.31.9 Constructor(Handle as Integer) 21899

### 137.31.9 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object based on a given PDFSelection handle.
**Notes:**

Please pass in a non zero handle which points to a PDFSelection object.
For use with declares.
See also:

- 137.31.8 Constructor(doc as PDFDocumentMBS) 21899

### 137.31.10 copy as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the selection object.

### 137.31.11 drawForPage(page as PDFPageMBS, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Calls drawForPage with a default value for box parameter.
**Notes:** The default value is kPDFDisplayBoxCropBox. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor.
See also:

- 137.31.12 drawForPage(page as PDFPageMBS, box as Integer, active as boolean) 21900

### 137.31.12 drawForPage(page as PDFPageMBS, box as Integer, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Draws the selection relative to the origin of the specified box in page space.
**Notes:**

The selection is drawn using the current highlight color. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor. Refer to the PDFPage class for the list of available box types.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
See also:

- 137.31.11 drawForPage(page as PDFPageMBS, active as boolean) 21900

### 137.31.13 extendSelectionAtEnd(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Extends the selection at either end.
**Example:**

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtEnd(50)
```

**Notes:** Selections can be extended right off onto neighboring pages even to include the entire PDF document.

### 137.31.14 extendSelectionAtStart(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Extends the selection at either end.
**Example:**

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtStart(50)
```

**Notes:** Selections can be extended right off onto neighboring pages even to include the entire PDF document.

### 137.31.15 extendSelectionForLineBoundaries

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Extend to the selection to the beginning and end of the currently selected lines of text.
**Notes:**

If the current selection is on a single line, then this will extend it to the entire line width. If the selection is across multiple lines, then the first and last lines are expected to wholly contain their respective rows of text.

Available in macOS 10.13 or newer or iOS 11.0 or newer.

### 137.31.16 numberOfTextRangesOnPage(page as PDFPageMBS) as UInt32

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of contiguous ranges of text on the specified page.
**Notes:**

Returns zero if page is not in selection.
A typical, simple selection will contain a single range of text.

Available in Mac OS X 10.7 and later.

### 137.31.17 pages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Array of pages covered by the selection.
**Notes:**

These are sorted by page index.
Returns nil on any error.

### 137.31.18 rangeAtIndex(page as PDFPageMBS, index as Integer) as NSRangeMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a range of contiguous text at index on the specified page.
**Notes:**

A simple selection. A typical, simple selection will contain a single range of text.
Available in Mac OS X 10.7 and later.

### 137.31.19 selectionsByLine as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of selections, one for each line of text covered by the receiver.
**Notes:**

If you call this method on a PDFSelection object that represents a paragraph, for example, selectionsByLine returns an array that contains one PDFSelection object for each line of text in the paragraph.
Available in Mac OS X v10.5 and later.

### 137.31.20 Properties

### 137.31.21 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String representing the text covered by the selection.
**Notes:**

May contain line-feeds.
(Read only property)

### 137.31.22 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The color used to draw the selection.
**Notes:**

Note that when no color has been specified for the PDFSelection objects in a document, the selections are drawn using NSColorMBS.selectedTextBackgroundColor for the active state and NSColorMBS.secondarySelectedControlColor for the inactive state.
(Read and Write property)

### 137.31.23 Handle as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The handle used internally for the object reference.
**Notes:** (Read and Write property)

### 137.31.24 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** String representing the text covered by the selection.
**Notes:**

May contain line-feeds.
(Read only property)

## 137.32 control PDFThumbnailViewControlMBS

### 137.32.1 control PDFThumbnailViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a PDFThumbnailView.
**Notes:**

This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

### 137.32.2 Blog Entries

### 137.32.4 Properties

### 137.32.5 View as PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 137.32.6 Events

### 137.32.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 137.32.8 Close

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 137.32.9 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 137.32.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacControls Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 137.32.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 137.32.12 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 137.32.13 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.32.14 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.32.15 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 137.32.16 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.

In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.32.17 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.32.18 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 137.32.19 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 137.32.20 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 137.32.21 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 137.32.22 Open

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 137.32.23 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 137.32.24 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 137.33 class PDFThumbnailViewMBS

### 137.33.1 class PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** A PDFThumbnailView object contains a set of thumbnails, each of which represents a page in a PDF document.
**Notes:**

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

### 137.33.2 Blog Entries

- MBS Xojo Plugins, version 21.1pr1

### 137.33.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr1

### 137.33.4 Methods

### 137.33.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new PDF thumbnail view with size 100/100 and position 0/0
**Example:**

```
dim t as new PDFThumbnailViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 137.33.6 Constructor(Handle as Integer) 21910
- 137.33.7 Constructor(left as Double, top as Double, width as Double, height as Double) 21911

### 137.33.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an object based on the given PDFThumbnailView handle.
**Example:**

```
dim t as new PDFThumbnailViewMBS(0, 0, 100, 100)
dim v as new PDFThumbnailViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a PDFThumbnailView and the plugin retains this handle.
See also:

- 137.33.5 Constructor 21910
- 137.33.7 Constructor(left as Double, top as Double, width as Double, height as Double) 21911

### 137.33.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new PDF thumbnail view with the given size and position.
**Example:**

```
dim x as new PDFThumbnailViewMBS(0, 0, 100, 100)
```

**Notes:** On success the handle property is not zero.
See also:

- 137.33.5 Constructor 21910
- 137.33.6 Constructor(Handle as Integer) 21910

### 137.33.8 PDFThumbnailViewDocumentEditedNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** The Notification when PDFDocument is modified.
**Notes:** Use NSNotificationObserverMBS class to listen for this one.

### 137.33.9 selectedPages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of PDF pages that correspond to the selected thumbnails in the thumbnail view.
**Notes:**

If the thumbnail view allows multiple selections (if allowsMultipleSelection returns true), you can use this method to get the PDF pages that correspond to the selected thumbnails.
Available in Mac OS X v10.5 and later.

### 137.33.10 Properties

### 137.33.11 allowsDragging as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether users can drag thumbnails within the thumbnail view; that is, re-order pages in the document.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.12 allowsMultipleSelection as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether the thumbnail view allows users to select more than one thumbnail at a time.
**Notes:**

By default, PDFThumbnailView allows only a single thumbnail to be selected at one time. When this is the case, you can get the PDF page that corresponds to the selected thumbnail using the PDFView method currentPage.

If you use setAllowsMultipleSelection to enable multiple selections, however, you must use selectedPages to get the pages that correspond to the set of selected thumbnails.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.13 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The color used in the background of the thumbnail view.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.14 Bezeled as Boolean

MBS MacControls Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether to use bezel for control.
**Notes:** (Read and Write property)

### 137.33.15 labelFont as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The font used to label the thumbnails.
**Notes:**

Typically, the label of a thumbnail is the page number of the page it represents.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.16 maximumNumberOfColumns as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the maximum number of columns of thumbnails the thumbnail view can display.
**Notes:**

The thumbnail displays as many columns of thumbnails as fit in its size.
Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.17 PDFView as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The PDFView object associated with the thumbnail view.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

### 137.33.18 thumbnailSize as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The maximum width and height of the thumbnails in the thumbnail view.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read and Write property)

# 137.34 control PDFViewControlMBS

## 137.34.1 control PDFViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a PDFView.
**Notes:**

This control embeds a special PDFView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

### 137.34.4 Methods

### 137.34.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear overlay item for this page.
**Notes:**

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.34.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Clear all overlays.
**Notes:** The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

### 137.34.7 Properties

### 137.34.8 View as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 137.34.9 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

**Function:** Get/Set overlay item.
**Notes:**

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

### 137.34.10 Events

### 137.34.11 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called after something was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.34.12 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called after a page annotations were drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.34.13 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called after a page was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.34.14 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called before a page was drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.34.15 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called before a page annotations were drawn.
**Notes:** On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

### 137.34.16 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:** The draw event called before a something was drawn.

### 137.34.17 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 137.34.18 Close

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 137.34.19 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 137.34.20 CocoaMouseDown(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:** This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

### 137.34.21 CocoaMouseDrag(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:** This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

### 137.34.22 CocoaMouseUp(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

### 137.34.23 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacControls Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 137.34.24 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 137.34.25 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 137.34.26 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.34.27 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.34.28 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 137.34.29 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.

In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 137.34.30 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 137.34.31 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 137.34.32 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 137.34.33 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 137.34.34 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 137.34.35 Open

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 137.34.36 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 137.34.37 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Opens a specified page.
**Notes:** This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS

action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

### 137.34.38 PerformFind

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Performs a find operation.
**Notes:**

Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

### 137.34.39 PerformGoToPage

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Performs a go-to operation.
**Notes:** Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

### 137.34.40 PerformPrint

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Prints the current document.
**Notes:** Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

### 137.34.41 PrintJobTitle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Overrides the job title used when the PDFView is printed.
**Notes:** Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

### 137.34.42 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 137.34.43 WillChangeScaleFactor(scale as Double) as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Overrides changes to the scale factor.
**Notes:**

Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

### 137.34.44 WillClickOnLink(URL as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

**Function:** Handle clicks on URL links in a view.
**Notes:**

If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

# 137.35 class PDFViewMBS

## 137.35.1 class PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** A PDFView object encapsulates the functionality of PDF Kit into a single widget that you can add to your application.
**Notes:**

PDFView may be the only class you need to deal with for adding PDF functionality to your application. It lets you display PDF data and allows users to select content, navigate through a document, set zoom level, and copy textual content to the Pasteboard. PDFView also keeps track of page history.

You can subclass PDFView to create a custom PDF viewer or better use our CustomPDFViewMBS class.

You can also create a custom PDF viewer by using the PDF Kit utility classes directly and not using PDFView at all.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

- MBS REALbasic Plugins, version 10.6pr2
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr8
- MBS REALbasic Plugins, version 10.3pr4

### 137.35.4 Methods

### 137.35.5 annotationsChangedOnPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Tells the PDF view that an annotation on the specified page has changed.
**Notes:**

When the PDFView object receives this message, it rescans for tool tips and pop-ups and informs the PDFThumbailView objects so the thumbnail images can be redrawn.
Available in Mac OS X v10.5 and later.

### 137.35.6 areaOfInterestForMouse(e as NSEventMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the type of area the mouse cursor is over.
**Notes:** The PDFAreaOfInterest enumeration defines the various area types. This method is for custom subclasses of the PDFView class. Use it if you override the NSResponder class's mouseMoved: method or related methods.

### 137.35.7 areaOfInterestForPoint(p as NSPointMBS) as integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns type of area (see defines above) mouse is over.

### 137.35.8 clearSelection

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Clears the selection.
**Notes:** The view redraws as necessary but does not scroll. This call is equivalent to setting CurrentSelection=nil.

### 137.35.9 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new PDF view with size 100/100 and position 0/0
**Example:**

```
dim t as new PDFViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 137.35.10 Constructor(Handle as Integer) 21927
- 137.35.11 Constructor(left as Double, top as Double, width as Double, height as Double) 21927

### 137.35.10 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an object based on the given PDFView handle.
**Example:**

```
dim t as new PDFViewMBS(0, 0, 100, 100)
dim v as new PDFViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a NSButton and the plugin retains this handle.
See also:

- 137.35.9 Constructor 21926
- 137.35.11 Constructor(left as Double, top as Double, width as Double, height as Double) 21927

### 137.35.11 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new PDF view with the given size and position.
**Example:**

```
dim x as new PDFViewMBS(0, 0, 100, 100)
```

**Notes:** On success the handle property is not zero.
See also:

- 137.35.9 Constructor 21926
- 137.35.10 Constructor(Handle as Integer) 21927

### 137.35.12 convertPointFromPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Converts a point from page space to view space.
**Notes:** Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

### 137.35.13 convertPointToPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Converts a point from view space to page space.
**Example:**

```
// convert point from mouse event to page coordinates
Function MouseDown(x as Integer, y as Integer, Modifiers as Integer) Handles MouseDown as Boolean
Dim a As NSApplicationMBS = NSApplicationMBS.sharedApplication
Dim n As NSEventMBS = a.currentEvent
Dim v As PDFViewMBS = Me.View
Dim w As NSWindowMBS = Self.NSWindowMBS
Dim p As NSPointMBS = n.locationInWindow

System.DebugLog "p: "+str(p.x)+"/"+str(p.y)

Dim doc As PDFDocumentMBS = v.document
Dim page As PDFPageMBS = doc.pageAtIndex(0)
Dim r As NSPointMBS = v.convertPointFromView(p, Nil)

System.DebugLog "r: "+Str(r.x)+"/"+Str(r.y)

Dim d As NSPointMBS = v.convertPointToPage(r, page)

System.DebugLog "d: "+Str(d.x)+"/"+Str(d.y)
End Function
```

**Notes:** Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

### 137.35.14 convertRectFromPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Converts a rectangle from page space to view space.
**Notes:** Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

### 137.35.15 convertRectToPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Converts a rectangle from view space to page space.
**Notes:** Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

### 137.35.16 copy

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Copies the text in the selection, if any, to the Pasteboard.

### 137.35.17 drawPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** For use by subclasses of PDFView for custom rendering of pages.
**Notes:**

Do not invoke this method, except by invoking it on super from a subclass.

The PDFView class calls drawPage: as necessary for each visible page that requires rendering. In the PDFView class, this method erases page to white, calls page.drawInRect(pageRect,self.displayBox), and then draws the selection, if any.

You can override this method to draw on top of a PDF page or to control how pages are drawn. In these cases, invoke this method on super and then perform custom drawing on top of the PDF page.

Changed in v22.5 to work on macOS Ventura.
But if the drawPage is called by macOS on the wrong thread, we ignore that to prevent StackOverflowEx-

ception from Xojo runtime.

### 137.35.18 drawPagePost(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** For use by subclasses of PDFView for post-page rendering.
**Notes:**

The default implementation of this method draws the text highlighting (if any) for the page. This method does not apply scaling or rotating to the current context to map to page space; instead, the context is in view-space coordinates (in which the origin is at the lower-left corner of the current PDF view).
Available in Mac OS X v10.5 and later.

### 137.35.19 goBack

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates back one step in the page history.
**Notes:** The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

### 137.35.20 goForward

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates forward one step in the page history.
**Notes:** The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

### 137.35.21 goToDestination(page as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the specified destination.
**Notes:**

Destinations include a page and a point on the page specified in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

### 137.35.22 goToFirstPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the first page of the document.
**Notes:** PDF Kit records the move in its page history.

### 137.35.23 goToLastPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the last page of the document.
**Notes:** PDF Kit records the move in its page history.

### 137.35.24 goToNextPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the next page of the document.
**Notes:** PDF Kit records the move in its page history.

### 137.35.25 goToPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Scrolls to the specified page.
**Notes:** PDF Kit records the move in its page history.

### 137.35.26 goToPreviousPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the previous page of the document.
**Notes:** PDF Kit records the move in its page history.

### 137.35.27 goToRect(rect as NSRectMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Navigates to the specified rectangle on the specified page.
**Notes:**

If the specified rectangle is already visible, this method does nothing. This allows you to scroll the PDFView object to a specific PDFAnnotation or PDFSelection object, because both of these objects have bounds methods that return an annotation or selection position in page space.

Note that rect is specified in page-space coordinates. Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.5 and later.

### 137.35.28 goToSelection(page as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Scrolls to the first character of the specified selection.
**Notes:** PDF Kit records the move in its page history.

### 137.35.29 highlightedSelections as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries highlighted selections.
**Notes:** Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

### 137.35.30 layoutDocumentView

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Performs layout of the inner views.
**Notes:**

The PDFView actually contains several subviews, such as the document view (where the PDF is actually drawn) and a "matte view" (which may appear as a gray area around the PDF content, depending on the scaling). Changes to the PDF content may require changes to these inner views, so you must call this method explicitly if you use PDF Kit utility classes to add or remove a page, rotate a page, or perform other operations affecting visible layout.

This method is called automatically from PDFView methods that affect the visible layout (such as setDocument, setDisplayBox or zoomIn).

### 137.35.31 pageForPoint(point as NSPointMBS, nearest as boolean) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the page containing a point specified in view coordinates.
**Notes:** Returns nil if there's no page at the specified point and nearest is set to false.

### 137.35.32 PDFViewAnnotationHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:**

Posted when the user clicks on an annotation.

Use the "PDFAnnotationHit" key to obtain userinfo of type PDFAnnotation.

### 137.35.33 PDFViewAnnotationWillHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:**

Posted before the user clicks an annotation.
Available in Mac OS X v10.5 and later.

### 137.35.34 PDFViewChangedHistoryNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when the page history changes.

### 137.35.35 PDFViewCopyPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when the user attempts to copy to the pasteboard without the appropriate permissions.

### 137.35.36 PDFViewDisplayBoxChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:**

Posted when the display box has changed.
Available in Mac OS X v10.5 and later.

### 137.35.37 PDFViewDisplayModeChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:**

Posted when the display mode has changed.
Available in Mac OS X v10.5 and later.

### 137.35.38 PDFViewDocumentChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when a new document is associated with the view.

### 137.35.39 PDFViewPageChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when a new page becomes the current page.

### 137.35.40 PDFViewPrintPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when the user attempts to print without the appropriate permissions.

### 137.35.41 PDFViewScaleChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:** Posted when the scale factor changes.

### 137.35.42 PDFViewSelectionChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** One of the notification names used with the PDF view.
**Notes:**

Posted when the current selection has changed.
Available in Mac OS X v10.5 and later.

### 137.35.43 PDFViewVisiblePagesChangedNotification as string

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Notification when the scroll view has scrolled into the bounds of a new page.

### 137.35.44 performAction(action as PDFActionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Performs the specified action.
**Notes:** Available in Mac OS X v10.5 and later.

### 137.35.45 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Print the PDF document.
**Notes:** If autoRotate is true, will ignore the orientation attribute in printInfo and rather choose the orientation on a page by page basis that best fits the page to the paper size.
See also:

- 137.35.46 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer) 21936

### 137.35.46 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Like the above method but allows an additional parameter to describe page scaling (see PDFDocument.h for types).
**Notes:** If pageScaling is equal to kPDFPrintPageScaleToFit each page is scaled up or down in order to best fit the paper size. Specifying kPDFPrintPageScaleDownToFit for pageScaling will only scale large pages down to fit the paper, smaller pages will not be scaled up. Passing pageScaling equal to kPDFPrintPageScaleNone is the equivalent of calling printWithInfo above.
See also:

- 137.35.45 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean) 21935

### 137.35.47 rowSizeForPage(page as PDFPageMBS) as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns the size needed to display a row of the current document page.
**Notes:** The size is dependent on the current scale factor and display attributes.

### 137.35.48 scrollSelectionToVisible

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Scrolls the view until the selection is visible.

### 137.35.49 selectAll

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Selects all text in the document.

### 137.35.50 setCurrentSelection(selection as PDFSelectionMBS, animate as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Sets the selection, in an animated way, if desired.
**Notes:**

This method behaves as setCurrentSelection, but with the addition of animation, if animate is true. The animation serves to draw the user's attention to the new selection, which can be useful when implementing search.
Available in Mac OS X v10.5 and later.

### 137.35.51 setCursorForAreaOfInterest(area as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Sets the type of mouse cursor according to the type of area the mouse cursor is over.
**Notes:** This method is especially useful for custom subclasses of the PDFView class.

### 137.35.52 setHighlightedSelections(selections() as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets highlighted selections.
**Notes:** Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

### 137.35.53 visiblePages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array of PDFPageMBS objects that represent the currently visible pages.
**Notes:** Available in Mac OS X v10.5 and later.

### 137.35.54 zoomIn

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Zooms in by increasing the scaling factor.
**Notes:**

Each invocation of zoomIn muliplies the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

### 137.35.55 zoomOut

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Zooms out by decreasing the scaling factor.
**Notes:**

Each invocation of zoomOut divides the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

### 137.35.56 Properties

### 137.35.57 acceptsDraggedFiles as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Indicate whether dragging a file into PDFView is allowed.
**Notes:**

If false (default), dragging events are not supported.
If true, a user can drag and drop a PDF file into the view and have it loaded & set as the visible document (the old document is released).

Available in macOS 10.13 or newer.
(Read and Write property)

### 137.35.58 allowsDragging as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Determines whether the view can accept new PDF documents dragged into it by the user.
**Notes:** (Read and Write property)

### 137.35.59 autoScales as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value indicating whether autoscaling is set.
**Notes:** (Read and Write property)

### 137.35.60 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the view's background color.
**Notes:**

A view's background is the area displayed to either side of a PDF document's pages. The background also appears between pages when page breaks are enabled. The default color is a 50% gray.
(Read and Write property)

### 137.35.61 canGoBack as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the previous page in the page history.
**Notes:**

The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

### 137.35.62 canGoForward as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the next page in the page history.
**Notes:**

The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

### 137.35.63 canGoToFirstPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the first page of the document.
**Notes:**

The return value will be true unless the view is already displaying the first page.
(Read only property)

### 137.35.64 canGoToLastPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the last page of the document.
**Notes:**

The return value will be true unless the view is already displaying the last page.
(Read only property)

### 137.35.65 canGoToNextPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the next page of the document.
**Notes:**

The return value will be true unless the view is displaying the last page.
(Read only property)

### 137.35.66 canGoToPreviousPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can navigate to the previous page of the document.
**Notes:**

The return value will be true unless the view is displaying the first page.
(Read only property)

### 137.35.67 canZoomIn as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can magnify the view,Äîthat is, zoom in.
**Notes:** (Read only property)

### 137.35.68 canZoomOut as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a Boolean value indicating whether the user can view an expanded area,Äîthat is, zoom out.
**Notes:** (Read only property)

### 137.35.69 currentDestination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns a PDFDestination object representing the current page and the current point in the view specified in page space.
**Notes:**

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
(Read only property)

### 137.35.70 currentPage as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current page.
**Notes:**

When there are two pages in the view in a two-up mode, "current page" is the left page. For continuous modes, returns the page crossing a horizontal line halfway between the view's top and bottom bounds.
(Read only property)

### 137.35.71 currentSelection as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current selection.
**Example:**

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

**Notes:**

Returns NULL if no selection exists.

Note that this method returns the actual instance of the current PDFSelectionMBS object. Therefore, if you want to modify it, you should make a copy of the returned selection and modify that, instead.
(Read and Write property)

### 137.35.72 displayBox as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The current style of display box.
**Notes:**

The available values for display boxes are defined in the Constants section in the PDFPageMBS class.
(Read and Write property)

### 137.35.73 displayDirection as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Set the layout direction, either vertical or horizontal, for the given display mode.
**Notes:**

Defaults to vertical layout (kPDFDisplayDirectionVertical).
Available in macOS 10.13 or newer.
(Read and Write property)

### 137.35.74 displayMode as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The current display mode.
**Notes:**

Value can be kPDFDisplaySinglePage, kPDFDisplaySinglePageContinuous, kPDFDisplayTwoUp and kPDFDisplayTwoUpContinuous.
(Read and Write property)

### 137.35.75 displaysAsBook as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value indicating whether the view will display the first page as a book cover (meaningful only when the document is in two-up or two-up continuous display mode).
**Notes:** (Read and Write property)

### 137.35.76 displaysPageBreaks as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value indicating whether the view is displaying page breaks.
**Notes:** (Read and Write property)

### 137.35.77 displaysRTL as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Specifies presentation of pages from right-to-left.
**Notes:**

Defaults to false.
(Read and Write property)

### 137.35.78 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the document associated with a PDFView object.
**Notes:** (Read and Write property)

### 137.35.79 documentView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Returns the innermost view used by PDFView or by your PDFView subclass.
**Notes:**

The innermost view is the one displaying the visible document pages. This method is useful when converting coordinates from one view to another.
(Read only property)

### 137.35.80 enableDataDetectors as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether data detection is enabled.
**Notes:**

If enabled, page text will be scanned for URL's as the page becomes visible. Where
// URL's are found, Link annotations are created in place. These are temporary annotations and are not saved.

Requires Mac OS X 10.6.
(Read and Write property)

### 137.35.81 greekingThreshold as Double

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The greeking threshold to use for displaying text.
**Notes:**

The default threshold is 3.0.
(Read and Write property)

### 137.35.82 interpolationQuality as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The interpolation quality for images drawn into the PDFView context.
**Notes:**

Available in Mac OS X 10.7 or later.
(Read and Write property)

### 137.35.83 maxScaleFactor as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Set the maximum scaling factor for the PDF document.
**Notes:**

Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

### 137.35.84 minScaleFactor as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Set the minimum scaling factor for the PDF document.
**Notes:**

Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

### 137.35.85 pageBreakMargins as NSEdgeInsetsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** The page break margins.
**Notes:**

If displaysPageBreaks is enabled, you may customize the spacing between pages by defining margins for the top, bottom, left, and right of each page. Note that pageBreakMargins only allows positive values and will clamp any negative value to 0.0. By default, if displaysPageBreaks is enabled, pageBreakMargins is { 4.75, 4.0, 4.75, 4.0 } (with respect to top, left, bottom, right), otherwise it is { 0.0, 0.0, 0.0, 0.0 }
(Read and Write property)

### 137.35.86 pageShadowsEnabled as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Specifies if shadows should be drawn around page borders in a PDFView.
**Notes:**

Defaults to true.
Available in macOS 10.14 or newer.
(Read and Write property)

### 137.35.87 scaleFactor as Double

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The scale factor for the view.
**Notes:**

The default value is 1.0, corresponding to actual size.
(Read and Write property)

### 137.35.88 scaleFactorForSizeToFit as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

**Function:** Regardless of current autoScales mode, this returns the "size to fit" scale factor that autoScales would use for scaling the current document and layout.
**Notes:**

For continuous modes this is a "fit width" scale, for non-continuous modes it is a "best fit" scale.
Available in macOS 10.13 or newer.
(Read only property)

### 137.35.89 shouldAntiAlias as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether to use anti-aliasing in the view.
**Notes:** (Read and Write property)

### 137.35.90 Constants

### 137.35.91 kPDFAnnotationArea = 4

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over an annotation.

### 137.35.92 kPDFControlArea = 16

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over a control.

### 137.35.93 kPDFDisplayDirectionHorizontal = 1

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the display direction constants.
**Notes:** Horizontal

### 137.35.94 kPDFDisplayDirectionVertical = 0

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the display direction constants.
**Notes:** Vertical

### 137.35.95 kPDFDisplaySinglePage = 0

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the PDF view display mode constants.
**Notes:** The document displays one page at a time horizontally and vertically. Vertical and horizontal scrolling apply only to the current page.

### 137.35.96 kPDFDisplaySinglePageContinuous = 1

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the PDF view display mode constants.
**Notes:** he document displays in continuous mode vertically, with single-page width horizontally. Vertical scrolling applies to the entire document.

### 137.35.97 kPDFDisplayTwoUp = 2

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the PDF view display mode constants.
**Notes:** The document displays two pages side-by-side. Vertical and horizontal scrolling apply only to the pair of displayed pages.

### 137.35.98 kPDFDisplayTwoUpContinuous = 3

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the PDF view display mode constants.
**Notes:** The document displays in continuous mode vertically and displays two pages side-by-side horizontally. Vertical scrolling applies to the entire document.

### 137.35.99 kPDFIconArea = 64

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:**

The mouse is over an icon.
Available in Mac OS X v10.5 and later.

### 137.35.100 kPDFImageArea = 256

MBS MacControls Plugin, Plugin Version: 21.1.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** Over an image.

### 137.35.101 kPDFInterpolationQualityHigh = 2

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the interpolation quality constants.
**Notes:** high

### 137.35.102 kPDFInterpolationQualityLow = 1

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the interpolation quality constants.
**Notes:** low

### 137.35.103 kPDFInterpolationQualityNone = 0

MBS MacControls Plugin, Plugin Version: 11.2.

**Function:** One of the interpolation quality constants.

### 137.35.104 kPDFLinkArea = 8

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over a link.

### 137.35.105 kPDFNoArea = 0

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over an undefined area.

### 137.35.106 kPDFPageArea = 1

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over a page.

### 137.35.107 kPDFPopupArea = 128

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over a popup menu.

### 137.35.108 kPDFTextArea = 2

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over text.

### 137.35.109 kPDFTextFieldArea = 32

MBS MacControls Plugin, Plugin Version: 9.6.

**Function:** One of the constants to apply mouse position over PDF view areas.
**Notes:** The mouse is over a text field.

# Chapter 138

# Phidgets

## 138.1 class OldPhidgetAccelerometerMBS

### 138.1.1 class OldPhidgetAccelerometerMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for the phidget accelerometer.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetAccelerometerMBS instead. **Notes:**

The PhidgetAccelerometer is a component that provides a high-level programmer interface to control a PhidgetAccelerometer device connected through a USB port. The product is available as a dual axis or a 3-axis module. With this component, the programmer can:

- Measure up to 5 Gravity (9.8 m/s2) change per axis, depending on unit purchased.
- Measures both dynamic acceleration (e.g., vibration) and static acceleration (e.g., gravity or tilt) on 2 or 3 axis.

Subclass of the OldPhidgetMBS class.

### 138.1.2 Methods

### 138.1.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** On success the handle value is not zero.

### 138.1.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last acceleration value received from the PhidgetAccelerometer for a particular axis.
**Notes:** Lasterror is set.

### 138.1.5 getAccelerationChangeTrigger(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the amount of change that should exist between the last reported value and the current value before an OnAccelerationChange event is fired.
**Notes:** Lasterror is set.

### 138.1.6 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum accleration supported by an axis.
**Notes:** The Lasterror property is set.

### 138.1.7 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum acceleraiton supported by an axis.
**Notes:** The Lasterror property is set.

### 138.1.8 getAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of acceleration axes supported by this accelerometer.
**Notes:** The Lasterror property is set.

### 138.1.9 setAccelerationChangeTrigger(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the amount of change that should exist between the last reported value and the current value before an AccelerationChange event is fired.
**Notes:**

If the AccelerationChangeTrigger is set to 0, an event will be triggered for every measurement of acceleration taken.

Lasterror is set.

### 138.1.10 Events

### 138.1.11 AccelerationChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for each change on the Acceleration.
**Notes:**

Index: Index of the Accelerometer posting event
Value: Value of the Accelerometer

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.2 class OldPhidgetAdvancedServoMBS

### 138.2.1 class OldPhidgetAdvancedServoMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class for a phidget advanced servo device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetRCServoMBS instead. **Notes:**

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

### 138.2.2 Methods

### 138.2.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** On success the handle value is not zero.

### 138.2.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the acceleration for the given index.
**Notes:** The Lasterror property is set.

### 138.2.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum acceleration supported by a motor.
**Notes:** The Lasterror property is set.

### 138.2.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum acceleration supported by a motor.
**Notes:** The Lasterror property is set.

### 138.2.7 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current value.
**Notes:** The Lasterror property is set.

### 138.2.8 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the engaged state of a motor.
**Notes:**

This is whether the motor is powered or not.
The Lasterror property is set.

### 138.2.9 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of motors supported by this controller.
**Notes:** The Lasterror property is set.

### 138.2.10 getPosition(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current position of an encoder.
**Notes:** The Lasterror property is set.

### 138.2.11 getPositionMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum position that a motor can go to.
**Notes:** The Lasterror property is set.

### 138.2.12 getPositionMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum position that a motor can go to.
**Notes:** The Lasterror property is set.

### 138.2.13 getServoType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the servo type of a motor.
**Notes:**

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

### 138.2.14 getSpeedRampingOn(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the speed ramping state for a motor.
**Notes:**

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

### 138.2.15 getStopped(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the stopped state of a motor.
**Notes:**

This is true when the motor is not moving and there are no outstanding commands.
The Lasterror property is set.

### 138.2.16 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current velocity.
**Notes:** The Lasterror property is set.

### 138.2.17 getVelocityLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last set velocity limit for a motor.
**Notes:** The Lasterror property is set.

### 138.2.18 getVelocityMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum velocity that can be set for a motor.
**Notes:** The Lasterror property is set.

### 138.2.19 getVelocityMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum velocity that can be set for a motor.
**Notes:** The Lasterror property is set.

### 138.2.20 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the acceleration.
**Notes:** The Lasterror property is set.

### 138.2.21 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
**Notes:** The Lasterror property is set.

### 138.2.22 setPosition(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current position of a motor.
**Notes:** The Lasterror property is set.

### 138.2.23 setPositionMax(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the maximum position that a motor can go to.
**Notes:** The Lasterror property is set.

### 138.2.24 setPositionMin(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the minimum position that a motor can go to.
**Notes:** The Lasterror property is set.

### 138.2.25 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double, velocity_max as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the servo parameters of a motor.
**Notes:**

The Lasterror property is set.

| | |
|---|---|
| index | The motor index. |
| min_us | The minimum supported PCM in microseconds. |
| max_us | The maximum supported PCM in microseconds. |
| degrees | The degrees of rotation defined by the given PCM range. |
| velocity_max | The maximum velocity in degrees/second. |

### 138.2.26 setServoType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the servo type of a motor.
**Notes:**

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

### 138.2.27 setSpeedRampingOn(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the speed ramping state for a motor.
**Notes:**

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

### 138.2.28 setVelocityLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the velocity limit for a motor.
**Notes:** The Lasterror property is set.

### 138.2.29 Events

### 138.2.30 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The current value changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.2.31 PositionChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The position changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.2.32 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The velocity changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

### 138.2.33 Constants

### 138.2.34 PHIDGET_SERVO_DEFAULT = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.35 PHIDGET_SERVO_FIRGELLI_L12_100_100_06_R = 17

MBS Phidgets Plugin, Plugin Version: 12.1.

**Function:** One of the servo type constants.

### 138.2.36 PHIDGET_SERVO_FIRGELLI_L12_100_50_06_R = 16

MBS Phidgets Plugin, Plugin Version: 12.1.

**Function:** One of the servo type constants.

### 138.2.37 PHIDGET_SERVO_FIRGELLI_L12_30_50_06_R = 13

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.38 PHIDGET_SERVO_FIRGELLI_L12_50_100_06_R = 14

MBS Phidgets Plugin, Plugin Version: 12.1.

**Function:** One of the servo type constants.

### 138.2.39 PHIDGET_SERVO_FIRGELLI_L12_50_210_06_R = 15

MBS Phidgets Plugin, Plugin Version: 12.1.

**Function:** One of the servo type constants.

### 138.2.40 PHIDGET_SERVO_HITEC_805BB = 5

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.41 PHIDGET_SERVO_HITEC_815BB = 12

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.42 PHIDGET_SERVO_HITEC_HS322HD = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.43 PHIDGET_SERVO_HITEC_HS422 = 6

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.44 PHIDGET_SERVO_HITEC_HS485HB = 10

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.45 PHIDGET_SERVO_HITEC_HS5245MG = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.46 PHIDGET_SERVO_HITEC_HS645MG = 11

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.47 PHIDGET_SERVO_HITEC_HS785HB = 9

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.48 PHIDGET_SERVO_HITEC_HSR1425CR = 8

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.49 PHIDGET_SERVO_RAW_us_MODE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.50 PHIDGET_SERVO_SPRINGRC_SM_S2313M = 18

MBS Phidgets Plugin, Plugin Version: 12.1.

**Function:** One of the servo type constants.

### 138.2.51 PHIDGET_SERVO_SPRINGRC_SM_S3317M = 19

MBS Phidgets Plugin, Plugin Version: 13.4.

**Function:** One of the servo type constants.

### 138.2.52 PHIDGET_SERVO_SPRINGRC_SM_S3317SR = 20

MBS Phidgets Plugin, Plugin Version: 13.4.

**Function:** One of the servo type constants.

### 138.2.53 PHIDGET_SERVO_SPRINGRC_SM_S4303R = 21

MBS Phidgets Plugin, Plugin Version: 20.3.

**Function:** One of the servo type constants.

### 138.2.54 PHIDGET_SERVO_SPRINGRC_SM_S4315M = 22

MBS Phidgets Plugin, Plugin Version: 20.3.

**Function:** One of the servo type constants.

### 138.2.55 PHIDGET_SERVO_SPRINGRC_SM_S4315R = 23

MBS Phidgets Plugin, Plugin Version: 20.3.

**Function:** One of the servo type constants.

### 138.2.56 PHIDGET_SERVO_SPRINGRC_SM_S4505B = 24

MBS Phidgets Plugin, Plugin Version: 20.3.

**Function:** One of the servo type constants.

### 138.2.57 PHIDGET_SERVO_TOWERPRO_MG90 = 7

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the servo type constants.

### 138.2.58 PHIDGET_SERVO_USER_DEFINED = 25

MBS Phidgets Plugin, Plugin Version: 20.3.

**Function:** One of the servo type constants.

## 138.3 class OldPhidgetAnalogMBS

### 138.3.1 class OldPhidgetAnalogMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Class specific to the Phidget Analog.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetVoltageInputMBS instead. **Notes:**

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.3.2 Methods

### 138.3.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new analog device instance.
**Notes:** Lasterror is set.

### 138.3.4 getEnabled(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the enabled state for an output.
**Notes:** Lasterror is set.

### 138.3.5 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of outputs supported by this phidget analog.
**Notes:** Lasterror is set.

### 138.3.6 getVoltage(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the currently set voltage for an output, in V.
**Notes:** Lasterror is set.

### 138.3.7 getVoltageMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum settable output voltage, in V.
**Notes:** Lasterror is set.

### 138.3.8 getVoltageMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum settable output voltage, in V.
**Notes:** Lasterror is set.

### 138.3.9 setEnabled(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the enabled state for an output.
**Notes:** Lasterror is set.

### 138.3.10 setVoltage(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the voltage of an output, in V.
**Notes:** Lasterror is set.

## 138.4 class OldPhidgetBridgeMBS

### 138.4.1 class OldPhidgetBridgeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class specific to the Phidget Bridge.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetMBS instead.
**Notes:**

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.4.2 Methods

### 138.4.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new instance.
**Notes:** Lasterror is set.

### 138.4.4 getBridgeMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum value supported by a bridge input, in mV/V. This is affected by Gain.
**Notes:** Lasterror is set.

### 138.4.5 getBridgeMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum value supported by a bridge input, in mV/V. This is affected by Gain.
**Notes:** Lasterror is set.

### 138.4.6 getBridgeValue(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current value of a bridge input, in mV/V.
**Notes:** Lasterror is set.

### 138.4.7 getDataRate as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the the data rate for the Phidget Bridge, in milliseconds.
**Notes:** Lasterror is set.

### 138.4.8 getDataRateMax as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the the maximum data rate for the Phidget Bridge, in milliseconds.
**Notes:** Lasterror is set.

### 138.4.9 getDataRateMin as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the the minimum data rate for the Phidget Bridge, in milliseconds.
**Notes:** Lasterror is set.

### 138.4.10 getEnabled(index as Integer) as Boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the enabled state for an input.
**Notes:** Lasterror is set.

### 138.4.11 getGain(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the the Gain for an input.
**Notes:** Lasterror is set.

### 138.4.12 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of inputs supported by this phidget bridge.
**Notes:** Lasterror is set.

### 138.4.13 setDataRate(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the the data rate for the Phidget Bridge, in milliseconds.
**Notes:** Lasterror is set.

### 138.4.14 setEnabled(index as Integer, value as Boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the enabled state for an input.
**Notes:** Lasterror is set.

### 138.4.15 setGain(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the the Gain for an input.
**Notes:** Lasterror is set.

### 138.4.16 Events

### 138.4.17 BridgeDataReceived(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The bridge data event handler.
**Notes:** This is called at a set rate as defined by data rate.

### 138.4.18 Constants

### 138.4.19 PHIDGET_BRIDGE_GAIN_1 = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 1.

### 138.4.20 PHIDGET_BRIDGE_GAIN_128 = 6

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 128.

### 138.4.21 PHIDGET_BRIDGE_GAIN_16 = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 16.

### 138.4.22 PHIDGET_BRIDGE_GAIN_32 = 4

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 32.

### 138.4.23 PHIDGET_BRIDGE_GAIN_64 = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 64.

### 138.4.24 PHIDGET_BRIDGE_GAIN_8 = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Gain of 8.

### 138.4.25 PHIDGET_BRIDGE_GAIN_UNKNOWN = 7

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the gain constants.
**Notes:** Unknown Gain.

## 138.5 class OldPhidgetDictionaryMBS

### 138.5.1 class OldPhidgetDictionaryMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Phidget Dictionary is a service provided by the Phidget Webservice.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetDictionaryMBS instead. **Notes:**

The Webservice maintains a centralized dictionary of key-value pairs that can be accessed and changed from any number of clients through the CPhidgetDictionary interface available in phidget21.

Note that the Webservice uses this dictionary to control access to Phidgets through the openRemote and openRemoteIP interfaces, and as such, you should never add or modify a key that starts with /PSK/ or /PCK/, unless you want to explicitly modify Phidget specific data ,Äì and this is highly discouraged, as it's very easy to break things. Listening to these keys is fine if so desired.

The intended use for the dictionary is as a central repository for communication and persistent storage of data between several client applications. As an example - a higher level interface exposed by one application ,Äì which controls the Phidgets, for others to access ,Äì rather then every client talking directly to the Phidgets themselves.

The dictionary makes use of extended regular expressions for key matching. See the end of this document for the rules of regular expressions.

See the Phidget manuals for help on regular expressions.

### 138.5.2 Methods

### 138.5.3 addKey(key as string, value as string, persistent as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds a new key to the Dictionary, or modifies the value of an existing key.
**Notes:**

The key can only contain numbers, letters, ,Äò/', ,Äò.', ,Äò-,Äò, ,Äò_', and must begin with a letter, ,Äò_' or ,Äò/'.
The value can contain any value.
The persistent value controls whether a key will stay in the dictionary after the client that created it disconnects. If persistent == 0, the key is removed when the connection closes. Otherwise the key remains in the

dictionary until it is explicitly removed.

Lasterror is set.

### 138.5.4 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes the file handles for this device.
**Notes:**

You should always call this when finished with a Dictionary.
Lasterror is set.

### 138.5.5 Constructor

MBS Phidgets Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A dummy constructor doing nothing.
See also:

- 138.5.6 Constructor(pattern as string) 21974

### 138.5.6 Constructor(pattern as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

The Lasterror property is set.
Pattern is a regular expression that matches the keys you want to listen for in the keychange event.
See also:

- 138.5.5 Constructor 21974

### 138.5.7 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the status of the device.
**Notes:**

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

### 138.5.8 getServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the address and port.
**Notes:** The Lasterror property is set.

### 138.5.9 getServerID as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the server ID.
**Notes:** The Lasterror property is set.

### 138.5.10 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the connection status of a Webservice.
**Notes:**

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

### 138.5.11 openRemote(serverID as string, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
**Notes:** The Lasterror property is set.

### 138.5.12 openRemoteIP(addr as string, port as Integer, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a connection to a remote Phidget Dictionary.
**Notes:**

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code.

If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.

Lasterror is set.

### 138.5.13 removeKey(pattern as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Removes a key, or set of keys, from the Dictionary.
**Notes:**

The key name is a regular expressions pattern, and so care must be taken to only have it match the specific keys you want to remove.
Lasterror is set.

### 138.5.14 Properties

### 138.5.15 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal used CPhidgetDictionaryHandle.
**Notes:** (Read and Write property)

### 138.5.16 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 138.5.17 Events

### 138.5.18 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This error event is used for reporting asynchronous errors ,Äì mostly related to opening remote Phidgets.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.5.19 KeyChanged(key as string, value as string, reason as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** These event will be called on key add, remove, and change.
**Notes:**

The Lasterror property is set.
It will also fire once to give an initial key value as soon as it is registered, if the key already exists.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Reason values:

| | |
|---|---|
| PHIDGET_DICTIONARY_VALUE_CHANGED | 1 |
| PHIDGET_DICTIONARY_ENTRY_ADDED | 2 |
| PHIDGET_DICTIONARY_ENTRY_REMOVING | 3 |
| PHIDGET_DICTIONARY_CURRENT_VALUE | 4 |

### 138.5.20 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when a connection to the sever has been made.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.5.21 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when a connection to the server has been lost.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.6 class OldPhidgetEncoderMBS

### 138.6.1 class OldPhidgetEncoderMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for the phidget encoder device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetEncoderMBS instead. **Notes:**

The PhidgetEncoder is a component that provides a high-level programmer interface to control a PhidgetEncoder device connected through a USB port.
With this component, the programmer can:

- Detect changes in position of incremental and absolute encoders.
- Easily track the changes with respect to time.

Subclass of the OldPhidgetMBS class.

### 138.6.2 Methods

### 138.6.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

### 138.6.4 getEnabled(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the enabled state of an encoder. This is whether the encoder is powered or not.
**Notes:** The Lasterror property is set.

### 138.6.5 getEncoderCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of encoder inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.6.6 getIndexPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries index position.
**Notes:**

Gets the position of the last index pulse, as referenced to getPosition.
This will return EPHIDGET_UNKNOWN if there hasn't been an index event, or if the encoder doesn't support index.

The Lasterror property is set.

### 138.6.7 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of digital inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.6.8 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of a digital input.
**Notes:** The Lasterror property is set.

### 138.6.9 getPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current position of an encoder.
**Notes:** The Lasterror property is set.

### 138.6.10 setEnabled(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the enabled state of an encoder. This is whether the encoder is powered or not.
**Notes:** The Lasterror property is set.

### 138.6.11 setPosition(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current position of an encoder.
**Notes:** The Lasterror property is set.

### 138.6.12 Events

### 138.6.13 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event for a change in the input.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.6.14 PositionChanged(index as Integer, position as Integer, time as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for every position change.
**Notes:**

Index: Index of the Encoder firing the Event
Position: Position of the Encoder
Time: Time of change

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.7 class OldPhidgetFrequencyCounterMBS

### 138.7.1 class OldPhidgetFrequencyCounterMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Class specific to the Phidget Frequency Counter.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetFrequencyCounterMBS instead. **Notes:**

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.7.2 Methods

### 138.7.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new instance.
**Notes:** Lasterror is set.

### 138.7.4 getEnabled(index as Integer) as Boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the enabled state for an input.
**Notes:** Lasterror is set.

### 138.7.5 getFilter(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the filter type for an input.
**Notes:** Lasterror is set.

### 138.7.6 getFrequency(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the measured frequency of an input, in Hz.
**Notes:** Lasterror is set.

### 138.7.7 getFrequencyInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of inputs supported by this phidget frequency counter.
**Notes:** Lasterror is set.

### 138.7.8 getTimeout(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the timeout value for an input, in microseconds. This controls the lowest measurable frequency.
**Notes:** Lasterror is set.

### 138.7.9 getTotalCount(index as Integer) as Int64

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the total number of ticks that have happened since the last reset on this input.
**Notes:** Lasterror is set.

### 138.7.10 getTotalTime(index as Integer) as Int64

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the total time that has passed since the last reset on this input, in microseconds.
**Notes:** Lasterror is set.

### 138.7.11 reset(index as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets total count and total time for an input.
**Notes:** Lasterror is set.

### 138.7.12 setEnabled(index as Integer, value as Boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the enabled state for an input.
**Notes:** Lasterror is set.

### 138.7.13 setFilter(index as Integer, filter as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the filter type for an input.
**Notes:** Lasterror is set.

### 138.7.14 setTimeout(index as Integer, filter as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the timeout value for an input, in microseconds.
**Notes:** Lasterror is set.

### 138.7.15 Events

### 138.7.16 Counted(index as Integer, time as Integer, counts as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when ticks have been counted on an input, or when the timeout has passed.

### 138.7.17 Constants

### 138.7.18 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_LOGIC_LEVEL = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Filter Type Constants.
**Notes:** Logic level signal filter.

### 138.7.19 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_UNKNOWN = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Filter Type Constants.
**Notes:** Filter type unknown.

### 138.7.20 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_ZERO_CROSSING = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Filter Type Constants.
**Notes:** Zero crossing signal filter.

## 138.8 class OldPhidgetGPGGAMBS

### 138.8.1 class OldPhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a NMEA GGA Sentence.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPGGAMBS instead.

### 138.8.2 Properties

### 138.8.3 altitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The altitude value.
**Notes:** (Read only property)

### 138.8.4 fixQuality as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The fix Quality.
**Notes:** (Read and Write property)

### 138.8.5 heightOfGeoid as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The height of GEO ID.
**Notes:** (Read only property)

### 138.8.6 horizontalDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The horizontal dilution.
**Notes:** (Read only property)

### 138.8.7 latitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The latitude value.
**Notes:** (Read only property)

### 138.8.8 longitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The longitude value.
**Notes:** (Read only property)

### 138.8.9 numSatellites as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of satellites.
**Notes:** (Read and Write property)

### 138.8.10 time as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The time value.
**Notes:** (Read and Write property)

## 138.9 class OldPhidgetGPGSAMBS

### 138.9.1 class OldPhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The NMEA GSA Sentence class.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPGSAMBS instead.

### 138.9.2 Methods

### 138.9.3 satUsed(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** IDs of used sats in no real order, 0 means nothing.

### 138.9.4 Properties

### 138.9.5 fixType as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The fix type.
**Notes:** (Read and Write property)

### 138.9.6 horizDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Horizontal dilution.
**Notes:** (Read only property)

### 138.9.7 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The mode.
**Notes:** (Read and Write property)

### 138.9.8 posnDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Position dilution.
**Notes:** (Read only property)

### 138.9.9 vertDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Vertical dilution.
**Notes:** (Read only property)

### 138.9.10 Constants

### 138.9.11 kFixType2D = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Fix Type values.
**Notes:** 2D

### 138.9.12 kFixType3D = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Fix Type values.
**Notes:** 3D

### 138.9.13 kFixTypeNo = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the Fix Type values.
**Notes:** no fix.

### 138.9.14 kModeAuto = 65

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the mode constants.
**Notes:** Auto

### 138.9.15 kModeForced = 77

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the mode constants.
**Notes:** Forced

## 138.10 class OldPhidgetGPGSVMBS

### 138.10.1 class OldPhidgetGPGSVMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The NMEA GSV Sentence class.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPVTGMBS instead.

### 138.10.2 Methods

### 138.10.3 satInfo(index as Integer) as OldPhidgetGPSSatInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Query the satellite information with the given index.
**Notes:** Index from 0 to 11.

### 138.10.4 Properties

### 138.10.5 satsInView as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of satellites in view.
**Notes:** (Read and Write property)

## 138.11 class OldPhidgetGPRMCMBS

### 138.11.1 class OldPhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for NMEA RMC Sentence
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPRMCMBS instead.

### 138.11.2 Properties

### 138.11.3 date as OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The date value.
**Notes:** (Read and Write property)

### 138.11.4 heading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The heading value.
**Notes:** (Read only property)

### 138.11.5 latitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The latitude value.
**Notes:** (Read only property)

### 138.11.6 longitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The longitude value.
**Notes:** (Read only property)

### 138.11.7 magneticVariation as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The magnetic variation.
**Notes:** (Read only property)

### 138.11.8 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The mode value.
**Notes:** (Read and Write property)

### 138.11.9 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The speed in knots.
**Notes:** (Read only property)

### 138.11.10 status as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The status value.
**Notes:** (Read and Write property)

### 138.11.11 time as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The time value.
**Notes:** (Read and Write property)

## 138.12 class OldPhidgetGPSDateMBS

### 138.12.1 class OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GPS Date in UTC.
**Deprecated:** This item is deprecated and should no longer be used.

### 138.12.2 Properties

### 138.12.3 Day as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Day of the month (1-31).
**Notes:** (Read and Write property)

### 138.12.4 Month as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Month (1-12).
**Notes:** (Read and Write property)

### 138.12.5 Year as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Year.
**Notes:** (Read and Write property)

## 138.13 class OldPhidgetGPSMBS

### 138.13.1 class OldPhidgetGPSMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Class specific to the Phidget GPS.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPSMBS instead.
**Notes:**

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.13.2 Methods

### 138.13.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates an GPS instance.
**Notes:** Lasterror is set.

### 138.13.4 getAltitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current altitude, in meters.
**Notes:** Lasterror is set.

### 138.13.5 getDate as OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current GPS date, in UTC
**Notes:** Lasterror is set.

### 138.13.6 getHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current heading, in degrees.
**Notes:** Lasterror is set.

### 138.13.7 getLatitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current latitude.
**Notes:** Lasterror is set.

### 138.13.8 getLongitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current longitude.
**Notes:** Lasterror is set.

### 138.13.9 getNMEAData as OldPhidgetNMEADataMBS
