MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets Raw NMEA Data.
**Notes:** Lasterror is set.

### 138.13.10 getPositionFixStatus as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the position fix status.
**Notes:** Lasterror is set.

### 138.13.11 getTime as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current GPS time, in UTC.
**Notes:** Lasterror is set.

### 138.13.12 getVelocity as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current velocity, in km/h.
**Notes:** Lasterror is set.

### 138.13.13 Events

### 138.13.14 PositionChanged(latitude as Double, longitude as Double, altitude as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The position change event.
**Notes:** Called when any of latitude, longitude, or altitude change.

### 138.13.15 PositionFixStatusChanged(status as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The position fix status change event.
**Notes:** Called when a position fix is aquired or lost.

## 138.14 class OldPhidgetGPSSatInfoMBS

### 138.14.1 class OldPhidgetGPSSatInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class for Satellite info - used in GSV sentence.
**Deprecated:** This item is deprecated and should no longer be used.

### 138.14.2 Properties

### 138.14.3 Azimuth as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The azimuth value.
**Notes:** (Read and Write property)

### 138.14.4 Elevation as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The elevation value.
**Notes:** (Read and Write property)

### 138.14.5 ID as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The ID.
**Notes:** (Read and Write property)

### 138.14.6 SNR as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The serial number.
**Notes:** (Read and Write property)

## 138.15 class OldPhidgetGPSTimeMBS

### 138.15.1 class OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GPS Time in UTC.
**Deprecated:** This item is deprecated and should no longer be used.

### 138.15.2 Properties

### 138.15.3 Hour as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The hour value.
**Notes:** (Read and Write property)

### 138.15.4 Millisecond as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Milliseconds value.
**Notes:** (Read and Write property)

### 138.15.5 Minute as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minutes value.
**Notes:** (Read and Write property)

### 138.15.6 Second as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The seconds value.
**Notes:** (Read and Write property)

## 138.16 class OldPhidgetGPVTGMBS

### 138.16.1 class OldPhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class for a NMEA VTG Sentence.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetGPVTGMBS instead.

### 138.16.2 Properties

### 138.16.3 magneticHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The magnetic heading.
**Notes:** (Read only property)

### 138.16.4 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The mode.
**Notes:** (Read and Write property)

### 138.16.5 speed as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The speed in km/hour.
**Notes:** (Read only property)

### 138.16.6 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The speed in knots.
**Notes:** (Read only property)

### 138.16.7 trueHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The true heading.
**Notes:** (Read only property)

## 138.17 class OldPhidgetInterfaceKitMBS

### 138.17.1 class OldPhidgetInterfaceKitMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget interface kit.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetHubMBS instead.
**Notes:**

The PhidgetInterfaceKit is a component that provides a high-level programmer interface to control a PhidgetInterfaceKit device connected through a USB port.
With this component, the programmer can:

- Turn particular outputs on and off.
- Get notified of changes of state of the inputs as events.
- Configure events to fire when the analog inputs change.

The PhidgetInterfaceKit devices provide a combination of:

- Digital outputs.
- Digital inputs.
- Analog inputs.

Subclass of the OldPhidgetMBS class.

### 138.17.2 Methods

### 138.17.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

### 138.17.4 getDataRate(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the Data Rate for an analog input in milliseconds.
**Notes:**

The Lasterror property is set.

This is the event rate. Since we're not going to run an extra thread, the accuracy of the data rate is limited by the interrupt endpoint data rate (>=8ms).

### 138.17.5 getDataRateMax(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum supported data rate for an analog input in milliseconds.
**Notes:** The Lasterror property is set.

### 138.17.6 getDataRateMin(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum supported data rate for an analog input in milliseconds.
**Notes:** The Lasterror property is set.

### 138.17.7 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of digital inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.17.8 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of a digital input.
**Notes:** The Lasterror property is set.

### 138.17.9 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of digital outputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.17.10 getOutputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of a digital output.
**Notes:** The Lasterror property is set.

### 138.17.11 getRatiometric as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the ratiometric state for this board.
**Notes:** The Lasterror property is set.

### 138.17.12 getSensorChangeTrigger(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
**Notes:**

To receive all events, set the SensorChangeTrigger to zero.
The Lasterror property is set.

### 138.17.13 getSensorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of sensor (analog) inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.17.14 getSensorRawValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the reported actual value of the sensor between 0 - 4095.
**Notes:**

This is directly proportional to the analog input, ranging from 0-5V (or 0-Vcc if Ratiometric is set to True). Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

### 138.17.15 getSensorValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last reported sensor value for the given index as a value from 0-1000
**Notes:**

Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

### 138.17.16 setDataRate(index as Integer, milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the Data Rate for an analog input in milliseconds.
**Notes:** The Lasterror property is set.

### 138.17.17 setOutputState(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state of a digital output.
**Notes:** The Lasterror property is set.

### 138.17.18 setRatiometric(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the ratiometric state for this board.
**Notes:** The Lasterror property is set.

### 138.17.19 setSensorChangeTrigger(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
**Notes:** Lasterror is set.

### 138.17.20 Events

### 138.17.21 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called on any input change.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.17.22 OutputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Returns the number of digital outputs on this particular Phidget device.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.17.23 SensorChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called on any sensor change.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.18 class OldPhidgetIRCodeInfoMBS

### 138.18.1 class OldPhidgetIRCodeInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a code info for the IR receiver/sender.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetIRCodeInfoMBS instead. **Notes:**

The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Some values can be set to null to select defaults. See the product manual for more information.

### 138.18.2 Properties

### 138.18.3 bitCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of bits in the code.
**Notes:** (Read and Write property)

### 138.18.4 carrierFrequency as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Carrier frequency in Hz - defaults to 38kHz.
**Notes:** (Read and Write property)

### 138.18.5 dutyCycle as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Duty Cycle in percent (10-50).
**Notes:**

Defaults to 33.
(Read and Write property)

### 138.18.6 encoding as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encoding used to encode the data.
**Notes:**

See the PHIDGET_IR_ENCODING_* constants.
(Read and Write property)

### 138.18.7 gap as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gap time in us.
**Notes:** (Read and Write property)

### 138.18.8 length as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The length of the code.
**Notes:**

Constant or Variable length encoding.
See PHIDGET_IR_LENGTH_* constants.
(Read and Write property)

### 138.18.9 minRepeat as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Minium number of times to repeat a code on transmit.
**Notes:** (Read and Write property)

### 138.18.10 trail as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Trail time in us - can be 0 for none.
**Notes:** (Read and Write property)

### 138.18.11 header(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The header value.
**Notes:**

Header pulse and space - can be 0 for none
Index from 0 to 1.
(Read and Write computed property)

### 138.18.12 one(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The one array.
**Notes:**

Pulse and Space times to represent a '1' bit, in us
Index from 0 to 1.
(Read and Write computed property)

### 138.18.13 repeat(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A series or pulse and space times to represent the repeat code.
**Notes:**

Start and end with pulses and null terminate. Set to 0 for none.
Index from 0 to 25.
(Read and Write computed property)

### 138.18.14 toggleMask(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Bit toggles, which are applied to the code after each transmit.
**Notes:** (Read and Write computed property)

### 138.18.15 zero(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** One of the arrays.
**Notes:**

Index from 0 to 1.
Pulse and Space times to represent a '0' bit, in us.
(Read and Write computed property)

### 138.18.16 Constants

### 138.18.17 PHIDGET_IR_ENCODING_BIPHASE = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** Bi-Phase, or Manchester encoding.

### 138.18.18 PHIDGET_IR_ENCODING_PULSE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** Pulse encoding, or Pulse Width Modulation.

### 138.18.19 PHIDGET_IR_ENCODING_RC5 = 5

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** RC5 - a type of Bi-Phase encoding.

### 138.18.20 PHIDGET_IR_ENCODING_RC6 = 6

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** RC6 - a type of Bi-Phase encoding.

### 138.18.21 PHIDGET_IR_ENCODING_SPACE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** Space encoding, or Pulse Distance Modulation.

### 138.18.22 PHIDGET_IR_ENCODING_UNKNOWN = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the encoding constants.
**Notes:** Unknown - the default value.

### 138.18.23 PHIDGET_IR_LENGTH_CONSTANT = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the length constants.
**Notes:** Constant - the bitstream + gap length is constant.

### 138.18.24 PHIDGET_IR_LENGTH_UNKNOWN = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the length constants.
**Notes:** Unknown - the default value.

### 138.18.25 PHIDGET_IR_LENGTH_VARIABLE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the length constants.
**Notes:** Variable - the bitstream has a variable length with a constant gap.

## 138.19 class OldPhidgetIRMBS

### 138.19.1 class OldPhidgetIRMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for an IR receiver/sender.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetIRMBS instead.
**Notes:**

Calls specific to the Phidget IR. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.19.2 Methods

### 138.19.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

The Lasterror property is set.
On success the handle value is not zero.

### 138.19.4 getLastCode(byref bitCount as Integer) as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last code that was received.
**Notes:**

The Lasterror property is set.

bitCount: set to the bit count of the code.

### 138.19.5 getLastLearnedCode(byref codeInfo as OldPhidgetIRCodeInfoMBS) as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last code that was learned.
**Notes:** The Lasterror property is set.

### 138.19.6 getRawData as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Read any available raw data.
**Notes:**

This should be polled continuously (every 20ms) to avoid missing data. Read data always starts with a space and ends with a pulse.
The Lasterror property is set.

### 138.19.7 Transmit(data as MemoryBlock, codeInfo as OldPhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits a code according to the settings in a CodeInto object.
**Notes:**

The Lasterror property is set.

data: The code to send. Data is transmitted MSBit first. MSByte is in array index 0. LSBit is right justified, so MSBit may be in bit positions 0-7 in array index 0 depending on the bit count.
codeInfo: The CodeInfo structure specifying to to send the code. Anything left as null to select default is filled in for the user.

### 138.19.8 TransmitRaw(data as MemoryBlock, length as Integer, carrierFrequency as Integer, dutyCycle as Integer, gap as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits RAW data as a series of pulses and spaces.
**Notes:**

The Lasterror property is set.

data: The data to send. The array (Int32) must start and end with a pulse and each element is a positive time in us.
length: The length of the data array. Maximum length is 1024, but streams should be kept much shorter, ie. <100ms between gaps.
carrierFrequency: The Carrier Frequency in Hz. leave as 0 for default.
dutyCycle: The Duty Cycle (10-50). Leave as 0 for default.
gap: The gap time in us. This guarantees a gap time (no transmitting) after the data is sent, but can be set to 0.

### 138.19.9 TransmitRepeat

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits a repeat of the last transmited code.
**Notes:**

The Lasterror property is set.
Depending of the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

### 138.19.10 Events

### 138.19.11 Code(data as memoryblock, bitcount as Integer, repeat as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A code was received.
**Notes:**

This is called when a code has been received that could be automatically decoded.
Data is return as an array with MSB in index 0. Bit count and a repeat flag are also returned. (Int32 values)
Repeats are detected as either the same code repeated in <100ms or as a special repeat code.

### 138.19.12 Learn(data as memoryblock, code as OldPhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The learn event.
**Notes:**

This is called when a code has been received for long enough to be learned.
The returned CodeInfo object can be used to retransmit the same code.

### 138.19.13 RawData(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This is called when raw data has been read from the device.
**Notes:**

Raw data always starts with a space and ends with a pulse.
tag contains 4 byte integer values.

## 138.20 class OldPhidgetLEDMBS

### 138.20.1 class OldPhidgetLEDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget LED device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetLCDMBS instead.
**Notes:**

The PhidgetLED is a component that provides a high-level programmer interface to control a PhidgetLED device connected through a USB port.

With this component, the programmer can:

- Control each led individually, On/Off and Brightness.

Subclass of the OldPhidgetMBS class.

### 138.20.2 Methods

### 138.20.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

The Lasterror property is set.
On success the handle value is not zero.

### 138.20.4 getCurrentLimit as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current limit.
**Notes:**

This is for all outputs.
Lasterror is set.

See the PHIDGET_LED_CURRENT_LIMIT_* constants.

### 138.20.5 getDiscreteLED(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the brightness of an individual LED.
**Notes:**

The Lasterror property is set.
Range of brightness is 0-100.

### 138.20.6 getLEDCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the number of LED positions available in this Phidget.
**Notes:**

The Lasterror property is set.
This property does not return the number of LEDs actually attached.

### 138.20.7 getVoltage as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the voltage.
**Notes:**

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

### 138.20.8 setCurrentLimit(currentLimit as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current limit.
**Notes:**

Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

### 138.20.9 setDiscreteLED(index as Integer, Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the brightness of an individual LED.
**Notes:**

The Lasterror property is set.
Range of brightness is 0-100.

### 138.20.10 setVoltage(Voltage as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current voltage.
**Notes:**

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

### 138.20.11 Constants

### 138.20.12 PHIDGET_LED_CURRENT_LIMIT_20mA = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the limit constants.
**Notes:** 20mA

### 138.20.13 PHIDGET_LED_CURRENT_LIMIT_40mA = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the limit constants.
**Notes:** 40mA

### 138.20.14 PHIDGET_LED_CURRENT_LIMIT_60mA = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the limit constants.
**Notes:** 60mA

### 138.20.15 PHIDGET_LED_CURRENT_LIMIT_80mA = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the limit constants.
**Notes:** 80mA

### 138.20.16 PHIDGET_LED_VOLTAGE_1_7V = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the voltage constants.
**Notes:** 1.7V

### 138.20.17 PHIDGET_LED_VOLTAGE_2_75V = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the voltage constants.
**Notes:** 2.75V

### 138.20.18 PHIDGET_LED_VOLTAGE_3_9V = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the voltage constants.
**Notes:** 3.9V

### 138.20.19 PHIDGET_LED_VOLTAGE_5_0V = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the voltage constants.
**Notes:** 5.0V

# 138.21 class OldPhidgetManagerMBS

## 138.21.1 class OldPhidgetManagerMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Phidget manager is an interface that allows for monitoring of all phidgets connected to a system, without opening them.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetManagerMBS instead.

## 138.21.2 Methods

## 138.21.3 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes the file handles for this device. You should always call this when finished with a Manager.
**Notes:** Lasterror is set.

## 138.21.4 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

The Lasterror property is set.
On success the handle value is not zero.

## 138.21.5 Device(index as Integer) as OldPhidgetMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The array of the attached devices.
**Notes:**

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.

### 138.21.6 getAttachedDevices

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Copies the list of attached devices into the Device and Count properties.
**Notes:** Lasterror is set.

### 138.21.7 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the status of the device.
**Notes:**

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

### 138.21.8 getServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the address and port.
**Notes:** The Lasterror property is set.

### 138.21.9 getServerID as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the server ID.
**Notes:** The Lasterror property is set.

### 138.21.10 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the connection status of a Webservice.
**Notes:**

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

### 138.21.11 Open

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a connection to the local Phidget Manager.
**Notes:** Lasterror is set.

### 138.21.12 openRemote(serverID as string, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
**Notes:** Lasterror is set.

### 138.21.13 openRemoteIP(addr as string, port as Integer, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a connection to a remote Phidget Manager.
**Notes:**

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active.

If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown.

Lasterror is set.

Address is the address of the computer running the Phidget Webservice.
This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice.
If authentication is not active, this can be set to "".

### 138.21.14 Properties

### 138.21.15 Count as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of devices.
**Notes:**

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.
(Read and Write property)

### 138.21.16 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal used CPhidgetManagerHandle.
**Notes:** (Read and Write property)

### 138.21.17 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code reported.
**Notes:** (Read and Write property)

### 138.21.18 Events

### 138.21.19 Attach(devicehandle as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when a device is attached.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.21.20 Detach(devicehandle as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when a device is detached.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.21.21 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is used for reporting asynchronous errors ,Äì mostly related to opening remote Phidgets.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.21.22 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when a connection to the sever has been made.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.21.23 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when a connection to the server has been lost.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.22 class OldPhidgetMBS

### 138.22.1 class OldPhidgetMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The base class of all Phidget device classes.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetMBS instead.
**Notes:**

Check phidgets.com for information on this devices.
http://www.phidgets.com/

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.1
- Rewritten Phidgets Plugin

### 138.22.3 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.1
- Rewritten Phidgets Plugin

### 138.22.4 Methods

### 138.22.5 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes the file handles for this device.
**Notes:**

You can call this while reads and writes are still outstanding; they will fail quickly.
Lasterror is set.
The destructor does a close if you forget it.

### 138.22.6 disableLogging

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Disables logging on the library.
**Notes:** The Lasterror property is set.

### 138.22.7 enableLogging(level as Integer, outputFile as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables logging on the library.
**Notes:**

The Lasterror property is set.
Data is written to the file specified with the output file path.
Not sure how the path must be specified. This is depending on the library used.

The levels:

| | |
|---|---|
| PHIDGET_LOG_CRITICAL | 1 |
| PHIDGET_LOG_ERROR | 2 |
| PHIDGET_LOG_WARNING | 3 |
| PHIDGET_LOG_DEBUG | 4 |
| PHIDGET_LOG_INFO | 5 |
| PHIDGET_LOG_VERBOSE | 6 |

### 138.22.8 GetDeviceClass as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the class of a Phidget.
**Notes:** See the PHIDCLASS_* constants.

### 138.22.9 GetDeviceID as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the device ID of a Phidget.
**Notes:** See the PHIDID_* constants.

### 138.22.10 GetDeviceLabel as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the Label for the Phidget.
**Notes:**

The Label is a user programmable serial number stored on the Phidget - it can be used to implement a serial numbering scheme, or describe the functionality of the Phidget in a specific application.

Lasterror is set.

### 138.22.11 GetDeviceName as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns string describing the name of the Phidget.
**Notes:**

For example, "Phidget InterfaceKit 8/8/8", "Phidget InterfaceKit 0/0/4", etc.
The Lasterror property is set.

### 138.22.12 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the status of the device.
**Notes:**

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

### 138.22.13 GetDeviceType as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns a string describing the type of the Phidget.
**Notes:**

All PhidgetInterfaceKits will return "PhidgetInterfaceKit", PhidgetRFID returns "PhidgetRFID" and so on.

Lasterror is set.

### 138.22.14 GetDeviceVersion as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns a string describing the Device Version of the Phidget.
**Notes:** Lasterror is set.

### 138.22.15 GetErrorDescription(errorcode as Integer) as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns a string describing the ErrorCode passed.
**Notes:**

Lasterror is set.

The list of the error codes:

0 EPHIDGET_OK
1 EPHIDGET_NOTFOUND
2 EPHIDGET_NOMEMORY
3 EPHIDGET_UNEXPECTED
4 EPHIDGET_INVALIDARG
5 EPHIDGET_NOTATTACHED
6 EPHIDGET_INTERRUPTED
7 EPHIDGET_INVALID
8 EPHIDGET_NETWORK
9 EPHIDGET_UNKNOWNVAL
10 EPHIDGET_BADPASSWORD
11 EPHIDGET_UNSUPPORTED

12 EPHIDGET_DUPLICATE
13 EPHIDGET_TIMEOUT
14 EPHIDGET_OUTOFBOUNDS
15 EPHIDGET_EVENT
16 EPHIDGET_NETWORK_NOTCONNECTED
17 EPHIDGET_WRONGDEVICE

### 138.22.16 GetLibraryVersion as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** returns a string providing the version number of the API library.
**Notes:** Lasterror is set.

### 138.22.17 GetSerialNumber as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the unique serial number of this Phidget.
**Notes:**

Lasterror is set.
This number is set during manufacturing, and is unique across all Phidgets.

### 138.22.18 GetServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the IP Address and Port of a remote Phidget device.
**Notes:**

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
Lasterror is set.

### 138.22.19 GetServerID as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the Server ID for a remote Phidget device.
**Notes:**

This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
The Lasterror property is set.

### 138.22.20 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns an integer indicating the connection status of a Webservice.
**Notes:**

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

### 138.22.21 Open(serialNumber as Integer = -1)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Creates a connection between an PhidgetMBS object and a physical Phidget.
**Example:**

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

**Notes:**

Open is pervasive. What this means is that you can call open on a device before it is plugged in, and keep the device opened across device dis- and re-connections.
Open is Asynchronous. What this means is that open will return immediately - before the device being opened is actually available.
What this means is that you need to either poll getDeviceStatus for an attached status, or handle the attach

event, in order to wait for the device to become available before trying to use it.

SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Lasterror is set.

### 138.22.22 OpenLabel(label as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a Phidget by label.
**Notes:**

Available with phidget library from December 2011.
Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
Lasterror is set.

### 138.22.23 openLabelRemote(label as string, serverID as string, password as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a Phidget remotely by ServerID. Note that this requires Bonjour (mDNS) to be running on both the host and the server.
**Notes:**

Available with phidget library from December 2011.
label: The label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
serverID: Server ID. Specify "" to open any.
password: The Password. Can be "" if the server is running unsecured.
Lasterror is set.

### 138.22.24 openLabelRemoteIP(label as string, addr as string, port as Integer, password as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens a Phidget remotely by address and port, with optional label.
**Notes:**

Available with phidget library from December 2011.
Lasterror is set.

label: Label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
address: The Address. This can be a hostname or IP address.
port: The Port number. Default is 5001.
password: The Password. Can be NULL if the server is running unsecured.

### 138.22.25 openRemote(serial as Integer, serverID as string, password as string = "")

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
**Notes:** Lasterror is set.

### 138.22.26 openRemoteIP(serial as Integer, addr as string, port as Integer, password as string = "")

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Attempts to open a connection to a Phidget Webservice, and waits for a phidget on that connection.
**Notes:**

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.
As with the regular open, openRemoteIP is pervasive and asynchronous ,Äì so long as the connection to the Webservice remains active.
SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Address is the address of the computer running the Phidget Webservice. This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice. If authentication is not active, this can be set to "".
Lasterror is set.

### 138.22.27 PUNK_DBL as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value used for unknown values (Double).

### 138.22.28 PUNK_FLT as single

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The value used for unknown values (Float).

### 138.22.29 SetDeviceLabel(label as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a Label ,Äì a string up to 10 characters long ,Äì to the Phidget associated with this handle.
**Notes:**

SetDeviceLabel may not be available on all operating systems.
Currently it is available on MacOS X, Linux, and Windows CE.
Calling this on Windows will return EPHIDGET_UNSUPPORTED
Lasterror is set.

### 138.22.30 waitForAttachment(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Waits the given time till a device has been attached.
**Example:**

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

**Notes:**

Lasterror is set to EPHIDGET_OK when the device is available, or to EPHIDGET_TIMEOUT if the device is not attached before the timeout expires.
Timeouts below about 300ms cannot be trusted because of initialization time, and sometimes an even larger timeout is required ,Äì ie. the first time a device is plugged into a windows machine.
A timeout of 0 is infinite.
This function can be used in conjunction with (or instead of) an attach event handler.
The Lasterror property is set.

### 138.22.31 Properties

### 138.22.32 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal used CPhidgetHandle.
**Notes:** (Read and Write property)

### 138.22.33 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

(Read and Write property)

### 138.22.34 Events

### 138.22.35 Attach

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when a device is attached.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

| | | |
|---|---|---|
| EPHIDGET_NOTFOUND | 1 | "A Phidget matching the type and or serial number could not be found." This indicates that a Phidget being searched for (ie. via Open) could not be located. |
| EPHIDGET_NOMEMORY | 2 | "Memory could not be allocated." This indicates that there is not enough memory for the Phidgets library to create the object requested. |
| EPHIDGET_UNEXPECTED | 3 | "Unexpected Error. Contact Phidgets Inc. for support." Indicates that a serious error has occurred, or a severe bug exists within the library. |
| EPHIDGET_INVALIDARG | 4 | "Invalid argument passed to function." An argument is not valid to the requirements of the function. In many cases this refers to an invalid Phidget Handle. |
| EPHIDGET_NOTATTACHED | 5 | "Phidget not physically attached." Indicates the function requires an attached Phidget to operate. |
| EPHIDGET_INTERRUPTED | 6 | "Read/Write operation was interrupted" An error occurred while attempting to communicate with the Phidget over USB. |
| EPHIDGET_INVALID | 7 | "The Error Code is not defined." Indicates that a serious error has occurred, or a severe bug exists within the library. |
| EPHIDGET_NETWORK | 8 | "Network Error." Attempting to communicate with the Phidget via the Network has failed. |
| EPHIDGET_UNKNOWNVAL | 9 | "Value is Unknown (State not yet received from device)." A query to a value on the Phidget device has failed as the Phidget has not returned data yet. |
| EPHIDGET_BADPASSWORD | 10 | "Authorization Failed." The remote access method has failed it's authorization. |
| EPHIDGET_UNSUPPORTED | 11 | "Not Supported" This is a bad or unsupported function call. |
| EPHIDGET_DUPLICATE | 12 | "Duplicated request" A previous request to the device has already performed this function, and it is not valid to perform twice. |
| EPHIDGET_TIMEOUT | 13 | "Given timeout has been exceeded" A synchronous request has failed it's time limits. Usually this is returned when attempting WaitForConnect. |
| EPHIDGET_OUTOFBOUNDS | 14 | "Index out of Bounds" An index into the function is above or below the recognized bounds of the device. ie. when accessing a single sensor on a multisensor device. |
| EPHIDGET_EVENT | 15 | "A non-null error code was returned from an event handler" An error code was passed to a function handler. Note that correct decoding of the actual error would have to be done within the event handler itself. |
| EPHIDGET_NETWORK_NOTCONNECTED | 16 | "A connection to the server does not ex-ist." An attempt to connect to a remotely connected device or service failed due to network connectivity problems. |
| EPHIDGET_WRONGDEVICE | 17 | "Function is not applicable for this device." The wrong type of device handle was passed as an argument to a function. (ie. calling CPhidgetWeightSensor_getWeight with an Accelerometer handle) |

### 138.22.36 Detach

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when a device is detached.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.22.37 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:**

This event is used for reporting asynchronous errors - mostly related to opening remote Phidgets.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.22.38 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is used for opening Phidgets remotely, and is called when a connection to the sever has been made.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.22.39 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is used for opening Phidgets remotely, and is called when a connection to the server has been lost.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.22.40 Wakeup

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when the device wakes up.

### 138.22.41 WillSleep

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when the device will go to sleep.

### 138.22.42 Constants

### 138.22.43 EPHIDGET_BADPASSWORD=10

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Authorization exception. "No longer used. Replaced by EEPHIDGET_BADPASSWORD"

### 138.22.44 EPHIDGET_BADVERSION=19

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Version Mismatch. "No longer used. Replaced by EEPHIDGET_BADVERSION"

### 138.22.45 EPHIDGET_CLOSED=18

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Phidget Closed. "Phidget handle was closed."

### 138.22.46 EPHIDGET_DUPLICATE=12

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Duplicate request. "Duplicated request."

### 138.22.47 EPHIDGET_EVENT=15

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Event. "A non-null error code was returned from an event handler." This code is not currently used.

### 138.22.48 EPHIDGET_INTERRUPTED=6

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Interrupted. "Read/Write operation was interrupted." This code is not currently used.

### 138.22.49 EPHIDGET_INVALID=7

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Invalid error code. "The Error Code is not defined."

### 138.22.50 EPHIDGET_INVALIDARG=4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Invalid argument. "Invalid argument passed to function."

### 138.22.51 EPHIDGET_NETWORK=8

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Network. "Network Error."

### 138.22.52 EPHIDGET_NETWORK_NOTCONNECTED=16

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Network not connected. "A connection to the server does not exist."

### 138.22.53 EPHIDGET_NOMEMORY=2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** No memory. "Memory could not be allocated."

### 138.22.54 EPHIDGET_NOTATTACHED=5

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Phidget not attached. "Phidget not physically attached."

### 138.22.55 EPHIDGET_NOTFOUND=1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Phidget not found. "A Phidget matching the type and or serial number could not be found."

### 138.22.56 EPHIDGET_OK=0

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Function completed successfully.

### 138.22.57 EPHIDGET_OUTOFBOUNDS=14

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Out of bounds. "Index out of Bounds."

### 138.22.58 EPHIDGET_TIMEOUT=13

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Timeout. "Given timeout has been exceeded."

### 138.22.59 EPHIDGET_UNEXPECTED=3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Unexpected. "Unexpected Error. Contact Phidgets Inc. for support."

### 138.22.60 EPHIDGET_UNKNOWNVAL=9

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Value unknown. "Value is Unknown (State not yet received from device, or not yet set by user)."

### 138.22.61 EPHIDGET_UNSUPPORTED=11

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Unsupported. "Not Supported."

### 138.22.62 EPHIDGET_WRONGDEVICE=17

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the error constants.
**Notes:** Wrong device. "Function is not applicable for this device."

### 138.22.63 PHIDCLASS_ACCELEROMETER = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.64 PHIDCLASS_ADVANCEDSERVO = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.65 PHIDCLASS_ANALOG = 22

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the HID class constants.

### 138.22.66 PHIDCLASS_BRIDGE = 23

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the HID class constants.

### 138.22.67 PHIDCLASS_ENCODER = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.68 PHIDCLASS_FREQUENCYCOUNTER = 21

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the HID class constants.

### 138.22.69 PHIDCLASS_GPS = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the HID class constants.

### 138.22.70 PHIDCLASS_INTERFACEKIT = 7

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.71 PHIDCLASS_IR = 19

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.72 PHIDCLASS_LED = 8

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.73 PHIDCLASS_MOTORCONTROL = 9

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.74 PHIDCLASS_PHSENSOR = 10

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.75 PHIDCLASS_RFID = 11

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.76 PHIDCLASS_SERVO = 12

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.77 PHIDCLASS_SPATIAL = 20

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.78 PHIDCLASS_STEPPER = 13

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.79 PHIDCLASS_TEMPERATURESENSOR = 14

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.80 PHIDCLASS_TEXTLCD = 15

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.81 PHIDCLASS_TEXTLED = 16

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID class constants.

### 138.22.82 PHIDCLASS_WEIGHTSENSOR = 17

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.179 PHIDSPEC_MOTORCONTROL=& h0E

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.180 PHIDSPEC_MOTORCONTROL_HC=& h2A

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.181 PHIDSPEC_NOTHING=& h00

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.182 PHIDSPEC_PHSENSOR=& h17

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.183 PHIDSPEC_RFID=& h0B

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.184 PHIDSPEC_RFIDB=& h1A

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.185 PHIDSPEC_ROTARY_TOUCH=& h1D

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.186 PHIDSPEC_SERVO_1MOTOR=& h01

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.187 PHIDSPEC_SERVO_1MOTOR_OLD=& h14

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.188 PHIDSPEC_SERVO_4MOTOR=& h29

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.189 PHIDSPEC_SERVO_4MOTOR_OLD=& h13

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.190 PHIDSPEC_STEPPER=& h10

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.191 PHIDSPEC_TEMPERATURESENSOR=& h0F

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.192 PHIDSPEC_TEXTLCD_2_20=& h08

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.193 PHIDSPEC_TEXTLCD_2_20_COMP1=& h0A

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.194 PHIDSPEC_TEXTLCD_2_20_CUSTOM=& h09

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.195 PHIDSPEC_TEXTLCD_with_888=& h24

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.196 PHIDSPEC_TEXTLED2=& h1B

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.197 PHIDSPEC_TEXTLED=& h0D

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.198 PHIDSPEC_UNIPOLAR_STEPPER=& h21

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.199 PHIDSPEC_WEIGHTSENSOR=& h15

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the HID spec constants.

### 138.22.200 PUNK_BOOL = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** The value used for unknown values (Boolean).

### 138.22.201 PUNK_INT = & H7FFFFFFF

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** The value used for unknown values (Integer).

### 138.22.202 PUNK_INT64 = & h7FFFFFFFFFFFFFFF

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** The value used for unknown values (Int64).

### 138.22.203 PUNK_SHRT = & h7FFF

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** The value used for unknown values (Short).

# 138.23 class OldPhidgetMissingFunctionExceptionMBS

## 138.23.1 class OldPhidgetMissingFunctionExceptionMBS

MBS Phidgets Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class used to report that a given phidget function was not loaded from the library.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetMissingFunctionExceptionMBS instead. **Notes:**

Check the message property.
Subclass of the RuntimeException class.

## 138.24 class OldPhidgetMotorControlMBS

### 138.24.1 class OldPhidgetMotorControlMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for the phidget motor control device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetDCMotorMBS instead. **Notes:**

The PhidgetMotorControl is a component that provides a high-level programmer interface to control a PhidgetMotorControl device connected through a USB port.

With this component, the programmer can:

- Control direction, and start and stop DC motors.
- Control the velocity and acceleration of each DC motor.
- Read the limit switch.

Subclass of the OldPhidgetMBS class.

### 138.24.2 Methods

### 138.24.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
Lasterror is set.

### 138.24.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current acceleration.
**Notes:**

Note that this value defaults to 10 upon initialisation.
The Lasterror property is set.

### 138.24.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum acceleration supported by a motor.
**Notes:** The Lasterror property is set.

### 138.24.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum acceleration supported by a motor.
**Notes:** The Lasterror property is set.

### 138.24.7 getBackEMF(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the Back EMF voltage for a motor.
**Notes:** Lasterror is set.

### 138.24.8 getBackEMFSensingState(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the Back EMF sensing state for a motor.
**Notes:** Lasterror is set.

### 138.24.9 getBraking(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the Braking value for a motor.
**Notes:**

Lasterror is set.
Returns the braking value, in percent.

### 138.24.10 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** get the current motor current consumption.
**Notes:** The Lasterror property is set.

### 138.24.11 getEncoderCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of encoder inputs supported by this board.
**Notes:** Lasterror is set.

### 138.24.12 getEncoderPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the position of an encoder. This position starts at 0 every time the phidget is opened.
**Notes:** Lasterror is set.

### 138.24.13 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of digital inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.24.14 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of a digital input.
**Notes:** The Lasterror property is set.

### 138.24.15 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of motors supported by this controller.
**Notes:** The Lasterror property is set.

### 138.24.16 getRatiometric as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the ratiometric state.
**Notes:** Lasterror is set.

### 138.24.17 getSensorCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of sensor inputs supported by this board.
**Notes:** Lasterror is set.

### 138.24.18 getSensorRawValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the raw value of a sensor (12-bit).
**Notes:** Lasterror is set.

### 138.24.19 getSensorValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the value of a sensor.
**Notes:** Lasterror is set.

### 138.24.20 getSupplyVoltage as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the Supply voltage for the motors.
**Notes:**

This could be higher then the actual supply voltage.
Returns the supply voltage, in volts.
Lasterror is set.

### 138.24.21 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current velocity of a motor.
**Notes:** The Lasterror property is set.

### 138.24.22 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the Motor's Maximum accesleration.
**Notes:**

Valid values are 0-100.
The Lasterror property is set.

### 138.24.23 setBackEMFSensingState(index as Integer, EMFState as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the Back EMF sensing state for a motor.
**Notes:** Lasterror is set.

### 138.24.24 setBraking(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the Braking value for a motor.
**Notes:**

This is applied when velocity is 0. Default is 0% .
value: The braking value, in percent.
Lasterror is set.

### 138.24.25 setEncoderPosition(index as Integer, position as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the encoder position.
**Notes:**

This can be used to set the position to a known value, and should only be called when the encoder is not moving.
Lasterror is set.

### 138.24.26 setRatiometric(value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the ratiometric state.
**Notes:**

This control the voltage reference used for sampling the analog sensors.
Lasterror is set.

### 138.24.27 setVelocity(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the velocity of a motor.
**Notes:** The Lasterror property is set.

### 138.24.28 Events

### 138.24.29 BackEMFUpdated(index as Integer, voltage as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called at a constant rate; every 16ms, when back EMF sensing is enabled for that motor.

### 138.24.30 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The current motor current consumption changed.
**Notes:**

Index: Index of the Motor firing the Event
Value: Value of the Motor Current

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.24.31 CurrentUpdated(index as Integer, current as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The current update event.
**Notes:** This is called at a constant rate; every 8ms.

### 138.24.32 EncoderPositionChanged(index as Integer, time as Integer, positionChange as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The encoder position change event.
**Notes:** This is called when the encoder position changes.

### 138.24.33 EncoderPositionUpdated(index as Integer, positionChange as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The encoder position update event.
**Notes:** This is called at a constant rate; every 8ms, whether the encoder position has changed or not.

### 138.24.34 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The input value changed.
**Notes:**

Index: Index of the Input firing the Event
State: State of the Input

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.24.35 SensorUpdated(index as Integer, sensorValue as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The sensor update event.
**Notes:** This is called at a constant rate; every 8ms.

### 138.24.36 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when the velocity changes.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

# 138.25 class OldPhidgetNMEADataMBS

## 138.25.1 class OldPhidgetNMEADataMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA Data Structure. Contains a set of supported NMEA sentences.
**Deprecated:** This item is deprecated and should no longer be used.

## 138.25.2 Properties

## 138.25.3 GGA as OldPhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GPS Fix and position data.
**Notes:** (Read and Write property)

## 138.25.4 GSA as OldPhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GPS DOP and active satellites.
**Notes:** (Read and Write property)

## 138.25.5 GSV as OldPhidgetGPGSVMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Detailed satellite information.
**Notes:** (Read and Write property)

## 138.25.6 RMC as OldPhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Recommended minimum data.
**Notes:** (Read and Write property)

### 138.25.7 VTG as OldPhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Heading and Speed over the Ground.
**Notes:** (Read and Write property)

## 138.26 class OldPhidgetNotInitialzedExceptionMBS

### 138.26.1 class OldPhidgetNotInitialzedExceptionMBS

MBS Phidgets Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class used to report that a given phidget object was not initialized properly.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetNotInitialzedExceptionMBS instead. **Notes:**

Check the message property.
Subclass of the RuntimeException class.

# 138.27 class OldPhidgetPHSensorMBS

## 138.27.1 class OldPhidgetPHSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget PH sensor device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetPHSensorMBS instead. **Notes:**

The PhidgetPHSensor is a component that provides a high-level programmer interface to control a PhidgetPHSensor device connected through a USB port.

With this component, the programmer can:

- Read the pH of a liquid with a pH sensor.

Subclass of the OldPhidgetMBS class.

## 138.27.2 Methods

## 138.27.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

## 138.27.4 getPH as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current pH.
**Notes:**

The Lasterror property is set.
Valid range is -10 to 10.

Note that this value defaults to -20. Applications not wishing to encounter this value should use Change Handlers instead of polling the device for data.

### 138.27.5 getPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the amount of change that should exist between the last reported value and the current value before an PHChange event is fired.
**Notes:** The Lasterror property is set.

### 138.27.6 getPHMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum PH that the sensor could report.
**Notes:** The Lasterror property is set.

### 138.27.7 getPHMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum PH that the sensor could report.
**Notes:** The Lasterror property is set.

### 138.27.8 getPotential as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current potential in volts.
**Notes:**

The Lasterror property is set.
Range is 0-5v.
2.5v corresponds to a pH of 7.0.

### 138.27.9 getPotentialMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum potential that can be sensed.
**Notes:** The Lasterror property is set.

### 138.27.10 getPotentialMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum potential that can be sensed.
**Notes:** The Lasterror property is set.

### 138.27.11 setPHChangeTrigger(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the amount of change that should exist between the last reported value and the current value before an OnPHChange event is fired.
**Notes:** The Lasterror property is set.

### 138.27.12 setTemperature(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the ambient temperature of the PH sensor for increased accuracy.
**Notes:**

This value defaults to 20 degrees celcius which is applicable for most applications.
The Lasterror property is set.

### 138.27.13 Events

### 138.27.14 PHChanged(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called if the pH changes by more than the PH trigger.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.28 class OldPhidgetRFIDMBS

### 138.28.1 class OldPhidgetRFIDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget RFID device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetRFIDMBS instead.
**Notes:**

The PhidgetRFID is a component that provides a high-level programmer interface to control a PhidgetRFID device connected through a USB port.
With this component, the programmer can:

- Read Radio Frequency Identification tags.

Radio Frequency Identification or RFID, is a non-contact identification technology which uses a reader to read data stored on low cost tags.

The particular instance of the technology we use stores a 40-bit number on the tag. Every tag that is purchased from Phidgets Inc. is guaranteed unique.

When a RFID tag is read, the component returns the unique number contained in the RFID tag.
Subclass of the OldPhidgetMBS class.

### 138.28.2 Methods

### 138.28.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

### 138.28.4 getAntennaOn as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of the antenna.
**Notes:** The Lasterror property is set.

### 138.28.5 getLastTag(m as memoryblock) as memoryblock

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Stores the last tag in a memoryblock.
**Notes:**

You need to pass in a memoryblock of the correct size for your tags.
For convenience the memoryblock is returned.

The Lasterror property is set.

### 138.28.6 getLEDOn as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of the onboard LED.
**Notes:** The Lasterror property is set.

### 138.28.7 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of outputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.28.8 getOutputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of an output.
**Notes:** The Lasterror property is set.

### 138.28.9 getTagStatus as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the tag present status.
**Notes:**

This is whether or not a tag is being read by the reader.
The Lasterror property is set.

### 138.28.10 setAntennaOn(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state of the antenna.
**Notes:**

Note that the antenna must be enabled before tags will be read.
The Lasterror property is set.

### 138.28.11 setLEDOn(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state of the onboard LED.
**Notes:** The Lasterror property is set.

### 138.28.12 setOutputState(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state of an output.
**Notes:** The Lasterror property is set.

### 138.28.13 Events

### 138.28.14 OutputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called if an output changes.
**Notes:**

Index: Index of the Output firing the Event
Value: State of the Output.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.28.15 Tag(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An RFID Tag is read.
**Notes:**

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.28.16 TagLost(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A RFID Tag is removed from the field.
**Notes:**

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.29 Globals

### 138.29.1 LoadPhidgetFrameworkMBS(framework as folderitem) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the phidget framework.
**Notes:**

Returns true on success and false on failure.
Path a folderitem for the phidget.framework in /library/frameworks.
Deprecated in plugin version 10.4.

### 138.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean

MBS Phidgets Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Phidgets shared library.
**Notes:**

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 138.29.3 LoadPhidgetLibraryMBS(path as string) as boolean 22095

### 138.29.3 LoadPhidgetLibraryMBS(path as string) as boolean

MBS Phidgets Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Phidgets shared library.
**Notes:**

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.

### 138.29.4 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3

See also:

- 138.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean 22095

### 138.29.5 LoadPhidgetLinuxLibraryMBS(path as string) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the phidget library.
**Notes:**

Returns true on success and false on failure.
Pass in the path to a .so file.
Deprecated in plugin version 10.4.

### 138.29.6 LoadPhidgetWindowsDLLMBS(dllpath as string) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the windows dll.
**Notes:**

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.
Deprecated in plugin version 10.4.

## 138.30 class OldPhidgetServoMBS

### 138.30.1 class OldPhidgetServoMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget servo device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetRCServoMBS instead. **Notes:**

The PhidgetServo is a component that provides a high-level programmer interface to control a PhidgetServo device connected through a USB port.

With this component, the programmer can:

- Set the desired position for a servo motor, ranging from 0 to 180 degrees.

Subclass of the OldPhidgetMBS class.

### 138.30.2 Methods

### 138.30.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

### 138.30.4 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the engaged state of a motor. This is whether the motor is powered or not.
**Notes:**

The Lasterror property is set.

index: The motor index.

### 138.30.5 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of motors supported by this controller
**Notes:** The Lasterror property is set.

### 138.30.6 getPosition(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current position of a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.30.7 getPositionMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum position that a motor can be set to.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.30.8 getPositionMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum position that a motor can be set to.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.30.9 getServoType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the servo type of a motor.
**Notes:**

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

### 138.30.10 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.30.11 setPosition(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current position of a motor.
**Notes:**

The Lasterror property is set.

index: The motor index.
position: The motor position.

### 138.30.12 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the servo parameters of a motor.

**Notes:**

The Lasterror property is set.

| | |
|---|---|
| index | The motor index. |
| min_us | The minimum supported PCM in microseconds. |
| max_us | The maximum supported PCM in microseconds. |
| degrees | The degrees of rotation defined by the given PCM range. |

### 138.30.13 setServoType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the servo type of a motor.
**Notes:**

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

### 138.30.14 Events

### 138.30.15 MotorPositionChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called if the motor position is changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

# 138.31 class OldPhidgetSpatialEventDataMBS

## 138.31.1 class OldPhidgetSpatialEventDataMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for event data on a spatial device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetSpatialMBS instead. **Notes:** Timestamped position data returned by the PhidgetSpatialMBS.SpatialData event.

## 138.31.2 Properties

## 138.31.3 TimestampMicroseconds as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The microseconds part of the Hardware timestamp.
**Notes:** (Read and Write property)

## 138.31.4 TimestampSeconds as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The seconds part of the Hardware timestamp.
**Notes:** (Read and Write property)

## 138.31.5 acceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Acceleration data for up to 3 axes.
**Notes:**

Index from 0 to 2.
(Read and Write computed property)

### 138.31.6 angularRate(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Angular rate data (Gyroscope) for up to 3 axes.
**Notes:**

Index from 0 to 2.
(Read and Write computed property)

### 138.31.7 magneticField(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Magnetic field data (Compass) for up to 3 axes.
**Notes:**

Index from 0 to 2.
(Read and Write computed property)

## 138.32 class OldPhidgetSpatialMBS

### 138.32.1 class OldPhidgetSpatialMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class to control the spatial phidget device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetSpatialMBS instead. **Notes:**

Calls specific to the Phidget Spatial. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

### 138.32.2 Methods

### 138.32.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
Lasterror is set.

### 138.32.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current acceleration of an axis.
**Notes:**

index: The acceleration index.
Returns the acceleration in gs.
Lasterror is set.

### 138.32.5 getAccelerationAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of acceleration axes supplied by this board.

### 138.32.6 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum accleration supported by an axis.
**Notes:**

index: The acceleration index.
Lasterror is set.

### 138.32.7 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum acceleration supported by an axis.
**Notes:** index: The acceleration index.

### 138.32.8 getAngularRate(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current angular rate of an axis.
**Notes:**

Returns the angular rate in degrees/second.
index: The angular rate index.
Lasterror is set.

### 138.32.9 getAngularRateMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum angular rate supported by an axis.
**Notes:**

index: The angular rate index.
Lasterror is set.

### 138.32.10 getAngularRateMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum angular rate supported by an axis.
**Notes:**

index: The angular rate index.
Lasterror is set.

### 138.32.11 getCompassAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of compass axes supplied by this board.
**Notes:** Lasterror is set.

### 138.32.12 getDataRate as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the data rate in milliseconds.
**Notes:** Lasterror is set.

### 138.32.13 getDataRateMax as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum supported data rate in milliseconds.
**Notes:** Lasterror is set.

### 138.32.14 getDataRateMin as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum supported data rate in milliseconds.
**Notes:** Lasterror is set.

### 138.32.15 getGyroAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of gyroscope axes supplied by this board.
**Notes:** Lasterror is set.

### 138.32.16 getMagneticField(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current magnetic field stregth of an axis.
**Notes:**

index: The magnetic field index.
Returns the magnetic field strength in Gauss.
Lasterror is set.

### 138.32.17 getMagneticFieldMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum magnetic field stregth supported by an axis.
**Notes:**

index: The magnetic field index.
Lasterror is set.

### 138.32.18 getMagneticFieldMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum magnetic field stregth supported by an axis.
**Notes:**

index: The magnetic field index.
Lasterror is set.

### 138.32.19 resetCompassCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the compass correction factors.
**Notes:**

Magnetic field data will be presented directly as reported by the sensor.
Lasterror is set.

### 138.32.20 setCompassCorrectionParameters(magField as Double, offset0 as Double, offset1 as Double, offset2 as Double, gain0 as Double, gain1 as Double, gain2 as Double, T0 as Double, T1 as Double, T2 as Double, T3 as Double, T4 as Double, T5 as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the compass correction factors. This can be used to correcting any sensor errors, including hard and soft iron offsets and sensor error factors.
**Notes:**

Lasterror is set.

magField: Local magnetic field strength.
offset0: Axis 0 offset correction.
offset1: Axis 1 offset correction.
offset2: Axis 2 offset correction.
gain0: Axis 0 gain correction.
gain1: Axis 1 gain correction.
gain2: Axis 2 gain correction.
T0: Non-orthogonality correction factor 0.
T1: Non-orthogonality correction factor 1.

T2: Non-orthogonality correction factor 2.
T3: Non-orthogonality correction factor 3.
T4: Non-orthogonality correction factor 4.
T5: Non-orthogonality correction factor 5.

### 138.32.21 setDataRate(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the data rate in milliseconds.
**Notes:**

Lasterror is set.
Note that data at rates faster then 8ms will be delivered to events as an array of data.

### 138.32.22 zeroGyro

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Zeroes the gyroscope.
**Notes:**

This takes about two seconds and the gyro zxes will report 0 during the process.
This should only be called when the board is not moving.

Lasterror is set.

### 138.32.23 Events

### 138.32.24 SpatialData(data() as OldPhidgetSpatialEventDataMBS, dataCount as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when new data has been received.
**Notes:**

This is called at getDataRate, up to 8ms, for faster then 8ms data, multiple sets of data are supplied in a single event.
Lasterror is set.

# 138.33 class OldPhidgetStepperMBS

## 138.33.1 class OldPhidgetStepperMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A class for a phidget stepper device.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetStepperMBS instead. **Notes:**

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

## 138.33.2 Methods

## 138.33.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** On success the handle value is not zero.

## 138.33.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the acceleration value.
**Notes:** The Lasterror property is set.

## 138.33.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum acceleration supported by a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum acceleration supported by a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.7 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current value.
**Notes:** The Lasterror property is set.

### 138.33.8 getCurrentLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum position that a motor can go to.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.9 getCurrentMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum current limit.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.10 getCurrentMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum current limit.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.11 getCurrentPosition(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current position of a motor.
**Notes:** The Lasterror property is set.

### 138.33.12 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the engaged state of a motor. This is whether the motor is powered or not.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.13 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of digital inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.33.14 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of a digital input.
**Notes:** The Lasterror property is set.

### 138.33.15 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of motors supported by this controller.
**Notes:** The Lasterror property is set.

### 138.33.16 getPositionMax(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum velocity that can be set for a motor.
**Notes:** The Lasterror property is set.

### 138.33.17 getPositionMin(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum position that a motor can go to.
**Notes:** The Lasterror property is set.

### 138.33.18 getStopped(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the stopped state of a motor. This is true when the motor is not moving and there are no outstanding commands.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.19 getTargetPosition(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last set target position of a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.20 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current velocity of a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.21 getVelocityLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the last set velocity limit for a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.22 getVelocityMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum velocity that can be set for a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.23 getVelocityMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum velocity that can be set for a motor.
**Notes:** The Lasterror property is set.

### 138.33.24 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the acceleration.
**Notes:** The Lasterror property is set.

### 138.33.25 setCurrentLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current limit for a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.26 setCurrentPosition(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the current position of a motor.
**Notes:**

This will not move the motor, just update the position value.

index: The motor index.
value: The position.

The Lasterror property is set.

### 138.33.27 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
**Notes:**

index: The motor index.
value: The engaged state. Possible values are true and false.

The Lasterror property is set.

### 138.33.28 setTargetPosition(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the target position of a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.29 setVelocityLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the velocity limit for a motor.
**Notes:**

index: The motor index.

The Lasterror property is set.

### 138.33.30 Events

### 138.33.31 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The current value changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.33.32 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The input value changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.33.33 ServoChanged(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The servo value changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.33.34 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when the velocity changes.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

## 138.34 class OldPhidgetTemperatureSensorMBS

### 138.34.1 class OldPhidgetTemperatureSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget temperature sensor.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetTemperatureSensorMBS instead. **Notes:**

The PhidgetTemperatureSensor is a component that provides a high-level programmer interface to control a PhidgetTemperatureSensor device connected through a USB port.

With this component, the programmer can:

- Read the temperature of Thermocouple device.
- Read cold junction temperature.
- Get notification of temperature change.

Subclass of the OldPhidgetMBS class.

### 138.34.2 Methods

### 138.34.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** On success the handle value is not zero.

### 138.34.4 getAmbientTemperature as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the ambient (board) temperature.
**Notes:** The Lasterror property is set.

### 138.34.5 getAmbientTemperatureMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum temperature that the ambient onboard temperature sensor can measure.
**Notes:** The Lasterror property is set.

### 138.34.6 getAmbientTemperatureMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum temperature that the ambient onboard temperature sensor can measure.
**Notes:** The Lasterror property is set.

### 138.34.7 getPotential(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the potential value for the temperature sender with the given index.
**Notes:** The Lasterror property is set.

### 138.34.8 getPotentialMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum potential that a thermocouple input can measure.
**Notes:** The Lasterror property is set.

### 138.34.9 getPotentialMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum potential that a thermocouple input can measure.
**Notes:** The Lasterror property is set.

### 138.34.10 getTemperature(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current temperature in Celsius or Fahrenheit (depending on UseImperial property).
**Notes:**

Index = 0 returns the temperature of the cold junction.
Index = 1 returns the temperatrue of the thermocouple.

Note that this value defaults to -500. Applications that do not wish to see this value should use Change Handlers instead of polling the device for data.

The Lasterror property is set.

### 138.34.11 getTemperatureChangeTrigger(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
**Notes:** The Lasterror property is set.

### 138.34.12 getTemperatureInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of thermocouple inputs supported by this board.
**Notes:** The Lasterror property is set.

### 138.34.13 getTemperatureMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the maximum temperature that can be measured by a thermocouple input. This depends on the type of thermocouple attached.
**Notes:** The Lasterror property is set.

### 138.34.14 getTemperatureMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the minimum temperature that can be measured by a thermocouple input.
**Notes:**

This depends on the type of thermocouple attached.
The Lasterror property is set.

### 138.34.15 getThermocoupleType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the type of thermocouple set to be at a thermocouple input. By default this is K-Type.
**Notes:**

The Lasterror property is set.
type: The thermocouple type.

### 138.34.16 setTemperatureChangeTrigger(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
**Notes:** The Lasterror property is set.

### 138.34.17 setThermocoupleType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the type of thermocouple plugged into a thermocouple input. By default this is K-Type.
**Example:**

```
dim t as OldPhidgetTemperatureSensorMBS

const PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1 // K-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2 // J-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3 // E-Type thermocouple
```

```
const PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4 // T-Type thermocouple

t.setThermocoupleType 0, PHIDGET_TEMPERATURE_SENSOR_T_TYPE
```

**Notes:** The Lasterror property is set.

### 138.34.18 Events

### 138.34.19 TemperatureChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The temperatur changed.
**Notes:**

Index: Index of the Temperature Sensor firing the Event
Value: Value of the Temperature Sensor

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

### 138.34.20 Constants

### 138.34.21 PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the sensor type constants.
**Notes:** E-Type thermocouple

### 138.34.22 PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the sensor type constants.
**Notes:** J-Type thermocouple

### 138.34.23 PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the sensor type constants.
**Notes:** K-Type thermocouple

### 138.34.24 PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

**Function:** One of the sensor type constants.
**Notes:** T-Type thermocouple

## 138.35 class OldPhidgetTextLCDMBS

### 138.35.1 class OldPhidgetTextLCDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for the phidget text LCD.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetLCDMBS instead.
**Notes:**

The PhidgetTextLCD is a component that provides a high-level programmer interface to control a PhidgetTextLCD device connected through a USB port.

With this component, the programmer can:

- Display text on a PhidgetTextLCD module.

Subclass of the OldPhidgetMBS class.

### 138.35.2 Methods

### 138.35.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
Lasterror is set.

### 138.35.4 getBacklight as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the state of the backlight.
**Notes:** The Lasterror property is set.

### 138.35.5 getBrightness as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the brightness of the backlight. Not supported on all TextLCDs
**Notes:**

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

### 138.35.6 getColumnCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of columns per supported by this display.
**Notes:** The Lasterror property is set.

### 138.35.7 getContrast as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the contrast value from 0-255.
**Notes:**

Note that this defaults to 0.
The Lasterror property is set.

### 138.35.8 getCursorBlink as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines if the cursor's blinking is on or off.
**Notes:**

Note that this defaults to False.
The Lasterror property is set.

### 138.35.9 getCursorOn as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines if the cursor is on or off.
**Notes:**

Note that this defaults to False.
The Lasterror property is set.

### 138.35.10 getRowCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of rows supported by this display.
**Notes:** The Lasterror property is set.

### 138.35.11 getScreen as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the active screen.
**Notes:** Lasterror is set.

### 138.35.12 getScreenCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of Display supported by this TextLCD.
**Notes:** Lasterror is set.

### 138.35.13 getScreenSize as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the screen size.
**Notes:**

See PHIDGET_TEXTLCD_SCREEN_* constants.
Lasterror is set.

### 138.35.14 initialize

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes the active screen.
**Notes:**

Only supported on the TextLCD adapter.
This should be called if a screen is attached after power up, or to clear the screen after setting the size.
Lasterror is set.

### 138.35.15 setBacklight(backlightState as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state of the backlight.
**Notes:** The Lasterror property is set.

### 138.35.16 setBrightness(Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the brightness of the backlight. Not supported on all TextLCDs
**Notes:**

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

### 138.35.17 setContrast(Contrast as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the contrast from 0-255.
**Notes:** The Lasterror property is set.

### 138.35.18 setCursorBlink(CursorBlink as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the cursor's blinking on or off.
**Notes:** The Lasterror property is set.

### 138.35.19 setCursorOn(CursorOn as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the cursor on or off.
**Notes:**

This cursor is displayed at the last location that was changed.

The Lasterror property is set.

### 138.35.20 setCustomCharacter(index as Integer, val1 as Integer, val2 as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets a custom character.
**Notes:**

With existing hardware, there is space for 8 custom characters : Index can range from 8 to 15.
Each character is described by a set of integers.
For more information, have a look at the TextLCD example in the examples.zip for Phidget21.

The Lasterror property is set.

### 138.35.21 setDisplayCharacter(index as Integer, column as Integer, character as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets a single character on the display.
**Notes:**

index: The row index.
column: The column index.
character: The character to display.

The Lasterror property is set.

### 138.35.22 setDisplayString(row as Integer, displayString as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the text to display on a particular row of the display.
**Notes:**

Row: Row to set on display
DisplayString: String to set on display. The text will be clipped at the right edge of the display.
The Lasterror property is set.

### 138.35.23 setScreen(screenIndex as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the active screen.
**Notes:**

This is the screen that all subsequent API calls will apply to.
Lasterror is set.

### 138.35.24 setScreenSize(screenSize as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the active screen size. Only supported on the TextLCD Adapter.
**Notes:** Lasterror is set.

### 138.35.25 Constants

### 138.35.26 PHIDGET_TEXTLCD_SCREEN_1x16 = 4

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 1 row, 16 column screen

### 138.35.27 PHIDGET_TEXTLCD_SCREEN_1x40 = 10

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 1 row, 40 column screen

### 138.35.28 PHIDGET_TEXTLCD_SCREEN_1x8 = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 1 row, 8 column screen

### 138.35.29 PHIDGET_TEXTLCD_SCREEN_2x16 = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 2 row, 16 column screen

### 138.35.30 PHIDGET_TEXTLCD_SCREEN_2x20 = 7

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 2 row, 20 column screen

### 138.35.31 PHIDGET_TEXTLCD_SCREEN_2x24 = 9

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 2 row, 24 column screen

### 138.35.32 PHIDGET_TEXTLCD_SCREEN_2x40 = 11

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 2 row, 40 column screen

### 138.35.33 PHIDGET_TEXTLCD_SCREEN_2x8 = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 2 row, 8 column screen

### 138.35.34 PHIDGET_TEXTLCD_SCREEN_4x16 = 6

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 4 row, 16 column screen

### 138.35.35 PHIDGET_TEXTLCD_SCREEN_4x20 = 8

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 4 row, 20 column screen

### 138.35.36 PHIDGET_TEXTLCD_SCREEN_4x40 = 12

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** 4 row, 40 column screen (special case, requires both screen connections)

### 138.35.37 PHIDGET_TEXTLCD_SCREEN_NONE = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** no screen attached

### 138.35.38 PHIDGET_TEXTLCD_SCREEN_UNKNOWN = 13

MBS Phidgets Plugin, Plugin Version: 11.1.

**Function:** One of the screen size constants for the Phidget TextLCD Adapter.
**Notes:** Unknown

# 138.36 class OldPhidgetTextLEDMBS

## 138.36.1 class OldPhidgetTextLEDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget text LED.
**Deprecated:** This item is deprecated and should no longer be used. You can use PhidgetLCDMBS instead.
**Notes:**

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

## 138.36.2 Methods

## 138.36.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:** On success the handle value is not zero.

## 138.36.4 getBrightness as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current brightness.
**Notes:** The Lasterror property is set.

## 138.36.5 getColumnCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of columns per supported by this display.
**Notes:** The Lasterror property is set.

### 138.36.6 getRowCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of rows supported by this display.
**Notes:** The Lasterror property is set.

### 138.36.7 setBrightness(Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the brightness.
**Notes:** The Lasterror property is set.

### 138.36.8 setDisplayString(row as Integer, displayString as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the display string for the given row.
**Notes:** The Lasterror property is set.

# 138.37 class OldPhidgetWeightSensorMBS

## 138.37.1 class OldPhidgetWeightSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for a phidget weight sensor.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

## 138.37.2 Methods

## 138.37.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Notes:**

On success the handle value is not zero.
The Lasterror property is set.

## 138.37.4 getWeight as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the current weight.
**Notes:** The Lasterror property is set.

## 138.37.5 getWeightChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.

**Notes:** The Lasterror property is set.

### 138.37.6 setWeightChangeTrigger(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.
**Notes:** The Lasterror property is set.

### 138.37.7 Events

### 138.37.8 WeightChanged(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The weight changed.
**Notes:**

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

# 138.38 class PhidgetAccelerometerMBS

## 138.38.1 class PhidgetAccelerometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Accelerometer class is used to gather acceleration data from Phidget accelerometer boards.
**Notes:**

Phidget accelerometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of acceleration can be recorded.

If the Phidget you're using also has a gyroscope and a magnetometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

## 138.38.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.38.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.38.4 Methods

## 138.38.5 Acceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent acceleration value that the channel has reported.

## 138.38.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.38.7 MaxAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the AccelerationChange event will report.

### 138.38.8 MinAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the AccelerationChange event will report.

### 138.38.9 Properties

### 138.38.10 AccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a AccelerationChange event until the acceleration value has changed by the amount specified by the AccelerationChangeTrigger.
**Notes:**

Setting the AccelerationChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.38.11 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of axes the channel can measure acceleration on.
**Notes:** (Read only property)

### 138.38.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another AccelerationChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between AccelerationChange events can also affected by the AccelerationChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.38.13 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether self-heating temperature stabilization is enabled.
**Notes:**

Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

### 138.38.14 MaxAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that AccelerationChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.38.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.38.16 MinAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that AccelerationChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.38.17 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.38.18 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent timestamp value that the channel has reported.
**Notes:**

This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

### 138.38.19 Events

### 138.38.20 AccelerationChanged(acceleration() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent acceleration values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a AccelerationChangeTrigger has been set to a non-zero value, the AccelerationChange event will not occur until the acceleration has changed by at least the AccelerationChangeTrigger value.

acceleration: The acceleration values.
timestamp: The timestamp value.

# 138.39 class PhidgetBLDCMotorMBS

## 138.39.1 class PhidgetBLDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The BLDC Motor class controls the power applied to attached brushless DC motors to affect its speed and direction.
**Notes:**

It can also contain various other control and monitoring functions that aid in the control of brushless DC motors.
Subclass of the PhidgetMBS class.

## 138.39.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.39.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.39.4 Methods

## 138.39.5 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds an offset (positive or negative) to the current position.
**Notes:** This can be especially useful for zeroing position.

## 138.39.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.39.7 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For BLDC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.39.8 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.39.9 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets target velocity asynchronously.
**Notes:**

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later.

### 138.39.10 Properties

### 138.39.11 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The rate at which the controller can change the motor's Velocity.
**Notes:**

The acceleration is bounded by MinAccleration and MaxAcceleration.
Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

### 138.39.12 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent braking strength value that the controller has reported.
**Notes:** (Read only property)

### 138.39.13 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the controller will fire another update event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)
(Read and Write property)

### 138.39.14 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Acceleration can be set to.
**Notes:**

Unit: duty cycle per second (duty cycle/s)
(Read only property)

### 138.39.15 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetBrakingStrength can be set to.
**Notes:** (Read only property)

### 138.39.16 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.39.17 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.39.18 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The upper bound of Position.
**Notes:** (Read only property)

### 138.39.19 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The upper bound of StallVelocity.
**Notes:** (Read only property)

### 138.39.20 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetVelocity can be set to.
**Notes:**

TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
(Read only property)

### 138.39.21 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Acceleration can be set to.
**Notes:**

Unit: duty cycle per second (duty cycle/s)
(Read only property)

### 138.39.22 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetBrakingStrength can be set to.
**Notes:** (Read only property)

### 138.39.23 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.39.24 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.39.25 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The lower bound of Position.
**Notes:** (Read only property)

### 138.39.26 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The lower bound of StallVelocity.
**Notes:** (Read only property)

### 138.39.27 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetVelocity can be set to.
**Notes:**

Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
(Read only property)

### 138.39.28 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position value that the controller has reported.
**Notes:**

Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

(Read only property)

### 138.39.29 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Change the units of your parameters so that your application is more intuitive.
**Notes:**

Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.
(Read and Write property)

### 138.39.30 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The stall velocity.
**Notes:**

Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.

- Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
- StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately reduce the Velocity (i.e. average voltage) to 0 and an error will be reported to your program.

- A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
- A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger .

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

### 138.39.31 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The braking value.
**Notes:**

When a motor is not being actively driven forward or reverse, you can choose if the motor will be allowed to freely turn, or will resist being turned.
A low TargetBrakingStrength value corresponds to free wheeling, this will have the following effects:
The motor will continue to rotate after the controller is no longer driving the motor (i.e. Velocity is 0), due to inertia.
The motor shaft will provide little resistance to being turned when it is stopped.
A higher TargetBrakingStrength value will resist being turned, this will have the following effects:
The motor will more stop more quickly if it is in motion and braking has been requested. It will fight against the rotation of the shaft.
Braking mode is enabled by setting the Velocity to MinVelocity

(Read and Write property)

### 138.39.32 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The average voltage across the motor is based on the TargetVelocity value.
**Notes:**

At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

### 138.39.33 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent velocity value that the controller has reported.
**Notes:** (Read only property)

### 138.39.34 Events

### 138.39.35 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent braking strength value will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

Regardless of the DataInterval, this event will occur only when the braking strength value has changed from the previous value reported.
Braking mode is enabled by setting the Velocity to MinVelocity.

### 138.39.36 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
**Notes:**

Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

### 138.39.37 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Event called when setTargetVelocityAsync finished.

### 138.39.38 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent velocity value will be reported in this event, which occurs when the DataInterval has elapsed.

**Notes:** This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date access to all properties.

# 138.40 class PhidgetCapacitiveTouchMBS

## 138.40.1 class PhidgetCapacitiveTouchMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Capacitive Touch class gathers input data from capacitive buttons and sliders on Phidget boards.
**Notes:** Subclass of the PhidgetMBS class.

## 138.40.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.40.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.40.4 Methods

## 138.40.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.40.6 Properties

## 138.40.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another Touch event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between Touch events can also affected by the TouchValueChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.40.8 IsTouched as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent touch state that the channel has reported.
**Notes:**

This will be false or true.
false is not touched
true is touched
(Read only property)

### 138.40.9 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.40.10 MaxSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Sensitivity can be set to.
**Notes:** (Read only property)

### 138.40.11 MaxTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the Touch event will report.
**Notes:** (Read only property)

### 138.40.12 MaxTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TouchValueChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.40.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.40.14 MinSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Sensitivity can be set to.
**Notes:** (Read only property)

### 138.40.15 MinTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the Touch event will report.
**Notes:** (Read only property)

### 138.40.16 MinTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TouchValueChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.40.17 Sensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines the sensitivity of all capacitive regions on the device.
**Notes:**

Higher values result in greater touch sensitivity.
The sensitivity value is bounded by MinSensitivity and MaxSensitivity.
(Read and Write property)

### 138.40.18 TouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent touch value that the channel has reported.
**Notes:**

This will be 0 or 1 for button-type inputs, or a ratio between 0-1 for axis-type inputs.
This value is bounded by MinTouchValue and MaxTouchValue.
The value is not reset when the touch ends.
(Read only property)

### 138.40.19 TouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a Touch event until the touch value has changed by the amount specified by the TouchValueChangeTrigger.
**Notes:**

Setting the TouchValueChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.40.20 Events

### 138.40.21 Touched(touchValue as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent touch value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a TouchValueChangeTrigger has been set to a non-zero value, the Touch event will not occur until the touch value has changed by at least the TouchValueChangeTrigger value.

touchValue:Value of the touch input axis.

### 138.40.22 TouchEnded

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The channel will report a TouchEnd event to signify that it is no longer detecting a touch.

## 138.41 class PhidgetCurrentInputMBS

### 138.41.1 class PhidgetCurrentInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Current Input class is used to measure current flowing through the Phidget from outside sources..
**Notes:**

This class may be used on a simple current sensor, or sometimes on a more complex Phidget that measures the amount of current flowing through an attached device, such as a motor controller, for diagnostic or control purposes.
Subclass of the PhidgetMBS class.

**Function:** The constructor.

### 138.41.6 Properties

### 138.41.7 Current as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent current value that the channel has reported.
**Notes:**

This value will always be between MinCurrent and MaxCurrent.
In amperes.
(Read only property)

### 138.41.8 CurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a CurrentChange event until the current value has changed by the amount specified by the CurrentChangeTrigger.
**Notes:**

Setting the CurrentChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
in amperes.
(Read and Write property)

### 138.41.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another CurrentChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.41.10 MaxCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the CurrentChange event will report.
**Notes:** (Read only property)

### 138.41.11 MaxCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that CurrentChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.41.12 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.41.13 MinCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the CurrentChange event will report.
**Notes:** (Read only property)

### 138.41.14 MinCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that CurrentChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.41.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.41.16 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose the power supply voltage.
**Notes:**

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.
(Read and Write property)

### 138.41.17 Events

### 138.41.18 CurrentChanged(current as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent current value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** If a CurrentChangeTrigger has been set to a non-zero value, the CurrentChange event will not occur until the current value has changed by at least the CurrentChangeTrigger value.

## 138.42 class PhidgetDCMotorMBS

### 138.42.1 class PhidgetDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DC Motor class controls the power applied to attached DC motors to affect its speed and direction.
**Notes:**

It can also contain various other control and monitoring functions that aid in the control of DC motors.
Subclass of the PhidgetMBS class.

### 138.42.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.42.3 Blog Entries

### 138.42.4 Methods

### 138.42.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.42.6 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For DC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.42.7 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.42.8 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets target velocity asynchronously.
**Notes:**

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.

The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later when done.

### 138.42.9 Properties

### 138.42.10 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The rate at which the controller can change the motor's Velocity.
**Notes:**

The acceleration is bounded by MinAccleration and MaxAcceleration.

Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

### 138.42.11 BackEMF as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent BackEMF value that the controller has reported.
**Notes:** (Read only property)

### 138.42.12 BackEMFSensingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When BackEMFSensingState is enabled, the controller will measure and report the BackEMF.
**Notes:**

The motor will coast (freewheel) 5% of the time while the back EMF is being measured (800ŒºÊs every 16ms). Therefore, at a DutyCycle of 100% , the motor will only be driven for 95% of the time.
(Read and Write property)

### 138.42.13 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent braking strength value that the controller has reported.
**Notes:**

See TargetBrakingStrength for details.
(Read only property)

### 138.42.14 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The controller will limit the current through the motor to the CurrentLimit value.
**Notes:**

Unit: amperes (A)
(Read and Write property)

### 138.42.15 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The current regulator gain.
**Notes:**

Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions.

As a rule of thumb, we recommend setting this value as follows:
(Read and Write property)

### 138.42.16 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the controller will fire another VelocityUpdate/BrakingStrengthChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
Note: BrakingStrengthChange events will only fire if a change in braking has occurred.

Unit: milliseconds (ms)
(Read and Write property)

### 138.42.17 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Acceleration can be set to.
**Notes:**

Unit: duty cycle per second (duty cycle/s)
(Read only property)

### 138.42.18 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetBrakingStrength can be set to.
**Notes:**

See TargetBrakingStrength for details.
(Read only property)

### 138.42.19 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that CurrentLimit can be set to.
**Notes:**

Unit: amperes (A)
(Read only property)

### 138.42.20 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that CurrentRegulatorGain can be set to.
**Notes:** (Read only property)

### 138.42.21 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.42.22 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.42.23 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetVelocity can be set to.
**Notes:**

TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of

a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

### 138.42.24 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Acceleration can be set to.
**Notes:**

Unit: duty cycle per second (duty cycle/s)
(Read only property)

### 138.42.25 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetBrakingStrength can be set to.
**Notes:**

See TargetBrakingStrength for details.
(Read only property)

### 138.42.26 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that CurrentLimit can be set to.
**Notes:**

Unit: amperes (A)
(Read only property)

### 138.42.27 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that CurrentRegulatorGain can be set to.
**Notes:** (Read only property)

### 138.42.28 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.42.29 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.42.30 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetVelocity can be set to
**Notes:**

Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

### 138.42.31 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This setting allows you to choose how hard the motor will resist being turned when it is not being driven forward or reverse (Velocity = 0).
**Notes:**

The TargetBrakingStrength sets the relative amount of electrical braking to be applied to the DC motor, with MinBrakingStrength corresponding to no braking (free-wheeling), and MaxBrakingStrength indicating full braking.

A low TargetBrakingStrength value corresponds to free-wheeling. This means:
The motor will continue to rotate after the controller is no longer driving the motor (Velocity = 0), due to its momentum.
The motor shaft will provide little resistance to being turned when it is stopped.
As TargetBrakingStrength increases, this will engage electrical braking of the DC motor. This means:
The motor will stop more quickly if it is in motion when braking is requested.
The motor shaft will resist rotation by oustide forces.
Braking will be added gradually, according to the Acceleration setting, once the motor controller's Velocity reaches 0.0
Braking will be immediately stopped when a new (non-zero) TargetVelocity is set, and the motor will accelerate to the requested velocity.
Braking mode is enabled by setting the Velocity to 0.0
(Read and Write property)

### 138.42.32 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The target velocity.
**Notes:**

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1√óMaxVelocity and MaxVelocity, where a sign change (¬±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

### 138.42.33 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent velocity value that the controller has reported.
**Notes:**

Unit: duty cycle (duty cycle)
(Read only property)

### 138.42.34 Events

### 138.42.35 BackEMFChanged(backEMF as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent back emf value will be reported in this event.
**Notes:** backEMF: The back EMF voltage from the motor

### 138.42.36 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the motor braking strength changes.
**Notes:**

brakingStrength:The most recent braking strength value will be reported in this event.
This event will occur only when the value of braking strength has changed
See TargetBrakingStrength for details about what this number represents.

### 138.42.37 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setTargetVelocityAsync completed.

### 138.42.38 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs at a rate defined by the DataInterval.
**Notes:** velocity:The most recent velocity value will be reported in this event.

# 138.43 class PhidgetDictionaryMBS

## 138.43.1 class PhidgetDictionaryMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Dictionaries are useful for passing information between multiple programs using Phidgets. #
**Notes:**

A common example would be to have one program controlling your application that receives commands sent via a Phidget dictionary from a web interface, as outlined in many of our articles.

Keys can be thought of as being similar to variable names, with their values as their associated value. Phidget dictionaries contain groups of related key-value pairs, and are stored on a central Phigdet Network Server. Dictionaries, and the key-value pairs within may be accessed from programs that have access to the Phigdet Network Server.

The Dictionary API supports connecting to a dictionary on the server, managing key-value pairs, and monitoring changes made to the dictionary.

More information on Phidget Dictionaries can be found on the Phidget Dictionary support page.
Subclass of the PhidgetMBS class.

## 138.43.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.43.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.43.4 Methods

## 138.43.5 add(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds a new key value pair to the dictionary.
**Notes:** It is an error if the key already exits.

### 138.43.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** creates an instance of a Phidget channel.

### 138.43.7 Keys as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries all keys in a dictionary.
**Notes:**

The list might not contain all of the keys in the dictionary if it is modified while you query keys.
Keys added during the scan may be missed, and keys deleted during the scan may be included.

### 138.43.8 remove(key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Removes the key from the dictionary.

### 138.43.9 removeAll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Removes every key from the dictionary.

### 138.43.10 update(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Updates a key value pair in the dictionary.
**Notes:** It is an error if the key does not exist.

### 138.43.11 validDictionaryKey(key as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether this is a valid key to use.
**Notes:** Returns true on success or false on failure.

### 138.43.12 Properties

### 138.43.13 Value(key as String) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set or get the value associated with the given key from the dictionary.
**Notes:** (Read and Write computed property)

### 138.43.14 Events

### 138.43.15 Added(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a new key value pair is added to the dictionary.
**Notes:**

key: The key that was added
value: The value of the new key

### 138.43.16 Removed(Key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a key is removed from the dictionary.

### 138.43.17 Updated(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a change is made to a key value pair in the dictionary.

# 138.44 class PhidgetDigitalInputMBS

## 138.44.1 class PhidgetDigitalInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Digital Input class is used to monitor the state of Phidget digital inputs.
**Notes:**

Use digital inputs to monitor the state of buttons, switches, or switch-to-ground sensors.
Subclass of the PhidgetMBS class.

## 138.44.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.44.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.44.4 Methods

## 138.44.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.44.6 Properties

## 138.44.7 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The input polarity mode for your channel.
**Notes:**

See your device's User Guide for more information about what value to chooose for the InputMode.
(Read and Write property)

### 138.44.8 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose the power supply voltage.
**Notes:**

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.
(Read and Write property)

### 138.44.9 State as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent state value that the channel has reported.
**Notes:** (Read only property)

### 138.44.10 Events

### 138.44.11 StateChanged(state as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event will occur when the state of the digital input has changed.
**Notes:** The value will either be 0 or 1 (true or false).

### 138.44.12 Constants

### 138.44.13 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing NPN digital sensors.

### 138.44.14 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing PNP digital sensors.

### 138.44.15 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 12 volts.

### 138.44.16 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 24 volts.

### 138.44.17 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** Switch the sensor power supply off.

## 138.45 class PhidgetDigitalOutputMBS

### 138.45.1 class PhidgetDigitalOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Digital Output class is used to control digital logic outputs and LED outputs on Phidgets boards.
**Notes:** Subclass of the PhidgetMBS class.

### 138.45.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.45.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.45.4 Methods

### 138.45.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.45.6 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe

timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Digital Output channels, this will set the output state to FALSE. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.45.7 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.45.8 setDutyCycleAsync(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the duty cycle asynchronously.
**Notes:**

The DutyCycle represents the fraction of time the output is on (high).
This will override the State setting on the channel.
A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
This is equivalent to setting a State of TRUE and FALSE respectively.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.
If the DigitalOutput channel you are using does not support PWM, then this value may only be set to 1.0

or 0.0
You can check if your device supports PWM by checking the ChannelSubclass property, viewable by selecting Phidget API above. Your DigitalOutput channel supports PWM if it is any subclass other than NONE.

calls setDutyCycleAsyncCompleted later.

### 138.45.9 setLEDCurrentLimitAsync(LEDCurrentLimit as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
**Notes:**

Reference the data sheet of the LED you are using before setting this value.

Calls setLEDCurrentLimitAsyncCompleted event later.

### 138.45.10 setStateAsync(state as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the state asynchronously.
**Notes:**

The State will dictate whether the output is constantly high (true) or low (false).
This will override any DutyCycle that may have been set on the channel.
Setting the State to true is the same as setting DutyCycle to 1.0, and setting the State to false is the same as setting a DutyCycle of 0.0.

Calls setStateAsyncCompleted event later.

### 138.45.11 Properties

### 138.45.12 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DutyCycle represents the fraction of time the output is on (high).
**Notes:**

A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.

Unit: duty cycle (duty cycle)
(Read and Write property)

### 138.45.13 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Frequency parameter sets the PWM frequency for all frequency-settable PWM outputs on the board.
**Notes:**

in hertz (Hz)
(Read and Write property)

### 138.45.14 LEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
**Notes:**

Reference the data sheet of the LED you are using before setting this value.
n amperes.
(Read and Write property)

### 138.45.15 LEDForwardVoltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
**Notes:**

Reference the data sheet of the LED you are using before setting this value.
(Read and Write property)

### 138.45.16 MaxDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DutyCycle can be set to.
**Notes:**

Unit: duty cycle (duty cycle)
(Read only property)

### 138.45.17 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.45.18 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DutyCycle can be set to.
**Notes:**

in hertz (Hz)
(Read only property)

### 138.45.19 MaxLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that LEDCurrentLimit can be set to.
**Notes:**

in amperes.
(Read only property)

### 138.45.20 MinDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DutyCycle can be set to.
**Notes:**

Unit: duty cycle (duty cycle)
(Read only property)

### 138.45.21 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.45.22 MinFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DutyCycle can be set to.
**Notes:**

in hertz (Hz)
(Read only property)

### 138.45.23 MinLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that LEDCurrentLimit can be set to.
**Notes:**

in amperes.
(Read only property)

### 138.45.24 State as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The State will indicate whether the output is high (true) or low (false).
**Notes:**

If a DutyCycle has been set, the state will return as true if the DutyCycle is above 0.5, or false otherwise.
(Read and Write property)

### 138.45.25 Events

### 138.45.26 setDutyCycleAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setDutyCycleAsync is done.

### 138.45.27 setLEDCurrentLimitAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setLEDCurrentLimitAsync completed.

### 138.45.28 setStateAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setStateAsync completed.

### 138.45.29 Constants

### 138.45.30 kLEDForwardVoltage_1_7V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 1.7V

### 138.45.31 kLEDForwardVoltage_2_75V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 2.75V

### 138.45.32 kLEDForwardVoltage_3_2V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 3.2V

### 138.45.33 kLEDForwardVoltage_3_9V = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 3.9V

### 138.45.34 kLEDForwardVoltage_4_0V = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 4.0V

### 138.45.35 kLEDForwardVoltage_4_8V = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 4.8V

### 138.45.36 kLEDForwardVoltage_5_0V = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 5.0V

### 138.45.37 kLEDForwardVoltage_5_6V = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the forward voltage setting of the LED.
**Notes:** 5.6V

# 138.46 class PhidgetDistanceSensorMBS

## 138.46.1 class PhidgetDistanceSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Distance Sensor class gathers data from the distance sensor on a Phidget board.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

## 138.46.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.46.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.46.4 Methods

## 138.46.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.46.6 SonarReflectionsAmplitudes as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent reflection values that the channel has reported.
**Notes:** The amplitude values are relative amplitudes of the reflections that are normalized to an arbitrary scale.

### 138.46.7 SonarReflectionsDistances as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent reflection values that the channel has reported.
**Notes:**

The distance values will always be between MinDistance and MaxDistance.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7

### 138.46.8 Properties

### 138.46.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.46.10 Distance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent distance value that the channel has reported.
**Notes:**

This value will always be between MinDistance and MaxDistance.
in milliseconds.
(Read only property)

### 138.46.11 DistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue an event until the distance value has changed by the amount specified by the DistanceChangeTrigger.
**Notes:**

Setting the DistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.

in milliseconds.
(Read and Write property)

### 138.46.12 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.46.13 MaxDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum distance that a event will report.
**Notes:**

in milliseconds.
(Read only property)

### 138.46.14 MaxDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DistanceChangeTrigger can be set to.
**Notes:**

in milliseconds.
(Read only property)

### 138.46.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.46.16 MinDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum distance that a event will report.
**Notes:**

in milliseconds.
(Read only property)

### 138.46.17 MinDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DistanceChangeTrigger can be set to.
**Notes:**

in milliseconds.
(Read only property)

### 138.46.18 SonarQuietMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When set to true, the device will operate more quietly.
**Notes:**

The measurable range is reduced when operating in quiet mode.
(Read and Write property)

### 138.46.19 Events

### 138.46.20 DistanceChanged(distance as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent distance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** If a DistanceChangeTrigger has been set to a non-zero value, the DistanceChange event will not occur until the distance has changed by at least the DistanceChangeTrigger value.

### 138.46.21 SonarReflectionsUpdated(distances() as UInt32, amplitudes() as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent reflections the channel has detected will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a DistanceChangeTrigger has been set to a non-zero value, the SonarReflectionsUpdate event will not occur until the distance has changed by at least the DistanceChangeTrigger value.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7.
If you are only interested in the closest reflection, you can simply use the DistanceChange event.
The values reported as amplitudes are relative amplitudes of the reflections that are normalized to an arbitrary scale.

distances: The reflection values
amplitudes: The amplitude values
count: The number of reflections detected

## 138.47 class PhidgetEncoderMBS

### 138.47.1 class PhidgetEncoderMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Encoder class is used to read position data from quadrature encoders in order to track linear or rotary movement.
**Notes:**

If the device supports an index pin as a reference point, you can also access it through this class.
Subclass of the PhidgetMBS class.

### 138.47.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.47.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.47.4 Methods

### 138.47.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.47.6 Properties

### 138.47.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another PositionChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PositionChange events can also affected by the PositionChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.47.8 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The enabled state of the encoder.
**Notes:** (Read and Write property)

### 138.47.9 IndexPosition as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position of the index channel calculated by the Phidgets library.
**Notes:**

The index channel will usually pulse once per rotation.
Setting the encoder position will move the index position the same amount so their relative position stays the same.
Index position is tracked locally as the last position at which the index was triggered. Setting position will only affect the local copy of the index position value. This means that index positions seen by multiple network applications may not agree.
(Read only property)

### 138.47.10 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The encoder interface mode. Match the mode to the type of encoder you have attached.
**Notes:**

It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

### 138.47.11 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.47.12 MaxPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that PositionChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.47.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.47.14 MinPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that PositionChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.47.15 Position as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position value calculated by the Phidgets library.
**Notes:**

Position counts quadrature edges within a quadrature cycle. This means there are four counts per full quadrature cycle.
Position is tracked locally as the total position change from the time the channel is opened. Setting position will only affect the local copy of the position value. This means that positions seen by multiple network applications may not agree.
(Read and Write property)

### 138.47.16 PositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a PositionChange event until the position value has changed by the amount specified by the PositionChangeTrigger.
**Notes:**

Setting the PositionChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.47.17 Events

### 138.47.18 PositionChanged(positionChange as Integer, timeChange as double, indexTriggered as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a PositionChangeTrigger has been set to a non-zero value, the PositionChange event will not occur until the position has changed by at least the PositionChangeTrigger value.

positionChange: The amount the position changed since the last change event
timeChange: The time elapsed since the last change event in milliseconds
indexTriggered: True if the index was passed since the last change event

### 138.47.19 Constants

### 138.47.20 kEncoderIOModeCollector10K = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface mode constants.
**Notes:** Line Driver 10K, 10kŒ© pull-down resistors will be applied to the input lines.

### 138.47.21 kEncoderIOModeCollector2K2 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface mode constants.
**Notes:** Open Collector 2.2K, 2.2kŒ© pull-up resistors will be applied to the input lines.

### 138.47.22 kEncoderIOModeLineDriver10K = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface mode constants.
**Notes:** Open Collector 10K, 10kŒ© pull-up resistors will be applied to the input lines.

### 138.47.23 kEncoderIOModeLineDriver2K2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface mode constants.
**Notes:** Line Driver 2.2K, 2.2kŒ© pull-down resistors will be applied to the input lines.

### 138.47.24 kEncoderIOModePushPull = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface mode constants.
**Notes:** Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

# 138.48 class PhidgetErrorExceptionMBS

## 138.48.1 class PhidgetErrorExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The error exception.
**Notes:**

Whenever a Phidget function returns an error, we raise an exception and put the error number into the exceptions.
Subclass of the RuntimeException class.

## 138.48.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.48.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.49 class PhidgetFrequencyCounterMBS

### 138.49.1 class PhidgetFrequencyCounterMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Frequency Counter class is used to measure the frequency of pulses in an electronic signal, or to count the pulses in the signal.
**Notes:**

Such signals can come from other electronics, or certain sensors that have a pulse output.
Subclass of the PhidgetMBS class.

### 138.49.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

### 138.49.4 Methods

### 138.49.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.49.6 reset

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the Count and TimeElapsed.
**Notes:** For best results, reset should be called when the channel is disabled.

### 138.49.7 Properties

### 138.49.8 Count as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent count value the channel has reported.
**Notes:**

The count represents the total number of pulses since the the channel was opened, or last reset.
(Read only property)

### 138.49.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another CountChange/FrequencyChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

### 138.49.10 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables or disables the channel.
**Notes:**

When a channel is disabled, it will not longer register counts, therefore the TimeElapsed and Count will not be updated until the channel is re-enabled.
(Read and Write property)

### 138.49.11 FilterType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines the signal type that the channel responds to.
**Notes:**

The filter type is chosen based on the type of input signal. See the PhidgetFrequencyCounter_FilterType entry under Enumerations for more information.
(Read and Write property)

### 138.49.12 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent frequency value that the channel has reported.
**Notes:**

This value will always be between 0 Hz and MaxFrequency.
in Hertz.
(Read only property)

### 138.49.13 FrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The frequency at which zero hertz is assumed.
**Notes:**

This means any frequency at or below the FrequencyCutoff value will be reported as 0 Hz.
This property is stored locally, so other users who have this Phidget open over a network connection won't see the effects of your selected cutoff.
(Read and Write property)

### 138.49.14 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The input polarity mode for your channel.
**Notes:**

See your device's User Guide for more information about what value to chooose for the InputMode
(Read and Write property)

### 138.49.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.49.16 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the FrequencyChange event will report.
**Notes:** (Read only property)

### 138.49.17 MaxFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that FrequencyCutoff can be set to.
**Notes:** (Read only property)

### 138.49.18 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.49.19 MinFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that FrequencyCutoff can be set to.
**Notes:** (Read only property)

### 138.49.20 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose the power supply voltage.
**Notes:**

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.
(Read and Write property)

### 138.49.21 TimeElapsed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The amount of time the frequency counter has been enabled for.
**Notes:**

This property complements Count, the total number of pulses detected since the channel was opened, or last reset.
(Read only property)

### 138.49.22 Events

### 138.49.23 CountChanged(counts as UInt64, timeChange as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

counts: The pulse count of the signal
timeChange: The change in elapsed time since the last change

### 138.49.24 FrequencyChanged(frequency as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent frequency value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** frequency: The calculated frequency of the signal.

### 138.49.25 Constants

### 138.49.26 kFilterTypeLogicLevel = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the filter types.
**Notes:** Logic level

### 138.49.27 kFilterTypeZeroCrossing = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the filter types.
**Notes:** Zero crossing

### 138.49.28 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing NPN digital sensors.

### 138.49.29 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing PNP digital sensors.

### 138.49.30 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 12 volts

### 138.49.31 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 24 volts

### 138.49.32 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** Switch the sensor power supply off.

# 138.50 class PhidgetGPGGAMBS

## 138.50.1 class PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA GGA Sentence.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 138.50.2 Blog Entries

## 138.50.4 Methods

## 138.50.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

## 138.50.6 Properties

## 138.50.7 altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Mean sea level altitude.
**Notes:** (Read and Write property)

### 138.50.8 fixQuality as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** GPS quality indicator.
**Notes:** (Read and Write property)

### 138.50.9 heightOfGeoid as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Geoidal separation.
**Notes:** (Read and Write property)

### 138.50.10 horizontalDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Horizontal dilution of precision.
**Notes:** (Read and Write property)

### 138.50.11 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Latitude.
**Notes:** (Read and Write property)

### 138.50.12 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Longitude.
**Notes:** (Read and Write property)

### 138.50.13 numSatellites as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of satellites in use.
**Notes:** (Read and Write property)

# 138.51 class PhidgetGPGSAMBS

## 138.51.1 class PhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA GSA sentence
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 138.51.4 Methods

## 138.51.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

## 138.51.6 Properties

## 138.51.7 fixType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Fix type.
**Notes:**

1 = no fix, 2 = 2D, 3 = 3D.
(Read and Write property)

### 138.51.8 horizDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Horizontal dilution of precision.
**Notes:** (Read and Write property)

### 138.51.9 mode as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Manual/Automatic mode.
**Notes:**

A = auto, M = manual.
(Read and Write property)

### 138.51.10 posnDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Position dilution of precision.
**Notes:** (Read and Write property)

### 138.51.11 vertDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Vertical dilution of precision.
**Notes:** (Read and Write property)

### 138.51.12 satUsed(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Satellite IDs.
**Notes:**

Index in range of 0 to 11.
(Read and Write computed property)

# 138.52 class PhidgetGPRMCMBS

## 138.52.1 class PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA RMC sentence.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 138.52.2 Blog Entries

## 138.52.4 Methods

## 138.52.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

## 138.52.6 Properties

## 138.52.7 heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Heading over ground in degrees.
**Notes:** (Read and Write property)

### 138.52.8 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Latitude.
**Notes:** (Read and Write property)

### 138.52.9 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Longitude.
**Notes:** (Read and Write property)

### 138.52.10 magneticVariation as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Magnetic variation.
**Notes:** (Read and Write property)

### 138.52.11 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Mode indicator.
**Notes:** (Read and Write property)

### 138.52.12 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Speed over ground in knots.
**Notes:** (Read and Write property)

### 138.52.13 status as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Status of the data
**Notes:** (Read and Write property)

## 138.53 class PhidgetGPSMBS

### 138.53.1 class PhidgetGPSMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The GPS class is used to configure and gather data from Phidgets GPS sensors, and gives you access to variables from GPS data packets.
**Notes:** Subclass of the PhidgetMBS class.

### 138.53.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.53.4 Methods

### 138.53.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.53.6 NMEAData as PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the NMEA data structure.

### 138.53.7 Properties

### 138.53.8 Altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The altitude above mean sea level in meters.
**Notes:** (Read only property)

### 138.53.9 Date as Date

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The UTC date of the last received position.
**Notes:**

Returns time and date as date object.
(Read only property)

### 138.53.10 DateTime as DateTime

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The UTC date of the last received position.
**Notes:**

Returns time and date as datetime object.
(Read only property)

### 138.53.11 Heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The current true course over ground of the GPS.
**Notes:**

Heading over ground in degrees.
(Read only property)

### 138.53.12 Latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The latitude of the GPS in degrees.
**Notes:** (Read only property)

### 138.53.13 Longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The longitude of the GPS.
**Notes:** (Read only property)

### 138.53.14 PositionFixState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The status of the position fix.
**Notes:**

True if a fix is available and latitude, longitude, and altitude can be read. False if the fix is not available.
(Read only property)

### 138.53.15 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The current speed over ground of the GPS.
**Notes:** (Read only property)

### 138.53.16 Events

### 138.53.17 HeadingChanged(heading as double, velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when a heading change occurs.
**Notes:**

heading: The current heading.
velocity: The current velocity.

### 138.53.18 PositionChanged(latitude as double, longitude as double, altitude as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent values the channel has measured will be reported in this event, which occurs when the GPS position changes.
**Notes:**

latitude: The current latitude.
longitude: The current longitude.
altitude: The current altitude.

### 138.53.19 PositionFixStateChanged(positionFixState as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a position fix is obtained or lost.
**Notes:**

positionFixState:The state of the position fix.
True indicates a fix is obtained. False indicates no fix found.

## 138.54 class PhidgetGPSNMEAMBS

### 138.54.1 class PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The NMEA Data structure.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 138.54.2 Methods

### 138.54.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 138.54.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.54.5 Properties

### 138.54.6 GGA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA GGA Sentence.
**Notes:** (Read and Write property)

### 138.54.7 GSA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA GSA Sentence.
**Notes:** (Read and Write property)

### 138.54.8 RMC as PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA RMC Sentence.
**Notes:** (Read and Write property)

### 138.54.9 VTG as PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA VTG Sentence.
**Notes:** (Read and Write property)

## 138.55 class PhidgetGPVTGMBS

### 138.55.1 class PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** NMEA VTG sentence.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 138.55.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

### 138.55.3 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

### 138.55.4 Methods

### 138.55.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 138.55.6 Properties

### 138.55.7 magneticHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Magnetic heading.
**Notes:** (Read and Write property)

### 138.55.8 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Mode indicator.
**Notes:** (Read and Write property)

### 138.55.9 speed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Speed over ground in km/h.
**Notes:** (Read and Write property)

### 138.55.10 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Speed over ground in knots.
**Notes:** (Read and Write property)

### 138.55.11 trueHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** True heading over ground.
**Notes:** (Read and Write property)

## 138.56 class PhidgetGyroscopeMBS

### 138.56.1 class PhidgetGyroscopeMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Gyroscope class reports rotational data from the Phidget containing a gyroscope chip for use in your code.
**Notes:**

Phidget gyroscopes usually have multiple sensors, each oriented in a different axis, so multiple dimensions of heading can be recorded.

If the Phidget you're using also has an accelerometer and a magnetometer, you may want to use the Spatial classin order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

### 138.56.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.56.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.56.4 Methods

### 138.56.5 AngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent angular rate value that the channel has reported.
**Notes:** This value will always be between MinAngularRate and MaxAngularRate.

### 138.56.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.56.7 MaxAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the AngularRateUpdate event will report.

### 138.56.8 MinAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the AngularRateUpdate event will report.

### 138.56.9 zero

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Re-zeros the gyroscope in 1-2 seconds.
**Notes:**

The device must be stationary when zeroing.
The angular rate will be reported as 0.0¬∞/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

### 138.56.10 Properties

### 138.56.11 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of axes the channel can measure angular rate on.
**Notes:**

See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

### 138.56.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another AngularRateUpdate event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)
(Read and Write property)

### 138.56.13 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set to true to enable the temperature stabilization feature of this device.
**Notes:**

This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)

HeatingEnabled: Whether self-heating temperature stabilization is enabled
(Read and Write property)

### 138.56.14 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.56.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.56.16 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent timestamp value that the channel has reported.
**Notes:**

This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

### 138.56.17 Events

### 138.56.18 AngularRateUpdated(angularRate() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent angular rate and timestamp values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

angularRate: The angular rate values
timestamp: The timestamp value

## 138.57 class PhidgetHubMBS

### 138.57.1 class PhidgetHubMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The hub class allows you to control power to VINT hub ports.
**Notes:** Subclass of the PhidgetMBS class.

### 138.57.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.57.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.57.4 Methods

### 138.57.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.57.6 setPortPower(Port as Integer, State as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Controls power to the VINT Hub Ports.
**Notes:**

port: The Hub port
state: The power state

# 138.58 class PhidgetHumiditySensorMBS

## 138.58.1 class PhidgetHumiditySensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Humidity Sensor class gathers relative humidity data from the Phidget and makes it available to your code.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

## 138.58.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.58.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.58.4 Methods

## 138.58.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.58.6 Properties

## 138.58.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another HumidityChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between HumidityChange events can also affected by the HumidityChangeTrigger.
Unit: milliseconds (ms)
(Read and Write property)

### 138.58.8 Humidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent humidity value that the channel has reported.
**Notes:**

This value will always be between MinHumidity and MaxHumidity.
(Read only property)

### 138.58.9 HumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a HumidityChange event until the humidity value has changed by the amount specified by the HumidityChangeTrigger.
**Notes:**

Setting the HumidityChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

### 138.58.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.58.11 MaxHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that the HumidityChange event will report.
**Notes:** (Read only property)

### 138.58.12 MaxHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that HumidityChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.58.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.58.14 MinHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that the HumidityChange event will report.
**Notes:** (Read only property)

### 138.58.15 MinHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that HumidityChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.58.16 Events

### 138.58.17 HumidityChanged(humidity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent humidity value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a HumidityChangeTrigger has been set to a non-zero value, the HumidityChange event will not occur until the humidity has changed by at least the HumidityChangeTrigger value.

humidity: The ambient relative humidity

# 138.59 class PhidgetIRCodeInfoMBS

## 138.59.1 class PhidgetIRCodeInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
**Notes:** Some values can be set to null to select defaults.

## 138.59.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

## 138.59.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

## 138.59.4 Properties

## 138.59.5 bitCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Number of bits in the code.
**Notes:** (Read only property)

## 138.59.6 carrierFrequency as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Carrier frequency in Hz - defaults to 38kHz
**Notes:** (Read only property)

## 138.59.7 dutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Duty Cycle in percent (0.1-0.5).
**Notes:**

Defaults to 0.33

Unit: duty cycle (duty cycle)
(Read and Write property)

### 138.59.8 encoding as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Encoding technique used to encode the data.
**Notes:** (Read only property)

### 138.59.9 gap as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gap time in microseconds.
**Notes:** (Read only property)

### 138.59.10 length as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Constant or Variable length encoding.
**Notes:** (Read only property)

### 138.59.11 minRepeat as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Minium number of times to repeat a code on transmit.
**Notes:** (Read only property)

### 138.59.12 trail as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Trail time in microseconds.
**Notes:**

Can be zero for no trail.
(Read only property)

### 138.59.13 header(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Header pulse and space.
**Notes:**

Can be zero for no header.
Index in range of 0 to 1.
(Read and Write computed property)

### 138.59.14 one(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Pulse and Space times to represent a '1' bit, in microseconds
**Notes:**

Index in range of 0 to 1.
(Read and Write computed property)

### 138.59.15 repeat(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** A series or pulse and space times to represent the repeat code.
**Notes:**

Start and end with pulses and null terminate. Set to 0 for none.
Index in range of 0 to 25.

(Read and Write computed property)

### 138.59.16 toggleMask(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Bit toggles, which are applied to the code after each transmit.
**Notes:**

index from 0 to 32.
(Read and Write computed property)

### 138.59.17 zero(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Pulse and Space times to represent a '0' bit, in microseconds
**Notes:**

Index in range of 0 to 1.
(Read and Write computed property)

### 138.59.18 Constants

### 138.59.19 kEncodingBiPhase = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** Bi-Phase, or Manchester encoding

### 138.59.20 kEncodingPulse = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** Pulse encoding, or Pulse Width Modulation

### 138.59.21 kEncodingRC5 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** RC5 - a type of Bi-Phase encoding

### 138.59.22 kEncodingRC6 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** RC6 - a type of Bi-Phase encoding

### 138.59.23 kEncodingSpace = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** Space encoding, or Pulse Distance Modulation

### 138.59.24 kEncodingUnknown = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the encoding technique used.
**Notes:** Unknown - the default value

### 138.59.25 kLengthConstant = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the length type of the bitstream and gaps.
**Notes:** Constant - the bitstream and gap length is constant

### 138.59.26 kLengthUnknown = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the length type of the bitstream and gaps.
**Notes:** Unknown - the default value

### 138.59.27 kLengthVariable = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the length type of the bitstream and gaps.
**Notes:** Variable - the bitstream has a variable length with a constant gap

# 138.60 class PhidgetIRMBS

## 138.60.1 class PhidgetIRMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Infrared Remote class lets you read and transmit command codes from infrared remotes that the majority of household appliances use.
**Notes:**

You can use this class to construct and transmit commands from scratch, or learn and retransmit codes from the remote controller of your appliance.
Subclass of the PhidgetMBS class.

## 138.60.2 Blog Entries

- Rewritten Phidgets Plugin
- MBS REALbasic Plugins, version 10.6pr7

## 138.60.3 Blog Entries

- Rewritten Phidgets Plugin
- MBS REALbasic Plugins, version 10.6pr7

## 138.60.4 Methods

## 138.60.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.60.6 getLastCode(byref bitCount as UInt32) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last code the channel has received.
**Notes:** The code is represented by a hexadecimal string (array of bytes).

### 138.60.7 getLastLearnedCode(byref codeInfo as PhidgetIRCodeInfoMBS) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last code the channel has learned.
**Notes:**

The code is represented by a hexadecimal string (array of bytes).
The codeInfo structure holds data that describes the learned code.

### 138.60.8 transmit(code as String, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits a code
**Notes:**

code data is transmitted MSBit first.
MSByte is in array index 0 of code
LSBit is right justified, therefore, MSBit may be in bit position 0-7 (of array index 0) depending on the bit count.

code:code data
codeInfo:contains the data for characterizing the code.

### 138.60.9 transmitRaw(data as MemoryBlock, carrierFrequency as UInt32, dutyCycle as double, gap as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits raw data as a series of pulses and spaces.
**Notes:**

data: data to send.
dataLen: length of the data array
carrierFrequency: carrier frequency in Hz
dutyCycle: the duty cycle
gap: the gap time.

data must start and end with a pulse.
Each element is a positive time in ŒºS

dataLength has a maximum length of 200, however, streams should be kept must shorter than this (less than 100ms between gaps).
dataLength must be an odd number
Leave carrierFrequency as 0 for default.
carrierFrequency has a range of 10kHz - 1MHz
Leave dutyCycle as 0 for default
dutyCycle can have a value between 0.1 and 0.5
Specifying a gap will guarantee a gap time (no transmitting) after data is sent.
gap time is in Œºs
gap time can be set to 0

### 138.60.10 transmitRepeat

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Transmits a repeat of the last transmited code.
**Notes:** Depending on the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

### 138.60.11 Events

### 138.60.12 CodeReceived(code as string, bitCount as Integer, isRepeat as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is fired every time a code is received and correctly decoded.
**Notes:**

code: The code string
bitCount: The length of the received code in bits
isRepeat: true if a repeat is detected

The code is represented by a hexadecimal string (array of bytes) with a length of 1/4 of bitCount.
The MSBit is considered to be the first bit received and will be in array index 0 of code
Repeat will be true if a repeat is detected (either timing wise or via a repeat code)
False repeasts can happen if two separate button presses happen close together

### 138.60.13 Learned(code as string, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event fires when a button has been held down long enough for the channel to have learned the CodeInfo values.
**Notes:** A code is usually learned after 1 second, or after 4 repeats.

### 138.60.14 RawDataReceived(data as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event will fire every time the channel gets more data.
**Notes:** This will happen at most once every 8ms.

# 138.61 class PhidgetLCDMBS

## 138.61.1 class PhidgetLCDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The LCD class allows you to control various liquid crystal displays.
**Notes:**

It offers control of displayed text as well as screen settings and custom character creation.
Subclass of the PhidgetMBS class.

## 138.61.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.61.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.61.4 Methods

## 138.61.5 Clear

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Clears all pixels in the current frame buffer.
**Notes:** Changes made to the frame buffer must be flushed to the LCD screen using flush.

## 138.61.6 ClearAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Clears all pixels in the current frame buffer.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

Calls ClearAsyncCompleted event later.

### 138.61.7 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.61.8 copy(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Copies all pixels from a specified rectangular region to another.
**Notes:**

sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle
inverted: If true, copied pixels are inverted

### 138.61.9 copyAsync(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Copies all pixels from a specified rectangular region to another.
**Notes:**

sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle

inverted: If true, copied pixels are inverted

Calls copyAsyncCompleted event later.

### 138.61.10 drawLine(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a straight line in the current frame buffer between two specified points.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

### 138.61.11 drawLineAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a straight line in the current frame buffer between two specified points.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

CallsdrawLineAsyncCompleted event later.

### 138.61.12 drawPixel(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws, erases, or inverts a single specified pixel.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel
y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

### 138.61.13 drawPixelAsync(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws, erases, or inverts a single specified pixel.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel
y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

Calls drawPixelAsyncCompleted event later.

### 138.61.14 drawRect(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a rectangle in the current frame buffer using the specified points.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

### 138.61.15 drawRectAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a rectangle in the current frame buffer using the specified points.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

Calls drawRectAsyncCompleted event later.

### 138.61.16 Flush

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Flushes the buffered LCD contents to the LCD screen.

### 138.61.17 FlushAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Flushes the buffered LCD contents to the LCD screen.
**Notes:** Calls FlushAsyncCompleted event later.

### 138.61.18 getFontSize(Font as Integer, byref Width as Integer, byref Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the size of the specified font.

**Notes:**

font: The specified font
width: The width of the font
height: The height of the font

### 138.61.19 Initialize

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes the Text LCD display.

### 138.61.20 MaxCharacters(font as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum number of characters that can fit on the frame buffer for the specified font.
**Notes:**

font: The specified font
maxCharacters: The maximum number of characters for the font

### 138.61.21 saveFrameBuffer(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes the specified frame buffer to flash memory
**Notes:** Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

### 138.61.22 saveFrameBufferAsync(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes the specified frame buffer to flash memory
**Notes:**

Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

Calls saveFrameBufferAsyncCompleted event later.

### 138.61.23 setCharacterBitmap(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Create a bitmap and select a character to represent it.
**Notes:**

Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

### 138.61.24 setCharacterBitmapAsync(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Create a bitmap and select a character to represent it.
**Notes:**

Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

Calls setCharacterBitmapAsyncCompleted event later.

### 138.61.25 setFontSize(Font as Integer, Width as Integer, Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the size of the specified font.

**Notes:**

font: The specified font
width: The width of the font
height: The height of the font

### 138.61.26 writeBitmap(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a bitmap to the current frame buffer at the given location.
**Notes:**

Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

### 138.61.27 writeBitmapAsync(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Draws a bitmap to the current frame buffer at the given location.
**Notes:**

Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

Calls writeTextAsyncCompleted event later.

### 138.61.28 writeText(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes text to the current frame buffer at the specified location.
**Notes:**

Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

### 138.61.29 writeTextAsync(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Write text asynchronously.
**Notes:**

Writes text to the current frame buffer at the specified location.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

Calls writeTextAsyncCompleted event later.

### 138.61.30 Properties

### 138.61.31 Backlight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Backlight affects the brightness of the LCD screen.

**Notes:**

Backlight is bounded by MinBackLight and MaxBacklight.
(Read and Write property)

### 138.61.32 Contrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Contrast level of the text or graphic pixels.
**Notes:**

A higher contrast will make the image darker.
Contrast is bounded by MinContrast and MaxContrast.
(Read and Write property)

### 138.61.33 CursorBlink as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When CursorBlink is true, the device will cause the cursor to periodically blink.
**Notes:** (Read and Write property)

### 138.61.34 CursorOn as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When CursorOn is true, the device will underline to the cursor position.
**Notes:** (Read and Write property)

### 138.61.35 FrameBuffer as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The frame buffer that is currently being used.
**Notes:**

Commands sent to the device are performed on this buffer.

(Read and Write property)

### 138.61.36 Height as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The height of the LCD screen attached to the channel.
**Notes:** (Read only property)

### 138.61.37 MaxBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Backlight can be set to.
**Notes:** (Read only property)

### 138.61.38 MaxContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Contrast can be set to.
**Notes:** (Read only property)

### 138.61.39 MinBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Backlight can be set to.
**Notes:** (Read only property)

### 138.61.40 MinContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Contrast can be set to.
**Notes:** (Read only property)

### 138.61.41 ScreenSize as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The size of the LCD screen attached to the channel.
**Notes:** (Read and Write property)

### 138.61.42 Sleeping as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The on/off state of Sleeping.
**Notes:**

Putting the device to sleep turns off the display and backlight in order to save power.
The device will still take commands while asleep, and will wake up if the screen is flushed, or if the contrast or backlight are changed.
When the device wakes up, it will return to its last known state, taking into account any changes that happened while asleep.
(Read and Write property)

### 138.61.43 Width as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The width of the LCD screen attached to the channel.
**Notes:** (Read only property)

### 138.61.44 Events

### 138.61.45 clearAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when clearAsync completes.

### 138.61.46 copyAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when copyAsync completes.

### 138.61.47 drawLineAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when drawLineAsync completes.

### 138.61.48 drawPixelAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when drawPixelAsync completes.

### 138.61.49 drawRectAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when drawRectAsync completes.

### 138.61.50 flushAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when flushAsync completes.

### 138.61.51 saveFrameBufferAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when saveFrameBufferAsync completes.

### 138.61.52 setCharacterBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setCharacterBitmapAsync completes.

### 138.61.53 writeBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when writeBitmapAsync completes.

### 138.61.54 writeTextAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when writeTextAsync completes.

### 138.61.55 Constants

### 138.61.56 kFont5x8 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fonts.
**Notes:** 5px by 8px font

### 138.61.57 kFont6x10 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fonts.
**Notes:** 6px by 10px font

### 138.61.58 kFont6x12 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fonts.
**Notes:** 6px by 12px font

### 138.61.59 kFontUser1 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fonts.
**Notes:** User-defined font # 1

### 138.61.60 kFontUser2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fonts.
**Notes:** User-defined font # 2

### 138.61.61 kPixelStateInvert = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the pixel state.
**Notes:** Invert the pixel state

### 138.61.62 kPixelStateOff = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the pixel state.
**Notes:** Pixel off state

### 138.61.63 kPixelStateOn = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the pixel state.
**Notes:** Pixel on state

### 138.61.64 kScreenSize1x16 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 1x16, One row, 16 column text screen

### 138.61.65 kScreenSize1x40 = & ha

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 1x40, One row, 40 column text screen

### 138.61.66 kScreenSize1x8 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 1x8, One row, eight column text screen

### 138.61.67 kScreenSize2x16 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 2x16, Two row, 16 column text screen

### 138.61.68 kScreenSize2x20 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 2x20, Two row, 20 column text screen

### 138.61.69 kScreenSize2x24 = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 2x24, Two row, 24 column text screen

### 138.61.70 kScreenSize2x40 = & hb

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 2x40, Two row, 40 column text screen

### 138.61.71 kScreenSize2x8 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 2x8, Two row, eight column text screen

### 138.61.72 kScreenSize4x16 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 4x16, Four row, 16 column text screen

### 138.61.73 kScreenSize4x20 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 4x20, Four row, 20 column text screen.

### 138.61.74 kScreenSize4x40 = & hc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 4x40, Four row, 40 column text screen

### 138.61.75 kScreenSize64x128 = & hd

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** 64x128, 64px by 128px graphic screen

### 138.61.76 kScreenSizeNone = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the screen sizes.
**Notes:** No Screen, Screen size unknown.

# 138.62 class PhidgetLightSensorMBS

## 138.62.1 class PhidgetLightSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Light Sensor class gathers data from the light sensor on a Phidget board.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

## 138.62.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.62.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.62.4 Methods

## 138.62.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.62.6 Properties

## 138.62.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another IlluminanceChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between IlluminanceChange events can also affected by the IlluminanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.62.8 Illuminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent illuminance value that the channel has reported.
**Notes:**

This value will always be between MinIlluminance and MaxIlluminance.
(Read only property)

### 138.62.9 IlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a IlluminanceChange event until the illuminance value has changed by the amount specified by the IlluminanceChangeTrigger.
**Notes:**

Setting the IlluminanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

### 138.62.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.62.11 MaxIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the IlluminanceChange event will report.
**Notes:** (Read only property)

### 138.62.12 MaxIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that IlluminanceChangeTrigger can be set to.
**Notes:**

In lux.
(Read only property)

### 138.62.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.62.14 MinIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the IlluminanceChange event will report.
**Notes:** (Read only property)

### 138.62.15 MinIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that IlluminanceChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.62.16 Events

### 138.62.17 IlluminanceChanged(illuminance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent illuminance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a IlluminanceChangeTrigger has been set to a non-zero value, the IlluminanceChange event will not occur until the illuminance has changed by at least the IlluminanceChangeTrigger value.

illuminance: The current illuminance

# 138.63 class PhidgetLogMBS

## 138.63.1 class PhidgetLogMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class hosting the log facilities.

## 138.63.2 Methods

## 138.63.3 addSource(source as String, LogLevel as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds a source to the Phidget logging system.
**Notes:**

This is useful for declaring a source and setting its log level before sending any messages.

source: The source name
level: The log level of the source

## 138.63.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.63.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.63.6 disable

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Disables logging within the Phidget library.

### 138.63.7 disableNetwork

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Disable networking.

### 138.63.8 disableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Disables automatic rotation of the log file.

### 138.63.9 enable(LogLevel as Integer, destination as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables logging within the Phidget library.
**Notes:**

LogLevel: The logging level
destination: The log file path, or "" for STDOUT

### 138.63.10 enableNetwork(address as string, port as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enable networking.

### 138.63.11 enableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables automatic rotation of the log file (the default).

### 138.63.12 getRotating(byref size as UInt64, byref keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the current log rotation parameters.
**Notes:**

size: The file size above which the log file should be rotated.
keepCount: The number of log files that will be kept after rotation.

### 138.63.13 Log(LogLevel as Integer, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a message to the Phidget library log.
See also:

- 138.63.14 Log(LogLevel as Integer, Source as String, Message as String) 22267

### 138.63.14 Log(LogLevel as Integer, Source as String, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a message to the Phidget library log.
See also:

- 138.63.13 Log(LogLevel as Integer, Message as String) 22267

### 138.63.15 rotate

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Manually rotate the log file.
**Notes:** This will only have an effect if automatic rotation is disabled and the log file is larger than the specified maximum file size.

### 138.63.16 setRotating(size as UInt64, keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets log rotation parameters.
**Notes:**

size: The file size above which the file should be rotated in bytes. Min: 32768 (32 KiB) Def: 10485760 (10 MiB)
keepCount: The number of log files that should be kept after rotation. Min: 0 Def: 1 Max: 64

### 138.63.17 Sources as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries current list of log sources.

### 138.63.18 Properties

### 138.63.19 isRotating as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Determines if the library is automatically rotating the log file.
**Notes:** (Read only property)

### 138.63.20 Level as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets or sets the log level for the phidget22 source..
**Notes:** (Read and Write property)

### 138.63.21 SourceLevel(source as String) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets or sets the log level of the specified log source.
**Notes:** (Read and Write computed property)

### 138.63.22 Constants

### 138.63.23 LogLevelCritical = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Critical

### 138.63.24 LogLevelDebug = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Debug

### 138.63.25 LogLevelError = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Errors

### 138.63.26 LogLevelInfo = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Information

### 138.63.27 LogLevelVerbose = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Verbose

### 138.63.28 LogLevelWarning = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the log level constants.
**Notes:** Warnings

# 138.64 class PhidgetMagnetometerMBS

## 138.64.1 class PhidgetMagnetometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Magnetometer class gathers magnetic compass data from Phidget boards.
**Notes:**

Phidget magnetometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of compass bearing can be recorded.

If the Phidget you're using also has a gyroscope and an accelerometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

## 138.64.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.64.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.64.4 Methods

## 138.64.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.64.6 MagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent field strength value that the channel has reported.
**Notes:** This value will always be between MinMagneticField and MaxMagneticField.

### 138.64.7 MaxMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
**Notes:** This check is done after calibration values have been applied, which will affect your magnetometer's range accordingly.

### 138.64.8 MinMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
**Notes:** This check is done after calibration values have been applied, which will affect your magnetometer's range accordingly.

### 138.64.9 resetCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the CompassCorrectionParameters to their default values.
**Notes:** Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

### 138.64.10 saveCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Saves the CalibrationParameters.
**Notes:** Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

### 138.64.11 setCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calibrate your device for the environment it will be used in.
**Notes:**

Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.
T5: Provided by calibration program.

### 138.64.12 Properties

### 138.64.13 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The number of axes the channel can measure field strength on.
**Notes:**

See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

### 138.64.14 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another MagneticFieldChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between MagneticFieldChange events can also affected by the MagneticFieldChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.64.15 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether self-heating temperature stabilization is enabled.
**Notes:**

Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

### 138.64.16 MagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a MagneticFieldChange event until the field strength value has changed by the amount specified by the MagneticFieldChangeTrigger.
**Notes:**

Setting the MagneticFieldChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.64.17 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.64.18 MaxMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that MagneticFieldChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.64.19 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.64.20 MinMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that MagneticFieldChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.64.21 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent timestamp value that the channel has reported. This is an extremely accurate time measurement streamed from the device.
**Notes:**

If your application requires a time measurement, you should use this value over a local software timestamp. (Read only property)

### 138.64.22 Events

### 138.64.23 MagneticFieldChanged(magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent magnetic field values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a MagneticFieldChangeTrigger has been set to a non-zero value, the MagneticFieldChange event will not occur until the field strength has changed by at least the MagneticFieldChangeTrigger value.

magneticField: The magnetic field values. Index from 0 to 2.
timestamp: The timestamp value

# 138.65 class PhidgetManagerMBS

## 138.65.1 class PhidgetManagerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Phidget Manager allows tracking of which Phidgets are available to be controlled from the current program.
**Notes:**

This is useful for listing all available Phidgets so you can select which ones to use at runtime.

You do not need to use a Phidget Manager if you know what Phidgets will be required for your application in advance.

Phidget channels that become available will each send an Attach event, and Phidgets that are removed from the system will send corresponding Detach events. If you are using a Phidget Manager, your program is responsible for keeping track of available Phidgets using these events.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes.

### 138.65.4 Methods

### 138.65.5 Close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes a Phidget Manager that has been opened.

### 138.65.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.65.7 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.65.8 LoadLibrary(file as FolderItem) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Phidgets library from given location.
**Notes:**

Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 138.65.9 LoadLibrary(path as String) as Boolean 22278

### 138.65.9 LoadLibrary(path as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Loads the Phidgets library from given file path.
**Example:**

```
// where is the library?

# If TargetWindows
Const path = "Phidget22.dll"
# Else TargetMacOS Then
Const path = "/Library/Frameworks/Phidget22.framework"
# EndIf

If PhidgetManagerMBS.LoadLibrary(path) Then

MessageBox "OK"

Else

MessageBox PhidgetManagerMBS.LibraryLoadError
Return

End If
```

**Notes:**

Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 138.65.8 LoadLibrary(file as FolderItem) as Boolean 22278

### 138.65.10 Open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens the Phidget Manager.
**Notes:** Be sure to register Attach and Detach event handlers for the Manager before opening it, to ensure you program doesn't miss the events reported for devices already connected to your system.

### 138.65.11 Properties

### 138.65.12 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 138.65.13 LibraryLoaded as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the phidgets library was loaded.
**Notes:** (Read only property)

### 138.65.14 LibraryLoadError as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The last error message from LoadLibrary call.
**Notes:** (Read only property)

### 138.65.15 Events

### 138.65.16 Attached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a channel is attached.
**Notes:** Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

### 138.65.17 Detached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a channel is detached.
**Notes:** Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

### 138.65.18 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An error occurred.

## 138.66 class PhidgetMBS

### 138.66.1 class PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The core Phidget class deals with functionality common to all Phidgets, such as opening and closing them, or setting Attach, Detach and Event handlers.
**Notes:**

This class is also used to specify the associations between the Phidget software objects and their corresponding physical devices, and makes it possible to determine which Phidget is which in cases where it might otherwise be ambiguous.

This class contains various functions such as Release, Retain, and getParent designed to be used with the Phidget Manager. These specialized functions may be safely ignored if your application does not require a Manager. You can check the Manager API for more information.

All errors are reported as exceptions.
And MBS Plugin schedules all events to raise on main thread, so you can easily update GUI.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 138.66.2 Methods

### 138.66.3 ChildDevices as PhidgetMBS()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries child devices for hub.

### 138.66.4 close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes a Phidget channel that has been opened.
**Notes:** Close will release the channel on the Phidget device, and should be called prior to delete.

### 138.66.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.
**Notes:**

Overwritten by subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

### 138.66.6 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.66.7 DeviceChannelCount(ChannelClass as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of channels of the specified channel class on the device.
**Notes:** Pass kChannelClassNothing to get the total number of channels.

### 138.66.8 open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens the Phidget channel.
**Notes:**

The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName

IsLocal
IsRemote

Open will return immediately, with the attachment process proceeding asynchronously. Use the Attach event or Attached property to determine when the channel is ready to use.

### 138.66.9 openWaitForAttachment(timeoutMs as UInt32 = 1000)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Opens the Phidget channel and waits a defined amount of time for the device to attach.
**Notes:**

The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName
IsLocal
IsRemote

OpenWaitForAttachment() will block until the channel is attached or a timeout occurs. A timeout value of 0 will wait forever.

### 138.66.10 Poll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Checks for pending events to dispatch.
**Notes:**

Our plugin dispatches events in two ways. If the event is raised on main thread, it will be raised directly. But if it arrives on other threads, it's queued and then dispatched via a timer on the main thread when there is idle time.
This poll method allows you to dispatch queued events now.

### 138.66.11 resetLibrary

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Closes all channels, and stops all threads.
**Notes:**

The library is reset to a newly loaded state. All channel handles have been freed.
This function is intended for use in special cases where the library cannot be unloaded between program runs, such as LabVIEW and Unity Editor.

### 138.66.12 writeDeviceLabel(deviceLabel as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes a label to the device in the form of a string in the device flash memory.
**Notes:**

This label can then be used to identify the device, and will persist across power cycles.

The label can be at most 10 UTF-16 code units. Most unicode characters take up a single code unit, but some, such as emoji, can take several.

Some older devices can not have their labels set from Windows. For these devices the label should be set from Linux or macOS.

Note: You should be careful when writing labels in your code, because the label is stored in flash which can only be re-written around 10,000 times before it will no longer write. If your program is complex, be sure to test it thoroughly before using WriteLabel to avoid accidentally burning out the flash.

### 138.66.13 Properties

### 138.66.14 Attached as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the attached status of channel.
**Notes:**

A Phidget is attached after it has been opened and the Phidget library finds and connects to the corresponding hardware device.

Most API calls are only valid on attached Phidgets.
(Read only property)
See also:

- 138.66.50 Attached 22295

### 138.66.15 Channel as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel index of the channel on the device.
**Notes:**

Specifies the channel index to be opened. The default channel is 0. Set to kChannelAny to open any channel on the specified device.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.16 ChannelClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the channel class of the channel.
**Notes:** (Read only property)

### 138.66.17 ChannelClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the name of the channel class the channel belongs to.
**Notes:** (Read only property)

### 138.66.18 ChannelName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the channel's name.
**Notes:**

This name serves as a description of the specific nature of the channel.
(Read only property)

### 138.66.19 ChannelSubclass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the subclass for this channel.
**Notes:**

Allows for identifying channels with specific characteristics without needing to know the exact device and channel index.
(Read only property)

### 138.66.20 ClientVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The major version of the client.
**Notes:** (Read only property)

### 138.66.21 ClientVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minor version of the client.
**Notes:** (Read only property)

### 138.66.22 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another change event.
**Notes:**

Unit: milliseconds (ms)
(Read and Write property)

### 138.66.23 DeviceClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the device class for the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.24 DeviceClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the name of the device class for the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.25 DeviceID as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the DeviceID for the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.26 DeviceLabel as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The device channel.
**Notes:**

Gets the label of the Phidget which this channel is a part of. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using writeDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

Specifies the label of the Phidget to be opened. Leave un-set to open any label. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using Phidget_writ-

eDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.27 DeviceName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the name of the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.28 DeviceSerialNumber as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The serial number of the Phidget which this channel is a part of.
**Notes:**

If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

Specifies the serial number of the Phidget to be opened. Leave un-set, or set to kSerialNumberAny to open any serial number.
If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.29 DeviceSKU as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the SKU (part number) of the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.30 DeviceVersion as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the firmware version of the Phidget which this channel is a part of.
**Notes:** (Read only property)

### 138.66.31 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 138.66.32 Hub as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the hub that this channel is attached to.
**Notes:** (Read only property)

### 138.66.33 HubPort as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the hub port index of the VINT Hub port that the channel is attached to.
**Notes:**

Specifies the hub port index of the VINT Hub port to open this channel on. Leave un-set, or set to kHubPortAny to open the channel on any VINT Hub port

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.34 HubPortCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the number of VINT ports present on the VINT Hub that the channel is attached to.
**Notes:** (Read only property)

### 138.66.35 IsChannel as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** True if the handle is for a channel.
**Notes:**

Returns true if the PhidgetHandle is for a channel. Mostly for use alongside Phidget_getParent() to distinguish channel handles from device handles.
(Read only property)

### 138.66.36 IsHubPortDevice as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether this channel is a VINT Hub port channel, or part of a VINT device attached to a hub port.
**Notes:**

Specifies whether this channel should be opened on a VINT Hub port directly, or on a VINT device attached to a hub port.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.37 IsLocal as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** True when this channel is attached directly on the local machine, or false otherwise.
**Notes:**

Set to True if the channel is to be opened locally, and not over a network. If both this and IsRemote are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.38 IsRemote as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** True when this channel is attached via a Phidget network server, or false otherwise.
**Notes:**

Set to True if the channel is to be opened remotely, rather than locally. If both this and IsLocal are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

In order for your program to have access to remote Phidgets, you must use the Networking API to EnableServerDiscovery or AddServer.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

### 138.66.39 LibraryVersion as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the version of the Phidget library being used by the program in human readable form.
**Notes:** (Read only property)

### 138.66.40 LibraryVersionNumber as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the version of the Phidget library being used by the program as a version number string.
**Notes:** (Read only property)

### 138.66.41 MeshMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The mesh mode.
**Notes:** (Read and Write property)

### 138.66.42 Parent as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the handle of the parent device of the given Phidget handle.
**Notes:**

For example, this would refer to the device the channel is a part of, or the Hub that a device is plugged into.

This is useful when used alongside a Phidget Manager to create device trees like the one in the Phidget Control Panel.

Phidget_release() must be called on the handle returned by this function to release the reference created by this call.

This can be used to travel up the device tree and get device information at each step.
The root device will return a null handle
Parent handles always refer to devices. See IsChannel()
(Read only property)

### 138.66.43 ServerHostname as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the hostname of the Phidget network server for network attached Phidgets.
**Notes:**

Fails if the channel is not connected to a Phidget network server.
(Read only property)

### 138.66.44 ServerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the name of the Phidget network server the channel is attached to, if any.
**Notes:**

Fails if the channel is not connected to a Phidget network server.
(Read and Write property)

### 138.66.45 ServerPeerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the peer name of the channel's server.
**Notes:**

Gets the peer name (address and port) of the Phidget server for network attached Phidgets, formatted as: address:port
Fails if the channel is not connected to a Phidget network server.
(Read only property)

### 138.66.46 ServerUniqueName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the unique name for the server the channel is attached to, if any.
**Notes:**

This is either a unique mDNS name, or the name specified in addServer
Fails if the channel is not connected to a Phidget network server.
(Read only property)

### 138.66.47 ServerVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The major version of the server.
**Notes:** (Read only property)

### 138.66.48 ServerVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minor version of the server.
**Notes:** (Read only property)

### 138.66.49 Events

### 138.66.50 Attached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the channel is attached to a physical channel on a Phidget.
**Notes:** This event is the recommended place to configuration properties of the channel such as the data interval or change trigger.
See also:

- 138.66.14 Attached as Boolean 22285

### 138.66.51 Detached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the channel is detached from a Phidget device channel.
**Notes:** This typically occurs when the Phidget device is removed from the system.

### 138.66.52 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called when an error condition has been detected.
**Notes:** See the documentation for your specific channel class to see what error events it might throw.

### 138.66.53 PropertyChanged(propertyName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when a property is changed externally from the user channel, usually from a network client attached to the same channel.

### 138.66.54 Constants

### 138.66.55 kChannelAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** The constant for any channel.
**Notes:** Pass to Channel to open any channel.

### 138.66.56 kChannelClassAccelerometer = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Accelerometer channel

### 138.66.57 kChannelClassBLDCMotor = & H23

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** BLDC motor channel

### 138.66.58 kChannelClassCapacitiveTouch = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Capacitive Touch channel

### 138.66.59 kChannelClassCurrentinput = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Current input channel

### 138.66.60 kChannelClassCurrentoutput = & H26

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Current output channel

### 138.66.61 kChannelClassDataAdapter = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Data Adapter

### 138.66.62 kChannelClassDcmotor = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** DC motor channel

### 138.66.63 kChannelClassDictionary = & H24

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Dictionary

### 138.66.64 kChannelClassDigitalInput = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Digital input channel

### 138.66.65 kChannelClassDigitalOutput = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Digital output channel

### 138.66.66 kChannelClassDistanceSensor = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Distance sensor channel

### 138.66.67 kChannelClassEncoder = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Encoder channel

### 138.66.68 kChannelClassFirmwareUpgrade = & H20

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Firmware Upgrade

### 138.66.69 kChannelClassFrequencyCounter = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Frequency counter channel

### 138.66.70 kChannelClassGeneric = & H21

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Generic channel

### 138.66.71 kChannelClassGps = & Ha

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** GPS channel

### 138.66.72 kChannelClassGyroscope = & Hc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Gyroscope channel

### 138.66.73 kChannelClassHub = & Hd

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** VINT Hub channel

### 138.66.74 kChannelClassHumiditySensor = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Humidity sensor channel

### 138.66.75 kChannelClassIR = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** IR channel

### 138.66.76 kChannelClassLcd = & Hb

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** LCD channel

### 138.66.77 kChannelClassLightSensor = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Light sensor channel

### 138.66.78 kChannelClassMagnetometer = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Magnetometer channel

### 138.66.79 kChannelClassMeshdongle = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Mesh Dongle

### 138.66.80 kChannelClassMotorPositionController = & H22

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Motor position control channel.

### 138.66.81 kChannelClassNothing = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Unknown

### 138.66.82 kChannelClassPhSensor = & H25

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** pH sensor channel

### 138.66.83 kChannelClassPowerguard = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Power guard channel

### 138.66.84 kChannelClassPressureSensor = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Pressure sensor channel

### 138.66.85 kChannelClassRCServo = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** RC Servo channel

### 138.66.86 kChannelClassResistanceInput = & H17

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Resistance input channel

### 138.66.87 kChannelClassRFID = & H18

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** RFID channel

### 138.66.88 kChannelClassSoundSensor = & H19

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Sound sensor channel

### 138.66.89 kChannelClassSpatial = & H1A

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Spatial channel

### 138.66.90 kChannelClassStepper = & H1B

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Stepper channel

### 138.66.91 kChannelClassTemperatureSensor = & H1C

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Temperature sensor channel

### 138.66.92 kChannelClassVoltageInput = & H1D

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Voltage input channel

### 138.66.93 kChannelClassVoltageOutput = & H1E

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Voltage output channel

### 138.66.94 kChannelClassVoltageRatioInput = & H1F

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel classes.
**Notes:** Voltage ratio input channel

### 138.66.95 kChannelSubClassDigitaloutputDutyCycle = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Digital output duty cycle

### 138.66.96 kChannelSubClassDigitaloutputFrequency = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Digital output frequency

### 138.66.97 kChannelSubClassDigitaloutputLedDriver = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Digital output LED driver

### 138.66.98 kChannelSubClassEncoderModeSettable = & H60

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Encoder IO mode settable

### 138.66.99 kChannelSubClassLCDGraphic = & H50

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Graphic LCD

### 138.66.100 kChannelSubClassLCDText = & H51

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Text LCD

### 138.66.101 kChannelSubClassNone = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** No subclass

### 138.66.102 kChannelSubClassSpatialAhrs = & H70

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Spatial AHRS/IMU

### 138.66.103 kChannelSubClassTemperaturesensorRtd = & H20

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Temperature sensor RTD

### 138.66.104 kChannelSubClassTemperaturesensorThermocouple = & H21

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Temperature sensor thermocouple

### 138.66.105 kChannelSubClassVoltageInputSensorPort = & H30

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Voltage sensor port

### 138.66.106 kChannelSubClassVoltageRatioInputBridge = & H41

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Voltage ratio bridge input

### 138.66.107 kChannelSubClassVoltageRatioInputSensorPort = & H40

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the channel subclasses.
**Notes:** Voltage ratio sensor port

### 138.66.108 kDeviceClassAccelerometer = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetAccelerometer device

### 138.66.109 kDeviceClassAdvancedServo = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetAdvancedServo device

### 138.66.110 kDeviceClassAnalog = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetAnalog device

### 138.66.111 kDeviceClassBridge = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetBridge device

### 138.66.112 kDeviceClassDataAdapter = & H19

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetDataAdapter device

### 138.66.113 kDeviceClassDictionary = & H18

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Dictionary device

### 138.66.114 kDeviceClassEncoder = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetEncoder device

### 138.66.115 kDeviceClassFirmwareUpgrade = & H17

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Firmware Upgrade

### 138.66.116 kDeviceClassFrequencyCounter = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetFrequencyCounter device

### 138.66.117 kDeviceClassGeneric = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Generic class.

### 138.66.118 kDeviceClassGPS = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetGPS device

### 138.66.119 kDeviceClassHub = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Phidget VINT Hub device

### 138.66.120 kDeviceClassInterfaceKit = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetInterfaceKit device

### 138.66.121 kDeviceClassIR = & Ha

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetIR device

### 138.66.122 kDeviceClassLed = & Hb

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetLED device

### 138.66.123 kDeviceClassMeshDongle = & Hc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Mesh Dongle

### 138.66.124 kDeviceClassMotorControl = & Hd

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetMotorControl device

### 138.66.125 kDeviceClassNothing = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Unknown device.

### 138.66.126 kDeviceClassPhsensor = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetPHSensor device

### 138.66.127 kDeviceClassRFID = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetRFID device

### 138.66.128 kDeviceClassServo = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetServo device

### 138.66.129 kDeviceClassSpatial = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetSpatial device

### 138.66.130 kDeviceClassStepper = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetStepper device

### 138.66.131 kDeviceClassTemperatureSensor = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetTemperatureSensor device

### 138.66.132 kDeviceClassTextLCD = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** PhidgetTextLCD device

### 138.66.133 kDeviceClassVint = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device classes.
**Notes:** Phidget VINT Hub device

### 138.66.134 kError2Big = & H36

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.135 kErrorAccess = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Access (Permission) Issue: Access to the resource (file) is denied. This can happen when enabling logging.

### 138.66.136 kErrorAgain = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.137 kErrorBadPassword = & H25

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.138 kErrorBadVersion = & H37

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.139 kErrorBusy = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Resource Busy: Specified resource is in use. This error code is not normally used.

### 138.66.140 kErrorClosed = & H38

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Closed: Channel was closed. This can happen if a channel is closed while openWaitForAttachment is waiting.

### 138.66.141 kErrorConnRef = & H23

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.142 kErrorConnReset = & H2E

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.143 kErrorDuplicate = & H1B

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Duplicate: Duplicated request. Can happen with some Net API calls, such as trying to add the same server twice.

### 138.66.144 kErrorEof = & H1F

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.145 kErrorEventBadConnection = & H1011

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.146 kErrorEventBadPower = & H1008

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.147 kErrorEventBadVersion = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.148 kErrorEventBusy = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.149 kErrorEventDispatch = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.150 kErrorEventEnergyDump = & H100E

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.151 kErrorEventFailSafe = & H100C

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.152 kErrorEventFailure = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.153 kErrorEventInvalidState = & H1010

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.154 kErrorEventMotorStall = & H100F

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.155 kErrorEventNetwork = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.156 kErrorEventOk = & H1000

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.157 kErrorEventOutOfRange = & H1007

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.158 kErrorEventOverCurrent = & H1006

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.159 kErrorEventOverrun = & H1002

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.160 kErrorEventOverTemp = & H1005

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.161 kErrorEventOverVoltage = & H100B

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.162 kErrorEventPacketLost = & H1003

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.163 kErrorEventSaturation = & H1009

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.164 kErrorEventVoltageError = & H100D

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.165 kErrorEventWrap = & H1004

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.166 kErrorExist = & Ha

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.167 kErrorFailSafe = & H3B

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.168 kErrorFault = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.169 kErrorFBig = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.170 kErrorHostUnreach = & H30

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.171 kErrorInterrupted = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Op Interrupted: The operation was interrupted; either from an error, or because the device was closed.

### 138.66.172 kErrorInvalid = & Hd

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Invalid: Invalid or malformed command. This can be caused by sending a command to a device which is not supported in it's current configuration.

### 138.66.173 kErrorInvalidArg = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Invalid Argument: One or more of the parameters passed to the function is not accepted by the channel in its current configuration. This may also be an indication that a NULL pointer was passed where a valid pointer is required.

### 138.66.174 kErrorInvalidPacket = & H35

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.175 kErrorIO = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.176 kErrorIsdir = & Hc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.177 kErrorKeepAlive = & H3A

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.178 kErrorMFile = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.179 kErrorNetUnavail = & H2D

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.180 kErrorNFile = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.181 kErrorNoDev = & H28

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.182 kErrorNoEnt = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** No Such Entity: The specified entity does not exist. This is usually a result of Net or Log API calls.

### 138.66.183 kErrorNoMemory = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.184 kErrorNoSpc = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Not enough space: The provided buffer argument size is too small.

### 138.66.185 kErrorNotAttached = & H34

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Device not Attached: This can happen for a number of common reasons. Be sure you are opening the channel before trying to use it. If you are opening the channel, the program may not be waiting for the channel to be attached. If possible use openWaitForAttachment. Otherwise, be sure to check the Attached property of the channel before trying to use it.

### 138.66.186 kErrorNotConfigured = & H39

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Not Configured: Device is not configured enough for this API call. Have a look at the must-set properties for this device and make sure to configure them first.

### 138.66.187 kErrorNotDir = & Hb

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.188 kErrorNotEmpty = & H1A

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.189 kErrorOk = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Success: Call succeeded.

### 138.66.190 kErrorPerm = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.191 kErrorPipe = & H29

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.192 kErrorResolv = & H2C

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.193 kErrorRo = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.194 kErrorRofs = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.

### 138.66.195 kErrorTimeOut = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Timed Out: Call has timed out. This can happen for a number of common reasons: Check that the Phidget you are trying to open is plugged in, and that the addressing parameters have been specified correctly. Check that the Phidget is not already open in another program, such as the Phidget Control Panel, or another program you are developing. If your Phidget has a plug or terminal block for external power, ensure it is plugged in and powered. If you are using remote Phidgets, ensure that your computer can access the remote Phidgets using the Phidget Control Panel. If you are using remote Phidgets, ensure you have enabled Server Discovery or added the server corresponding to the Phidget you are trying to open. If you are using Network Server Discovery, try extending the timeout to allow more time for the server to be discovered.

### 138.66.196 kErrorUnexpected = & H1C

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Unexpected Error: Something unexpected has occured. Enable library logging and have a look at the log, or contact Phidgets support.

### 138.66.197 kErrorUnknownVal = & H33

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Unknown or Invalid Value: The value is unknown. This can happen right after attach, when the value has not yet been recieved from the Phidget. This can also happen if a device has not yet been configured / enabled. Some properties can only be read back after being set.

### 138.66.198 kErrorUnsupported = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Operation Not Supported: This API call is not supported. For Class APIs this means that this API is not supported by this device. This can also mean the API is not supported on this OS, or OS configuration.

### 138.66.199 kErrorWrongDevice = & H32

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the error constants.
**Notes:** Wrong Device: A Phidget channel object of the wrong channel class was passed into this API call.

### 138.66.200 kHubPortAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** The constant for any port.
**Notes:** Pass to HubPort to open any hub port.

### 138.66.201 kID1000 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetServo 1-Motor (1000)

### 138.66.202 kID1001 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetServo 4-Motor (1001)

### 138.66.203 kID1002 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAnalog 4-Output (1002)

### 138.66.204 kID1008 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAccelerometer 2-Axis (1008)

### 138.66.205 kID1010_1013_1018_1019 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 8/8/8 (1010, 1013, 1018, 1019)

### 138.66.206 kID1011 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 2/2/2 (1011)

### 138.66.207 kID1012 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 0/16/16 (1012)

### 138.66.208 kID1014 = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 0/0/4 (1014)

### 138.66.209 kID1015 = & ha

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetLinearTouch (1015)

### 138.66.210 kID1016 = & hb

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetCircularTouch (1016)

### 138.66.211 kID1017 = & hc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 0/0/8 (1017)

### 138.66.212 kID1023 = & hd

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetRFID (1023)

### 138.66.213 kID1024 = & he

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetRFID Read-Write (1024)

### 138.66.214 kID1030 = & hf

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetLED-64 (1030)

### 138.66.215 kID1031 = & h10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetLED-64 Advanced (1031)

### 138.66.216 kID1032 = & h11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetLED-64 Advanced (1032)

### 138.66.217 kID1040 = & h12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetGPS (1040)

### 138.66.218 kID1041 = & h13

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial 0/0/3 Basic (1041)

### 138.66.219 kID1042 = & h14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial 3/3/3 Basic (1042)

### 138.66.220 kID1043 = & h15

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial Precision 0/0/3 High Resolution (1043)

### 138.66.221 kID1044 = & h16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial Precision 3/3/3 High Resolution (1044)

### 138.66.222 kID1045 = & h17

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTemperatureSensor IR (1045)

### 138.66.223 kID1046 = & h18

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetBridge 4-Input (1046)

### 138.66.224 kID1047 = & h19

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetEncoder HighSpeed 4-Input (1047)

### 138.66.225 kID1048 = & h1a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTemperatureSensor 4-input (1048)

### 138.66.226 kID1049 = & h1b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial 0/0/3 (1049)

### 138.66.227 kID1051 = & h1c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTemperatureSensor 1-Input (1051)

### 138.66.228 kID1052 = & h1d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetEncoder Mechanical (1052)

### 138.66.229 kID1053 = & h1e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAccelerometer 2-Axis (1053)

### 138.66.230 kID1054 = & h1f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetFrequencyCounter (1054)

### 138.66.231 kID1055 = & h20

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetIR (1055)

### 138.66.232 kID1056 = & h21

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial 3/3/3 (1056)

### 138.66.233 kID1057 = & h22

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetEncoder HighSpeed (1057)

### 138.66.234 kID1058 = & h23

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetPHSensor (1058)

### 138.66.235 kID1059 = & h24

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAccelerometer 3-Axis (1059)

### 138.66.236 kID1060 = & h25

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetMotorControl LV (1060)

### 138.66.237 kID1061 = & h26

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAdvancedServo 8-Motor (1061)

### 138.66.238 kID1062 = & h27

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetStepper Unipolar 4-Motor (1062)

### 138.66.239 kID1063 = & h28

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetStepper Bipolar 1-Motor (1063)

### 138.66.240 kID1064 = & h29

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetMotorControl HC (1064)

### 138.66.241 kID1065 = & h2a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetMotorControl 1-Motor (1065)

### 138.66.242 kID1066 = & h2b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAdvancedServo 1-Motor (1066)

### 138.66.243 kID1067 = & h2c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetStepper Bipolar HC (1067)

### 138.66.244 kID1202_1203 = & h2d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTextLCD 20x2 with PhidgetInterfaceKit 8/8/8 (1201, 1202, 1203)

### 138.66.245 kID1204 = & h2e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTextLCD Adapter (1204)

### 138.66.246 kID1215_1218 = & h2f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTextLCD 20x2 (1215/1216/1217/1218)

### 138.66.247 kID1219_1222 = & h30

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetTextLCD 20x2 with PhidgetInterfaceKit 0/8/8 (1219, 1220, 1221, 1222)

### 138.66.248 kIDADP1000 = & h31

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** pH Adapter

### 138.66.249 kIDADP1001 = & h84

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** RS232 Adapter

### 138.66.250 kIDADPRS485_422 = & h85

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** RS485/422 Prototype

### 138.66.251 kIDADPSerial = & h86

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Serial Prototype

### 138.66.252 kIDCURLOOP = & h7a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 4-20mA Output

### 138.66.253 kIDDAQ1000 = & h33

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Analog Input Module x8

### 138.66.254 kIDDAQ1200 = & h34

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Input 4

### 138.66.255 kIDDAQ1300 = & h35

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Input 4 Isolated

### 138.66.256 kIDDAQ1301 = & h36

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Input 16

### 138.66.257 kIDDAQ1400 = & h37

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Versatile Input

### 138.66.258 kIDDAQ1500 = & h38

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Bridge

### 138.66.259 kIDDCC1000 = & h39

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** DC Motor Controller with PID

### 138.66.260 kIDDCC1001 = & h6e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Small DC Motor Controller

### 138.66.261 kIDDCC1002 = & h75

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 4A Small DC Motor Controller

### 138.66.262 kIDDCC1003 = & h78

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 2 Channel DC Motor Controller

### 138.66.263 kIDDCC1004 = & h80

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** DC Motor Controller 12A

### 138.66.264 kIDDCC1005 = & h81

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** DC Motor Controller High Current

### 138.66.265 kIDDCC1100 = & h6c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** BLDC Motor Controller

### 138.66.266 kIDDICTIONARY = & h6f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Dictionary

### 138.66.267 kIDDigitalInputPort = & h5f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Hub Port in Digital Input mode

### 138.66.268 kIDDigitalOutputPort = & h60

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Hub Port in Digital Output mode

### 138.66.269 kIDDST1000 = & h3a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 200mm Distance Sensor

### 138.66.270 kIDDST1001 = & h79

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 650mm distance sensor

### 138.66.271 kIDDST1002 = & h7e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 1200mm distance sensor

### 138.66.272 kIDDST1200 = & h3b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Sonar Distance Sensor

### 138.66.273 kIDENC1000 = & h3c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Encoder

### 138.66.274 kIDFirmwareUpgradeSPI = & h68

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget SPI device under firmware upgrade

### 138.66.275 kIDFirmwareUpgradeSTM32F0 = & h66

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Device in firmware upgrade mode, STM32F0 Proc.

### 138.66.276 kIDFirmwareUpgradeSTM32G0 = & h8f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Device in firmware upgrade mode, STM32G0 Proc.

### 138.66.277 kIDFirmwareUpgradeSTM8S = & h67

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Device in firmware upgrade mode, STM8S Proc.

### 138.66.278 kIDFirmwareUpgradeUSB = & h65

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** USB device in firmware upgrade mode

### 138.66.279 kIDGenericUSB = & h63

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Generic USB device

### 138.66.280 kIDGenericVINT = & h64

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Generic VINT device

### 138.66.281 kIDHIN1000 = & h3d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Capacitive Touch Sensor

### 138.66.282 kIDHIN1001 = & h3e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Capacitive Scroll

### 138.66.283 kIDHIN1100 = & h3f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Joystick

### 138.66.284 kIDHIN1101 = & h6d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Dial Encoder

### 138.66.285 kIDHub0000 = & h40

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget USB VINT Hub with 6 ports

### 138.66.286 kIDHub0001 = & h8e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget USB VINT Hub with 6 ports

### 138.66.287 kIDHub0004 = & h43

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget SPI VINT Hub with 6 ports

### 138.66.288 kIDHub5000 = & h7b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget Network Hub with 6 ports

### 138.66.289 kIDHUM1000 = & h45

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Humidity Sensor

### 138.66.290 kIDHUM1001 = & h7f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Humidity Sensor

### 138.66.291 kIDHUM1100 = & h88

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Moisture Sensor

### 138.66.292 kIDInterfaceKit_4_8_8 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetInterfaceKit 4/8/8

### 138.66.293 kIDLCD1100 = & h46

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** LCD

### 138.66.294 kIDLED1000 = & h47

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** LED Driver 32

### 138.66.295 kIDLightningHub = & h44

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget Lightning VINT Hub with 6 ports

### 138.66.296 kIDLUX1000 = & h48

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Light Sensor

### 138.66.297 kIDMeshDongle = & h42

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget Mesh Dongle

### 138.66.298 kIDMeshHub = & h41

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Phidget Mesh Hub with 4 ports

### 138.66.299 kIDMOT0108 = & h83

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial 3/3/3

### 138.66.300 kIDMOT0109 = & h8c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial Precision 3/3/3

### 138.66.301 kIDMOT0110 = & h8d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetSpatial Precision 3/3/3

### 138.66.302 kIDMOT1100 = & h49

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Accelerometer 0/0/3

### 138.66.303 kIDMOT1101 = & h4a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Spatial 3/3/3

### 138.66.304 kIDMOT1102 = & h89

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Spatial Phidget AHRS

### 138.66.305 kIDNothing = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Unknown device

### 138.66.306 kIDOUT1000 = & h4b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Analog Output 0-5V

### 138.66.307 kIDOUT1001 = & h4c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Analog Output (+/-)10V

### 138.66.308 kIDOUT1002 = & h4d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Analog Output (+/-)10V - 16 bit

### 138.66.309 kIDOUT1100 = & h4e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Output 4

### 138.66.310 kIDPRE1000 = & h4f

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Barometer

### 138.66.311 kIDRCC0004 = & h7c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** PhidgetAdvancedServo 8-Motor (RCC0004)

### 138.66.312 kIDRCC1000 = & h50

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 8-Servo Controller

### 138.66.313 kIDREL1000 = & h51

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Power Relay 4

### 138.66.314 kIDREL1100 = & h52

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Output 4 Isolated

### 138.66.315 kIDREL1101 = & h53

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Digital Output 16 Isolated

### 138.66.316 kIDSAF1000 = & h54

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Power Supply Protector

### 138.66.317 kIDSND1000 = & h55

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Sound Pressure Level Sensor

### 138.66.318 kIDSTC1000 = & h56

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Bipolar Stepper Motor Controller

### 138.66.319 kIDSTC1001 = & h73

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Bipolar Stepper Motor SmallController

### 138.66.320 kIDSTC1002 = & h76

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 8A Bipolar Stepper Motor Controller

### 138.66.321 kIDSTC1003 = & h77

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 4A Bipolar Stepper Motor SmallController

### 138.66.322 kIDTMP1000 = & h57

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Integrated Temperature Sensor

### 138.66.323 kIDTMP1100 = & h58

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Thermocouple 1

### 138.66.324 kIDTMP1101 = & h59

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Thermocouple 4

### 138.66.325 kIDTMP1200 = & h5a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** RTD

### 138.66.326 kIDTMP1300 = & h5b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Infrared Temperature Sensor

### 138.66.327 kIDTPDiagnoser = & h8b

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Testpoint Diagnoser

### 138.66.328 kIDUNKNOWN = & h7d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Unknown device.

### 138.66.329 kIDUSBSwitch = & h74

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** OS Testing Fixture

### 138.66.330 kIDVCP1000 = & h5c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Voltage Sensor High Precision

### 138.66.331 kIDVCP1001 = & h5d

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Voltage Sensor Large

### 138.66.332 kIDVCP1002 = & h5e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Voltage Sensor Small

### 138.66.333 kIDVCP1100 = & h69

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** 30A Current Sensor

### 138.66.334 kIDVINTACCEL = & h8a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** VINT Accelerometer

### 138.66.335 kIDVoltageInputPort = & h61

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Hub Port in Voltage Input mode

### 138.66.336 kIDVoltageRatioPort = & h62

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the device IDs.
**Notes:** Hub Port in Voltage Ratio Input mode

### 138.66.337 kIRMaxCodeBitCount = & h80

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for IR sender/receiver.

### 138.66.338 kIRMaxCodeStrLength = & h21

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for IR sender/receiver.

### 138.66.339 kIRRawDataLongSpace = & hffffffff

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for IR sender/receiver.

### 138.66.340 kLabelAny = ""

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** The constant to pick any label.
**Notes:** Pass to DeviceLabel to open any label.

### 138.66.341 kMeshModeRouter = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the mesh mode constants.
**Notes:** Router mode

### 138.66.342 kMeshModeSleepyEndDevice = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the mesh mode constants.
**Notes:** Sleepy end device mode

### 138.66.343 kSerialNumberAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** The constant for any serial number.
**Notes:** Pass to DeviceSerialNumber to open any serial number.

### 138.66.344 kServerAuthRequired = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** A flag constant for server.

### 138.66.345 kTimeoutDefault = 300000000

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constant for timeouts.
**Notes:** Pass to OpenWaitForAttachment() for the default timeout.

### 138.66.346 kTimeoutInfinite = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constant for timeouts.
**Notes:** Pass to OpenWaitForAttachment() for an infinite timeout.

## 138.67 class PhidgetMissingFunctionExceptionMBS

### 138.67.1 class PhidgetMissingFunctionExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The exception to report a missing function.
**Notes:**

This exception type is raised when a library function should be called, but is not available.
Subclass of the RuntimeException class.

### 138.67.2 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

### 138.67.3 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

# 138.68 class PhidgetMotorPositionControllerMBS

## 138.68.1 class PhidgetMotorPositionControllerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Motor Position Controller class controlls the position, velocity and acceleration of the attached motor.
**Notes:**

It also contains various other control and monitoring functions that aid in the control of the motor.

For specifics on how to use this class, we recommend watching our video on the Phidget Motor Position Controller class.
Subclass of the PhidgetMBS class.

## 138.68.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.68.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.68.4 Methods

## 138.68.5 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds an offset (positive or negative) to the current position.
**Notes:** Useful for zeroing position.

## 138.68.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.68.7 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Motor Position Controller channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.68.8 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.68.9 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets target velocity asynchronously.
**Notes:** Calls setTargetVelocityAsyncCompleted later.

### 138.68.10 Properties

### 138.68.11 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The rate at which the controller can change the motor's velocity.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

### 138.68.12 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Motor current limit
**Notes:**

The controller will limit the current through the motor to this value.

Unit: amperes (A)
(Read and Write property)

### 138.68.13 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Current Regulator Gain.
**Notes:**

Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions. Each DC Motor we sell specifies a suitable current regulator gain.
(Read and Write property)

### 138.68.14 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the controller will fire another CurrentChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.68.15 DeadBand as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Depending on your system, it may not be possible to bring the position error (TargetPosition - Position) to zero.
**Notes:**

A small error can lead to the motor continually 'hunting' for a target position, which can cause unwanted effects. By setting a non-zero DeadBand, the position controller will relax control of the motor within the deadband, preventing the 'hunting' behavior.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

### 138.68.16 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent duty cycle value that the controller has reported.
**Notes:**

This value will be between -1 and 1 where a sign change (¬±) is indicitave of a direction change.
Note that DutyCycle is merely an indication of the average voltage across the motor. At a constant load, an increase in DutyCycle indicates an increase in motor speed.
The units of DutyCycle refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Unit: duty cycle (duty cycle)
(Read only property)

### 138.68.17 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When engaged, a motor has the ability to be positioned. When disengaged, no commands are sent to the motor.
**Notes:**

This function is useful for completely relaxing a motor once it has reached the target position.
(Read and Write property)

### 138.68.18 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The FanMode dictates the operating condition of the fan.
**Notes:**

Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70¬∞C and it will remain on until the temperature falls below 55¬∞C.
If the FanMode is off, the controller will still turn on the fan if the temperature reaches 85¬∞C and it will remain on until it falls below 70¬∞C.
(Read and Write property)

### 138.68.19 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The encoder interface mode. Match the mode to the type of encoder you have attached.
**Notes:**

It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

### 138.68.20 Kd as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Derivative gain constant.
**Notes:**

A higher Kd will help reduce oscillations.
(Read and Write property)

### 138.68.21 Ki as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Integral gain constant.
**Notes:**

The integral term will help eliminate steady-state error.
(Read and Write property)

### 138.68.22 Kp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Proportional gain constant.
**Notes:**

A small Kp value will result in a less responsive controller, however, if Kp is too high, the system can become unstable.
(Read and Write property)

### 138.68.23 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Acceleration can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.24 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum current limit that can be set for the device.
**Notes:**

Unit: amperes (A)
(Read only property)

### 138.68.25 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum current regulator gain for the device.
**Notes:** (Read only property)

### 138.68.26 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.68.27 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.68.28 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetPosition can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.29 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The upper bound of StallVelocity.
**Notes:** (Read only property)

### 138.68.30 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that VelocityLimit can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.31 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Acceleration can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.32 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum current limit that can be set for the device.
**Notes:**

Unit: amperes (A)
(Read only property)

### 138.68.33 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum current regulator gain for the device.
**Notes:** (Read only property)

### 138.68.34 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.68.35 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.68.36 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetPosition can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.37 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The lower bound of StallVelocity.
**Notes:** (Read only property)

### 138.68.38 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that VelocityLimit can be set to.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.39 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position value that the controller has reported.
**Notes:**

This value will always be between MinPosition and MaxPosition.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

### 138.68.40 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Change the units of your parameters so that your application is more intuitive.
**Notes:**

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

### 138.68.41 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.
**Notes:**

Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If

the controller detects a dangerous stall, it will immediately disengage the motor (i.e. Engaged will be set to false) and an error will be reported to your program.

A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger.

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

### 138.68.42 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** If the controller is configured and the TargetPosition is set, the motor will try to reach the TargetPostiion.
**Notes:**

If the DeadBand is non-zero, the final position of the motor may not match the TargetPosition
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

### 138.68.43 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When moving, the motor velocity will be limited by this value.
**Notes:**

VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

### 138.68.44 Events

### 138.68.45 DutyCycleUpdated(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent duty cycle value will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date access to all properties.

### 138.68.46 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent position value will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.

position: The position value

### 138.68.47 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called by setTargetVelocityAsync when completed.

### 138.68.48 Constants

### 138.68.49 kEncoderIOModeCollector10K = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface modes.
**Notes:** Open Collector 10K, 10kŒ© pull-up resistors will be applied to the input lines.

### 138.68.50 kEncoderIOModeCollector2K2 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface modes.
**Notes:** Open Collector 2.2K, 2.2kŒ© pull-up resistors will be applied to the input lines.

### 138.68.51 kEncoderIOModeLineDriver10K = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface modes.
**Notes:** Line Driver 10K, 10kŒ© pull-down resistors will be applied to the input lines.

### 138.68.52 kEncoderIOModeLineDriver2K2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface modes.
**Notes:** Line Driver 2.2K, 2.2kŒ© pull-down resistors will be applied to the input lines.

### 138.68.53 kEncoderIOModePushPull = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the encoder interface modes.
**Notes:** Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

### 138.68.54 kFanModeAuto = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fan modes.
**Notes:** The fan will be automatically controlled based on temperature.

### 138.68.55 kFanModeOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fan modes.
**Notes:** Turns the fan off.

### 138.68.56 kFanModeOn = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the fan modes.
**Notes:** Turns the fan on.

# 138.69 class PhidgetNetMBS

## 138.69.1 class PhidgetNetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class for managing servers.
**Notes:**

The Phidget NET class controls all network functionality of a Phidget program, and allows for the use of remote Phidgets in your program. It can be used to enable automated Phidget server discovery over the local network, and to connect to or reject specific servers.

For basic use of the Net class, the only functions you need to worry about are EnableServerDiscovery and AddServer. In most cases, you can use EnableServerDiscovery with server type kServerTypeDeviceRemote to automatically connect to Phidget servers on your local network. You can use AddServer to connect to servers that aren't discoverable on your local network.

To connect to a password-protected discoverable server on your local network, you can use SetServerPassword to specify the password to connect to that server.

If for some reason you need to prevent your program from discovering a non-password-protected server on your local network, you can call DisableServer directly after calling EnableServerDiscovery.

You must enable server discovery or add at least one server before setting other properties of this class, such as disabling servers, or setting server passwords. Similarly, server discovery must remain enabled, or at least one server must remain added, to maintain memory of those preferences.

## 138.69.2 Methods

## 138.69.3 addServer(serverName as String, address as String, port as Integer, password as String, Flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Registers a server that the client (your program) will try to connect to.
**Notes:**

The client will continually try to connect to the server, increasing the time between each attempt to a maximum interval of 16 seconds.

This call is intended for use when server discovery is not enabled, or to connect to a server that is not discoverable.

The server name used by this function does not have to match the name of the server running on the host machine. Only the address, port, and password need to match.

This call will fail if a server with the same name has already been discovered.

This call will fail if SetServerPassword() has already been called with the same server name, as SetServerPassword() registers the server entry anticipating the discovery of the server.

### 138.69.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.69.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.69.6 disableServer(serverName as String, flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Prevents attempts to automatically connect to a server.
**Notes:** By default the client (your program) will continually attempt to connect to added or discovered servers.This call will disable those attempts, but will not close an already established connection.

### 138.69.7 disableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Disables the dynamic discovery of servers that publish their identity.
**Notes:** DisableServerDiscovery() does not disconnect already established connections.

### 138.69.8 enableServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables attempts to connect to a discovered server, if attempts were previously disabled by DisableServer().
**Notes:**

All servers are enabled by default.

This call will fail if the server was not previously added, disabled or discovered.

### 138.69.9 enableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the dynamic discovery of servers that publish their identity to the network.
**Notes:**

Currently Multicast DNS is used to discover and publish Phidget servers.
To connect to remote Phidgets, call this function with server type kServerTypeDeviceRemote.

EnableServerDiscovery must be called once for each server type your program requires. Multiple calls for the same server type are ignored

This call will fail with the error code EPHIDGET_UNSUPPORTED if your computer does not have the required mDNS support. We recommend using Bonjour Print Services on Windows and Mac, or Avahi on Linux.

### 138.69.10 removeAllServers

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Removes all servers.

### 138.69.11 removeServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Removes a registration for a server that the client (your program) is trying to connect to.
**Notes:**

If the client is currently connected to the server, the connection will be closed.

If the server was discovered (not added by AddServer()), the connection may be reestablished if and when the server is rediscovered. DisableServer() should be used to prevent the reconnection of a discovered server

### 138.69.12 setServerPassword(serverName as String, password as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the password that will be used to attempt to connect to the server.
**Notes:**

If the server has not already been added or discovered, a placeholder server entry will be registered to use this password on the server once it is discovered.

serverName: The name of the server
password: The password to use for the server (empty string if no password)

### 138.69.13 Events

### 138.69.14 ServerAdded(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Subscribe to this event if you would like to know when a server has been added.

### 138.69.15 ServerRemoved(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Subscribe to this event if you would like to know when a server has been removed.

## 138.70 class PhidgetNotInitialzedExceptionMBS

### 138.70.1 class PhidgetNotInitialzedExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The exception to report an access of a not initialized object.
**Notes:**

We raise this exception if handle is zero, so the object was not properly initialized.
Subclass of the RuntimeException class.

### 138.70.2 Blog Entries

### 138.70.3 Blog Entries

- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

# 138.71 class PhidgetPHSensorMBS

## 138.71.1 class PhidgetPHSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The PH Sensor class gathers data from a pH sensor type Phidget board.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

## 138.71.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.71.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.71.4 Methods

## 138.71.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.71.6 Properties

## 138.71.7 CorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Set this property to the measured temperature of the solution to correct the slope of the pH conversion for temperature.
**Notes:**

Unit: degrees celsius (¬∞C)
(Read and Write property)

### 138.71.8 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another PHChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PHChange events can also affected by the PHChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.71.9 MaxCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that CorrectionTemperature can be set to.
**Notes:**

Unit: degrees celsius (¬∞C)
(Read only property)

### 138.71.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.71.11 MaxPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the PHChange event will report.
**Notes:** (Read only property)

### 138.71.12 MaxPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that PHChangeTrigger can be set to.
**Notes:**

Unit: pH (pH)
(Read only property)

### 138.71.13 MinCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that CorrectionTemperature can be set to.
**Notes:**

Unit: degrees celsius (¬∞C)
(Read only property)

### 138.71.14 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.71.15 MinPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the PHChange event will report.
**Notes:** (Read only property)

### 138.71.16 MinPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that PHChangeTrigger can be set to.
**Notes:**

Unit: pH (pH)
(Read only property)

### 138.71.17 PH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent pH value that the channel has reported.
**Notes:**

This value will always be between MinPH and MaxPH.
(Read only property)

### 138.71.18 PHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a PHChange event until the pH value has changed by the amount specified by the PHChangeTrigger.
**Notes:**

Setting the PHChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
Unit: pH (pH)
(Read and Write property)

### 138.71.19 Events

### 138.71.20 PHChanged(PH as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent pH value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a PHChangeTrigger has been set to a non-zero value, the PHChange event will not occur until the pH has changed by at least the PHChangeTrigger value.

PH: The current pH.

## 138.72 class PhidgetPowerGuardMBS

### 138.72.1 class PhidgetPowerGuardMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Power Guard class controls the safety features and thresholds of a programmable power guard Phidget board.
**Notes:** Subclass of the PhidgetMBS class.

### 138.72.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.72.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.72.4 Methods

### 138.72.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.72.6 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe

timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For PowerGuard channels, this will disable the output. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.72.7 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.72.8 Properties

### 138.72.9 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The FanMode dictates the operating condition of the fan.
**Notes:**

Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70¬∞C and it will remain on until the temperature falls below 55¬∞C.
If the FanMode is off, the device will still turn on the fan if the temperature reaches 85¬∞C and it will remain on until it falls below 70¬∞C.

(Read and Write property)

### 138.72.10 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.72.11 MaxOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that OverVoltage can be set to.
**Notes:**

Unit: volts (V)
(Read only property)

### 138.72.12 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.72.13 MinOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that OverVoltage can be set to.
**Notes:**

Unit: volts (V)
(Read only property)

### 138.72.14 OverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The device constantly monitors the output voltage, and if it exceeds the OverVoltage value, it will disconnect the input from the output.
**Notes:**

This functionality is critical for protecting power supplies from regenerated voltage coming from motors. Many power supplies assume that a higher than output expected voltage is related to an internal failure to the power supply, and will permanently disable themselves to protect the system. A typical safe value is to set OverVoltage to 1-2 volts higher than the output voltage of the supply. For instance, a 12V supply would be protected by setting OverVoltage to 13V.
The device will connect the input to the output again when the voltage drops to (OverVoltage - 1V)
Unit: volts (V)
(Read and Write property)

### 138.72.15 PowerEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When PowerEnabled is true, the device will connect the input to the output and begin monitoring.
**Notes:**

The output voltage is constantly monitored and will be automatically disconnected from the input when the output exceeds the OverVoltage value.
PowerEnabled allows the device to operate as a Solid State Relay, powering on or off all devices connected to the output.
(Read and Write property)

### 138.72.16 Constants

### 138.72.17 kFanModeAuto = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the operating condition of the fan.
**Notes:** The fan will be automatically controlled based on temperature.

### 138.72.18 kFanModeOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the operating condition of the fan.
**Notes:** Turns the fan off.

### 138.72.19 kFanModeOn = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the operating condition of the fan.
**Notes:** Turns the fan on.

# 138.73 class PhidgetPressureSensorMBS

## 138.73.1 class PhidgetPressureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Pressure Sensor class gathers data from the pressure sensor on a Phidget board.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

## 138.73.4 Methods

## 138.73.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.73.6 Properties

## 138.73.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another PressureChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PressureChange events can also affected by the PressureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.73.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.73.9 MaxPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the PressureChange event will report.
**Notes:**

Unit: kilopascals (kPa)
(Read only property)

### 138.73.10 MaxPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that PressureChangeTrigger can be set to.
**Notes:**

Unit: kilopascals (kPa)
(Read only property)

### 138.73.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.73.12 MinPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the PressureChange event will report.
**Notes:**

Unit: kilopascals (kPa)
(Read only property)

### 138.73.13 MinPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that PressureChangeTrigger can be set to.
**Notes:**

Unit: kilopascals (kPa)
(Read only property)

### 138.73.14 Pressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent pressure value that the channel has reported.
**Notes:**

This value will always be between MinPressure and MaxPressure.
Unit: kilopascals (kPa)
(Read only property)

### 138.73.15 PressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a PressureChange event until the pressure value has changed by the amount specified by the PressureChangeTrigger.
**Notes:**

Setting the PressureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
Unit: kilopascals (kPa)
(Read and Write property)

### 138.73.16 Events

### 138.73.17 PressureChanged(pressure as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent pressure value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** If a PressureChangeTrigger has been set to a non-zero value, the PressureChange event will not occur until the pressure has changed by at least the PressureChangeTrigger value.

# 138.74 class PhidgetRCServoMBS

## 138.74.1 class PhidgetRCServoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The RC Servo class controls the signal being sent to the servo motors from the Phidget controller in order to control their position.
**Notes:**

This class provides control of the position, velocity, acceleration, and supply voltage of the attached servo. Subclass of the PhidgetMBS class.

## 138.74.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.74.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.74.4 Methods

## 138.74.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.74.6 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For RC Servo channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.74.7 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.74.8 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the target position asynchronously.
**Notes:** Calls the setTargetPositionAsyncCompleted event later.

### 138.74.9 Properties

### 138.74.10 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:**

When changing velocity, the RC servo motor will accelerate/decelerate at this rate.
The acceleration is bounded by MaxAcceleration and MinAcceleration.
**Notes:**

Using the default settings this acceleration will correspond acceleration of servo arm in degrees/s2, for many standard RC servos.
SpeedRampingState controls whether or not the acceleration value is actually applied when trying to reach a target position.
There is a practical limit on how fast your RC servo motor can accelerate. This is based on the load and physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

### 138.74.11 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the controller will fire another PositionChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

### 138.74.12 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Phidget return code.
**Notes:**

When engaged, a RC servo motor has the ability to be positioned. When disengaged, no commands are sent to the RC servo motor.

There is no position feedback to the controller, so the RC servo motor will immediately snap to the TargetPosition after being engaged from a disengaged state.
This property is useful for relaxing a servo once it has reached a given position.
If you are concerned about tracking position accurately, you should not disengage the motor while IsMoving is true.
(Read and Write property)

### 138.74.13 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** IsMoving returns true if the RC servo motor is currently in motion.
**Notes:**

The controller cannot know if the RC servo motor is physically moving. When <code >IsMoving is false, it simply means there are no commands in the pipeline to the RC servo motor.
(Read only property)

### 138.74.14 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum acceleration that Acceleration can be set to.
**Notes:**

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.74.16 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.74.17 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum position TargetPosition can be set to.
**Notes:**

The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

### 138.74.18 MaxPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The MaxPulseWidth represents the maximum pulse width that your RC servo motor specifies.
**Notes:**

This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.

(Read and Write property)

### 138.74.19 MaxPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum pulse width that MaxPulseWidth can be set to.
**Notes:**

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.20 MaxTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Torque can be set to.
**Notes:**

Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

### 138.74.21 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum velocity VelocityLimit can be set to.
**Notes:**

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.
See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.22 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Acceleration can be set to.
**Notes:**

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.23 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.74.24 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:** (Read only property)

### 138.74.25 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum position that TargetPosition can be set to.
**Notes:**

The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

### 138.74.26 MinPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The MinPulseWidth represents the minimum pulse width that your RC servo motor specifies.
**Notes:**

This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

### 138.74.27 MinPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum pulse width that MinPulseWidth can be set to.
**Notes:**

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.28 MinTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Torque can be set to.
**Notes:**

Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

### 138.74.29 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum velocity VelocityLimit can be set to.
**Notes:**

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.30 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position of the RC servo motor that the controller has reported.
**Notes:**

This value will always be between MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.31 SpeedRampingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The speed ramping state value
**Notes:**

When speed ramping state is enabled, the controller will take the Acceleration and Velocity properties into account when moving the RC servo motor, usually resulting in smooth motion. If speed ramping state is not enabled, the controller will simply set the RC servo motor to the requested position.
(Read and Write property)

### 138.74.32 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The target position.
**Notes:**

If the RC servo motor is configured and TargetPosition is set, the controller will continuously try to reach targeted position.

The target position is bounded by MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.
If the RC servo motor is not engaged, then the position cannot be read.
The position can still be set while the RC servo motor is not engaged. Once engaged, the RC servo motor will snap to position, assuming it is not there already.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

Position and Pulse Width

An RC servo motor's position is controlled using a type of Pulse Width Modulation, sending voltage pulses of a given time span, or Pulse Width to the servo.
The servo translates the Pulse Width of the control signal to a corresponding position of the servo arm.
Knowing this, a servo's range of motion can be thought of in terms of a MinPulseWidth and a MaxPulseWidth corresponding to range of pulse widths that produce the servo arm's full range of movement.
In Phidget22, you can adjust the MinPulseWidth and MaxPulseWidth stored by the library to match the desired range of movement you expect from your servo.
Since directly setting the timing of RC servo pulse widths is not very intuitive for most purpses, we map these pulse widths to a user-defied Minimum and Maximum Position.This allows you to define the servo's position in terms best suited to your application, such as degrees, fractions of a rotation, or even some measure of speed for a continuous-rotation servo.
By setting the servo's Target Position to MaxPosition, the controller will send pulses of MaxPulseWidth to the servo.
Similarly, MinPosition will send pulses of MinPulseWidth to the servo
MaxPosition can be set smaller than MinPosition to invert movement of the servo, if it helps your application.
Setting a TargetPosition will transate the position between MinPosition and MaxPosition to a corresponding Pulse Width between MinPulseWidth and MaxPulseWidth, in turn sending the servo arm to the desired position.
Setting VelocityLimit and Acceleration for your servo will limit the rate of change of the servo's position in terms of one UserUnit per second (or /s2). Here, a UserUnit is whatever distance is maked by the change of the TargetPosition by 1.0

Adjusting the Servo's Limits

To tune your program to a specific servo:
First adjust the servo's range of motion by setting the MaxPulseWidth and MinPulseWidth. You can use the default values for these (or the ones on your servo's datasheet) as a starting point.
Send the servo to MaxPosition and MinPosition to check the results. Repeat steps 1 and 2 as nessesarry.
Set the MaxPosition and MinPosition to match whatever numbers you find best suited to your application. (Read and Write property)

### 138.74.33 Torque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Torque is a ratio of the maximum available torque.
**Notes:**

The torque is bounded by MinTorque and MaxTorque
Increasing the torque will increase the speed and power consumption of the RC servo motor.
(Read and Write property)

### 138.74.34 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The velocity that the RC servo motor is being driven at.
**Notes:**

A negative value means the RC servo motor is moving towards a lower position.
The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
This is not the actual physical velocity of the RC servo motor.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

### 138.74.35 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When moving, the RC servo motor velocity will be limited by this value.
**Notes:**

The velocity limit is bounded by MinVelocityLimit and MaxVelocityLimit.
Using the default settings this velocity will correspond to the maximum speed of rotation of servo arm in degrees/s, for many standard RC servos.
SpeedRampingState controls whether or not the velocity limit value is actually applied when trying to reach a target position.

The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
Note that when this value is set to 0, the RC servo motor will not move.
There is a practical limit on how fast your servo can rotate, based on the physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

### 138.74.36 Voltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The supply voltage for the RC servo motor.
**Notes:**

If your controller supports multiple RC servo motors, every motor will have the same supply voltage. It is not possible to set individual supply voltages.
(Read and Write property)

### 138.74.37 Events

### 138.74.38 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An event that occurs when the position changes on a RC servo motor.
**Notes:** position: The position value

### 138.74.39 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when setTargetPositionAsync completes.

### 138.74.40 TargetPositionReached(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the RC servo motor has reached the TargetPosition.
**Notes:** The controller cannot know if the RC servo motor has physically reached the target position. When TargetPosition is reached, it simply means the controller pulse width output is matching its target.

### 138.74.41 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** An event that occurs when the velocity changes on a RC servo motor.
**Notes:** velocity: The velocity value

### 138.74.42 Constants

### 138.74.43 kVoltage5V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for voltage supplied to all attached servos.
**Notes:** Run all servos on 5V DC

### 138.74.44 kVoltage6V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for voltage supplied to all attached servos.
**Notes:** Run all servos on 6V DC

### 138.74.45 kVoltage7_4V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for voltage supplied to all attached servos.
**Notes:** Run all servos on 7.4V DC

## 138.75 class PhidgetResistanceInputMBS

### 138.75.1 class PhidgetResistanceInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Resistance Input class measures the resistance of a circuit connected to the Phidget, which is used to read resistance-based sensors such as platinum RTDs.
**Notes:** Subclass of the PhidgetMBS class.

### 138.75.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.75.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.75.4 Methods

### 138.75.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.75.6 Properties

### 138.75.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another ResistanceChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between ResistanceChange events can also affected by the ResistanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.75.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.75.9 MaxResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the ResistanceChange event will report.
**Notes:**

Unit: ohms (Œ©)
(Read only property)

### 138.75.10 MaxResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that ResistanceChangeTrigger can be set to.
**Notes:**

Unit: ohms (Œ©)
(Read only property)

### 138.75.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.75.12 MinResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the ResistanceChange event will report.
**Notes:**

When the device is also being used as a TemperatureSensor the MinResistance and MaxResistance will not represent the true input range. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Œ©)
(Read only property)

### 138.75.13 MinResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that the ResistanceChangeTrigger can be set to.
**Notes:**

Unit: ohms (Œ©)
(Read only property)

### 138.75.14 Resistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent resistance value that the channel has reported.
**Notes:**

This value will always be between MinResistance and MaxResistance.
The Resistance value will change when the device is also being used as a temperature sensor. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Œ©)
(Read only property)

### 138.75.15 ResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a ResistanceChange event until the resistance value has changed by the amount specified by the ResistanceChangeTrigger.
**Notes:**

Setting the ResistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering

Unit: ohms (Œ©)
(Read and Write property)

### 138.75.16 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Select the RTD wiring configuration.
**Notes:**

More information about RTD wiring can be found in the user guide.
(Read and Write property)

### 138.75.17 Events

### 138.75.18 ResistanceChanged(resistance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent resistance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a ResistanceChangeTrigger has been set to a non-zero value, the ResistanceChange event will not occur until the resistance has changed by at least the ResistanceChangeTrigger value.

resistance: The resistance value

### 138.75.19 Constants

### 138.75.20 RTD_WIRE_SETUP_2WIRE = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 2-wire RTD setup.

### 138.75.21 RTD_WIRE_SETUP_3WIRE = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 3-wire RTD setup.

### 138.75.22 RTD_WIRE_SETUP_4WIRE = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 4-wire RTD setup.

# 138.76 class PhidgetRFIDMBS

## 138.76.1 class PhidgetRFIDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The RFID class provides methods for Phidget RFID boards to read and write (if writing is supported) to RFID tags.
**Notes:** Subclass of the PhidgetMBS class.

## 138.76.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.76.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.76.4 Methods

## 138.76.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.76.6 LastTag(byref tagString as String, byref protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Gets the most recently read tag's data, even if that tag is no longer within read range.
**Notes:**

Only valid after at least one tag has been read.

tagString: The data stored on the most recently read tag
protocol: Protocol of the most recently read tag

### 138.76.7 Write(tagString as String, protocol as Integer, lockTag as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Writes data to the tag being currently read by the reader.
**Notes:**

You cannot write to a read-only or locked tag.

tagString: The data to write to the tag
protocol: The communication protocol to use
lockTag: If true, permanently locks the tag so that it cannot be re-written after this write.

### 138.76.8 Properties

### 138.76.9 AntennaEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The on/off state of the antenna.
**Notes:**

You can turn the antenna off to save power.
You must turn the antenna on in order to detect and read RFID tags.
(Read and Write property)

### 138.76.10 TagPresent as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This property is true if a compatibile RFID tag is being read by the reader.
**Notes:**

TagPresent will remain true until the tag is out of range and can no longer be read.
(Read only property)

### 138.76.11 Events

### 138.76.12 TagFound(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when an RFID tag is read.
**Notes:**

Tag: Data from the tag
Protocol: Communication protocol of the tag

### 138.76.13 TagLost(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when an RFID tag that was being read is removed from the read range.
**Notes:**

Tag: Data from the lost tag
Protocol: Communication protocol of the lost tag

### 138.76.14 Constants

### 138.76.15 kProtocolEM4100 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the protocol constants.
**Notes:** EM4100

### 138.76.16 kProtocolISO11785_FDX_B = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the protocol constants.
**Notes:** ISO11785 FDX B

### 138.76.17 kProtocolPhidgets = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the protocol constants.
**Notes:** PhidgetTAG

# 138.77 class PhidgetServerMBS

## 138.77.1 class PhidgetServerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The class to describe a known server.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 138.77.2 Blog Entries

- MBS Xojo Plugins, version 22.4pr1

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

## 138.77.6 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.77.7 Properties

### 138.77.8 Address as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The address of the server.
**Notes:** (Read only property)

### 138.77.9 Flags as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Flags describing the server state.
**Notes:**

Flag is 1, if the server requires a password to authenticate.
(Read only property)

### 138.77.10 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 138.77.11 Host as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The hostname of the server.
**Notes:** (Read only property)

### 138.77.12 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The name of the server.
**Notes:** (Read only property)

### 138.77.13 Port as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The port number of the server.
**Notes:** (Read only property)

### 138.77.14 ServerType as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Name of the server type.
**Notes:** (Read only property)

### 138.77.15 Type as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The server type.
**Notes:** (Read only property)

### 138.77.16 Constants

### 138.77.17 kServerTypeDevice = 2

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:** Device

### 138.77.18 kServerTypeDeviceListener = 1

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:** Device Listener

### 138.77.19 kServerTypeDeviceRemote = 3

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:**

Phidget22 Server
Server discovery with this server type allows discovery of servers hosting Phidget devices. Enabling server discovery with this server type allows automated connection to these servers, and the Phidgets connected to them. Enabling server discovery with this server type will also enable ServerAdded and ServerRemoved events for this server type.

### 138.77.20 kServerTypeNone = 0

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.

### 138.77.21 kServerTypeSBC = 7

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:**

Phidget SBC
Server discovery with this server type detects the presence of Phidget SBCs on the network. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.

### 138.77.22 kServerTypeWww = 5

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:** WWW

### 138.77.23 kServerTypeWwwListener = 4

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:** WWW Listener

### 138.77.24 kServerTypeWwwRemote = 6

MBS Phidgets Plugin, Plugin Version: 22.4.

**Function:** One of the server types.
**Notes:**

Phidget22 Web server
Server discovery with this server type detects the presence of Phidget web servers used to communicate with in-browser JavaScript. Enabling server discovery with this server type will enable ServerAdded and ServerRemoved events for this server type.

## 138.78 class PhidgetSoundSensorMBS

### 138.78.1 class PhidgetSoundSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Sound Sensor class gathers data from the sound sensor on a Phidget board.
**Notes:**

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

### 138.78.4 Methods

### 138.78.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.78.6 Octaves as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The unweighted value of each frequency band.
**Notes:**

The following frequency bands are represented:
octaves [ 0 ] = 31.5 Hz
octaves [ 1 ] = 63 Hz
octaves [ 2 ] = 125 Hz

octaves [ 3 ] = 250 Hz
octaves [ 4 ] = 500 Hz
octaves [ 5 ] = 1 kHz
octaves [ 6 ] = 2 kHz
octaves [ 7 ] = 4 kHz
octaves [ 8 ] = 8 kHz
octaves [ 9 ] = 16 kHz

### 138.78.7 Properties

### 138.78.8 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another SPLChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between SPLChange events can also affected by the SPLChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.78.9 dB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent dB SPL value that has been calculated.
**Notes:**

This value is bounded by MaxdB.
(Read only property)

### 138.78.10 dBA as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent dBA SPL value that has been calculated.
**Notes:**

The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
(Read only property)

### 138.78.11 dBC as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent dBC SPL value that has been calculated.
**Notes:**

The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
(Read only property)

### 138.78.12 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.78.13 MaxdB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the SPLChange event will report.
**Notes:** (Read only property)

### 138.78.14 MaxSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that SPLChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.78.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.78.16 MinSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that SPLChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.78.17 NoiseFloor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum SPL value that the channel can accurately measure.
**Notes:**

Input SPLs below this level will not produce an output from the microphone.
(Read only property)

### 138.78.18 SPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a SPLChange event until the dB value has changed by the amount specified by the SPLChangeTrigger.
**Notes:**

Setting the SPLChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.78.19 SPLRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When selecting a range, first decide how sensitive you want the microphone to be.
**Notes:**

Select a smaller range when you want more sensitivity from the microphone.
If a Saturation event occurrs, increase the range.
(Read and Write property)

### 138.78.20 Events

### 138.78.21 SPLChanged(dB as Double, dBA as Double, dBC as Double, octaves() as Double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent SPL values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a SPLChangeTrigger has been set to a non-zero value, the SPLChange event will not occur until the dB SPL value has changed by at least the SPLChangeTrigger value.
The dB SPL value is calculated from the Octaves data.
The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
The following frequency bands are represented:

octaves [ 0 ] = 31.5 Hz
octaves [ 1 ] = 63 Hz
octaves [ 2 ] = 125 Hz
octaves [ 3 ] = 250 Hz
octaves [ 4 ] = 500 Hz
octaves [ 5 ] = 1 kHz
octaves [ 6 ] = 2 kHz
octaves [ 7 ] = 4 kHz
octaves [ 8 ] = 8 kHz
octaves [ 9 ] = 16 kHz

dB: The dB SPL value.
dBA: The dBA SPL value.
dBC: The dBC SPL value.
Octaves: The dB SPL value for each band.

### 138.78.22 Constants

### 138.78.23 SPLRange102dB = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the sound sensor.
**Notes:** Range 102dB

### 138.78.24 SPLRange82dB = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the sound sensor.
**Notes:** Range 82dB

# 138.79 class PhidgetSpatialMBS

## 138.79.1 class PhidgetSpatialMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Spatial class simultaneously gathers data from the acceleromter, gyroscope and magnetometer on a Phidget board.
**Notes:**

You can also use the individual classes for these sensors if you want to handle the data in separate events.
Subclass of the PhidgetMBS class.

## 138.79.2 Blog Entries

## 138.79.4 Methods

## 138.79.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.79.6 resetMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the MagnetometerCorrectionParameters to their default values.
**Notes:** Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

### 138.79.7 saveMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Saves the MagnetometerCorrectionParameters.
**Notes:** Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

### 138.79.8 setAHRSParameters(angularVelocityThreshold as double, AngularVelocityDeltaThreshold as double, accelerationThreshold as double, magTime as double, accelTime as double, biasTime as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calibrate your device for the environment it will be used in.
**Notes:**

Setting these parameters will allow you to tune the AHRS algorithm on the device to your specific application.

angularVelocityThreshold: The maximum angular velocity reading where the device is assumed to be "at rest"
AngularVelocityDeltaThreshold: The acceptable amount of change in angular velocity between measurements before movement is assumed.
accelerationThreshold: The maximum acceleration applied to the device (minus gravity) where it is assumed to be "at rest". This is also the maximum acceleration allowable before the device stops correcting to the acceleration vector.
magTime: The time it will take to correct the heading 95% of the way to aligning with the compass (in seconds),up to 15 degrees of error. Beyond 15 degrees, this is the time it will take for the bearing to move 45 degrees towards the compass reading. Remember you can zero the algorithm at any time to instantly realign the spatial with acceleration and magnetic field vectors regardless of magnitude.
accelTime: The time it will take to correct the pitch and roll 95% of the way to aligning with the accelerom-

eter (in seconds).
biasTime: The time it will take to have the gyro biases settle to within 95% of the measured steady state (in seconds).

### 138.79.9 setMagnetometerCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Calibrate your device for the environment it will be used in.
**Notes:**

Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.
T5: Provided by calibration program.

### 138.79.10 zeroAlgorithm

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Zeros the AHRS algorithm.

### 138.79.11 zeroGyro

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Re-zeros the gyroscope in 1-2 seconds.
**Notes:**

The device must be stationary when zeroing.
The angular rate will be reported as 0.0¬∞/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

### 138.79.12 Properties

### 138.79.13 Algorithm as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Selects the IMU/AHRS algorithm.
**Notes:** (Read and Write property)

### 138.79.14 AlgorithmMagnetometerGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The gain for the magnetometer in the AHRS algorithm.
**Notes:**

Lower gains reduce sensor noise while slowing response time.
(Read and Write property)

### 138.79.15 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another SpatialData event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

### 138.79.16 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Whether self-heating temperature stabilization is enabled.
**Notes:**

Set to true to enable the temperature stabilization feature of this device.
This enables on-board heating elements to bring the board up to a known temperature to minimize ambient temperature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

### 138.79.17 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.79.18 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.79.19 Events

### 138.79.20 AlgorithmData(quaternion() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent IMU/AHRS Quaternion will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

quaternion: The quaternion value - [ x, y, z, w ]
timestamp: The timestamp value

### 138.79.21 SpatialData(acceleration() as double, angularRate() as double, magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent values that your channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

acceleration: The acceleration vaulues
angularRate: The angular rate values
magneticField: The field strength values
timestamp: The timestamp value

### 138.79.22 Constants

### 138.79.23 kFilterTypeLogicLevel = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the filter types.
**Notes:** Logic level

### 138.79.24 kFilterTypeZeroCrossing = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the filter types.
**Notes:** Zero crossing

### 138.79.25 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing NPN digital sensors.

### 138.79.26 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the input modes.
**Notes:** For interfacing PNP digital sensors.

### 138.79.27 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 12 volts

### 138.79.28 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 24 volts

### 138.79.29 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** Switch the sensor power supply off.

### 138.79.30 kSpatialAlgorithmAHRS = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the spatial algorithm.
**Notes:** AHRS algorithm, incorporating magnetometer data for yaw correction.

### 138.79.31 kSpatialAlgorithmIMU = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the spatial algorithm.
**Notes:** IMU algorithm, using gyro and accelerometer, but not magnetometer.

### 138.79.32 kSpatialAlgorithmNone = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the spatial algorithm.
**Notes:** No AHRS algorithm is used.

## 138.80 class PhidgetStepperMBS

### 138.80.1 class PhidgetStepperMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Stepper class powers and controls the stepper motor connected to the Phidget controller, allowing you to change the position, velocity, acceleration, and current limit.
**Notes:** Subclass of the PhidgetMBS class.

### 138.80.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.80.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.80.4 Methods

### 138.80.5 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Adds an offset (positive or negative) to the current position and target position.
**Notes:** This is especially useful for zeroing position.

### 138.80.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.80.7 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Stepper channels, this will disengage the motor. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.80.8 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
**Notes:** This function will fail if no failsafe timer has been set for the channel.

### 138.80.9 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets target position asynchronously.

**Notes:**

If the controller is configured and the TargetPosition is set, the Stepper motor will move towards the TargetPosition at the specified Acceleration and Velocity.

TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.

Calls setTargetPositionAsyncCompleted event later when done.

### 138.80.10 Properties

### 138.80.11 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The rate at which the controller can change the motor's Velocity.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
Changing the acceleration value while the stepper is in motion (especially at speeds higher than 1000 1/16th steps/s) can cause unpredictable results due to the inability of the processor tocalculate a new acceleration curve quickly enough. Generally you should wait until the motor is stationary until calling this function.
(Read and Write property)

### 138.80.12 ControlMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Use step mode when you want to set a TargetPosition for the Stepper motor.
**Notes:**

Use run mode when you simply want the Stepper motor to rotate continuously in a specific direction.Changing the control mode while the motor is running will result in the following behaviour:
Step ->Run : The motor will keep moving in the direction it's currently going, and will accelerate to max velocity.
Run ->Step : The motor will set the target position to infinity in the direction it's currently going, at the current velocity.

(Read and Write property)

### 138.80.13 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The current through the motor will be limited by the CurrentLimit.
**Notes:**

See your Stepper motor's data sheet for more information about what value the CurrentLimit should be.

Unit: amperes (A)
(Read and Write property)

### 138.80.14 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the controller will fire another PositionChange/VelocityChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

### 138.80.15 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When this property is true, the controller will supply power to the motor coils.
**Notes:**

The controller must be Engaged in order to move the Stepper motor, or have it hold position.
(Read and Write property)

### 138.80.16 HoldingCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The HoldingCurrentLimit will activate when the TargetPosition has been reached.
**Notes:**

It will limit current through the motor.
When the motor is not stopped, the current through the motor is limited by the CurrentLimit.
If no HoldingCurrentLimit is specified, the CurrentLimit value will persist when the motor is stopped.
Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.
(Read and Write property)

### 138.80.17 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** IsMoving returns true while the controller is sending commands to the motor.
**Notes:**

Note: there is no feedback to the controller, so it does not know whether the motor shaft is actually moving or not.
(Read only property)

### 138.80.18 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Acceleration can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.19 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that CurrentLimit and HoldingCurrentLimit can be set to.
**Notes:**

Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

### 138.80.20 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.80.21 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.80.22 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TargetPosition can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.23 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that VelocityLimit can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.24 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Acceleration can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.25 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that CurrentLimit and HoldingCurrentLimit can be set to.
**Notes:**

Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

### 138.80.26 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.80.27 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

in milliseconds.
(Read only property)

### 138.80.28 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TargetPosition can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.29 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that VelocityLimit can be set to.
**Notes:**

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.

The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.30 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent position value that the controller has reported.
**Notes:**

This value will always be between MinPosition and MaxPosition.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.31 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Applies a factor to the [ user units ] per step to all movement parameters to make the units in your application is more intuitive.
**Notes:**

For example, starting from position 0 and setting a new position with a rescale factor, the stepper will move Position / RescaleFactor steps.
In this way, units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

### 138.80.32 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** If the controller is configured and the TargetPosition is set, the Stepper motor will move towards the TargetPosition at the specified Acceleration and Velocity.
**Notes:**

TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The Rescale-

Factor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

### 138.80.33 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent velocity value that the controller has reported.
**Notes:**

This value is bounded by MinVelocityLimit and MaxVelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

### 138.80.34 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** When moving, the Stepper motor velocity will be limited by this value.
**Notes:**

The VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.
When in step mode, the MinVelocityLimit has a value of 0. This is because the sign (¬±) of the TargetPosition will indicate the direction.
When in run mode, the MinVelocityLimit has a value of -MaxVelocityLimit. This is because there is no target position, so the direction is defined by the sign (¬±) of the VelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

### 138.80.35 Events

### 138.80.36 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the controller updates the stepper motor position.

**Notes:** This event will still fire even if the motor is blocked from physically moving or misses steps.

### 138.80.37 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when target position is set asynchronously.

### 138.80.38 Stopped

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the motor controller stops.
**Notes:** The motor may still be physically moving if the inertia is great enough to make it misstep.

### 138.80.39 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Occurs when the stepper motor velocity changes.
**Notes:** velocity: Velocity of the stepper. Sign indicates direction.

### 138.80.40 Constants

### 138.80.41 kControlModeRun = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the control mode constants.
**Notes:** Control the motor by selecting a target velocity (sign indicates direction). The motor will rotate continously in the chosen direction.

### 138.80.42 kControlModeStep = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the control mode constants.
**Notes:** Control the motor by setting a target position.

# 138.81 class PhidgetTemperatureSensorMBS

## 138.81.1 class PhidgetTemperatureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Temperature Sensor class gathers data from the temperature sensor on a Phidget board. # **Notes:**

This includes on-board ambient temperature sensors, connected thermocouples or platinum RTDs, and IR temperature sensors. This class is also used to measure the temperature on some high-power Phidget boards such as motor controllers for safety reasons.

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

- Rewritten Phidgets Plugin

## 138.81.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.81.4 Methods

## 138.81.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.81.6 Properties

## 138.81.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another TemperatureChange event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between TemperatureChange events can also affected by the TemperatureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.81.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.81.9 MaxTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the TemperatureChange event will report.
**Notes:**

In degrees celsius.
(Read only property)

### 138.81.10 MaxTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that TemperatureChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.81.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.81.12 MinTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the TemperatureChange event will report.
**Notes:**

In degrees celsius.
(Read only property)

### 138.81.13 MinTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that TemperatureChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.81.14 RTDType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The RTDType must correspond to the RTD type you are using in your application.
**Notes:**

If you are unsure which RTDType to use, visit your device's User Guide for more information.
(Read and Write property)

### 138.81.15 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The RTDWireSetup must correspond to the wire configuration you are using in your application.
**Notes:**

If you are unsure which RTDWireSetup to use, visit your device's User Guide for more information.
(Read and Write property)

### 138.81.16 Temperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent temperature value that the channel has reported.
**Notes:**

This value will always be between MinTemperature and MaxTemperature.
in degrees celsius.
(Read only property)

### 138.81.17 TemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a TemperatureChange event until the temperature value has changed by the amount specified by the TemperatureChangeTrigger.
**Notes:**

Setting the TemperatureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In degrees celsius.
(Read and Write property)

### 138.81.18 ThermocoupleType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The ThermocoupleType must correspond to the thermocouple type you are using in your application.

**Notes:**

If you are unsure which ThermocoupleType to use, visit the Thermocouple Primer for more information.
(Read and Write property)

### 138.81.19 Events

### 138.81.20 TemperatureChanged(temperature as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent temperature value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:** If a TemperatureChangeTrigger has been set to a non-zero value, the TemperatureChange event will not occur until the temperature has changed by at least the TemperatureChangeTrigger value.

### 138.81.21 Constants

### 138.81.22 kRTDTypePT1000_3850 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD sensor types.
**Notes:** Configures the RTD type as a PT1000 with a 3850ppm curve.

### 138.81.23 kRTDTypePT1000_3920 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD sensor types.
**Notes:** Configures the RTD type as a PT100 with a 3920ppm curve.

### 138.81.24 kRTDTypePT100_3850 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD sensor types.
**Notes:** Configures the RTD type as a PT100 with a 3850ppm curve.

### 138.81.25 kRTDTypePT100_3920 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD sensor types.
**Notes:** Configures the RTD type as a PT100 with a 3920ppm curve.

### 138.81.26 kRTDWireSetup2Wire = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 2-wire RTD setup.

### 138.81.27 kRTDWireSetup3Wire = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 3-wire RTD setup.

### 138.81.28 kRTDWireSetup4Wire = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the RTD wiring configuration constants.
**Notes:** Configures the device to make resistance calculations based on a 4-wire RTD setup.

### 138.81.29 kThermoCoupleTypeE = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the thermocouple type constants.
**Notes:** Configures the thermocouple input as a E-Type thermocouple.

### 138.81.30 kThermoCoupleTypeJ = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the thermocouple type constants.
**Notes:** Configures the thermocouple input as a J-Type thermocouple.

### 138.81.31 kThermoCoupleTypeK = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the thermocouple type constants.
**Notes:** Configures the thermocouple input as a K-Type thermocouple.

### 138.81.32 kThermoCoupleTypeT = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the thermocouple type constants.
**Notes:** Configures the thermocouple input as a T-Type thermocouple.

## 138.82 class PhidgetUnitInfoMBS

### 138.82.1 class PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The name, symbol, and Phidgets enumeration of the units of the sensor value calculated from the analog sensor's measurements.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 138.82.2 Methods

### 138.82.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 138.82.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The destructor.

### 138.82.5 Properties

### 138.82.6 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The name.
**Notes:** (Read only property)

### 138.82.7 Symbol as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The symbol.
**Notes:** (Read only property)

### 138.82.8 Unit as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The unit.
**Notes:** (Read only property)

### 138.82.9 Constants

### 138.82.10 kUnitAmpere = 10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Ampere

### 138.82.11 kUnitBoolean = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Boolean

### 138.82.12 kUnitCentimeter = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Centimeter

### 138.82.13 kUnitDecibel = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Decibel

### 138.82.14 kUnitDegreeCelcius = 13

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Degree Celcius

### 138.82.15 kUnitGauss = 15

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Gauss

### 138.82.16 kUnitGram = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** gram

### 138.82.17 kUnitKilogram = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Kilogram

### 138.82.18 kUnitKiloPascal = 11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Kilo Pascal

### 138.82.19 kUnitLux = 14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Lux

### 138.82.20 kUnitMeter = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Meter

### 138.82.21 kUnitMilliampere = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Milliampere

### 138.82.22 kUnitMillimeter = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Millimeter

### 138.82.23 kUnitNone = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Unitless

### 138.82.24 kUnitPercent = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Percent

### 138.82.25 kUnitPH = 16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** pH

### 138.82.26 kUnitVolt = 12

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Volt

### 138.82.27 kUnitWatt = 17

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the unit constants.
**Notes:** Watt

# 138.83 class PhidgetVoltageInputMBS

## 138.83.1 class PhidgetVoltageInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Voltage Input class measures the voltage across the input of a Phidget with a voltage input.
**Notes:**

This may be a sensor designed to measure voltage directly, or it could be an input designed to interface with 0-5V sensors.

For 0-5V sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

## 138.83.2 Blog Entries

## 138.83.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.83.4 Methods

## 138.83.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.83.6 Properties

## 138.83.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger values.

Unit: milliseconds (ms)
(Read and Write property)

### 138.83.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.83.9 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the VoltageChange event will report.
**Notes:**

In volts.
(Read only property)

### 138.83.10 MaxVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that VoltageChangeTrigger can be set to.
**Notes:**

In volts.
(Read only property)

### 138.83.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.83.12 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the VoltageChange event will report.
**Notes:**

In volts.
(Read only property)

### 138.83.13 MinVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that VoltageChangeTrigger can be set to.
**Notes:**

In volts.
(Read only property)

### 138.83.14 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose the power supply voltage.
**Notes:**

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.
(Read and Write property)

### 138.83.15 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula.
**Notes:**

By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

- The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.
- Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

### 138.83.16 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The unit of measurement that applies to the sensor values of the SensorType that has been selected.
**Notes:**

Helps keep track of the type of information being calculated from the voltage input.
(Read only property)

### 138.83.17 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent sensor value that the channel has reported.
**Notes:**

Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

### 138.83.18 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
**Notes:**

Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.83.19 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent voltage value that the channel has reported.
**Notes:**

This value will always be between MinVoltage and MaxVoltage.
In volts.
(Read only property)

### 138.83.20 VoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a VoltageChange event until the voltage value has changed by the amount specified by the VoltageChangeTrigger.
**Notes:**

Setting the VoltageChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In volts.
(Read and Write property)

### 138.83.21 VoltageRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The voltage range you choose should allow you to measure the full range of your input signal.
**Notes:**

A larger VoltageRange equates to less resolution.
If a Saturation event occurs, increase the voltage range.
(Read and Write property)

### 138.83.22 Events

### 138.83.23 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to kSensorTypeVoltage.

### 138.83.24 VoltageChanged(voltage as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent voltage value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a VoltageChangeTrigger has been set to a non-zero value, the VoltageChange event will not occur until the voltage has changed by at least the VoltageChangeTrigger value.
If SensorType is supported and set to anything other then kSensorTypeVoltage, this event will not fire.
In volts.

### 138.83.25 Constants

### 138.83.26 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 12 volts

### 138.83.27 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** The sensor is provided with 24 volts

### 138.83.28 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the power supply.
**Notes:** Switch the sensor power supply off.

### 138.83.29 kSensorType1114 = & h2b84

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1114 - Temperature Sensor

### 138.83.30 kSensorType1117 = & h2ba2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1117 - Voltage Sensor

### 138.83.31 kSensorType1123 = & h2bde

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1123 - Precision Voltage Sensor

### 138.83.32 kSensorType1127 = & h2c06

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1127 - Precision Light Sensor

### 138.83.33 kSensorType1130ORP = & h2c26

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1130 - ORP Adapter

### 138.83.34 kSensorType1130PH = & h2c25

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1130 - pH Adapter

### 138.83.35 kSensorType1132 = & h2c38

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1132 - 4-20mA Adapter

### 138.83.36 kSensorType1133 = & h2c42

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1133 - Sound Sensor

### 138.83.37 kSensorType1135 = & h2c56

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1135 - Precision Voltage Sensor

### 138.83.38 kSensorType1142 = & h2c9c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1142 - Light Sensor 1000 lux

### 138.83.39 kSensorType1143 = & h2ca6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 1143 - Light Sensor 70000 lux

### 138.83.40 kSensorType3500 = & h88b8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3500 - AC Current Sensor 10Amp

### 138.83.41 kSensorType3501 = & h88c2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3501 - AC Current Sensor 25Amp

### 138.83.42 kSensorType3502 = & h88cc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3502 - AC Current Sensor 50Amp

### 138.83.43 kSensorType3503 = & h88d6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3503 - AC Current Sensor 100Amp

### 138.83.44 kSensorType3507 = & h88fe

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3507 - AC Voltage Sensor 0-250V (50Hz)

### 138.83.45 kSensorType3508 = & h8908

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3508 - AC Voltage Sensor 0-250V (60Hz)

### 138.83.46 kSensorType3509 = & h8912

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3509 - DC Voltage Sensor 0-200V

### 138.83.47 kSensorType3510 = & h891c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3510 - DC Voltage Sensor 0-75V

### 138.83.48 kSensorType3511 = & h8926

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3511 - DC Current Sensor 0-10mA

### 138.83.49 kSensorType3512 = & h8930

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3512 - DC Current Sensor 0-100mA

### 138.83.50 kSensorType3513 = & h893a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3513 - DC Current Sensor 0-1A

### 138.83.51 kSensorType3514 = & h8944

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3514 - AC Active Power Sensor 0-250V*0-30A (50Hz)

### 138.83.52 kSensorType3515 = & h894e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3515 - AC Active Power Sensor 0-250V*0-30A (60Hz)

### 138.83.53 kSensorType3516 = & h8958

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3516 - AC Active Power Sensor 0-250V*0-5A (50Hz)

### 138.83.54 kSensorType3517 = & h8962

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3517 - AC Active Power Sensor 0-250V*0-5A (60Hz)

### 138.83.55 kSensorType3518 = & h896c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3518 - AC Active Power Sensor 0-110V*0-5A (60Hz)

### 138.83.56 kSensorType3519 = & h8976

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3519 - AC Active Power Sensor 0-110V*0-15A (60Hz)

### 138.83.57 kSensorType3584 = & h8c00

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3584 - 0-50A DC Current Transducer

### 138.83.58 kSensorType3585 = & h8c0a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3585 - 0-100A DC Current Transducer

### 138.83.59 kSensorType3586 = & h8c14

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3586 - 0-250A DC Current Transducer

### 138.83.60 kSensorType3587 = & h8c1e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3587 - +-50A DC Current Transducer

### 138.83.61 kSensorType3588 = & h8c28

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3588 - +-100A DC Current Transducer

### 138.83.62 kSensorType3589 = & h8c32

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** 3589 - +-250A DC Current Transducer

### 138.83.63 kSensorTypeMOT2002High = & h4e36

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** MOT2002 - Motion Sensor High Sensitivity

### 138.83.64 kSensorTypeMOT2002Low = & h4e34

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** MOT2002 - Motion Sensor Low Sensitivity

### 138.83.65 kSensorTypeMOT2002Med = & h4e35

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** MOT2002 - Motion Sensor Medium Sensitivity

### 138.83.66 kSensorTypeVCP4114 = & ha0b4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** VCP4114 - +-25A DC Current Transducer

### 138.83.67 kSensorTypeVoltage = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the sensor types.
**Notes:** Generic voltage sensor, Default. Configures the channel to be a generic voltage sensor. Unit is volts.

### 138.83.68 kVoltageRange1000mV = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±1000mV DC

### 138.83.69 kVoltageRange10mV = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±10mV DC

### 138.83.70 kVoltageRange15V = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±15V DC

### 138.83.71 kVoltageRange200mV = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±200mV DC

### 138.83.72 kVoltageRange2V = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±2V DC

### 138.83.73 kVoltageRange312_5mV = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±312.5mV DC

### 138.83.74 kVoltageRange400mV = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±400mV DC

### 138.83.75 kVoltageRange40mV = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±40mV DC

### 138.83.76 kVoltageRange40V = 10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±40V DC

### 138.83.77 kVoltageRange5V = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Range ¬±5V DC

### 138.83.78 kVoltageRangeAUTO = 11

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the measurement range of the voltage input.
**Notes:** Auto-range mode changes based on the present voltage measurements.

# 138.84 class PhidgetVoltageOutputMBS

## 138.84.1 class PhidgetVoltageOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Voltage Output class controls the variable DC voltage output on a Phidget board.
**Notes:**

This class provides settings for the output voltage as well as various safety controls.
Subclass of the PhidgetMBS class.

## 138.84.2 Blog Entries

- Rewritten Phidgets Plugin

## 138.84.3 Blog Entries

- Rewritten Phidgets Plugin

## 138.84.4 Methods

## 138.84.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

## 138.84.6 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enables the failsafe feature for the channel, with a given failsafe time.
**Notes:**

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Voltage Output channels, this will set the output voltage to 0V. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

### 138.84.7 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Resets the failsafe timer, if one has been set.
**Notes:**

See EnableFailsafe for details.
This function will fail if no failsafe timer has been set for the channel.

### 138.84.8 setVoltageAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the voltage value that the channel will output.
**Notes:**

The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.

Run asynchronously in the background and calls setVoltageAsyncCompleted event when done.

### 138.84.9 Properties

### 138.84.10 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enable the output voltage by setting Enabled to true.
**Notes:**

Disable the output by seting Enabled to false to save power.
(Read and Write property)

### 138.84.11 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

In milliseconds.
(Read only property)

### 138.84.12 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that Voltage can be set to.
**Notes:**

In volts.
(Read only property)

### 138.84.13 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that failsafeTime can be set to when calling EnableFailsafe.
**Notes:**

In milliseconds.
(Read only property)

### 138.84.14 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that Voltage can be set to.
**Notes:**

In volts.
(Read only property)

### 138.84.15 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The voltage value that the channel will output.
**Notes:**

The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.
(Read and Write property)

### 138.84.16 VoltageOutputRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose a VoltageOutputRange that best suits your application.
**Notes:**

Changing the VoltageOutputRange will also affect the MinVoltage and MaxVoltage values.
(Read and Write property)

### 138.84.17 Events

### 138.84.18 setVoltageAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called by setVoltageAsync.

### 138.84.19 Constants

### 138.84.20 kVoltageOutputRange10V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the output voltage range.
**Notes:** ¬±10V DC

### 138.84.21 kVoltageOutputRange5V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the constants for the output voltage range.
**Notes:** 0-5V DC

## 138.85 class PhidgetVoltageRatioInputMBS

### 138.85.1 class PhidgetVoltageRatioInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The Voltage Ratio Input class is used for measuring the ratio between the voltage supplied to and the voltage returned from an attached sensor or device.
**Notes:**

This is useful for interfacing with ratiometric sensors or wheatstone bridge based sensors.

For ratiometric sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

### 138.85.2 Blog Entries

- Rewritten Phidgets Plugin

### 138.85.3 Blog Entries

- Rewritten Phidgets Plugin

### 138.85.4 Methods

### 138.85.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 138.85.6 Properties

### 138.85.7 BridgeEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Enable power to and data from the input by setting BridgeEnabled to true.
**Notes:** (Read and Write property)

### 138.85.8 BridgeGain as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Choose a BridgeGain that best suits your application.
**Notes:**

For more information about the range and accuracy of each BridgeGain to decide which best suits your application, see your device's User Guide.
(Read and Write property)

### 138.85.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The DataInterval is the time that must elapse before the channel will fire another event.
**Notes:**

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

### 138.85.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.85.11 MaxVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value the VoltageRatioChange event will report.
**Notes:** (Read only property)

### 138.85.12 MaxVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The maximum value that VoltageRatioChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.85.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that DataInterval can be set to.
**Notes:**

Unit: milliseconds (ms)
(Read only property)

### 138.85.14 MinVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value the VoltageRatioChange event will report.
**Notes:** (Read only property)

### 138.85.15 MinVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The minimum value that VoltageRatioChangeTrigger can be set to.
**Notes:** (Read only property)

### 138.85.16 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries sensor type.
**Notes:**

We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula. By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.

Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

### 138.85.17 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The unit of measurement that applies to the sensor values of the SensorType that has been selected.
**Notes:**

Helps keep track of the type of information being calculated from the voltage ratio input.
(Read only property)

### 138.85.18 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent sensor value that the channel has reported.
**Notes:**

Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

### 138.85.19 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
**Notes:**

Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.85.20 VoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The most recent voltage ratio value that the channel has reported.
**Notes:**

This value will always be between MinVoltageRatio and MaxVoltageRatio.
(Read only property)

### 138.85.21 VoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** The channel will not issue a VoltageRatioChange event until the voltage ratio value has changed by the amount specified by the VoltageRatioChangeTrigger.
**Notes:**

Setting the VoltageRatioChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

### 138.85.22 Events

### 138.85.23 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to SENSOR_TYPE_VOLTAGERATIO

sensorValue: The sensor value
sensorUnit: The sensor unit information corresponding to the SensorValue.
Helps keep track of the type of information being calculated from the voltage ratio input.

### 138.85.24 VoltageRatioChanged(voltageRatio as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The most recent voltage ratio value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
**Notes:**

If a VoltageRatioChangeTrigger has been set to a non-zero value, the VoltageRatioChange event will not occur until the voltage has changed by at least the VoltageRatioChangeTrigger value.
If SensorType is supported and set to anything other then SENSOR_TYPE_VOLTAGERATIO, this event will not fire.

### 138.85.25 Constants

### 138.85.26 kBridgeGain1 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 1x Amplification

### 138.85.27 kBridgeGain128 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 128x Amplification

### 138.85.28 kBridgeGain16 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 16x Amplification

### 138.85.29 kBridgeGain2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 2x Amplification

### 138.85.30 kBridgeGain32 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 32x Amplification

### 138.85.31 kBridgeGain4 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 4x Amplification

### 138.85.32 kBridgeGain64 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 64x Amplification

### 138.85.33 kBridgeGain8 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the bridge gain amplification constants.
**Notes:** 8x Amplification

### 138.85.34 kSensorType1101_Sharp_2D120X = & h2b03

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1101 - IR Distance Adapter, with Sharp Distance Sensor 2D120X (4-30cm)

### 138.85.35 kSensorType1101_Sharp_2Y0A02 = & h2b05

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1101 - IR Distance Adapter, with Sharp Distance Sensor 2Y0A02 (20-150cm)

### 138.85.36 kSensorType1101_Sharp_2Y0A21 = & h2b04

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1101 - IR Distance Adapter, with Sharp Distance Sensor 2Y0A21 (10-80cm)

### 138.85.37 kSensorType1102 = & h2b0c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1102 - IR Reflective Sensor 5mm

### 138.85.38 kSensorType1103 = & h2b16

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1103 - IR Reflective Sensor 10cm

### 138.85.39 kSensorType1104 = & h2b20

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1104 - Vibration Sensor

### 138.85.40 kSensorType1105 = & h2b2a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1105 - Light Sensor

### 138.85.41 kSensorType1106 = & h2b34

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1106 - Force Sensor

### 138.85.42 kSensorType1107 = & h2b3e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1107 - Humidity Sensor

### 138.85.43 kSensorType1108 = & h2b48

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1108 - Magnetic Sensor

### 138.85.44 kSensorType1109 = & h2b52

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1109 - Rotation Sensor

### 138.85.45 kSensorType1110 = & h2b5c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1110 - Touch Sensor

### 138.85.46 kSensorType1111 = & h2b66

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1111 - Motion Sensor

### 138.85.47 kSensorType1112 = & h2b70

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1112 - Slider 60

### 138.85.48 kSensorType1113 = & h2b7a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1113 - Mini Joy Stick Sensor

### 138.85.49 kSensorType1115 = & h2b8e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1115 - Pressure Sensor

### 138.85.50 kSensorType1116 = & h2b98

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1116 - Multi-turn Rotation Sensor

### 138.85.51 kSensorType1118_AC = & h2bad

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1118 - 50Amp Current Sensor AC

### 138.85.52 kSensorType1118_DC = & h2bae

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1118 - 50Amp Current Sensor DC

### 138.85.53 kSensorType1119_AC = & h2bb7

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1119 - 20Amp Current Sensor AC

### 138.85.54 kSensorType1119_DC = & h2bb8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1119 - 20Amp Current Sensor DC

### 138.85.55 kSensorType1120 = & h2bc0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1120 - FlexiForce Adapter

### 138.85.56 kSensorType1121 = & h2bca

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1121 - Voltage Divider

### 138.85.57 kSensorType1122_AC = & h2bd5

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1122 - 30 Amp Current Sensor AC

### 138.85.58 kSensorType1122_DC = & h2bd6

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1122 - 30 Amp Current Sensor DC

### 138.85.59 kSensorType1124 = & h2be8

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1124 - Precision Temperature Sensor

### 138.85.60 kSensorType1125_Humidity = & h2bf3

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1125 - Humidity Sensor

### 138.85.61 kSensorType1125_Temperature = & h2bf4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1125 - Temperature Sensor

### 138.85.62 kSensorType1126 = & h2bfc

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1126 - Differential Air Pressure Sensor +- 25kPa

### 138.85.63 kSensorType1128 = & h2c10

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1128 - MaxBotix EZ-1 Sonar Sensor

### 138.85.64 kSensorType1129 = & h2c1a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1129 - Touch Sensor

### 138.85.65 kSensorType1131 = & h2c2e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1131 - Thin Force Sensor

### 138.85.66 kSensorType1134 = & h2c4c

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1134 - Switchable Voltage Divider

### 138.85.67 kSensorType1136 = & h2c60

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1136 - Differential Air Pressure Sensor +-2 kPa

### 138.85.68 kSensorType1137 = & h2c6a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1137 - Differential Air Pressure Sensor +-7 kPa

### 138.85.69 kSensorType1138 = & h2c74

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1138 - Differential Air Pressure Sensor 50 kPa

### 138.85.70 kSensorType1139 = & h2c7e

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1139 - Differential Air Pressure Sensor 100 kPa

### 138.85.71 kSensorType1140 = & h2c88

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1140 - Absolute Air Pressure Sensor 20-400 kPa

### 138.85.72 kSensorType1141 = & h2c92

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1141 - Absolute Air Pressure Sensor 15-115 kPa

### 138.85.73 kSensorType1146 = & h2cc4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 1146 - IR Reflective Sensor 1-4mm

### 138.85.74 kSensorType3120 = & h79e0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3120 - Compression Load Cell (0-4.5 kg)

### 138.85.75 kSensorType3121 = & h79ea

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3121 - Compression Load Cell (0-11.3 kg)

### 138.85.76 kSensorType3122 = & h79f4

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3122 - Compression Load Cell (0-22.7 kg)

### 138.85.77 kSensorType3123 = & h79fe

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3123 - Compression Load Cell (0-45.3 kg)

### 138.85.78 kSensorType3130 = & h7a44

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3130 - Relative Humidity Sensor

### 138.85.79 kSensorType3520 = & h8980

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3520 - Sharp Distance Sensor (4-30cm)

### 138.85.80 kSensorType3521 = & h898a

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3521 - Sharp Distance Sensor (10-80cm)

### 138.85.81 kSensorType3522 = & h8994

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** 3522 - Sharp Distance Sensor (20-150cm)

### 138.85.82 kSensorTypeVoltageRatio = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

**Function:** One of the sensor type constants.
**Notes:** Generic ratiometric sensor, Default. Configures the channel to be a generic ratiometric sensor. Unit is volts/volt.

# Chapter 139

# Photos

## 139.1 control DesktopPHLivePhotoControlMBS

### 139.1.1 control DesktopPHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** A view that displays a Live Photo,Äîa picture that also includes motion and sound from the moments just before and after its capture.
**Notes:**

Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app,Äîsee the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer,Äîfor example, to install it on a different view for proper event handling in your app,Äôs view hierarchy,Äîuse the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

### 139.1.5 Xojo Developer Magazine

- 18.3, page 57: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

### 139.1.6 Methods

### 139.1.7 available as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether this control is available.

### 139.1.8 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Begins playback of Live Photo content in the view.
**Notes:**

style: An option for how much of the Live Photo,Äôs motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate,Äîfor example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

### 139.1.9 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Ends playback of Live Photo content in the view.
See also:

- 139.1.10 stopPlayback(animated as boolean) 22489

### 139.1.10 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Ends playback of Live Photo content in the view.
See also:

- 139.1.9 stopPlayback 22489

### 139.1.11 Properties

### 139.1.12 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The audio gain to apply to the Live Photo,Äôs movie content during playback.
**Notes:**

Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

### 139.1.13 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The content mode.
**Notes:** (Read and Write property)

### 139.1.14 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Live Photo displayed in the view.
**Notes:** (Read and Write property)

### 139.1.15 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** A view for displaying Live Photo status.
**Notes:**

The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don,Äôt need to do anything with view,Äôs content,Äîinstead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

### 139.1.16 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that determines whether the view plays the audio content of its Live Photo.
**Notes:**

The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

### 139.1.17 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 139.1.18 Events

### 139.1.19 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 139.1.20 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 139.1.21 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 139.1.22 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 139.1.23 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Notifies the delegate that Live Photo playback has ended.
**Notes:** playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

### 139.1.24 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 139.1.25 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 139.1.26 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 139.1.27 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 139.1.28 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 139.1.29 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 139.1.30 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 139.1.31 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 139.1.32 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 139.1.33 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Notifies the control that Live Photo playback is about to begin.
**Notes:** playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

### 139.1.34 Constants

### 139.1.35 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 21.5.

**Function:** One of the content mode constants.
**Notes:** Aspect Fill.

### 139.1.36 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 21.5.

**Function:** One of the content mode constants.
**Notes:** Aspect Fit.

### 139.1.37 PlaybackStyleFull = 1

MBS Mac64bit Plugin, Plugin Version: 21.5.

**Function:** One of the playback styles.
**Notes:** Plays back the entire motion and sound content of the Live Photo, including transition effects at

the start and end.

### 139.1.38 PlaybackStyleHint = 2

MBS Mac64bit Plugin, Plugin Version: 21.5.

**Function:** One of the playback styles.
**Notes:** Plays back only a brief section of the motion content of the Live Photo, without sound.

### 139.1.39 PlaybackStyleUndefined = 0

MBS Mac64bit Plugin, Plugin Version: 21.5.

**Function:** One of the playback styles.
**Notes:** This value is invalid for use.

## 139.2 class PHAdjustmentDataMBS

### 139.2.1 class PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A description of the edits made to an asset's photo, video, or Live Photo content, which allows your app to reconstruct or revert the effects of prior editing sessions.
**Notes:**

When a user edits an asset, Photos saves a PHAdjustmentData object along with the modified image or video data. This object provides an application-defined ‚Äúrecipe‚Äù you can use to reconstruct the edit. For example, if your app applies filters to a photo, you might might create adjustment data that identifies which filters the user picked, the parameters for each, and the order to apply the filters in. Later, the user can resume working with those filters and parameters by using your app or another app that understands your adjustment data format. When iCloud Photos is enabled, a user can revert or resume edits made on a different device.

You work with adjustment data when editing an asset, using either the requestContentEditingInputWithOptions method or a photo extension view controller that implements the PHContentEditingController protocol.

- When you begin an edit (through a PHContentEditingInputMBS object), examine the editing input‚Äôs adjustmentData property to decide whether the last edit made to the asset is compatible with your app. If so, you can allow the user to resume working with that edit. If not, you can make further edits to the last saved version of the photo.

- When you commit an edit (through a PHContentEditingOutputMBS object), provide a new adjustment whose data represents the changes your app made.

For each asset, Photos stores only one PHAdjustmentDataMBS object, representing the most recent edit made to the asset‚Äôs content.

### 139.2.2 Methods

### 139.2.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.11 or newer.

### 139.2.4 Constructor(formatIdentifier as string, formatVersion as string, data as Memoryblock)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Initializes an adjustment object with the specified format and data.
**Notes:**

formatIdentifier: A string that uniquely identifies the format of the adjustment data.
formatVersion: A version number for the adjustment data format.
data: A serialized form of whatever information is needed to reconstruct the adjustment.

Returns an initialized adjustment object.

To uniquely identify the adjustments your app makes, use the the formatIdentifier and formatVersion parameters. These parameters help you determine whether and how to interpret the adjustment data when working with an edited asset later. For best results, use reverse-DNS-style identifiers and monotonically increasing version numbers.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.

Use the data parameter to store whatever information is useful to your app for reconstructing an edit. For example, if your app applies Core Image filters to photos, you can use this parameter to store a serialized property list that describes the filters and their parameters.

Because Photos limits the size of adjustment data, you should keep your edit information short and descriptive. Don,Äôt use image data to describe an edit,Äîinstead, save only the minimal information that is needed to recreate the edit.
Your app must provide a non-empty Memoryblock for the data parameter. If you cannot provide relevant data to describe an edit, you may pass data that encodes an NSUUID object.

### 139.2.5 Properties

### 139.2.6 data as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Data that contains the information necessary to reconstruct the adjustment.
**Notes:**

Use this property to resume working with the last edit that was made to an asset. For example, if your app applies Core Image filters to photos, this property may hold a serialized property list that describes the filters and their parameters. Use the formatIdentifier and formatVersion properties to determine whether

the adjustment data saved with an asset is in a format that your app can understand.
(Read only property)

### 139.2.7 formatIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string uniquely identifying the format of the adjustment data.
**Notes:**

Set this identifier when you create an adjustment object with the constructor. For best results, identify your organization or product using a reverse-DNS-style name, such as com.example.myApp.

Read this property, and the formatVersion property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
(Read only property)

### 139.2.8 formatVersion as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A version number for the adjustment data format.
**Notes:**

Set this identifier when creating an adjustment object with the constructor.
Read this property, and the formatIdentifier property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.
(Read only property)

### 139.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 139.3 class PHAssetChangeRequestMBS

### 139.3.1 class PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change block.
**Notes:**

You use the PHAssetChangeRequest class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset,Äôs content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request,Äôs properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset,Äôs state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.

### 139.3.2 Methods

### 139.3.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.3.4 changeRequestForAsset(asset as PHAssetMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for modifying the specified asset.
**Notes:**

asset: The asset to be modified.

Returns an asset change request.

Before editing an asset, use its canPerformEditOperation method to see if the asset allows editing.

After you create a change request within a photo library change block, propose changes to the original asset,Äôs properties by setting the corresponding properties of the change request. After Photos runs your change block, the asset,Äôs properties reflect your changes. For details on change blocks, see PHPhotoLibraryMBS.

To edit an asset,Äôs image or video content, first begin a content editing session with the asset,Äôs requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.

### 139.3.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.3.6 creationRequestForAssetFromImage(image as NSImageMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new image asset to the Photos library.
**Notes:**

image: An image.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.
To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

### 139.3.7 creationRequestForAssetFromImageAtFile(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new image asset to the Photos library, using the image file at the specified URL.
**Notes:**

file: A URL for an image file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

### 139.3.8 creationRequestForAssetFromVideoAtFileURL(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new video asset to the Photos library, using the video file at the specified URL.
**Notes:**

file: A folderitem for a video file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

### 139.3.9 deleteAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests that the specified assets be deleted.
**Notes:**

assets: An array of PHAssetMBS objects to be deleted.

Call this method within a photo library change block to delete assets. For details on change blocks, see PHPhotoLibraryMBS.

### 139.3.10 revertAssetContentToOriginal

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Request to revert any edits made to the asset,Äôs content.
**Notes:**

When an asset has been edited, Photos stores multiple versions of the asset: the original version of the asset as it was first captured or imported, and the input and output of the most recent edit. (You work with asset versions when requesting to edit an asset,Äôs content,Äîsee PHContentEditingInputRequestOptions.) Call this method to revert to the original version of the asset, discarding all edits.

This request fails if original content for the asset is not available on the current device (for example, if iCloud Photo Library is enabled and the user has edited the asset on a different device). Use PHAssetResourceManagerMBS to ensure that original asset content is downloaded to the current device before making this request.

### 139.3.11 Properties

### 139.3.12 contentEditingOutput as PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The output of an asset content editing session.
**Notes:**

To edit an asset,Äôs image or video content, you must first begin a content editing session with the asset,Äôs requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.
(Read and Write property)

### 139.3.13 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The date and time at which the asset claims to have been originally created.
**Notes:**

Set this property to change the creation date of an asset.
(Read and Write property)

### 139.3.14 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The date and time at which the asset claims to have been originally created.
**Notes:**

Set this property to change the creation date of an asset.
(Read and Write property)

### 139.3.15 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the asset is marked as one of the user,Äôs favorites.
**Notes:** (Read and Write property)

### 139.3.16 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the asset is hidden in collections.
**Notes:**

Hidden assets do not appear in the Moments interface in the Photos app.
(Read and Write property)

### 139.3.17 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The location information saved with the asset.
**Notes:**

Typically, an asset,Äôs location metadata identifies the place where the asset was captured. Use this property to provide a different location.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read and Write property)

### 139.3.18 placeholderForCreatedAsset as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A placeholder object for the asset that the change request creates.
**Notes:**

Use this property if you need to reference the asset created by a change request within the same change block.
(Read only property)

## 139.4 class PHAssetCollectionChangeRequestMBS

### 139.4.1 class PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A request to create, delete, or modify a Photos asset collection, for use in a photo library change block.
**Notes:**

You use the PHAssetCollectionChangeRequestMBS class to request changes for PHAssetCollectionMBS objects. To make changes to asset collections (such as user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForAssetCollectionWithTitle: method to create a new asset collection.
- Call the deleteAssetCollections: method to delete existing asset collections.
- Call the changeRequestForAssetCollection: or changeRequestForAssetCollection:assets: method to modify a collection,Äôs metadata or list of member assets.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you,Äôre requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying an asset collection works like a mutable version of the asset collection object. Use the change request,Äôs properties and instance methods to request changes to the asset collection itself.

After Photos runs the change block and calls your completion handler, the asset collection,Äôs state reflects the changes you requested in the block.
If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

### 139.4.2 Methods

### 139.4.3 addAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Add the specified asset to the asset collection.
**Notes:**

asset: The PHAsset object to be added to the asset collection.

If you created the change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.4 addAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Add the specified assets to the asset collection.
**Notes:**

assets: An array of PHAsset objects to be added to the asset collection.

If you created the change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.4.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for modifying the specified asset collection.
**Notes:**

assetCollection: The asset collection to be modified.

Returns an asset collection change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when modifying an asset collection,Äôs metadata or when adding or removing assets without regard to their arrangement. To work with indexes in the list of member assets, use the changeRequestForAssetCollection method instead.
See also:

- 139.4.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS 22507

### 139.4.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for modifying the specified asset collection, with a fetch result for tracking changes.
**Notes:**

assetCollection: The asset collection to be modified.
assets: A fetch result listing the assets in the collection.

Returns an asset collection change request.

After you create a change request within a photo library change block, you propose changes to the collection,Äôs title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange assets at specified indexes in the asset collection,Äôs list of member assets. By passing in a fetch result reflecting what your app sees as the current state of the collection,Äôs membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don,Äôt need to work with indexes in the list of member assets, you can use the changeRequestForAssetCollection method instead.
See also:

- 139.4.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS 22506

### 139.4.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.4.9 creationRequestForAssetCollectionWithTitle(title as string) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new asset collection to the Photos library.
**Notes:**

image: A name for the new asset collection.

Returns an asset collection creation request.

Call this method within a photo library change block to create a new asset collection. For details on change blocks, see PHPhotoLibraryMBS.
To add assets to the newly created asset collection or change its title, use the methods listed in Modifying Asset Collections. To reference the newly created asset collection later in the same change block or after the change block completes, use the placeholderForCreatedAssetCollection property to retrieve a placeholder object.

### 139.4.10 deleteAssetCollections(Collections() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests that the specified asset collections be deleted.
**Notes:**

assetCollections: An array of PHAssetCollectionMBS objects to be deleted.

Call this method within a photo library change block to delete asset collections. For details on change blocks, see PHPhotoLibraryMBS.

### 139.4.11 insertAsset(asset as PHAssetMBS, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Insert the specified asset into the collection at the specified indexes.

**Notes:**

asset: A PHAssetMBS object to be inserted into the asset collection.
index: The index at which the asset should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.12 insertAssets(assets() as PHAssetMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Inserts the specified assets into the collection at the specified indexes.
**Notes:**

assets: An array of PHAssetMBS objects to be inserted into the asset collection.
indexes: The indexes at which the assets should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.13 moveAsset(fromIndex as Integer, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Move the asset at the specified index in the asset collection to a new index.
**Notes:**

fromIndex: The indexes of the asset to be moved in the asset collection.
toIndex: The index at which to place the moved asset, relative to the collection,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

### 139.4.14 moveAssets(fromIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Moves the assets at the specified indexes in the asset collection to a new index.
**Notes:**

fromIndexes: The indexes of the assets to be moved in the asset collection.
toIndex: The index at which to place the moved assets, relative to the collection,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

### 139.4.15 removeAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the specified asset from the asset collection.
**Notes:**

asset: A PHAssetMBS object to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier

property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 139.4.16 removeAsset(AtIndex as Integer) 22511

### 139.4.16 removeAsset(AtIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the asset at the specified index from the asset collection.
**Notes:**

index: The index of the asset to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 139.4.15 removeAsset(asset as PHAssetMBS) 22510

### 139.4.17 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the specified assets from the asset collection.
**Notes:**

assets: An array of PHAssetMBS objects to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 139.4.18 removeAssets(AtIndexes as NSIndexSetMBS) 22512

### 139.4.18 removeAssets(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the assets at the specified indexes from the asset collection.
**Notes:**

indexes: The indexes of the assets to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 139.4.17 removeAssets(assets() as PHAssetMBS) 22511

### 139.4.19 replaceAsset(AtIndex as Integer, asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Replaces the asset at the specified index in the asset collection with the specified asset.
**Notes:**

index: The index of the asset to be replaced in the asset collection.
asset: A PHAssetMBS object to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.20 replaceAssets(AtIndexes as NSIndexSetMBS, assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Replaces the assets at the specified indexes in the asset collection with the specified assets.
**Notes:**

indexes: The indexes of the assets to be replaced in the asset collection.
assets: An array of PHAssetMBS objects to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection,Äôs contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

### 139.4.21 Properties

### 139.4.22 placeholderForCreatedAssetCollection as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A placeholder object for the asset collection that the change request creates.
**Notes:**

Use this property if you need to reference the asset collection created by a change request within the same change block.
(Read only property)

### 139.4.23 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The displayed name of the asset collection.
**Notes:**

Set this property to change the asset collection,Äôs title.
(Read and Write property)

## 139.5 class PHAssetCollectionMBS

### 139.5.1 class PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A representation of a Photos asset grouping, such as a moment, user-created album, or smart album.
**Notes:**

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of an asset collection, fetch them with a PHAsset class method such as fetchAssetsInAssetCollection. To find asset collections, use one of the methods listed in Fetching Asset Collections.

Important
Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Asset Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS.requestAuthorization method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and collection lists, asset collections are immutable. To create, rename, or delete asset collections, or to add, remove, or rearrange members in an asset collection, create a PHAssetCollectionChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

### 139.5.2 Blog Entries

- Show Live Photos in your Xojo application

### 139.5.3 Blog Entries

- Show Live Photos in your Xojo application

### 139.5.4 Methods

### 139.5.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.5.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.5.7 fetchAssetCollectionsContainingAsset(asset as PHAssetMBS, type as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves asset collections of the specified type containing the specified asset.
**Notes:**

asset: A Photos asset.
type: An asset collection type, such as an album or a moment. See Type constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

### 139.5.8 fetchAssetCollectionsWithALAssetGroupURLs(assetGroupURLs() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves asset collections using URLs provided by the Assets Library framework.
**Notes:**

assetGroupURLs: An array of URLs, each an asset group URL that was previously retrieved from an ALAssetsGroupMBS object.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use

default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

The Assets Library framework is deprecated in iOS 8.0 and later, replaced by the Photos framework. Use this method if your app has previously stored URLs from ALAssetsGroupMBS objects and you need to retrieve the corresponding Photos framework objects.

### 139.5.9 fetchAssetCollectionsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves asset collections with the specified unique identifiers.
**Notes:**

identifiers: An array of strings, each the localIdentifier string of an asset collection.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

### 139.5.10 fetchAssetCollectionsWithType(type as Integer, subType as integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves asset collections of the specified type and subtype.
**Notes:**

type: A type of asset collection, such as an album or a moment. See Type constants.
subtype: A subtype of asset collection. See Subtype constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all asset collections with the specified type and subtype. To retrieve a more specific set of asset collections, provide a PHFetchOptionsMBS object containing

a filter predicate.

### 139.5.11 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The names of locations grouped by the collection (an array of strings).
**Notes:** This property applies only to asset collections whose type is PHAssetCollectionTypeMoment. The Photos app automatically creates moments to group assets by time and location. A moment might group assets captured in multiple locations, so this array can contain multiple names. For other asset collection types, this property,Äôs value is nil.

### 139.5.12 transientAssetCollectionWithAssetFetchResult(fetchResult as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a temporary asset collection containing the assets from the specified fetch result.
**Notes:**

fetchResult: A fetch result containing one or more PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

### 139.5.13 transientAssetCollectionWithAssets(assets() as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a temporary asset collection containing the specified assets.
**Notes:**

assets: An array of PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos app or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

### 139.5.14 Properties

### 139.5.15 approximateLocation as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A location representing those of all assets in the collection.
**Notes:**

The Photos app automatically creates moments to group assets by time and location. A moment can contain photos from several locations in close proximity. In such cases, this property describes the general area containing the locations of all assets in the moment.
This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

### 139.5.16 assetCollectionSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The subtype of the asset collection.
**Notes:**

Use subtypes to make minor distinctions between collections of the same type. For albums, for example, you might distinguish user-created albums from those synced from iPhoto. See Subtype constants for possible values.
(Read only property)

### 139.5.17 assetCollectionType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of the asset collection, such as an album or a moment.
**Notes:** (Read only property)

### 139.5.18 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The latest creation date among all assets in the asset collection.
**Notes:**

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

### 139.5.19 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The latest creation date among all assets in the asset collection.
**Notes:**

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

### 139.5.20 estimatedAssetCount as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The estimated number of assets in the asset collection.
**Notes:**

This count may not match the current number of assets in the collection. To get the most recent count, fetch the collection,Äôs assets with the fetchAssetsInAssetCollection method and read the count property of the fetch result.
If asset count information is not available for the collection, this property,Äôs value is NSNotFound.
(Read only property)

### 139.5.21 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The earliest creation date among all assets in the asset collection.
**Notes:**

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.

(Read only property)

### 139.5.22 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The earliest creation date among all assets in the asset collection.
**Notes:**

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property,Äôs value is nil.
(Read only property)

### 139.5.23 Constants

### 139.5.24 SubtypeAlbumCloudShared = 101

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** An iCloud Shared Photo Stream.

### 139.5.25 SubtypeAlbumImported = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** An album imported from a camera or external storage.

### 139.5.26 SubtypeAlbumMyPhotoStream = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** The user,Äôs personal iCloud Photo Stream.

### 139.5.27 SubtypeAlbumRegular = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** An album created in the Photos app.

### 139.5.28 SubtypeAlbumSyncedAlbum = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** An album synced to the device from iPhoto.

### 139.5.29 SubtypeAlbumSyncedEvent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** An Event synced to the device from iPhoto.

### 139.5.30 SubtypeAlbumSyncedFaces = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A Faces group synced to the device from iPhoto.

### 139.5.31 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A bit mask representing all possible subtypes.

### 139.5.32 SubtypeSmartAlbumAllHidden = 205

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all assets hidden from the Moments view in the Photos app.

### 139.5.33 SubtypeSmartAlbumAnimated = 214

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all image animation assets.

### 139.5.34 SubtypeSmartAlbumBursts = 207

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all burst photo sequences in the photo library.

### 139.5.35 SubtypeSmartAlbumDepthEffect = 212

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all images captured using the Depth Effect camera mode on compatible devices.

### 139.5.36 SubtypeSmartAlbumFavorites = 203

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all assets that the user has marked as favorites.

### 139.5.37 SubtypeSmartAlbumGeneric = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album of no more specific subtype.

### 139.5.38 SubtypeSmartAlbumLivePhotos = 213

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all Live Photo assets.

### 139.5.39 SubtypeSmartAlbumLongExposures = 215

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all Live Photo assets where the Long Exposure variation is enabled.

### 139.5.40 SubtypeSmartAlbumPanoramas = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all panorama photos in the photo library.

### 139.5.41 SubtypeSmartAlbumRecentlyAdded = 206

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups assets that were recently added to the photo library.

### 139.5.42 SubtypeSmartAlbumScreenshots = 211

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all images captured using the device,Äôs screenshot function.

### 139.5.43 SubtypeSmartAlbumSelfPortraits = 210

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all photos and videos captured using the device,Äôs front-facing camera.

### 139.5.44 SubtypeSmartAlbumSlomoVideos = 208

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all Slow-Mo videos in the photo library.

### 139.5.45 SubtypeSmartAlbumTimelapses = 204

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all time-lapse videos in the photo library.

### 139.5.46 SubtypeSmartAlbumUnableToUpload = 216

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** Unable to upload album.

### 139.5.47 SubtypeSmartAlbumUserLibrary = 209

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all assets that originate in the user,Äôs own library (as opposed to assets from iCloud Shared Albums).

### 139.5.48 SubtypeSmartAlbumVideos = 202

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the subtypes constants.
**Notes:** A smart album that groups all video assets in the photo library.

### 139.5.49 TypeAlbum = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the asset collection types.
**Notes:** An album in the Photos app.

### 139.5.50 TypeMoment= 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the asset collection types.
**Notes:** A moment in the Photos app. Deprecated by Apple.

### 139.5.51 TypeSmartAlbum = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the asset collection types.
**Notes:** A smart album whose contents update dynamically.

## 139.6 class PHAssetCreationRequestMBS

### 139.6.1 class PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A request to create a new Photos asset from underlying data resources, for use in a photo library change block.
**Notes:**

A PHAssetCreationRequestMBS object, used within a photo library change block, constructs a new photo or video asset from data resources, and adds it to the Photos library. This class works in terms of the raw data resources that together form an asset, so you can use it together with the PHAssetResource class to perform a complete copy (or backup and restore) of an asset,Äôs underlying resources. To instead simply create a new asset from an image object, image file, or video file, see the superclass PHAssetChangeRequestMBS.

To create a new asset from data resources, first start a change block using the shared PHPhotoLibraryMBS method performChanges or performChangesAndWait. Then, within the change block:

1. Within the change block, create a new asset creation request with the creationRequestForAsset method.
2. Add image, video, or data resources using the methods listed in Providing Data Resources for the New Asset.
3. (Optional.) Set metadata for the new asset using methods and properties of the superclass PHAssetChangeRequestMBS.

After Photos runs the change block and calls your completion handler, the new asset is created in the Photos library.
If you instantiate or use this class outside a photo library change block, Photos throws an exception. For details on change blocks, see PHPhotoLibrary.
Subclass of the PHAssetChangeRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.6.2 Methods

### 139.6.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a data resource to the asset being created, using the specified data.
**Notes:**

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.

options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 139.6.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 22527
- 139.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 22527

### 139.6.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a data resource to the asset being created, using the specified data.
**Notes:**

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 139.6.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil) 22526
- 139.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 22527

### 139.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Adds a data resource to the asset being created, using the file at the specified URL.
**Notes:**

type: The role of this data resource in constructing an asset. For details, see type constants.
file: The URL to a local file containing data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS.

Photos imports the asset resource data only when it executes the PHPhotoLibrary change block in which you create a PHAssetCreationRequestMBS object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 139.6.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil) 22526
- 139.6.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 22527

### 139.6.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.6.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.6.8 creationRequestForAsset as PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new asset to the Photos library using asset resources.
**Notes:**

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS. After calling this method, and before returning from the change block use the methods listed in Providing Data Resources for the New Asset to specify one or more data resources for the asset.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (provided by the superclass PHAssetChangeRequestMBS and listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

### 139.6.9 supportsAssetResourceTypes(types() as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns a Boolean value indicating whether Photos supports creating an asset with the specified combination of resource types.
**Notes:**

types: An array of numbers, each the raw value of a PHAssetResourceType identifier.
Return true if Photos supports the specified combination of resource types; otherwise, false.

When you request creation of an asset from resource data, Photos does not validate that the resources can construct a complete asset until the complete PHPhotoLibrary performChanges change block executes. (If an asset cannot be constructed from the provided resources, Photos calls the completionHandler you provide in that method with an error describing the failure.) To perform preflight validation before executing an asset creation request, use this method to verify that the set of resource types from which you want to create an asset are correct.

This method verifies only that the collection of asset resource types is valid (for example, ensuring that you do not attempt to construct a photo asset without image data), so it is still possible for an asset creation request to fail if the data itself is incomplete or invalid. However, calling by using this method you can avoid some kinds of asset creation failure before performing the expensive operation of reading (and potentially downloading or transmitting) asset resource data.

### 139.6.10 Constants

### 139.6.11 TypeAdjustmentBasePairedVideo = 11

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:**

The resource provides an unaltered version of the video data for a Live Photo asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

### 139.6.12 TypeAdjustmentBasePhoto = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides an unaltered version of its photo asset for use in for use in reconstructing recent edits.

### 139.6.13 TypeAdjustmentBaseVideo = 12

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:**

The resource provides an unaltered version of the video data for video asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

### 139.6.14 TypeAdjustmentData = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides data for use in reconstructing recent edits to its asset.

### 139.6.15 TypeAlternatePhoto = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides photo data that is not the primary form of its asset.

### 139.6.16 TypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides original audio data for its asset.

### 139.6.17 TypeFullSizePairedVideo = 10

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:**

The resource provides the current video data component of a Live Photo asset.
Requires MacOS 10.15 or newer.

### 139.6.18 TypeFullSizePhoto = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides photo data at the highest available size and quality for its asset.

### 139.6.19 TypeFullSizeVideo = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides video data at the highest available size and quality for its asset.

### 139.6.20 TypePairedVideo = 9

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides the original video data component of a Live Photo asset.

### 139.6.21 TypePhoto = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides original photo data for its asset.

### 139.6.22 TypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
**Notes:** The resource provides original video data for its asset.

## 139.7 class PHAssetMBS

### 139.7.1 class PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The class representating of an image, video, or Live Photo in the Photos library.
**Notes:**

You fetch assets to begin working with them. Use the class methods listed in Fetching Assets to retrieve one or more PHAsset instances representing the assets you want to display or edit.

Assets contain only metadata. The underlying image or video data for any given asset might not be stored on the local device. However, depending on how you plan to use this data, you may not need to download all of it. If you need to populate a collection view with thumbnail images, the Photos framework can manage downloading, generating, and caching thumbnails for each asset. For details, see PHImageManagerMBS.

Asset objects are immutable. To edit an asset,Äôs metadata (such as marking it as a favorite photo), create a PHAssetChangeRequestMBS object within a photo library change block. For more details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.7.2 Blog Entries

- Show Live Photos in your Xojo application

### 139.7.3 Blog Entries

- Show Live Photos in your Xojo application

### 139.7.4 Methods

### 139.7.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.7.6 cancelContentEditingInputRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels a request for editing the asset,Äôs content.
**Notes:**

requestID: The numeric identifier of the request to be canceled.

When you request asset editing information with the requestContentEditingInputWithOptions method, the asset returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelContentEditingInputRequest method.

### 139.7.7 canPerformEditOperation(editOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns whether the asset supports the specified editing operation.
**Notes:**

editOperation: The operation to be tested.

Returns true if the asset supports the the specified editing operation; otherwise, false.

If an asset supports editing, you can create a PHAssetChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

### 139.7.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.7.9 fetchAssets(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves all assets matching the specified options.
**Notes:**

options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

### 139.7.10 fetchAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves assets from the specified asset collection.
**Notes:**

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets in the specified collection. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

### 139.7.11 fetchAssetsWithBurstIdentifier(burstIdentifier as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves assets with the specified burst photo sequence identifier.
**Notes:**

burstIdentifier: A burst identifier string, as provided by the burstIdentifier property of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

A burst photo sequence, as seen in the Photos app, corresponds to a group of Photos assets that share the same burstIdentifier string.

By default, the returned PHFetchResultMBS object contains only the representative asset and any user-picked photos from the burst sequence. To retrieve all photos in the burst sequence, provide a PHFetchOptionsMBS object containing a filter predicate.

### 139.7.12 fetchAssetsWithLocalIdentifiers(identifiers() as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves assets with the specified local-device-specific unique identifiers.
**Notes:**

identifiers: An array of strings, each the localIdentifier string of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

### 139.7.13 fetchAssetsWithMediaType(mediaType as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves assets with the specified media type.
**Notes:**

mediaType: A media type, such as image or video. See type constants.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets with the specified type. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

### 139.7.14 fetchKeyAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves assets marked as key assets in the specified asset collection.
**Notes:**

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result or nil if no objects match the request.

Most asset collections contain a key asset, which the Photos app displays as a proxy for the collection. Different types of asset collections have different ways of specifying one or more key assets. For example, in the Camera Roll collection, the most recently captured photo or video is the key asset.

This method returns nil if the assetCollection parameter references a transient asset collection (such as one created with the transientAssetCollectionWithAssets method).

### 139.7.15 PHContentEditingInputCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys indicating the status of an asset content editing request.
**Notes:**

A Boolean value indicating whether the image request was canceled. (boolean)

If you call the cancelContentEditingInputRequest method to cancel a request, Photos calls your result handler delegate with the value true for this key.

### 139.7.16 PHContentEditingInputErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys indicating the status of an asset content editing request.
**Notes:**

An error that occurred while attempting to load the asset data, NSErrorMBS.

Photos provides an error object for this key if it cannot provide asset data for your handler block,Äôs contentEditingInput parameter. Examine the error object for information about the cause of the error.

### 139.7.17 PHContentEditingInputResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys indicating the status of an asset content editing request.
**Notes:**

A Boolean value indicating whether the asset data is stored on the local device or must be downloaded from iCloud.

If true, no asset data was provided because the asset data must be downloaded from iCloud. To do this, submit another request, specifying true for the networkAccessAllowed option.

### 139.7.18 requestContentEditingInputWithOptions(options as PHContentEditingInputRequestOptionsMBS, CompletionDelegate as RequestContentEditingInputWithOptionsCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests asset information for beginning a content editing session.
**Notes:**

options: Options affecting how Photos handles an edit session request.

Returns a numeric identifier for the request. Pass this identifier to the cancelContentEditingInputRequest method if you need to cancel the request before it completes.

When you call this method, Photos downloads the asset,Äôs image or video data (if necessary) and prepares it for editing, then calls your completionHandler ddelegate to provide a PHContentEditingInputMBS object you use for editing.

To complete the edit, create a PHContentEditingOutputMBS object from the editing input to provide the edited asset data. Then, commit the edit by posting a change block to the shared PHPhotoLibrary object. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output you created.

### 139.7.19 Properties

### 139.7.20 burstIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unique identifier shared by photo assets from the same burst sequence.
**Notes:**

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. The Photos framework identifies a burst sequence as a group of assets sharing the same burst identifier string.
(Read only property)

### 139.7.21 burstSelectionTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The selection type of the asset in a burst photo sequence.
**Notes:**

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites. See PHAssetBurstSelectionType for possible values.

Because an asset may have more than one selection type, you use bit masks to identify an asset.
(Read only property)

### 139.7.22 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The date and time at which the asset was originally created.
**Notes:** (Read only property)

### 139.7.23 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The date and time at which the asset was originally created.
**Notes:** (Read only property)

### 139.7.24 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The duration, in seconds, of the video asset.
**Notes:**

For photo assets, the duration is always zero.
(Read only property)

### 139.7.25 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the user has marked the asset as a favorite.
**Notes:** (Read only property)

### 139.7.26 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the user has hidden the asset.
**Notes:**

Hidden assets do not appear in the Moments interface in the Photos app and are not returned when fetching the contents of a moment collection.
(Read only property)

### 139.7.27 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The location information saved with the asset.
**Notes:**

Typically, an asset,Äôs location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

### 139.7.28 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The subtypes of the asset, identifying special kinds of assets such as panoramic photo or high-framerate video.
**Notes:**

See subtype constants for possible values.
Because an asset may have more than one subtype, you use these values as bit masks to identify an asset.
(Read only property)

### 139.7.29 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of the asset, such as video or audio.
**Notes:**

See Type constants.
(Read only property)

### 139.7.30 modificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The date and time at which the asset was last modified.
**Notes:**

Photos updates the modification date when an asset,Äôs image or video content or metadata changes.
(Read only property)

### 139.7.31 modificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The date and time at which the asset was last modified.
**Notes:**

Photos updates the modification date when an asset,Äôs image or video content or metadata changes.
(Read only property)

### 139.7.32 pixelHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The height, in pixels, of the asset,Äôs image or video data.
**Notes:**

If the asset,Äôs content has been edited, this property describes the size of the current version of the asset.
(Read only property)

### 139.7.33 pixelWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The width, in pixels, of the asset,Äôs image or video data.
**Notes:**

If the asset,Äôs content has been edited, this property describes the size of the current version of the asset.
(Read only property)

### 139.7.34 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The playback style for the asset.
**Notes:** (Read only property)

### 139.7.35 RepresentsBurst as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the asset is the representative photo from a burst photo sequence.
**Notes:**

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. One asset represents the entire sequence in displayed collections.
(Read only property)

### 139.7.36 sourceType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The means by which the asset entered the user,Äôs Photos library.
**Notes:**

Assets from some sources can be edited, deleted, or added to collections; assets from other sources do not support these operations. For details, see SourceType constants.
(Read only property)

### 139.7.37 Constants

### 139.7.38 BurstSelectionTypeAutoPick = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
**Notes:** Photos has automatically identified the asset as a potential user favorite.

### 139.7.39 BurstSelectionTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
**Notes:** The asset is not marked as a favorite member of its burst sequence or is not a member of a burst sequence.

### 139.7.40 BurstSelectionTypeUserPick = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
**Notes:** The user has marked the asset as a favorite member of its burst sequence.

### 139.7.41 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for edit operations.
**Notes:** The asset,Äôs photo or video content can be edited.

### 139.7.42 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for edit operations.
**Notes:** The asset can be deleted from the photo library.

### 139.7.43 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for edit operations.
**Notes:** The asset,Äôs metadata properties can be edited.

### 139.7.44 MediaSubtypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:**

The asset has no subtype.
This is the default subtype for most photo and video assets.

### 139.7.45 MediaSubtypePhotoDepthEffect = 16

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:** The asset is a photo captured with the Camera app's Portrait mode depth effect.

### 139.7.46 MediaSubtypePhotoHDR = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:** The asset is a High Dynamic Range photo.

### 139.7.47 MediaSubtypePhotoLive = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:**

The asset is a Live Photo that includes movement and sounds from the moments just before and after its capture.
To display a Live Photo asset with its associated video content, retrieve a PHLivePhotoMBS object using the PHImageManagerMBS class and assign it to a PHLivePhotoViewMBS object.

### 139.7.48 MediaSubtypePhotoPanorama = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:** The asset is a large-format panorama photo.

### 139.7.49 MediaSubtypePhotoScreenshot = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:** The asset is an image captured with the device,Äôs screenshot feature.

### 139.7.50 MediaSubtypeVideoHighFrameRate = & h20000

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:**

The asset is a high-frame-rate video.

High-frame-rate videos are created by the Slow-Mo feature in the Camera app on an iOS device.

### 139.7.51 MediaSubtypeVideoStreamed = & h10000

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:**

The asset is a video whose contents are always streamed over a network connection.
This subtype identifies video assets that are never stored on the local device, such as shared videos in a subscribed iCloud Photo Stream.

### 139.7.52 MediaSubtypeVideoTimelapse = & h40000

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
**Notes:** The asset is a time-lapse video.

### 139.7.53 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is an audio file.

### 139.7.54 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is a photo or other static image.

### 139.7.55 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset,Äôs type is unknown.

### 139.7.56 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is a video file.

### 139.7.57 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a still image.

### 139.7.58 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as an animated image.

### 139.7.59 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a Live Photo.

### 139.7.60 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset has an unsupported or undefined media playback type.

### 139.7.61 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a video.

### 139.7.62 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a looping video.

### 139.7.63 SourceTypeCloudShared = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for source types.
**Notes:**

The asset originates from an iCloud Shared Album.
Assets from shared albums cannot be edited and do not appear in Moments collections.

### 139.7.64 SourceTypeiTunesSynced = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for source types.
**Notes:**

The asset originates from a Mac or PC and is present on the device through iTunes sync.
iTunes-synced assets cannot be edited or deleted.

### 139.7.65 SourceTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for source types.
**Notes:** Source information is not available for the asset.

### 139.7.66 SourceTypeUserLibrary = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for source types.
**Notes:**

The asset is part of the user,Äôs main Photos library.

The main library contains both assets that originate on the device (such as photos and videos captured with the Camera app or screenshots) and assets synchronized through iCloud Photo Library or My Photo Stream. These assets appear in Moments collections and can be edited or deleted.

### 139.7.67 Delegates

### 139.7.68 RequestContentEditingInputWithOptionsCompletedMBS(Asset as PHAssetMBS, Options as PHContentEditingInputRequestOptionsMBS, tag as variant, contentEditingInput as PHContentEditingInputMBS, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that Photos calls when the requested asset editing information is ready.
**Notes:**

contentEditingInput: An object that describes the asset for editing and provides methods for loading the image or video content to be edited.
info: A dictionary providing information about the status of the request. See Editing Request Info Keys for possible keys and values.

## 139.8 class PHAssetResourceCreationOptionsMBS

### 139.8.1 class PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the creation of a new Photos asset from underlying resources.
**Notes:** You use this class when creating an asset for addition to the Photos library with a PHAssetCreationRequestMBS object.

### 139.8.2 Methods

### 139.8.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.8.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.8.5 copy as PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Copies the options object.

### 139.8.6 Properties

### 139.8.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.8.8 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The filename for the asset resource being created.
**Notes:**

You can use this property to track the original name of the file from which you import an asset resource even if you use the addResourceWithType method to create a resource from data instead of from a file. After creating the asset, this information is available in the originalFilename property of the corresponding PHAssetResourceMBS object.

If you do not specify a value for this property and are using the addResourceWithType method to create a resource, Photos infers the filename from that method,Äôs fileURL parameter. Otherwise, Photos automatically generates a filename.
(Read and Write property)

### 139.8.9 shouldMoveFile as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether Photos moves or duplicates files when creating an asset resource.
**Notes:**

This property applies only when creating an asset resource with the addResourceWithType method. If this value is true, Photos moves the specified file into the Photos library to create the asset resource, removing the original file after the asset has been successfully created. When using this option, Photos does not make an intermediary copy of the resource data, so no additional storage space is required.

If this value is false (the default), Photos copies the contents of the original file into the Photos library.

Attempting to move a file that is currently open or has hard links fails.
(Read and Write property)

### 139.8.10 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The uniform type identifier for the resource.
**Notes:**

If you do not specify a value for this property, Photos infers the data type from the type value you specify when adding the resource to a creation request.

For details in uniform type identifiers, see Uniform Type Identifiers Overview.
(Read and Write property)

# 139.9 class PHAssetResourceManagerMBS

## 139.9.1 class PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A resource manager for the data storage underlying a Photos asset.
**Notes:**

An asset can have multiple underlying data resources,Äîfor example, both original and edited versions,Äîeach of which is represented by a PHAssetResourceMBS object. Unlike the PHImageManagerMBS class, which provides and caches the primary representations of assets as thumbnails, image objects, or video objects, the asset resource manager provides direct access to these underlying data resources.

Available in MacOS 10.15 or newer.

## 139.9.2 Methods

## 139.9.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

## 139.9.4 cancelDataRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels an asynchronous request.
**Notes:**

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for asset resource data using the requestDataForAssetResource method, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelDataRequest method.

## 139.9.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.9.6 defaultManager as PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the shared asset resource manager object.
**Notes:** This method always returns the same asset resource manager object, which is shared for all uses in your app.

### 139.9.7 requestDataForAssetResource(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, DataReceivedHandler as RequestDataForAssetResourceDataReceivedMBS, CompleteHandler as RequestDataForAssetResourceCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests the underlying data for the specified asset resource, to be delivered asynchronously.
**Notes:**

resource: The asset resource for which to request data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelDataRequest: method.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos calls your handler block at least once, progressively providing chunks of data. After reading all of the data, Photos calls your completionHandler block to indicate that the data is complete. (At this point, the complete data for the asset is the concatenation of the data parameters from all calls to your handler block.) If Photos cannot finish reading or downloading asset resource data, it calls your completionHandler block with a description of the error. Photos can also call the completionHandler block with a non-nil error when the data is complete if the user cancels downloading.

### 139.9.8 writeDataForAssetResource(resource as PHAssetResourceMBS, file as FolderItem, options as PHAssetResourceRequestOptionsMBS, CompleteHandler as WriteDataForAssetResourceCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests the underlying data for the specified asset resource, to be asynchronously written to a local file.
**Notes:**

resource: The asset resource for which to request data.
fileURL: A URL identifying the local filename at which to write the asset resource,Äôs data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos progressively writes the data into the specified file. After writing all of the data, or if an error prevents reading all of the data, Photos calls your delegate.

### 139.9.9 Properties

### 139.9.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.9.11 Constants

### 139.9.12 PHInvalidAssetResourceDataRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** The invalid request ID.

### 139.9.13 Delegates

### 139.9.14 RequestDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that photos calls after the request has been fulfilled or has failed.
**Notes:** error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

### 139.9.15 RequestDataForAssetResourceDataReceivedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Data as MemoryBlock, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that Photos calls to provide the requested data.
**Notes:** data: The requested asset resource data.

### 139.9.16 WriteDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, File as FolderItem, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that photos calls after the request has been fulfilled or has failed.
**Notes:** error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

## 139.10 class PHAssetResourceMBS

### 139.10.1 class PHAssetResourceMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An underlying data resource associated with a photo, video, or Live Photo asset in the Photos library.
**Notes:**

Each PHAssetMBS object references one or more resources. Use these objects to work with those resources directly, like when backing up or restoring assets.

- A photo asset can contain both JPEG and RAW files representing the same photo.
- A Live Photo asset contains both still photo and video resources.
- An edited asset contains resources representing asset content before and after the edit, as well as a resource corresponding to the PHAdjustmentDataMBS object that describes the edit.

To work with the data contained in an asset resource, fetch it using the PHAssetResourceManagerMBS class. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.10.2 Methods

### 139.10.3 assetResourcesForAsset(asset as PHAssetMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the list of data resources associated with an asset.
**Notes:**

asset: A photo or video asset in the Photos library.

Returns the asset,Äôs resources.

Asset resource objects describe the data files that an asset represents. An asset can contain multiple resources,Äîfor example, an edited photo asset contains resources for both the original and edited images, as well as for the PHAdjustmentDataMBS object describing the edit. To work with one of these files, fetch the underlying data using the PHAssetResourceManagerMBS class.

### 139.10.4 assetResourcesForLivePhoto(livePhoto as PHLivePhotoMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the list of data resources associated with a Live Photo object.
**Notes:**

livePhoto: A Live Photo object.

Returns the underlying resources that constitute the Live Photo.

A Live Photo is a picture, taken with a compatible device, that includes movement and sound from the moments just before and after its capture. A PHLivePhoto object represents the displayable combination of image, motion, and sound data. You can obtain such objects from the Photos library using the PHImageManagerMBS class or construct them from asset resources exported from a Photos library using the PHLivePhotoMBS class.

Use this method to export the underlying resources that constitute a Live Photo. For example, a social networking app can retrieve those data files and upload them to a server. Then, on another user,Äôs device, the app downloads those data files and uses the PHLivePhoto class to re-create a Live Photo object for display using the PHLivePhotoViewMBS class.

### 139.10.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.10.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.10.7 Properties

### 139.10.8 assetLocalIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unique identifier for the asset object this resource is associated with.
**Notes:**

This property,Äôs value corresponds to the localIdentifier property of the PHAssetMBS object that owns this asset resource. If you,Äôve obtained an asset resource without a reference to its owning asset, use the fetchAssetsWithLocalIdentifiers method with this identifier to retrieve the correct PHAssetMBS object.
(Read only property)

### 139.10.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.10.10 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The original filename of the asset resource from when it was created or imported.
**Notes:** (Read only property)

### 139.10.11 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The relationship of this asset resource to its owning asset.
**Notes:**

An asset can contain multiple resources, and different resources contribute to the asset in different ways. For details and examples, see resource types.
(Read only property)

### 139.10.12 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The uniform type identifier for the asset resource,Äôs image or video data.
**Notes:**

For more information, see Uniform Type Identifiers Overview in Apple's documentation.
(Read only property)

## 139.11 class PHAssetResourceRequestOptionsMBS

### 139.11.1 class PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the delivery of underlying asset data that you request from the asset resource manager.
**Notes:**

You use this class when requesting the underlying data for photo, video, and Live Photo asset resources from a PHAssetResourceManagerMBS object.

Requires MacOS 10.15 or newer.

### 139.11.2 Methods

### 139.11.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.11.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.11.5 copy as PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the request options.

### 139.11.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.11.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the delegate that Photos calls periodically while downloading the asset resource data.
**Notes:** If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

### 139.11.8 Properties

### 139.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.11.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether Photos can download the requested asset resource data from iCloud.
**Notes:**

If true, and the requested resource data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a block that Photos calls periodically while downloading the resource data. If false (the default), and the resource data is not on the local device, Photos calls the completionHandler block you provided in your request, with an NSErrorMBS object indicating that the resource requires network access.
(Read and Write property)

### 139.11.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls periodically while downloading the asset resource data.
**Notes:**

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.
(Read and Write property)

### 139.11.12 Delegates

### 139.11.13 ProgressHandlerMBS(progress as double, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls while downloading asset resource data from iCloud. Used by the progressHandler property.
**Notes:**

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.

## 139.12 class PHCachingImageManagerMBS

### 139.12.1 class PHCachingImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that facilitates retrieving or generating preview thumbnails, optimized for batch preloading large numbers of assets.
**Notes:**

For quick performance when you are working with many assets, a caching image manager can prepare asset images in the background in order to eliminate delays when you later request individual images. For example, use a caching image manager when you want to populate a collection view or similar UI with thumbnails of photo or video assets.

Much of the key functionality of the PHCachingImageManager class is defined by its superclass, PHImageManagerMBS. For details, see PHImageManagerMBS.

To use a caching image manager:
1. Create a PHCachingImageManager instance. (This step replaces using the shared PHImageManager instance.)
2. Use PHAsset class methods to fetch the assets you,Äôre interested in.
3. To prepare images for those assets, call the startCachingImagesForAssets:targetSize:contentMode:options: method with the target size, content mode, and options you plan to use when later requesting images for each individual asset.
4. When you need an image for an individual asset, call the requestImageForAsset:targetSize:contentMode:options:resultHandler: method, and pass the same parameters you used when preparing that asset.

If the image you request is among those already prepared, the PHCachingImageManager object immediately returns that image. Otherwise, Photos prepares the image on demand and caches it for later use.
Subclass of the PHImageManagerMBS class.

### 139.12.2 Methods

### 139.12.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.12.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.12.5 startCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:**

Prepares image representations of the specified assets for later use.

**Notes:**

assets: An array of PHAssetMBS objects for which to prepare image representations.
targetSize: The size of the images to be prepared.
contentMode: An option for how to fit the images to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested images, and notify your app of progress or errors. For details, see PHImageRequestOptions.

When you call this method, Photos begins to fetch image data and generates thumbnail images on a background thread. At any time afterward, you can use the requestImageForAsset:targetSize method to request individual images from the cache. If Photos has finished preparing a requested image, that method provides the image immediately.

Photos caches images with the exact target size, content mode, and options you specify in this method. If you later request an image with, for example, a different target size than you passed when calling this method, Photos cannot make use of the cache and so it must fetch or generate a new image.

### 139.12.6 stopCachingImagesForAllAssets

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels all image preparation that is currently in progress.

### 139.12.7 stopCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels image preparation for the specified assets and options.
**Notes:**

assets: The array of specific PHAssetMBS objects for which image preparation is in progress but is no longer needed.
targetSize: The target size with which you requested image preparation.
contentMode: The content mode with which you requested image preparation.
options: The options with which you requested image preparation.

This method cancels image preparation for the specified assets with the specified options. Use it when image preparation that might be in progress is no longer needed. For example, if you prepare images for a collection view filled with photo thumbnails and then the user chooses a different thumbnail size for your collection view, call this method to cancel generating thumbnail images at the old size.

### 139.12.8 Properties

### 139.12.9 allowsCachingHighQualityImages as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the image manager prepares high-quality images.
**Notes:**

If true (the default), the image manager prepares images at high quality. This option produces better images, at a high performance cost.
For faster performance when preparing large numbers of images,Äîsuch as while the user is scrolling quickly through a collection of thumbnails,Äîset this property to false.
(Read and Write property)

## 139.13 class PHChangeMBS

### 139.13.1 class PHChangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A description of a change that occurred in the photo library.
**Notes:**

Photos provides PHChangeMBS objects to notify your app of changes to the assets and collections managed by the Photos app. To receive change information, implement the DidChange event in your PHPhotoLibraryMBS subclass.

After Photos provides you with a change object, you use its methods to get a change details object. Call the changeDetailsForObject or changeDetailsForFetchResult method, passing an asset or collection object you,Äôve previously fetched or a fetch result containing several such objects. The resulting PHObjectChangeDetailsMBS or PHFetchResultChangeDetailsMBS object describes any changes that have happened to the object or fetch result since you last fetched it.

### 139.13.2 Methods

### 139.13.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.13.4 changeDetailsForFetchResult(FetchResult as PHFetchResultMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns detailed change information for a fetch result.
**Notes:**

object: A fetch result.

Returns a change details object, or nil if there have been no changes affecting the fetch result,Äôs contents.

When Photos calls your change observer,Äôs photoLibraryDidChange method, call the changeDetailsForObject method to get detailed change information about the results of a fetch you,Äôve previously performed. If there have been any changes in the Photos library affecting the fetch, the resulting PHFetchResultChangeDe-

tailsMBS object tells you if any contents in the fetch result have been added, removed, or changed since you fetched it. If there have been no changes since you performed the fetch, this method returns nil.

Typically, if your app displays the members of a collection (such as an album or moment), you use a method such as fetchAssetsInAssetCollection to retrieve those members and then keep the resulting PHFetchResultMBS object. You can then pass that fetch result to this method to learn about changes to the collection, such as whether new members have been added to it (and which indexes to insert them at in your UI).

To find out about changes to an object,Äôs properties, such as a collection,Äôs title or an asset,Äôs metadata, use the changeDetailsForObject: method.

### 139.13.5 changeDetailsForObject(PHObject as PHObjectMBS) as PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns detailed change information for the specified asset or collection.
**Notes:**

object: A PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS object.

Returns a change details object, or nil if there have been no changes to the specified asset or collection.

When Photos calls your change observer,Äôs photoLibraryDidChange: method, call the changeDetailsForObject method to get detailed change information about an asset or collection you,Äôve previously fetched. If the asset or collection has changed since you last fetched it, the resulting PHObjectChangeDetailsMBS object describes the changes. If there are no changes between the fetched object and the current state of the asset or collection it represents in the Photos library, this method returns nil.
For an asset collection or collection list, this method and the PHObjectChangeDetailsMBS object it returns describe changes only to the collection,Äôs properties. If you are instead interested in changes to the collection,Äôs membership, use the changeDetailsForFetchResult method.

### 139.13.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.13.7 Properties

### 139.13.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

# 139.14 class PHChangeRequestMBS

## 139.14.1 class PHChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change delegate.
**Notes:**

You use the PHAssetChangeRequestMBS class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset,Äôs content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request,Äôs properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset,Äôs state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 139.14.2 Methods

## 139.14.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

## 139.14.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.14.5 Properties

### 139.14.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

# 139.15 class PHCloudIdentifierMBS

## 139.15.1 class PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A cloud identifier for a Photos project extension.
**Notes:** The user can choose to store Photos project extensions in iCloud. The cloud identifier uniquely references project extensions in the cloud by string serialization. When a project's global identifier can't be determined from its local identifier, the notFoundIdentifier identifier is provided in that array slot.

## 139.15.2 Methods

## 139.15.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.15.4 Constructor(stringValue as String)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Deserializes a cloud identifier from its string value.

## 139.15.5 notFoundIdentifier as PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The global identifier used in an array slot for items that couldn't be found.

## 139.15.6 Properties

## 139.15.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.15.8 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A string version of the cloud identifier to use in serialization.
**Notes:** (Read only property)

# 139.16 class PHCollectionListChangeRequestMBS

## 139.16.1 class PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A request to create, delete, or modify a Photos collection list, for use in a photo library change block.
**Notes:**

You use the PHCollectionListChangeRequest class to request changes for PHCollectionList objects. To make changes to collection lists (such as folders containing user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForCollectionListWithTitle method to create a new asset collection.
- Call the deleteCollectionLists: method to delete existing asset collections.
- Call the changeRequestForCollectionList: or changeRequestForCollectionList method to modify a collection,Äôs metadata or its list of child collections.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you,Äôre requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying a collection list works like a mutable version of the collection list object. Use the change request,Äôs properties and instance methods to request changes to the collection list itself.

After Photos runs the change delegate and calls your completion handler, the collection list,Äôs state reflects the changes you requested in the delegate.

If you create or use a change request object outside a photo library change delegate, Photos raises an Objective-C exception. For details on change delegates, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

## 139.16.2 Methods

## 139.16.3 addChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Add the specified collections as children of the collection list.
**Notes:**

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be added to the collection list.

If you created the change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method, Photos inserts the new children after the existing child collections in the collection list. Otherwise, the arrangement of the new children relative to others in the collection is undefined.

### 139.16.4 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.16.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for modifying the specified collection list.
**Notes:**

collectionList: The collection list to be modified.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.
Use this method when modifying a collection list,Äôs metadata or when adding or removing child collections without regard to their arrangement. To work with indexes in the list of child collections, use the changeRequestForCollectionList method instead.
See also:

- 139.16.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

### 139.16.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for modifying the specified collection list, with a fetch result for tracking changes.
**Notes:**

collectionList: The collection list to be modified.
childCollections: A fetch result listing the child collections in the collection.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection,Äôs title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange collections at specified indexes in the collection list. By passing in a fetch result reflecting what your app sees as the current state of the collection,Äôs membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don,Äôt need to work with indexes in the list of child collections, you can use the changeRequestForCollectionList method instead.
See also:

- 139.16.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS 22574

### 139.16.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.16.8 creationRequestForCollectionListWithTitle(title as string) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a request for adding a new collection list to the Photos library.
**Notes:**

title: A name for the new collection list.

Returns a collection list creation request.

Call this method within a photo library change block to create a new collection list. For details on change blocks, see PHPhotoLibraryMBS.
To add collections to the newly created collection list or to change its title, use the methods listed in Modifying Collection Lists. To reference the newly created collection collection list later in the same change delegate or after the change delegate completes, use the placeholderForCreatedCollectionListMBS property to retrieve a placeholder object.

### 139.16.9 deleteCollectionLists(collectionLists() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests to delete the specified asset collections.
**Notes:**

collectionLists: An array of PHCollectionListMBS objects to be deleted.

Call this method within a photo library change block to delete collection lists. For details on change blocks, see PHPhotoLibraryMBS.

Deleting a collection list also deletes any child collections it contains. To preserve those collections, remove them from the collection list (with the removeChildCollections or removeChildCollectionsAtIndexes method) before deleting it. Deleting a collection list does not delete assets contained in its child collections.

### 139.16.10 insertChildCollections(collections() as PHCollectionMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Inserts the specified collections into the collection list at the specified indexes.
**Notes:**

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into the collection list.
indexes: The indexes at which the collections should be inserted. The count of locations in this index set must equal the count of collections.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCol-

lectionList method before inserting child collections.
For a detailed discussion of how the index set you specify maps to insertions in the collection list, see the similar NSMutableArray method insertObjects.

### 139.16.11 moveChildCollections(AtIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Moves the child collections at the specified indexes in the collection list to a new index.
**Notes:**

indexes: The indexes of the child collections to be moved in the collection list.
toIndex: The index at which to place the moved child collections, relative to the collection list,Äôs ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before rearranging child collections.

### 139.16.12 removeChildCollections(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the child collections at the specified indexes from the collection list.
**Notes:**

indexes: The indexes of the child collections to be removed from the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before removing child collections. To remove objects based on their identities (without regard to their indexes in the collection), use the removeChildCollections method.
See also:

- 139.16.13 removeChildCollections(collections() as PHCollectionMBS) 22577

### 139.16.13 removeChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Removes the specified child collections from the collection list.
**Notes:**

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be removed from the collection list.

This method removes child collections from the collection list based on their identity (determined by the localIdentifier property of each collection). To remove objects at specified indexes, use the removeChildCollections method.
See also:

- 139.16.12 removeChildCollections(AtIndexes as NSIndexSetMBS) 22577

### 139.16.14 replaceChildCollections(AtIndexes as NSIndexSetMBS, ChildCollections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Replaces the child collections at the specified indexes in the collection list with the specified collections.
**Notes:**

indexes: The indexes of the child collections to be replaced in the collection list.
collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into (or moved within) the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list,Äôs contents using the changeRequestForCollectionList method before rearranging child collections.

### 139.16.15 Properties

### 139.16.16 placeholderForCreatedCollectionList as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A placeholder object for the collection list that the change request creates.
**Notes:**

Use this property if you need to reference the collection created by a change request within the same change block. For details on change blocks, see PHPhotoLibraryMBS.
(Read only property)

### 139.16.17 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The displayed name of the collection list.
**Notes:**

Set this property to change the collection list,Äôs title.
(Read and Write property)

## 139.17 class PHCollectionListMBS

### 139.17.1 class PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A group containing Photos asset collections, such as Moments, Years, or folders of user-created albums.
**Notes:**

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of a collection list, fetch them with a PHCollectionMBS class method such as fetchCollectionsInCollectionList. To find objects at the root of the collection list hierarchy (such as album folders with no parent folders), use the fetchTopLevelUserCollectionsWithOptions method.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collection Lists, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization: method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and asset collections, collection lists are immutable. To create, rename, or delete collection lists, or to add, remove, or rearrange members in a collection list, create a PHCollectionListChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

### 139.17.2 Methods

### 139.17.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.17.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.17.5 fetchCollectionListsContainingCollection(collection as PHCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves collection lists that contain the specified collection.
**Notes:**

collection: An asset collection or another collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHCollectionList objects, or an empty fetch result if no objects match the request.

Different kinds of collections have different containment possibilities. For example, an asset collection whose type is TypeAlbum may be contained in a folder, or have no containing collection list. A folder, in turn, may be contained in another folder. An asset collection whose type is TypeMoment is always contained by two collection lists: a moment cluster and a moment year.

### 139.17.6 fetchCollectionListsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves collection lists with the specified local-device-specific unique identifiers.
**Notes:**

identifiers: An array of strings, each the localIdentifier string of a collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

### 139.17.7 fetchCollectionListsWithType(collectionListType as Integer, subtype as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves collection lists of the specified type.
**Notes:**

collectionListType: A type of collection list. See PHCollectionListType.
subtype: A subtype of collection list. See PHCollectionListSubtype.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResult object contains all collection lists with the specified type and subtype. To retrieve a more specific set of collection lists, provide a PHFetchOptionsMBS object containing a filter predicate.

### 139.17.8 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The names of locations grouped by the collection (an array of strings).
**Notes:** For a collection list representing a group of moments, as seen in the Collections view in the Photos app, this property lists the location names associated with each moment in the group. For other types of collection list, this property,Äôs value is nil.

### 139.17.9 transientCollectionListWithCollections(collections() as PHCollectionMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a temporary collection list that contains the specified asset collections.
**Notes:**

collections: An array of PHAssetCollectionMBS objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

### 139.17.10 transientCollectionListWithCollectionsFetchResult(fetchResult as PHFetchResultMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a temporary collection list containing the asset collections in the specified fetch result.
**Notes:**

fetchResult: A fetch result that contains one or more PHAssetCollection objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you,Äôve designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

### 139.17.11 Properties

### 139.17.12 collectionListSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of asset collection grouping the collection list represents.
**Notes:**

Use subtypes to make minor distinctions between collection lists of the same type, such as moment clusters and moment years. See Subtype constants.
(Read only property)

### 139.17.13 collectionListType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of asset collection group that the collection list represents.
**Notes:**

A collection list may represent an upper level of the Moments hierarchy shown in the Photos app, a folder that contains albums, or a smart folder synced from iPhoto.

(Read only property)

### 139.17.14 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The latest creation date among all assets in the collection list.
**Notes:**

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

### 139.17.15 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The latest creation date among all assets in the collection list.
**Notes:**

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

### 139.17.16 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The earliest creation date among all assets in the collection list.
**Notes:**

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

### 139.17.17 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

**Function:** The earliest creation date among all assets in the collection list.
**Notes:**

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property,Äôs value is nil.
(Read only property)

### 139.17.18 Constants

### 139.17.19 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** Use this value to fetch collection lists of all possible subtypes.

### 139.17.20 SubtypeMomentListCluster = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** The collection list is a moment cluster, grouping several related moments.

### 139.17.21 SubtypeMomentListYear = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** The collection list is a moment year, grouping all moments from one or more calendar years.

### 139.17.22 SubtypeRegularFolder = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** The collection list is a folder containing albums or other folders.

### 139.17.23 SubtypeSmartFolderEvents = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** The collection list is a smart folder containing one or more Events synced from iPhoto.

### 139.17.24 SubtypeSmartFolderFaces = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for the major distinctions between kinds of collection list.
**Notes:** The collection list is a smart folder containing one or more Faces synced from iPhoto.

### 139.17.25 TypeFolder = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for major distinctions between kinds of collection list,
**Notes:** A folder containing asset collections of type PHAssetCollectionTypeAlbum or PHAssetCollection-TypeSmartAlbum.

### 139.17.26 TypeMomentList = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for major distinctions between kinds of collection list,
**Notes:**

A group of asset collections of type PHAssetCollectionTypeMoment.
Moment lists include both moment clusters and moment years. Moment clusters appear as ,ÄúCollections,Äù in the Photos app, grouping individual moments. Years group all moments containing assets created in the same calendar year.

### 139.17.27 TypeSmartFolder = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for major distinctions between kinds of collection list,
**Notes:** A smart folder synced to the device.

# 139.18 class PHCollectionMBS

## 139.18.1 class PHCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The abstract superclass for Photos asset collections and collection lists.
**Notes:**

You do not create or work with instances of this class directly. Instead, use one of its two concrete subclasses, PHAssetCollectionMBS or PHCollectionListMBS.

- A PHAssetCollectionMBS object represents a collection of photo or video assets, such as an album, moment, or Shared Photo Stream.
- A PHCollectionListMBS object represents a collection that contains other collections, such as a a folder containing albums or the set of all moments in a calendar year.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization method to prompt the user at a time of your choosing.)

Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.
Subclass of the PHObjectMBS class.

## 139.18.2 Methods

## 139.18.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.18.4 canPerformEditOperation(anOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns whether the collection supports the specified editing operation.
**Notes:**

anOperation: A bit mask of editing operations to be tested.

Returns true if the asset supports the specified editing operation; otherwise, false.

If an asset collection or collection list supports editing, you can create a PHAssetCollectionChangeRequestMBS or PHCollectionListChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

### 139.18.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.18.6 fetchCollectionsInCollectionList(collectionList as PHCollectionListMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves collections from the specified collection list.
**Notes:**

collectionList: The collection list from which to fetch collections.
options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all collections in the specified collection list. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object that contains a filter predicate.

### 139.18.7 fetchTopLevelUserCollections(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves collections from the root of the photo library,Äôs hierarchy of user-created albums and folders.
**Notes:**

options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollection objects, or an empty fetch result if no objects match the request.

### 139.18.8 Properties

### 139.18.9 canContainAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value indicating whether the collection can contain assets.
**Notes:**

If this value is true, the collection is a PHAssetCollection object; otherwise, false. For details on asset collections, see PHAssetCollectionMBS.
(Read only property)

### 139.18.10 canContainCollections as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value indicating whether the collection can contain other collections.
**Notes:**

If this value is true, the collection is a PHCollectionList object; otherwise, false. For details on collection lists, see PHCollectionListMBS.
(Read only property)

### 139.18.11 localizedTitle as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The localized name of the collection.
**Notes:**

This property,Äôs value can be either a user-supplied name for a user-created collection, or the localized name of a collection built into the Photos app.
(Read only property)

### 139.18.12 Constants

### 139.18.13 EditOperationAddContent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection supports adding items that already exist elsewhere in the photo library.

### 139.18.14 EditOperationCreateContent = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection supports creating new items.

### 139.18.15 EditOperationDelete = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection itself can be deleted.

### 139.18.16 EditOperationDeleteContent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection supports deleting the items it contains.

### 139.18.17 EditOperationRearrangeContent = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.

**Notes:** The collection supports reordering the arrangement of items it contains.

### 139.18.18 EditOperationRemoveContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection supports removing the items it contains.

### 139.18.19 EditOperationRename = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
**Notes:** The collection itself can be renamed.

## 139.19 class PHContentEditingInputMBS

### 139.19.1 class PHContentEditingInputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container that provides information about and access to the image, video, or Live Photo content of an asset to be edited.
**Notes:**

To edit an asset,Äôs photo or video content:

1. Fetch a PHAsset object that represents the photo or video to be edited.
2. Call the asset,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutputMBS object. For photo- or video-only assets, use the editing output,Äôs properties to provide edited asset data. For Live Photo assets, create a PHLivePhotoEditingContextMBS object to edit the Live Photo content.
5. Use a photo library change block to commit the edit. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created. For more details, see PHPhotoLibraryMBS.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAsset object, you implement methods in the PHContentEditingControllerMBS protocol. Photos provides a PHContentEditingInputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

### 139.19.2 Methods

### 139.19.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.11 or newer.

### 139.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.19.5 Properties

### 139.19.6 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that describes the most recent edit to the asset,Äôs content.
**Notes:**

Adjustment data describes the ,Äúrecipe,Äù for the last edit made to an asset,Äôs photo or video content. For example, a photo editing app can use this property to read information about a set of filters applied to a photo. With this information, your app can later allow a user to change the filter parameters.
(Read only property)

### 139.19.7 audiovisualAsset as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The video asset, as an AVAssetMBS object.
**Notes:**

This object provides access to the video asset as a collection of tracks and metadata. For details on working with AVAssetMBS objects.

We pass result, the AVAssetMBS object, as variant to avoid plugin dependencies.
(Read only property)

### 139.19.8 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The date and time when the asset was originally created.
**Notes:** (Read only property)

### 139.19.9 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** The date and time when the asset was originally created.
**Notes:** (Read only property)

### 139.19.10 displaySizeImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An image of the asset,Äôs contents, appropriately sized for display.
**Notes:**

This property does not provide the full-sized image for a photo asset but rather a scaled-down image appropriate for use in a photo editing user interface. To load the full-sized asset image, use the fullSizeImageURL property.
(Read only property)

### 139.19.11 fullSizeImageOrientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The Exif display orientation of the full-size image file.
**Notes:**

This property's value is a raw numeric value describing the encoded image orientation according to the TIFF and Exif specifications. To more easily work with such values, convert this value to the CGImagePropertyOrientation type.
(Read only property)

### 139.19.12 fullSizeImageURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The URL to a file that contains the full-sized image data.
**Notes:**

Typically, your app or extension does not need to load a full-sized image for use in an editing UI. Instead, use the displaySizeImage property to retrieve an image suitable for screen display. You can then load the full-sized image on a background queue so that it will be ready by the time the user finishes editing the display-size image. At that time, apply the user,Äôs adjustments to the full-sized image and then use the PHContentEditingOutputMBS class to commit the edit to the photo library.
(Read only property)

### 139.19.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.19.14 livePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unedited Live Photo content of the editing input.
**Notes:**

To edit the video and photo content of the Live Photo, create a PHLivePhotoEditingContextMBS object using this PHContentEditingInputMBS object.
If the editing input does not represent a Live Photo, this property,Äôs value is nil, indicating that you cannot use this PHContentEditingInputMBS object to create a Live Photo editing context.
(Read only property)

### 139.19.15 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The location information that was saved with the asset.
**Notes:**

Typically, an asset,Äôs location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

### 139.19.16 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The subtypes of the asset, identifying special kinds of assets such as a panoramic photo or a high-frame-rate video.
**Notes:**

See MediaSubtype* constants for possible values.
Because an asset can have more than one subtype, use these values as bit masks to identify an asset.
(Read only property)

### 139.19.17 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of the asset, such as video or audio.
**Notes:**

See MediaType* constants.
(Read only property)

### 139.19.18 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The playback style for the asset.
**Notes:** (Read only property)

### 139.19.19 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The uniform type identifier for the asset,Äôs image or video data.
**Notes:** (Read only property)

### 139.19.20 Constants

### 139.19.21 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a still image.

### 139.19.22 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as an animated image.

### 139.19.23 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a Live Photo.

### 139.19.24 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset has an unsupported or undefined media playback type.

### 139.19.25 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a video.

### 139.19.26 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a looping video.

## 139.20 class PHContentEditingInputRequestOptionsMBS

### 139.20.1 class PHContentEditingInputRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the delivery of image or video data when you request to edit the content of a Photos asset.
**Notes:**

You use the PHContentEditingInputRequestOptionsMBS class with the requestContentEditingInputWithOptions method for editing the contents of a PHAssetMBS object.
This class does not affect photo editing extensions.

### 139.20.2 Methods

### 139.20.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.20.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.20.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.20.6 SetCanHandleAdjustmentData(CanHandleAdjustmentData as CanHandleAdjustmentDataMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets delegate to be called when Photos needs to determine whether your app can continue previous edits made to an asset.
**Notes:** When an asset is edited, Photos stores a PHAdjustmentDataMBS object provided by the app or extension that edited the asset. This object provides all information necessary to reconstruct the edited asset using the original asset data. When your app requests to edit an asset, Photos calls this block to inquire whether your app can handle the asset,Äôs past adjustments.

### 139.20.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the delegate Photos calls periodically while downloading the asset.
**Notes:** If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.

### 139.20.8 Properties

### 139.20.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.20.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether Photos can download the requested asset from iCloud if needed.
**Notes:**

If true (the default), Photos downloads the asset requested for editing if it is not stored on the local device. To be notified of the download,Äôs progress, use the PHContentEditingInputRequestOptionsMBS property to provide a delegate that Photos calls periodically while downloading the asset.
(Read and Write property)

### 139.20.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate Photos calls periodically while downloading the asset.
**Notes:**

If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.
(Read and Write property)

### 139.20.12 Delegates

### 139.20.13 CanHandleAdjustmentDataMBS(adjustmentData as PHAdjustmentDataMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate takes the following parameter.
**Notes:**

adjustmentData: A PHAdjustmentDataMBS object you can use to determine whether your app can work with past edits made to the asset. Typically, you make this decision based on the adjustment data,Äôs formatIdentifier and formatVersion properties.

If your method returns true, Photos provides the original asset data for editing. Your app uses the adjustment data to alter, add to, or reapply previous edits. (For example, an adjustment data may describe filters applied to a photo. Your app reapplies those filters and allows the user to change filter parameters, add new filters, or remove filters.)
If your method returns false, Photos provides the most recent asset data,Äîthe rendered output of all previous edits,Äîfor editing.

### 139.20.14 ProgressHandlerMBS(progress as double, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate takes the following parameters.
**Notes:**

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
stop: Set stop to true inside the block to cancel the download.

# 139.21 class PHContentEditingOutputMBS

## 139.21.1 class PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container to which you provide the results of editing the photo, video, or Live Photo content of a Photos asset.
**Notes:**

To edit an asset,Äôs photo or video content:

1. Fetch a PHAssetMBS object that represents the photo or video to be edited.
2. Call the asset,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object. This object provides information about the asset, the asset data to be edited, and a preview image for display.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutput object. For photo- or video-only assets, provide the edited content with the renderedContentURL property. For Live Photo assets, create a PHLivePhotoEditingContext object to edit the Live Photo content and pass your content editing output to the saveLivePhotoToOutput method. For all asset types, provide your adjustment data with the adjustmentData property of the content editing output.
5. Use a photo library change block to commit the edit. (For details, see PHPhotoLibraryMBS.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.

Each PHPhotoLibraryperformChanges call prompts the user for permission to edit the contents of the photo library,Äîto edit multiple assets in one batch, create multiple PHAssetChangeRequest objects within the same change block, each with its own corresponding PHContentEditingOutput object.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAssetMBS object, you implement methods in the PHContentEditingController protocol. Photos provides a PHContentEditingOutputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

Requires MacOS 10.11 or newer.

## 139.21.2 Methods

## 139.21.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.

**Notes:** Should return true on MacOS 10.11 or newer.

### 139.21.4 Constructor(contentEditingInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an editing output from the specified editing input.
**Notes:**

contentEditingInput: An object providing information about the asset to be edited.

Returns an initialized content editing output.

To complete the edit, use the renderedContentURL property to provide the edited asset content. Then, use the PHAssetChangeRequestMBS class or PHContentEditingController protocol to commit the edit to storage.
See also:

- 139.21.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS) 22602

### 139.21.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates an editing output for use in adding a new asset to the photo library.
**Notes:**

placeholderForCreatedAsset: A placeholder object that ties the editing output to a PHAssetChangeRequest object for creating a new asset.

Returns an initialized content editing output.

Use this method if you want to add a new asset to the Photos library with edited content, as opposed to editing the content of an asset after adding it to the library. For example, you might use this option if your app applies filters to photos it captures with the device camera,Äîinstead of saving only the filtered image to the Photos library, your app can save both the filtered and the original image, allowing the user to revert to the original image or apply different filters later.
See also:

- 139.21.4 Constructor(contentEditingInput as PHContentEditingInputMBS) 22602

### 139.21.6 Properties

### 139.21.7 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object describing the changes made to the asset.
**Notes:**

You use adjustment data to describe the ,Äúrecipe,Äù for an edit that later edits can make use of. For example, a photo editing app can use this property to save information about the filters applied to a photo. Later, the same app (or another app that understands its adjustment data format) can load the filter information, change the filter parameters, and reapply the filters to the original photo.

If you write new asset content to the URL specified by the renderedContentURL property, you must also provide a new, distinct PHAdjustmentDataMBS object describing your edit. Passing a preexisting adjustment data object (that describes an earlier edit) results in undefined behavior.
(Read only property)

### 139.21.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.21.9 renderedContentURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The URL at which to write a file containing edited asset content.
**Notes:**

Read this property to find a URL for writing edited asset content. Then, if editing a photo asset, write the altered photo image to a file in JPEG format at this URL. If editing a video asset, export the video to a QuickTime (.mov) file at this URL.

Edited asset content must incorporate (or ,Äúbake in,Äù) the intended orientation of the asset. That is, the orientation metadata (if any) that you write in the output image or video file must declare the ,Äúup,Äù orientation, and the image or video data must appear right-side up when presented without orientation metadata.

For Live Photo content, you don,Äôt write output to this URL. Instead, pass the editing output object to the saveLivePhotoToOutput method.

(Read only property)

# 139.22 class PHFetchOptionsMBS

## 139.22.1 class PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options that affect the filtering, sorting, and management of results that Photos returns when you fetch asset or collection objects.
**Notes:**

Using class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to fetch assets or collections produces a PHFetchResultMBS object containing the requested objects. The options you specify control which objects the fetch result includes, how those objects are arranged in the fetch result, and how Photos should notify your app of changes to the fetch result.

Photos supports only a restricted set of keys for the predicate and sortDescriptors properties. The set of available keys depends on which class you,Äôre using to fetch assets or collections,Äîsee Table 1 for the list of keys supported by each class.

Supported predicate and sort descriptor keys

| Class for Fetch Method | Supported Keys |
|---|---|
| PHAsset | SELF, localIdentifier, creationDate, modificationDate, mediaType, mediaSubtypes, duration, pixelWidth, pixelHeight, favorite (or isFavorite), hidden (or isHidden), burstIdentifier |
| PHAssetCollection | SELF, localIdentifier, localizedTitle (or title), startDate, endDate, estimatedAssetCount |
| PHCollectionList | SELF, localIdentifier, localizedTitle (or title), startDate, endDate |
| PHCollection (can fetch a mix of PHCollectionList and PHAssetCollection objects) | SELF, localIdentifier, localizedTitle (or title), startDate, endDate |

Available in MacOS 10.13 or newer.

## 139.22.2 Methods

## 139.22.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.22.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.22.5 copy as PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 139.22.6 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the list of sort descriptors, specifying an order for the fetched objects.

### 139.22.7 sortDescriptors as NSSortDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A list of sort descriptors, specifying an order for the fetched objects.

### 139.22.8 Properties

### 139.22.9 fetchLimit as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The maximum number of objects to include in the fetch result.
**Notes:**

With the default fetch limit of zero, Photos returns all requested assets or collections in a fetch result. Change this value to fetch more efficiently in situations where a potentially very large result is not needed. For example, to fetch only the most recently captured asset, call the fetchAssetsWithOptions method, using the sortDescriptors property to sort in descending date order, and setting a fetch limit of one.
(Read and Write property)

### 139.22.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.22.11 includeAllBurstAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the fetch result includes all assets from burst photo sequences.
**Notes:**

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites.

If the value is false (the default), fetches that include burst photo sequences return only the user-picked members and representative asset of each sequence. If the value is true, such fetches include all assets in each sequence.
(Read and Write property)

### 139.22.12 includeAssetSourceTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The set of source types for which to include assets in the fetch result.
**Notes:**

Asset source types identify the means by which an asset enters the Photos library, and affect the possible actions you can perform on an asset. For example, assets synced from iTunes cannot be edited or deleted.

The SourceType type is an option set,Äîto include multiple source types in the same query, combine type constants with the bitwise OR operator. See SourceType constants in PHAssetMBS class.
(Read and Write property)

### 139.22.13 includeHiddenAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether the fetch result includes assets marked as hidden.
**Notes:**

If the value is false (the default), fetches exclude assets whose hidden property is true. If the value is true, fetches include all assets regardless of their hidden state.

(Read and Write property)

### 139.22.14 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A predicate that specifies which properties to select results by and that also specifies any constraints on selection.
**Notes:**

Construct a predicate with the properties of the class of objects that you want to fetch
(Read and Write property)

### 139.22.15 wantsIncrementalChangeDetails as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether your app receives detailed change information for the objects in the fetch result.
**Notes:**

If you have registered a change observer with the shared PHPhotoLibraryMBS object, fetching assets or collections automatically registers your observer to receive information about later changes to the fetch result and about the objects it contains. For a fetch result, change information (a PHFetchResultChangeDetailsMBS object) can include a detailed list of incremental differences from the previous state of the fetch result, such as new photos captured since the original fetch.

If true (the default), Photos sends detailed incremental changes when such information is available. If false, Photos tells your app only when the fetch result has changed (in which case you can perform the fetch again to receive updated results).
(Read and Write property)

# 139.23 class PHFetchResultChangeDetailsMBS

## 139.23.1 class PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A description of changes that occurred in the set of asset or collection objects listed in a fetch result.
**Notes:** A PHFetchResultChangeDetailsMBS object provides detailed information about the differences between two fetch results,Äîone that you previously obtained and an updated one that would result if you performed the same fetch again. The change details object provides information useful for updating a UI that lists the contents of a fetch result, such as the indexes of added, removed, and rearranged objects.

## 139.23.2 Methods

## 139.23.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.23.4 changeDetailsFromFetchResult(fromResult as PHFetchResultMBS, toFetchResult as PHFetchResultMBS, changedObjects() as PHObjectMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a change details object that summarizes the differences between two fetch results.
**Notes:**

fromResult: A fetch result to be treated as the ,Äúbefore,Äù state in the resulting change details object.
toResult: A fetch result to be treated as the ,Äúafter,Äù state in the resulting change details object.
changedObjects: An collection of objects to manually note as changed between the two fetch results.

Typically, you use the PHChangeMBS class to retrieve PHFetchResultChangeDetailsMBS objects describing any changes that have occurred since you performed a fetch, but you can also use this method to get a change details object that summarizes the difference between two arbitrary PHFetchResultMBS objects. In this case, Photos cannot automatically determine when the same objects are present in both fetch results but those objects,Äô content has changed, so the changedIndexes and changedObjects properties are empty.

However, you can use the changedObjects parameter to manually note objects as changed. For example, consider a view controller that maintains a base fetch result representing a list of albums, and a transient

collection that filters the list according to the user,Äôs search terms.

### 139.23.5 changedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The objects in the fetch result whose content or metadata have been updated.
**Notes:**

An array of PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

### 139.23.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.23.7 enumerateMoves(theDelegate as enumerateMovesHandlerMBS, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Runs the specified block for each case where an object has moved from one index to another in the fetch result.
**Notes:** The toIndex parameter in the handler block is relative to the state of the fetch result after you,Äôve applied the changes described by the removedIndexes, insertedIndexes and changedIndexes properties. Therefore, if you use this method to update a collection view or similar user interface displaying the contents of the fetch result, update your UI to reflect insertions, removals, and changes before you process moves.

### 139.23.8 insertedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The new items that have been inserted in the fetch result.
**Notes:**

This array can contain PHAssetMBS, PHAssetCollectionMBS or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

### 139.23.9 removedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The items that have been removed from the fetch result.
**Notes:**

This array can contain PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.

### 139.23.10 Properties

### 139.23.11 changedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The indexes of objects in the fetch result whose content or metadata have been updated.
**Notes:**

Use this index set to update elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you,Äôve applied the changes described by the removedIndexes and insertedIndexes properties; when updating your app,Äôs interface, apply changes after removals and insertions and before moves.

If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

### 139.23.12 fetchResultAfterChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The current fetch result, incorporating recent changes.
**Notes:**

You can use this object to inspect the current state of the fetched objects even if the hasIncrementalChanges property,Äôs value is false. Using this fetch result is equivalent to performing once more the same fetch that returned the original fetch result.
(Read only property)

### 139.23.13 fetchResultBeforeChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The original fetch result, without recent changes.
**Notes:**

This property,Äôs value is the same object you passed to the changeDetailsForFetchResult method to request change details.
(Read only property)

### 139.23.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.23.15 hasIncrementalChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether changes to the fetch result can be described incrementally.
**Notes:**

If this value is true, use the insertedIndexes, removedIndexes, and changedIndexes properties (or the insertedObjects, removedObjects, and changedObjects properties) to find out which objects in the fetch result have been added, removed, or updated. You can also use the hasMoves property and enumerateMoves method to find out which objects in the fetch result have been rearranged. These properties can be useful for updating a collection view or similar interface that displays the fetch result,Äôs contents.

If this value is false, the fetch result is too different from its original state for incremental change information to be meaningful. Use the fetchResultAfterChanges property to get the fetch result,Äôs current membership. (If displaying the fetch result,Äôs contents, reload your user interface to match the new fetch result.)
(Read only property)

### 139.23.16 hasMoves as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether objects have been rearranged in the fetch result.
**Notes:**

If this value is true, use the enumerateMoves method to find out which elements have been moved and what their new indexes are.
(Read only property)

### 139.23.17 insertedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The indexes where new objects have been inserted in the fetch result.
**Notes:**

Use this index set can to insert elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you,Äôve applied the changes described by the removedIndexes property; when updating your app,Äôs interface, apply insertions after removals and before changes and moves.

If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

### 139.23.18 removedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The indexes from which objects have been removed from the fetch result.
**Notes:**

Use this index set to remove elements from a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property); when updating your app,Äôs interface, apply removals before insertions, changes, and moves.
If the hasIncrementalChanges property,Äôs value is false, this property,Äôs value is nil.
(Read only property)

### 139.23.19 Delegates

### 139.23.20 enumerateMovesHandlerMBS(fromIndex as Integer, toIndex as Integer, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that Photos calls to provide details about which objects in the fetch result have moved to which indexes.
**Notes:**

fromIndex: The index of an object in the original fetch result.
toIndex: The index to which the object has moved in the new fetch result.

## 139.24 class PHFetchResultMBS

### 139.24.1 class PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An ordered list of assets or collections returned from a Photos fetch method.
**Notes:**

When you use class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to retrieve objects, Photos provides the resulting objects in a fetch result. You access the contents of a fetch result with various methods. Unlike an array, however, a PHFetchResult object dynamically loads its contents from the Photos library as needed, providing optimal performance even when handling a large number of results.

A fetch result provides thread-safe access to its contents. After a fetch, the fetch result,Äôs count value is constant, and all objects in the fetch result keep the same localIdentifier value. (To get updated content for a fetch, register a change observer with the shared PHPhotoLibraryMBS object.)

A fetch result caches its contents, keeping a batch of objects around the most recently accessed index. Because objects outside of the batch are no longer cached, accessing these objects results in refetching those objects. This process can result in changes to values previously read from those objects.

### 139.24.2 Blog Entries

- Show Live Photos in your Xojo application

### 139.24.3 Blog Entries

- Show Live Photos in your Xojo application

### 139.24.4 Methods

### 139.24.5 allObjects as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Queries all objects as array.

### 139.24.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.24.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.24.8 containsObject(anObject as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns whether the specified object is present in the fetch result.
**Notes:**

anObject: An object.

Returns true if anObject is present in the fetch result, otherwise false.

This method determines whether anObject is present in the fetch result by sending an isEqual: message to each of the fetch result,Äôs objects (and passing anObject as the parameter to each isEqual message).

### 139.24.9 copy as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the result set.

### 139.24.10 countOfAssetsWithMediaType(MediaType as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the number of assets in the fetch result of a specified type.
**Notes:**

mediaType: The type of assets to count, such as image or video. See MediaType constants.

Returns the number of assets in the fetch result of the specified type.

The first time you call this method, Photos enumerates the contents of the fetch result to count those of the specified type, then caches the result. Subsequent calls with the same mediaType parameter return the cached value.
This method counts only the PHAssetMBS objects in a fetch result. If a fetch result contains only PHAssetCollectionMBS or PHCollectionListMBS objects, the return value is 0.

### 139.24.11 indexOfObject(anObject as Variant) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the lowest index whose corresponding object in the fetch result is equal to the specified object.
**Notes:**

anObject: An object.

Returns the lowest index whose corresponding object in the fetch result is equal to anObject, or NSNotFound if no such object is in the fetch result.

Starting at index 0, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
See also:

- 139.24.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer 22616

### 139.24.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the lowest index within the specified range whose corresponding object in the fetch result is equal to the specified object.
**Notes:**

anObject: An object.
range: The range of indexes in the fetch result within which to search for anObject.

Returns the lowest index within range whose corresponding object in the fetch result is equal to anObject,

or NSNotFound if no such object is in the fetch result.

Starting at range.location, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
Raises an exception (NSExceptionMBS class) if the range parameter represents a range that doesn,Äôt exist in the fetch result.
See also:

- 139.24.11 indexOfObject(anObject as Variant) as Integer 22616

### 139.24.13 objectAtIndex(index as Integer) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the object located at the specified index.
**Notes:**

index: An index within the bounds of the fetch result.

Returns the object located at index in the fetch result.

Raises an exception (NSExceptionMBS class) if index is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

### 139.24.14 objectsAtIndexes(indexes as NSIndexSetMBS) as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns an array containing the objects in the fetch result at the indexes in the specified index set.
**Notes:**

indexes: An index set containing indexes within the bounds of the fetch result.

Returns an array containing the objects in the fetch result at the indexes specified by indexes.

The ordering of the returned array follows the index set. That is, in the returned array, an object with a higher index in the index set comes after any object with a smaller index in the index set.
Raises an exception (NSExceptionMBS) if any index in the index set is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

### 139.24.15 Properties

### 139.24.16 count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The number of objects in the fetch result.
**Notes:** (Read only property)

### 139.24.17 firstObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The first object in the fetch result.
**Notes:**

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

### 139.24.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.24.19 lastObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The last object in the fetch result.
**Notes:**

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

### 139.24.20 Constants

### 139.24.21 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
**Notes:**

The asset,Äôs photo or video content can be edited.
To begin the process of editing an asset, use the requestContentEditingInputWithOptions method.

### 139.24.22 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
**Notes:**

The asset can be deleted from the photo library.
To delete one or more assets, create a change request with the deleteAssets method inside a PHPhotoLibrary change block.

### 139.24.23 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
**Notes:**

The asset,Äôs metadata properties can be edited.
To change an asset,Äôs properties, create a change request with the changeRequestForAsset method inside a PHPhotoLibraryMBS change block.

### 139.24.24 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is an audio file.

### 139.24.25 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is a photo or other static image.

### 139.24.26 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset,Äôs type is unknown.

### 139.24.27 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants identifying the general type of an asset, such as image or video.
**Notes:** The asset is a video file.

### 139.24.28 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a still image.

### 139.24.29 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as an animated image.

### 139.24.30 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a Live Photo.

### 139.24.31 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset has an unsupported or undefined media playback type.

### 139.24.32 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a video.

### 139.24.33 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants of asset playback styles that dictate how to present an asset to the user.
**Notes:** The asset should be displayed as a looping video.

## 139.25 class PHImageManagerMBS

### 139.25.1 class PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that facilitates retrieving or generating preview thumbnails and asset data.
**Notes:**

Use these methods to fetch full-size photo assets or thumbnail images, or to retrieve AVFoundation objects for playing, exporting, and manipulating video assets.

To load image or video data:
1. Use the PHAsset class to fetch the asset you,Äôre interested in.
2. Call the defaultManager method to retrieve the shared image manager object.
3. Use one of the methods listed in Requesting Images and Requesting Video Objects to load the asset,Äôs image or video data.

The image manager caches the asset images and data it provides, so later requests for the same assets with similar parameters will return results more quickly.

If you need to load image data for many assets together, use the PHCachingImageManagerMBS class to ,Äúpreheat,Äù the cache by loading images you expect to need soon. For example, when populating a collection view with photo asset thumbnails, you can cache images ahead of the current scroll position.

Available in MacOS 10.13 or later.

### 139.25.2 Blog Entries

- Show Live Photos in your Xojo application

### 139.25.3 Blog Entries

- Show Live Photos in your Xojo application

### 139.25.4 Methods

### 139.25.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.25.6 cancelImageRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels an asynchronous request.
**Notes:**

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for image data using the requestImageForAsset method, or for a video object using one of the methods listed in Requesting Video Objects, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelImageRequest method.

### 139.25.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.25.8 defaultManager as PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns the shared image manager object.
**Notes:** This method always returns the same image manager object, which is shared for all uses in your app.

### 139.25.9 MaximumSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A special value for requesting original image data or the largest rendered image available.
**Notes:** When you use the PHImageManagerMaximumSize option, Photos provides the largest image available for the asset without scaling or cropping. (That is, it ignores the resizeMode option.)

### 139.25.10 PHImageCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary.
**Notes:**

A key whose value indicates whether the image request was canceled.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value.If you call the cancelImageRequest method to cancel a request, Photos calls your result handler block with the value true for this key.

### 139.25.11 PHImageErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary.
**Notes:**

A key whose value is an error that occurred when Photos attempted to load the image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an NSErrorMBS object.Photos provides an error object for this key if it cannot provide an image for your handler block,Äôs result parameter. Examine the error object for information about the cause of the error.

### 139.25.12 PHImageResultIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary.
**Notes:**

A key whose value indicates whether the result image is a low-quality substitute for the requested image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value. If true, the result parameter of your resultHandler block contains a low-quality image because Photos could not yet provide a higher-quality image. Depending on your settings in the PHImageRequestOptions object that you provided with the request, Photos may call your result handler delegate again to provide a higher-quality image.

### 139.25.13 PHImageResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary.
**Notes:**

A key whose value indicates whether photo asset data is stored on the local device or must be downloaded from iCloud.

This key provides information about an image loading result in the resultHandler delegate for methods listed in Requesting Images. The corresponding value is a Boolean value.

If true, no image was provided, because the asset data must be downloaded from iCloud. To download the data, submit another request, and specify true for the networkAccessAllowed option.

### 139.25.14 PHImageResultRequestIDKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary.
**Notes:**

A key whose value is a unique identifier for the image request.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an integer value. This identifier matches that returned when making a request. You can use it with the cancelImageRequest method to cancel requests with pending results that are no longer needed.

### 139.25.15 RequestAVAssetForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestAVAssetForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests AVFoundation objects representing the video asset,Äôs content and state, to be loaded asynchronously.
**Notes:**

asset: The video asset for which video objects are to be loaded.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates AVFoundation objects. It then calls your resultHandler block to provide the requested video.

Use this method when you want to work with the arrangement of audio and video tracks that an asset contains. If you plan to use the asset only for playback, call the requestPlayerItemForVideo method. If you plan to export the asset data, call the requestExportSessionForVideo method.

### 139.25.16 RequestExportSessionForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestExportSessionForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests an export session for writing the video asset,Äôs data to a file, to be loaded asynchronously.
**Notes:**

asset: The video asset for which an export session is to be created.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.
exportPreset: The export preset name for exporting the asset. For available presets, see AVAssetExportSessionMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates an export session. It then calls your resultHandler delegate to provide the requested video.
For additional export options, use the requestAVAssetForVideo method and then create AVAssetReader and AVAssetWriterMBS objects to transcode and output the video asset,Äôs data.

### 139.25.17 RequestImageDataAndOrientationForAsset(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests the largest represented image as data bytes and EXIF orientation for the specified asset.
**Notes:**

asset: The asset for which to load image data.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors.

If PHImageRequestOptionsMBS.VersionCurrent is requested and the asset has adjustments, the largest rendered image data is returned. In all other cases, the original image data is returned.
For further details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads the largest available representation of the image asset, then calls your resultHandler block to provide the requested data. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread, you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler. This method ignores the deliveryMode option,ÄîPhotos calls your result handler block exactly once.

If the version option is set to PHImageRequestOptionsMBS.VersionCurrent, Photos provides rendered image data, including the results of any edits that have been made to the asset content. Otherwise, Photos provides the originally captured image data for the asset.

### 139.25.18 RequestImageForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests an image representation for the specified asset.
**Notes:**

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads or generates an image of the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size,Äîeither because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler.

For an asynchronous request, Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler,Äôs info parameter indicates when Photos is providing a temporary low-quality image.

You can use this method for both photo and video assets ,Äî for a video asset, an image request provides a thumbnail image or poster frame.

### 139.25.19 RequestImageForAssetSync(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, byref Info as Dictionary) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests an image representation for the specified asset synchronously.
**Notes:**

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns the image.

### 139.25.20 RequestLivePhotoForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHLivePhotoRequestOptionsMBS, CompletionHandler as RequestLivePhotoForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests a Live Photo representation for the specified asset.
**Notes:**

asset: The asset whose Live Photo data is to be loaded.
targetSize: The target size of Live Photo to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHLivePhotoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

A Live Photo is a picture, taken with a supported device, that includes movement and sound from the moments just before and after its capture. Much like how a UIImage object represents a ready-to-use form of an image, a PHLivePhotoMBS object represents a Live Photo whose image, motion, and sound data are prepared for display. Use this method to request an asset,Äôs Live Photo form; after Photos calls your resultHandler delegate to provide the Live Photo, you can display it using the PHLivePhotoViewMBS class.

Use this method only when you plan to display the motion and sound content associated with a Live Photo. In contexts where you need only a still image for a Live Photo asset,Äîfor example, when loading thumbnails to display in a photo chooser interface,Äîuse the requestImageForAsset method instead.

When you call this method, Photos loads or generates a PHLivePhotoMBS object for the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size,Äîeither because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network. This method always executes asynchronously.

Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler,Äôs info parameter indicates when Photos is providing a temporary low-quality image.

### 139.25.21 RequestPlayerItemForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, CompletionHandler as RequestPlayerItemForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests a representation of the video asset for playback, to be loaded asynchronously.
**Notes:**

asset: The video asset to be played back.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates a player item. It then calls your resultHandler block to provide the requested video.

Use this method when you want to simply play back the video asset as it currently exists. For more detailed options or to work with the asset,Äôs audio and video tracks, use the requestAVAssetForVideo method instead.

### 139.25.22 Properties

### 139.25.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.25.24 Constants

### 139.25.25 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the content mode constants.
**Notes:** Scales the image so that it completely fills the target size.

### 139.25.26 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the content mode constants.
**Notes:** Scales the image so that its larger dimension fits the target size.

### 139.25.27 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the content mode constants.
**Notes:**

Fits the image to the requested size using the default option, PHImageContentModeAspectFit.

Use this content mode when requesting a full-sized image using the PHImageManagerMBS.MaximumSize value for the target size. In this case, the image manager does not scale or crop the image.

### 139.25.28 PHInvalidImageRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** A special value provided for asynchronous image requests that cannot be canceled.

### 139.25.29 Delegates

### 139.25.30 RequestAVAssetForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, AVAsset as Variant, AVAudioMix as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that Photos calls after loading the asset,Äôs data.
**Notes:**

asset: An object that provides access to the video asset as a collection of tracks and metadata. For details on working with AVAsset objects, see AVFoundation Programming Guide.
audioMix: Use this object to rearrange the asset,Äôs audio tracks, edit additional audio into the mix, or configure an AVAssetReaderOutput object for exporting the asset,Äôs audio data. If nil, the asset uses a default audio mix.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for

possible keys and values.

We pass AVAsset, the AVAssetMBS object, as variant to avoid plugin dependencies.
Same for AVAudioMix with AVAudioMixMBS object.

### 139.25.31 RequestExportSessionForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as string, exportSession as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate that Photos calls after loading the asset,Äôs data and preparing the export session.
**Notes:**

exportSession: An AVAssetExportSessionMBS object that you can use for writing the video asset,Äôs data to a file.
info: A dictionary that provides information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass AVAsset, the AVAssetExportSessionMBS object, as variant to avoid plugin dependencies.

### 139.25.32 RequestImageDataAndOrientationForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, imageData as MemoryBlock, dataUTI as String, orientation as Integer, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate called, exactly once, when image loading is complete, providing the requested image or information about the status of the request.
**Notes:**

imageData: The requested image.
dataUTI: The uniform type identifier for the image.
orientation: The EXIF orientation for the image, as a CGImagePropertyOrientation.
info: A dictionary providing information about the status of the request.

### 139.25.33 RequestImageForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, result as NSImageMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
**Notes:**

result: The requested image.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

### 139.25.34 RequestLivePhotoForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, livePhoto as PHLivePhotoMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
**Notes:**

result: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

### 139.25.35 RequestPlayerItemForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, playerItem as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A delegate Photos calls after loading the asset,Äôs data and preparing the player item.
**Notes:**

playerItem: An AVPlayerItemMBS object that you can use for playing back the video asset.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass playerItem, the AVPlayerItemMBS object, as variant to avoid plugin dependencies.

## 139.26 class PHImageRequestOptionsMBS

### 139.26.1 class PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the delivery of still image representations of Photos assets you request from an image manager.
**Notes:** Available on macOS 10.13 or newer.

### 139.26.2 Methods

### 139.26.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.26.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.26.5 copy as PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the request.

### 139.26.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.26.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the delegate that Photos calls periodically while downloading the image.
**Notes:** If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

### 139.26.8 Properties

### 139.26.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The requested image quality and delivery priority.
**Notes:**

Use this property to tell Photos to provide an image quickly (possibly sacrificing image quality), to provide a high-quality image (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

### 139.26.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.26.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether Photos can download the requested image from iCloud.
**Notes:**

If true, and the requested image is not stored on the local device, Photos downloads the image from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the image. If false (the default), and the image is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the image is not available unless you enable network access.

(Read and Write property)

### 139.26.12 normalizedCropRect as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A rectangle for requesting a cropped version of the original image.
**Notes:**

To request a cropped image, specify the crop rectangle in a unit coordinate space relative to the image. In this coordinate system, the point { 0.0,0.0 } refers to the upper left corner of the image, and the point { 1.0,1.0 } refers to the opposite corner regardless of the image,Äôs aspect ratio.
This property defaults to zero rectangle, which specifies no cropping.
If you specify a crop rectangle, you must also specify the PHImageRequestOptionsResizeModeExact option for the resizeMode property.
(Read and Write property)

### 139.26.13 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls periodically while downloading the image.
**Notes:**

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

### 139.26.14 ResizeMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mode that specifies how to resize the requested image.
**Notes:**

Use this property to choose how to fit the image to the target size you specified when requesting image data.
See PHImageRequestOptionsResizeMode.
(Read and Write property)

### 139.26.15 Synchronous as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that determines whether Photos processes the image request synchronously.
**Notes:**

If false (the default), the requestImageForAsset method returns immediately. Depending on the deliveryMode property, Photos may call your resultHandler delegate before the method returns, at some later time, or both.
If true, the requestImageForAsset method blocks the calling thread until image data is ready or an error occurs. Photos calls your result handler delegate exactly once.

Perform synchronous requests from a background thread only.
(Read and Write property)

### 139.26.16 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The version of the image to be requested.
**Notes:**

Use this property to request a version of the image with or without adjustments, or to request high-quality original data (for example, a RAW file) if such is available. See Version constants.
(Read and Write property)

### 139.26.17 Constants

### 139.26.18 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.
**Notes:** Photos provides only a fast-loading image, possibly sacrificing image quality.

### 139.26.19 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.

**Notes:** Photos provides only the highest-quality image available, regardless of how much time it takes to load.

### 139.26.20 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.
**Notes:** Photos automatically provides one or more results in order to balance image quality and responsiveness.

### 139.26.21 ResizeModeExact = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
**Notes:**

Photos resizes the image to match the target size exactly.
Resizing to exactly match a target size is less efficient than using the fast resizing option.
You must choose this option if you use the normalizedCropRect property to request a cropped image.

### 139.26.22 ResizeModeFast = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
**Notes:**

Photos efficiently resizes the image to a size similar to, or slightly larger than, the target size.
With this option, Photos can use image subsampling to quickly provide an image at a size roughly matching the target size.

### 139.26.23 ResizeModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.

**Notes:** Photos does not resize the image asset.

### 139.26.24 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for requesting an image asset with or without adjustments, used by the version property.
**Notes:** Request the most recent version of the image asset (the one that reflects all edits).

### 139.26.25 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for requesting an image asset with or without adjustments, used by the version property.
**Notes:** Request the original, highest-fidelity version of the image asset.

### 139.26.26 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for requesting an image asset with or without adjustments, used by the version property.
**Notes:** Request a version of the image asset without adjustments.

### 139.26.27 Delegates

### 139.26.28 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls while downloading asset data from iCloud. Used by the progressHandler property.
**Notes:**

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and to allow you to cancel the download.

Photos calls this block in an arbitrary serial queue. Dispatch to the main thread if your handler needs to update the user interface.

The method takes the following parameters:
progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the block.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request,Äôs deliveryMode property.

If the method call is asynchronously dispatched to main thread, the stop property does not work.

# 139.27 control PHLivePhotoControlMBS

## 139.27.1 control PHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A view that displays a Live Photo,Äîa picture that also includes motion and sound from the moments just before and after its capture.
**Notes:**

Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app,Äîsee the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer,Äîfor example, to install it on a different view for proper event handling in your app,Äôs view hierarchy,Äîuse the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

### 139.27.5 Xojo Developer Magazine

- 18.3, page 57: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

### 139.27.6 Methods

### 139.27.7 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

**Function:** Whether this control is available.

### 139.27.8 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Begins playback of Live Photo content in the view.
**Notes:**

style: An option for how much of the Live Photo,Äôs motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate,Äîfor example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

### 139.27.9 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Ends playback of Live Photo content in the view.
See also:

- 139.27.10 stopPlayback(animated as boolean)

### 139.27.10 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Ends playback of Live Photo content in the view.
See also:

- 139.27.9 stopPlayback 22642

### 139.27.11 Properties

### 139.27.12 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The audio gain to apply to the Live Photo,Äôs movie content during playback.
**Notes:**

Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

### 139.27.13 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The content mode.
**Notes:** (Read and Write property)

### 139.27.14 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The Live Photo displayed in the view.
**Notes:** (Read and Write property)

### 139.27.15 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A view for displaying Live Photo status.
**Notes:**

The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don,Äôt need to do anything with view,Äôs content,Äîinstead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

### 139.27.16 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A Boolean value that determines whether the view plays the audio content of its Live Photo.
**Notes:**

The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

### 139.27.17 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The view used in the control.
**Notes:**

Use this object to set more options on the control.
(Read only property)

### 139.27.18 Events

### 139.27.19 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 139.27.20 Close

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 139.27.21 Closing

Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 139.27.22 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 139.27.23 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 139.27.24 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Notifies the delegate that Live Photo playback has ended.
**Notes:** playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

### 139.27.25 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 139.27.26 FocusLost

Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 139.27.27 FocusReceived

Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 139.27.28 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 139.27.29 GotFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 139.27.30 LostFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 139.27.31 MenuBarSelected

Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 139.27.32 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 139.27.33 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 139.27.34 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 139.27.35 Open

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 139.27.36 Opening

Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 139.27.37 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

### 139.27.38 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** Notifies the control that Live Photo playback is about to begin.
**Notes:** playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

### 139.27.39 Constants

### 139.27.40 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the content mode constants.
**Notes:** Aspect Fill.

### 139.27.41 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the content mode constants.
**Notes:** Aspect Fit.

### 139.27.42 PlaybackStyleFull = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the playback styles.
**Notes:** Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.

### 139.27.43 PlaybackStyleHint = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the playback styles.
**Notes:** Plays back only a brief section of the motion content of the Live Photo, without sound.

### 139.27.44 PlaybackStyleUndefined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the playback styles.
**Notes:** This value is invalid for use.

# 139.28 class PHLivePhotoEditingContextMBS

## 139.28.1 class PHLivePhotoEditingContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An editing session for modifying the photo, video, and audio content of a Live Photo.
**Notes:**

A Live Photo is a picture, captured by a supported iOS device, that includes motion and sound from the moments just before and after it was taken. Editing the content of a Live Photo works much like editing other asset types:

1. In an app using the Photos framework, fetch a PHAsset object that represents the Live Photo to edit, and use that object,Äôs requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
In a photo editing extension that runs within the Photos app, your extension,Äôs main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.
2. Create a Live Photo editing context with the initWithLivePhotoEditingInput initializer.
You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.
3. Use the frameProcessor property to define a block to be used in processing the Live Photo,Äôs visual content. Photos will call this block repeatedly to process each frame of the Live Photo,Äôs video and still photo content.
4. Create a PHContentEditingOutputMBS object to store the results of your edit, then call the saveLivePhotoToOutput:options to process the Live Photo and save it to your editing output object. This method applies your frameProcessor to each frame.
Note
You can also use the prepareLivePhotoForPlaybackWithTargetSize method to process a preview-quality version of the Live Photo to display in your app,Äôs UI during editing.
5. To allow a user to continue working with the edit later (for example, to adjust the parameters of a filter), create a PHAdjustmentDataMBS object describing your changes, and store it in the adjustmentData property of your editing output.
6. In an app using the Photos framework, use a photo library change block to commit the edit. (For details, see PHPhotoLibrary.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.
In a photo editing extension, provide the PHContentEditingOutputMBS object that you created in your main view controller,Äôs finishContentEditing method.

When you use either of the methods listed in Processing an Editing Context,Äôs Live Photo, Photos calls your frameProcessor delegate repeatedly to process each frame of the Live Photo,Äôs video and still photo content. In that block, a PHLivePhotoFrameMBS object provides the Live Photo,Äôs existing content as a CIImageMBS object. You use Core Image to modify the image, then provide the result of your edits by returning a CIImageMBS object representing the result of processing the input image.

Core Image provides several ways to process the Live Photo,Äôs visual content. You can use the built-in filters listed in Core Image Filter Reference or create CIFilterMBS subclasses using custom graphics kernel code. Or, to use other image processing technologies, you can directly access and modify image content in pixel buffers, Metal textures, or IOSurfaceRef objects with a custom CIImageProcessorKernel subclass.

### 139.28.2 Methods

### 139.28.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.12 or newer.

### 139.28.4 cancel

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Aborts any Live Photo processing in progress.
**Notes:** This method applies only after you,Äôve begun processing a Live Photo for display or output with the initWithLivePhotoEditingInput or saveLivePhotoToOutput method. After you call this method, Photos calls your completion handler and provides an error with the PHLivePhotoEditingErrorCodeAborted error code.

### 139.28.5 Constructor(livePhotoInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a Live Photo editing context for the specified editing input.
**Notes:**

livePhotoInput: A content editing input object representing the Live Photo for which to perform editing.

Returns a new Live Photo editing context, or nil if the provided content editing input does not represent a Live Photo.

In an app using the Photos framework, you obtain a PHContentEditingInputMBS object by calling requestContentEditingInputWithOptions method of a PHAssetMBS object that you,Äôve previously fetched.
In a photo editing extension that runs within the Photos app, your extension,Äôs main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.

You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.

### 139.28.6 PHLivePhotoShouldRenderAtPlaybackTime as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Specifies whether processing should occur during or before playback.
**Notes:**

The value for this key is an NSNumber object with a Boolean value. With the default value of false, Photos always renders your edits immediately when you call the Constructor, calling your frameProcessor block for each frame in the Live Photo,Äôs video and still photo content.

When you specify a value of true, Photos can defer rendering until playback time, calling your frameProcessor block only for photo and video frames that need to be displayed. However, in this case Photos may still choose to pre-render your edits if needed.

This option does not apply when rendering for output with the saveLivePhotoToOutput method.

### 139.28.7 prepareLivePhotoForPlayback(targetSize as CGSizeMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Processes a Live Photo with your edits for viewing.
**Notes:**

targetSize: The size of the view in which you plan to preview the edited Live Photo output.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method to generate preview versions of the edited Live Photo,Äîfor example, to display in your editing UI.

### 139.28.8 saveLivePhotoToOutput(ContentEditingOutput as PHContentEditingOutputMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Processes and saves a full-quality Live Photo as the output of your editing session.
**Notes:**

output: The photo editing output to receive the rendered Live Photo, created from the same PHContentEditingInputMBS object you used to begin this Live Photo editing context.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method when you have finished an editing session and need to provide rendered output in a PHContentEditingOutputMBS object. Unlike when rendering output for a photo or video asset, you don,Äôt need to provide rendered output using the renderedContentURL property of the editing output object. Instead, create a PHContentEditingOutputMBS object using the Constructor initializer, passing the same PHContentEditingInputMBS object you used in the FrameProcessing delegate initializer to start this Live Photo editing context. Then pass that editing output object to this method, and Photos renders the Live Photo and provides it to the editing output.

Don,Äôt forget to describe your edits in a PHAdjustmentDataMBS object and provide that to the adjustmentData property of your content editing output. Providing adjustment data allows your app (or photo editing extension) to non-destructively resume working with an edit later, whether on the same device or on another Mac or iOS device using iCloud Photo Library.

After this method,Äôs completion handler signals successful rendering, you use the content editing output to complete the edit. In an app using the Photos framework, create a PHAssetChangeRequestMBS object inside a changes, and set its contentEditingOutput property to your editing output. In a photo editing extension running in the Photos app, your main view controller provides content editing output when requested by the finishContentEditing method.

### 139.28.9 SetFrameProcessor(FrameProcessor as FrameProcessorMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets a delegate to be called by Photos for processing each frame of the Live Photo,Äôs visual content.
**Notes:**

Use this property to define the image processing to be performed on each frame of the Live Photo. Setting this property does not begin processing; instead, after you call one of the methods listed in Processing an Editing Context,Äôs Live Photo, Photos executes your block repeatedly to process each frame of the Live Photo,Äôs video and still photo content.

In your frame processor block, use the image property of the provided PHLivePhotoFrameMBS object to access the image to be processed, and return a CIImageMBS object representing the result of your processing. For example, the following code sets up a processor block to apply a simple sepia-tone filter, then calls the saveLivePhotoToOutput method to begin processing the Live Photo for output.

### 139.28.10 Properties

### 139.28.11 audioVolume as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The audio gain to apply to the processed Live Photo.
**Notes:**

Values must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) leaves the audio content of the Live Photo unchanged. A value of 0.0 mutes all audio in the output Live Photo.
Setting this property does not process the Live Photo content; instead, it sets the audio gain to be applied when you later process the Live Photo using one of the methods listed in Processing an Editing Context,Äôs Live Photo.
(Read and Write property)

### 139.28.12 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The duration, in seconds, of the Live Photo.
**Notes:** (Read only property)

### 139.28.13 fullSizeImage as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The unedited still photo content of the Live Photo.
**Notes:**

Value is CIImageMBS.
Use this property to display the unedited Live Photo,Äôs photo content, or to provide still-image previews in your editing UI.

For the best interactive editing performance, use a Metal, OpenGL, or OpenGL ES view and corresponding Core Image context to render editing results. See Processing Images in Core Image Programming Guide for details and examples.

This image does not reflect the Live Photo,Äôs orientation metadata. Adjust your rendering based on the orientation property to ensure that the image appears to the user in the correct orientation.
(Read only property)

### 139.28.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.28.15 orientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The image orientation of the Live Photo.
**Notes:**

This fullSizeImage object does not reflect the Live Photo,Äôs orientation metadata. Use this property when displaying that image to ensure that it appears to the user in the correct orientation.
(Read only property)

### 139.28.16 photoTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The offset, in seconds, from the beginning of the Live Photo,Äôs duration to the time corresponding to its still photo.
**Notes:**

To create time-based effects in your frameProcessor block, use this property together with the duration property.
(Read only property)

### 139.28.17 Delegates

### 139.28.18 FrameProcessorMBS(frame as PHLivePhotoFrameMBS, byref error as NSErrorMBS, tag as Variant) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate for a block Photos calls to process Live Photo frames.
**Notes:**

Result of delegate method must be a CIImageMBS object.

To apply edits to a Live Photo, define a block with this signature and assign it to the frameProcessor property of a Live Photo editing context. Then call the initWithLivePhotoEditingInput: to prepare a preview-quality version of your edits for display, or the saveLivePhotoToOutput method to produce full-quality final output. When you call one of those methods, Photos calls your frame processor block repeatedly,Äîprocessing each frame of the Live Photo,Äôs video content as well as its still photo content,Äîto render the output.

This delegates takes the following parameters:

frame: A PHLivePhotoFrameMBS object describing the frame image to be processed.
error: If your delegate cannot successfully process the frame, set this to an error object describing the failure.

Your block should return a CIImageMBS object representing the result of your edits, or nil to indicate that your image processing has failed and the Live Photo edit should be aborted. Use the frame parameter,Äôs image property to access the image to be edited.

### 139.28.19 PrepareLivePhotoForPlaybackCompletedMBS(options as Dictionary, livePhoto as PHLivePhotoMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate that Photos calls on the main queue after processing is complete.
**Notes:**

livePhoto: The rendered Live Photo, suitable for displaying in a PHLivePhotoViewMBS object.
error: If preparing the edited Live Photo for display succeeds, this parameter is nil. If processing fails, the livePhoto parameter is nil, and this parameter contains an error object describing the failure.

### 139.28.20 SaveLivePhotoToOutputCompletedMBS(output as PHContentEditingOutputMBS, options as Dictionary, success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate that Photos calls on the main queue after rendering is complete.
**Notes:**

success: True if rendering succeeds; otherwise false.
error: If rendering succeeds, this parameter is nil. If rendering fails, this parameter contains an error object describing the failure.

# 139.29 class PHLivePhotoFrameMBS

## 139.29.1 class PHLivePhotoFrameMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A container that provides image content for a single frame of a Live Photo in an editing context.
**Notes:**

You don,Äôt create classes that implement this protocol. Instead, you provide a frameProcessor block when editing a Live Photo with the PHLivePhotoEditingContextMBS class. When you process your edits for output or display, Photos calls your block repeatedly to process each frame of the Live Photo,Äôs video and still photo content. On each call, Photos provides the frame,Äôs image content and associated information in an object that adopts this protocol. In that block, you use that object,Äôs image property to access the image to be edited, then perform your edits and return another CIImageMBS object representing the result of processing the input image.

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 139.29.2 Methods

## 139.29.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.12 or newer.

## 139.29.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

## 139.29.5 Properties

## 139.29.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.29.7 Image as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The image content of the frame to be processed.
**Notes:**

Value is CIImageMBS object.
Core Image provides several ways to perform your adjustments to this image:

- Create a single CIFilterMBS object, or a chain of filters. Set this image as the kCIInputImageKey parameter of the first filter in the chain, and use the last filter,Äôs outputImage property to access the result. Each CIFilter object can be a built-in filter or a custom filter subclass that you create.
- Use the imageByApplyingFilter method to conveniently apply one of the many built-in Core Image filters.
- Access pixel buffers directly and apply custom image processing using a custom CIImageProcessorKernelMBS subclass.

In all cases, you obtain another CIImageMBS object representing the result of your adjustments. Return that image from your frameProcessor block. (See the frameProcessor description for example code.)
(Read only property)

### 139.29.8 renderScale as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The scale factor of the frame image relative to the Live Photo,Äôs photo content.
**Notes:**

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo,Äôs video content and to process the Live Photo,Äôs still photo content. Video frames can be a different size than still photo content,Äîuse this value to scale any of your image processing parameters that depend on the image,Äôs size.
(Read only property)

### 139.29.9 time as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The time offset, in seconds, of this frame relative to the start of the Live Photo.
**Notes:**

You can use this value to vary your image processing over time, creating animated effects.
(Read only property)

### 139.29.10 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The type of image content in this frame.
**Notes:**

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo,Äôs video content and to process the Live Photo,Äôs still photo content. Use this property to distinguish photo content from video frames,Äîfor example, to add a watermark only to still photo content.
(Read only property)

### 139.29.11 Constants

### 139.29.12 TypePhoto = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the identifiers for the type of frame image to be processed. Used with the type property.
**Notes:** The image is a still photo.

### 139.29.13 TypeVideo = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the identifiers for the type of frame image to be processed. Used with the type property.
**Notes:** The image is a single frame from the Live Photo,Äôs video content.

## 139.30 class PHLivePhotoMBS

### 139.30.1 class PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A displayable representation of a Live Photo,Äîa picture that includes motion and sound from the moments just before and after its capture.
**Notes:**

In macOS, you can use this class to display edits in progress for Live Photo content in a photo editing extension.

For guidance on how to integrate Live Photos with your app,Äôs user experience, see Live Photos in iOS Human Interface Guidelines.

The PHLivePhotoMBS class serves in much the same role for Live Photos as the NSImageMBS class serves for static images. A NSImageMBS object represents not the data file an image is loaded from, but instead a ready-to-use image that can be displayed in a view,Äîsimilarly, a PHLivePhotoMBS object represents a Live Photo ready to display with motion and sound using a PHLivePhotoViewMBS object, not an entry in the Photos library or the data resources that constitute a Live Photo. (To work with Live Photos as elements of the Photos library, use the PHAsset class. To work with the data files that constitute a Live Photo, use the PHAssetResourceMBS class.)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.30.2 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5

### 139.30.3 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5

### 139.30.4 Methods

### 139.30.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.12 or newer.

### 139.30.6 cancelLivePhotoRequestWithRequestID(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Cancels an asynchronous request.
**Notes:**

requestID: The numeric identifier of the request to be canceled.

When you use the requestLivePhotoWithResourceFileURLs method to asynchronously load a Live Photo from resource files, the method returns a numeric identifier for the request. To cancel the request before it completes, provide the identifier when calling the cancelLivePhotoRequestWithRequestID method.

### 139.30.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.30.8 copy as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 139.30.9 PHLivePhotoInfoCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
**Notes:** A Boolean value indicating whether the Live Photo loading request was canceled.

### 139.30.10 PHLivePhotoInfoErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
**Notes:** An error that occurred while attempting to load the requested Live Photo.

### 139.30.11 PHLivePhotoInfoIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
**Notes:**

A Boolean value indicating whether the result Live Photo is a low-quality substitute for the requested Live Photo.

If true, the result parameter of your resultHandler block contains a still or low-quality Live Photo, and Photos will call your result delegate method again to provide the full motion and sound content of the Live Photo. If false, Photos has provided all possible data and will not call your result handler again.

### 139.30.12 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Asynchronously loads a Live Photo from the specified resource files.
**Notes:**

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 139.30.13 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

### 139.30.13 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Asynchronously loads a Live Photo from the specified resource files.
**Notes:**

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 139.30.12 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 22664

### 139.30.14 Properties

### 139.30.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.30.16 Height as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The size, in pixels, of the Live Photo.
**Notes:** (Read only property)

### 139.30.17 Width as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The size, in pixels, of the Live Photo.
**Notes:** (Read only property)

### 139.30.18 Constants

### 139.30.19 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for ContentMode property.
**Notes:** Scales the image so that it completely fills the target size.

### 139.30.20 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for ContentMode property.
**Notes:** Scales the image so that its larger dimension fits the target size.

### 139.30.21 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the constants for ContentMode property.
**Notes:** Fits the image to the requested size using the default option, ContentModeAspectFit.

### 139.30.22 RequestIDInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** The value for an invalid request ID.

### 139.30.23 Delegates

### 139.30.24 RequestLivePhotoWithResourceFileURLsMBS(LivePhoto as PHLivePhotoMBS, placeholderImage as NSImageMBS, targetSize as CGSizeMBS, contentMode as Integer, tag as variant, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The method called when live photo is loaded.
**Notes:**

LivePhoto: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See PHLivePhotoMBS class for possible keys and values.

Method may be called twice if there is a low res and high res version.

## 139.31 class PHLivePhotoRequestOptionsMBS

### 139.31.1 class PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the delivery of Live Photo assets you request from an image manager.
**Notes:**

A Live Photo is a picture that includes movement and sound from the moments just before and after its capture.
Available in MacOS 10.15 or newer.

### 139.31.2 Methods

### 139.31.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.31.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.31.5 copy as PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the options object.

### 139.31.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.31.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the delegate which Photos calls periodically while downloading the Live Photo.
**Notes:** If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.

### 139.31.8 Properties

### 139.31.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The requested Live Photo quality and delivery priority.
**Notes:**

Use this property to tell Photos to provide a Live Photo quickly (possibly sacrificing image quality), to provide a high-quality Live Photo (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

### 139.31.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.31.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether Photos can download the requested Live Photo data from iCloud.
**Notes:**

If true, and the requested Live Photo data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a block that Photos calls periodically while downloading. If false (the default), and the Live Photo data is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the data is not available unless you enable network access.

(Read and Write property)

### 139.31.12 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate which Photos calls periodically while downloading the Live Photo.
**Notes:**

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.
(Read and Write property)

### 139.31.13 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The version of the Live Photo to be requested.
**Notes:**

Use this property to request a version of the Live Photo with or without adjustments. See Version constants.
(Read and Write property)

### 139.31.14 Constants

### 139.31.15 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.
**Notes:** Photos provides only a fast-loading image, possibly sacrificing image quality.

### 139.31.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.
**Notes:** Photos provides only the highest-quality image available, regardless of how much time it takes to

load.

### 139.31.17 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested image data, used by the deliveryMode property.
**Notes:** Photos automatically provides one or more results in order to balance image quality and responsiveness.

### 139.31.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the version constants.
**Notes:** Request the most recent version of the image asset (the one that reflects all edits).

### 139.31.19 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the version constants.
**Notes:** Request the original, highest-fidelity version of the image asset.

### 139.31.20 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the version constants.
**Notes:** Request a version of the image asset without adjustments.

### 139.31.21 Delegates

### 139.31.22 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate that Photos calls periodically while downloading the Live Photo..
**Notes:**

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the progressHandler property in PHLivePhotoRequestOptionsMBS class, Photos calls your block periodically to report progress and to allow you to cancel the download.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request,Äôs deliveryMode property.

If this method is dispatched asynchronously to the main thread, the stop property doesn't work.

# 139.32 class PHObjectChangeDetailsMBS

## 139.32.1 class PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A description of changes that occurred in an asset or collection object.
**Notes:**

A PHObjectChangeDetailsMBS object provides detailed information about differences between two states of an asset or collection object,Äîone that you previously obtained and an updated state that would result if you fetched that entity again. You observe changes via events in PHPhotoLibraryMBS object. When Photos notifies your observer of a change, you get change details by passing the object you,Äôre interested in to the changeDetailsForObject method.

For an asset collection or collection list, a PHObjectChangeDetailsMBS object describe changes only to the collection,Äôs properties. If you are instead interested in changes to the collection,Äôs membership, fetch the collection,Äôs contents and use the changeDetailsForFetchResult: method to track changes to the fetch result.

Needs macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 139.32.2 Methods

## 139.32.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.32.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.32.5 Properties

### 139.32.6 assetContentChanged as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the asset,Äôs photo or video content has changed.
**Notes:**

If this value true, you can use the PHImageManagerMBS class to retrieve updated content.
This value is false if the asset has not changed or if the change details do not refer to a PHAssetMBS object.
(Read only property)

### 139.32.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.32.8 objectAfterChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that reflects the current state of the asset or collection it represents.
**Notes:**

Read this object,Äôs properties to retrieve updated metadata for the asset or collection. Using this object is equivalent to repeating the same fetch that returned the original object.
(Read only property)

### 139.32.9 objectBeforeChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** An object that reflects the original state of the asset or collection it represents.
**Notes:**

This property,Äôs value is the same object you passed to the changeDetailsForObject to request change details.
(Read only property)

### 139.32.10 objectWasDeleted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that indicates whether the object has been deleted from the Photos library.
**Notes:**

If this value is true, the asset or collection has been permanently deleted from the Photos library.

To instead track the removal of assets from collections (or collections from collection lists), fetch the collection,Äôs contents and use the changeDetailsForFetchResult method to track changes to the fetch result.
(Read only property)

## 139.33 class PHObjectMBS

### 139.33.1 class PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The abstract superclass for Photos model objects (assets and collections).
**Notes:**

You do not create or use instances of this class directly. Instead, work with instances of its concrete subclasses ,Äî PHAssetMBS, PHAssetCollectionMBS, PHCollectionListMBS, and PHObjectPlaceholderMBS.

Because the PHObjectMBS class implements the isEqual and hash methods in terms of its localIdentifier property, you can use techniques that depend on these methods to keep track of asset and collection objects. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.33.2 Methods

### 139.33.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.33.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.33.5 copy as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Creates a copy of the object.

### 139.33.6 Properties

### 139.33.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.33.8 localIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A unique string that persistently identifies the object.
**Notes:**

Use this string to find the object by using the fetchAssetsWithLocalIdentifiers, fetchAssetCollectionsWithLocalIdentifiers, or fetchCollectionListsWithLocalIdentifiers method.
(Read only property)

## 139.34 class PHObjectPlaceholderMBS

### 139.34.1 class PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A read-only proxy representing a Photos asset or collection object yet to be created by a change request.
**Notes:**

You obtain object placeholders when you use change requests to create assets, collections, or collection lists. After the change request completes, you can use the object placeholder to fetch the newly created object. You can also use an object placeholder to make additional change requests involving the object to be created. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.34.2 Methods

### 139.34.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.34.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The private constructor.

### 139.34.5 Properties

### 139.34.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

# 139.35 class PHPhotoLibraryMBS

## 139.35.1 class PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A shared object that manages access and changes to the user,Äôs shared photo library.
**Notes:**

The shared PHPhotoLibraryMBS object represents the entire set of assets and collections managed by the Photos app, including both assets stored on the local device and (if enabled) those stored in iCloud Photos. You use this object for the following tasks:

- Getting or verifying the user's permission for your app to access Photos content.
- Making changes to assets and collections; for example, editing asset metadata or content, inserting new assets, or rearranging the members of a collection.
- Registering for update messages sent when changes are made to the library.

Requires MacOS 10.13 or newer.

## 139.35.5 Videos

- XDC 2020 MBS Plugins Presentation

### 139.35.6 Methods

### 139.35.7 authorizationStatus as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Returns information about your app,Äôs authorization to access the user,Äôs photo library.
**Notes:**

Returns the current authorization status.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization.

Important
Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Tip
Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

If this method returns PHAuthorizationStatusNotDetermined, you can call the requestAuthorization method to prompt the user for photo library access permission.

### 139.35.8 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.35.9 cloudIdentifiersForLocalIdentifiers(localIdentifiers() as String) as PHCloudIdentifierMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Queries cloud identifiers for local identifiers.

### 139.35.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.35.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.35.12 localIdentifiersForCloudIdentifiers(cloudIdentifiers() as PHCloudIdentifierMBS) as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Queries local identifiers for cloud identifiers.

### 139.35.13 performChanges(ChangeBlock as ChangeBlockMBS, CompletionHandler as ChangeCompletionHandlerMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Asynchronously runs a block that requests changes to be performed in the photo library.
**Notes:** We call back to main thread for delegates, so please keep main thread available.

### 139.35.14 PHLocalIdentifierNotFound as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** One of the error constants.
**Notes:** The local identifier was not found.

### 139.35.15 PHPhotosErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The error domain for Photos errors.

### 139.35.16 requestAuthorization(CompletionHandler as RequestAuthorizationCompletedMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Requests the user,Äôs permission, if needed, to access the photo library.
**Notes:**

CompletionHandler: Photos calls this delegate upon determining your app,Äôs authorization to access the photo library.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization. Alternatively, you can call this method to prompt the user at a time of your choosing.

Important:
Your app,Äôs Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

This method always returns immediately. If the user has previously granted or denied photo library access

permission, it executes the delegate when called; otherwise, it displays an alert and executes the block only after the user has responded to the alert.

### 139.35.17 sharedPhotoLibrary as PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Retrieves the shared photo library object.
**Notes:** The singleton photo library object.

### 139.35.18 Properties

### 139.35.19 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.35.20 unavailabilityReason as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The error object to give reason for unavailability.
**Notes:** (Read only property)

### 139.35.21 Events

### 139.35.22 DidBecomeUnavailable

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:** The Photos library did become unavailable.

### 139.35.23 DidChange(changes as PHChangeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

**Function:**

Tells you that a set of changes has occurred in the Photos library.
Required.
**Notes:**

change: An object representing the changes.

Use the provided PHChangeMBS object to find out which, if any, of the albums or collections you,Äôre interested in have changed and get detailed change information. Call the change object,Äôs changeDetailsForObject method to get information about changes to an asset,Äôs contents or metadata properties or about a collection,Äôs metadata properties. Call the change object,Äôs changeDetailsForFetchResult to get information about changes to a collection,Äôs list of members (or to any other fetch result).

### 139.35.24 Constants

### 139.35.25 PHAuthorizationStatusAuthorized = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the status constants.
**Notes:** The user has explicitly granted your app access to the photo library.

### 139.35.26 PHAuthorizationStatusDenied = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the status constants.
**Notes:** The user has explicitly denied your app access to the photo library.

### 139.35.27 PHAuthorizationStatusNotDetermined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the status constants.
**Notes:** Explicit user permission is required for photo library access, but the user has not yet granted or denied such permission.

### 139.35.28 PHAuthorizationStatusRestricted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the status constants.
**Notes:** Your app is not authorized to access the photo library, and the user cannot grant such permission.

### 139.35.29 PHPhotosErrorInvalid = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Invalid error?

### 139.35.30 PHPhotosErrorLibraryVolumeOffline = 3114

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Library volume offline.

### 139.35.31 PHPhotosErrorRelinquishingLibraryBundleToWriter = 3142

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Relinquishing library bundle to writer

### 139.35.32 PHPhotosErrorSwitchingSystemPhotoLibrary = 3143

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** Failed to switch system photo library.

### 139.35.33 PHPhotosErrorUserCancelled = 3072

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the error constants.
**Notes:** The user cancelled.

### 139.35.34 Delegates

### 139.35.35 ChangeBlockMBS(tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate that requests changes to be performed.
**Notes:** This delegate takes no parameters and has no return value.

### 139.35.36 ChangeCompletionHandlerMBS(success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A delegate that Photos calls after the change block completes and Photos performs the requested changes.
**Notes:**

success: True if Photos successfully applied the changes requested in the block; otherwise, false.
error: If an error occurs, an NSError object describing the error; otherwise, nil.

# 139.36 class PHPickerConfigurationMBS

## 139.36.1 class PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** An object that contains information about how to configure a picker view controller.

## 139.36.2 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5

- MBS Xojo Plugins, version 22.5pr1

## 139.36.4 Methods

## 139.36.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a new configuration object.
**Notes:** This configuration doesn,Äôt return asset identifiers. To create configuration object with the system photo library use the other constructor.
See also:

- 139.36.6 Constructor(PhotoLibrary as Variant) 22687

## 139.36.6 Constructor(PhotoLibrary as Variant)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a new configuration object for a photo library.
**Notes:**

photoLibrary: The library from which to pick photos and videos.

Please pass a PHPhotoLibraryMBS class.
See also:

- 139.36.5 Constructor 22687

### 139.36.7 copy as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a copy of the configuration object.

### 139.36.8 preselectedAssetIdentifiers as String()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** An array of asset identifiers to preselect in the picker.

### 139.36.9 setPreselectedAssetIdentifiers(Identifiers() as String)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Sets an array of asset identifiers to preselect in the picker.
**Notes:**

Preselection works only when initializing a PHPickerConfigurationMBS object with a photo library. Otherwise, the system returns an error.

The number of preselected asset identifiers can exceed your selection limit. The system disables the done action until the selection count is lower than selectionLimit.
Additionally, when you configure a picker with preselected identifiers:
Results include all preselected identifiers when canceling the picker.
Results don,Äôt include item providers for preselected assets that remain selected.
When deselecting all assets, the system keeps the done action enabled.

### 139.36.10 Properties

### 139.36.11 Filter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The filter you apply to restrict the asset types the picker displays.
**Notes:**

By default, a configuration object displays all asset types: images, Live Photos, and videos.
(Read and Write property)

### 139.36.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.36.13 PreferredAssetRepresentationMode as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A mode that determines which representation to use if an asset contains more than one.
**Notes:**

An asset can contain many representations under the same uniform type identifier, or you can prefer a specific format. This mode determines which representation a result uses if many exist.

The system may perform additional transcoding to convert the asset you request to the compatable representation. Use PHPickerConfigurationMBS.AssetRepresentationModeCurrent to avoid transcoding, if possible.
(Read and Write property)

### 139.36.14 Selection as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The selection behavior for the picker.
**Notes:** (Read and Write property)

### 139.36.15 SelectionLimit as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The maximum number of selections the user can make.
**Notes:**

The default value is 1. Setting the value to 0 sets the selection limit to the maximum that the system supports.
(Read and Write property)

### 139.36.16 Constants

### 139.36.17 AssetRepresentationModeAutomatic = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants identifying the mode the system uses when many representations exist for an asset.
**Notes:** A mode that indicates that the system chooses the appropriate asset representation.

### 139.36.18 AssetRepresentationModeCompatible = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants identifying the mode the system uses when many representations exist for an asset.
**Notes:** A mode that uses the most compatible asset representation.

### 139.36.19 AssetRepresentationModeCurrent = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants identifying the mode the system uses when many representations exist for an asset.
**Notes:** A mode that uses the current representation to avoid transcoding, if possible.

### 139.36.20 SelectionDefault = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for the selection behavior.
**Notes:** Uses the default selection behavior.

### 139.36.21 SelectionOrdered = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the constants for the selection behavior.
**Notes:** Uses the selection order made by the user, numbering the selected assets.

## 139.37 class PHPickerFilterMBS

### 139.37.1 class PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A type that defines the filter to apply to the photo library.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 139.37.2 Blog Entries

- MBS Xojo Plugins, version 22.5pr1

### 139.37.3 Blog Entries

- MBS Xojo Plugins, version 22.5pr1

### 139.37.4 Methods

### 139.37.5 anyFilterMatchingSubfilters(filters() as PHPickerFilterMBS) as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a new filter by combining the filters in the array.
**Notes:** filters: The list of filters to combine into a new filter.

### 139.37.6 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 139.37.7 copy as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a copy of the filter object.

### 139.37.8 imagesFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A filter that represents images, and includes Live Photos.

### 139.37.9 livePhotosFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A filter that represents Live Photos.

### 139.37.10 videosFilter as PHPickerFilterMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A filter that represents video assets.

### 139.37.11 Properties

### 139.37.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

# 139.38 class PHPickerResultMBS

## 139.38.1 class PHPickerResultMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Types that represent a selected asset from the user,Äôs photo library.
**Notes:**

When you get result objects in a real application and you like to allow more than a few pictures, you may need to manage the jobs to download:

- Have a queue for the result objects to be downloaded.
- Check what types are available on each.
- Download what you need, e.g. HEIC or JPEG representation.
- Have a timer to start downloads and make sure you have only a limited number of parallel downloads like e.g. 4.
- Monitor which downloads failed and keep the NSErrorMBS for logging them.
- Show progress dialog for the download, e.g. with our ProgressHUDMBS class.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 139.38.2 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022

## 139.38.3 Blog Entries

- The Top 10 from the MBS Xojo Plugins in 2022
- News from the MBS Xojo Plugins Version 22.5
- MBS Xojo Plugins, version 22.5pr1

### 139.38.4 Methods

### 139.38.5 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The private constructor.

### 139.38.6 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 139.38.7 hasItemConformingToTypeIdentifier(typeIdentifier as string) as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns a Boolean value indicating whether an item provider contains a data representation conforming to a specified uniform type identifier (UTI) and to specified open-in-place behavior.

### 139.38.8 loadFileRepresentationForTypeIdentifier(typeIdentifier as string, handler as LoadFileRepresentationCompletedMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Asynchronously loads the requested type to a temporary file.
**Notes:**

You can show a progress dialog and use progressCurrent and progressTotal values.
Calls delegate later when download is finished.

### 139.38.9 TypeIdentifiers as String()

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Returns the array of type identifiers for the item provider, listed in the same order in which they were registered.

### 139.38.10 Properties

### 139.38.11 assetIdentifier as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The selected asset,Äôs local identifier.
**Notes:** (Read only property)

### 139.38.12 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.38.13 progressCurrent as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The number of bytes downloaded so far.
**Notes:**

This allows you to periodically check how far a download is and show a progress dialog.
Only valid after calling loadFileRepresentationForTypeIdentifier method.
(Read only property)

### 139.38.14 progressTotal as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The total size of a download.
**Notes:**

This allows you to periodically check how far a download is and show a progress dialog.
Only valid after calling loadFileRepresentationForTypeIdentifier method.
(Read only property)

### 139.38.15 Delegates

### 139.38.16 LoadFileRepresentationCompletedMBS(File as FolderItem, error as NSErrorMBS, result as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The delegate called when loadFileRepresentationForTypeIdentifier is finished.
**Notes:** Called on main thread.

## 139.39 class PHPickerViewControllerMBS

### 139.39.1 class PHPickerViewControllerMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A view controller that provides the user interface for choosing assets from the photo library.
**Notes:**

The PHPickerViewController class is an alternative to UIImagePickerController.
PHPickerViewController improves stability and reliability, and includes several benefits to developers and users, such as the following:

- Deferred image loading and recovery UI
- Reliable handling of large and complex assets, like RAW and panoramic images
- User-selectable assets that aren,Äôt available for UIImagePickerController
- Configuration of the picker to display only Live Photos
- Availability of PHLivePhotoMBS objects without library access
- Stricter validations against invalid inputs

You can present a picker object only once; you can,Äôt reuse it across sessions.

### 139.39.4 Methods

### 139.39.5 Constructor(configuration as PHPickerConfigurationMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a new picker view controller with the configuration you specify.
**Notes:** configuration: The configuration with which to initialize the view controller.

### 139.39.6 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 139.39.7 Dismiss

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Dismisses the controller.

### 139.39.8 Present

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Presents the controller.

### 139.39.9 Properties

### 139.39.10 configuration as PHPickerConfigurationMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The configuration you specify when creating the picker.
**Notes:** (Read only property)

### 139.39.11 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.39.12 Events

### 139.39.13 didFinishPicking(Result() as PHPickerResultMBS)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Notifies the delegate that the user completed a selection or dismissed the picker using the cancel button.
**Notes:**

picker: The currently presented picker view controller.
results: The results of the user,Äôs selections.

The system doesn,Äôt automatically dismiss the picker after calling this method, but the plugin does.

# 139.40 class PHProjectChangeRequestMBS

## 139.40.1 class PHProjectChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A request to change asset data in a Photos project extension.
**Notes:**

Make a project change request to alter a project's title or metadata. Respond to project change requests by updating your user interface as assets are added, modified, or removed.

Available in macOS 10.13 or newer.
Subclass of the PHChangeRequestMBS class.

## 139.40.2 Methods

## 139.40.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

## 139.40.4 Constructor(project as PHProjectMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a change request around the specified project.
**Notes:** project: The project being changed in the request.

## 139.40.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The destructor.

## 139.40.6 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Removes the specified assets from the project.
**Notes:** assets: A collection of PHAssets to be removed from the project.

### 139.40.7 Properties

### 139.40.8 keyAsset as PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Sets the key asset representing the project.
**Notes:**

Setting a key asset has been deprecated in macOS 10.14. Use ProjectPreviewImage to provide a rendered preview image instead of designating a key asset.
(Read and Write property)

### 139.40.9 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Compressed project-specific data to use in the change request.
**Notes:**

The total size of stored data is limited to 1 MB; attempting to store more data will result in an error. Don't include rasterized images that can be locally cached. Limit stored data to compressed project-specific data.
(Read and Write property)

### 139.40.10 projectPreviewImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The project preview in Photos.
**Notes:**

When setting, please pass a rendered project preview with dimensions of 1024 x 1024.

PhotoKit requires that you set a project preview in the following situations:

- Whenever the project changes in a way that requires a new preview.
- During or after execution of the beginProjectWithExtensionContext protocol method.
- During or after execution of the resumeProjectWithExtensionContext protocol method.

(Read and Write property)

### 139.40.11 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The title of the change request.
**Notes:** (Read and Write property)

## 139.41 class PHProjectMBS

### 139.41.1 class PHProjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A representation of a Photos app project extension.
**Notes:**

This class represents the project when extended from macOS Photos. Projects can have the following types:

- Book
- Calendar
- Card
- Prints
- Slideshow
- Wall decor

Users create projects by selecting one or more assets, right-clicking the selection, and grouping the assets, much like an album collection. Your app treats the project as a separate entity, represented as a PHProject. Subclass of the PHAssetCollectionMBS class.

### 139.41.2 Methods

### 139.41.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.13 or newer.

### 139.41.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** The constructor.

### 139.41.5 Properties

### 139.41.6 hasProjectPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** A property that indicates whether a project preview was previously set.
**Notes:**

To set the preview, use ProjectPreviewImage property.
(Read only property)

### 139.41.7 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

**Function:** Data associated with the project extension.
**Notes:** (Read only property)

## 139.42 class PHVideoRequestOptionsMBS

### 139.42.1 class PHVideoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A set of options affecting the delivery of video asset data that you request from an image manager.
**Notes:** Available on MacOS 10.15 or newer.

### 139.42.2 Methods

### 139.42.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Checks whether class is available.
**Notes:** Should return true on MacOS 10.15 or newer.

### 139.42.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The constructor.

### 139.42.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The destructor.

### 139.42.6 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** Sets the delegate that Photos calls periodically while downloading the video.
**Notes:** If you request a video whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

### 139.42.7 Properties

### 139.42.8 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A mode specifying the requested video quality and delivery priority.
**Notes:**

Use this property to tell Photos to provide a video quickly (possibly sacrificing image quality) or to provide a high-quality video (possibly sacrificing speed). This option applies only when requesting the current version of the video (that is, only when the version property is VersionCurrent).
The default option is DeliveryModeAutomatic. See DeliveryMode.
(Read and Write property)

### 139.42.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 139.42.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** A Boolean value that specifies whether Photos can download the requested video from iCloud.
**Notes:**

If true, and the requested video is not stored on the local device, Photos downloads the video from iCloud. To be notified of the download,Äôs progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the video. If false (the default), and the video is not on the local device, the PHImageResultIsInCloudKey value in the result handler,Äôs info dictionary indicates that the video is not available unless you enable network access.
(Read and Write property)

### 139.42.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls periodically while downloading the video.
**Notes:**

If you request a video whose data is not on the local device, and you have enabled downloading with the

networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

### 139.42.12 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The version of the video to request.
**Notes:**

If a video asset has been edited, use this property to request a video with or without adjustments.
The default option is VersionCurrent. See Version constants.
(Read and Write property)

### 139.42.13 Constants

### 139.42.14 DeliveryModeAutomatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested video data, used by the deliveryMode property.
**Notes:** Photos automatically determines which quality of video data to provide based on the request and current conditions.

### 139.42.15 DeliveryModeFastFormat = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested video data, used by the deliveryMode property.
**Notes:** Photos provides whatever quality of video can be most quickly loaded.

### 139.42.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested video data, used by the deliveryMode property.
**Notes:** Photos provides only the highest quality video available.

### 139.42.17 DeliveryModeMediumQualityFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for delivering requested video data, used by the deliveryMode property.
**Notes:** Photos provides a video of moderate quality unless a higher quality version is locally cached.

### 139.42.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for requesting a video asset with or without adjustments, used by the version property.
**Notes:**

Request the most recent version of the video asset, reflecting all edits.
The resulting video is the rendered output from all previously made adjustments.

### 139.42.19 VersionOriginal = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

**Function:** One of the option constants for requesting a video asset with or without adjustments, used by the version property.
**Notes:**

Request a version of the video asset without adjustments.
The resulting video is the originally captured or imported version of the asset, regardless of any edits that have been made.

### 139.42.20 Delegates

### 139.42.21 ProgressHandlerMBS(progress as double, tag as Variant, error as NSErrorMBS, byref stop as Boolean, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

**Function:** The delegate that Photos calls while downloading asset data from iCloud.
**Notes:**

If you request a video asset whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling

the download.

The method takes the following parameters:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the video, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the video request. See Image Result Info Keys for possible keys and values.

If the event is dispatched asynchronously to main thread, the stop property will not work.

# Chapter 140

# PHP

## 140.1 class PHPMBS

### 140.1.1 class PHPMBS

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for the PHP library.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

For Linux and Mac OS X the PHP library is included in the plugin.
Plugin version 15.3 is built for PHP 5.6.12.

### 140.1.5 Xojo Developer Magazine

- 13.6, page 10: News

### 140.1.6 Methods

### 140.1.7 CallbackArgumentCount as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the number of arguments to the callback event.
**Notes:** Returns 0 on any error.

### 140.1.8 CallbackArgumentDouble(index as Integer) as Double

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts the parameter with the given index to double and returns it.
**Notes:** Returns 0 on any error.

### 140.1.9 CallbackArgumentInteger(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts the parameter with the given index to integer and returns it.
**Notes:** Returns 0 on any error.

### 140.1.10 CallbackArgumentString(index as Integer) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Converts the parameter with the given index to string and returns it.
**Notes:** Returns an empty string on any error.

### 140.1.11 Constructor

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Initializes the PHP engine.
**Example:**

```
const path="php.dll"
call PHPMBS.LoadLibrary(path) // load the dll
dim p as new PHPMBS // initialize

if p.inited then // worked?
msgbox "ok"
end if
```

**Notes:** In older plugins this work was done by the method Init.

### 140.1.12 Execute(code as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs php code.
**Example:**

```
dim p as PHPMBS

p=new PHPMBS
MsgBox p.Execute("echo ""Hello"";")
```

**Notes:** Same as run, but does not call the write event, but return the whole output as one big string.

### 140.1.13 existsVariable(name as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether variable exists or not.
**Notes:** getVariable returns "" for variables which don't exist, but your variable may just be an empty string so this function lets you know whether the variable actually exists.

### 140.1.14 getVariable(name as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns value of the variable with the given name.
**Notes:** Returns an empty string if the variable name is wrong.

### 140.1.15 LoadExtension(Path as string) as boolean

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads an extension.
**Notes:**

Returns true on success.
Will write errors to stderr which you see in console apps.

### 140.1.16 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the PHP shared library.
**Notes:**

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 140.1.17 LoadLibrary(path as string) as boolean 

### 140.1.17 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Loads the PHP shared library.
**Notes:**

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 140.1.16 LoadLibrary(file as folderitem) as boolean 22714

### 140.1.18 Run(code as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Runs PHP code.
**Example:**

```
dim php as PHPMBS // your php object

if php.run("echo 1+2;") then
// ok
else
// failed
end if
```

**Notes:**

Returns true on success.
Returns false on any compilation error or the library is not loaded/available.

You need to wrap your code into exception handlers as the plugin will ignore all exceptions and if you want to find errors, you need to catch them yourself.

### 140.1.19 setVariable(name as string, value as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the variable with the given name to the given value.

### 140.1.20 Properties

### 140.1.21 Inited as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the PHP library has been initialized.
**Notes:**

Returns true on success.
(Read only property)

### 140.1.22 LastErrorFile as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error file name.
**Notes:** (Read and Write property)

### 140.1.23 LastErrorLine as Integer

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error line.
**Notes:** (Read and Write property)

### 140.1.24 LastErrorMessage as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error message.
**Notes:** (Read and Write property)

### 140.1.25 LastExitStatus as Integer

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last exit status.
**Notes:** (Read and Write property)

### 140.1.26 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the PHP library has been loaded.
**Notes:**

Returns true on success.
(Read only property)

### 140.1.27 UseUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to use UTF-8 text encoding.
**Notes:**

By default we use ISO Latin1 encoding.
But you can ask for passing UTF-8 to/from PHP.

If enabled and a text is passed back from PHP which is not valid UTF-8, we still returned it marked as Latin1.
(Read and Write property)

### 140.1.28 INI as String

MBS Tools Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The PHP Ini to use.
**Notes:**

Must be called before initialization.

Default is:
html_errors=0
register_argc_argv=1
implicit_flush=1
output_buffering=0
max_execution_time=0
max_input_time=-1
(Read and Write computed property)

### 140.1.29 Events

### 140.1.30 Callback(ArgumentCount as Integer) as Variant

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called when you call the php function callXojo()
**Notes:**

Return a variant with double, float, string or integer value.
Parameters are available using CallbackArgument* functions.

### 140.1.31 LogMessage(message as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** A message for the log file.
**Notes:** Normally written by apache to the log files.

### 140.1.32 Write(data as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** PHP wants to write some data.
**Notes:**

This text is normally the result, e.g. the content of the website the php code produces.

If php.ini file is used, you need to disable the output_buffering option to have this callback working.

# Chapter 141

# Pictures Import and Export

## 141.1 Globals

### 141.1.1 BitRotateMBS(Degree as Integer, InputData as Ptr, OutputData as Ptr, Width as Integer, Height as Integer, InputRowBytes as Integer = -1, OutputRowBytes as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Rotates 1bit image in memory.
**Notes:**

Degree can be -360, -270, -180, -90, 0, 90, 180 or 270 to rotate counter clockwise.
InputData points to an 1bit image with given width and height. InputRowBytes if defined tells how many bytes per row are used in the input image. If <= 0, we calculate it. OutputRowBytes defines row bytes for output image, which is different for 90/270 rotation.
Returns true on success or false on failure.
The function is optimized for 180 degree to be quicker if image size is multiply of 8.
For 90 and 270 degree, there is an optimization if width and height are a multiply of 8.

### 141.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.4
- MBS Xojo Plugins, version 18.4pr5
- MBS Xojo Plugins, version 18.4pr4

### 141.1.3 Xojo Developer Magazine

- 17.1, page 11: News
- 16.6, page 9: News

### 141.1.4 BMPStringtoPictureMBS(data as string) as picture

MBS Picture Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a BMP picture from a string.
**Example:**

```
dim p as Picture = LogoMBS(500)
dim s as string = p.BMPDataMBS
dim q as Picture = BMPStringtoPictureMBS(s)
window1.Backdrop = q
```

**Notes:**

This function is endian safe and supports 1, 4, 8, 16, 24, 32 bit BMP images.
For 32bit images the alpha value is ignored.
Returns nil on any error.
Only uncompressed BMP files are supported.

### 141.1.5 Blog Entries

- MBS Real Studio Plugins, version 12.5pr13
- MBS REALbasic Plugins, version 10.6pr9
- MonkeyBread Software Releases the MBS Plugins 8.2

### 141.1.6 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Splits a one bit CMYK file into different files.
**Notes:**

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.

CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

Errorcodes:

| | |
|---|---|
| 1 | not used |
| 2 | Failed to open f |
| 3 | Failed to open fc |
| 4 | Failed to open fm |
| 5 | Failed to open fy |
| 6 | Failed to open fk |
| 7 | Width<1 |
| 8 | Height<1 |
| 9 | Allocating read buffer failed |
| 10 | Allocating write buffer failed for c |
| 11 | Allocating write buffer failed for m |
| 12 | Allocating write buffer failed for y |
| 13 | Allocating write buffer failed for k |
| 14 | Read failed |
| 15 | Write failed for c |
| 16 | Write failed for m |
| 17 | Write failed for y |
| 18 | Write failed for k |

See also:

- 141.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 22721

### 141.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Splits a one bit CMYK file into different files.
**Notes:**

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

ReadLines and WriteLines define how many rows to read in one I/O operation.

Errorcodes:

| | |
|---|---|
| 1 | not used |
| 2 | Failed to open f |
| 3 | Failed to open fc |
| 4 | Failed to open fm |
| 5 | Failed to open fy |
| 6 | Failed to open fk |
| 7 | Width<1 |
| 8 | Height<1 |
| 9 | Allocating read buffer failed |
| 10 | Allocating write buffer failed for c |
| 11 | Allocating write buffer failed for m |
| 12 | Allocating write buffer failed for y |
| 13 | Allocating write buffer failed for k |
| 14 | Read failed |
| 15 | Write failed for c |
| 16 | Write failed for m |
| 17 | Write failed for y |
| 18 | Write failed for k |

See also:

- 141.1.6 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer 22720

## 141.2 class PNGOptimizerMBS

### 141.2.1 class PNGOptimizerMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This class is a wrapper for the OptiPNG command line tool.
**Example:**

```
dim p as Picture = LogoMBS(500)

dim fi as FolderItem = SpecialFolder.Desktop.Child("test unoptimized.png")
if not fi.SaveAsPNGMBS(p,0) then
MsgBox "Failed to save PNG file."
Return
end if

dim fo as FolderItem = SpecialFolder.Desktop.Child("test optimized.png")
fo.Delete // delete if existed before

dim o as new PNGOptimizerMBS

o.YieldTicks=10 // give time for other threads
o.InputFile=fi
o.OutputFile=fo

if o.Optimize then
MsgBox "OK: Saved "+str(o.BytesSaved)
fo.Launch
else
MsgBox "failed"
end if
```

**Notes:**

OptiPNG: Advanced PNG optimization program.
http://optipng.sourceforge.net/

Copyright (C) 2001-2008 Cosmin Truta.
OptiPNG is open-source software, and is distributed under the same licensing and warranty terms as libpng.

PNG optimization is described in detail in the PNG-Tech article "A guide to PNG optimization"
http://www.cs.toronto.edu/
textasciitilde cosmin/pngtech/optipng.html

The idea of running multiple compression trials with different PNG filters and zlib parameters is inspired from the pngcrush program by Glenn Randers-Pehrson.
The idea of performing lossless image reductions is inspired from the pngrewrite program by Jason Summers.

### 141.2.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr3
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3
- MonkeyBread Software Releases the MBS REALbasic plugins 8.7

### 141.2.3 Blog Entries

- MBS Xojo Plugins, version 18.3pr3
- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr3
- MonkeyBread Software Releases the MBS REALbasic plugins 8.7

### 141.2.4 Methods

### 141.2.5 Optimize as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The main optimization function.
**Notes:** Returns true on success and false on failure.

### 141.2.6 Properties

### 141.2.7 BytesSaved as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** After the optimization this property shows how many bytes were saved.
**Notes:** (Read and Write property)

### 141.2.8 Debug as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enables debug output.
**Notes:** (Read and Write property)

### 141.2.9 Fix as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enable error recovery.
**Notes:** (Read and Write property)

### 141.2.10 Force as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Enforce writing of a new output file.
**Notes:**

If the input image has a digital signature, the library will not optimize the file unless force=true.
(Read and Write property)

### 141.2.11 full as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to produce a full report on IDAT (might reduce speed).
**Notes:** (Read and Write property)

### 141.2.12 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The file to process.
**Notes:** (Read and Write property)

### 141.2.13 interlace as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The interlace type (0-1).
**Notes:**

Set by default to -1 for undefined.
(Read and Write property)

### 141.2.14 KeepBackup as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to keep a backup of the modified files.
**Notes:**

If the file exists and KeepBackup=false an error is reported. If you set KeepBackup=True the old file is renamed.
(Read and Write property)

### 141.2.15 NoBitDepthReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to not do a bit depth reduction.
**Notes:**

Reducing the bit depth of the image data can reduce the file size.
(Read and Write property)

### 141.2.16 NoColorTypeReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to not do a color type reduction.
**Notes:**

If your PNG file has only 256 colors in use, the optimizer can use a color palette to save space.
(Read and Write property)

### 141.2.17 NoIDATRecompression as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to not recompress the image data.
**Notes:** (Read and Write property)

### 141.2.18 NoPaletteReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to not reduce the palette.
**Notes:**

If not all colors are used, the palette can be reduced in its size.
(Read and Write property)

### 141.2.19 OptimizationLevel as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The optimization level.
**Notes:**

A value between 0 and 7.
Default is 2.
(Read and Write property)

### 141.2.20 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output file.
**Notes:** (Read and Write property)

### 141.2.21 Overwrite as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Overwrite existing files.
**Notes:** (Read and Write property)

### 141.2.22 Preserve as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to preserve file attributes if possible.
**Notes:** (Read and Write property)

### 141.2.23 Quiet as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Run in quiet mode.
**Notes:** (Read and Write property)

### 141.2.24 simulate as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the optimization runs only in simulation mode.
**Notes:**

No file is written in simulation mode.
(Read and Write property)

### 141.2.25 Snip as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cut one image out of multi-image or animation files.
**Notes:** (Read and Write property)

### 141.2.26 StripAll as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Strip metadata objects .
**Notes:** (Read and Write property)

### 141.2.27 Verbose as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Run in verbose mode / show copyright and version info.
**Notes:** (Read and Write property)

### 141.2.28 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** How much time is given back to Xojo for other ticks.
**Example:**

```
dim p as new PNGOptimizerMBS
p.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

### 141.2.29 Events

### 141.2.30 Log(message as string)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event to output a message to the log file.
**Notes:** You may want to show that to your advantaged users.

### 141.2.31 Panic(message as string)

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

**Function:** Called if something really bad happend and the app needs to quit.

### 141.2.32 Progress(index as Integer, count as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The event called for reporting ongoing process in the trials.
**Notes:** The library will try several PNG settings and report progress so you can update a progress bar.

### 141.2.33 ProgressBegin

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called before the library starts to optimize.
**Notes:** You may want to show a progress dialog here.

### 141.2.34 ProgressEnd

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

**Function:** This event is called after the library finished.
**Notes:** You may want to hide your progress dialog here.

# Chapter 142

# PNG

## 142.1 Globals

### 142.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves a picture to a PNG string.
**Notes:**

If the picture has no mask, no alpha channel is written to the file.
Returns "" on any error.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 142.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22732

- 142.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22732

- 142.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22733

### 142.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves a palette based RGB picture as a PNG file.
**Notes:**

If the picture has no mask, no alpha channel is written to the file.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 142.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22731
- 142.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22732
- 142.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22733

### 142.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves a picture to a PNG string.
**Notes:**

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 142.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22731
- 142.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22732
- 142.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22733

### 142.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Saves a picture to a PNG string.
**Notes:**

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

### 142.1.5 Blog Entries

- Inside REAL Studio Web Edition

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 142.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22731
- 142.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22732
- 142.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22732

### 142.1.6 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads PNG data from a string variable.
**Notes:**

If the picture has an alpah channel the returned picture will have a mask.

Returns picture on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

### 142.1.7 Blog Entries

- MBS Xojo Plugins, version 18.4pr1

### 142.1.8 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads PNG data from a string variable.
**Notes:**

Returns PNGPictureMBS object on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

## 142.2 class PNGpictureMBS

### 142.2.1 class PNGpictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a PNG picture.
**Notes:** Based on LibPNG.

### 142.2.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

### 142.2.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

### 142.2.4 Methods

### 142.2.5 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a new picture which is created using the picture and it's mask.
**Example:**

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

### 142.2.6 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the PNG library compiled into the plugin.
**Notes:** Please ask if you need a newer version.

### 142.2.7 Properties

### 142.2.8 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of the picture.
**Notes:** (Read and Write property)

### 142.2.9 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mask of the picture.
**Notes:**

May be nil.
(Read and Write property)

### 142.2.10 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The picture data of the picture.
**Notes:**

If this image is all black, you may use a different gamma setting.
(Read and Write property)

### 142.2.11 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the picture.
**Notes:** (Read and Write property)

### 142.2.12 Constants

### 142.2.13 kDefaultGamma = 0

MBS Images Plugin, Plugin Version: 11.3.

**Function:** The default gamma constant.
**Notes:** Pass this value to get the default gamma.

### 142.2.14 kDefaultNoGamma = -1

MBS Images Plugin, Plugin Version: 20.3.

**Function:** The no gamma constant.
**Notes:** Pass this value to not do any gamma correction.

## 142.3 class PNGReaderMBS

### 142.3.1 class PNGReaderMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for reading PNG files.
**Example:**

```
dim Current as PictureMBS // global
dim f as FolderItem

f=GetopenFolderItem(FileTypes.Png)

if f<>Nil then
Current=nil

dim p as new PNGReaderMBS

if p.OpenFile(f) then
if p.ApplyOptions(0) then

Current=new PictureMBS(p.Width,p.Height,PictureMBS.ImageFormatRGB)

dim i,c as Integer

c=p.Height-1
for i=0 to c
Current.RowInFormat(i, PictureMBS.ImageFormatRGBA)=p.ReadRow
next

end if
end if
end if
```

**Notes:**

Use this class to read PNG files row by row as memoryblock.

Based on LibPNG.

### 142.3.5 Xojo Developer Magazine

- 18.1, page 10: News
- 17.2, page 11: News

### 142.3.6 Methods

### 142.3.7 ApplyOptions(gamma as double = 0.0, ScreenGamma as double = -1.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Applies various options.
**Notes:**

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Added ScreenGamma parameter in plugin version 15.2. If you set both gamma and Screengamma to a value >0.0, the plugin will use those gamma values. If both are equal, no gamma correction is made.

16-bit images are always reduced to 8-bit images.

Returns true on success and false on failure. Calls ReadHeader method if needed.

### 142.3.8 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Combines the pict and the mask property to a picture with mask.

### 142.3.9 Open(file as folderitem, data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens either the data string or the file.
**Notes:** Returns true on success.

### 142.3.10 OpenData(data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a PNG file from the data string.
**Notes:** Returns true on success.

### 142.3.11 OpenFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a file.
**Example:**

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")

If p.OpenFile(f) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

**Notes:** Returns true on success.
See also:

- 142.3.12 OpenFile(Path as String) as boolean 22741

### 142.3.12 OpenFile(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens a file.
**Example:**

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = f.NativePath

If p.OpenFile(path) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

**Notes:** Returns true on success.
See also:

- 142.3.11 OpenFile(file as folderitem) as boolean 22741

### 142.3.13 OpenSpecialData(data as string) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Same as OpenData but with special handling of the png data.
**Example:**

```
dim f as FolderItem = getfolderitem("mbs.png")
dim b as BinaryStream = f.OpenAsBinaryFile(false) // BinaryStream.Open(f) in newer RB versions
dim s as string = b.Read(B.Length)

dim p as new PNGReaderMBS
if p.OpenSpecialData(s) then
if p.ApplyOptions(0) then
if p.ReadPicture then
Backdrop = p.Pict
Title = "OK"
else
Title = "Failed to read picture."
end if
else
Title = "Failed to apply options."
end if
else
Title = "Failed to open picture."
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This function can be used to read PNG files made for the Apple iPhone. The PNG is converted from the Apple format to the normal PNG format and passed to OpenData. In the SourceData property you can get the modified PNG data. Still this modified PNG data has the channels swapped, so you should read the image with the pict property.

On Mac OS X 10.8, the NSImage class also reads iOS optimized PNG files.

Deprecated as it does not read all files and we can't fix this old code. Please use a command line tool to convert instead.

### 142.3.14 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the PNG library compiled into the plugin.

### 142.3.15 ReadEXIF(byref exif as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the EXIF data block.
**Notes:** Returns true on success or false on failure.

### 142.3.16 ReadHeader as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads header of PNG.
**Notes:**

This reads header and fill properties Width, Height, ColorType, OriginalColorType, InterlaceType and BitDepth.
Returns true on success and false on failure.

### 142.3.17 ReadICCProfile(byref name as string, byref compression as Integer, byref profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the ICC Profile from the PNG file.
**Notes:**

Name is the profile name, compression the method used to compress the profile data and profile a string with the content of the profile as binary data.
Returns true on success.

### 142.3.18 ReadPicture as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the picture into the pict and mask properties.
**Notes:** Returns true on success.

### 142.3.19 ReadRow as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the next row as a memoryblock.
**Example:**

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

**Notes:**

Returns nil on any error.
Format is RGBA as in the example with 4 bytes per pixel.
See also:

- 142.3.20 ReadRow(mem as memoryblock) as boolean

### 142.3.20 ReadRow(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the next row into the given memoryblock.
**Notes:**

Returns false on any error and true on success.
Format is RGBA as in the example with 4 bytes per pixel.
Make sure the memoryblock is big enough. Else you risk a crash.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.
See also:

- 142.3.19 ReadRow as memoryblock 22744

### 142.3.21 ReadRowAlphaOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the next row into the given memoryblock.
**Notes:**

Returns false on any error and true on success.
Format is alpha channel as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.

### 142.3.22 ReadRowMaskOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the next row into the given memoryblock.
**Notes:**

Returns false on any error and true on success.
Format is mask (inverse alpha) as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.

The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.
ReadRow with reusing memoryblock is faster than allocating a new one for each row.

### 142.3.23 ReadsRGBTag(byref file_srgb_intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads the sRGB tag.
**Notes:** Returns true if the value was read into the given variable.

### 142.3.24 RowBytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The length of each row in bytes.

### 142.3.25 Properties

### 142.3.26 AllowDamaged as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to return picture for files with damaged content.
**Notes:**

e.g. a half downloaded PNG file can still be processed and may give you a preview for the file.
(Read and Write property)

### 142.3.27 BitDepth as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bit depth of the PNG file.
**Notes:**

The original value from file headers, not updated by ApplyOptions, even if we convert e.g. 1 bit to gray for you.
(Read and Write property)

### 142.3.28 ChunkCacheMax as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum cache size for caching chunks.
**Notes:**

The PNG specification sets no limit on the number of ancillary chunks allowed in a PNG datastream. By default, libpng imposes a limit of a total of 1000 sPLT, tEXt, iTXt, zTXt, and unknown chunks to be stored. You can change the limit on the total number of such hunks that will be stored, with this property, where & h7fffffff means unlimited.
(Read and Write property)

### 142.3.29 ChunkMallocMax as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum allocation size for one chunk.
**Example:**

```
dim png as new PNGReaderMBS
png.chunkMallocMax=32 * 1024 * 1024
```

**Notes:**

Libpng imposes a limit of 8 Megabytes (8,000,000 bytes) on the amount of memory that a compressed chunk other than IDAT can occupy, when decompressed.
You can query or change this limit with with this property.
Any chunks that would cause either of these limits to be exceeded will be ignored.
(Read and Write property)

### 142.3.30 ColorType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color type of the PNG file.
**Notes:**

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

### 142.3.31 CompressionBufferSize as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The zlib compression buffer size.
**Notes:**

You can change the zlib compression buffer size to be used while reading compressed data with this property where the default size is 8192 bytes. Note that the buffer size is changed immediately and the buffer is reallocated immediately, instead of setting a flag to be acted upon later.
(Read and Write property)

### 142.3.32 ExpandGrayToRGB as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether grayscale images are expanded to RGB.
**Notes:**

Set before ApplyOptions if you need this option.
Default is true.

Shall set transformations such that the grayscale image is converted to 24-bit RGB.

see png_set_gray_to_rgb function in libpng documentation.
(Read and Write property)

### 142.3.33 HasTransparency as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether a transparency block is included for palette images (tRNS).
**Notes:**

Set by ReadHeader or ApplyOptions.
(Read only property)

### 142.3.34 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of the picture in pixels.
**Notes:** (Read and Write property)

### 142.3.35 InterlaceType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The interlace setting.
**Notes:** (Read and Write property)

### 142.3.36 Interlacing as Integer

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether the png file is interlaced.
**Notes:**

Value is 1 if not interlaced and 7 if interlaced.
(Read and Write property)

### 142.3.37 InvertAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether alpha values should be inverted.
**Notes:**

Set before ApplyOptions if you need this option.
Default is false.

see png_set_invert_alpha function in libpng documentation.
(Read and Write property)

### 142.3.38 Mask as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mask of the picture.
**Notes:** (Read and Write property)

### 142.3.39 OriginalColorType as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The original color type of the PNG file.
**Notes:**

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

### 142.3.40 Pict as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The picture read.
**Notes:** (Read and Write property)

### 142.3.41 RGBToGray as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to convert RGB to grayscale.
**Example:**

```
dim png as PNGReaderMBS
```

```
// ask for gray only
png.RGBToGray = True

// avoid extra filler bytes for missing alpha channel
png.UseFiller = false
```

**Notes:**

Set before ApplyOptions if you need this option.
Default is false.

see png_set_rgb_to_gray function in libpng documentation.
(Read and Write property)

### 142.3.42 RGBToGrayErrorAction as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Error handling option for Reduce RGB to grayscale.
**Notes:**

Can be 1 for none, 2 for warn or 3 for error.
Default is 1.
(Read and Write property)

### 142.3.43 RGBToGrayGreen as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The green coefficient to use for RGB to Gray conversion.
**Notes:**

Default is -1 for default coefficients.
(Read and Write property)

### 142.3.44 RGBToGrayRed as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The green coefficient to use for RGB to Gray conversion.
**Notes:**

Default is -1 for default coefficients.
(Read and Write property)

### 142.3.45 SourceData as String

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source data used in Open functions.
**Example:**

```
dim p as PNGReaderMBS // your reader

// write data to file
dim fo as FolderItem = SpecialFolder.Desktop.Child("mbsout.png")
dim bo as BinaryStream = fo.CreateBinaryFile("") // BinaryStream.Create(fo,true) in newer RB Versions

bo.Write p.SourceData
```

**Notes:**

If you used OpenSpecialData, the data here is the PNG without the Apple modifications, but still with swapped colors.
This property is set by the OpenSpecialData, Open and OpenData functions.
(Read and Write property)

### 142.3.46 SourceFile as FolderItem

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The folderitem passed to the Open functions.
**Notes:**

This property is set by the Open and OpenFile functions.
(Read and Write property)

### 142.3.47 SourcePath as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The source file path.
**Notes:** (Read and Write property)

### 142.3.48 StripAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to strip alpha.
**Notes:**

Set before ApplyOptions if you need this option.
Default is false.

see png_set_strip_alpha function in libpng documentation.
(Read and Write property)

### 142.3.49 SwapRB as Boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to swap red and blue channels.
**Example:**

```
dim p as new PNGReaderMBS
p.SwapRB = true
```

**Notes:**

The PNG files for the iPhone have swapped channels so the iPhone does not need to swap them for display.
One of the tricks Apple uses for making the iPhone faster.
This flag is set to true by OpenSpecialData.
(Read and Write property)

### 142.3.50 UseFiller as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether filler byte is used for RGB.
**Notes:**

Set by ApplyOptions if needed.
Defines whether RGB is extended to 4 bytes with an extra filler byte if needed.

see png_set_filler function in libpng documentation.
(Read and Write property)

### 142.3.51 UserHeightMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height maximum.
**Notes:**

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

### 142.3.52 UserWidthMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width maximum.
**Notes:**

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

### 142.3.53 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the picture in pixels.
**Notes:** (Read and Write property)

### 142.3.54 Events

### 142.3.55 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The PNG library has an error message for you.

**Notes:** Processing will stop soon.

### 142.3.56 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The PNG library has a warning for you.

## 142.4 class PNGWriterMBS

### 142.4.1 class PNGWriterMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class to write a PNG file.
**Example:**

```
dim Current as PictureMBS // your picture
dim f as FolderItem

f=GetsaveFolderItem(FileTypes.Png,"test.png")

if f<>Nil then
const PNG_COLOR_MASK_PALETTE = 1
const PNG_COLOR_MASK_COLOR = 2
const PNG_COLOR_MASK_ALPHA = 4

dim p as new PNGWriterMBS

p.Width=Current.Width
p.Height=Current.Height
p.Type=PNG_COLOR_MASK_COLOR
p.bpc=3
p.Rowbytes=p.Width*p.bpc

if p.OpenWriteDestination(f) then
if p.SetHeader(false, -1) then
if p.SetGamma(0) then
if p.WriteInfo then
dim i,c as Integer

c=p.Height-1
for i=0 to c
p.WriteRow current.RowInFormat(i, Current.ImageFormatRGB)
next

if p.WriteEnd then
MsgBox "OK"
end if
end if
end if
end if
end if
end if
```

**Notes:**

You can use this class to write PNG files by row.

Based on LibPNG.

- MBS REALbasic plug-ins version 9.4

### 142.4.5 Xojo Developer Magazine

- 17.2, page 11: News

### 142.4.6 Methods

### 142.4.7 CloseDestination

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Closes the file.

### 142.4.8 Finish as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes the PNG file and returns the PNG file content as string.
**Notes:** Returns "" on any error.

### 142.4.9 OpenWriteDestination(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the file to write.
**Example:**

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(f) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

**Notes:** If you pass nil for the file, the data is collected in memory and you can get it on the end using the

Finish method.
See also:

- 142.4.10 OpenWriteDestination(Path as String) as boolean 22759

### 142.4.10 OpenWriteDestination(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens the file to write.
**Example:**

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = file.NativePath

Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(path) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

**Notes:** If you pass "" for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 142.4.9 OpenWriteDestination(file as folderitem) as boolean 22758

### 142.4.11 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the PNG library compiled into the plugin.

### 142.4.12 SetAlphaData(alphas() as Integer, colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the alpha data and the color palette.
**Notes:**

The array can have up to 256 colors.
The color and the alpha arrays must have the same size.
Returns true on success.

### 142.4.13 SetAlphas as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the alpha data to the file.
**Notes:**

You must call SetAlphaData before.
Returns true on success.

### 142.4.14 SetEXIF(EXIFData as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the EXIF data block.
**Notes:** Returns true on success or false on failure.

### 142.4.15 SetGamma(gamma as Double = 0.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the gamma value and other options for the PNG file.
**Notes:**

Returns on success.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Default for Mac is 1.8 and for Windows 2.2.

If you use SRGB, the Gamma must be 2.2.

### 142.4.16 SetGrayPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies a picture into the internal buffers for writing a Grayscale image file.
**Notes:**

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

### 142.4.17 SetHeader(Interlace as boolean = false, Filter as Integer = -1, Compression as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines the header options for the PNG file.
**Notes:**

Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

Compression can be between 0 (none) to 9 (max). Default is 6. Value -1 means the plugin will not change from default of PNG library. Normally you have no better compression for setting higher than 6, but only burn more CPU power.

### 142.4.18 SetICCProfile(name as string, CompressionType as Integer, Profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Adds a ICC Profile to the PNG.
**Notes:**

Name is the profile name as an ASCII string.
CompressionType is always 0 (PNG_COMPRESSION_TYPE_BASE).

### 142.4.19 SetPalette as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the palette data.
**Notes:** Returns true on success.

### 142.4.20 SetPaletteData(colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the color palette.
**Notes:**

The array can have up to 256 colors.
Returns true on success.

### 142.4.21 SetPalettePicture(pict as picture) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies a picture into the internal buffers.
**Notes:**

You need to define the color palette before calling this method.

This method sets width, height, type and bpc properties.
Returns true on success.

### 142.4.22 SetResolution(ResolutionHorizontal as Integer, ResolutionVertical as Integer, Unit as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the resolution of the PNG.
**Notes:**

Unit is ResolutionUnknown, ResolutionMeter or ResolutionDPI.
Internally the PNG saves only in dots per meter, so the plugin converts DPI to DPM for you.

### 142.4.23 SetRGBPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Copies a picture into the internal buffers.
**Example:**

```
// Write a RGBA PNG file
dim current as Picture = LogoMBS(500)

// create a mask
dim g as Graphics = current.Mask.Graphics
g.ForeColor = & cFFFFFF
g.FillRect 0,0,500,500
g.ForeColor = & c000000
g.FillOval 0,0,500,500

// show in window
window1.Backdrop = current

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current, current.mask) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

**Notes:**

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

### 142.4.24 SetRows(rows() as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Uses the given memoryblocks for row data.
**Notes:**

The memory is not copied, so keep the array alive!
This method sets height. You need to set width, bpc, type and rowbytes.
Returns true on success.

### 142.4.25 SetsRGB(intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the sRGB intent.
**Notes:**

Possible values:

```
const PNG_sRGB_INTENT_PERCEPTUAL   = 0
const PNG_sRGB_INTENT_RELATIVE     = 1
const PNG_sRGB_INTENT_SATURATION   = 2
const PNG_sRGB_INTENT_ABSOLUTE     = 3
```

### 142.4.26 WriteEnd as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Finishes the writing.
**Notes:**

Returns true on success.

Do not call if you use WriteRows.

### 142.4.27 WriteInfo as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the PNG file header.
**Notes:**

Returns true on success.

Do not call if you use WriteRows.

### 142.4.28 WriteRow(row as memoryblock)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes one row of image data.
**Notes:**

The data must be in the RGBA format with one byte per value.
(4 bytes per Pixel)

Returns true on success.

Do not call if you use WriteRows.

### 142.4.29 WriteRows as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes the picture from memory to the file.
**Example:**

```
// Write a RGB PNG file
dim current as Picture = LogoMBS(500)
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
```

```
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

**Notes:** If you call this method, you need to call SetRGBPicture or SetPalettePicture before and you can't call WriteInfo, WriteRow and WriteEnd.

### 142.4.30 Properties

### 142.4.31 bpc as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bytes per pixel.
**Notes:**

Should be 3 for RGB, 1 for palette pictures and 4 for RGB with Alpha.
(Read and Write property)

### 142.4.32 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The height of the picture to write.
**Notes:** (Read and Write property)

### 142.4.33 Rowbytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The bytes per row.
**Notes:** (Read and Write property)

### 142.4.34 Type as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The color type.
**Notes:**

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

(Read and Write property)

### 142.4.35 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The width of the picture to write.
**Notes:** (Read and Write property)

### 142.4.36 Events

### 142.4.37 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The PNG library has an error message for you.
**Notes:** Processing will stop soon.

### 142.4.38 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

**Function:** The PNG library has a warning for you.

### 142.4.39 Constants

### 142.4.40 ResolutionDPI = 2

MBS Images Plugin, Plugin Version: 10.1.

**Function:** One of the resolution unit type constants.
**Notes:** The unit for points per inch.

### 142.4.41 ResolutionMeter = 1

MBS Images Plugin, Plugin Version: 10.1.

**Function:** One of the resolution unit type constants.
**Notes:** The unit for points per meter.

### 142.4.42 ResolutionUnknown = 0

MBS Images Plugin, Plugin Version: 10.1.

**Function:** One of the resolution unit type constants.

### 142.4.43 TypeGray = 0

MBS Images Plugin, Plugin Version: 12.5.

**Function:** One of the type constants.
**Notes:** Gray

### 142.4.44 TypeGrayA = 4

MBS Images Plugin, Plugin Version: 12.5.

**Function:** One of the type constants.
**Notes:** Gray with Alpha

### 142.4.45 TypePalette = 1

MBS Images Plugin, Plugin Version: 12.5.

**Function:** One of the type constants.
**Notes:** Palette

### 142.4.46 TypeRGB = 2

MBS Images Plugin, Plugin Version: 12.5.

**Function:** One of the type constants.
**Notes:** RGB

### 142.4.47 TypeRGBA = 6

MBS Images Plugin, Plugin Version: 12.5.

**Function:** One of the type constants.
**Notes:** RGB with Alpha.

# Chapter 143

# Power

## 143.1 class IOPMAssertionMBS

### 143.1.1 class IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for PowerManagement assertions.
**Notes:** You use this class to block a Mac from sleeping display, disk or whole machine.

### 143.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

### 143.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

### 143.1.4 Methods

### 143.1.5 AssertionsByProcess as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a dictionary listing all assertions, grouped by their owning process.
**Notes:**

Notes: One process may have multiple assertions. Several processes may have asserted the same assertion

to different levels.

On success, this returns a dictionary of assertions per process. At the top level, keys to the Dictionary are pids stored as Integer. The value associated with each pid is an array of active assertions. Each entry in the array is an assertion represented as a Dictionary. See the keys kIOPMAssertionTypeKey and kIOPMAssertionLevelKey.

### 143.1.6 AssertionsStatus as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a list of available assertions and their system-wide levels.
**Notes:**

The system-wide level is the maximum of all individual assertions' levels.

On success, this returns a Dictionary of all assertions currently available.
The keys in the dictionary are the assertion types, and the value of each is a CFNumber that represents the aggregate level for that assertion.

### 143.1.7 Constructor(type as string, level as Integer, name as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Calls internally CreateWithName function.

### 143.1.8 CreateWithDescription(AssertionType as string, Name as string, Details as string = "", HumanReadableReason as string = "", LocalizationBundlePath as string = "", Timeout as Double = 0, TimeoutAction as string = "") as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an IOPMAssertion.
**Notes:**

This is the preferred API to call to create an assertion. It allows the caller to specify the Name, Details, and HumanReadableReason at creation time. There are other keys that can further describe an assertion, but most developers don't need to use them. Use SetProperty or CreateWithProperties if you need to specify properties that aren't available here.

AssertionType: An assertion type constant. Caller must specify this argument.
Name: A String value to correspond to key kIOPMAssertionNameKey. Caller must specify this argument.
Details: A String value to correspond to key kIOPMAssertionDetailsKey. Caller my pass "", but it helps power users and administrators identify the reasons for this assertion.
HumanReadableReason: A String value to correspond to key kIOPMAssertionHumanReadableReasonKey. Caller may pass "", but if it's specified OS X may display it to users to describe the active assertions on their system.
LocalizationBundlePath: A String value to correspond to key kIOPMAssertionLocalizationBundlePathKey. This bundle path should include a localization for the string HumanReadableReason. Caller may pass "", but this argument is required if caller specifies HumanReadableReason.
Timeout: Specifies a timeout for this assertion. Pass 0 for no timeout.
TimeoutAction: Specifies a timeout action. Caller my pass "". If a timeout is specified but a TimeoutAction is not, the default timeout action is kIOPMAssertionTimeoutActionTurnOff.

On success this function returns a new assertion.

### 143.1.9 CreateWithHandle(Handle as Integer) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new object with retaining given handle.

### 143.1.10 CreateWithName(type as string, level as Integer, name as string) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Dynamically requests a system behavior from the power management system.
**Notes:**

Create is deprecated in favor of CreateWithProperties. Please use that version of this API instead.

No special privileges are necessary to make this call - any process may activate a power assertion. Caller must specify an AssertionName - "" is not a valid input.

| | |
|---|---|
| Type | The String assertion type to request from the PM system. |
| Level | Pass kIOPMAssertionLevelOn or kIOPMAssertionLevelOff. |
| Name | A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters. |

On success, returns an IOPMAssertionMBS object.

### 143.1.11 CreateWithProperties(AssertionProperties as Dictionary) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates an IOPMAssertion with more flexibility than CreateWithDescription.
**Notes:**

AssertionProperties: Dictionary providing the properties of the assertion that need to be created.
On successful return, returns the assertion.

Create a new PM assertion - the caller must specify the type of assertion, initial level, and its properties as IOPMAssertionDictionaryKeys keys in the AssertionProperties dictionary. The following keys are recommend and/or required to be specified in the AssertionProperties dictionary argument.

- Required kIOPMAssertionTypeKey define the assertion type.
- Required kIOPMAssertionValueKey define an inital value.
- Required kIOPMAssertionNameKey Caller must describe the name for the activity that requires the change in behavior provided by the assertion.
- Optional kIOPMAssertionDetailsKey Caller may describe context-specific data about the assertion.
- Optional kIOPMAssertionHumanReadableReasonKey Caller may describe the reason for creating the assertion in a localizable String. This should be a human readable phrase that describes the actions the calling process is taking while the assertion is held, like "Downloading TV episodes", or "Compiling Projects"
- Optional kIOPMAssertionLocalizationBundlePathKey Caller may provide its bundle's path, where OS X can localize for GUI display the String specified by kIOPMAssertionHumanReadableReasonKey.
- Optional kIOPMAssertionPlugInIDKey if the caller is a plugin with a different identity than the process it's loaded in.
- Optional kIOPMAssertionFrameworkIDKey if the caller is a framework acting on behalf of a process.
- Optional The caller may specify a timeout.

### 143.1.12 DeclareUserActivity(AssertionName as string, userType as Integer, byref AssertionID as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Declares that the user is active on the system.
**Notes:**

This causes the display to power on and postpone display sleep up to the user's display sleep Energy Saver settings. If you prefer to hold the display awake for a longer period and you know how long you'd like to hold it, consider taking assertion kIOPMAssertionTypePreventUserIdleDisplaySleep using CreateWithDescription instead.

No special privileges are necessary to make this call - any process may call this API. Caller must specify an AssertionName.

AssertionName: A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.
userType: This parameter specifies if the active user is located locally in front of the system or connected to the system over the network. Various components of the system are maintained at different power levels depending on user location.

On Success, unique id will be returned in this parameter. Caller may call this function again with the unique id retured previously to report continous user activity. The unique id returned by this function may change on each call depending on how frequently this function call is repeated and the current display sleep timer value. If you make this call more than once, track the returned value for assertionID, and pass it in as an argument on each call.

Returns kIOReturnSuccess (0) on success, any other return indicates PM could not successfully activate the specified assertion.

### 143.1.13 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Copies details about an IOPMAssertion.
**Notes:** Returns a dictionary describing an IOPMAssertion's specifications and current state.

### 143.1.14 SetProperty(key as string, value as Variant) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sets a property in the assertion.
**Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
```

```
if a.SetProperty(IOPMAssertionMBS.kIOPMAssertionNameKey, "test") then
MsgBox a.name
end if
```

**Notes:**

Only the process that created an assertion may change its properties.
key: The string key to modify.
Value: The property to set. It must be a number or string, as specified by the property key named in key.
Returns false on any error and true on success.

### 143.1.15 Properties

### 143.1.16 Details as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The details for this assertion.
**Notes:**

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

### 143.1.17 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal handle to the assertion.
**Notes:**

Zero is not a valid ID.
(Read only property)

### 143.1.18 HumanReadableReason as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Optional valie that provides a localizable string for OS X to display PM Assertions in the GUI.
**Notes:**

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.
(Read and Write property)

### 143.1.19 Level as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The assertion level.
**Notes:** (Read and Write property)

### 143.1.20 LocalizationBundlePath as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Refers to a string, identifying the path to the caller's bundle, which contains localization info.
**Notes:** (Read and Write property)

### 143.1.21 Name as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the assertion.
**Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

**Notes:**

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

### 143.1.22 RetainCount as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The retain count of the object.
**Notes:** (Read only property)

### 143.1.23 Timeout as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies an outer bound, in seconds, that this assertion should be asserted.
**Notes:**

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.
(Read and Write property)

### 143.1.24 TimeoutAction as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Specifies the action to take upon timeout expiration.
**Notes:**

Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey.
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff.
(Read and Write property)

### 143.1.25 Type as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The assertion type.
**Notes:**

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.
(Read and Write property)

### 143.1.26 Constants

### 143.1.27 kIOPMAssertionDetailsKey = "Details"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:**

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Optional kIOPMAssertionNameKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

### 143.1.28 kIOPMAssertionFrameworkIDKey = "FrameworkBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.

### 143.1.29 kIOPMAssertionHumanReadableReasonKey = "HumanReadableReason"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:**

Optional key that provides a localizable string for OS X to display PM Assertions in the GUI.

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Required kIOPMAssertionNameKey
- Optional kIOPMAssertionDetailsKey

### 143.1.30 kIOPMAssertionLevelKey = "AssertLevel"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:**

The Dictionary key for assertion level in an assertion info dictionary.

The value for this key will be an integer with value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn. The level reflects the assertion's level set at creation, or adjusted via IOPMAssertionSetLevel.

### 143.1.31 kIOPMAssertionLevelOff = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** Level for a disabled assertion, passed as an argument to Create.

### 143.1.32 kIOPMAssertionLevelOn = 255

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** Level for an enabled assertion, passed as an argument to Create.
**Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

### 143.1.33 kIOPMAssertionLocalizationBundlePathKey = "BundlePath"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:** Refers to a string, identifying the path to the caller's bundle, which contains localization info.

### 143.1.34 kIOPMAssertionNameKey = "AssertName"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionNameKey)
MsgBox v
```

**Notes:**

The Dictionary key for assertion name. Setting this key is required when you're creating an assertion.

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can also set to add explanation to an assertion:

- Optional kIOPMAssertionDetailsKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

### 143.1.35 kIOPMAssertionPlugInIDKey = "PlugInBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.

### 143.1.36 kIOPMAssertionRetainCountKey = "RetainCount"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:** The retain count of the object.

### 143.1.37 kIOPMAssertionTimeoutActionKey = "TimeoutAction"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:**

Specifies the action to take upon timeout expiration.
Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

### 143.1.38 kIOPMAssertionTimeoutActionLog = "TimeoutActionLog"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the values for kIOPMAssertionTimeoutActionKey.
**Notes:** When this timeout action is specified, PM will log the timeout event but will not turn off or affect the setting of the assertion in any way.

### 143.1.39 kIOPMAssertionTimeoutActionRelease = "TimeoutActionRelease"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the values for kIOPMAssertionTimeoutActionKey.
**Notes:** When a timeout expires with this action, Power Management will log the timeout event, and will release the assertion.

### 143.1.40 kIOPMAssertionTimeoutActionTurnOff = "TimeoutActionTurnOff"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the values for kIOPMAssertionTimeoutActionKey.
**Notes:** When a timeout expires with this action, Power Management will log the timeout event, and will set the assertion's level to kIOPMAssertionLevelOff.

### 143.1.41 kIOPMAssertionTimeoutKey = "TimeoutSeconds"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Notes:**

Specifies an outer bound, in seconds, that this assertion should be asserted.

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

### 143.1.42 kIOPMAssertionTypeKey = "AssertType"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the keys for the properties dictionary.
**Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionTypeKey)
MsgBox v
```

**Notes:**

The dictionary key for assertion type in an assertion info dictionary.

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.

### 143.1.43 kIOPMAssertionTypePreventSystemSleep = "PreventSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the assertion types.
**Notes:**

Prevents the system from sleeping and allows the system to reside in Dark Wake for an arbitrary length of time.

When asserted and set to level kIOPMAssertionLevelOn, the system will prefer to enter the Dark Wake state, or remain in Dark Wake if already there, rather than go to sleep.

Assertions are just suggestions to the OS, and the OS can only honor them to the best of its ability. In the case of low power or a thermal emergency, the system may sleep anyway despite the assertion.

An assertion must publish the AssertionType in its assertion properties dictionary.
The AssertionType should be a key in the properties dictionary, with a value of a CFNumber containing the kCFNumberIntegerType value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn.

### 143.1.44 kIOPMAssertionTypePreventUserIdleDisplaySleep = "PreventUserIdleDisplaySleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the assertion types.
**Notes:**

Prevents the display from dimming automatically.

When asserted and set to level kIOPMAssertionLevelOn, will prevent the display from turning off due to a period of idle user activity. Note that the display may still sleep from other reasons, like a user closing a portable's lid or the machine sleeping. If the display is already off, this assertion does not light up the display. If display needs to be turned on, then consider calling function IOPMAssertionDeclareUserActivity.
While the display is prevented from dimming, the system cannot go into idle sleep.
This assertion has no effect if the system is in Dark Wake.

### 143.1.45 kIOPMAssertionTypePreventUserIdleSystemSleep = "PreventUserIdleSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the assertion types.
**Notes:**

Prevents the system from sleeping automatically due to a lack of user activity.
When asserted and set to level kIOPMAssertionLevelOn, will prevent the system from sleeping due to a period of idle user activity.

The display may dim and idle sleep while kIOPMAssertionTypePreventUserIdleSystemSleep is enabled, but the system may not idle sleep. The system may still sleep for lid close, Apple menu, low battery, or other sleep reasons.

This assertion has no effect if the system is in Dark Wake.

### 143.1.46 kIOPMAssertPreventDiskIdle = "PreventDiskIdle"

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the assertion types.
**Notes:**

Prevent attached disks from idling into lower power states.

When asserted and set to level kIOPMAssertionLevelOn, will prevent attached disks and optical media from idling into lower power states.
Apps who rely on real-time access to disks should create this assertion to avoid latencies caused by disks changing power states. For example, audio and video performance or recording apps may benefit from this assertion. Most Apps should not take this assertion; preventing disk idle consumes battery life, and most apps don't require the low latency disk access that this provides.
This assertion doesn't increase a disk's power state (it just prevents that device from idling). After creating this assertion, the caller should perform disk I/O on the necessary drives to ensure that they're in a usable power state.
The system may still sleep while this assertion is active. Callers should also take kIOPMAssertionTypePreventUserIdleSystemSleep if necessary, to prevent idle system sleep.

### 143.1.47 kIOPMUserActiveLocal = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the user activity constants.
**Notes:** User is local on the system

### 143.1.48 kIOPMUserActiveRemote = 1

MBS MacOSX Plugin, Plugin Version: 13.2.

**Function:** One of the user activity constants.
**Notes:** Remote User connected to the system.

## 143.2 class IOPMMBS

### 143.2.1 class IOPMMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The Mac OS X class which can control the energy settings.
**Example:**

```
dim p as new IOPMMBS

Listbox1.AddRow "EthernetWakeOnLANSettings: "+str(p.EthernetWakeOnLANSettings)
Listbox1.AddRow "GeneralAggressiveness: "+str(p.GeneralAggressiveness)
Listbox1.AddRow "MinutesToDim: "+str(p.MinutesToDim)
Listbox1.AddRow "MinutesToSleep: "+str(p.MinutesToSleep)
Listbox1.AddRow "MinutesToSpinDown: "+str(p.MinutesToSpinDown)
Listbox1.AddRow "MotionSensor: "+str(p.MotionSensor)
Listbox1.AddRow "PowerSource: "+str(p.PowerSource)
Listbox1.AddRow "SetProcessorSpeed: "+str(p.SetProcessorSpeed)
```

**Notes:** The functions and properties are not described from Apple.

### 143.2.2 Properties

### 143.2.3 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference for the power manager.
**Notes:**

If this value is zero, the properties will not work.
(Read and Write property)

### 143.2.4 EthernetWakeOnLANSettings as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The setting for whether ethernet wake on LAN.
**Notes:**

Value is 1 if you enable this option in the energy system control panel and 0 if you disable it.
(Read and Write computed property)

### 143.2.5 GeneralAggressiveness as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The general aggressiveness.
**Notes:** (Read and Write computed property)

### 143.2.6 MinutesToDim as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The minutes until the display is dimmed.
**Example:**

```
dim p as new IOPMMBS
p.MinutesToDim=10 // dim display in 10 minutes
```

**Notes:**

This value is the same as in the energy system control panel.
(Read and Write computed property)

### 143.2.7 MinutesToSleep as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The time in minutes until the Mac goes to sleep.
**Example:**

```
dim p as new IOPMMBS
p.MinutesToSleep=10 // sleep display in 10 minutes
```

**Notes:** (Read and Write computed property)

### 143.2.8 MinutesToSpinDown as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The time in minutes until the hard discs spin down.
**Notes:**

If you enable the spin down option in the energy system control panel, this value is 10 and if you disable it, it is 180.
(Read and Write computed property)

### 143.2.9 MotionSensor as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The setting for the motion sensor.
**Notes:** (Read and Write computed property)

### 143.2.10 PowerSource as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The power source settings.
**Notes:**

Constants for this property:

const kIOPMInternalPower = 1
const kIOPMExternalPower = 2
(Read and Write computed property)

### 143.2.11 SetProcessorSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The setting for the processor speed.
**Notes:** (Read and Write computed property)

## 143.3 class IOPowerSourcesMBS

### 143.3.1 class IOPowerSourcesMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class to look on all the power sources on a Mac OS X based computer.
**Example:**

```
dim i as IOPowerSourcesMBS
dim j,n as Integer

i=new IOPowerSourcesMBS

n=i.Count-1
for j=0 to n
CFShowMBS i.Item(j) // Print battery info to console.
next
```

**Notes:** Requires Mac OS X.

### 143.3.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr9

### 143.3.3 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr9

### 143.3.4 Methods

### 143.3.5 ExternalPowerAdapterDetails as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a CFDictionary that describes the attached (AC) external power adapter (if any external power adapter is attached.
**Example:**

```
dim d as CFDictionaryMBS = IOPowerSourcesMBS.ExternalPowerAdapterDetails
dim dic as Dictionary = d.Dictionary

dim lines() as string
lines.Append "AdapterRevision: "+dic.Lookup("AdapterRevision", "")
lines.Append "AdapterID: "+dic.Lookup("AdapterID", "")
lines.Append "FamilyCode: "+dic.Lookup("FamilyCode", "")
lines.Append "SerialNumber: "+dic.Lookup("SerialNumber", "")
lines.Append "Watts: "+dic.Lookup("Watts", "")

MsgBox Join(lines, EndOfLine)
```

**Notes:**

Returns a CFDictionary on success.
If no adapter is attached, or if there's an error, returns nil.

### 143.3.6 Item(index as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Ask for the power source description with the given index.
**Example:**

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox i.Item(0).XML.Str // shows dictionary for first power source
```

**Notes:** Indes is from 0 to count-1.

### 143.3.7 Update

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries for new power sources and updates the item array.
**Example:**

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

### 143.3.8 Properties

### 143.3.9 Count as Integer

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The number of registered power sources.
**Example:**

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

**Notes:** (Read only property)

### 143.3.10 Events

### 143.3.11 Changed

MBS MacCF Plugin, Plugin Version: 4.0, Platform: macOS, Targets: .

**Function:** The state of one power source changed.
**Notes:** Whenever something changes around the power sources, you are notified with this event.

## 143.4 class SleepNotificationMBS

### 143.4.1 class SleepNotificationMBS

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class to listen for sleep notifications on Mac OS X .
**Notes:**

Uses IOKit.

Your application can use the sleep event to deny idle sleep, i.e. sleep after a period of inactivity. Applications should not deny idle sleep unless absolutely necessary.

The kIOMessage* constants in this class are declared in the Mac OS X headers, but they are not all used by the system.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

### 143.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

### 143.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

### 143.4.4 Properties

### 143.4.5 running as Boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether this notification class is working.
**Notes:**

Value is true on MachO targets.
(Read and Write property)

### 143.4.6 Events

### 143.4.7 Sleep(message as int64) as boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

**Function:** A message was received.
**Notes:**

Use the constants to check what message you got.

Return true to deny or false to allow.

On the Can Messages the plugin informs the system about Deny or Allow, but on the Will messages, it will not answer if you return true, so the system will wait for an answer and delay sleep. There seems to be no way to delay more than 30 seconds when the user selects the sleep menu command.

The message parameter is an int64 in Plugin version 9.7 so the integer comparison to the constants works better.

### 143.4.8 Constants

### 143.4.9 kIOMessageCanSystemPowerOff = & he0000240

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.10 kIOMessageCanSystemSleep = & he0000270

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.
**Notes:**

Idle sleep is about to kick in.
Applications have a chance to prevent sleep by returning true in the sleep event. Most applications should not prevent idle sleep.

Power Management waits up to 30 seconds for you to either allow or deny idle sleep. If you don't acknowledge this power change by returning true or false, the system will wait 30 seconds then go to sleep.

### 143.4.11 kIOMessageSystemHasPoweredOn = & he0000300

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.12 kIOMessageSystemWillNotPowerOff = & he0000260

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.13 kIOMessageSystemWillNotSleep = & he0000290

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.14 kIOMessageSystemWillPowerOff = & he0000250

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.15 kIOMessageSystemWillPowerOn = & he0000320

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.16 kIOMessageSystemWillRestart = & he0000310

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

### 143.4.17 kIOMessageSystemWillSleep = & he0000280

MBS MacOSX Plugin, Plugin Version: 8.0.

**Function:** One of the message constants.

## 143.5 class WakeNotifierMBS

### 143.5.1 class WakeNotifierMBS

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Notification and statistics about sleeping off a Mac.
**Notes:**

For Mac OS X 10.5.6 you see the SleepDemand and the WakeUp events when your Mac sleeps and wakes up.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

### 143.5.2 Properties

### 143.5.3 CallEvents as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** whether or not to call the events of this class.
**Notes:**

Default is false.
(Read and Write property)

### 143.5.4 DisableSleep as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Diabled sleep if a sleep request comes?
**Notes:**

Not used if you have code in the SleepRequest event handler.
(Read and Write property)

### 143.5.5 HadSleeped as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Sleeped since last reset?
**Notes:**

You can set this value to false to reset it.
(Read and Write property)

### 143.5.6 LastSleepTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Last time in absolute seconds when falled asleep.
**Notes:**

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

### 143.5.7 LastWakeTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Last time in absolute seconds when waken up.
**Notes:**

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

### 143.5.8 SleepCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Count of sleep demands.
**Notes:** (Read only property)

### 143.5.9 SleepEventCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Counts how often the Power Manager calls the sleep notification function.
**Notes:**

For debugging so you know that sleep requests are handled.
(Read and Write property)

### 143.5.10 Valid as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns True if the sleep event handler could be installed.
**Notes:**

False, if no Power Manager is installed.
(Read only property)

### 143.5.11 WakeCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Count of waking up.
**Notes:** (Read only property)

### 143.5.12 Events

### 143.5.13 SleepDemand

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

**Function:** Called just before falling asleep.

### 143.5.14 SleepRequest as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

**Function:** Can be go sleeping?
**Notes:**

Return true to deny sleeping.
Returning nothing or false will put the Mac to sleep.

### 143.5.15 SleepRevoke

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

**Function:** Called when a sleep request was denied by an application or a device driver.

### 143.5.16 WakeUp

MBS MacClassic Plugin, Plugin Version: 2.6, Platform: macOS, Targets: .

**Function:** Called when the Mac wakes up.

## 143.6 class WindowsPowerStateMBS

### 143.6.1 class WindowsPowerStateMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to watch for power changes on a computer using Microsoft Windows as operation system.
**Notes:**

Not all Windows versions call the same/all events.

This function listens for WM_POWERBROADCAST sent to all applications.

see
https://msdn.microsoft.com/en-us/library/windows/desktop/aa373247(v=vs.85).aspx

### 143.6.2 Events

### 143.6.3 BatteryLow

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The BatteryLow event is broadcast to notify applications that battery power is low.
**Notes:** Support for this event was removed in Windows Vista bei Microsoft.

### 143.6.4 OEMEvent(eventcode as Integer)

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The OEMEvent event is broadcast when an APM BIOS signals an APM OEM event.
**Notes:**

eventcode: A DWORD value that specifies the OEM-defined event code that was signaled by the system's APM BIOS. OEM event codes are in the range & h0200 - & h02FF.

Because not all APM BIOS implementations provide OEM event notifications, this event may never be broadcast on some computers.

Support for this event was removed in Windows Vista bei Microsoft.

### 143.6.5 PowerStatusChange

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The PowerStatusChange event is broadcast when a change in the power status of the computer is detected, such as a switch from battery power to A/C.
**Notes:** The system also broadcasts this event when remaining battery power slips below the threshold specified by the user or if the battery power changes by a specified percentage.

### 143.6.6 QueryStandby(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The QueryStandby event is broadcast to request permission to set the computer into standby mode.
**Notes:**

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to go to standby mode can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QueryStandby event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during standby processing.

### 143.6.7 QueryStandbyFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The QueryStandbyFailed event is broadcast as a notification that permission to go to standby mode was denied.

**Notes:** This event is broadcast if any application or driver returned false to a previous QueryStandby event.

### 143.6.8 QuerySuspend(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The QuerySuspend event is broadcast to request permission to suspend the computer.
**Notes:**

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to suspend can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QuerySuspend event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during Suspend processing.

Support for this event was removed in Windows Vista bei Microsoft.

### 143.6.9 QuerySuspendFailed

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The QuerySuspendFailed event is broadcast as a notification that permission to suspend the computer was denied.
**Notes:**

This event is broadcast if any application or driver returned false to a previous QuerySuspend event.

Support for this event was removed in Windows Vista bei Microsoft.

### 143.6.10 ResumeAutomatic

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The ResumeAutomatic event is broadcast when the computer wakes up automatically to handle an event.
**Notes:** An application will not generally respond unless it is handling the event, because the user is not present.

### 143.6.11 ResumeCritical

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The ResumeCritical event is broadcast as a notification that the system has resumed operation.
**Notes:**

This event can indicate that some or all applications did not receive a Suspend event. For example, this event can be broadcast after a critical suspension caused by a failing battery.

Support for this event was removed in Windows Vista bei Microsoft.

### 143.6.12 ResumeStandby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The ResumeStandby event is broadcast as a notification that the system has resumed operation after being put to standby.

### 143.6.13 ResumeSuspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The ResumeSuspend event is broadcast as a notification that the system has resumed operation after being suspended.

### 143.6.14 Standby

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The Standby event is broadcast immediately before the computer enters a standby state.
**Notes:** This event is typically broadcast when all applications and installable drivers have returned okay to a previous QueryStandby event.

### 143.6.15 Suspend

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

**Function:** The Suspend event is broadcast immediately before the computer enters a suspended state.
**Notes:** This event is typically broadcast when all applications and installable drivers have returned okay to a previous QuerySuspend event.

# Chapter 144

# Printing

## 144.1 Globals

### 144.1.1 NewCPMPageFormatMBS as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new page format object.
**Notes:** Returns nil on any error.

### 144.1.2 NewCPMPrintSessionMBS as CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new print session object.
**Example:**

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")

dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings
```

```
'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

**Notes:** Returns nil on any error.

### 144.1.3 NewCPMPrintSettingsMBS as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new print settings object.
**Notes:** Returns nil on any error.

## 144.2 class CPMLanguageInfoMBS

### 144.2.1 class CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a language info.
**Notes:** Only a data class.

### 144.2.2 Properties

### 144.2.3 Level as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The level string of the printer.
**Notes:** (Read and Write property)

### 144.2.4 Release as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The release string of the printer.
**Notes:** (Read and Write property)

### 144.2.5 Version as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The version string of the printer.
**Notes:** (Read and Write property)

## 144.3 class CPMPageFormatMBS

### 144.3.1 class CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a page format.

### 144.3.2 Methods

### 144.3.3 AdjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The adjusted page size.
**Notes:** Lasterror is set.

### 144.3.4 AdjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The adjusted page size.
**Notes:** Lasterror is set.

### 144.3.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new page format object.

### 144.3.6 CopySettings(Destination as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Copies the settings to another pageformat object.

### 144.3.7 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a data representation of a PMPageFormat object as a data string.
**Example:**

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation
break // check in debugger
```

**Notes:**

Use CreateWithDataRepresentation to create a CPMPageFormatMBS from a string created by this call. Format can be kPMDataFormatXMLDefault, kPMDataFormatXMLMinimal or kPMDataFormatXMLCompressed.

### 144.3.8 CreateWithDataRepresentation(Data as String) as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.
**Example:**

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation

dim other as CPMPageFormatMBS = CPMPageFormatMBS.CreateWithDataRepresentation(d)
MsgBox str(other.Orientation)
```

**Notes:** Returns nil in case of error.

### 144.3.9 PrinterID as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Obtains the formatting printer for the pageformat.
**Notes:** Will either return the formatting printer for the pageformat or will return nil if the pageformat doesn't have that information.

### 144.3.10 UnadjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The unadjusted page size.
**Notes:** Lasterror is set.

### 144.3.11 UnadjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The unadjusted page size.
**Notes:** Lasterror is set.

### 144.3.12 Properties

### 144.3.13 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The handle for the page format.
**Notes:**

It's a PMPageFormat which you find in CMTypes.h in the Toolbox.
(Read and Write property)

### 144.3.14 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The error code from the last command.
**Notes:**

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

### 144.3.15 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** whether the destructor will release the handle.
**Notes:** (Read and Write property)

### 144.3.16 Orientation as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The page orientation.
**Example:**

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
```

**Notes:**

Lasterror is set.

Possible values:

| | | |
|---|---|---|
| kPMPortrait | 1 | |
| kPMLandscape | 2 | |
| kPMReversePortrait | 3 | will revert to kPortrait for current drivers |
| kPMReverseLandscape | 4 | will revert to kLandscape for current drivers |

(Read and Write computed property)

### 144.3.17 Scale as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The page scaling.
**Notes:**

Lasterror is set.
Value is 100 for 100% .
(Read and Write computed property)

### 144.3.18 Constants

### 144.3.19 kPMDataFormatXMLCompressed = 2

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the data formats constants.
**Notes:** kPMDataFormatXMLCompressed is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate PMXXXCreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLCompressed is approximately 20 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and the minimum data size is important.

### 144.3.20 kPMDataFormatXMLDefault = 0

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the data formats constants.
**Notes:** Specifies a data format that is compatible with all Mac OS X versions. Data in this format can be used with the PMUnflattenXXX routines present in all versions of Mac OS X prior to 10.5. However, this data representation is much larger than the more modern data representations described below.

### 144.3.21 kPMDataFormatXMLMinimal = 1

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the data formats constants.
**Notes:** XMLMinimal is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate CreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLMinimal is approximately 3-5 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and an uncompressed XML representation of the data is needed.

### 144.3.22 kPMLandscape = 2

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the orientation constants.
**Notes:** Landscape

### 144.3.23 kPMPortrait = 1

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the orientation constants.

**Notes:** Portrait

### 144.3.24 kPMReverseLandscape = 4

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the orientation constants.
**Notes:** Reverse Landscape

### 144.3.25 kPMReversePortrait = 3

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the orientation constants.
**Notes:** Reverse Portrait

## 144.4 class CPMPrinterMBS

### 144.4.1 class CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a printer.

### 144.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

### 144.4.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5
- MonkeyBread Software Releases the MBS REALbasic plug-ins 9.2

### 144.4.4 Methods

### 144.4.5 Constructor(name as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Initializes a new printer object given the printer name.
**Notes:**

Raises exception if lookup fails.
This accepts both CUPS names and the Mac GUI names in printing control panel.

### 144.4.6 CreateFromPrinterID(PrinterID as String) as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Create a PMPrinter instance from the supplied printerID.
**Example:**

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox p.name
```

### 144.4.7 CreateGenericPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a generic PMPrinter.

### 144.4.8 CreateLocalPrinterList as CPMPrinterMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries list of local printers.
**Example:**

```
dim a() as CPMPrinterMBS = CPMPrinterMBS.CreateLocalPrinterList
for each p as CPMPrinterMBS in a
MsgBox p.Name
next
```

### 144.4.9 DescriptionURL as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the description URL for this printer.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DescriptionURL
```

**Notes:**

Should be the path to a PPD file for a laser printer.
Lasterror is set.

### 144.4.10 DeviceURI as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Hand back the URI of the printer's device.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DeviceURI
```

**Notes:**

On success returns a CFURLMBS object describing the printer's device.
Lasterror is set.

### 144.4.11 DriverCreator as String

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns a 4 letter code for the creator of the printer.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "DriverCreator: "+str(printer.DriverCreator)
```

**Notes:** Lasterror is set.

### 144.4.12 DriverReleaseInfo as CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries printer driver version.

### 144.4.13 HostName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Hand back the host name of the print server hosting the printer's print queue.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "HostName: "+str(printer.HostName)
```

**Notes:** Lasterror is set.

### 144.4.14 ID as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the ID of the string.

### 144.4.15 IndexedPrinterResolution(index as Integer) as CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns a printer resolution.
**Notes:**

Lasterror is set.
Index is from 1 to ResolutionCount.

### 144.4.16 IsDefault as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether this printer is the default printer.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsDefault: "+str(printer.IsDefault)
```

### 144.4.17 IsFavorite as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Return true if the printer is in the user's favorite printer list.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter
```

```
MsgBox "IsFavorite: "+str(printer.IsFavorite)
```

### 144.4.18 IsPostScriptCapable as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Can this printer do postscript?
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptCapable: "+str(printer.IsPostScriptCapable)
```

**Notes:** Lasterror is set.

### 144.4.19 IsPostScriptPrinter as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** If the result is true if the printer is a PostScript printer.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptPrinter: "+str(printer.IsPostScriptPrinter)
```

**Notes:** A PostScript printer is one whose driver takes PostScript directly.

### 144.4.20 IsRemote as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Hand back a boolean indicating whether the printer is hosted by remote print server.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter
```

MsgBox "IsRemote: "+str(printer.IsRemote)

**Notes:**

If result is true, the print queue represents a printer hosted and managed by a remote print server.

If result is false, the print queue represents a directly connected printer, a network printer, or a remote printer that is locally managed. Consult the queue's device URI to determine the type of connection that is used to communicate with the printer.

Whether a printer is remote is derived from the CUPS printer-type attribute for the print queue.

### 144.4.21 LanguageInfo as CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns language information about the printer.
**Notes:** Lasterror is set.

### 144.4.22 Location as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the location of the printer.

### 144.4.23 MakeAndModelName as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** A string with the name for the model and the maker.
**Notes:**

Lasterror is set.
Returns "" on any error.

### 144.4.24 Name as string

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the name of the string.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.name
```

### 144.4.25 ResolutionCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns how much resolutions are supported by the printer.
**Notes:** Lasterror is set.

### 144.4.26 SetDefault

MBS MacCG Plugin, Plugin Version: 9.2, Platform: macOS, Targets: Desktop only.

**Function:** Set the default printer for the current user.
**Notes:**

It is not typical for an application to set the current default printer for the user; the printing system itself takes care of managing the default printer.
This function should be used only in rare circumstances.

Requires Mac OS X 10.5.

### 144.4.27 State as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries printer state.
**Example:**

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox str(p.State)
```

**Notes:** Can be kPMPrinterIdle, kPMPrinterProcessing or kPMPrinterStopped.

### 144.4.28 Properties

### 144.4.29 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The handle for the printer.
**Notes:**

It's a PMPrinter which you find in CMTypes.h in the Toolbox.
(Read and Write property)

### 144.4.30 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The error code from the last command.
**Notes:**

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

### 144.4.31 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** whether the destructor will release the handle.
**Notes:** (Read and Write property)

### 144.4.32 Constants

### 144.4.33 kPMPrinterIdle = 3

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the printer state constants.
**Notes:** Printer is idle.

### 144.4.34 kPMPrinterProcessing = 4

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the printer state constants.
**Notes:** Printer is processing.

### 144.4.35 kPMPrinterStopped = 5

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the printer state constants.
**Notes:** Printer is stopped.

## 144.5 class CPMPrintSessionMBS

### 144.5.1 class CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a print session.
**Notes:** Works only in Carbon Stuff and can only be used with CGContext which works only on Mac OS X.

### 144.5.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

### 144.5.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

### 144.5.4 Methods

### 144.5.5 BeginDocument(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Begins a new document with the given settings.
**Notes:** Lasterror is set.

### 144.5.6 BeginDocumentNoDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Begins a new document with the given settings.
**Notes:**

Doesn't use the print progress dialog.
Lasterror is set.

### 144.5.7 BeginPage(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Begins a new page.
**Notes:** Lasterror is set.

### 144.5.8 BeginPageNoDialog(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Begins a new page.
**Notes:**

Doesn't use the print progress dialog.
Lasterror is set.

### 144.5.9 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new print session object.

### 144.5.10 CreatePrinterList(list() as string)

MBS MacCG Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a list of all printers.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
session.CreatePrinterList(list)

MsgBox join(list, EndOfLine)
```

**Notes:**

List is an array of strings with the names of the printers.
Lasterror is set.
See also:

- 144.5.11 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS) 22828

### 144.5.11 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a list of all printers.
**Example:**

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
dim currentprinter as CPMPrinterMBS
dim index as Integer
session.CreatePrinterList(list, index, currentprinter)

MsgBox join(list, EndOfLine)
```

**Notes:**

List is an array of strings with the names of the printers.
Index is the index of the current printer inside this list.
CurrentPrinter is the current printer selected.
Lasterror is set.
See also:

- 144.5.10 CreatePrinterList(list() as string) 22827

### 144.5.12 DefaultPageFormat(pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Sets the page format object to the default settings.
**Notes:** Lasterror is set.

### 144.5.13 DefaultPrintSettings(printsettings as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Sets the settings object to the default settings.
**Notes:** Lasterror is set.

### 144.5.14 EndDocument

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Ends the current document.
**Notes:** Lasterror is set.

### 144.5.15 EndDocumentNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Ends the current document.
**Notes:**

Doesn't use the print progress dialog.
Lasterror is set.

### 144.5.16 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Ends the current page.
**Notes:** Lasterror is set.

### 144.5.17 EndPageNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Ends the current page.
**Notes:**

Doesn't use the print progress dialog.
Lasterror is set.

### 144.5.18 GetDestinationFormat(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the destination format value.
**Notes:** Lasterror is set.

### 144.5.19 GetDestinationLocation(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the destination location value.
**Notes:** Lasterror is set.

### 144.5.20 GetDestinationType(printsettings as CPMPrintSettingsMBS) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Returns the destination type value.
**Notes:** Lasterror is set.

### 144.5.21 kPMDocumentFormatDefault as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the constants for the document format.

### 144.5.22 kPMDocumentFormatPDF as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the constants for the document format.

### 144.5.23 kPMDocumentFormatPostScript as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the constants for the document format.

### 144.5.24 kPMGraphicsContextCoreGraphics as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the constants for the graphics context.

### 144.5.25 kPMGraphicsContextDefault as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** One of the constants for the graphics context.

### 144.5.26 PageContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new CGContext object for the current page.
**Notes:** Lasterror is set.

### 144.5.27 PageSetupDialog(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Shows the page setup dialog.
**Notes:** Lasterror is set.

### 144.5.28 PrintDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Shows the print dialog.
**Notes:** Lasterror is set.

### 144.5.29 SetDestination(printsettings as CPMPrintSettingsMBS, desttype as Integer, destformat as String, desturl as String)

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets a new destination.
**Notes:**

Some destinations so you may need to specify a format, else you can pass "" for the default format. Some destinations require a URL to a file.

Destination type codes:

| | |
|---|---|
| kPMDestinationInvalid | 0 |
| kPMDestinationPrinter | 1 |
| kPMDestinationFile | 2 |
| kPMDestinationFax | 3 |
| kPMDestinationPreview | 4 |

Destformat strings:

| | |
|---|---|
| kPMDocumentFormatPDF | application/pdf |
| kPMDocumentFormatPICT | application/vnd.apple.printing-pict |
| kPMDocumentFormatPICTPS | application/vnd.apple.printing-pict-ps |
| kPMDocumentFormatPostScript | application/postscript |

Lasterror is set.

### 144.5.30 UseSheets(docWindow as window)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

**Function:** Specifies that a printing dialog should be displayed as a sheet.
**Notes:**

docWindow: The window to which the sheet dialog should be attached.
Lasterror is set. (-1 for the docWindow parameter being nil)

### 144.5.31 ValidatePageFormat(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Validates the page format.
**Notes:** Lasterror is set.

### 144.5.32 ValidatePrintSettings(printsettings as CPMPrintSettingsMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** Validates the print settings.
**Notes:** Lasterror is set.

### 144.5.33 Properties

### 144.5.34 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The handle for the print session.
**Notes:**

It's a PMPrintSession which you find in CMTypes.h in the Toolbox.
(Read and Write property)

### 144.5.35 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The error code from the last command.
**Notes:**

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

### 144.5.36 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** whether the destructor will release the handle.
**Notes:** (Read and Write property)

### 144.5.37 SheetTarget as Window

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

**Function:** The window set by UseSheets.
**Notes:**

This property is to reference the window used for the sheets so Xojo does not destroy the window too early.
(Read and Write property)

### 144.5.38 CurrentPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The current printer for this session.
**Notes:**

Lasterror is set.
Setting this can only be done on Mac OS X.
(Read and Write computed property)

### 144.5.39 CurrentPrinterName as string

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** The current printer for this session by name.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 144.5.40 Events

### 144.5.41 SheetDone(WindowHandle as Integer, accepted as boolean)

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: .

**Function:** This event is called for a finished print sheet.
**Notes:** Accepted is false if the cancel button was used. True if OK was clicked.

### 144.5.42 Constants

### 144.5.43 kPMDestinationFax = 3

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Fax

### 144.5.44 kPMDestinationFile = 2

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** File

### 144.5.45 kPMDestinationInvalid = 0

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Invalid

### 144.5.46 kPMDestinationPreview = 4

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Preview

### 144.5.47 kPMDestinationPrinter = 1

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Printer

### 144.5.48 kPMDestinationProcessPDF = 5

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Process to PDF

### 144.5.49 kPMDestinationTypeDefault = 1

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the destination types.
**Notes:** Default is printer.

## 144.6 class CPMPrintSettingsMBS

### 144.6.1 class CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a print session.

### 144.6.2 Methods

### 144.6.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new print settings object.

### 144.6.4 CopyPrintSettings(dest as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Copes the settings to the other settings.

### 144.6.5 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns a data representation of a PMPageFormat object as a data string.
**Example:**

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim data as string = p.CreateDataRepresentation
Break // check in debugger
```

### 144.6.6 CreateWithDataRepresentation(Data as String) as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.

### 144.6.7 Dictionary as Dictionary

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Represent these print settings as a dictionary.

### 144.6.8 GetPageRange(byref minPage as UInt32, byref maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries the page range to print.
**Notes:**

Obtains the valid range of pages that can be printed.
The default page range is 1 - (all pages). The page range is something that is set by the application. It is NOT the first and last page to print. It serves as limits for setting the first and last page.

### 144.6.9 Keys as String()

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Queries list of keys.
**Example:**

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim keys() as string = p.keys
Break // check in debugger
```

### 144.6.10 SetPageRange(minPage as UInt32, maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the page range to print.

### 144.6.11 Properties

### 144.6.12 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The handle for the print settings.
**Notes:**

It's a PMPrintSettings which you find in CMTypes.h in the Toolbox.
(Read and Write property)

### 144.6.13 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The error code from the last command.
**Notes:**

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

### 144.6.14 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** whether the destructor will release the handle.
**Notes:** (Read and Write property)

### 144.6.15 Collate as boolean

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The collate setting.
**Notes:** (Read and Write computed property)

### 144.6.16 Copies as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The number of copies that the user requests to be printed.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 144.6.17 Duplex as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The duplex setting.
**Notes:** (Read and Write computed property)

### 144.6.18 FirstPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The number of the first page to print.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 144.6.19 JobName as String

MBS MacCG Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop only.

**Function:** Specifies the name of a print job.
**Notes:**

Lasterror is set.
(Read and Write computed property)

### 144.6.20 LastPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The number of the last page to print.
**Example:**

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")
```

```
dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next
```

```
next

'end the printing
thePrintSession.EndDocument
```

**Notes:**

Lasterror is set.
(Read and Write computed property)

### 144.6.21 Value(key as String) as Variant

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The value in settings.
**Example:**

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
dim value as Variant = p.value("com.apple.print.PrintSettings.PMCopyCollate")
Break // check in debugger
```

**Notes:** (Read and Write computed property)

### 144.6.22 Constants

### 144.6.23 kPMDuplexNone = 1

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the duplex mode constants.
**Notes:** Duplex off.

### 144.6.24 kPMDuplexNoTumble = 2

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the duplex mode constants.
**Notes:** Duplex with no tumble.

### 144.6.25 kPMDuplexTumble = 3

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the duplex mode constants.
**Notes:** Duplex with tumble.

### 144.6.26 kPMSimplexTumble = 4

MBS MacCG Plugin, Plugin Version: 15.1.

**Function:** One of the duplex mode constants.
**Notes:** No duplex.

## 144.7 class CPMRectMBS

### 144.7.1 class CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a rectangle.
**Notes:** Only a data class.

### 144.7.2 Properties

### 144.7.3 Bottom as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The bottom distance to the border.
**Notes:** (Read and Write property)

### 144.7.4 Height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The height of the rectangle.
**Notes:**

Setting the height changes the bottom property.
(Read and Write property)

### 144.7.5 Left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The left distance to the border.
**Notes:** (Read and Write property)

### 144.7.6 Right as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The right distance to the border.
**Notes:** (Read and Write property)

### 144.7.7 Top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The top distance to the border.
**Notes:** (Read and Write property)

### 144.7.8 Width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The width of the rectangle.
**Notes:**

Setting the height changes the right property.
(Read and Write property)

## 144.8 class CPMResolutionMBS

### 144.8.1 class CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A class for a resolution.
**Notes:** Only a data class.

### 144.8.2 Properties

### 144.8.3 Horizontal as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The horizontal resolution.
**Notes:** (Read and Write property)

### 144.8.4 Vertical as Double

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

**Function:** The vertical resolution.
**Notes:** (Read and Write property)

## 144.9 class CPMVersionMBS

### 144.9.1 class CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The class for version information.

### 144.9.2 Properties

### 144.9.3 CountryCode as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The country code.
**Notes:** (Read and Write property)

### 144.9.4 LongVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The long version string.
**Notes:** (Read and Write property)

### 144.9.5 ShortVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The short version string.
**Notes:** (Read and Write property)

### 144.9.6 VersionMajor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The major version number.
**Notes:** (Read and Write property)

### 144.9.7 VersionMinor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The minor version number.
**Notes:** (Read and Write property)

### 144.9.8 VersionRevision as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The reversion number.
**Notes:** (Read and Write property)

### 144.9.9 VersionStage as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The version stage.
**Notes:** (Read and Write property)

## 144.10 class WindowsAddPrintJobMBS

### 144.10.1 class WindowsAddPrintJobMBS

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to send raw data to a printer.
**Example:**

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

**Notes:**

Perfect for printing postscript data to a postscript printer.
You can use this class in several ways:

1. OpenPrinter, AddJob, WriteJob and ScheduleJob.
2. OpenPrinter, StartDocPrinter, StartPagePrinter, WritePrinter, EndPagePrinter, EndDocPrinter and ClosePrinter.
3. OpenPrinter, StartDocPrinter, WritePrinter, EndDocPrinter and ClosePrinter.

### 144.10.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr1
- More on printing on Windows
- MBS Plugins 10.3 Release Notes

### 144.10.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr1
- More on printing on Windows
- MBS Plugins 10.3 Release Notes

### 144.10.4 Methods

### 144.10.5 AddJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new print job.
**Notes:** Returns true on success and false on failure.

### 144.10.6 ClosePrinter

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Closes printer connection.

### 144.10.7 EndDocPrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The EndDocPrinter function ends a print job for the specified printer.
**Notes:**

If the function succeeds, the return value is a true.

The EndDocPrinter function returns an error if the print job was not started by calling the StartDocPrinter function.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

### 144.10.8 EndPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The EndPagePrinter function notifies the print spooler that the application is at the end of a page in a print job.
**Notes:**

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

### 144.10.9 OpenPrinter(PrinterName as string) as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Opens the printer for printing.
**Notes:**

Returns true on success and false on failure.
PrinterName can be "" for the default printer.

### 144.10.10 ScheduleJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Schedules the printing.
**Notes:** Returns true on success and false on failure.

### 144.10.11 StartDocPrinter(DocName as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
**Example:**

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)
```

```
call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

**Notes:**

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 144.10.13 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean 22854

### 144.10.12 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
**Example:**

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

// output to a file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.ps")

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

**Notes:**

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 144.10.13 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean 22854

### 144.10.13 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
**Example:**

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if
```

```
const DocName = "My Document"

// output to a file
dim file as string = "C:\test.ps"

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

**Notes:**

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.
See also:

- 144.10.11 StartDocPrinter(DocName as string, Datatype as string) as boolean 22851
- 144.10.12 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean 22853

### 144.10.14 StartPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The StartPagePrinter function notifies the spooler that a page is about to be printed on the specified printer.
**Notes:**

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

### 144.10.15 WriteJob(data as string) as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Adds data to the spool file.
**Notes:**

You need to pass raw data for the printer, e.g. postscript data.
Returns the number of bytes written.
So lenb(data) should be equal to the result.

Only available between a call to AddJob and ScheduleJob.

### 144.10.16 WritePrinter(data as string) as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The WritePrinter function notifies the print spooler that data should be written to the specified printer.
**Notes:**

data: The data that should be written to the printer.

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a high-level document (such as an Adobe PDF or Microsoft Word file) or other printer data (such PCL, PS, or HPGL) is sent directly to a printer, the print settings defined in the document take precedent over Windows print settings.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

### 144.10.17 Properties

### 144.10.18 JobID as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The JobID of this print.
**Notes:**

For information only.

Maybe be useful for the user to find this print job later.
(Read and Write property)

### 144.10.19 JobPath as String

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The file name of the temporary file used.
**Notes:**

Just for information and only available between a call to AddJob and ScheduleJob.
(Read and Write property)

### 144.10.20 lastError as Integer

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Zero for no error.
-1 if the plugin has a problem like invalid parameter or called on Mac/Linux.
others are Windows error codes.
(Read and Write property)

### 144.10.21 lastErrorMessage as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The localized text message for LastError property.
**Notes:** (Read and Write property)

### 144.10.22 PrinterHandle as Integer

MBS Win Plugin, Plugin Version: 6.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The handle to the printer.
**Notes:** (Read and Write property)

### 144.10.23 Constants

### 144.10.24 kDataFormatRAW = "RAW"

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the data format constants.
**Notes:** Use this constant if you send to both local and networked printers that use GDI-based printer drivers.

### 144.10.25 kDataFormatXPS_PASS = "XPS_PASS"

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the data format constants.
**Notes:** Use this constant to send printer control data directly to printers that use XPSDrv printer drivers.

## 144.11 class WindowsDeviceModeMBS

### 144.11.1 class WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for device modue information for a Windows printer.
**Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Basicly this class wraps the Windows DEVMODE structure.

For more information on the DEVMODE structure, visit this website:
http://msdn.microsoft.com/en-us/library/dd183565(VS.85).aspx

### 144.11.7 Videos

- Presentation from Munich conference about MBS Plugins.

### 144.11.8 Methods

### 144.11.9 ApplyToSetupString(SetupString as String) as string

MBS Win Plugin, Plugin Version: 17.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Applies current device mode to the given setup string.
**Example:**

```
dim p as new PrinterSetup

if p.PageSetupDialog then

dim w as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(s)

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)

dim s as string = w.SetupString
dim t as string = w.ApplyToSetupString(s)

Break // check

end if
```

**Notes:**

The setup string contains a device mode and we replace the one from Xojo with our own.
The other information is kept the same.

### 144.11.10 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new empty device mode.
**Notes:** Size is set for you to default name of the data structure.

### 144.11.11 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new WindowsDeviceModeMBS object with given data.
**Notes:**

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 144.11.12 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS 22863

### 144.11.12 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new WindowsDeviceModeMBS object with given data.
**Notes:**

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 144.11.11 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS 22862

### 144.11.13 FromSetupString(SetupString as String) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Initialized DevMode object from setup string.
**Example:**

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// change printer
d.DeviceName = "Deskjet 2540 series# :2"
```

```
// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

**Notes:**

You can pass string from PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.

### 144.11.14 RawData(Unicode as boolean = true) as memoryblock

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Copies the raw data of the WindowsDeviceModeMBS class.
**Notes:**

Returns nil on any error.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.

### 144.11.15 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a setup string from devmode.
**Notes:**

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Please pass reasonable flags.
Check existing SetupStrings from Xojo for possible values.
Resolution parameters can e.g. bei 72.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 144.11.16 SetupString(Margin as Integer = 2500) as string 22865

### 144.11.16 SetupString(Margin as Integer = 2500) as string

MBS Win Plugin, Plugin Version: 14.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a setup string from devmode.
**Example:**

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)
```

```
// change printer
d.DeviceName = "Deskjet 2540 series# :2"

// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

**Notes:**

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 144.11.15 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string 22865

### 144.11.17 Properties

### 144.11.18 Collate as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies whether collation should be used when printing multiple copies.
**Notes:**

This member is ignored unless the printer driver indicates support for collation by setting the dmFields member to DM_COLLATE.
This member can be one of the following values:

| Value | Meaning |
|---|---|
| DMCOLLATE_TRUE | Collate when printing multiple copies. |
| DMCOLLATE_FALSE | Do not collate when printing multiple copies. |

(Read and Write property)

### 144.11.19 Color as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Switches between color and monochrome on color printers.
**Notes:**

The following are the possible values:
DMCOLOR_COLOR
DMCOLOR_MONOCHROME
(Read and Write property)

### 144.11.20 Copies as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Selects the number of copies printed if the device supports multiple-page copies.
**Example:**

```
dim w as WindowsDeviceModeMBS // your device mode object

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)
```

**Notes:** (Read and Write property)

### 144.11.21 Data as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The raw data pointer to the DEVMODEW structure.
**Notes:** (Read only property)

### 144.11.22 DefaultSource as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the paper source.
**Notes:**

Use the DMBIN_* constants.
(Read and Write property)

### 144.11.23 DeviceName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the "friendly" name of the printer or display; for example, "PCL/HP LaserJet" in the case of PCL/HP LaserJet.
**Notes:**

This string is unique among device drivers. Note that this name may be truncated to fit in the dmDeviceName field.
(Read and Write property)

### 144.11.24 DitherType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies how dithering is to be done.
**Notes:**

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMDITHER_USER.

| Value | Meaning |
|---|---|
| DMDITHER_NONE | No dithering. |
| DMDITHER_COARSE | Dithering with a coarse brush. |
| DMDITHER_FINE | Dithering with a fine brush. |
| DMDITHER_LINEART | Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs. |
| DMDITHER_GRAYSCALE | Device does gray scaling. |

(Read and Write property)

### 144.11.25 DriverExtra as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Contains the number of bytes of private driver-data that follow this structure. If a device driver does not use device-specific information, set this member to zero.
**Notes:** (Read and Write property)

### 144.11.26 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The driver version number assigned by the driver developer.
**Notes:** (Read and Write property)

### 144.11.27 Duplex as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Selects duplex or double-sided printing for printers capable of duplex printing.
**Notes:**

Following are the possible values.

| Value | Meaning |
|---|---|
| DMDUP_SIMPLEX | Normal (nonduplex) printing. |
| DMDUP_HORIZONTAL | Short-edge binding, that is, the long edge of the page is horizontal. |
| DMDUP_VERTICAL | Long-edge binding, that is, the long edge of the page is vertical. |

(Read and Write property)

### 144.11.28 Fields as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies whether certain properties have been initialized.
**Notes:**

If a property is initialized, its corresponding bit is set, otherwise the bit is clear. A driver supports only those properties that are appropriate for the printer or display technology.

Use the DM_* constants which match by name their property. So the DM_ORIENTATION bit value is related to the Orientation property.
(Read and Write property)

### 144.11.29 FormName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string array that specifies the name of the form to use; for example, "Letter" or "Legal".
**Notes:**

A complete set of names can be retrieved by using the GetPrinterFormats function on the WindowsPrinterListMBS class.
(Read and Write property)

### 144.11.30 ICMIntent as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies which color matching method, or intent, should be used by default.
**Notes:**

This member is primarily for non-ICM applications. ICM applications can establish intents by using the ICM functions. This member can be one of the following predefined values, or a driver defined value greater than or equal to the value of DMICM_USER.

(Read and Write property)

| Value | Meaning |
|---|---|
| DMICM_ABS_COLORIMETRIC | Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing. |
| DMICM_COLORIMETRIC | Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired. |
| DMICM_CONTRAST | Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired. |
| DMICM_SATURATE | Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired. |

### 144.11.31 ICMMethod as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies how ICM is handled.
**Notes:**

For a non-ICM application, this member determines if ICM is enabled or disabled. For ICM applications, the system examines this member to determine how to handle ICM support. This member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMICMMETHOD_USER.

| Value | Meaning |
|---|---|
| DMICMMETHOD_NONE | Specifies that ICM is disabled. |
| DMICMMETHOD_SYSTEM | Specifies that ICM is handled by Windows. |
| DMICMMETHOD_DRIVER | Specifies that ICM is handled by the device driver. |
| DMICMMETHOD_DEVICE | Specifies that ICM is handled by the destination device. |

The printer driver must provide a user interface for setting this member. Most printer drivers support only the DMICMMETHOD_SYSTEM or DMICMMETHOD_NONE value. Drivers for PostScript printers support all values.
(Read and Write property)

### 144.11.32 LogPixels as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of pixels per logical inch.
**Notes:**

Printer drivers do not use this member.
(Read and Write property)

### 144.11.33 MediaType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the type of media being printed on.
**Notes:**

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMMEDIA_USER.

| Value | Meaning |
|---|---|
| DMMEDIA_STANDARD | Plain paper. |
| DMMEDIA_GLOSSY | Glossy paper. |
| DMMEDIA_TRANSPARENCY | Transparent film. |

(Read and Write property)

### 144.11.34 Nup as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies where the NUP is done.
**Notes:**

It can be one of the following.

| Value | Meaning |
|---|---|
| DMNUP_SYSTEM | The print spooler does the NUP. |
| DMNUP_ONEUP | The application does the NUP. |

(Read and Write property)

### 144.11.35 Orientation as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printer devices only, selects the orientation of the paper.
**Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
```

```
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

This member can be either DMORIENT_PORTRAIT (1) or DMORIENT_LANDSCAPE (2).
(Read and Write property)

### 144.11.36 PaperLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printer devices only, overrides the length of the paper specified by the PaperSize member, either for custom paper sizes or for devices such as dot-matrix printers that can print on a page of arbitrary length.
**Notes:**

These values, along with all other values in this structure that specify a physical length, are in tenths of a millimeter.
(Read and Write property)

### 144.11.37 PaperSize as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printer devices only, selects the size of the paper to print on.
**Notes:**

This member can be set to zero if the length and width of the paper are both set by the PaperLength and PaperWidth members. Otherwise, the PaperSize member can be set to a device specific value greater than or equal to DMPAPER_USER or to one of the following predefined values with DMPAPER_* constants.
(Read and Write property)

### 144.11.38 PaperWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printer devices only, overrides the width of the paper specified by the PaperSize member.
**Notes:**

Unit is tenths of a millimeter.
(Read and Write property)

### 144.11.39 PrintQuality as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the printer resolution.
**Notes:**

There are four predefined device-independent values:

DMRES_HIGH
DMRES_MEDIUM
DMRES_LOW
DMRES_DRAFT

If a positive value is specified, it specifies the number of dots per inch (DPI) and is therefore device dependent.
(Read and Write property)

### 144.11.40 Scale as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the factor by which the printed output is to be scaled.
**Notes:**

The apparent page size is scaled from the physical page size by a factor of Scale /100. For example, a letter-sized page with a dmScale value of 50 would contain as much data as a page of 17- by 22-inches because the output text and graphics would be half their original height and width.
(Read and Write property)

### 144.11.41 Size as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the size, in bytes, of the DEVMODE structure, not including any private driver-specific data that might follow the structure's public members.
**Notes:**

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

### 144.11.42 SpecVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The version number of the initialization data specification on which the structure is based.
**Notes:**

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

### 144.11.43 TTOption as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies how TrueType fonts should be printed.
**Notes:**

This member can be one of the following values:

| Value | Meaning |
|---|---|
| DMTT_BITMAP | Prints TrueType fonts as graphics. This is the default action for dot-matrix printers. |
| DMTT_DOWNLOAD | Downloads TrueType fonts as soft fonts. This is the default action for Hewlett-Packard printers that use Printer Control Language (PCL). |
| DMTT_DOWNLOAD_OUTLINE | Downloads TrueType fonts as outline soft fonts. |
| DMTT_SUBDEV | Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers. |

(Read and Write property)

### 144.11.44 YResolution as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the y-resolution, in dots per inch, of the printer.
**Notes:**

If the printer initializes this member, the PrintQuality member specifies the x-resolution, in dots per inch, of the printer.
(Read and Write property)

### 144.11.45 Constants

### 144.11.46 DMBIN_AUTO = 7

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Auto

### 144.11.47 DMBIN_CASSETTE = 14

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Cassette

### 144.11.48 DMBIN_ENVELOPE = 5

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Envelope

### 144.11.49 DMBIN_ENVMANUAL = 6

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Envelope Manual.

### 144.11.50 DMBIN_FORMSOURCE = 15

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Form Source.

### 144.11.51 DMBIN_LARGECAPACITY = 11

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Large Capacity

### 144.11.52 DMBIN_LARGEFMT = 10

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Large Format

### 144.11.53 DMBIN_LOWER = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Lower

### 144.11.54 DMBIN_MANUAL = 4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Manual

### 144.11.55 DMBIN_MIDDLE = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Middle

### 144.11.56 DMBIN_ONLYONE = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Only One.

### 144.11.57 DMBIN_SMALLFMT = 9

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Small Format

### 144.11.58 DMBIN_TRACTOR = 8

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Tractor

### 144.11.59 DMBIN_UPPER = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** Upper

### 144.11.60 DMBIN_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the source bin constants.
**Notes:** User

### 144.11.61 DMCOLLATE_FALSE = 0

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the collate mode constants.
**Notes:** Do not collate when printing multiple copies.

### 144.11.62 DMCOLLATE_TRUE = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the collate mode constants.
**Notes:** Collate when printing multiple copies.

### 144.11.63 DMCOLOR_COLOR = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the color mode constants.
**Notes:** Color

### 144.11.64 DMCOLOR_MONOCHROME = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the color mode constants.
**Notes:** Monochrome.

### 144.11.65 DMDITHER_COARSE = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.
**Notes:** Dithering with a coarse brush.

### 144.11.66 DMDITHER_ERRORDIFFUSION = 5

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.67 DMDITHER_FINE = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.
**Notes:** Dithering with a fine brush.

### 144.11.68 DMDITHER_GRAYSCALE = 10

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.
**Notes:** Device does gray scaling.

### 144.11.69 DMDITHER_LINEART = 4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.
**Notes:** Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.

### 144.11.70 DMDITHER_NONE = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.
**Notes:** No dithering.

### 144.11.71 DMDITHER_RESERVED6 = 6

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.72 DMDITHER_RESERVED7 = 7

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.73 DMDITHER_RESERVED8 = 8

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.74 DMDITHER_RESERVED9 = 9

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.75 DMDITHER_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the dither constants.

### 144.11.76 DMDUP_HORIZONTAL = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the duplex mode constants.
**Notes:** Horizontal duplex.

### 144.11.77 DMDUP_SIMPLEX = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the duplex mode constants.
**Notes:** No duplex = simplex.

### 144.11.78 DMDUP_VERTICAL = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the duplex mode constants.
**Notes:** Vertical duplex.

### 144.11.79 DMICMMETHOD_DEVICE = 4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM method constants.
**Notes:** Specifies that ICM is handled by the destination device.

### 144.11.80 DMICMMETHOD_DRIVER = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM method constants.
**Notes:** Specifies that ICM is handled by the device driver.

### 144.11.81 DMICMMETHOD_NONE = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM method constants.
**Notes:** Specifies that ICM is disabled.

### 144.11.82 DMICMMETHOD_SYSTEM = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM method constants.
**Notes:** Specifies that ICM is handled by Windows.

### 144.11.83 DMICMMETHOD_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM method constants.

### 144.11.84 DMICM_ABS_COLORIMETRIC = 4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM intent constants.
**Notes:** Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.

### 144.11.85 DMICM_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM intent constants.
**Notes:** Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.

### 144.11.86 DMICM_CONTRAST = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM intent constants.
**Notes:** Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.

### 144.11.87 DMICM_SATURATE = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM intent constants.
**Notes:** Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

### 144.11.88 DMICM_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the ICM intent constants.

### 144.11.89 DMMEDIA_GLOSSY = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the media type constants.
**Notes:** Glossy paper.

### 144.11.90 DMMEDIA_STANDARD = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the media type constants.
**Notes:** Plain paper.

### 144.11.91 DMMEDIA_TRANSPARENCY = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the media type constants.
**Notes:** Transparent film.

### 144.11.92 DMMEDIA_USER = 256

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the media type constants.

### 144.11.93 DMNUP_ONEUP = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the NUP constants.
**Notes:** The application does the NUP.

### 144.11.94 DMNUP_SYSTEM = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the NUP constants.
**Notes:** The print spooler does the NUP.

### 144.11.95 DMORIENT_LANDSCAPE = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the orientation constants.
**Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_LANDSCAPE

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** Landscape mode.

### 144.11.96 DMORIENT_PORTRAIT = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the orientation constants.
**Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
```

```
MsgBox "Failed"
end if
```

**Notes:** Portrait mode.

### 144.11.97 DMPAPER_10x11 = 45

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 10- by 11-inch sheet

### 144.11.98 DMPAPER_10x14 = 16

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 10- by 14-inch sheet

### 144.11.99 DMPAPER_11X17 = 17

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 11- by 17-inch sheet

### 144.11.100 DMPAPER_12X11 = 90

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 12- by 11-inch sheet

### 144.11.101 DMPAPER_15X11 = 46

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 15- by 11-inch sheet

### 144.11.102 DMPAPER_9X11 = 44

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 9- by 11-inch sheet

### 144.11.103 DMPAPER_A2 = 66

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A2 sheet, 420 x 594-millimeters

### 144.11.104 DMPAPER_A3 = 8

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A3 sheet, 297- by 420-millimeters

### 144.11.105 DMPAPER_A3_EXTRA = 63

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A3 Extra 322 x 445-millimeters

### 144.11.106 DMPAPER_A3_EXTRA_TRANSVERSE = 68

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A3 Extra Transverse 322 x 445-millimeters

### 144.11.107 DMPAPER_A3_ROTATED = 76

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A3 rotated sheet, 420- by 297-millimeters

### 144.11.108 DMPAPER_A3_TRANSVERSE = 67

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A3 Transverse 297 x 420-millimeters

### 144.11.109 DMPAPER_A4 = 9

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 sheet, 210- by 297-millimeters

### 144.11.110 DMPAPER_A4_EXTRA = 53

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 sheet, 9.27 x 12.69 inches

### 144.11.111 DMPAPER_A4_PLUS = 60

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 Plus 210 x 330-millimeters

### 144.11.112 DMPAPER_A4_ROTATED = 77

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 rotated sheet, 297- by 210-millimeters

### 144.11.113 DMPAPER_A4_SMALL = 10

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 small sheet, 210- by 297-millimeters

### 144.11.114 DMPAPER_A4_TRANSVERSE = 55

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A4 Transverse 210 x 297 millimeters

### 144.11.115 DMPAPER_A5 = 11

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A5 sheet, 148- by 210-millimeters

### 144.11.116 DMPAPER_A5_EXTRA = 64

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A5 Extra 174 x 235-millimeters

### 144.11.117 DMPAPER_A5_ROTATED = 78

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A5 rotated sheet, 210- by 148-millimeters

### 144.11.118 DMPAPER_A5_TRANSVERSE = 61

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A5 Transverse 148 x 210-millimeters

### 144.11.119 DMPAPER_A6 = 70

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A6 sheet, 105- by 148-millimeters

### 144.11.120 DMPAPER_A6_ROTATED = 83

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** A6 rotated sheet, 148- by 105-millimeters

### 144.11.121 DMPAPER_A_PLUS = 57

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** SuperA/A4 227 x 356 -millimeters

### 144.11.122 DMPAPER_B4 = 12

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B4 sheet, 250- by 354-millimeters

### 144.11.123 DMPAPER_B4_JIS_ROTATED = 79

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B4 (JIS) rotated sheet, 364- by 257-millimeters

### 144.11.124 DMPAPER_B5 = 13

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B5 sheet, 182- by 257-millimeter paper

### 144.11.125 DMPAPER_B5_EXTRA = 65

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B5 (ISO) Extra 201 x 276-millimeters

### 144.11.126 DMPAPER_B5_JIS_ROTATED = 80

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B5 (JIS) rotated sheet, 257- by 182-millimeters

### 144.11.127 DMPAPER_B5_TRANSVERSE = 62

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.128 DMPAPER_B6_JIS = 88

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B6 (JIS) sheet, 128- by 182-millimeters

### 144.11.129 DMPAPER_B6_JIS_ROTATED = 89

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B6 (JIS) rotated sheet, 182- by 128-millimeters

### 144.11.130 DMPAPER_B_PLUS = 58

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** SuperB/A3 305 x 487-millimeters

### 144.11.131 DMPAPER_CSHEET = 24

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C Sheet, 17- by 22-inches

### 144.11.132 DMPAPER_DBL_JAPANESE_POSTCARD = 69

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Double Japanese Postcard, 200- by 148-millimeters

### 144.11.133 DMPAPER_DBL_JAPANESE_POSTCARD_ROTATED = 82

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Double Japanese Postcard Rotated, 148- by 200-millimeters

### 144.11.134 DMPAPER_DSHEET = 25

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** D Sheet, 22- by 34-inches

### 144.11.135 DMPAPER_ENV_10 = 20

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.136 DMPAPER_ENV_11 = 21

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.137 DMPAPER_ENV_12 = 22

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.138 DMPAPER_ENV_14 = 23

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.139 DMPAPER_ENV_9 = 19

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.140 DMPAPER_ENV_B4 = 33

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B4 Envelope, 250- by 353-millimeters

### 144.11.141 DMPAPER_ENV_B5 = 34

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B5 Envelope, 176- by 250-millimeters

### 144.11.142 DMPAPER_ENV_B6 = 35

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** B6 Envelope, 176- by 125-millimeters

### 144.11.143 DMPAPER_ENV_C3 = 29

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C3 Envelope, 324- by 458-millimeters

### 144.11.144 DMPAPER_ENV_C4 = 30

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C4 Envelope, 229- by 324-millimeters

### 144.11.145 DMPAPER_ENV_C5 = 28

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C5 Envelope, 162- by 229-millimeters

### 144.11.146 DMPAPER_ENV_C6 = 31

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C6 Envelope, 114- by 162-millimeters

### 144.11.147 DMPAPER_ENV_C65 = 32

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** C65 Envelope, 114- by 229-millimeters

### 144.11.148 DMPAPER_ENV_DL = 27

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** DL Envelope, 110- by 220-millimeters

### 144.11.149 DMPAPER_ENV_INVITE = 47

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Envelope Invite 220 x 220 mm

### 144.11.150 DMPAPER_ENV_ITALY = 36

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Italy Envelope, 110- by 230-millimeters

### 144.11.151 DMPAPER_ENV_MONARCH = 37

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Monarch Envelope, 3 7/8- by 7 1/2-inches

### 144.11.152 DMPAPER_ENV_PERSONAL = 38

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** 6 3/4 Envelope, 3 5/8- by 6 1/2-inches

### 144.11.153 DMPAPER_ESHEET = 26

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** E Sheet, 34- by 44-inches

### 144.11.154 DMPAPER_EXECUTIVE = 7

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Executive, 7 1/4- by 10 1/2-inches

### 144.11.155 DMPAPER_FANFOLD_LGL_GERMAN = 41

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 10, 324- by 458-millimeters

### 144.11.191 DMPAPER_PENV_10_ROTATED = 118

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 10 Rotated, 458- by 324-millimeters

### 144.11.192 DMPAPER_PENV_1_ROTATED = 109

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 1 Rotated, 165- by 102-millimeters

### 144.11.193 DMPAPER_PENV_2 = 97

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 2, 102- by 176-millimeters

### 144.11.194 DMPAPER_PENV_2_ROTATED = 110

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 2 Rotated, 176- by 102-millimeters

### 144.11.195 DMPAPER_PENV_3 = 98

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 3, 125- by 176-millimeters

### 144.11.196 DMPAPER_PENV_3_ROTATED = 111

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 3 Rotated, 176- by 125-millimeters

### 144.11.197 DMPAPER_PENV_4 = 99

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 4, 110- by 208-millimeters

### 144.11.198 DMPAPER_PENV_4_ROTATED = 112

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 4 Rotated, 208- by 110-millimeters

### 144.11.199 DMPAPER_PENV_5 = 100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 5, 110- by 220-millimeters

### 144.11.200 DMPAPER_PENV_5_ROTATED = 113

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 5 Rotated, 220- by 110-millimeters

### 144.11.201 DMPAPER_PENV_6 = 101

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 6, 120- by 230-millimeters

### 144.11.202 DMPAPER_PENV_6_ROTATED = 114

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 6 Rotated, 230- by 120-millimeters

### 144.11.203 DMPAPER_PENV_7 = 102

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 7, 160- by 230-millimeters

### 144.11.204 DMPAPER_PENV_7_ROTATED = 115

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 7 Rotated, 230- by 160-millimeters

### 144.11.205 DMPAPER_PENV_8 = 103

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 8, 120- by 309-millimeters

### 144.11.206 DMPAPER_PENV_8_ROTATED = 116

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 8 Rotated, 309- by 120-millimeters

### 144.11.207 DMPAPER_PENV_9 = 104

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 9, 229- by 324-millimeters

### 144.11.208 DMPAPER_PENV_9_ROTATED = 117

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** PRC Envelope # 9 Rotated, 324- by 229-millimeters

### 144.11.209 DMPAPER_QUARTO = 15

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Quarto, 215- by 275-millimeter paper

### 144.11.210 DMPAPER_RESERVED_48 = 48

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.211 DMPAPER_RESERVED_49 = 49

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.

### 144.11.212 DMPAPER_STATEMENT = 6

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Statement, 5 1/2- by 8 1/2-inches

### 144.11.213 DMPAPER_TABLOID = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Tabloid, 11- by 17-inches

### 144.11.214 DMPAPER_TABLOID_EXTRA = 52

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the paper format constants.
**Notes:** Tabloid, 11.69 x 18-inches

### 144.11.215 DMPAPER_USER = 256

MBS Win Plugin, Plugin Version: 11.3.

**Function:** One of the paper format constants.
**Notes:**

user defined size.
Set PaperWidth and PaperLength fields.
Use all flags DM_PAPERLENGTH, DM_PAPERWIDTH and DM_PAPERSIZE combined for Fields prop-

erty.

### 144.11.216 DMRES_DRAFT = -1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the print quality constants.
**Notes:** Draft

### 144.11.217 DMRES_HIGH = -4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the print quality constants.
**Notes:** High

### 144.11.218 DMRES_LOW = -2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the print quality constants.
**Notes:** Low

### 144.11.219 DMRES_MEDIUM = -3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the print quality constants.
**Notes:** Medium

### 144.11.220 DMTT_BITMAP = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the true type option mode constants.
**Notes:** Prints TrueType fonts as graphics. This is the default action for dot-matrix printers.

### 144.11.221 DMTT_DOWNLOAD = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the true type option mode constants.
**Notes:** Downloads TrueType fonts as soft fonts. This is the default action for Hewlett-Packard printers that use Printer Control Language (PCL).

### 144.11.222 DMTT_DOWNLOAD_OUTLINE = 4

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the true type option mode constants.
**Notes:** Downloads TrueType fonts as outline soft fonts.

### 144.11.223 DMTT_SUBDEV = 3

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the true type option mode constants.
**Notes:** Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers.

### 144.11.224 DM_BITSPERPEL = & h00040000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the BitsperPel property.

### 144.11.225 DM_COLLATE = & h00008000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Collate property.

### 144.11.226 DM_COLOR = & h00000800

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Color property.

### 144.11.227 DM_COPIES = & h00000100

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Copies property.

### 144.11.228 DM_DEFAULTSOURCE = & h00000200

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the DefaultSource property.

### 144.11.229 DM_DISPLAYFLAGS = & h00200000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the DisplayFlags property.

### 144.11.230 DM_DISPLAYFREQUENCY = & h00400000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the DisplayFrequency property.

### 144.11.231 DM_DITHERTYPE = & h04000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the DitherType property.

### 144.11.232 DM_DUPLEX = & h00001000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Duplex property.

### 144.11.233 DM_FORMNAME = & h00010000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Formname property.

### 144.11.234 DM_ICMINTENT = & h01000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the ICMIntent property.

### 144.11.235 DM_ICMMETHOD = & h00800000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the ICMMethod property.

### 144.11.236 DM_LOGPIXELS = & h00020000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the LogPixels property.

### 144.11.237 DM_MEDIATYPE = & h02000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the MediaType property.

### 144.11.238 DM_NUP = & h00000040

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the NUP property.

### 144.11.239 DM_ORIENTATION = & h00000001

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** This value is related to the Orientation property.

### 144.11.240 DM_PANNINGHEIGHT = & h10000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Panningheight property.

### 144.11.241 DM_PANNINGWIDTH = & h08000000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Panningwidth property.

### 144.11.242 DM_PAPERLENGTH = & h00000004

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Paperlength property.

### 144.11.243 DM_PAPERSIZE = & h00000002

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Papersize property.

### 144.11.244 DM_PAPERWIDTH = & h00000008

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Paperwidth property.

### 144.11.245 DM_PELSHEIGHT = & h00100000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Pelsheight property.

### 144.11.246 DM_PELSWIDTH = & h00080000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Pelswidth property.

### 144.11.247 DM_POSITION = & h00000020

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Position property.

### 144.11.248 DM_PRINTQUALITY = & h00000400

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the PrintQuality property.

### 144.11.249 DM_SCALE = & h00000010

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the Scale property.

### 144.11.250 DM_TTOPTION = & h00004000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the TTOption property.

### 144.11.251 DM_YRESOLUTION = & h00002000

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants to use with the fields property.
**Notes:** This value is related to the YResolution property.

## 144.12 class WindowsGraphicsInfoMBS

### 144.12.1 class WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** This class gives information for Windows Device contexts.
**Example:**

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox _
"Printer physical page size: "+str(info.PhysicalWidth)+" "+str(info.PhysicalHeight)+_
EndOfLine+_
"Useable paper size: "+str(info.ResolutionX)+ " x "+str(info.ResolutionY)+_
EndOfLine+_
"Paper size: "+str(info.SizeX)+" x "+str(info.Sizey)+" mm"
```

**Notes:** Main use currently is to learn about native resolution of a printer graphics object.

### 144.12.6 Methods

### 144.12.7 Constructor

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Initializes properties for main screen.
See also:

- 144.12.8 Constructor(c as control) 22916
- 144.12.9 Constructor(c as DesktopControl) 22917
- 144.12.10 Constructor(g as graphics) 22917
- 144.12.11 Constructor(p as Picture) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918
- 144.12.13 Constructor(w as window) 22918

### 144.12.8 Constructor(c as control)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this control object.
See also:

- 144.12.7 Constructor 22916
- 144.12.9 Constructor(c as DesktopControl) 22917
- 144.12.10 Constructor(g as graphics) 22917
- 144.12.11 Constructor(p as Picture) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918
- 144.12.13 Constructor(w as window) 22918

### 144.12.9 Constructor(c as DesktopControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this control object.
See also:

- 144.12.7 Constructor 22916
- 144.12.8 Constructor(c as control) 22916

- 144.12.11 Constructor(p as Picture) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918
- 144.12.13 Constructor(w as window) 22918

### 144.12.10 Constructor(g as graphics)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this graphics object.
See also:

- 144.12.7 Constructor 22916
- 144.12.8 Constructor(c as control) 22916
- 144.12.9 Constructor(c as DesktopControl) 22917
- 144.12.11 Constructor(p as Picture) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918
- 144.12.13 Constructor(w as window) 22918

### 144.12.11 Constructor(p as Picture)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this picture object.
See also:

- 144.12.7 Constructor 22916
- 144.12.8 Constructor(c as control) 22916
- 144.12.9 Constructor(c as DesktopControl) 22917

- 144.12.10 Constructor(g as graphics) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918
- 144.12.13 Constructor(w as window) 22918

### 144.12.12 Constructor(w as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this window object.
See also:

- 144.12.7 Constructor 22916
- 144.12.8 Constructor(c as control) 22916
- 144.12.9 Constructor(c as DesktopControl) 22917

- 144.12.11 Constructor(p as Picture) 22917
- 144.12.13 Constructor(w as window) 22918

### 144.12.13 Constructor(w as window)

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop only.

**Function:** Initializes properties for this window object.
See also:

- 144.12.7 Constructor 22916
- 144.12.8 Constructor(c as control) 22916
- 144.12.9 Constructor(c as DesktopControl) 22917
- 144.12.10 Constructor(g as graphics) 22917
- 144.12.11 Constructor(p as Picture) 22917
- 144.12.12 Constructor(w as DesktopWindow) 22918

### 144.12.14 Properties

### 144.12.15 AspectX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Relative width of a device pixel used for line drawing.
**Notes:** (Read and Write property)

### 144.12.16 AspectXY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Diagonal width of the device pixel used for line drawing.
**Notes:** (Read and Write property)

### 144.12.17 AspectY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Relative height of a device pixel used for line drawing.
**Notes:** (Read and Write property)

### 144.12.18 BitsPerPixel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of adjacent color bits for each pixel.
**Example:**

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Color Depth: "+str(info.BitsPerPixel)
```

**Notes:**

As example gives a display device context, the bits per pixel is the screen depth.
(Read and Write property)

### 144.12.19 BrushesCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of device-specific brushes.
**Notes:** (Read and Write property)

### 144.12.20 ColorCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of entries in the device's color table, if the device has a color depth of no more than 8 bits per pixel.
**Notes:**

For devices with greater color depths, 1 is returned.
(Read and Write property)

### 144.12.21 DesktopResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Horizontal width of entire desktop in pixels.
**Example:**

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

**Notes:** (Read and Write property)

### 144.12.22 DesktopResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Vertical height of entire desktop in pixels.
**Example:**

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

**Notes:** (Read and Write property)

### 144.12.23 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device driver version.
**Notes:** (Read and Write property)

### 144.12.24 FontCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of device-specific fonts.
**Notes:** (Read and Write property)

### 144.12.25 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of pixels per logical inch along the screen width.
**Example:**

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

**Notes:**

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

### 144.12.26 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of pixels per logical inch along the screen height.
**Example:**

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

**Notes:**

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

### 144.12.27 MakersCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of markers the device has.
**Notes:** (Read and Write property)

### 144.12.28 PenCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of device-specific pens.
**Notes:** (Read and Write property)

### 144.12.29 PhysicalHeight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printing devices: the height of the physical page, in device units.
**Notes:**

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper has a physical height value of 6600 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

### 144.12.30 PhysicalOffsetX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printing devices: the distance from the left edge of the physical page to the left edge of the printable area, in device units.
**Notes:**

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the leftmost 0.25-inch of paper, has a horizontal physical offset of 150 device units.
(Read and Write property)

### 144.12.31 PhysicalOffsetY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printing devices: the distance from the top edge of the physical page to the top edge of the printable area, in device units.
**Notes:**

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the topmost 0.5-inch of paper, has a vertical physical offset of 300 device units.
(Read and Write property)

### 144.12.32 PhysicalWidth as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For printing devices: the width of the physical page, in device units.
**Notes:**

For example, a printer set to print at 600 dpi on 8.5-x11-inch paper has a physical width value of 5100 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

### 144.12.33 Planes as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Number of color planes.
**Notes:** (Read and Write property)

### 144.12.34 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Width, in pixels, of the screen; or for printers, the width, in pixels, of the printable area of the page.
**Notes:** (Read and Write property)

### 144.12.35 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Height, in raster lines, of the screen; or for printers, the height, in pixels, of the printable area of the page.
**Notes:** (Read and Write property)

### 144.12.36 ScalingFactorX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Scaling factor for the x-axis of the printer.
**Notes:** (Read and Write property)

### 144.12.37 ScalingFactorY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Scaling factor for the y-axis of the printer.
**Notes:** (Read and Write property)

### 144.12.38 SizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Width, in millimeters, of the physical screen.
**Notes:** (Read and Write property)

### 144.12.39 SizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Height, in millimeters, of the physical screen.
**Notes:** (Read and Write property)

### 144.12.40 Technology as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Device technology. It can be any one of the kTechnology* constants.
**Notes:** (Read and Write property)

### 144.12.41 VRefresh as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** For display devices: the current vertical refresh rate of the device, in cycles per second (Hz).
**Notes:** (Read and Write property)

### 144.12.42 Constants

### 144.12.43 kTechnologyCharStream = 4

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Character stream

### 144.12.44 kTechnologyDisplayFile = 6

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Display file

### 144.12.45 kTechnologyMetaFile = 5

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Metafile

### 144.12.46 kTechnologyPlotter = 0

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Vector plotter

### 144.12.47 kTechnologyRasterCamera = 3

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Raster camera

### 144.12.48 kTechnologyRasterDisplay = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Raster display

### 144.12.49 kTechnologyRasterPrinter = 2

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the technology constants.
**Notes:** Raster printer

# 144.13 class WindowsPageFormatMBS

## 144.13.1 class WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for a page format.
**Example:**

```
// change the printer name to your printer's name
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim formats(-1) as WindowsPageFormatMBS = w.GetPrinterFormats

for each p as WindowsPageFormatMBS in formats
MsgBox p.Name
next
```

**Notes:**

This class wraps the FORM_INFO_1 structure. You can find more information here:
http://msdn.microsoft.com/en-us/library/dd144836(v=VS.85).aspx

## 144.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

## 144.13.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

## 144.13.4 Properties

## 144.13.5 DisplayName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The form's display name in the language specified by LangId.
**Notes:**

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.6 Flags as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The flags for this page format.
**Notes:**

The following values are defined.

| Value | Meaning |
|---|---|
| FORM_USER | If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry. |
| FORM_BUILTIN | If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry. |
| FORM_PRINTER | If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry. |

(Read and Write property)

### 144.13.7 ImageableAreaBottom as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.8 ImageableAreaHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.9 ImageableAreaLeft as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.10 ImageableAreaRight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.11 ImageableAreaTop as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.12 ImageableAreaWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The imageable area, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.13 Keyword as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A non-localizable string identifier of the form.
**Notes:**

When passed to AddForm or SetForm, this gives the caller a means of identifying the form in all locales.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.14 LangId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The language of the DisplayName.
**Notes:**

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.15 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The mode.
**Notes:**

Value can be 1 (Windows 2000 and newer) or 2 (Windows Vista and newer).
(Read and Write property)

### 144.13.16 MuiDll as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The Multilingual User Interface localized resource DLL that contains the localized display name.
**Notes:**

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.17 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the form.
**Notes:** (Read and Write property)

### 144.13.18 ResourceId as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The resource ID of the form's display name in MuiDll.
**Notes:**

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.19 SizeHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The height, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.20 SizeWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The width, in thousandths of millimeters, of the form.
**Notes:** (Read and Write property)

### 144.13.21 StringType as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies how a localized display name for the form is obtained at runtime.
**Notes:**

The following values are defined. Only one can be set in any given call to AddForm or SetForm. Both STRING_MUIDLL and STRING_LANGPAIR can be set in the WindowsPageFormatMBS (s) returned by GetForm or GetPrinterFormats.

Can be STRING_LANGPAIR, STRING_MUIDLL or STRING_NONE.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

### 144.13.22 Constants

### 144.13.23 FORM_BUILTIN = 1

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants.
**Notes:** If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.

### 144.13.24 FORM_PRINTER = 2

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants.
**Notes:** If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

### 144.13.25 FORM_USER = 0

MBS Win Plugin, Plugin Version: 10.4.

**Function:** One of the flag constants.
**Notes:** If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.

### 144.13.26 STRING_LANGPAIR = 4

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the StringType property.
**Notes:** The display name and language ID are provided directly by DisplayName and the language is specified by LangId.

### 144.13.27 STRING_MUIDLL = 2

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the StringType property.
**Notes:** The display name is extracted from the Multilingual User Interface localized resources DLL specified in MuiDll. The ID is in the ResourceId member.

### 144.13.28 STRING_NONE = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the StringType property.
**Notes:** There is no localized display name.

## 144.14 class WindowsPageSetupDialogMBS

### 144.14.1 class WindowsPageSetupDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The class to run the Windows Page Setup dialog.

### 144.14.2 Blog Entries

- MBS Xojo Plugins, version 21.6pr3
- MBS Real Studio Plugins, version 12.1pr7

### 144.14.3 Blog Entries

- MBS Xojo Plugins, version 21.6pr3
- MBS Real Studio Plugins, version 12.1pr7

### 144.14.4 Methods

### 144.14.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 144.14.6 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries the strings that identify the driver, device, and output port names for a printer.
**Notes:**

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning

message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

### 144.14.7 PageSetupDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Creates a Page Setup dialog box that enables the user to specify the attributes of a printed page.
**Notes:**

These attributes include the paper size and source, the page orientation (portrait or landscape), and the width of the page margins.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.
If the user cancels or closes the Page Setup dialog box or an error occurs, the return value is false. To get extended error information, use the lasterror property.

Starting with Windows Vista, the PageSetupDialog does not contain the Printer button. To switch printer selection other functions.

### 144.14.8 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Sets the strings that identify the driver, device, and output port names for a printer.
**Notes:**

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for

the Print property sheet or Print dialog box.

### 144.14.9 Properties

### 144.14.10 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The device mode object.
**Notes:**

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

### 144.14.11 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** A set of bit flags that you can use to initialize the Page Setup dialog box.
**Notes:**

When the dialog box returns, it sets these flags to indicate the user's input.
See the PSD_* constants for possible values.
(Read and Write property)

### 144.14.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 144.14.13 MarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The widths of the bottom margin.
**Notes:**

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg

returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

### 144.14.14 MarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The widths of the left margin.
**Notes:**

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

### 144.14.15 MarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The widths of the right margin.
**Notes:**

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

### 144.14.16 MarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The widths of the top margin.
**Notes:**

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

### 144.14.17 MinMarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The minimum allowable widths for the bottom margin.
**Notes:**

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.18 MinMarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The minimum allowable widths for the left margin.
**Notes:**

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.19 MinMarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The minimum allowable widths for the right margin.
**Notes:**

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.20 MinMarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The minimum allowable widths for the top margin.
**Notes:**

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES

or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.21 PaperSizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The dimensions of the paper selected by the user.
**Notes:**

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.22 PaperSizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The dimensions of the paper selected by the user.
**Notes:**

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

### 144.14.23 Parent as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The window that owns the dialog box.
**Notes:**

This member can be any valid window, or it can be nil if the dialog box has no owner.
Can reference a Window or DesktopWindow object.
(Read and Write property)

### 144.14.24 Constants

### 144.14.25 DN_DEFAULTPRN = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** The flag for default printer on the SetDevNames/GetDevNames flag parameter.

### 144.14.26 PSD_DEFAULTMINMARGINS = & h00000000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Sets the minimum values that the user can specify for the page margins to be the minimum margins allowed by the printer. This is the default. This flag is ignored if the PSD_MARGINS and PSD_MINMARGINS flags are also specified.

### 144.14.27 PSD_DISABLEMARGINS = & h00000010

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Disables the margin controls, preventing the user from setting the margins.

### 144.14.28 PSD_DISABLEORIENTATION = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Disables the orientation controls, preventing the user from setting the page orientation.

### 144.14.29 PSD_DISABLEPAPER = & h00000200

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Disables the paper controls, preventing the user from setting page parameters such as the paper size and source.

### 144.14.30 PSD_DISABLEPRINTER = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:**

Obsolete.
Windows XP/2000: Disables the Printer button, preventing the user from invoking a dialog box that contains additional printer setup information.

### 144.14.31 PSD_INHUNDREDTHSOFMILLIMETERS = & h00000008

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Indicates that hundredths of millimeters are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in hundredths of millimeters. You can set this flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

### 144.14.32 PSD_INTHOUSANDTHSOFINCHES = & h00000004

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Indicates that thousandths of inches are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in thousandths of inches. You can set this flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

### 144.14.33 PSD_MARGINS = & h00000002

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Causes the system to use the values specified in the Margin members as the initial widths for the left, top, right, and bottom margins. If PSD_MARGINS is not set, the system sets the initial widths to one inch for all margins.

### 144.14.34 PSD_MINMARGINS = & h00000001

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Causes the system to use the values specified in the MinMargin members as the minimum allowable widths for the left, top, right, and bottom margins. The system prevents the user from entering a width that is less than the specified minimum. If PSD_MINMARGINS is not specified, the system sets the minimum

allowable widths to those allowed by the printer.

### 144.14.35 PSD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Hides and disables the Network button.

### 144.14.36 PSD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Prevents the system from displaying a warning message when there is no default printer.

### 144.14.37 PSD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** PageSetupDialog does not display the dialog box. Instead, it sets the DevNames and DevMode members to objects that are initialized for the system default printer. PageSetupDlg returns an error if either DevNames or DevMode is not nil.

### 144.14.38 PSD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the flag constants.
**Notes:** Causes the dialog box to display the Help button. The hwndOwner member must specify the window to receive the HELPMSGSTRING registered messages that the dialog box sends when the user clicks the Help button.

## 144.15 class WindowsPrintDialogMBS

### 144.15.1 class WindowsPrintDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The class for showing the windows print dialog.

- MBS Real Studio Plugins, version 12.1pr7

### 144.15.4 Methods

### 144.15.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The constructor.

### 144.15.6 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries the strings that identify the driver, device, and output port names for a printer.
**Notes:**

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.

OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

### 144.15.7 getPageRange(index as Integer, byref fromPage as Integer, byref toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Queries a page range entry.

### 144.15.8 PrintDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays a Print Dialog Box or a Print Setup dialog box.
**Notes:**

The Print dialog box enables the user to specify the properties of a particular print job.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.

If the user canceled or closed the Print or Printer Setup dialog box or an error occurred, the return value is zero. To get extended error information, use the lasterror property. If the user canceled or closed the dialog box, lasterror returns zero.

This is the older function. PrintDialogEx is the newer function.

http://msdn.microsoft.com/en-us/library/windows/desktop/ms646940(v=vs.85).aspx

### 144.15.9 PrintDialogEx as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays a Print property sheet that enables the user to specify the properties of a particular

print job.
**Notes:**

Changed from Boolean to Integer in v21.3 to allow you to distinguish between different different results. Result is either 0 for OK or an COM error code.

A Print property sheet has a General page that contains controls similar to the Print dialog box. The property sheet can also have additional application-specific and driver-specific property pages as well as the General page.
If the function succeeds, the return value is S_OK (0) and the ResultAction member contains one of the following values.

| Constant | Value | Description |
|---|---|---|
| PD_RESULT_APPLY | 2 | The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked. |
| PD_RESULT_CANCEL | 0 | The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged. |
| PD_RESULT_PRINT | 1 | The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user. |

Lasterror is set.
The values of DevMode and DevNames in WindowsPrintDialogMBS may change when they are passed into PrintDialog. This is because these members are filled on both input and output.
If PD_RETURNDC is set but PD_USEDEVMODECOPIESANDCOLLATE flag is not set, the PrintDialog functions return incorrect number of copies. To get the correct number of copies, ensure that the calling application always uses PD_USEDEVMODECOPIESANDCOLLATE with PD_RETURNDC.

http://msdn.microsoft.com/en-us/library/windows/desktop/ms646942(v=vs.85).aspx

### 144.15.10 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Sets the strings that identify the driver, device, and output port names for a printer.
**Notes:**

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.

OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

### 144.15.11 setPageRange(index as Integer, fromPage as Integer, toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Sets a page range entry.
**Notes:** Index from 0 to 19.

### 144.15.12 Properties

### 144.15.13 Copies as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Contains the initial number of copies for the Copies edit control if DevMode is nil; otherwise, the Copies member of the DEVMODE contains the initial value.
**Notes:**

When PrintDlgEx returns, nCopies contains the actual number of copies the application must print. This value depends on whether the application or the printer driver is responsible for printing multiple copies. If the PD_USEDEVMODECOPIESANDCOLLATE flag is set in the Flags member, nCopies is always 1 on return, and the printer driver is responsible for printing multiple copies. If the flag is not set, the application is responsible for printing the number of copies specified by nCopies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
(Read and Write property)

### 144.15.14 DC as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The device context or an information context, depending on whether the Flags member specifies the PD_RETURNDC or PC_RETURNIC flag.
**Notes:**

If neither flag is specified, the value of this member is undefined. If both flags are specified, PD_RETURNDC has priority.
(Read and Write property)

### 144.15.15 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The device mode object.
**Notes:**

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

### 144.15.16 ExclusionFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** A set of bit flags that can exclude items from the printer driver property pages in the Print property sheet.
**Notes:**

This value is used only if the PD_EXCLUSIONFLAGS flag is set in the Flags member. Exclusion flags should be used only if the item to be excluded will be included on either the General page or on an application-defined page in the Print property sheet. This member can specify the following flag.
PD_EXCL_COPIESANDCOLLATE: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.
(Read and Write property)

### 144.15.17 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** A set of bit flags that you can use to initialize the Print property sheet.
**Notes:**

When the PrintDialog function returns, it sets these flags to indicate the user's input. This member can be one or more of the following values.

To ensure that PrintDialog returns the correct values in the Copies and Collate members of the DeviceMode, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = TRUE. In so doing, the Copies member of the PRINTDLG structure is always 1 and PD_COLLATE is always false.

To ensure that PrintDialog returns the correct values in nCopies and PD_COLLATE, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = FALSE. In so doing, dmCopies is always 1 and dmCollate is always FALSE.
Starting with Windows Vista, when you call PrintDlg or PrintDlgEx with PD_RETURNDC set to TRUE and PD_USEDEVMODECOPIESANDCOLLATE set to FALSE, the PrintDlg or PrintDlgEx function sets the number of copies in the nCopies member of the PRINTDLG structure, and it sets the number of copies in the structure represented by the hDC member of the PRINTDLG structure.
When making calls to GDI, you must ignore the value of nCopies, consider the value as 1, and use the returned hDC to avoid printing duplicate copies.
(Read and Write property)

### 144.15.18 FromPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The initial value for the starting page edit control.
**Notes:**

When PrintDialog returns, nFromPage is the starting page specified by the user. If the Pages radio button is selected when the user clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters a starting page value that is within the minimum to maximum page range.
If the input value for either FromPage or nToPage is outside the minimum/maximum range, PrintDlg returns an error only if the PD_PAGENUMS flag is specified; otherwise, it displays the dialog box but changes the out-of-range value to the minimum or maximum value.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

### 144.15.19 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The last error code.
**Notes:**

Typical errors:
E_OUTOFMEMORY = & h8007000E // Insufficient memory.
E_INVALIDARG = & h80070057 // One or more arguments are invalid.
E_POINTER = & h80000005 // Invalid pointer.
E_HANDLE = & h80000006 // Invalid handle.
E_FAIL = & h80000008 // Unspecified error.
(Read and Write property)

### 144.15.20 MaxPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The maximum value for the page ranges specified in the Pages edit control.
**Notes:**

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

### 144.15.21 MaxPageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The size, in array elements, of the PageRanges buffer.
**Notes:**

This value indicates the maximum number of page ranges that can be stored in the array. If the PD_NOPAGENUMS flag is specified, this value is not valid. If the PD_NOPAGENUMS flag is not specified, this value must be greater than zero.
The plugin supports up to 20 page ranges.
(Read and Write property)

### 144.15.22 MinPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The minimum value for the page ranges specified in the Pages edit control.
**Notes:**

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

### 144.15.23 PageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** On input, set this member to the initial number of page ranges specified.
**Notes:**

When the PrintDialog function returns, PageRanges indicates the number of user-specified page ranges. If the PD_NOPAGENUMS flag is specified, this value is not valid. Use getPageRange to query page ranges

or setPageRange to set them.
(Read and Write property)

### 144.15.24 Parent as Variant

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The window that owns the dialog box.
**Notes:**

The window that owns the property sheet. This member must be a valid window handle; it cannot be nil. Can reference a Window or DesktopWindow object.
(Read and Write property)

### 144.15.25 ResultAction as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** If the PrintDlgEx function returns S_OK (0), ResultAction contains the outcome of the dialog.
**Notes:**

If PrintDialog returns an error, this member should be ignored. The ResultAction member can be one of the following values:

| | |
|---|---|
| PD_RESULT_APPLY | The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not want to print yet. The PRINTDLGEX structure contains the information specified by the user at the time the Apply button was clicked. |
| PD_RESULT_CANCEL | The user clicked the Cancel button. The information in the PRINTDLGEX structure is unchanged. |
| PD_RESULT_PRINT | The user clicked the Print button. The PRINTDLGEX structure contains the information specified by the user. |

(Read and Write property)

### 144.15.26 StartPanel as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The property page that is initially displayed.
**Notes:**

To display the General page, specify START_PAGE_GENERAL. For consistency, it is recommended that the property sheet always be started on the General page.
The plugin sets START_PAGE_GENERAL for default value.
(Read and Write property)

### 144.15.27 ToPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The initial value for the ending page edit control.
**Notes:**

When PrintDialog returns, ToPage is the ending page specified by the user. If the Pages radio button is selected when the use clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters an ending page value that is within the minimum to maximum page range.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

### 144.15.28 Constants

### 144.15.29 PD_ALLPAGES = 0

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

The default flag that indicates that the All radio button is initially selected.
This flag is used as a placeholder to indicate that the PD_PAGENUMS, PD_SELECTION, and PD_CURRENTPAGE flags are not specified.

### 144.15.30 PD_COLLATE = & h00000010

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

If this flag is set, the Collate check box is selected.
If this flag is set when the PrintDlgEx function returns, the application must simulate collation of multiple copies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
See PD_NOPAGENUMS.

### 144.15.31 PD_CURRENTPAGE = & h00400000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** If this flag is set, the Current Page radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

### 144.15.32 PD_DISABLEPRINTTOFILE = & h00080000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Disables the Print to File check box.

### 144.15.33 PD_EXCLUSIONFLAGS = & h01000000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

Indicates that the ExclusionFlags member identifies items to be excluded from the printer driver property pages.
If this flag is not set, items will be excluded by default from the printer driver property pages. The exclusions prevent the duplication of items among the General page, any application-specified pages, and the printer driver pages.

### 144.15.34 PD_EXCL_COPIESANDCOLLATE = & h00008100

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.

### 144.15.35 PD_HIDEPRINTTOFILE = & h00100000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Hides the Print to File check box.

### 144.15.36 PD_NOCURRENTPAGE = & h00800000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Disables the Current Page radio button.

### 144.15.37 PD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Hides and disables the Network button.

### 144.15.38 PD_NOPAGENUMS = 8

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

Disables the Pages radio button and the associated edit controls.
Also, it causes the Collate check box to appear in the dialog.

### 144.15.39 PD_NOSELECTION = 4

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Disables the Selection radio button.

### 144.15.40 PD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Prevents the warning message from being displayed when an error occurs.

### 144.15.41 PD_PAGENUMS = 2

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** If this flag is set, the Pages radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected. If this flag is set when the PrintDialog function returns, the PageRanges member indicates the page ranges specified by the user.

### 144.15.42 PD_PRINTSETUP = & h00000040

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Causes the system to display the Print Setup dialog box rather than the Print dialog box.

### 144.15.43 PD_PRINTTOFILE = & h00000020

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

If this flag is set, the Print to File check box is selected.
If this flag is set when PrintDialog returns, the OutputName of DevNames contains the string "FILE:". When you call the StartDoc function to start the printing operation, specify this "FILE:" string in the Output parameter member of the DOCINFO structure. Specifying this string causes the print subsystem to query the user for the name of the output file.
StartDoc is available in our plugins through StartDocPrinter in WindowsAddPrintJobMBS class.

### 144.15.44 PD_RESULT_APPLY = 2

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the ResultAction value constants.
**Notes:** The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.

### 144.15.45 PD_RESULT_CANCEL = 0

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the ResultAction value constants.
**Notes:** The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.

### 144.15.46 PD_RESULT_PRINT = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the ResultAction value constants.
**Notes:** The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

### 144.15.47 PD_RETURNDC = & h00000100

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

Causes PrintDialog to return a device context matching the selections the user made in the property sheet. The device context is returned in DC property.

### 144.15.48 PD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

If this flag is set, the PrintDialog function does not display the property sheet.
Instead, it sets the DevNames and DevMode members to the default for the system default printer. Both DevNames and DevMode must be empty, or PrintDialog returns an error.

### 144.15.49 PD_RETURNIC = & h00000200

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

Similar to the PD_RETURNDC flag, except this flag returns an information context rather than a device context.
If neither PD_RETURNDC nor PD_RETURNIC is specified, hDC is undefined on output.

### 144.15.50 PD_SELECTION = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

If this flag is set, the Selection radio button is selected.
If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

### 144.15.51 PD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Causes the dialog box to display the Help button.

### 144.15.52 PD_USEDEVMODECOPIES = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:** Same as PD_USEDEVMODECOPIESANDCOLLATE.

### 144.15.53 PD_USEDEVMODECOPIESANDCOLLATE = & h00040000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the constants for the flags property.
**Notes:**

This flag indicates whether your application supports multiple copies and collation.
Set this flag on input to indicate that your application does not support multiple copies and collation. In this case, the Copies member of the class always returns 1, and PD_COLLATE is never set in the Flags member.
If this flag is not set, the application is responsible for printing and collating multiple copies. In this case, the Copies property indicates the number of copies the user wants to print, and the PD_COLLATE flag in

the Flags member indicates whether the user wants collation.
Regardless of whether this flag is set, an application can determine from Copies and PD_COLLATE how many copies to render and whether to print them collated.
If this flag is set and the printer driver does not support multiple copies, the Copies edit control is disabled. Similarly, if this flag is set and the printer driver does not support collation, the Collate check box is disabled.

The Copies and Collate members of the WindowsDeviceModeMBS object contain the copies and collate information used by the printer driver. If this flag is set and the printer driver supports multiple copies, the Copies member indicates the number of copies requested by the user. If this flag is set and the printer driver supports collation, the Collate member of the WindowsDeviceModeMBS object indicates whether the user wants collation. If this flag is not set, the dmCopies member always returns 1, and the Collate member is always zero.

In Windows versions prior to Windows Vista, if this flag is not set by the calling application and the dmCopies member of the WindowsDeviceModeMBS object is greater than 1, use that value for the number of copies; otherwise, use the value of the Copies member of this class.

### 144.15.54 START_PANEL_GENERAL = & hffffffff

MBS Win Plugin, Plugin Version: 12.1.

**Function:** Special value for StartPanel property to select general panel.

# 144.16 class WindowsPrinterInfoMBS

## 144.16.1 class WindowsPrinterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for details on printer information.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

**Notes:**

This class wraps the PRINTER_INFO_2 structure on windows which you find documented here:
http://msdn.microsoft.com/en-us/library/dd162845(VS.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

## 144.16.2 Blog Entries

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

## 144.16.3 Blog Entries

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

## 144.16.4 Methods

## 144.16.5 Constructor

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 144.16.6 LocalPrinters as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the printers as an array.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

**Notes:** On any error the array will be empty.

### 144.16.7 OpenPrinter(admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Opens the printer so you can operate on it.
**Example:**

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

**Notes:**

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

### 144.16.8 Printers(flags as Integer, Name as Variant = nil) as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 15.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The Printers function enumerates available printers, print servers, domains, or print providers.
**Notes:**

If you call this with flags = kPrinterFlagsLocal + kPrinterFlagsConnections and name = nil, you get same as LocalPrinters function.

https://msdn.microsoft.com/en-us/library/windows/desktop/dd162692(v=vs.85).aspx

### 144.16.9 Properties

### 144.16.10 AttributeFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the printer attributes.
**Notes:**

This member can be one of the following values:

| | | |
|---|---|---|
| PRINTER_ATTRIBUTE_QUEUED | & h00000001 | |
| PRINTER_ATTRIBUTE_DIRECT | & h00000002 | |
| PRINTER_ATTRIBUTE_DEFAULT | & h00000004 | (Windows 95) |
| PRINTER_ATTRIBUTE_SHARED | & h00000008 | |
| PRINTER_ATTRIBUTE_NETWORK | & h00000010 | |
| PRINTER_ATTRIBUTE_HIDDEN | & h00000020 | |
| PRINTER_ATTRIBUTE_LOCAL | & h00000040 | |
| PRINTER_ATTRIBUTE_ENABLE_DEVQ | & h00000080 | |
| PRINTER_ATTRIBUTE_KEEPPRINTEDJOBS | & h00000100 | |
| PRINTER_ATTRIBUTE_DO_COMPLETE_FIRST | & h00000200 | |
| PRINTER_ATTRIBUTE_WORK_OFFLINE | & h00000400 | (Windows 95) |
| PRINTER_ATTRIBUTE_ENABLE_BIDI | & h00000800 | (Windows 95) |
| PRINTER_ATTRIBUTE_RAW_ONLY | & h00001000 | |
| PRINTER_ATTRIBUTE_PUBLISHED | & h00002000 | (Windows 2000) Indicates whether the printer is published in the directory service. |

Renamed Attributes parameter to AttributeFlags in plugin version 8.2.
(Read and Write property)

### 144.16.11 AveragePPM as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the average number of pages per minute that have been printed on the printer.
**Notes:** (Read and Write property)

### 144.16.12 Comment as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that provides a brief description of the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.Comment
next
```

**Notes:** (Read and Write property)

### 144.16.13 CountJobs as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the number of print jobs that have been queued for the printer.
**Notes:** (Read and Write property)

### 144.16.14 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the data type used to record the print job.
**Notes:** (Read and Write property)

### 144.16.15 DefaultPriority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the default priority value assigned to each print job.
**Notes:** (Read and Write property)

### 144.16.16 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The WindowsDeviceModeMBS object that defines default printer data such as the paper orientation and the resolution.
**Notes:** (Read and Write property)

### 144.16.17 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the name of the printer driver.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.DriverName
next
```

**Notes:** (Read and Write property)

### 144.16.18 Location as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the physical location of the printer.
**Notes:**

for example, "Bldg. 38, Room 1164".
(Read and Write property)

### 144.16.19 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the default print-processor parameters.
**Notes:** (Read and Write property)

### 144.16.20 PortName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that identifies the port(s) used to transmit data to the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.PortName
```

next

**Notes:**

If a printer is connected to more than one port, the names of each port must be separated by commas (for example, "LPT1:,LPT2:,LPT3:").
(Read and Write property)

### 144.16.21 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the name of the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

**Notes:** (Read and Write property)

### 144.16.22 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the name of the print processor used by the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrintProcessor
next
```

**Notes:** (Read and Write property)

### 144.16.23 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies a priority value that the spooler uses to route print jobs.
**Notes:**

Possible values:

| | |
|---|---|
| NO_PRIORITY | 0 |
| MAX_PRIORITY | 99 |
| MIN_PRIORITY | 1 |
| DEF_PRIORITY | 1 |

(Read and Write property)

### 144.16.24 SeparatorPageFile as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that specifies the name of the file used to create the separator page.
**Notes:**

This page is used to separate print jobs sent to the printer.
(Read and Write property)

### 144.16.25 ServerName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string identifying the server that controls the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ServerName
next
```

**Notes:**

If this string is "", the printer is controlled locally.
(Read and Write property)

### 144.16.26 ShareName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A string that identifies the sharepoint for the printer.
**Example:**

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ShareName
next
```

**Notes:**

This string is used only if the PRINTER_ATTRIBUTE_SHARED constant was set for the Attributes member.
(Read and Write property)

### 144.16.27 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the earliest time at which the printer will print a job.
**Notes:**

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
(Read and Write property)

### 144.16.28 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the printer status.
**Notes:**

This member can be one of the following values:

Windows 95: The PRINTER_STATUS_PAGE_PUNT value specifies that the page is being "punted" (that is, not printed) because it is too complex for the printer to print.
(Read and Write property)

| | |
|---|---|
| PRINTER_STATUS_PAUSED | & h00000001 |
| PRINTER_STATUS_ERROR | & h00000002 |
| PRINTER_STATUS_PENDING_DELETION | & h00000004 |
| PRINTER_STATUS_PAPER_JAM | & h00000008 |
| PRINTER_STATUS_PAPER_OUT | & h00000010 |
| PRINTER_STATUS_MANUAL_FEED | & h00000020 |
| PRINTER_STATUS_PAPER_PROBLEM | & h00000040 |
| PRINTER_STATUS_OFFLINE | & h00000080 |
| PRINTER_STATUS_IO_ACTIVE | & h00000100 |
| PRINTER_STATUS_BUSY | & h00000200 |
| PRINTER_STATUS_PRINTING | & h00000400 |
| PRINTER_STATUS_OUTPUT_BIN_FULL | & h00000800 |
| PRINTER_STATUS_NOT_AVAILABLE | & h00001000 |
| PRINTER_STATUS_WAITING | & h00002000 |
| PRINTER_STATUS_PROCESSING | & h00004000 |
| PRINTER_STATUS_INITIALIZING | & h00008000 |
| PRINTER_STATUS_WARMING_UP | & h00010000 |
| PRINTER_STATUS_TONER_LOW | & h00020000 |
| PRINTER_STATUS_NO_TONER | & h00040000 |
| PRINTER_STATUS_PAGE_PUNT | & h00080000 |
| PRINTER_STATUS_USER_INTERVENTION | & h00100000 |
| PRINTER_STATUS_OUT_OF_MEMORY | & h00200000 |
| PRINTER_STATUS_DOOR_OPEN | & h00400000 |
| PRINTER_STATUS_SERVER_UNKNOWN | & h00800000 |
| PRINTER_STATUS_POWER_SAVE | & h01000000 |

### 144.16.29 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies the latest time at which the printer will print a job.
**Notes:**

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
Status
(Read and Write property)

### 144.16.30 Constants

### 144.16.31 kPrinterFlagsConnections = 4

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** The function enumerates the list of printers to which the user has made previous connections.

### 144.16.32 kPrinterFlagsDefault = 1

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** Default printer.

### 144.16.33 kPrinterFlagsLocal = 2

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** If the kPrinterFlagsName flag is not also passed, the function ignores the Name parameter, and enumerates the locally installed printers. If kPrinterFlagsName is also passed, the function enumerates the local printers on Name.

### 144.16.34 kPrinterFlagsName = 8

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** The function enumerates the printer identified by Name. This can be a server, a domain, or a print provider. If Name is nil, the function enumerates available print providers.

### 144.16.35 kPrinterFlagsNetwork = 64

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** Network printers?

### 144.16.36 kPrinterFlagsRemote = 16

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** Remote (non Local) printers?

### 144.16.37 kPrinterFlagsShared = 32

MBS Win Plugin, Plugin Version: 15.2.

**Function:** One of the flags for Printer function.
**Notes:** The function enumerates printers that have the shared attribute. Cannot be used in isolation; use an OR operation to combine with another constants.

## 144.17 class WindowsPrinterJobMBS

### 144.17.1 class WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for Windows print job information.

### 144.17.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

### 144.17.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

### 144.17.4 Properties

### 144.17.5 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The type of data used to record the print job.
**Notes:** (Read and Write property)

### 144.17.6 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The device-initialization and environment data for the printer driver.
**Notes:** (Read and Write property)

### 144.17.7 Document as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the user who owns the print job.
**Notes:** (Read and Write property)

### 144.17.8 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the printer driver that should be used to process the print job.
**Notes:** (Read and Write property)

### 144.17.9 JobID as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A job identifier value.
**Notes:** (Read and Write property)

### 144.17.10 MachineName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the machine that created the print job.
**Notes:** (Read and Write property)

### 144.17.11 NotifyName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the user who should be notified when the job has been printed or when an error occurs while printing the job.
**Notes:** (Read and Write property)

### 144.17.12 PagesPrinted as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of pages that have printed.
**Notes:**

This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

### 144.17.13 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Print-processor parameters.
**Notes:** (Read and Write property)

### 144.17.14 Position as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The job's position in the print queue.
**Notes:** (Read and Write property)

### 144.17.15 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the printer for which the job is spooled.
**Notes:** (Read and Write property)

### 144.17.16 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the print processor that should be used to print the job.
**Notes:** (Read and Write property)

### 144.17.17 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The job priority.
**Notes:**

This member can be one of the following values or in the range between 1 through 99 (kPriorityMin through kPriorityMax).
(Read and Write property)

### 144.17.18 Size as Int64

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The size, in bytes, of the job.
**Notes:** (Read and Write property)

### 144.17.19 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The earliest time that the job can be printed.
**Notes:** (Read and Write property)

### 144.17.20 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The job status.
**Notes:**

Check kJobStatus* constants for possible values.
(Read and Write property)

### 144.17.21 StatusString as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The status of the print job.
**Notes:**

This member should be checked prior to Status and, if StatusString is "", the status is defined by the contents of the Status member.
(Read and Write property)

### 144.17.22 Submitted as Date

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The time when the job was submitted.
**Notes:**

This time value is in Universal Time Coordinate (UTC) format.
(Read and Write property)

### 144.17.23 Time as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The total time, in milliseconds, that has elapsed since the job began printing.
**Notes:** (Read and Write property)

### 144.17.24 TotalPages as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of pages required for the job.
**Notes:**

This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

### 144.17.25 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The latest time that the job can be printed.
**Notes:** (Read and Write property)

### 144.17.26 UserName as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the user who owns the print job.
**Notes:** (Read and Write property)

### 144.17.27 Constants

### 144.17.28 kJobStatusBlockedDeviceQueue = & h200

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** The driver cannot print the job.

### 144.17.29 kJobStatusComplete = & h1000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:**

The job is sent to the printer, but may not be printed yet.
(Windows XP and later)

### 144.17.30 kJobStatusDeleted = & h100

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job has been deleted.

### 144.17.31 kJobStatusDeleting = 4

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job is being deleted.

### 144.17.32 kJobStatusError = 2

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** An error is associated with the job.

### 144.17.33 kJobStatusOffline = & h20

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Printer is offline.

### 144.17.34 kJobStatusPaperOut = & h40

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Printer is out of paper.

### 144.17.35 kJobStatusPaused = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job is paused.

### 144.17.36 kJobStatusPrinted = & h80

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job has printed.

### 144.17.37 kJobStatusPrinting = & h10

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job is printing.

### 144.17.38 kJobStatusRenderingLocally = & h4000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Rendering.

### 144.17.39 kJobStatusRestart = & h800

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job has been restarted.

### 144.17.40 kJobStatusRetained = & h2000

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:**

The job has been retained in the print queue following printing.
(Windows XP and later)

### 144.17.41 kJobStatusSpooling = 8

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Job is spooling.

### 144.17.42 kJobStatusUserIntervention = & h400

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the job status constants.
**Notes:** Printer has an error that requires the user to do something.

### 144.17.43 kPriorityDefault = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the priority constants.
**Notes:** Default priority.

### 144.17.44 kPriorityMax = 99

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the priority constants.
**Notes:** Maximum priority.

### 144.17.45 kPriorityMin = 1

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the priority constants.
**Notes:** Minimum priority.

### 144.17.46 kPriorityNo = 0

MBS Win Plugin, Plugin Version: 12.1.

**Function:** One of the priority constants.
**Notes:** No priority.

# 144.18 class WindowsPrinterMBS

## 144.18.1 class WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The class for an open connection to a windows printer.
**Notes:**

Objects of this class can operate on printers.
Some operations need administrative permissions. If you don't have them, lasterror is set to 5.

### 144.18.4 Methods

### 144.18.5 AddForm(form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The AddForm function adds a form to the list of available forms that can be selected for the specified printer.
**Example:**

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

dim form as new WindowsPageFormatMBS

form.Mode = 1
form.Name = "MyTest"
form.DisplayName = "MyTest"
form.Flags = 0
form.SizeHeight = 100000
form.SizeWidth = 100000
form.ImageableAreaLeft = 0
form.ImageableAreaTop = 0
form.ImageableAreaRight = 100000
form.ImageableAreaBottom = 100000

if w.AddForm(form) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Form.Mode gives level of the data. Must be either 1 (old version) or 2 (newer version).

Form: The form details.

Returns true if the function succeeds and false if the function fails.

Note: This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

An application can determine which forms are available for a printer by calling the GetPrinterFormats function.
If form points to a Mode 2 form, then AddForm will fail if either a form with the specified name already exists or the Keyword value already exists.

### 144.18.6 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as DesktopWindow) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
**Notes:**

This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user.
InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.
See also:

- 144.18.7 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer 22980

### 144.18.7 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
**Notes:**

This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user.
InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.
See also:

- 144.18.6 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as DesktopWindow) as integer 22979

### 144.18.8 AllJobs as WindowsPrinterJobMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries all jobs for the printer.
**Example:**

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"
```

**Notes:** PrinterName property must be set, so the function knows which printer.

### 144.18.9 CanPrinterPassThroughPostScript as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Whether this printer can pass through postscript data.
**Notes:**

Returns true for Postscript printers and false for other printers.

For more information on this function, visit this website:
http://msdn.microsoft.com/en-us/library/dd162831(v=VS.85).aspx

### 144.18.10 ChangePrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Changes printer settings.
**Notes:**

This function opens the printer, queries current settings using GetPrinter, applies all your changes, calls DocumentProperties to verify those settings are valid for the printer and uses SetPrinter to apply the changes.
To indicate which fiels in the WindowsDeviceModeMBS object are set by you, use the fields integer value with a combination of the DM_* constants.
Returns true on success and false on failure.

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

For more information on the SetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(VS.85).aspx

For more information on the DocumentProperties function, check this website:
http://msdn.microsoft.com/en-us/library/dd183576(VS.85).aspx

Even if you change printer settings, other parts of the application, e.g. Xojo framework may not care.

### 144.18.11 ConfigurePort(name as string = ””, parent as window = nil, PortName as string = ””) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays the port-configuration dialog box for a port on the specified server.
**Notes:**

Name: The name of the server on which the specified port exists. If this parameter is ””, the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.
See also:

- 144.18.12 ConfigurePort(name as string, parent as DesktopWindow, PortName as string) as boolean 22982

### 144.18.12 ConfigurePort(name as string, parent as DesktopWindow, PortName as string) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Displays the port-configuration dialog box for a port on the specified server.
**Notes:**

Name: The name of the server on which the specified port exists. If this parameter is ””, the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.
See also:

- 144.18.11 ConfigurePort(name as string = """, parent as window = nil, PortName as string = """) as boolean 22982

### 144.18.13 ConnectToPrinterDialog(parent as DesktopWindow) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** Displays a dialog box that lets users browse and connect to printers on a network.
**Notes:**

If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinterConnection to delete a connection to a printer.
See also:

- 144.18.14 ConnectToPrinterDialog(parent as window = nil) as boolean 22983

### 144.18.14 ConnectToPrinterDialog(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** Displays a dialog box that lets users browse and connect to printers on a network.
**Notes:**

If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinterConnection to delete a connection to a printer.
See also:

- 144.18.13 ConnectToPrinterDialog(parent as DesktopWindow) as boolean 22983

### 144.18.15 Constructor(PrinterName as string, admin as boolean = false)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Opens the printer so you can operate on it.
**Notes:**

Admin: whether you want to get permissions to administrate.
Raises exception if printer can't be opened. Use OpenPrinter function to avoid exception.

### 144.18.16 DeleteForm(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The DeleteForm function removes a form name from the list of supported forms.
**Notes:**

name: The form name to be removed.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

DeleteForm can only delete form names that were added by using the AddForm function.

### 144.18.17 DeleteJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Delete the print job.
**Notes:** Returns true on success and false on failure.

### 144.18.18 DeletePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Deletes the specified printer object.
**Notes:**

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If there are print jobs remaining to be processed for the specified printer, DeletePrinter marks the printer for pending deletion, and then deletes it when all the print jobs have been printed. No print jobs can be added to a printer that is marked for pending deletion.
A printer marked for pending deletion cannot be held, but its print jobs can be held, resumed, and restarted. If the printer is held and there are jobs for the printer, DeletePrinter fails with ERROR_ACCESS_DENIED.

Lasterror is set.

### 144.18.19 DeletePrinterConnection(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Deletes a connection to a printer that was established by a call to AddPrinterConnection or ConnectToPrinterDialog.
**Notes:**

name: The name of the printer connection to delete.
Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The DeletePrinterConnection function does not delete any printer driver files that were copied to the server to which the printer is attached.

### 144.18.20 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean = false, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
**Example:**

```
// get default printer
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
dim s as new WindowsDeviceModeMBS
dim n as Integer = p.DocumentProperties(nil, s, true, window1)
```

**Notes:**

Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.
InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.
If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

- 144.18.21 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean, parent as DesktopWindow) as integer 22987

### 144.18.21 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean, parent as DesktopWindow) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
**Example:**

```
// get default printer
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
dim s as new WindowsDeviceModeMBS
dim n as Integer = p.DocumentProperties(nil, s, true, window1)
```

**Notes:**

Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.
InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.
If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

See also:

- 144.18.20 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean = false, parent as window = nil) as Integer 22986

### 144.18.22 GetDefaultPrinter as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The GetDefaultPrinter function retrieves the printer name of the default printer for the current user on the local computer.
**Example:**

msgbox WindowsPrinterMBS.GetDefaultPrinter

**Notes:**

For more details on the GetDefaultPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144876(VS.85).aspx

Returns an empty string on any error.

### 144.18.23 GetForm(name as string) as WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The GetForm function retrieves information about a specified form.
**Example:**

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// get a page format
dim f as WindowsPageFormatMBS = w.GetForm("Letter")

// and show details
MsgBox f.DisplayName+" "+str(F.SizeWidth/10000,"0.0")+" x "+str(f.SizeHeight/10000,"0.0")
```

**Notes:**

name: The string that specifies the name of the form. To get the names of the forms supported by the printer, call the GetPrinterFormats function.

On failure returns nil, on success the form details.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If the caller is remote, and the Form Mode is 2, the StringType value of the returned WindowsPageFormatMBS will always be STRING_LANGPAIR.

### 144.18.24 GetJob(JobID as Integer) as WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Query job with given ID from printer.
**Notes:**

Returns nil on any error.
PrinterName property must be set, so the function knows which printer.

### 144.18.25 GetPrinterFormats as WindowsPageFormatMBS()

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the page formats supported by this printer.
**Notes:**

On failure the array is empty.

This function uses the EnumForms for which you can find more information on this website:
http://msdn.microsoft.com/en-us/library/dd162624(v=VS.85).aspx

### 144.18.26 GetPrinterSettings(Mode as Integer=2) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries printer settings.
**Example:**

```
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim dm as WindowsDeviceModeMBS = w.GetPrinterSettings
```

**Notes:**

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

### 144.18.27 GetPrinterTechnology as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the printer technology.
**Example:**

```
dim w as new WindowsPrinterMBS("my printer")
msgbox w.GetPrinterTechnology
```

**Notes:**

Opens the printer, queries the print technology and returns that string.
For postscript printers the string should contain the word "postscript".
Returns an empty string on any error.

For details on this function, check the following website:
http://msdn.microsoft.com/en-us/library/dd144931(VS.85).aspx

### 144.18.28 OpenPrinter(PrinterName as string, admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Opens the printer so you can operate on it.
**Notes:**

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

### 144.18.29 PauseJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Pause the print job.
**Notes:** Returns true on success and false on failure.

### 144.18.30 PausePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Pauses the printer.
**Example:**

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)
```

```
if p.PausePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

**Notes:**

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

### 144.18.31 PrinterProperties(parent as DesktopWindow) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

**Function:** The PrinterProperties function displays a printer-properties property sheet for the specified printer.
**Example:**

```
// get default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.
See also:

- 144.18.32 PrinterProperties(parent as window = nil) as boolean 22992

### 144.18.32 PrinterProperties(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop only.

**Function:** The PrinterProperties function displays a printer-properties property sheet for the specified

printer.
**Example:**

```
// get default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:**

Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.
See also:

- 144.18.31 PrinterProperties(parent as DesktopWindow) as boolean 22992

### 144.18.33 PurgePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Purges the printer.
**Example:**

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PurgePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

**Notes:**

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

### 144.18.34 ResumeJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Resume a paused print job.
**Notes:** Returns true on success and false on failure.

### 144.18.35 ResumePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Resumes the printer.
**Example:**

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.ResumePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

**Notes:**

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

### 144.18.36 SetDefaultPrinter(PrinterName as string) as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Changes the default printer to the given one.
**Example:**

```
call WindowsPrinterMBS.SetDefaultPrinter("My Printer")
```

**Notes:**

Returns a Windows error code. (0 for success)

For details on the Windows SetDefaultPrinter method, check here:

http://msdn.microsoft.com/en-us/library/dd162971(VS.85).aspx

### 144.18.37 SetForm(name as string, form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The SetForm function sets the form information for the specified printer.
**Notes:**

name: The string that specifies the form name for which the form information is set.
Form: The form data. Mode property must be either 1 (older format) or 2 (newer format).

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation,Äîfactors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

SetForm can be called multiple times for an existing WindowsPageFormatMBS, each call adding additional pairs of DisplayName and LangId values. All languages versions of the form will get the Size and ImageableArea values of the WindowsPageFormatMBS in the most recent call to SetForm.
If the caller is remote and the form's Mode is 2, the StringType value of the WindowsPageFormatMBS cannot be STRING_MUIDLL.

### 144.18.38 SetJob(JobID as Integer, job as WindowsPrinterJobMBS) as boolean

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets job parameters.
**Example:**

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter, true)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"

// pick first
dim j as WindowsPrinterJobMBS = jobs(0)
j.Document = "Hello World"

// write back values
call w.SetJob(j.JobID, j)

// error?
```

```
if w.Lasterror<>0 then
MsgBox w.LasterrorMessage
end if
```

**Notes:**

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd162978(v=vs.85).aspx

### 144.18.39 SetPrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets printer settings.
**Example:**

```
// switch default printer to A5 landscape paper

dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, false)
dim d as WindowsDeviceModeMBS = p.GetPrinterSettings(9)

if d = nil then
MsgBox p.LasterrorMessage
else
d.PaperSize = d.DMPAPER_A5
d.Fields = BitwiseOr(d.Fields, d.DM_PAPERSIZE)
d.Orientation = d.DMORIENT_LANDSCAPE
d.Fields = BitwiseOr(d.Fields, d.DM_ORIENTATION)

if p.SetPrinterSettings(d, 9) then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage
end if
end if
```

**Notes:**

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:

http://msdn.microsoft.com/en-us/library/dd145082(v=vs.85).aspx

### 144.18.40 Properties

### 144.18.41 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The internal handle to the printer.
**Notes:** (Read and Write property)

### 144.18.42 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The last windows error code.
**Notes:** (Read and Write property)

### 144.18.43 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The text message for the last error code.
**Notes:** (Read and Write property)

### 144.18.44 PrinterName as String

MBS Win Plugin, Plugin Version: 3.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The name of the open printer in this object.
**Example:**

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

**Notes:** (Read and Write property)

# Chapter 145

# Process

## 145.1 class Application

### 145.1.1 class Application

Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Extends the Application class inside Xojo.

### 145.1.2 Methods

### 145.1.3 ApplicationCreatorCodeMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the Creator Code of the application.
**Example:**

msgbox "Hi. This application has the creator code "+app.ApplicationCreatorCodeMBS

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Only useful on Mac OS.
If you run your app inside the Xojo IDE it will return "RBv2" which is Xojo's Creator code sind Xojo 2.0.

### 145.1.4 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

### 145.1.5 ApplicationFileMBS as folderitem

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Gives a folderitem to the applications file.
**Example:**

msgbox "Hi. The file of this application is named "+app.ApplicationFileMBS.name

**Deprecated:** This item is deprecated and should no longer be used. You can use ExecutableFile instead.
**Notes:**

Inside Xojo points to the Xojo application.

This item may go in the future. Please use app.executablefile in new Xojo versions.

### 145.1.6 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Xojo Plugins, version 19.4pr1

### 145.1.7 Xojo Developer Magazine

- 3.1, page 42: Register Document File Types, Fill and Query the Registry by Christian Schmitz

### 145.1.8 ApplicationNameMBS as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the name of the application.
**Example:**

msgbox "Hi. This application is named "+app.ApplicationNameMBS

**Notes:** This may not be the exact same name than the filename.

### 145.1.9 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries arguments of process.
**Notes:**

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

### 145.1.10 BundleFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns a folderitem to the bundle's mail folder.

### 145.1.11 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the localized string for the given key from the default table.
**Notes:** A short version for BundleLocalizedString which uses the default table.
See also:

- 145.1.12 BundleLocalizedStringMBS(key as string,fromtable as string) as string 23001

### 145.1.12 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the localized string for the given key and table.
**Example:**

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
dim s as string

s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
```

```
end if

return s
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

**Notes:**

The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 145.1.11 BundleLocalizedStringMBS(key as string) as string 23001

### 145.1.13 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

**Function:** Searches inside the application bundle for a file.
**Example:**

```
dim f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

**Notes:**

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

### 145.1.14 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns a folderitem to the resource file inside the bundle.
**Example:**

```
Dim f As FolderItem = App.BundleResourceFolderMBS

If f = Nil Then
MsgBox "Failed?"
Else
MsgBox f.NativePath
End If
```

### 145.1.15 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

**Function:** Hides the current application.
**Notes:** Returns true if the current application was hidden.

### 145.1.16 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

**Function:** Hides all applications except the current one.
**Notes:** Returns true if the other applications were hidden.

### 145.1.17 LaunchTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the the ticks value at launch time.
**Example:**

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

**Notes:**

This value must be converted to the secondsvalue like in the example.
-1 on Windows.

For Mac OS X see the DarwinResourceUsageMBS class.

### 145.1.18 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop only.

**Function:** If your application is a bundle, this function returns your own bundle.
**Notes:**

Returns nil on any error.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.1.19 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the shared NSApplication object.
**Notes:**

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.1.20 OverlayApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

**Function:** Adds a picture on top of the application dock title.
**Example:**

```
static n as Integer // global property
dim p as picture
dim m as picture
dim g as graphics
dim s as string
dim w,h,x as Integer

n=n+1 // add one
s=str(n)
```

```
m=New Picture(128,128,32)
p=New Picture(128,128,32)

g=p.graphics
g.textsize=24
w=g.stringwidth(s)
h=g.stringheight(s,0)
x=125-w-10
g.foreColor=rgb(255,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20
g.foreColor=rgb(0,0,0)
g.drawstring s,x+5,15+g.textascent

g=m.graphics
g.foreColor=rgb(0,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20

if app.OverlayApplicationDockTileImageMBS(CGCreateImageMBS(p,m)) then
end if
```

**Notes:**

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

### 145.1.21 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

### 145.1.22 ProcessTimeMBS as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current CPU time for the process.
**Example:**

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

**Notes:**

On Mac OS X, the OS counts how much CPU time in given to the current process.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

### 145.1.23 RestoreApplicationDockTileImageMBS as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

**Function:** Restores the application dock tile image.
**Example:**

```
if app.RestoreApplicationDockTileImageMBS then
// ok
end if
```

**Notes:** Added support for 64-bit in plugin version 16.0.

### 145.1.24 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

### 145.1.25 SetApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Platform: macOS, Targets: Desktop only.

**Function:** Sets the application dock tile image.
**Example:**

```
dim p as CGImageMBS = CGImageMBS.CreateImage(LogoMBS(500))
```

```
if app.SetApplicationDockTileImageMBS(p) then
// ok
end if
```

**Notes:**

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

### 145.1.26 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.5pr2

### 145.1.27 Properties

### 145.1.28 FrontmostMBS as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns true if the application is frontmost.
**Example:**

```
app.frontmostmbs=True 'bring app to front
```

**Notes:**

This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows in version 19.2. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

## 145.2 class BackgroundThreadMBS

### 145.2.1 class BackgroundThreadMBS

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The thread subclass we use for the CallMethodOnThreadMBS functions.
**Example:**

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Subclass of the Thread class.

## 145.3 module CallDelegateCrashSafeMBS

### 145.3.1 module CallDelegateCrashSafeMBS

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The module to call a delegate and catch a crash.
**Example:**

```
Try

System.DebugLog "Try the call..."

CallDelegateCrashSafeMBS AddressOf TestMethod

System.DebugLog "Call succeeded!"

Catch c As DelegateCrashExceptionMBS

System.DebugLog "Caught exception!"
System.DebugLog c.Message

End Try
```

**Notes:**

We can catch the following conditions:

- Invalid pointer access
- Invalid instruction
- Floating point exception
- Wrong system call
- Broken pipe
- Bus error

We may crash ourselves on stack corruption and we print the stack trace to stderr for macOS and Linux for debugging.

If a crash is caught, there may be memory leaked as objects allocated in the called method are not freed. The call function can not be used recursively and only on one thread at the time.

### 145.3.2 Blog Entries

### 145.3.4 Methods

### 145.3.5 CallDelegateCrashSafeMBS(m as DelegateCrashSafeMBS)

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Calls a method that may crash.
**Example:**

```
Try

System.DebugLog "Try the call..."

CallDelegateCrashSafeMBS AddressOf TestMethod

System.DebugLog "Call succeeded!"

Catch c As DelegateCrashExceptionMBS

System.DebugLog "Caught exception!"
System.DebugLog c.Message
```

```
End Try
```

**Notes:**

Raises DelegateCrashExceptionMBS if a crash happens.

The call function can not be used recursively and only on one thread at the time.

### 145.3.6 Properties

### 145.3.7 CallCounter as Integer

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The number of calls made.
**Notes:** (Read only property)

### 145.3.8 CrashCounter as Integer

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The number of crashes caught.
**Notes:** (Read only property)

### 145.3.9 Delegates

### 145.3.10 DelegateCrashSafeMBS()

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The delegate definition for a simple method to call.

### 145.3.11 Xojo Developer Magazine

- 21.1, page 9

## 145.4 module CallDelegatesMBS

### 145.4.1 module CallDelegatesMBS

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module for the call delegate methods.
**Notes:** Only supported on Xojo 2013r1 and newer.

### 145.4.2 Blog Entries

- MBS Xojo Plugins, version 23.1pr5
- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.0

### 145.4.4 Methods

### 145.4.5 CallDelegateOnMainThreadMBS(m as _delegateMBS)

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a delegate on the main thread.
**Example:**

```
CallDelegateOnMainThreadMBS AddressOf testString, "Hello"
CallDelegateOnMainThreadMBS AddressOf testNumbers, 5, 6
CallDelegateOnMainThreadMBS AddressOf TestNoParameters
CallDelegateOnMainThreadMBS AddressOf Test, "4th call", 4
```

**Notes:**

We call the delegate on the main thread later with passing a parameter
Our plugin supports various combinations of up to 2 parameters of type string, variant, boolean, double, integer and object.
If you need more, please contact us.
Only supported on Xojo 2013r1 and newer.

If the method you call has optional parameters, you must pass all values or Xojo will throw a compile error.

### 145.4.6 CallDelegateOnPreemptiveThreadMBS(m as _delegateMBS) as Boolean

MBS Util Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Calls a delegate on a preemptive thread.
**Notes:**

Experimental function to play with preemptive-threads in Xojo apps.

Some rules:

- No objects, no strings, no arrays
- Use Ptr, not Memoryblocks
- Crashes in debugger, so only use in built app
- Use # Pragma BackgroundTasks False
- Use # Pragma BreakOnExceptions False
- Use # Pragma StackOverflowChecking False
- Use # Pragma NilObjectChecking False
- No exceptions
- Delegate must be stored in global variable to avoid it getting freed early.
- You can pass up to one ptr as data parameter.
- Declares may work, but should be pre-used to make sure they don't raise an exception and are loaded.

uses thread pool on iOS, macOS and Windows. Otherwise regular threads.
See also:

- 145.4.7 CallDelegateOnPreemptiveThreadMBS(m as _delegatePtrMBS, data as Ptr) as Boolean 23013

### 145.4.7 CallDelegateOnPreemptiveThreadMBS(m as _delegatePtrMBS, data as Ptr) as Boolean

MBS Util Plugin, Plugin Version: 23.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a delegate on a preemptive thread and passes a ptr.
**Notes:**

Experimental function to play with preemptive-threads in Xojo apps.

Some rules:

- No objects, no strings, no arrays
- Use Ptr, not Memoryblocks
- Crashes in debugger, so only use in built app
- Use # Pragma BackgroundTasks False
- Use # Pragma BreakOnExceptions False
- Use # Pragma StackOverflowChecking False
- Use # Pragma NilObjectChecking False
- No exceptions
- Delegate must be stored in global variable to avoid it getting freed early.
- You can pass up to one ptr as data parameter.
- Declares may work, but should be pre-used to make sure they don't raise an exception and are loaded.

uses thread pool on iOS, macOS and Windows. Otherwise regular threads.
See also:

- 145.4.6 CallDelegateOnPreemptiveThreadMBS(m as _delegateMBS) as Boolean 23013

## 145.5 Globals

### 145.5.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread after the given delay in seconds.
**Example:**

```
if CallMethodLaterMBS(window1, "Test", 5.0) then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with no parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 145.5.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean 23015
- 145.5.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 23016
- 145.5.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23017

### 145.5.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread after the given delay in seconds.
**Example:**

```
if CallMethodLaterMBS(window1, "Test", 4.0, "Hello") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with one variant parameter and no return values.

The method will be called later (Asyncronously) on the main thread after the given delay in seconds. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 145.5.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean 23015
- 145.5.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 23016
- 145.5.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23017

### 145.5.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread after the given delay in seconds.
**Example:**

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with two variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 145.5.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean 23015
- 145.5.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean 23015
- 145.5.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23017

### 145.5.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread after the given delay in seconds.
**Example:**

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with three variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.

- 145.5.9 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23020

### 145.5.9 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object.
**Example:**

```
if CallMethodMBS(window1, "Test", "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with three variant parameters and no return values.

Returns true on success and false on failure.

- 145.5.14 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23023

### 145.5.13 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread.
**Example:**

```
if CallMethodOnMainThreadMBS(window1, "Test", "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with two variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
Deprecated, please use CallDelegatesMBS.CallDelegateOnMainThreadMBS instead.
See also:

- 145.5.11 CallMethodOnMainThreadMBS(target as object, name as string) as boolean 23021
- 145.5.12 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant) as boolean 23021
- 145.5.14 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23023

### 145.5.14 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on the main thread.
**Example:**

```
if CallMethodOnMainThreadMBS(window1, "Test", "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Notes:**

The method must be declared on the given class for the target object with three variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
Deprecated, please use CallDelegatesMBS.CallDelegateOnMainThreadMBS instead.

### 145.5.15 Blog Entries

### 145.5.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on a new thread.
**Example:**

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with no parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 145.5.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23026

### 145.5.17 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on a new thread.
**Example:**

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with one variant parameter and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.

- 145.5.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean 23024
- 145.5.18 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean 23025
- 145.5.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23026

### 145.5.18 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on a new thread.
**Example:**

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with two variant parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.

- 145.5.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 23026

### 145.5.19 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calls a method on the target object on a new thread.
**Example:**

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The method must be declared on the given class for the target object with three variant parameters and no

return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.

### 145.5.21 GetDarwinVMStatisticsMBS as DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** Returns information about the current memory status on Mac OS X.
**Example:**

```
dim d as DarwinVMStatisticsMBS

d=GetDarwinVMStatisticsMBS

if d=nil then
msgBox "No Darwin running :-("
quit
else
dim lines(-1) as string

lines.Append format(d.pageins,"0")+" pageins"
lines.Append format(d.pageouts,"0")+" pageouts"
lines.Append format(d.pagesize,"0")+" pagesize"
```

```
lines.Append format(d.freepages,"0")+" freepages"
lines.Append format(d.activepages,"0")+" activepages"
lines.Append format(d.inactivepages,"0")+" inactivepages"
lines.Append format(d.wiredpages,"0")+" wiredpages"
lines.Append format(d.zerofillpages,"0")+" zerofillpages"
lines.Append format(d.reactivations,"0")+" reactivations"
lines.Append format(d.faults,"0")+" faults"
lines.Append format(d.cowfaults,"0")+" cowfaults"
lines.Append format(d.lookups,"0")+" lookups"
lines.Append format(d.hits,"0")+" hits"

MsgBox Join(lines,EndOfLine)
end if
```

### 145.5.22 GetDarwinResourceUsageMBS as DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Get information about resource utilization.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

**Notes:**

Returns nil on any error.
For more information type "man getrusage" in the Mac OS X Terminal.

### 145.5.23 SetThreadNameMBS(name as string)

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Sets the name of current thread.
**Example:**

```
SetThreadNameMBS "SQL Query Thread"
```

**Notes:** This is useful to see thread name in crash reports or sample reports.

### 145.5.24 Blog Entries

- MBS Xojo plug-ins in version 16.0
- Thread Names
- MBS Xojo / Real Studio Plugins, version 15.5pr2

### 145.5.25 CountProcessesMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Counts how many processes are running.
**Notes:**

Short for this function:

```
function CountProcesses as Integer
dim n as Integer
dim p as ProcessMBS

p=new ProcessMBS
p.getfirstProcess
n=1
while p.getnextProcess
n=n+1
wend

return n
end if
```

### 145.5.26 GetWindowsVMStatisticsMBS as WindowsVMStatisticsMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns information about the current memory status on Windows.
**Example:**

```
dim w as WindowsVMStatisticsMBS

w=GetWindowsVMStatisticsMBS
if w<>nil then

list.AddRow format(w.pagesize,"0")
list.AddRow format(w.memoryLoad,"0")
list.AddRow format(w.availablePageFileMemory,"0")
list.AddRow format(w.availablePhysicalMemory,"0")
```

```
list.AddRow format(w.availableVirtualMemory,"0")
list.AddRow format(w.totalPageFileMemory,"0")
list.AddRow format(w.totalPhysicalMemory,"0")
list.AddRow format(w.totalVirtualMemory,"0")

else

msgBox "No Windows memory statistics..."
quit
end if
```

## 145.6 class ConsoleApplication

### 145.6.1 class ConsoleApplication

Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

**Function:** Extends the ConsoleApplication class inside Xojo.

### 145.6.2 Methods

### 145.6.3 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: Console only.

**Function:** Queries arguments of process.
**Notes:**

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.6.4 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

**Function:** Returns the the ticks value at launch time.

**Example:**

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

**Notes:**

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.6.5 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

**Function:** If your application is a bundle, this function returns your own bundle.
**Notes:**

Returns nil on any error.
For console application, returns the bundle referencing the console app file.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.6.6 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

**Function:** Returns the shared NSApplication object.
**Notes:**

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

### 145.6.7 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Console only.

**Function:** Returns the current CPU time for the process.
**Example:**

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

**Notes:**

On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

## 145.7 class DarwinGroupListMBS

### 145.7.1 class DarwinGroupListMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The list of Groups on a Mac OS X system.
**Example:**

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

### 145.7.2 Methods

### 145.7.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The effective user ID of the calling process.
**Example:**

```
dim l as new DarwinGroupListMBS
MsgBox str(l.CurrentEffectiveUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.7.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real group ID of the calling process.
**Example:**

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

**Notes:** The real group ID is specified at login time.

### 145.7.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real user ID of the calling process.
**Example:**

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.7.6 Group(index as Integer) as DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** Returns the Group with the given index.
**Example:**

```
dim l as new DarwinGroupListMBS
dim c as Integer = l.Count-1
dim names(-1) as string
for i as Integer = 0 to c
dim g as DarwinGroupMBS = l.Group(i)
names.Append g.Name
next
MsgBox Join(names,EndOfLine)
```

### 145.7.7 Properties

### 145.7.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The number of Groups on this Mac OS X system.
**Example:**

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

**Notes:** (Read only property)

## 145.8 class DarwinGroupMBS

### 145.8.1 class DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** A class with information about a Group on Mac OS X.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

### 145.8.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

### 145.8.3 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

### 145.8.4 Methods

### 145.8.5 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The effective user ID of the calling process.
**Example:**

```
dim g as new DarwinGroupMBS
MsgBox "CurrentEffectiveUserID: "+str(G.CurrentEffectiveUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.8.6 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real group ID of the calling process.
**Example:**

```
dim g as new DarwinGroupMBS
MsgBox "CurrentGroupID: "+str(G.CurrentGroupID)
```

**Notes:** The real group ID is specified at login time.

### 145.8.7 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real user ID of the calling process.
**Example:**

```
dim g as new DarwinGroupMBS
MsgBox "CurrentUserID: "+str(G.CurrentUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.8.8 LoadGroupByID(Groupid as Integer)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** Fills the properties of this class with the values for the Group with the given ID.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

### 145.8.9 LoadGroupByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** Fills the properties of this class with the values for the given Group.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByName "staff"
MsgBox g.Name
```

### 145.8.10 UserName(index as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The Group ID of this Group.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID

dim c as Integer = g.UserCount-1
for i as Integer = 0 to c
MsgBox g.UserName(i)
next
```

### 145.8.11 Properties

### 145.8.12 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The group ID of the Group.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "GroupID: "+str(G.GroupID)
```

**Notes:** (Read only property)

### 145.8.13 Name as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The name of the Group.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "Name: "+g.Name
```

**Notes:** (Read only property)

### 145.8.14 Password as string

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The password for this group.
**Notes:** (Read only property)

### 145.8.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** whether the values in this class were filled correctly.
**Notes:** (Read only property)

### 145.8.16 UserCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

**Function:** The number of users in this group.
**Example:**

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "UserCount: "+str(G.UserCount)
```

**Notes:** (Read only property)

## 145.9 class DarwinResourceUsageMBS

### 145.9.1 class DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** A class for information about resource utilization.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

**Notes:** For more information type "man getrusage" in the Mac OS X Terminal.

### 145.9.2 Blog Entries

### 145.9.4 Properties

### 145.9.5 BlockInputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of block input operations.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockInputOperations)
```

**Notes:** (Read only property)

### 145.9.6 BlockOutputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of block output operations.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockOutputOperations)
```

**Notes:** (Read only property)

### 145.9.7 IntegralMaxResidentSetSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Integral max resident set size.
**Example:**

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

**Notes:**

Maximum memory usage of this app.
(Read only property)

### 145.9.8 IntegralSharedTextMemorySize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Integral shared text memory size.

**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralSharedTextMemorySize)
```

**Notes:** (Read only property)

### 145.9.9 IntegralUnsharedDataSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Integral unshared data size.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedDataSize)
```

**Notes:** (Read only property)

### 145.9.10 IntegralUnsharedStackSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Integral unshared stack size.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedStackSize)
```

**Notes:** (Read only property)

### 145.9.11 InvoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of involuntary context switches.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.InvoluntaryContextSwitches)
```

**Notes:** (Read only property)

### 145.9.12 MessagesReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of messages received.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesReceived)
```

**Notes:** (Read only property)

### 145.9.13 MessagesSent as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of messages sent.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesSent)
```

**Notes:** (Read only property)

### 145.9.14 PageFaults as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of page faults.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageFaults)
```

**Notes:** (Read only property)

### 145.9.15 PageReclaims as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of page reclaims.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageReclaims)
```

**Notes:** (Read only property)

### 145.9.16 SignalsReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of signals received.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SignalsReceived)
```

**Notes:** (Read only property)

### 145.9.17 Swaps as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of swaps.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.Swaps)
```

**Notes:** (Read only property)

### 145.9.18 SystemTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Seconds of system time used.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SystemTimeUsed)
```

**Notes:** (Read only property)

### 145.9.19 UserTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Seconds of user time used.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.UserTimeUsed)
```

**Notes:** (Read only property)

### 145.9.20 VoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Number of voluntary context switches.
**Example:**

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.VoluntaryContextSwitches)
```

**Notes:** (Read only property)

## 145.10 class DarwinTaskInfoMBS

### 145.10.1 class DarwinTaskInfoMBS

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** A class for your applications memory/resource usage.
**Example:**

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

- 3.6, page 6: News

### 145.10.3 Xojo Developer Magazine

- 3.6, page 6: News

### 145.10.4 Methods

### 145.10.5 Update as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Updates the values and returns true on success.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.UserTime)
call d.Update
MsgBox str(d.UserTime)
```

**Notes:** The constructor updates the values on creation of the object.

### 145.10.6 Properties

### 145.10.7 ContextSwitches as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of context switches.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.ContextSwitches)
```

**Notes:** (Read and Write property)

### 145.10.8 COWFaults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of copy-on-write faults.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.COWFaults)
```

**Notes:** (Read and Write property)

### 145.10.9 Faults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of page faults.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.Faults)
```

**Notes:** (Read and Write property)

### 145.10.10 MessagesReceived as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of messages received.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesReceived)
```

**Notes:** (Read and Write property)

### 145.10.11 MessagesSent as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of messages sent.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesSent)
```

**Notes:** (Read and Write property)

### 145.10.12 PageIns as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of actual pageins.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.PageIns)
```

**Notes:** (Read and Write property)

### 145.10.13 ResidentSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of resident pages.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.ResidentSize,"0")+" Bytes of physical memory."
```

**Notes:** (Read and Write property)

### 145.10.14 SuspendCount as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Suspend count for task.
**Example:**

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.SuspendCount)
```

**Notes:** (Read and Write property)

### 145.10.15 SystemCallsMach as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of mach system calls.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsMach,"0")+" system calls using the Mach Interface."
```

**Notes:** (Read and Write property)

### 145.10.16 SystemCallsUnix as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of unix system calls.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsUnix,"0")+" system calls using the Unix Interface."
```

**Notes:** (Read and Write property)

### 145.10.17 SystemTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Total system run time.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.SystemTime,"0")+" seconds of CPU time."
```

**Notes:** (Read and Write property)

### 145.10.18 UserTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Total user run time.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.UserTime,"0")+" seconds of CPU time."
```

**Notes:** (Read and Write property)

### 145.10.19 VirtualSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Platform: macOS, Targets: All.

**Function:** Number of virtual pages.
**Example:**

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.VirtualSize,"0")+" Bytes of the 4 GB address space."
```

**Notes:** (Read and Write property)

## 145.11 class DarwinUserListMBS

### 145.11.1 class DarwinUserListMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The list of users on a Mac OS X system.
**Example:**

```
// find the short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer

// requires MachO target
declare function getuid lib "System" () as Integer

uid=getuid

d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.UserID=uid then
MsgBox p.Name
end if
next
```

### 145.11.2 Methods

### 145.11.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The effective user ID of the calling process.
**Example:**

```
dim l as new DarwinUserListMBS
MsgBox "CurrentEffectiveUserID: "+str(l.CurrentEffectiveUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to de-

termine the real-user-id of the calling process.

### 145.11.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real group ID of the calling process.
**Example:**

```
dim l as new DarwinUserListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

**Notes:** The real group ID is specified at login time.

### 145.11.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real user ID of the calling process.
**Example:**

```
dim l as new DarwinUserListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.11.6 User(index as Integer) as DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Returns the user with the given index.
**Example:**

```
// find short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer
```

```
u=SystemInformationMBS.Username
d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.LongName=u then
MsgBox p.Name
end if
next
```

### 145.11.7 Properties

### 145.11.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The number of users on this Mac OS X system.
**Example:**

```
dim l as new DarwinUserListMBS
MsgBox "Number of users: "+str(l.Count)
```

**Notes:** (Read only property)

## 145.12 class DarwinUserMBS

### 145.12.1 class DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** A class with information about a user on Mac OS X.
**Example:**

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox l.Name+": "+l.LongName
```

### 145.12.2 Methods

### 145.12.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The effective user ID of the calling process.
**Example:**

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentEffectiveUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.12.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real group ID of the calling process.
**Example:**

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentGroupID)
```

**Notes:** The real group ID is specified at login time.

### 145.12.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Platform: macOS, Targets: All.

**Function:** The real user ID of the calling process.
**Example:**

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentUserID)
```

**Notes:** The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

### 145.12.6 LoadUserByID(userid as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Fills the properties of this class with the values for the user with the given ID.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Name
```

### 145.12.7 LoadUserByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** Fills the properties of this class with the values for the given user.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

### 145.12.8 Properties

### 145.12.9 AccountExpireTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The time when the account will expire.
**Notes:** (Read only property)

### 145.12.10 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The group ID of the user.
**Example:**

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox str(l.GroupID)
```

**Notes:** (Read only property)

### 145.12.11 HomePath as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The home path of the user.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.HomePath
```

**Notes:** (Read only property)

### 145.12.12 LastPasswordChangeTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The last time when the user changed the password.
**Notes:** (Read only property)

### 145.12.13 LongName as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The long name of the user.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

**Notes:** (Read only property)

### 145.12.14 Name as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The short name of the user.
**Example:**

```
dim l as new DarwinUserListMBS

dim c as Integer = l.Count-1
for i as Integer = 0 to c
dim u as DarwinUserMBS = l.User(i)
if u.UserID = l.CurrentUserID then
MsgBox "our user name: "+u.Name
end if
next
```

**Notes:** (Read only property)

### 145.12.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** whether the values in this class were filled correctly.
**Notes:** (Read only property)

### 145.12.16 Shell as string

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The path to the default shell for this user.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Shell
```

**Notes:** (Read only property)

### 145.12.17 UserID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

**Function:** The user ID of this user.
**Example:**

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox str(l.UserID)
```

**Notes:** (Read only property)

## 145.13 class DarwinVMStatisticsMBS

### 145.13.1 class DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** Holds information about the current Mac OS X memory status.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)+" page ins"
```

### 145.13.2 Properties

### 145.13.3 ActivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The total number of pages currently in use and pageable.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ActivePages)
```

**Notes:** (Read only property)

### 145.13.4 CowFaults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The number of faults that caused a page to be copied (generally caused by copy-on-write faults).
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CowFaults)
```

**Notes:** (Read only property)

### 145.13.5 CPUTicksIdle as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

**Function:** The number of time slices used by the Idle process.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksIdle)
```

**Notes:**

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

### 145.13.6 CPUTicksNice as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

**Function:** The number of time slices used by the task switcher process.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksNice)
```

**Notes:**

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

### 145.13.7 CPUTicksSystem as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

**Function:** The number of time slices used by the system processes.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksSystem)
```

**Notes:**

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

### 145.13.8 CPUTicksUser as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Platform: macOS, Targets: All.

**Function:** The number of time slices used by the user application processes.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksUser)
```

**Notes:**

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

### 145.13.9 Faults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The number of times the "vm_fault" routine has been called.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Faults)
```

**Notes:** (Read only property)

### 145.13.10 FreePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The total number of free pages in the system.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.FreePages)
```

**Notes:** (Read only property)

### 145.13.11 Hits as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The hit count.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Hits)
```

**Notes:** (Read only property)

### 145.13.12 InactivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The total number of pages on the inactive list.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.InactivePages)
```

**Notes:** (Read only property)

### 145.13.13 Lookups as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The count of lookups.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Lookups)
```

**Notes:** (Read only property)

### 145.13.14 PageIns as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The number of requests for pages from a pager (such as the inode pager).
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)
```

**Notes:** (Read only property)

### 145.13.15 PageOuts as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The number of pages that have been paged out.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.PageOuts)
```

**Notes:** (Read only property)

### 145.13.16 Pagesize as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The size of one memory page in memory.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Pagesize)
```

**Notes:**

On PowerPC CPUs, it should be 4096 Bytes.
(Read only property)

### 145.13.17 Reactivations as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** the total number of pages that have been moved from the inactive list to the active list (reactivated).
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Reactivations)
```

**Notes:** (Read only property)

### 145.13.18 WiredPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The total number of pages wired down. That is, pages that cannot be paged out.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.WiredPages)
```

**Notes:** (Read only property)

### 145.13.19 ZeroFillPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Platform: macOS, Targets: All.

**Function:** The total number of pages that have been zero-filled on demand.
**Example:**

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ZeroFillPages)
```

**Notes:** (Read only property)

## 145.14 class DelegateCrashExceptionMBS

### 145.14.1 class DelegateCrashExceptionMBS

MBS Util Plugin, Plugin Version: 23.0, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The exception raised when a delegate call crashes.
**Notes:**

Raised in CallDelegateCrashSafeMBS function.
Message defines what caused the crash and ErrorNumber is the signal number (platform dependent!).

Message contains the reason, e.g.

- Delegate crashed with invalid pointer access.
- Delegate crashed with illegal instruction.
- Delegate crashed with floating point error.
- Delegate crashed with wrong system call.
- Delegate crashed with broken pipe.
- Delegate crashed with memory bus error.

Subclass of the RuntimeException class.

- Crash Protection for Xojo methods
- MBS Xojo Plugins, version 22.6pr1

## 145.15 class DesktopApplication

### 145.15.1 class DesktopApplication

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Extends the Application class inside Xojo.

### 145.15.2 Methods

### 145.15.3 ApplicationNameMBS as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the name of the application.
**Example:**

msgbox "Hi. This application is named "+app.ApplicationNameMBS

**Notes:** This may not be the exact same name than the filename.

### 145.15.4 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Queries arguments of process.
**Notes:**

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

### 145.15.5 Blog Entries

- Console and GUI in one project
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.2
- MBS Xojo / Real Studio Plugins, version 15.2pr1

- 13.5, page 8: News

### 145.15.7 BundleFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns a folderitem to the bundle's mail folder.

### 145.15.8 Blog Entries

- MBS Real Studio Plugins, version 13.0pr9

### 145.15.9 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the localized string for the given key from the default table.
**Notes:** A short version for BundleLocalizedString which uses the default table.
See also:

- 145.15.10 BundleLocalizedStringMBS(key as string,fromtable as string) as string 23068

### 145.15.10 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the localized string for the given key and table.
**Example:**

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
dim s as string

s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
end if

return s
```

```
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

**Notes:**

The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 145.15.9 BundleLocalizedStringMBS(key as string) as string 23068

### 145.15.11 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Searches inside the application bundle for a file.
**Example:**

```
dim f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

**Notes:**

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

### 145.15.12 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns a folderitem to the resource file inside the bundle.
**Example:**

```
Dim f As FolderItem = App.BundleResourceFolderMBS
```

```
If f = Nil Then
MsgBox "Failed?"
Else
MsgBox f.NativePath
End If
```

### 145.15.13 Blog Entries

- MBS Xojo Plugins, version 21.4pr2
- MBS Real Studio Plugins, version 13.0pr9

### 145.15.14 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Hides the current application.
**Notes:** Returns true if the current application was hidden.

### 145.15.15 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Hides all applications except the current one.
**Notes:** Returns true if the other applications were hidden.

### 145.15.16 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the the ticks value at launch time.
**Example:**

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

**Notes:**

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

### 145.15.17 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** If your application is a bundle, this function returns your own bundle.
**Notes:**

Returns nil on any error.

Works for Console, Desktop and Web projects.

### 145.15.18 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the shared NSApplication object.
**Notes:**

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects.

### 145.15.19 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** Returns the current CPU time for the process.
**Example:**

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

**Notes:**

On Mac OS X, the OS counts how much CPU time in given to the current process.
Returns -1 in case of an error.

### 145.15.20 Properties

### 145.15.21 FrontmostMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns true if the application is frontmost.
**Example:**

app.frontmostmbs=True 'bring app to front

**Notes:**

This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows, too. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

## 145.16 class EnvironmentMBS

### 145.16.1 class EnvironmentMBS

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Allows you to access system wide environment properties.

### 145.16.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

### 145.16.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

### 145.16.4 Methods

### 145.16.5 Add(name as string,value as string) as boolean

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Add a property to the list.
**Example:**

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
if e.add("authorname","Christian") then
msgbox "ok"
else
msgbox "fail"
end if
```

**Notes:** Setting this value to some new value will currently only change this value for your application and all child applications.

### 145.16.6 Get(name as string) as string

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns the value for a named property.
**Example:**

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox e.get("windir") // normally c:\windows
```

### 145.16.7 Lines as string()

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: All.

**Function:** Returns array of definition lines of environment variables.
**Example:**

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

**Notes:** Returned strings are in format "name=value".

### 145.16.8 Name(Index as Integer) as string

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns the name of the environment propertie number n.

### 145.16.9 Names as string()

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: All.

**Function:** Returns array of names of environment variables.
**Example:**

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

### 145.16.10 Update

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Updates the object to the current environment properties.
**Notes:** This method is called by the constructor and the methods which change the environment properties.

### 145.16.11 Properties

### 145.16.12 Count as Integer

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns the number of environment properties.
**Example:**

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox str(e.count)
```

**Notes:** (Read only property)

### 145.16.13 Value(Index as Integer) as string

MBS Util Plugin, Platform: Windows, Targets: All.

**Function:** Returns the value of the environment propertie number n.
**Notes:**

Setting this value to some new value will currently only change this value for your application and all child applications.
(Read and Write computed property)

## 145.17 class MutexMBS

### 145.17.1 class MutexMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for a mutex.
**Notes:**

This is the mutex class the threadMBS class is using internally.
A mutex is not locked by default.

### 145.17.4 Methods

### 145.17.5 Lock

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Locks the mutex.
**Example:**

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."

m.Unlock
```

```
MsgBox "Released mutex."
```

**Notes:**

The function returns as soon as it has access to the mutex.

Always use Lock and Unlock in a pair.

### 145.17.6 TryLock as boolean

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Locks the mutex if possible.
**Example:**

```
dim m as new MutexMBS

if m.TryLock then
MsgBox "Got mutex."

m.Unlock
else
MsgBox "Failed to get mutex."
end if
```

**Notes:**

Returns true if we got a lock and false if not.
Always use Lock and Unlock in a pair.

### 145.17.7 Unlock

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unlocks the mutex.
**Example:**

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."
```

```
m.Unlock
MsgBox "Released mutex."
```

**Notes:** Always use Lock and Unlock in a pair.

### 145.17.8 Properties

### 145.17.9 Handle as Integer

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal used reference to the native mutex object.
**Example:**

```
dim m as new MutexMBS
MsgBox "Handle: "+hex(m.Handle)
```

**Notes:**

Windows Mutex or PThread Mutex.
(Read and Write property)

### 145.17.10 Tag as Variant

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An object reference for your use.
**Notes:**

Just for convenience.
This property was added so you can use this property for a reference so you won't need to subclass this class and add custom properties.
(Read and Write property)

# 145.18 class NamedMutexMBS

## 145.18.1 class NamedMutexMBS

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a named mutex.
**Notes:**

Using a mutex on Windows and a semaphore on MacOS and Linux.

Raises UnsupportedOperationException exceptions if something fails.

## 145.18.2 Blog Entries

- New in the MBS Xojo Plugins Version 20.2

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.2
- MBS Xojo Plugins, version 20.2pr2

## 145.18.4 Methods

## 145.18.5 Constructor(Name as string)

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor to create a new mutex.
**Notes:**

Name should be a simple text, but unique, so we recommend reverse domain notation.
The name should not contain a slash.
If mutex exists already, we open it. The mutex lives until the last application closed it.

If name matches the name of an existing event, semaphore, waitable timer, job, or file-mapping object, the function fails.

Raises an UnsupportedOperationException on failure.

You can open the same mutex twice and get different Xojo objects from the plugin for both.

### 145.18.6 Lock

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Locks the mutex.
**Notes:**

Blocks until mutex is locked.
Please call Unlock later to unlock.

To avoid you looking up the app, we limit locking to one minute. After that you get a timeout error.

### 145.18.7 TryLock as boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Tries to lock the mutex.
**Notes:**

Returns true if locked or false if the lock can't be set.
If false is returned another app may have a lock currently.
Please call Unlock later to unlock if you get back true.

### 145.18.8 Unlock

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unlocks the mutex.

### 145.18.9 Properties

### 145.18.10 Handle as Integer

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 145.18.11 Name as String

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the mutex.
**Notes:** (Read only property)

### 145.18.12 Tag as Variant

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The tag value.
**Notes:**

You can use it as you like to store whatever value is needed.
(Read and Write property)

## 145.19 class NSProcessInfoActivityMBS

### 145.19.1 class NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The class for an activity.
**Example:**

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

**Notes:**

For Windows, please check WindowsThreadExecutionStateMBS to prevent system sleep.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 145.19.2 Methods

### 145.19.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Private constructor.

### 145.19.4 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The destructor.
**Notes:** If you missed to call endActivity, the destructor will do it.

### 145.19.5 Properties

### 145.19.6 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 145.19.7 Options as Integer

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

**Function:** The options used to create activity.
**Notes:** (Read and Write property)

### 145.19.8 Reason as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

**Function:** The reason used to create the activity.
**Notes:** (Read and Write property)

## 145.20 class NSProcessInfoMBS

### 145.20.1 class NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** The NSProcessInfo class provides methods to access information about the current process.
**Notes:**

Each process has a single, shared NSProcessInfo object, known as process information agent.

The process information agent can return such information as the arguments, environment variables, host name, or process name. The processInfo class method returns the shared agent for the current process,Äîthat is, the process whose object sent the message. For example, the following line returns the NSProcessInfo object, which then provides the name of the current process:

```
dim processInfo as new NSProcessInfoMBS
dim processName as string = processInfo.processName
```

The NSProcessInfo class also includes the operatingSystem method, which returns an enum constant identifying the operating system on which the process is executing.

NSProcessInfo objects attempt to interpret environment variables and command-line arguments in the user's default C string encoding if they cannot be converted to Unicode as UTF-8 strings. If neither conversion works, these values are ignored by the NSProcessInfo object.

For Windows, please check WindowsThreadExecutionStateMBS to prevent system sleep.

### 145.20.5 Xojo Developer Magazine

- 19.5, page 9: News

### 145.20.6 Methods

### 145.20.7 argument(index as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns the command-line argument for the process with the given index.
**Example:**

```
dim p as new NSProcessInfoMBS

dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

### 145.20.8 arguments as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Returns the command-line arguments for the process.
**Notes:** Returns array of strings with the process's command-line arguments.

### 145.20.9 beginActivity(options as Integer, reason as string) as NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Begin an activity using the given options and reason.
**Example:**

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

**Notes:**

options: Options for the activity. See constants for possible values.
reason: A string used in debugging to indicate the reason the activity began.

Returns an object token representing the activity.

Indicate completion of the activity by calling endActivity passing the returned object as the argument.
Available in OS X v10.9 and later.

For Windows, please check WindowsThreadExecutionStateMBS to prevent system sleep.

### 145.20.10 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

**Function:** The constructor.

### 145.20.11 disableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Decrement the counter tracking the number of automatic quit opt-out requests.
**Notes:**

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic termination.
An example of using this would be disabling autoquitting when the user of an instant messaging application signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive.
Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

### 145.20.12 disableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Disables the application for quickly klling using sudden termination.
**Notes:**

This method increments the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

### 145.20.13 enableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Increment the counter tracking the number of automatic quit opt-out requests.
**Notes:**

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic termination.
An example of using this would be disabling autoquitting when the user of an instant messaging application

signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive. Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

### 145.20.14 enableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Enables the application for quick killing using sudden termination.
**Notes:**

This method decrements the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

### 145.20.15 endActivity(activity as NSProcessInfoActivityMBS)

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** Ends the given activity.
**Notes:**

activity: An activity object returned by beginActivity.
Available in OS X v10.9 and later.

### 145.20.16 NSActivityLatencyCritical as UInt64

MBS MacCocoa Plugin, Plugin Version: 13.5, Platform: macOS, Targets: All.

**Function:** One of the activity option constants.
**Notes:**

Flag to indicate the activity requires the highest amount of timer and I/O precision available.
Important: Very few applications should need to use this constant.
Available in OS X v10.9 and later.
Value is & hFF00000000.

### 145.20.17 NSProcessInfoThermalStateDidChangeNotification as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Platform: macOS, Targets: All.

**Function:** The notification name to use with NSNotificationObserverMBS.
**Notes:**

This notification is posted once the thermal state of the system has changed. Once the notification is posted, use the thermalState property to retrieve the current thermal state of the system.

You can use this opportunity to take corrective action in your application to help cool the system down. Work that could be done in the background or at opportunistic times should be using the Quality of Service levels in NSOperation or the NSBackgroundActivityScheduler API.

This notification is posted on the global dispatch queue. Register for it using the default notification center. The object associated with the notification is NSProcessInfoMBS.processInfo.

### 145.20.18 operationSystemVersion(byref Major as Integer, byref Minor as Integer, byref Patch as Integer)

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Queries operation system version.
**Notes:** One call to get all three parts.

### 145.20.19 processInfo as NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

**Function:** Returns the process information agent for the process.

### 145.20.20 Properties

### 145.20.21 activeProcessorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Provides the number of active processing cores available on the computer.
**Example:**

```
dim p as new NSProcessInfoMBS
```

```
MsgBox str(p.activeProcessorCount)
```

**Notes:**

Available in Mac OS X v10.5 and later.
(Read only property)

### 145.20.22 argumentsCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** The number of the command-line arguments.
**Example:**

```
dim p as new NSProcessInfoMBS

dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

**Notes:** (Read only property)

### 145.20.23 automaticTerminationSupportEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Marks the calling app as supporting automatic termination.
**Notes:**

Without calling this or setting the equivalent Info.plist key (NSSupportsAutomaticTermination), the above methods (disableAutomaticTermination/enableAutomaticTermination) have no effect, although the counter tracking automatic termination opt-outs is still kept up to date to ensure correctness if this is called later. Currently, passing false has no effect.
This should be called during applicationDidFinishLaunching or earlier.
(Read and Write property)

### 145.20.24 environment as dictionary

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns the variable names and their values in the environment from which the process was launched.
**Example:**

```
dim p as new NSProcessInfoMBS
dim d as Dictionary = p.environment
MsgBox str(d.Count)
```

**Notes:** (Read only property)

### 145.20.25 globallyUniqueString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns a global unique identifier for the process.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox p.globallyUniqueString // shows for example "072EC09A-4825-11DD-BDC0-001D4F46F5E0-18405-00000CA853EB5B46"
```

**Notes:**

Returns the Global ID for the process. The ID includes the host name, process ID, and a time stamp, which ensures that the ID is unique for the network.

This method generates a new string each time it is invoked, so it also uses a counter to guarantee that strings created from the same process are unique.
(Read only property)

### 145.20.26 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** The internal reference to the NSProcessInfo object.
**Notes:** (Read and Write property)

### 145.20.27 hostName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns the name of the host computer.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox p.hostName // for example "iMac.local"
```

**Notes:** (Read only property)

### 145.20.28 isiOSAppOnMac as Boolean

MBS MacCocoa Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** A Boolean value that indicates whether the process is an iPhone or iPad app running on a Mac.
**Notes:**

The value of this property is true only when the process is an iOS app running on a Mac. The value of the property is false for all other apps on the Mac, including Mac apps built using Mac Catalyst. The property is also false for processes running on platforms other than macOS.
(Read only property)

### 145.20.29 isLowPowerModeEnabled as Boolean

MBS MacCocoa Plugin, Plugin Version: 21.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Retrieve the current setting of the system for the low power mode setting.
**Notes:**

On systems where the low power mode is unknown or unsupported, the value returned from the lowPowerModeEnabled property is always false.
Returns true if low power mode is enabled for macOS 12 or iOS 9 and newer.
(Read only property)

### 145.20.30 operatingSystem as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns a constant to indicate the operating system on which the process is executing.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

**Notes:**

Operating system identifier. See "Constants" for a list of possible values. In Mac OS X, it's NSMACHOperatingSystem.
(Read only property)

### 145.20.31 operatingSystemName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns a string containing the name of the operating system on which the process is executing.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemName // shows "NSMACHOperatingSystem"
```

**Notes:**

Operating system name. In Mac OS X, it's "NSMACHOperatingSystem"
(Read only property)

### 145.20.32 operatingSystemVersionString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns a string containing the version of the operating system on which the process is executing.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemVersionString // "Version 10.5.4 (Build 9E17)"
```

**Notes:**

Returns the Operating system version. This string is human readable, localized, and is appropriate for displaying to the user. This string is not appropriate for parsing.
(Read only property)

### 145.20.33 operationSystemVersionMajor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Queries major OS version.
**Notes:** (Read only property)

### 145.20.34 operationSystemVersionMinor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Queries minor OS version.
**Notes:** (Read only property)

### 145.20.35 operationSystemVersionPatch as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

**Function:** Queries OS version patch level.
**Notes:** (Read only property)

### 145.20.36 physicalMemory as UInt64

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Provides the amount of physical memory on the computer.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox str(p.physicalMemory)
```

**Notes:**

Available in Mac OS X v10.5 and later.
(Read only property)

### 145.20.37 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Returns the identifier of the process.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox str(p.processIdentifier)
```

**Notes:** (Read only property)

### 145.20.38 processName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** The name of the process.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox p.processName
```

**Notes:**

The process name is used to register application defaults and is used in error messages. It does not uniquely identify the process.

You can assign a new value, but:
User defaults and other aspects of the environment might depend on the process name, so be very careful if you change it. Setting the process name in this manner is not thread safe.
(Read and Write property)

### 145.20.39 processorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Platform: macOS, Targets: All.

**Function:** Provides the number of processing cores available on the computer.
**Example:**

```
dim p as new NSProcessInfoMBS
```

```
MsgBox str(p.processorCount)
```

**Notes:**

Available in Mac OS X v10.5 and later.
(Read only property)

### 145.20.40 systemUptime as Double

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

**Function:** Returns the how long it has been since the computer has been restarted.
**Notes:**

Returns an NSTimeInterval indicating how long system the computer has been restarted.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.20.41 thermalState as Integer

MBS MacCocoa Plugin, Plugin Version: 15.1, Platform: macOS, Targets: All.

**Function:** Retrieve the current thermal state of the system.
**Example:**

```
dim n as NSProcessInfoMBS = NSProcessInfoMBS.processInfo

Select case n.thermalState
case n.NSProcessInfoThermalStateNominal
MsgBox "Thermal State: Nominal"
case n.NSProcessInfoThermalStateFair
MsgBox "Thermal State: Fair"
case n.NSProcessInfoThermalStateSerious
MsgBox "Thermal State: Serious"
case n.NSProcessInfoThermalStateCritical
MsgBox "Thermal State: Critical"
else
MsgBox "Thermal State: Unknown"
end Select
```

**Notes:**

On systems where thermal state is unknown or unsupported, the value returned from the thermalState

property is always NSProcessInfoThermalStateNominal.

Available in Mac OS X 10.10.3 and newer.
Returns -1 if function is called on older Mac OS X versions, Linux or Windows.
(Read only property)

### 145.20.42 Constants

### 145.20.43 NSActivityAutomaticTerminationDisabled = & h8000

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to prevent automatic termination.
Available in OS X v10.9 and later.

### 145.20.44 NSActivityBackground = & h000000FF

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to indicate the app has initiated some kind of work, but not as the direct result of user request.
Available in OS X v10.9 and later.

### 145.20.45 NSActivityIdleDisplaySleepDisabled = & h10000000000

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to require the screen to stay powered on.
Available in OS X v10.9 and later.

### 145.20.46 NSActivityIdleSystemSleepDisabled = & h100000

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to prevent idle sleep.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

### 145.20.47 NSActivitySuddenTerminationDisabled = & h4000

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to prevent sudden termination.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

### 145.20.48 NSActivityUserInitiated = & h00FFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to indicate the app is performing a user-requested action.
Available in OS X v10.9 and later.

### 145.20.49 NSActivityUserInitiatedAllowingIdleSystemSleep = & h00EFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5.

**Function:** One of the activity option constants.
**Notes:**

Flag to indicate the app is performing a user-requested action, but that the system can sleep on idle.
Available in OS X v10.9 and later.

### 145.20.50 NSHPUXOperatingSystem=4

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Notes:** Indicates the HP UX operating system.

### 145.20.51 NSMACHOperatingSystem=5

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Example:**

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

**Notes:** Indicates the Mac OS X operating system.

### 145.20.52 NSOSF1OperatingSystem=7

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Notes:** Indicates the OSF/1 operating system.

### 145.20.53 NSProcessInfoThermalStateCritical = 3

MBS MacCocoa Plugin, Plugin Version: 15.1.

**Function:** One of the constants describing the current thermal state of the system.
**Notes:** System performance is significantly impacted and the Mac needs to cool down. Recommendation: reduce application's usage of CPU, GPU, and I/O to the minimum level needed to respond to user actions. Consider stopping use of camera and other peripherals if your application is using them.

### 145.20.54 NSProcessInfoThermalStateFair = 1

MBS MacCocoa Plugin, Plugin Version: 15.1.

**Function:** One of the constants describing the current thermal state of the system.

**Notes:** The system has reached a state where fans may become audible.

### 145.20.55 NSProcessInfoThermalStateNominal = 0

MBS MacCocoa Plugin, Plugin Version: 15.1.

**Function:** One of the constants describing the current thermal state of the system.
**Notes:** No corrective action is needed.

### 145.20.56 NSProcessInfoThermalStateSerious = 2

MBS MacCocoa Plugin, Plugin Version: 15.1.

**Function:** One of the constants describing the current thermal state of the system.
**Notes:** Fans are running at maximum speed, system performance maybe impacted. Recommendation: reduce application's usage of CPU, GPU and I/O, if possible. Switch to lower quality visual effects, reduce frame rates.

### 145.20.57 NSSolarisOperatingSystem=3

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Notes:** Indicates the Solaris operating system.

### 145.20.58 NSSunOSOperatingSystem=6

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Notes:** Indicates the Sun OS operating system.

### 145.20.59 NSWindows95OperatingSystem=2

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.

**Notes:** Indicates the Windows 95 operating system.

### 145.20.60 NSWindowsNTOperatingSystem=1

MBS MacCocoa Plugin, Plugin Version: 8.4.

**Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
**Notes:** Indicates the Windows NT operating system.

## 145.21 class NSRunningApplicationMBS

### 145.21.1 class NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** NSRunningApplication is a class to manipulate and provide information for a single instance of an application.
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

**Notes:**

Only user applications are tracked; this does not provide information about every process on the system.
Some properties of an application are fixed, such as the bundle identifier. Other properties may vary over time, such as whether the app is hidden. Properties that vary can be observed with key-value observing, in which case the description comment for the method notes this capability.
Properties that vary over time are inherently race-prone. For example, a hidden app may unhide itself at any time. To ameliorate this, properties persist until the next turn of the main run loop in a common mode. For example, if you repeatedly poll an unhidden app for its hidden property without allowing the run loop to run, it will continue to return false, even if the app hides, until the next turn of the run loop.
NSRunningApplication is thread safe, in that its properties are returned atomically. However, it is still subject to the main run loop policy described above. If you access an instance of NSRunningApplication from a background thread, be aware that its time-varying properties may change from under you as the main run loop runs (or not).
An NSRunningApplication instance remains valid after the application exits. However, most properties lose their significance, and some properties may not be available on a terminated application.

Requires Mac OS X 10.6.

### 145.21.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr5
- MBS Real Studio Plugins, version 11.3pr9

### 145.21.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr5
- MBS Real Studio Plugins, version 11.3pr9

### 145.21.4 Methods

### 145.21.5 activateWithOptions(options as Integer) as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to activate the application using the specified options.
**Notes:**

options: The options to use when activating the application. See "NSApplicationActivationOptions" for the possible values.

Returns true if the application was activated successfully, otherwise false.

This method will return false if the application has quit, or is not a type of application than can be activated.

Available in Mac OS X v10.6 and later.

### 145.21.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The constructor.
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

**Notes:**

Initializes the object with the current application.
Available in Mac OS X v10.6 and later.

### 145.21.7 currentApplication as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an NSRunningApplication representing this application.
**Example:**

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication
```

MsgBox n.localizedName

**Notes:** Available in Mac OS X v10.6 and later.

### 145.21.8 forceTerminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to force the receiver to quit.
**Notes:**

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the forceTerminate message is sent to the receiver.

This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

### 145.21.9 hide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to hide or the application.
**Example:**

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication

MsgBox str(n.hide) // hide me
```

**Notes:**

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.
Available in Mac OS X v10.6 and later.

### 145.21.10 runningApplications as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of NSRunningApplication representing the running applications.
**Example:**

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplications
dim s(-1) as string

for each r as NSRunningApplicationMBS in n
s.Append r.localizedName
next

MsgBox Join(s,EndOfLine)
```

**Notes:**

Returns an array of NSRunningApplication instances.

The order of the array is unspecified, but it is stable, meaning that the relative order of particular applications will not change across multiple calls to runningApplications. See NSRunningApplication Class Reference for more information on NSRunningApplication.
Similar to the NSRunningApplication classes's properties, this property will only change when the main run loop is run in a common mode. Instead of polling, use key-value observing to be notified of changes to this array property.
This property is thread safe, in that it may be called from background threads and the result is returned atomically.

This list is not updated in a tight loop. For receiving updates, you need to have the runloop run (e.g. check regularly in a timer).

### 145.21.11 runningApplicationsWithBundleIdentifier(bundleID as string) as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of currently running applications with the specified bundle identifier.
**Example:**

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplicationsWithBundleIdentifier("com.apple.iTunes")

if UBound(n)>=0 then
MsgBox n(0).localizedName
```

```
else
MsgBox "iTunes is not running?"
end if
```

**Notes:**

An array of NSRunningApplications, or an empty array if no applications match the bundle identifier.
Available in Mac OS X v10.6 and later.

### 145.21.12 runningApplicationWithProcessIdentifier(pid as Integer) as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the running application with the given process identifier, or nil if no application has that pid.
**Example:**

```
dim n as NSRunningApplicationMBS
dim pid as Integer

while n=nil
pid=pid+1
n=NSRunningApplicationMBS.runningApplicationWithProcessIdentifier(pid)
wend

MsgBox n.localizedName+" has PID "+str(pid)
```

**Notes:**

pid: The process identifier.

Returns an instance of NSRunningApplication for the specified pid, or nil if the application has no process identifier.

Applications that do not have PIDs cannot be returned from this method.
Available in Mac OS X v10.6 and later.

### 145.21.13 terminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to quit the receiver normally.
**Notes:**

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the terminate message is sent to the receiver.
This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

### 145.21.14 unhide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to unhide or the application.
**Notes:**

Returns true if the application was successfully shown, otherwise false.

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.

Available in Mac OS X v10.6 and later.

### 145.21.15 Properties

### 145.21.16 activationPolicy as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the activation policy of the application. (read-only)
**Notes:**

The value returned by this property is usually fixed, but it may change through a call to activateWithOptions.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.17 active as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether the application is currently frontmost. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.active)
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.18 bundleIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the CFBundleIdentifier of the application. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleIdentifier
```

**Notes:**

The value of this property will be nil if the application does not have an Info.plist.
(Read only property)

### 145.21.19 bundleURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the URL to the application's bundle. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleURL
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.20 executableArchitecture as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the URL to the application's executable. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.executableArchitecture) // shows 7
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.21 executableURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the URL to the application's executable. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.executableURL
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.22 finishedLaunching as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether the receiver's process has finished launching, (read-only)
**Notes:**

The value of this property corresponds to the running application having received an NSApplicationDidFinishLaunchingNotification notification internally. Some applications do not post this notification (applications that do not rely on NSApplication) and so are never reported as finished launching.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.23 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal reference to the NSRunningApplication object.
**Notes:** (Read and Write property)

### 145.21.24 hidden as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates whether the application is currently hidden. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.hidden)
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.25 icon as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the icon for the receiver's application. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

dim i as NSImageMBS = n.icon
```

```
// without this call the size is 32x32 Pixel
i.setSize 512,512

Backdrop = i.CopyPictureWithMask
```

**Notes:**

Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.26 launchDate as date

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the date when the application was launched. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.launchDate.ShortTime
```

**Notes:**

This property is not available for all applications. Specifically, it is not available for applications that were launched not launched by LaunchServices.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.27 launchDateTime as DateTime

MBS MacCocoa Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the date when the application was launched. (read-only)
**Notes:**

This property is not available for all applications. Specifically, it is not available for applications that were launched not launched by LaunchServices.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.28 localizedName as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the localized name of the application. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

**Notes:**

The value of this property is dependent on the current localization of the application and is suitable for presentation to the user.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.29 ownsMenuBar as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns whether the application owns the current menu bar.
**Example:**

```
// put in a timer...
dim r as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication
window1.Title = str(r.ownsMenuBar)
```

**Notes:**

Available in Mac OS X v10.7 and later.
(Read only property)

### 145.21.30 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates the process identifier (pid) of the application. (read-only)
**Example:**

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.processIdentifier)
```

**Notes:**

Not all applications have a pid. Applications without a return a value of -1.
Do not rely on this for comparing processes, instead compare NSRunningApplication instances using isEqual:.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.31 terminated as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Indicates that the receiver's application has terminated. (read-only)
**Notes:**

The value of terminated is true if the receiver's application has terminated, otherwise false.
This property is observable using key-value observing.
Available in Mac OS X v10.6 and later.
(Read only property)

### 145.21.32 Constants

### 145.21.33 NSApplicationActivateAllWindows = 1

MBS MacCocoa Plugin, Plugin Version: 9.7.

**Function:** One of the flag constants for activateWithOptions.
**Notes:**

By default, activation brings only the main and key windows forward. If you specify NSApplicationActivateAllWindows, all of the application's windows are brought forward.
Available in Mac OS X v10.6 and later.

### 145.21.34 NSApplicationActivateIgnoringOtherApps = 2

MBS MacCocoa Plugin, Plugin Version: 9.7.

**Function:** One of the flag constants for activateWithOptions.
**Notes:**

By default, activation deactivates the calling app (assuming it was active), and then the new app is activated only if there is no currently active application. This prevents the new app from stealing focus from the user,

if the app is slow to activate and the user has switched to a different app in the interim. However, if you specify NSApplicationActivateIgnoringOtherApps, the application is activated regardless of the currently active app, potentially stealing focus from the user. You should rarely pass this flag because stealing key focus produces a very bad user experience.
Available in Mac OS X v10.6 and later.

### 145.21.35 NSApplicationActivationPolicyAccessory = 1

MBS MacCocoa Plugin, Plugin Version: 9.7.

**Function:** One of the constants used for following activation policies.
**Notes:**

The application does not appear in the Dock and does not have a menu bar, but it may be activated programmatically or by clicking on one of its windows. This corresponds to value of the LSUIElement key in the application's Info.plist being 1.
Available in Mac OS X v10.6 and later.

### 145.21.36 NSApplicationActivationPolicyProhibited = 2

MBS MacCocoa Plugin, Plugin Version: 9.7.

**Function:** One of the constants used for following activation policies.
**Notes:**

The application does not appear in the Dock and may not create windows or be activated. This corresponds to the value of the LSBackgroundOnly key in the application's Info.plist being 1. This is also the default for unbundled executables that do not have Info.plists.
Available in Mac OS X v10.6 and later.

### 145.21.37 NSApplicationActivationPolicyRegular = 0

MBS MacCocoa Plugin, Plugin Version: 9.7.

**Function:** One of the constants used for following activation policies.
**Notes:**

The application is an ordinary app that appears in the Dock and may have a user interface. This is the default for bundled apps, unless overridden in the Info.plist.
Available in Mac OS X v10.6 and later.

## 145.22 class NSXPCConnectionMBS

### 145.22.1 class NSXPCConnectionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The NSXPCConnection class provides a bi-directional communication channel between two processes.
**Notes:**

This class is the primary means of creating and configuring the communication mechanism between two processes. Each process has one instance of this class to represent the endpoint in the communication channel.

Requires a setup with info.plist entries, correct permissions and code signing.

### 145.22.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

### 145.22.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

### 145.22.4 Methods

### 145.22.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.

### 145.22.6 CallMethod(name as string, tag as Variant, params() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Calls method and passes parameters.
**Notes:** Returns array of variant.

### 145.22.7 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Closes the connection.

### 145.22.8 Constructor(endpoint as NSXPCListenerEndpointMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Initializes an NSXPCConnection object to connect to an NSXPCListener object in another process, identified by an NSXPCListenerEndpoint object.
**Notes:**

endpoint: The desired listener endpoint for the service.
Available in OS X v10.8 and later.

- 145.22.9 Constructor(MachOServiceName as string, flags as Integer) 23116
- 145.22.10 Constructor(ServiceName as string) 23117

### 145.22.9 Constructor(MachOServiceName as string, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes an NSXPCConnection object to connect to a LaunchAgent or LaunchDaemon with a name advertised in a launchd.plist.
**Notes:**

For example, if an agent is managed with launchd and has a launchd.plist in
textasciitilde /Library/LaunchAgents, this method would create a connection to that agent. The agent should use NSXPCListener to wait for new connections.

If the connection is being made to a process that is running in a privileged Mach bootstrap context (for example, a daemon started by a launchd property list in /Library/LaunchDaemons), then pass the NSXPC-ConnectionPrivileged option.

Available in OS X v10.8 and later.
See also:

- 145.22.8 Constructor(endpoint as NSXPCListenerEndpointMBS) 23116
- 145.22.10 Constructor(ServiceName as string) 23117

### 145.22.10 Constructor(ServiceName as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Initializes an NSXPCConnection object to connect to an NSXPCListener object in an XPC service, identified by a service name.
**Notes:**

XPC services are helper processes that are usually part of your application bundle. The service should use NSXPCListener to wait for new connections.
Available in OS X v10.8 and later.
See also:

- 145.22.8 Constructor(endpoint as NSXPCListenerEndpointMBS) 23116
- 145.22.9 Constructor(MachOServiceName as string, flags as Integer) 23116

### 145.22.11 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The destructor.

### 145.22.12 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Invalidates the connection.
**Notes:** When you call this method, all outstanding reply blocks, error handling blocks, and invalidation blocks are called on the message handling queue. The connection must be invalidated before it is deallocated. After a connection is invalidated, no more messages may be sent or received.

### 145.22.13 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Starts or resumes handling of messages on a connection.
**Notes:**

All connections start suspended. You must resume them before they start processing received messages or sending messages through the remoteObjectProxy object.
Available in OS X v10.8 and later.

### 145.22.14 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Suspends the connection.
**Notes:**

Suspends and resumes must be balanced before the connection may be invalidated.
Available in OS X v10.8 and later.

### 145.22.15 Properties

### 145.22.16 auditSessionIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The BSM audit session identifier for the connecting process.
**Notes:**

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

### 145.22.17 effectiveGroupIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The effective group ID (EGID) of the connecting process.
**Notes:**

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

### 145.22.18 effectiveUserIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The effective user ID (EUID) of the connecting process.
**Notes:**

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

### 145.22.19 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** If the connection was created with an NSXPCListenerEndpoint object, returns the endpoint object used.
**Notes:** (Read only property)

### 145.22.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 145.22.21 processIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The process ID (PID) of the connecting process.
**Notes:**

This attribute may be used by the listener delegate to accept or reject connections.
Available in OS X v10.8 and later.
(Read only property)

### 145.22.22 serviceName as String

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The name of the XPC service that this connection was configured to connect to.
**Notes:** (Read only property)

### 145.22.23 Events

### 145.22.24 CallMethodReturned(name as string, tag as Variant, Parameters() as Variant, Results() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** The event called when method returns.

### 145.22.25 ErrorHandler(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** The error event for errors happening when calling method.

### 145.22.26 InterruptionHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** The event is called if the remote process exits or crashes.
**Notes:** It may be possible to re-establish the connection by simply sending another message. The handler is invoked on the same queue as reply messages and other handlers, and it is always executed after any other messages or reply block handlers (except for the invalidation handler).

### 145.22.27 InvalidationHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** This event is invoked on the same queue as reply messages and other handlers, and is always executed last (after the interruption handler, if required).
**Notes:** You may not send messages over the connection from within an invalidation handler block.

### 145.22.28 Constants

### 145.22.29 NSXPCConnectionPrivileged = 1

MBS MacFrameworks Plugin, Plugin Version: 14.2.

**Function:** One of the options that you can pass to a connection.
**Notes:**

Use this option if connecting to a service in the privileged Mach bootstrap (for example, a daemon with a launchd.plist in /Library/LaunchDaemons).
Available in OS X v10.8 and later.

# 145.23 class NSXPCListenerEndpointMBS

## 145.23.1 class NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Class that "names" a specific NSXPCListener object.
**Notes:**

An instance may be retrieved from an NSXPCListener and sent over existing NSXPCConnections. A process may then use it to create a new NSXPCConnection to the original NSXPCListener.

This pattern is useful if you have a service which multiplexes work to other services. The service can act as an intermediate helper. The requesting application does not need to know specifically which service it is connecting to, just that it implements a known NSXPCInterface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.

## 145.23.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The private constructor.

### 145.23.7 Properties

### 145.23.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

# 145.24 class NSXPCListenerMBS

## 145.24.1 class NSXPCListenerMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The NSXPCListener class and its delegate are responsible for waiting for new incoming connections, configuring them, and accepting or rejecting them.
**Notes:**

Each XPC service, launchd agent, or launchd daemon typically has at least one NSXPCListener object that listens for connections to a specified service name.
When the listener receives a new connection request, it creates a new NSXPCConnection object, then asks the delegate to inspect, configure, and resume the connection object by calling the delegate's shouldAcceptNewConnection event.

- MBS Xojo / Real Studio Plugins, version 14.2pr1

## 145.24.4 Methods

## 145.24.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Whether this class is available.

## 145.24.6 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Closes listener.

## 145.24.7 Constructor(Anonymous as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a new listener connection.
**Notes:**

If Anonymous is true: Initializes with a new anonymous listener connection.
If false: Initializes with the singleton listener used to listen for incoming connections in an XPC service.

see also:
https://developer.apple.com/library/mac/documentation/Foundation/Reference/NSXPCListener_reference/translated_content/NSXPCListener.html
See also:

- 145.24.8 Constructor(Name as string) 23124

### 145.24.8 Constructor(Name as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Initializes a listener in a LaunchAgent or LaunchDaemon which has a name advertised in a launchd.plist file.
**Notes:**

For example, you might use this in an agent launched by launchd with a launchd.plist contained in textasciitilde /Library/LaunchAgents, or a daemon launched by launchd with a launchd.plist contained in /Library/LaunchDaemons.

Available in OS X v10.8 and later.
See also:

- 145.24.7 Constructor(Anonymous as boolean = false) 23123

### 145.24.9 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The destructor.

### 145.24.10 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Invalidates the listener.
**Notes:**

After calling this method, no more connections are created. Once a listener is invalidated it may not be resumed or suspended.

Available in OS X v10.8 and later.

### 145.24.11 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Starts processing of incoming requests.
**Notes:**

All listeners start suspended and must be resumed before they begin processing incoming requests.

If called on the serviceListener object, this method never returns. Therefore, you should call it as the last step inside the XPC service's main function after setting up any desired initial state and configuring the listener itself.

If called on any other NSXPCListener, the connection is resumed, and the method returns immediately.
Available in OS X v10.8 and later.

### 145.24.12 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Suspends the listener.
**Notes:**

Suspends and resumes must be balanced before the listener may be invalidated.
Available in OS X v10.8 and later.

### 145.24.13 Properties

### 145.24.14 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** Returns an endpoint object that may be sent over an existing connection.
**Notes:**

The receiver of the endpoint can use this object to create a new connection to this NSXPCListener object.
The resulting NSXPCListenerEndpoint object uniquely names this listener object across connections.
(Read only property)

### 145.24.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 145.24.16 Events

### 145.24.17 CallMethod(Name as string, Parameters() as Variant) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** Called on the listener side when a method was called on the connection.
**Notes:** Return array of variant for the results.

### 145.24.18 shouldAcceptNewConnection(newConnection as NSXPCConnection-MBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

**Function:** Accepts or rejects a new connection to the listener.
**Notes:**

To accept the connection, first configure the connection if desired, then call resume on the new connection, then return true.
To reject the connect, return a value of false. This causes the connection object to be invalidated.
In this method, you can also set up properties on the connection object, such as its exported object and interfaces. Be sure to call resume when you are finished configuring the connection object and are ready for it to receive messages.

# 145.25 class ProcessMBS

## 145.25.1 class ProcessMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Adds the class ProcessMBS to Xojo to get details about all running applications.
**Example:**

```
// Shows how to use the processInformationCFDictionary function to
// decide on Mac OS X whether an application is a background only one.

dim myProcess as ProcessMBS
dim myCFDictionary as CFDictionaryMBS
dim myCFBoolean as CFBooleanMBS
dim myCFObject as CFObjectMBS

myProcess=new ProcessMBS
myProcess.GetCurrentProcess
myCFDictionary = CFDictionaryMBS(myProcess.processInformationCFDictionary)
myCFObject = myCFDictionary.Value(newcfstringmbs("LSBackgroundOnly"))
myCFBoolean=CFBooleanMBS(myCFObject)

if myCFBoolean.Value then
MsgBox "is background"
else
MsgBox "is not background"
end if
```

**Notes:**

Requires Windows 95 or Windows 2000 to run on Windows.

To find all windows on Windows, use the WindowsListMBS class.
To find all windows on Mac OS X, use the CGSWindowListMBS class.

For newer code on Mac, please check NSRunningApplicationMBS class.

### 145.25.4 Methods

### 145.25.5 Bundle as folderitem

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the bundle path.
**Notes:**

Maybe nil if not available.
Returns on Mac OS X the path to the main bundle of the process.

### 145.25.6 BundleID as string

MBS Util Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the bundle identifier.
**Notes:**

Maybe "" if not available.
Returns on Mac OS X the identifier to the main bundle of the process.

### 145.25.7 CurrentProcessID as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the process ID of the application.
**Example:**

```
MsgBox str(ProcessMBS.CurrentProcessID)
```

### 145.25.8 GetCurrentProcess

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Load the current Process' information into the class.
**Notes:** This should always be your Xojo application.

### 145.25.9 GetfirstProcess

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Load the first Process into the class.
**Example:**

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

### 145.25.10 GetFrontProcess

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Load the frontmost Process' information into the class.

### 145.25.11 GetNextProcess as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Load the next Process into the class.
**Example:**

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

**Notes:** Returns true if successfull.

### 145.25.12 GetProcess(serial as memoryblock)

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Load the process information for the process with the given serial.

### 145.25.13 KillProcess as Integer

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Kills a Process on Mac OS X or Windows.
**Example:**

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

**Notes:**

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 145.25.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 23131
- 145.25.15 KillProcess(timeoutms as Integer) as Integer 23131

### 145.25.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Kills a Process on Mac OS X or Windows.
**Example:**

```
const pid = 12345 // put the PID here
call ProcessMBS.KillProcess pid, 100
```

**Notes:**

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Returns on Windows:
0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 145.25.13 KillProcess as Integer 23130
- 145.25.15 KillProcess(timeoutms as Integer) as Integer 23131

### 145.25.15 KillProcess(timeoutms as Integer) as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Kills a Process on Mac OS X or Windows.
**Example:**

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

**Notes:**

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds. If you don't specify a timeout, 1000 ms are used.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 145.25.13 KillProcess as Integer 23130
- 145.25.14 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 23131

### 145.25.16 MacProcessSerial as memoryblock

MBS Util Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the serial number for this process as a memoryblock with binary content.
**Notes:**

On Mac OS every process as its own unique ID. (If you launch one application two times, they may have everything equal except the process serial.)

The serial itself is a 8byte long memoryblock (two integer).

Returns nil on any error.

### 145.25.17 ProcessInformationCFDictionary as object

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a CFDictionaryMBS object with the properties of the process.
**Example:**

```
dim p as ProcessMBS
dim d as CFDictionaryMBS
```

```
p=new ProcessMBS

p.GetCurrentProcess

d=CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d=nil then
MsgBox "This example works only on Mac OS X 10.2!"
else
// use information in dictionary
end if
```

**Notes:**

Only available on Mac OS X 10.2 or newer.
(And in Mac OS X 10.2 is a bug which may lead into a crash by using this function. Fixed in Mac OS X 10.3)
The function returns a CFDictionaryMBS, but to avoid plugin dependencies, the function is declared as Object, so RB 4.5 don't crash when an application uses the process plugin and dosn't use the CF Plugin.

Result:
An immutable CFDictionary containing these keys and their values. Keys marked with an '*' are optional. Over time more keys may be added.

### 145.25.18 QuitProcess as Integer

MBS Util Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Quits a Process on Mac OS.
**Example:**

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.QuitProcess)
```

**Notes:**

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".
Sets the lasterror property.

| Key Name | Type |
|---|---|
| "PSN" | CFNumber, kCFNumberLongLongType |
| "Flavor" | CFNumber, kCFNumberSInt32 |
| "Attributes" | CFNumber, kCFNumberSInt32 |
| "ParentPSN" | CFNumber, kCFNumberLongLong |
| "FileType" | CFString, file type |
| "FileCreator" | CFString, file creator |
| "pid" | CFNumber, kCFNumberLongType |
| "LSBackgroundOnly" | CFBoolean |
| "LSUIElement" | CFBoolean |
| "IsHiddenAttr" | CFBoolean |
| "IsCheckedInAttr" | CFBoolean |
| "RequiresClassic" | CFBoolean |
| "RequiresCarbon" | CFBoolean |
| "LSUserQuitOnly" | CFBoolean |
| "LSUIPresentationMode" | CFNumber, kCFNumberShortType |
| "BundlePath" | CFString |
| kIOBundleExecutableKey | CFString |
| kIOBundleNameKey | CFString |
| kIOBundleIdentifierKey | CFString |

### 145.25.19 SameAs(other as ProcessMBS) as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if two ProcessMBS objects have the same Process.

### 145.25.20 SetFrontProcessWithOptions(options as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Moves the current process to the front.
**Example:**

```
dim p as ProcessMBS

// move my front window to the front
p=new ProcessMBS
p.GetCurrentProcess
p.SetFrontProcessWithOptions 1
```

**Notes:**

If you pass 0 in the options parameter, the process is activated and all process windows are brought forward.

If you pass kSetFrontProcessFrontWindowOnly (value 1), the process is activated and the frontmost non-floating window is brought forward. (Mac OS X only)

### 145.25.21 SetServiceMode(ismode as boolean) as boolean

MBS Util Plugin, Plugin Version: 2.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** If an application is a service, it is not listed inside the Windows force quit window.
**Notes:** Works only on Windows 95, 98 and ME.

### 145.25.22 TransformProcessType(mode as Integer) as Integer

MBS Util Plugin, Plugin Version: 15.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Changes the 'type' of the process specified in the psn parameter.
**Notes:**

Given a psn for an application, this call transforms that application into the given type. Foreground applications have a menu bar and appear in the Dock. Background applications do not appear in the Dock, do not have a menu bar (and should not have windows or other user interface). UIElement applications do not have a menu bar, do not appear in the dock, but may in limited circumstances present windows and user interface. If a foreground application is frontmost when transformed into a background application, it is first hidden and another application is made frontmost. A UIElement or background-only application which is transformed into a foreground application is not brought to the front (use SetFrontProcess() after the transform if this is required) nor will it be shown if it is hidden (even if hidden automatically by being transformed into a background-only application), so the caller should use ShowHideProcess() to show the application after it is transformed into a foreground application. Applications can only transform themselves; this call cannot change the type of another application.

Returns error code (0 for success).

### 145.25.23 TransformToForegroundApplication as Integer

MBS Util Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Transforms a background application to a foreground application.
**Notes:**

Returns a Mac OS error code. Returns -1 if the function is not available. You need to select a process first with Get*Process functions.
Requires Mac OS X 10.3.

You can use this call to transform a background-only application into a foreground application. A foreground application appears in the Dock (and in the Force Quit dialog) and contains a menu bar. This function does not cause the application to be brought to the front; you must set FrontProcess=true to do so.

While available starting in 10.3 "Panther," calling TransformProcessType on a UIElement application in 10.3 or 10.4 will return paramErr (-50), rendering it only usable on a full BackgroundOnly? application. Leopard supports foregrounding both UIElement and BackgroundOnly? applications.

### 145.25.24 Update

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Updates the classes information.
**Notes:** Use it if you want the current CPUTime value after some time.

### 145.25.25 WinFullProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves the full name of the executable image for the specified process.
**Notes:**

Returns empty string on any error like missing permissions.
The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows Vista or Windows Server 2008 or newer.

### 145.25.26 WinGetPriorityClass(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves the priority class for the specified process.
**Notes:**

You can pass ProcessID -1 to get the current process.
This value, together with the priority value of each thread of the process, determines each thread's base priority level.

If the function succeeds, the return value is the priority class of the specified process.

The process's priority class is one of the following values:

| Name | Value | Description |
|---|---|---|
| ABOVE_NORMAL_PRIORITY_CLASS | & h00008000 | Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS. |
| BELOW_NORMAL_PRIORITY_CLASS | & h00004000 | Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS. |
| HIGH_PRIORITY_CLASS | & h00000080 | Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles. |
| IDLE_PRIORITY_CLASS | & h00000040 | Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes. |
| NORMAL_PRIORITY_CLASS | & h00000020 | Process with no special scheduling needs. |
| REALTIME_PRIORITY_CLASS | & h00000100 | Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive. |

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower level take place.
For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

For Mac and Linux, please use Priority.

### 145.25.27 WinModulePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the path the first code file in this process.
**Notes:**

Returns empty string on any error like missing permissions.
The path is in the typical style "C:\path\name.exe".

### 145.25.28 WinProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Retrieves the name of the executable file for the specified process.
**Notes:**

Returns empty string on any error like missing permissions.
The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows XP or Windows Server 2003 or newer.

### 145.25.29 WinSetPriorityClass(ProcessID as Integer, PriorityClass as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sets the priority class for the specified process.
**Notes:**

You can pass ProcessID -1 to get the current process.
This value together with the priority value of each thread of the process determines each thread's base priority level.

The process's priority class is one of the following values:

| Name | Value | Description |
|---|---|---|
| ABOVE_NORMAL_PRIORITY_CLASS | & h00008000 | Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS. |
| BELOW_NORMAL_PRIORITY_CLASS | & h00004000 | Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS. |
| HIGH_PRIORITY_CLASS | & h00000080 | Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles. |
| IDLE_PRIORITY_CLASS | & h00000040 | Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes. |
| NORMAL_PRIORITY_CLASS | & h00000020 | Process with no special scheduling needs. |
| REALTIME_PRIORITY_CLASS | & h00000100 | Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive. |

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower level take place.

For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. The SetThreadPriority function enables setting the base priority level of a thread relative to the priority class of its process. For more information, see Scheduling Priorities.
The *_PRIORITY_CLASS values affect the CPU scheduling priority of the process. For processes that perform background work such as file I/O, network I/O, or data processing, it is not sufficient to adjust the CPU scheduling priority; even an idle CPU priority process can easily interfere with system responsiveness when it uses the disk and memory. Processes that perform background work should use the PROCESS_MODE_BACKGROUND_BEGIN and PROCESS_MODE_BACKGROUND_END values to adjust their resource scheduling priorities; processes that interact with the user should not use PROCESS_MODE_BACKGROUND_BEGIN.
If a process is in background processing mode, the new threads it creates will also be in background processing mode. When a thread is in background processing mode, it should minimize sharing resources such as critical sections, heaps, and handles with other threads in the process, otherwise priority inversions can occur. If there are threads executing at high priority, a thread in background processing mode may not be scheduled promptly, but it will never be starved.
Each thread can enter background processing mode independently using SetThreadPriority. Do not call SetPriorityClass to enter background processing mode after a thread in the process has called SetThreadPriority to enter background processing mode. After a process ends background processing mode, it resets all threads in the process; however, it is not possible for the process to know which threads were already in background processing mode.

On any error the value is zero.
For Mac and Linux, please use Priority.

### 145.25.30 Properties

### 145.25.31 CPUTime as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the number of the ticks this Process did get to calculate.
**Notes:**

Unit is 1/60 of a second.
On Mac OS X this value is not available and normally 0.
(Read only property)

### 145.25.32 CurrentProcess as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if the application is in the current Process.
**Notes:**

This should always be true because you are running Xojo as the current ProcessMBS while you ask for this. (Read only property)

### 145.25.33 flags as Integer

MBS Util Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The flags for this process on Mac OS.
**Example:**

```
Sub Open()
// List all visible processes

dim s as string
dim p as ProcessMBS
dim d As CFDictionaryMBS
dim LSBackgroundOnly, LSUIElement As CFStringMBS
dim b As CFBooleanMBS
dim obj As CFObjectMBS
dim visible as Boolean

const modeOnlyBackground=& h00000400

LSUIElement=NewCFStringMBS("LSUIElement")
LSBackgroundOnly = NewCFStringMBS("LSBackgroundOnly")

p = new ProcessMBS
p.getfirstProcess

do
visible=True

// Mac OS X
d = CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d <>nil Then
obj = d.Value(LSBackgroundOnly)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)
```

```
if b.value Then
visible=false
end
end if

obj= d.Value(LSUIElement)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)

if b.value Then
visible=false
end
end if
end if

// Mac OS 9

if BitwiseAnd(p.Flags,modeOnlyBackground)<>0 then
visible=False
end if

if visible then
ListBox1.AddRow p.Name
end if

loop until not p.GetNextProcess
End Sub
```

**Notes:**

Returns 0 on any error.

Process mode flags. These flags indicate whether the process is an application or desk accessory. For applications, this field also returns information specified in the application's 'SIZE' resource. This information is returned as flags. You can refer to these flags by using these constants:

(Read only property)

### 145.25.34 FrontProcess as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if the application is in the front of all others.
**Example:**

| | |
|---|---|
| modeDeskAccessory | & h00020000 |
| modeMultiLaunch | & h00010000 |
| modeNeedSuspendResume | & h00004000 |
| modeCanBackground | & h00001000 |
| modeDoesActivateOnFGSwitch | & h00000800 |
| modeOnlyBackground | & h00000400 |
| modeGetFrontClicks | & h00000200 |
| modeGetAppDiedMsg | & h00000100 |
| mode32BitCompatible | & h00000080 |
| modeHighLevelEventAware | & h00000040 |
| modeLocalAndRemoteHLEvents | & h00000020 |
| modeStationeryAware | & h00000010 |
| modeUseTextEditServices | & h00000008 |

```
dim p as new ProcessMBS
p.GetCurrentProcess
p.FrontProcess=true 'bring app to front
```

**Notes:**

This property is for read and write. Writing to it brings the Process to front.
(Read and Write property)

### 145.25.35 lasterror as Integer

MBS Util Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

As this property is introduced with MBS Plugin 3.1, only a few functions set it.
0 means no error, -1 means not available and anything else is a Mac OS error code.
(Read and Write property)

### 145.25.36 LaunchProcess as ProcessMBS

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the application which launched the current one.
**Notes:**

For some applications like the "loginwindow" it is nil, because there was no app to launch it other than the system itself.
(Read only property)

### 145.25.37 MacCreator as string

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the Mac Creator code for the application.
**Notes:** (Read only property)

### 145.25.38 MacType as string

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the Mac Type code for the application.
**Notes:**

Possible values:

| | |
|---|---|
| "APPL" | normal application |
| "appe" | background application (Classic) |
| "APPC" | Control panel application (Classic) |
| "APPD" | Desktop Accessory (Classic) |
| "FNDR" | Finder |

others may be possible.
(Read only property)

### 145.25.39 MemoryFree as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the size of the free space in the Process' memory partition.
**Notes:**

On Mac OS X normally 0.
(Read only property)

### 145.25.40 MemorySize as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns size of the Process' memory partition.
**Notes:**

On Mac OS X normally 0.
(Read only property)

### 145.25.41 Name as string

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the name of this application.
**Notes:**

Added Windows support in MBS Plugin 2.7 for this property.
(Read only property)

### 145.25.42 Path as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the path of the Process' executable file.
**Notes:**

Maybe nil if not available.
Use this folderitem to get an icon for the Process.
(and this icon may be nil!)
(Read only property)

### 145.25.43 ProcessID as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Returns the PID of the process for use in unix command line tools.
**Example:**

```
Function LoginWindowPID() as Integer
// returns Process ID of Loginwindow on Mac OS X.
// or 0 on error

dim p as ProcessMBS

p=new ProcessMBS
p.GetFirstProcess

do
```

```
if p.Name="loginwindow" then
Return p.ProcessID
end if
loop until not p.GetNextProcess
End Function
```

**Notes:**

Works only on Mac OS X.
See the "CPU Focus" application for an example.

Note that this call does not make sense for Classic applications, since they all share a single UNIX process ID.
(Read only property)

### 145.25.44 Visible as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns true if the application is visible.
**Example:**

```
// hide iTunes

dim p as new ProcessMBS

p.GetFirstProcess
do
if p.BundleID="com.apple.iTunes" then
p.Visible=false
exit
end if
loop until not p.GetNextProcess
```

**Notes:**

Works only on Mac OS X.
Returns false if not supported.

Sets the lasterror property.
(Read and Write property)

### 145.25.45 Priority as Integer

MBS Util Plugin, Plugin Version: 10.2, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The priority of the process.
**Example:**

```
dim p as new ProcessMBS

p.GetCurrentProcess

MsgBox str(p.priority) // shows 0

p.priority = 5

MsgBox str(p.priority) // shows 5
```

**Notes:**

20 (least) to -20 (max). Setting the value may be limited due to permissions.
(Read and Write computed property)
See also:

- 145.25.46 Priority(ProcessID as Integer) as Integer 23146

### 145.25.46 Priority(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Targets: Desktop, Console & Web.

**Function:** Sets or gets priority for a process on Mac and Linux.
**Notes:**

Value is in the range -20 to 20. The default priority is 0; lower priorities cause more favorable scheduling.
For Windows, please use WinSetPriorityClass and WinGetPriorityClass.
(Read and Write computed property)
See also:

- 145.25.45 Priority as Integer 23146

### 145.25.47 Constants

### 145.25.48 kProcessTransformToBackgroundApplication = 2

MBS Util Plugin, Plugin Version: 15.2.

**Function:** One of the process transformation types.
**Notes:**

Turn application in a background application.
functional in Mac OS X 10.7 and later

### 145.25.49 kProcessTransformToForegroundApplication = 1

MBS Util Plugin, Plugin Version: 15.2.

**Function:** One of the process transformation types.
**Notes:** Turn application in a foreground application.

### 145.25.50 kProcessTransformToUIElementApplication = 4

MBS Util Plugin, Plugin Version: 15.2.

**Function:** One of the process transformation types.
**Notes:**

Turn application in a user interface element application.
functional in Mac OS X 10.7 and later

## 145.26 class WindowsProcessMemoryInfoMBS

### 145.26.1 class WindowsProcessMemoryInfoMBS

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to get information about the memory usage of a process on Windows.

### 145.26.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

### 145.26.3 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

### 145.26.4 Methods

### 145.26.5 Constructor

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The constructor which fills the values into the properties.
**Example:**

```
dim w as new WindowsProcessMemoryInfoMBS
msgbox "This application uses currently "+str(w.WorkingSetSize)+" Bytes of memory."
```

**Notes:** Queries the current process memory information.
See also:

- 145.26.6 Constructor(ProcessID as Integer) 23148

### 145.26.6 Constructor(ProcessID as Integer)

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The constructor which fills the values into the properties.
**Notes:** Queries the process memory information of the process with the given ID.
See also:

- 145.26.5 Constructor 23148

### 145.26.7 Properties

### 145.26.8 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of page faults.
**Notes:** (Read only property)

### 145.26.9 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
**Notes:** (Read only property)

### 145.26.10 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak space allocated for the pagefile, in bytes.
**Notes:** (Read only property)

### 145.26.11 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak working set size, in bytes.
**Notes:** (Read only property)

### 145.26.12 ProcessID as Integer

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The process ID of the process queried.
**Notes:**

Value is 0 if the query failed.
(Read only property)

### 145.26.13 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak nonpaged pool usage, in bytes.
**Notes:** (Read only property)

### 145.26.14 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current paged pool usage, in bytes.
**Notes:** (Read only property)

### 145.26.15 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current nonpaged pool usage, in bytes.
**Notes:** (Read only property)

### 145.26.16 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak paged pool usage, in bytes.
**Notes:** (Read only property)

### 145.26.17 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current working set size, in bytes.
**Notes:**

This is the memory your application uses.
(Read only property)

# 145.27 class WindowsProcessStatisticsMBS

## 145.27.1 class WindowsProcessStatisticsMBS

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A class to get information about process statistics on Windows.
**Example:**

```
dim c as new WindowsProcessStatisticsMBS
MsgBox str(C.PeakWorkingSetSize)
```

## 145.27.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr6
- MBS Real Studio Plugins, version 11.2pr4

- MBS REALbasic Plugins, version 10.3pr7

## 145.27.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr6
- MBS Real Studio Plugins, version 11.2pr4
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr7

## 145.27.4 Methods

## 145.27.5 Constructor(ProcessID as Integer = -1, Mode as Integer = 255)

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new object for given process and with given mode.
**Example:**

```
dim pid as Integer = -1
dim c as new WindowsProcessStatisticsMBS(pid, WindowsProcessStatisticsMBS.ModeMemoryCounters)
MsgBox str(C.PeakWorkingSetSize)
```

**Notes:**

If ProcessID is -1, the current process is queried.
Mode can be a combination of the Mode* constants you want to query. The Mode property will later contain the Mode* constants combination of the values which are valid.

### 145.27.6 Properties

### 145.27.7 CreationTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A file time that receives the creation time of the process.
**Notes:**

Property is valid if Mode contains ModeTimes.
(Read only property)

### 145.27.8 CycleTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The sum of the cycle time of all threads of the specified process.
**Notes:**

Property is valid if Mode contains ModeTimes.
This value can only be queried on Windows Vista or newer.
(Read only property)

### 145.27.9 ExitTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A file time that receives the exit time of the process. If the process has not exited, the content of this structure is undefined.
**Notes:**

Property is valid if Mode contains ModeTimes.
(Read only property)

### 145.27.10 HandleCount as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of handles in use by the process.
**Example:**

```
dim w as new WindowsProcessStatisticsMBS
dim n1 as Integer = w.HandleCount

dim x as new window1 // make a new window

w = new WindowsProcessStatisticsMBS
dim n2 as Integer = w.HandleCount

MsgBox str(n2)+" handles in used, "+str(n2-n1)+" used by second window"
```

**Notes:**

Value is -1 on an error.
(Read only property)

### 145.27.11 KernelTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A file time structure that receives the amount of time that the process has executed in kernel mode.
**Notes:**

The time that each of the threads of the process has executed in kernel mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeTimes.
(Read only property)

### 145.27.12 Mode as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Which values have been queried.
**Notes:**

This value is a combination of the Mode* constants.
(Read only property)

### 145.27.13 OtherOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of I/O operations performed, other than read and write operations.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.14 OtherTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of bytes transferred during operations other than read and write operations.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.15 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of page faults.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.16 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.17 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak space allocated for the pagefile, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.18 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak working set size, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.19 ProcessID as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The process ID of the process queried.
**Notes:** (Read only property)

### 145.27.20 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak nonpaged pool usage, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.21 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current paged pool usage, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.22 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current nonpaged pool usage, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.23 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The peak paged pool usage, in bytes.
**Notes:**

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.24 ReadOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of read operations performed.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.25 ReadTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of bytes read.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.26 TotalIdleTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The amount of time that the system has been idle.
**Notes:** (Read only property)

### 145.27.27 TotalKernelTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The amount of time that the system has spent executing in Kernel mode (including all threads in all processes, on all processors).
**Notes:**

This time value also includes the amount of time the system has been idle. So you may want to subtract idle time to get real kernel time.
(Read only property)

### 145.27.28 TotalUserTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The amount of time that the system has spent executing in User mode (including all threads in all processes, on all processors).
**Notes:**

If you need to know what is the percentage of the CPU time spent for user applications, you need to read this value two times and calculate the delta.
(Read only property)

### 145.27.29 UserTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** A file time structure that receives the amount of time that the process has executed in user mode.
**Notes:**

The time that each of the threads of the process has executed in user mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.30 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The current working set size, in bytes.
**Notes:**

This is the memory your application uses.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

### 145.27.31 WriteOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of write operations performed.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.32 WriteTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The number of bytes written.
**Notes:**

Property is valid if Mode contains ModeIOCounters.
(Read only property)

### 145.27.33 Constants

### 145.27.34 ModeCycleTime = 8

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the mode constants.
**Notes:** Whether to query the cycle time.

### 145.27.35 ModeHandles = 32

MBS Win Plugin, Plugin Version: 12.5.

**Function:** One of the mode constants.
**Notes:** Whether to query the handle count.

### 145.27.36 ModeIOCounters = 2

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the mode constants.
**Notes:** Whether to query the IOCounters.

### 145.27.37 ModeMemoryCounters = 1

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the mode constants.
**Notes:** Whether to query the memory counters.

### 145.27.38 ModeTimes = 4

MBS Win Plugin, Plugin Version: 10.3.

**Function:** One of the mode constants.
**Notes:** Whether to query the time values.

### 145.27.39 ModeTotalTime = 16

MBS Win Plugin, Plugin Version: 11.2.

**Function:** One of the mode constants.
**Notes:**

Whether to query the total CPU time values.
Requires Windows XP with SP1.

## 145.28 class WindowsVMStatisticsMBS

### 145.28.1 class WindowsVMStatisticsMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Holds information about the current Windows memory status.

### 145.28.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr7

### 145.28.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr7

### 145.28.4 Methods

### 145.28.5 Constructor

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Creates a new statistics object with current values.
**Example:**

```
// show values in a listbox:
dim w as new WindowsVMStatisticsMBS

list.AddRow "Pagesize: "+format(w.Pagesize,"0")
list.AddRow "MemoryLoad: "+format(w.MemoryLoad,"0")
list.AddRow "AvailablePageFileMemory: "+format(w.AvailablePageFileMemory,"0")
list.AddRow "AvailablePhysicalMemory: "+format(w.AvailablePhysicalMemory,"0")
list.AddRow "AvailableVirtualMemory: "+format(w.AvailableVirtualMemory,"0")
list.AddRow "TotalPageFileMemory: "+format(w.TotalPageFileMemory,"0")
list.AddRow "TotalPhysicalMemory: "+format(w.TotalPhysicalMemory,"0")
list.AddRow "TotalVirtualMemory: "+format(w.TotalVirtualMemory,"0")
```

### 145.28.6 Properties

### 145.28.7 AllocationGranularity as Integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The granularity for the starting address at which virtual memory can be allocated.
**Notes:**

Typically 64 KB.
(Read only property)

### 145.28.8 AvailablePageFileMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the number of bytes available in the paging file.
**Notes:** (Read only property)

### 145.28.9 AvailablePhysicalMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the number of bytes of physical memory available.
**Notes:** (Read only property)

### 145.28.10 AvailableVirtualMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the number of bytes of unreserved and uncommitted memory in the user mode portion of the virtual address space of the calling process.
**Notes:** (Read only property)

### 145.28.11 Memoryload as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Specifies a number between 0 and 100 that gives a general idea of current memory utilization, in which 0 indicates no memory use and 100 indicates full memory use.
**Notes:** (Read only property)

### 145.28.12 Pagesize as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The size of one memory page in memory.
**Notes:**

On Intel 80386 or newer CPUs, it should be 4096 Bytes.
(Read only property)

### 145.28.13 TotalPageFileMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the total number of bytes that can be stored in the paging file. Note that this number does not represent the actual physical size of the paging file on disk.
**Notes:** (Read only property)

### 145.28.14 TotalPhysicalMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the total number of bytes of physical memory.
**Notes:** (Read only property)

### 145.28.15 TotalVirtualMemory as Int64

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Indicates the total number of bytes that can be described in the user mode portion of the virtual address space of the calling process.
**Notes:**

Value is 0 on any error.
(Read only property)

# Chapter 146

# ProgressView

## 146.1 class ProgressBackgroundViewMBS

### 146.1.1 class ProgressBackgroundViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The class for a background view.

### 146.1.2 Methods

### 146.1.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 146.1.4 Properties

### 146.1.5 BlurEffectStyle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The blur effect style, when using BackgroundStyleBlur.
**Notes:**

Defaults to UIBlurEffectStyleLight.
(Read and Write property)

### 146.1.6 Color as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The background color or the blur tint color.
**Notes:**

Defaults to nil on iOS 13 and later and [ UIColor colorWithWhite:0.8f alpha:0.6f ] on older systems.
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.1.7 ColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The background color or the blur tint color.
**Example:**

```
// set background color for this HUD
dim p as ProgressHUDMBS // your instance
p.backgroundView.ColorValue = & c00FF00
```

**Notes:**

Defaults to nil on iOS 13 and later and [ UIColor colorWithWhite:0.8f alpha:0.6f ] on older systems.
This is the color as a Xojo color value.
(Read and Write property)

### 146.1.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 146.1.9 Style as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The background style.
**Notes:**

Defaults to BackgroundStyleBlur.
(Read and Write property)

### 146.1.10 Constants

### 146.1.11 BackgroundStyleBlur = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the style constants.
**Notes:** UIVisualEffectView or UIToolbar.layer background view.

### 146.1.12 BackgroundStyleSolidColor = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the style constants.
**Notes:** Solid color background

## 146.2 class ProgressBarProgressViewMBS

### 146.2.1 class ProgressBarProgressViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A flat bar progress view.

### 146.2.2 Methods

### 146.2.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 146.2.4 Properties

### 146.2.5 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 146.2.6 LineColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar border line color.
**Notes:**

Defaults to white [ UIColor whiteColor ] .
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.2.7 LineColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar border line color.
**Notes:**

Defaults to white.
This is the color as a Xojo color value.
(Read and Write property)

### 146.2.8 Progress as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The Progress (0.0 to 1.0).
**Notes:** (Read and Write property)

### 146.2.9 ProgressColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar progress color.
**Notes:**

Defaults to white [ UIColor whiteColor ] .
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.2.10 ProgressColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar progress color.
**Notes:**

Defaults to white.
This is the color as a Xojo color value.
(Read and Write property)

### 146.2.11 ProgressRemainingColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar background color.
**Notes:**

Defaults to clear [ UIColor clearColor ] .
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.2.12 ProgressRemainingColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Bar background color.
**Notes:**

Defaults to clear [ UIColor clearColor ] .
This is the color as a Xojo color value.
(Read and Write property)

## 146.3 class ProgressHUDMBS

### 146.3.1 class ProgressHUDMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Displays a simple HUD window containing a progress indicator and two optional labels for short messages.
**Notes:**

This is a simple drop-in class for displaying a progress HUD view similar to Apple's private UIProgressHUD class.
The MBProgressHUD window spans over the entire space given to it by the constructor and catches all user input on this region, thereby preventing the user operations on components below the view.

To still allow touches to pass through the HUD, you can set hud.userInteractionEnabled = false.
MBProgressHUD is a UI class and should therefore only be accessed on the main thread.

### 146.3.6 Methods

### 146.3.7 Constructor(Control as MobileControl)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a HUD on top of the control.
See also:

- 146.3.8 Constructor(Screen as MobileScreen) 23170
- 146.3.9 Constructor(ViewHandle as Integer) 23170

### 146.3.8 Constructor(Screen as MobileScreen)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a HUD on top of the screen.
See also:

- 146.3.7 Constructor(Control as MobileControl) 23170
- 146.3.9 Constructor(ViewHandle as Integer) 23170

### 146.3.9 Constructor(ViewHandle as Integer)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Creates a HUD on top of the given view handle.
See also:

- 146.3.7 Constructor(Control as MobileControl) 23170
- 146.3.8 Constructor(Screen as MobileScreen) 23170

### 146.3.10 Destructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The destructor.

### 146.3.11 hide(animated as boolean = true)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Hides the HUD.
**Notes:**

This still calls the hudWasHidden event. This is the counterpart of the show method. Use it to hide the HUD when your task completes.

animated: If set to true the HUD will disappear using the current animationType. If set to false the HUD will not use animations while disappearing.

You may want to set RemoveFromSuperViewOnHide to false in case you like to show it again later.
See also:

- 146.3.12 hide(animated as boolean, afterDelay as Double) 23171

### 146.3.12 hide(animated as boolean, afterDelay as Double)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Hides the HUD after a delay.
**Notes:**

This still calls the hudWasHidden event. This is the counterpart of the show method. Use it to hide the HUD when your task completes.

animated: If set to true the HUD will disappear using the current animationType. If set to false the HUD will not use animations while disappearing.
delay: Delay in seconds until the HUD is hidden.
See also:

- 146.3.11 hide(animated as boolean = true) 23171

### 146.3.13 show(animated as boolean = true)

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Displays the HUD.
**Notes:**

You need to make sure that the main thread completes its run loop soon after this method call so that the user interface can be updated. Call this method when your task is already set up to be executed in a new thread (e.g., when using something like a thread or timer).

Animated: If set to true the HUD will appear using the current animationType. If set to false the HUD will not use animations while appearing.

### 146.3.14 Properties

### 146.3.15 AnimationType as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The animation type that should be used when the HUD is shown and hidden.
**Notes:** (Read and Write property)

### 146.3.16 backgroundView as ProgressBackgroundViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** View covering the entire HUD area, placed behind bezelView.
**Example:**

```
// set background color for this HUD
dim p as ProgressHUDMBS // your instance
p.backgroundView.ColorValue = & c00FF00
```

**Notes:** (Read only property)

### 146.3.17 bezelView as ProgressBackgroundViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The view containing the labels and indicator (or customView).
**Notes:** (Read only property)

### 146.3.18 ButtonTitle as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The title of the button.
**Notes:** (Read and Write property)

### 146.3.19 ButtonView as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A button that is placed below the labels.
**Notes:**

Value is NSViewMBS object.
(Read only property)

### 146.3.20 ContentColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A color that gets forwarded to all labels and supported indicators.
**Notes:**

Also sets the tintColor
for custom views on iOS 7+. Set to nil to manage color individually.
Defaults to semi-translucent black on iOS 7 and later and white on earlier iOS versions.
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.3.21 ContentColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A color that gets forwarded to all labels and supported indicators.
**Example:**

```
dim p as ProgressHUDMBS // your view

// change color to red
p.ContentColorValue = & cFF0000
```

**Notes:**

Also sets the tintColor
for custom views on iOS 7+. Set to nil to manage color individually.
Defaults to semi-translucent black on iOS 7 and later and white on earlier iOS versions.
This is the color as a Xojo color value.
(Read and Write property)

### 146.3.22 defaultMotionEffectsEnabled as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** When enabled, the bezel center gets slightly affected by the device accelerometer data.
**Notes:**

Defaults to false.

This can cause main thread checker assertions on certain devices. https://github.com/jdg/MBProgressHUD/issues/552
(Read and Write property)

### 146.3.23 DetailsLabelText as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The text for the details label.
**Notes:**

The details text can span multiple lines.
(Read and Write property)

### 146.3.24 DetailsLabelView as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A label that holds an optional details message displayed below the labelText message.
**Notes:**

The details text can span multiple lines.
Value is NSViewMBS object.
(Read only property)

### 146.3.25 graceTime as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:**

Grace period is the time (in seconds) that the invoked method may be run without showing the HUD.
**Notes:**

If the task finishes before the grace time runs out, the HUD will not be shown at all.
This may be used to prevent HUD display for very short tasks.
Defaults to 0 (no grace time).

The graceTime needs to be set before the hud is shown.
(Read and Write property)

### 146.3.26 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 146.3.27 Indicator as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The indicator control in use.
**Notes:**

Either ProgressBarProgressViewMBS or ProgressRoundProgressViewMBS object.
(Read only property)

### 146.3.28 LabelText as String

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The label text.
**Notes:**

The HUD is automatically resized to fit the entire text.
(Read and Write property)

### 146.3.29 LabelView as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A label that holds an optional short message to be displayed below the activity indicator. #
**Notes:**

The HUD is automatically resized to fit the entire text.
Value is NSViewMBS object.
(Read only property)

### 146.3.30 margin as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The amount of space between the HUD edge and the HUD elements (labels, indicators or custom views).
**Notes:**

This also represents the minimum bezel distance to the edge of the HUD view.
Defaults to 20.
(Read and Write property)

### 146.3.31 MinHeight as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The minimum size of the HUD bezel.
**Notes:**

Defaults to zero (no minimum size).
(Read and Write property)

### 146.3.32 minShowTime as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The minimum time (in seconds) that the HUD is shown.
**Notes:**

This avoids the problem of the HUD being shown and than instantly hidden.
Defaults to 0 (no minimum show time).
(Read and Write property)

### 146.3.33 MinWidth as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The minimum size of the HUD bezel.
**Notes:**

Defaults to zero (no minimum size).
(Read and Write property)

### 146.3.34 Mode as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** MBProgressHUD operation mode.
**Notes:**

The default is ModeIndeterminate.
(Read and Write property)

### 146.3.35 offsetX as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The bezel offset relative to the center of the view.
**Notes:**

You can use MBProgressMaxOffset and -MBProgressMaxOffset to move the HUD all the way to the screen edge in each direction.
E.g., CGPointMake(0, MBProgressMaxOffset) would position the HUD centered on the bottom edge.
(Read and Write property)

### 146.3.36 offsetY as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The bezel offset relative to the center of the view.
**Notes:**

You can use MBProgressMaxOffset and -MBProgressMaxOffset to move the HUD all the way to the screen edge in each direction.
E.g., CGPointMake(0, MBProgressMaxOffset) would position the HUD centered on the bottom edge.
(Read and Write property)

### 146.3.37 Progress as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The progress of the progress indicator, from 0.0 to 1.0.
**Notes:**

Defaults to 0.0.
(Read and Write property)

### 146.3.38 RemoveFromSuperViewOnHide as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Removes the HUD from its parent view when hidden.
**Notes:**

Defaults to false.
(Read and Write property)

### 146.3.39 Square as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Force the HUD dimensions to be equal if possible.
**Notes:** (Read and Write property)

### 146.3.40 userInteractionEnabled as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A Boolean value that determines whether user events are ignored and removed from the event queue.
**Notes:**

When set to false, touch, press, keyboard, and focus events intended for the view are ignored and removed from the event queue. When set to YES, events are delivered to the view normally. The default value of this property is true.

During an animation, user interactions are temporarily disabled for all views involved in the animation, regardless of the value in this property. You can disable this behavior by specifying the UIViewAnimationOptionAllowUserInteraction option when configuring the animation.
(Read and Write property)

### 146.3.41 View as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The view as NSViewMBS object.
**Notes:**

Value is NSViewMBS object.
(Read only property)

### 146.3.42 Events

### 146.3.43 buttonAction

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Called when user taps the button.

### 146.3.44 hudWasHidden

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: .

**Function:** Called after the HUD was fully hidden from the screen.

### 146.3.45 Constants

### 146.3.46 AnimationFade = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the animation modes.
**Notes:** Opacity animation

### 146.3.47 AnimationZoom = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the animation modes.
**Notes:** Opacity + scale animation (zoom in when appearing zoom out when disappearing)

### 146.3.48 AnimationZoomIn = 3

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the animation modes.
**Notes:** Opacity + scale animation (zoom in style)

### 146.3.49 AnimationZoomOut = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the animation modes.
**Notes:** Opacity + scale animation (zoom out style)

### 146.3.50 MaxOffset = 1000000.0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** The max offset constant to move to the other border.

### 146.3.51 ModeAnnularDeterminate = 3

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Notes:** Ring-shaped progress view.

### 146.3.52 ModeCustomView = 4

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Notes:** Shows a custom view.

### 146.3.53 ModeDeterminate = 1

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Example:**

```
dim p as ProgressHUDMBS // your instance
p.Mode = p.ModeDeterminate
p.Progress = counter / 100.0
```

```
p.DetailsLabelText = "Importing "+counter.ToString+" of 100"
```

**Notes:** A round, pie-chart like, progress view.

### 146.3.54 ModeDeterminateHorizontalBar = 2

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Notes:** Horizontal progress bar.

### 146.3.55 ModeIndeterminate = 0

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Example:**

```
dim p as ProgressHUDMBS // your instance
p.Mode = p.ModeInDeterminate
p.DetailsLabelText = "Cleaning up."
```

**Notes:** A round progress indicator.

### 146.3.56 ModeText = 5

MBS iOS Plugin, Plugin Version: 22.5.

**Function:** One of the mode constants.
**Notes:** Shows only labels.

## 146.4 class ProgressRoundProgressViewMBS

### 146.4.1 class ProgressRoundProgressViewMBS

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** A progress view for showing definite progress by filling up a circle (pie chart).

### 146.4.2 Methods

### 146.4.3 Constructor

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The constructor.

### 146.4.4 Properties

### 146.4.5 Annular as Boolean

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Display mode.
**Notes:**

False = round or True = annular. Defaults to round.
(Read and Write property)

### 146.4.6 backgroundTintColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Indicator background (non-progress) color.
**Notes:**

Only applicable on iOS versions older than iOS 7.
Defaults to translucent white (alpha 0.1).
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.4.7 backgroundTintColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Indicator background (non-progress) color.
**Notes:**

Only applicable on iOS versions older than iOS 7.
Defaults to translucent white (alpha 0.1).
This is the color as a Xojo color value.
(Read and Write property)

### 146.4.8 Handle as Integer

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 146.4.9 Progress as Double

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** The Progress (0.0 to 1.0).
**Notes:** (Read and Write property)

### 146.4.10 progressTintColor as Variant

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Indicator progress color.
**Notes:**

Defaults to white [ UIColor whiteColor ] .
This uses NSColorMBS to wrap the UIColor.
(Read and Write property)

### 146.4.11 progressTintColorValue as Color

MBS iOS Plugin, Plugin Version: 22.5, Platform: iOS, Targets: iOS only.

**Function:** Indicator progress color.
**Notes:**

Defaults to white.
This is the color as a Xojo color value.
(Read and Write property)

# Chapter 147

# Quartz Composer

## 147.1 control DesktopQCViewControlMBS

### 147.1.1 control DesktopQCViewControlMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The control to host a QCView properly.

### 147.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.1.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.1.4 Properties

### 147.1.5 View as QCViewMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The QCView in use by this control.
**Notes:**

Please use this property to access the actual view and make your settings and load the data to render.
(Read only property)

### 147.1.6 Events

### 147.1.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 147.1.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 147.1.9 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 147.1.10 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 147.1.11 DidStartRendering

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Rendering did start notification.

### 147.1.12 DidStopRendering

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Rendering did stop notification.

### 147.1.13 FocusLost

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 147.1.14 FocusReceived

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 147.1.15 FrameChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 147.1.16 MenuBarSelected

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 147.1.17 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 147.1.18 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 147.1.19 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's

boundaries.

### 147.1.20 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 147.1.21 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 147.2 class QCCompositionMBS

### 147.2.1 class QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The composition class.
**Notes:**

The QCComposition class represents a Quartz Composer composition that either:

- comes from the system-wide composition repository (/Library/Compositions and textasciitilde /Library/Compositions) where it can be accessed by any application through the methods of the QCCompositionRepository class
- is created from an arbitrary source (typically a file on disk) using one of its methods

This class cannot be subclassed.

A QCComposition object has the following information associated with it and that you can obtain by using the appropriate method of the QCComposition class:

- Attributes include the name and description of the composition, copyright information, and whether or not its provided by OS X (built-in).
- The protocols that the composition conforms to. A composition protocol defines a set of required and optional input parameters and output results.

Many methods of the QCRenderer, QCCompositionLayer, and QCView classes take a QCComposition object as a parameter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 147.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.2.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.2.4 Methods

### 147.2.5 compositionWithData(data as MemoryBlock) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a composition object initialized with the contents of a Quartz Composer composition file.
**Example:**

```
dim data as MemoryBlock // composition file content in MemoryBlock variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

**Notes:**

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 147.2.6 compositionWithData(data as string) as QCCompositionMBS 23191

### 147.2.6 compositionWithData(data as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a composition object initialized with the contents of a Quartz Composer composition file.
**Example:**

```
dim data as string // composition file content in string variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

**Notes:**

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 147.2.5 compositionWithData(data as MemoryBlock) as QCCompositionMBS 23191

### 147.2.7 compositionWithFile(file as folderitem) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a composition object initialized with a Quartz Composer composition file.
**Example:**

```
dim file as folderitem // your folderitem
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(file)
```

**Notes:**

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 147.2.8 compositionWithFile(path as string) as QCCompositionMBS 23192

### 147.2.8 compositionWithFile(path as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns a composition object initialized with a Quartz Composer composition file.
**Example:**

```
dim path as string = "/System/Library/Compositions/Rollercoaster.qtz" // your path
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(path)
```

**Notes:**

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 147.2.7 compositionWithFile(file as folderitem) as QCCompositionMBS 23192

### 147.2.9 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 147.2.10 copy as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Creates a copy of the composition.

### 147.2.11 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the attributes of the composition.

### 147.2.12 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array listing the keys that identify the input ports of the root patch of the composition.

### 147.2.13 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array listing the keys that identify the output ports of the root patch of the composition.

### 147.2.14 protocols as string()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the list of protocols to which the composition conforms.

### 147.2.15 QCCompositionAttributeBuiltInKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Example:**

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
```

```
dim d as Dictionary = c.getattributes
dim b as Boolean = d.Value(c.QCCompositionAttributeBuiltInKey)
MsgBox str(b)
```

**Notes:**

The key for the composition origin. The associated value is a Boolean value.
True indicates the composition is built-in (provided by OS X).

### 147.2.16 QCCompositionAttributeCategoryKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Example:**

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Lookup(c.QCCompositionAttributeCategoryKey, "?")
MsgBox b
```

**Notes:** The composition category. The associated value is a category constant. See Categories.

### 147.2.17 QCCompositionAttributeCopyrightKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Example:**

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Value(c.QCCompositionAttributeCopyrightKey)
MsgBox b
```

**Notes:**

The key for composition copyright information.
The associated value is a string.

### 147.2.18 QCCompositionAttributeDescriptionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Notes:**

The key for the composition description.
The associated value is a string.

### 147.2.19 QCCompositionAttributeHasConsumersKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Notes:**

The key for a composition that has consumer patches. The associated value is a Boolean value.
True indicates that the composition has consumers.

### 147.2.20 QCCompositionAttributeIsTimeDependentKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Notes:** The key for the composition time dependency. The associated value is a Boolean value. True indicates that the composition is time dependent.

### 147.2.21 QCCompositionAttributeNameKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard attribute names.
**Example:**

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
MsgBox d.Value(c.QCCompositionAttributeNameKey)
```

**Notes:**

The key for the composition name.
The associated value is a string.

### 147.2.22 QCCompositionCategoryDistortion as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the category names.
**Notes:** A composition that produces a distortion effect.

### 147.2.23 QCCompositionCategoryStylize as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the category names.
**Notes:** A composition that produces a stylize effect.

### 147.2.24 QCCompositionCategoryUtility as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the category names.
**Notes:** A utility composition.

### 147.2.25 QCCompositionInputAudioPeakKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A number input port whose key is inputAudioPeak. The value must be in the [ 0,1 ] range as a mono signal with no decay applied.

### 147.2.26 QCCompositionInputAudioSpectrumKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A structure input port whose key is inputAudioSpectrum. The structure must contain 16 values in

the [ 0,1 ] range representing 16 spectrum bands of the mono signal from low to high frequencies with no decay applied.

### 147.2.27 QCCompositionInputDestinationImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** An image input port whose key is inputDestinationImage.

### 147.2.28 QCCompositionInputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** An image input port whose key is inputImage.

### 147.2.29 QCCompositionInputPaceKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A number input port whose key is inputPace. The value must be in the [ 0,1 ] range.

### 147.2.30 QCCompositionInputPreviewModeKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A Boolean input port whose key is inputPreviewMode. When the value of this input port is set to TRUE, the composition that provides this port must be able to run in a low-quality mode that produces a preview of the composition.

### 147.2.31 QCCompositionInputPrimaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A color input port whose key is inputPrimaryColor.

### 147.2.32 QCCompositionInputScreenImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** An image input port whose key is inputScreenImage.

### 147.2.33 QCCompositionInputSecondaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A color input port whose key is inputSecondaryColor.

### 147.2.34 QCCompositionInputSourceImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** An image input port whose key is inputSourceImage.

### 147.2.35 QCCompositionInputTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A structure input port whose key is inputTrackInfo. The structure contains optional entries, such as ”name”, ”artist”, ”album”, ”duration”, ”artwork”, and so on.

### 147.2.36 QCCompositionInputTrackPositionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A number input port whose key is inputTrackPosition. The value must be expressed in seconds.

### 147.2.37 QCCompositionInputTrackSignalKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A Boolean input port whose key is inputTrackSignal.

### 147.2.38 QCCompositionInputXKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A number input port whose key is inputX. The value must be normalized to the image width with the origin on the left.

### 147.2.39 QCCompositionInputYKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard input key names.
**Notes:** A number input port whose key is inputY. The value must be normalized to the image height with the origin at the bottom.

### 147.2.40 QCCompositionOutputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard output key names.
**Notes:** An image output port whose key is outputImage.

### 147.2.41 QCCompositionOutputWebPageURLKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard output key names.
**Notes:** A string output port whose key is outputWebPageURL.

### 147.2.42 QCCompositionProtocolGraphicAnimation as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard protocol names.
**Notes:**

A composition that renders a generic graphical animation. It has the option to use QCCompositionInputPrimaryColorKey for the primary color of the animation, QCCompositionInputSecondaryColorKey for the secondary color of the animation, QCCompositionInputPaceKey for the global pace of the animation, and QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

Available in OS X v10.5 and later.

### 147.2.43 QCCompositionProtocolGraphicTransition as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard protocol names.
**Notes:** A composition that performs a transition between two images, using a transition time in range of 0 to 1. A conforming composition must use the input keys QCCompositionInputSourceImageKey for the starting image and QCCompositionInputDestinationImageKey for the image to transition to. The composition can optionally use QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

### 147.2.44 QCCompositionProtocolImageFilter as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard protocol names.
**Notes:** A composition that applies an effect to a source image. A conforming composition must use the input key QCCompositionInputImageKey for the source image and QCCompositionOutputImageKey for the output image. The composition can optionally use QCCompositionInputXKey to specify the X position of the center point of the effect, QCCompositionInputYKey to specify the Y position of the center point of the effect, andQCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

### 147.2.45 QCCompositionProtocolMusicVisualizer as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard protocol names.
**Notes:**

A composition that acts as a visualizer for music. A conforming composition must use the input key QCCompositionInputAudioPeakKey for the instantaneous audio peak and the QCCompositionInputAudioSpectrumKey for the instantaneous audio spectrum. It can optionally use the QCCompositionInputTrackInfoKey to indicate it receives information about the current track and the QCCompositionInputTrackSignalKey to

indicate the start of a new track.

Available in OS X v10.5 and later.

### 147.2.46 QCCompositionProtocolScreenSaver as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** One of the standard protocol names.
**Notes:**

A composition that can be used as a screen saver. The composition has the option to use QCCompositionInputScreenImageKey for a screenshot image of the screen that the screen saver runs on, QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes, and QCCompositionOutputWebPageURLKey for a URL to open in the default web browser when screen saver exits (only allowed if screen saver password is disabled).

Available in OS X v10.5 and later.

### 147.2.47 Properties

### 147.2.48 Description as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The description for the composition.
**Notes:** (Read only property)

### 147.2.49 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 147.2.50 identifier as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The identifier for the composition.
**Example:**

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox a(0).identifier
```

**Notes:**

The unique identifier for the composition if it comes from the composition repository; "" otherwise.
(Read only property)

### 147.2.51 Name as String

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name for the composition.
**Example:**

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
MsgBox c.name
```

**Notes:** (Read only property)

## 147.3 class QCCompositionRepositoryMBS

### 147.3.1 class QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The system-wide Quartz Composer composition repository.
**Example:**

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

**Notes:**

The QCCompositionRepository class represents a system-wide centralized repository of built-in and installed Quartz Composer compositions (/Library/Compositions and
textasciitilde /Library/Compositions). The QCCompositionRepository class cannot be subclassed.

Compositions in the repository are represented by the QCComposition class. You can use the methods of the QCCompositionRepository class to fetch all compositions or only those that meet specific criteria.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.3.4 Methods

### 147.3.5 allCompositions as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array that contains all compositions currently in the composition repository.
**Example:**

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

### 147.3.6 Compositions(protocols() as String = nil, attributes as Dictionary = nil) as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns an array of compositions that match a set of criteria.
**Example:**

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.Compositions( array( QCCompositionMBS.QCCompositionProtocol-
ImageFilter))
MsgBox str(a.Ubound+1)+" compositions found"
```

**Notes:**

protocols: The protocols that you want compositions to conform to. Pass nil if you don,Äôt want to filter based on the protocol. You can pass any of these protocols: QCCompositionProtocolAnimation, QCCompositionProtocolImageProducer, QCCompositionProtocolImageFilter, QCCompositionProtocolImageCompositor, QCCompositionProtocolImageTransition, and QCCompositionProtocolScreenSaverRSS.
attributes: A dictionary that contains the attributes, and their associated values, that you want compositions to match. Pass nil if you don,Äôt want to filter based on the attributes. For example, you can pass any of these attributes: QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, QCCompositionAttributeCopyrightKey, QCCompositionAttributeBuiltInKey, and QCCompositionAttributeTimeDependentKey.

Returns an array of QCComposition objects that meet the supplied criteria.

### 147.3.7 compositionWithIdentifier(identifier as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the composition that corresponds to the identifier.
**Example:**

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim c as QCCompositionMBS = r.compositionWithIdentifier("/swing")
MsgBox c.Name
```

**Notes:**

identifier: A string that uniquely identifies the composition to retrieve.

Returns the composition identified by the provided string, or nil if there is no composition with that identifier in the composition repository.

### 147.3.8 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 147.3.9 loadPlugIn(file as folderitem) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.
**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.plugin")
dim r as Boolean = QCCompositionRepositoryMBS.loadPlugIn(f)

if r then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

**Notes:** This method will do nothing if the plug-in was already loaded.
See also:

- 147.3.10 loadPlugIn(path as string) as Boolean 23205

### 147.3.10 loadPlugIn(path as string) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.

**Notes:** This method will do nothing if the plug-in was already loaded.
See also:

- 147.3.9 loadPlugIn(file as folderitem) as Boolean 23205

### 147.3.11 QCCompositionRepositoryDidUpdateNotification as string

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The new of the notification which is posted whenever the list of compositions in the composition repository is updated.

### 147.3.12 sharedCompositionRepository as QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the shared instance of the composition repository.

### 147.3.13 Properties

### 147.3.14 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

## 147.4 control QCViewControlMBS

### 147.4.1 control QCViewControlMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The control to host a QCView properly.

### 147.4.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.4.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.1pr2

### 147.4.4 Properties

### 147.4.5 View as QCViewMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** The QCView in use by this control.
**Notes:**

Please use this property to access the actual view and make your settings and load the data to render.
(Read only property)

### 147.4.6 Events

### 147.4.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 147.4.8 Close

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 147.4.9 Closing

Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 147.4.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacControls Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 147.4.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 147.4.12 DidStartRendering

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:** Rendering did start notification.

### 147.4.13 DidStopRendering

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:** Rendering did stop notification.

### 147.4.14 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 147.4.15 FocusLost

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 147.4.16 FocusReceived

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 147.4.17 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 147.4.18 GotFocus

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 147.4.19 LostFocus

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 147.4.20 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 147.4.21 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 147.4.22 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 147.4.23 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 147.4.24 Open

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 147.4.25 Opening

Plugin Version: 15.1, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 147.4.26 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 147.5 class QCViewMBS

### 147.5.1 class QCViewMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** The QCView class is a custom NSView class that loads, plays, and controls Quartz Composer compositions.
**Notes:**

It is an autonomous view that is driven by an internal timer running on the main thread.

The view can be set to render a composition automatically when it is placed onscreen. The view stops rendering when it is placed offscreen. When not rendering, the view is filled with the current erase color. The rendered composition automatically synchronizes to the vertical retrace of the monitor.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

### 147.5.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.1
- MBS Xojo / Real Studio Plugins, version 15.1pr2
- Plugins 10.1
- Playing with Quartz Compositions in REALbasic

### 147.5.3 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.1
- MBS Xojo / Real Studio Plugins, version 15.1pr2
- Plugins 10.1
- Playing with Quartz Compositions in REALbasic

### 147.5.4 Methods

### 147.5.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new Quartz composer view with size 100/100 and position 0/0
**Example:**

```
dim t as new QCViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 147.5.6 Constructor(Handle as Integer) 23214
- 147.5.7 Constructor(left as Double, top as Double, width as Double, height as Double) 23214

### 147.5.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

**Function:** Creates an object based on the given QCView handle.
**Example:**

```
dim t as new QCViewMBS(0, 0, 100, 100)
dim v as new QCViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a QCView and the plugin retains this handle.
See also:

- 147.5.5 Constructor 23213
- 147.5.7 Constructor(left as Double, top as Double, width as Double, height as Double) 23214

### 147.5.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new Quartz composer view with the given size and position.
**Example:**

```
dim x as new QCViewMBS(0, 0, 100, 100)
```

**Notes:** On success the handle property is not zero.
See also:

- 147.5.5 Constructor 23213
- 147.5.6 Constructor(Handle as Integer) 23214

### 147.5.8 erase

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Clears the view using the current erase color.

### 147.5.9 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the attributes of the composition associated with the renderer.
**Notes:**

Returns a dictionary that contains the attributes that describe the composition, including the input and output ports of the root patch.

The dictionary can define any of the attributes that are specified by the composition attribute keys. See QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, and QCCompositionAttributeCopyrightKey.

The dictionary can also contain dictionaries that correspond to the keys that identify the input and output ports of the root patch of the composition. See QCPortAttributeTypeKey, QCPortAttributeNameKey, QCPortAttributeMinimumValueKey, QCPortAttributeMaximumValueKey, and QCPortAttributeMenuItemsKey.

Available in Mac OS X v10.4 and later.

### 147.5.10 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array that contains the keys that identify the input ports of the root patch of the composition.

### 147.5.11 loadComposition(composition as QCCompositionMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Loads a QCComposition object into the view.
**Notes:**

Returns true if successful; otherwise false.
If unsuccessful, any composition that's already loaded in the view remains loaded.

### 147.5.12 loadCompositionFromData(data as MemoryBlock) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Loads the composition from memoryblock.
**Notes:**

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.
Available in Mac OS X v10.4 and later.
See also:

- 147.5.13 loadCompositionFromData(data as string) as boolean 23216

### 147.5.13 loadCompositionFromData(data as string) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Loads the composition from data string.
**Notes:**

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.
Available in Mac OS X v10.4 and later.
See also:

- 147.5.12 loadCompositionFromData(data as MemoryBlock) as boolean 23216

### 147.5.14 loadCompositionFromFile(file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Loads the composition file located at the specified path.
**Notes:**

file: A folderitem that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

• 147.5.15 loadCompositionFromFile(filepath as string) as boolean 23217

### 147.5.15 loadCompositionFromFile(filepath as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Loads the composition file located at the specified path.
**Notes:**

filepath: A string that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

• 147.5.14 loadCompositionFromFile(file as folderitem) as boolean 23216

### 147.5.16 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an array that contains the keys that identify the output ports of the root patch of the composition.

### 147.5.17 pauseRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Pauses rendering in the view.
**Notes:**

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

### 147.5.18 resumeRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Resumes rendering a paused composition.
**Notes:**

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

### 147.5.19 setValueForInputKey(value as Variant, key as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Sets the value for an input port of a composition.
**Notes:**

value: The value to set for the input port. The input port must be at the root patch of the composition. The data type of the value argument must match the input port.
key: The key associated with the input port of the composition. This method throws an exception if key is invalid.

Returns false if it cannot set the value.
Available in Mac OS X v10.4 and later.

### 147.5.20 startRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Starts rendering the composition that is in the view.
**Notes:**

Returns false if the composition fails to start rendering; true otherwise.
Available in Mac OS X v10.4 and later.

### 147.5.21 stopRendering

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Stops rendering the composition that is in the view.
**Notes:** Available in Mac OS X v10.4 and later.

### 147.5.22 unloadComposition

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Unloads the composition from the view.
**Notes:**

If necessary, this method calls stopRendering prior to unloading the composition.
Available in Mac OS X v10.5 and later.

### 147.5.23 valueForInputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value for an input port of a composition.
**Notes:**

key: The key associated with an input port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value. The data type of returned value depends on the type of the input port.
Available in Mac OS X v10.4 and later.

### 147.5.24 valueForOutputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the value for an output port of a composition.
**Notes:**

key
The key associated with an output port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value as Xojo variant. The data type of returned value depends on the type of the output port.

### 147.5.25 Properties

### 147.5.26 autostartsRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Whether the composition that is in the view starts rendering automatically when the view is put on the screen.
**Notes:**

Available in Mac OS X v10.4 and later.
(Read and Write property)

### 147.5.27 eraseColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** The color used to erase the view.
**Notes:**

Available in Mac OS X v10.4 and later.
(Read and Write property)

### 147.5.28 eventForwardingMask as Integer

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** The mask used to filter which types of events are forwarded from the view to the composition during rendering.
**Notes:**

mask: An event filtering mask. The mask can be a combination of any of the mask constants listed in Table below (defined in NSEventMBS) or the constant NSAnyEventMask.

| Constant | Description |
|---|---|
| NSLeftMouseDownMask | The user pressed the left button. |
| NSLeftMouseDraggedMask | The user moved the mouse with the left button down. |
| NSLeftMouseUpMask | The user released the left button. |
| NSRightMouseDownMask | The user pressed the right button. |
| NSRightMouseDraggedMask | The user moved the mouse with the right button down. |
| NSRightMouseUpMask | The user released the right button. |
| NSOtherMouseDownMask | The user pressed the middle button, or some button other than the left or right button. |
| NSOtherMouseDraggedMask | The user moved the mouse with the middle button down, or some button other than the left or right button. |
| NSOtherMouseUpMask | The user released the middle button, or some button other than the left or right button. |
| NSMouseMovedMask | The user moved the mouse without holding down a mouse button. |
| NSScrollWheelMask | The user moved the mouse scroll wheel. |
| NSKeyDownMask | The user generated a character or characters by pressing a key. |
| NSKeyUpMask | The user released a key. |
| NSFlagsChangedMask | The user pressed or released a modifier key, or toggled the Caps Lock key. |

(Read and Write property)

### 147.5.29 isPausedRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns whether or not the rendering in the view is paused.
**Notes:**

True if the rendering is paused; otherwise false.
Available in Mac OS X v10.5 and later.
(Read only property)

### 147.5.30 isRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Checks whether a composition is rendering in the view.
**Notes:**

Returns true if a composition is rendering in the view; false otherwise.
Available in Mac OS X v10.5 and later.
(Read only property)

### 147.5.31 loadedComposition as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns the composition loaded in the view.
**Notes:** (Read only property)

### 147.5.32 maxRenderingFrameRate as Double

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** The maximum rendering frame rate.
**Notes:**

Pass 0.0 to specify that there is no limit.
Available in Mac OS X v10.4 and later.
(Read and Write property)

### 147.5.33 snapshotImage as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.1, Platform: macOS, Targets: Desktop only.

**Function:** Returns an NSImage object of the current image in the view.
**Notes:**

Available in Mac OS X v10.5 and later.
(Read only property)

# Chapter 148

# QuickLook

## 148.1 control DesktopQLPreviewViewControlMBS

### 148.1.1 control DesktopQLPreviewViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a QLPreviewViewMBS.

### 148.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 148.1.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 148.1.4 Properties

### 148.1.5 View as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

**Function:** The view this control shows.
**Notes:** (Read only property)

### 148.1.6 Events

### 148.1.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 148.1.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 148.1.9 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 148.1.10 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 148.1.11 FocusLost

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 148.1.12 FocusReceived

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 148.1.13 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 148.1.14 MenuBarSelected

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 148.1.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 148.1.16 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 148.1.17 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 148.1.18 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 148.1.19 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 148.2 class QLPreviewPanelMBS

### 148.2.1 class QLPreviewPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The QLPreviewPanel class implements the Preview Panel - a user interface object that displays the preview of a list of items.
**Notes:**

Every application only has on instance of QLPreviewPanel.
Subclass of the NSPanelMBS class.

### 148.2.2 Blog Entries

- MBS Xojo Plugins, version 21.1pr1
- MBS Xojo Plugins, version 19.5pr7
- MBS Real Studio Plugins, version 11.2pr7
- MBS Plugins 10.3 Release Notes

### 148.2.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr1
- MBS Xojo Plugins, version 19.5pr7
- MBS Real Studio Plugins, version 11.2pr7
- MBS Plugins 10.3 Release Notes

### 148.2.4 Methods

### 148.2.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Whether this panel is available.
**Notes:** Returns true on Snow Leopard.

### 148.2.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The constructor for a new panel.

### 148.2.7 currentPreviewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The currently previewed item in the preview panel or nil if there is none.

### 148.2.8 enterFullScreenMode(screen as NSScreenMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Enters full screen mode.
**Notes:** If panel is not on-screen, the panel will go directly to full screen mode.

### 148.2.9 exitFullScreenMode

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Exits full screen mode.

### 148.2.10 refreshCurrentPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Asks the Preview Panel to recompute the preview of the currently previewed item.

### 148.2.11 reloadData

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Asks the Preview Panel to reload its data from its data source.
**Notes:** This method does not refresh the visible item if it has not changed.

### 148.2.12 updateController

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** Asks the Preview Panel to update its current controller.
**Notes:** The Preview Panel automatically updates its controller (by searching the responder chain) whenever the main or key window changes. Invoke updateController if the responder chain changes without explicit notice.

### 148.2.13 Properties

### 148.2.14 currentPreviewItemIndex as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** The index of the currently previewed item in the preview panel or NSNotFound (-1) if there is none.
**Notes:** (Read and Write property)

### 148.2.15 inFullScreenMode as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

**Function:** True if the panel is currently open and in full screen mode.
**Notes:** (Read only property)

### 148.2.16 PreviewView as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

**Function:** Returns the preview view in the panel.
**Notes:** (Read only property)

### 148.2.17 Events

### 148.2.18 didLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** This event is called after an item has been loaded.

### 148.2.19 handleEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** Invoked by the preview panel when it receives an event it doesn't handle.
**Notes:** Returns true if you did not handle this event.

### 148.2.20 numberOfPreviewItems as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** The event called to ask you for the number of items that the preview panel should preview.

### 148.2.21 previewItemAtIndex(index as Integer) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** The event is called to ask you for the item with the given index.

### 148.2.22 sourceFrameOnScreenForPreviewItem(file as folderitem) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** Invoked when the preview panel opens or closes to provide a zoom effect.
**Notes:** Return a zero rect if there is no origin point, this will produce a fade of the panel. The coordinates are screen based.

### 148.2.23 transitionImageForPreviewItem(file as folderitem, byref contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Platform: macOS, Targets: .

**Function:** Called to ask you for the transition image for a given preview item.
**Notes:**

Invoked when the preview panel opens or closes to provide a smooth transition when zooming.

contentRect: The rect within the image that actually represents the content of the document. For example, for icons the actual rect is generally smaller than the icon itself.

Return an image the panel will crossfade with when opening or closing. You can specify the actual "document" content rect in the image in contentRect.

### 148.2.24 willLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

**Function:** This event is called before an item is loaded.

## 148.3 control QLPreviewViewControlMBS

### 148.3.1 control QLPreviewViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The Xojo control for a QLPreviewViewMBS.

### 148.3.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 148.3.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls
- MBS Xojo / Real Studio Plugins, version 15.0pr8

### 148.3.4 Properties

### 148.3.5 View as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

**Function:** The view this control shows.
**Notes:** (Read only property)

### 148.3.6 Events

### 148.3.7 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the bounds, but not the frame, changed.

### 148.3.8 Close

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

### 148.3.9 Closing

Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:**

The control is about to close.
In older Xojo versions, this event is named Close.

### 148.3.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

**Function:** This event is called when it is appropriate to display a contextual menu for the control.

### 148.3.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** Called when a menuitem is choosen.
**Notes:** This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

### 148.3.12 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

### 148.3.13 FocusLost

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In older Xojo versions, this event is named LostFocus.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 148.3.14 FocusReceived

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 148.3.15 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The event called when the frame changed.
**Notes:** This event notifies you, that the control changed it's bounding frame, which is position and/or size.

### 148.3.16 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
**Notes:** This only fires if the control itself got focus and not a sub control.

### 148.3.17 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
**Notes:** This only fires if the control itself lost focus and not a sub control.

### 148.3.18 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:**

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

### 148.3.19 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was pressed inside the control,Äôs region at the location passed in to x, y.
**Notes:**

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

### 148.3.20 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

### 148.3.21 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

### 148.3.22 Open

MBS MacFrameworks Plugin, Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

### 148.3.23 Opening

Plugin Version: 15.0, Platform: macOS, Targets: .

**Function:**

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

### 148.3.24 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

## 148.4 class QLPreviewViewMBS

### 148.4.1 class QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The class for using a preview view from QuickLook in Xojo.
**Notes:**

If you want to show previews of files in your application, use this view. For example if you not just want to show previews of pictures, but also from Movies, PDF, Office and iWork files.
Requires Mac OS X 10.6 or newer.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

### 148.4.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr8

### 148.4.3 Blog Entries

- MBS Real Studio Plugins, version 11.2pr8

### 148.4.4 Methods

### 148.4.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether this class is available.
**Notes:** Returns true on Mac OS X 10.6 or newer.

### 148.4.6 close

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Closes the receiver, releasing the current preview item.
**Notes:**

Once the receiver has closed, it will no longer accept preview items.

The application is required to call close when the receiver is no longer needed if shouldCloseWithWindow is false.
The close method will be called automatically when the window closes if shouldCloseWithWindow is true.

### 148.4.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new quicklook preview view with size 100/100 and position 0/0
**Example:**

```
dim t as new QLPreviewViewMBS
```

**Notes:** On success the handle property is not zero.
See also:

- 148.4.8 Constructor(Handle as Integer) 23238
- 148.4.9 Constructor(left as Double, top as Double, width as Double, height as Double) 23239
- 148.4.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 23239

### 148.4.8 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates an object based on the given QLPreviewView handle.
**Example:**

```
dim t as new QLPreviewViewMBS(0, 0, 100, 100)
dim v as new QLPreviewViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a QLPreviewView and the plugin retains this handle.
See also:

- 148.4.7 Constructor 23238
- 148.4.9 Constructor(left as Double, top as Double, width as Double, height as Double) 23239
- 148.4.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 23239

### 148.4.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new QuickLook preview view with the given size and position.
**Example:**

```
dim x as new QLPreviewViewMBS(0, 0, 100, 100)
```

**Notes:** On success the handle property is not zero.
See also:

- 148.4.7 Constructor 23238
- 148.4.8 Constructor(Handle as Integer) 23238
- 148.4.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 23239

### 148.4.10 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Creates a new QuickLook preview view with the given size and position.
**Example:**

```
dim view as new QLPreviewViewMBS(0, 0, 200, 200, QLPreviewViewMBS.StyleCompact)
```

**Notes:**

On success the handle property is not zero.

On Mac OS X 10.7 or later we use the new style parameter to create a Preview view with the given style.
See also:

- 148.4.7 Constructor 23238
- 148.4.8 Constructor(Handle as Integer) 23238
- 148.4.9 Constructor(left as Double, top as Double, width as Double, height as Double) 23239

### 148.4.11 refreshPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Asks the Preview view to recompute the preview of the currently previewed item.

### 148.4.12 Properties

### 148.4.13 autostarts as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Whether playback of audio/video files automatically starts.
**Notes:** (Read and Write computed property)

### 148.4.14 previewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** The current visible item in the view.
**Notes:** (Read and Write computed property)

### 148.4.15 shouldCloseWithWindow as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

**Function:** Set whether the receiver closes when its window closes.
**Notes:**

See close method.
(Read and Write computed property)

### 148.4.16 Constants

### 148.4.17 StyleCompact = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the style constants.
**Notes:** Use in inspectors.

### 148.4.18 StyleNormal = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

**Function:** One of the style constants.
**Notes:** Use in full previews.

# Chapter 149

# QuickTime

## 149.1 class QTAudioChannelDescriptionMBS

### 149.1.1 class QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: All.

**Function:** The description for an audio channel.

### 149.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

### 149.1.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

### 149.1.4 Properties

### 149.1.5 ChannelFlags as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Flags that control the interpretation of Coordinates.
**Notes:** (Read and Write property)

### 149.1.6 ChannelLabel as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The AudioChannelLabel that describes the channel.
**Notes:** (Read and Write property)

### 149.1.7 Coordinates(index as Integer) as Double

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** An ordered triple that specifies a precise speaker location.
**Notes:**

Index from 0 to 2.
(Read and Write computed property)

### 149.1.8 Constants

### 149.1.9 kAudioChannelCoordinates_Azimuth = 0

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For spherical coordinates, 0 is front center, positive is right, negative is left. This is measured in degrees.

### 149.1.10 kAudioChannelCoordinates_BackFront = 1

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For rectangulare coordinates, negative is back and positive is front.

### 149.1.11 kAudioChannelCoordinates_Distance = 2

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For spherical coordinates, the units are described by flags.

### 149.1.12 kAudioChannelCoordinates_DownUp = 2

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For rectangulare coordinates, negative is below ground level, 0 is ground level, and positive is above ground level.

### 149.1.13 kAudioChannelCoordinates_Elevation = 1

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For spherical coordinates, +90 is zenith, 0 is horizontal, -90 is nadir. This is measured in degrees.

### 149.1.14 kAudioChannelCoordinates_LeftRight = 0

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for indexing the Coordinates array.
**Notes:** For rectangulare coordinates, negative is left and positive is right.

### 149.1.15 kAudioChannelFlags_AllOff = 0

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for the ChannelFlags property.
**Notes:** All flags off.

### 149.1.16 kAudioChannelFlags_Meters = 4

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for the ChannelFlags property.
**Notes:** Set to indicate the units are in meters, clear to indicate the units are relative to the unit cube or unit sphere.

### 149.1.17 kAudioChannelFlags_RectangularCoordinates = 1

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for the ChannelFlags property.
**Notes:** The channel is specified by the cartesioan coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_SphericalCoordinates.

### 149.1.18 kAudioChannelFlags_SphericalCoordinates = 2

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the constants for the ChannelFlags property.
**Notes:** The channel is specified by the spherical coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_RectangularCoordinates.

### 149.1.19 kAudioChannelLabel_Ambisonic_W = 200

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.20 kAudioChannelLabel_Ambisonic_X = 201

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.21 kAudioChannelLabel_Ambisonic_Y = 202

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.22 kAudioChannelLabel_Ambisonic_Z = 203

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.23 kAudioChannelLabel_Center = 3

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.24 kAudioChannelLabel_CenterSurround = 9

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Back Center" or plain "Rear Surround"

### 149.1.25 kAudioChannelLabel_CenterSurroundDirect = 44

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** back center, non diffuse

### 149.1.26 kAudioChannelLabel_ClickTrack = 304

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.27 kAudioChannelLabel_DialogCentricMix = 43

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.28 kAudioChannelLabel_Discrete = 400

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.29 kAudioChannelLabel_Discrete_0 = & h10000

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.30 kAudioChannelLabel_Discrete_1 = & h10001

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.31 kAudioChannelLabel_Discrete_10 = & h1000A

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.32 kAudioChannelLabel_Discrete_11 = & h1000B

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.33 kAudioChannelLabel_Discrete_12 = & h1000C

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.34 kAudioChannelLabel_Discrete_13 = & h1000D

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.35 kAudioChannelLabel_Discrete_14 = & h1000E

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.36 kAudioChannelLabel_Discrete_15 = & h1000F

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.37 kAudioChannelLabel_Discrete_2 = & h10002

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.38 kAudioChannelLabel_Discrete_3 = & h10003

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Example:**

```
// build 2 channels to go on channel 3& 4
dim d1 as new QTAudioChannelDescriptionMBS
dim d2 as new QTAudioChannelDescriptionMBS

d1.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d1.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_3
d2.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d2.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_4

dim a as new QTAudioChannelLayoutMBS

a.NumberChannelDescriptions = 2
a.ChannelDescriptions(0) = d1
a.ChannelDescriptions(1) = d2
a.ChannelLayoutTag = QTAudioChannelLayoutMBS.kAudioChannelLayoutTag_DiscreteInOrder + 2
```

### 149.1.39 kAudioChannelLabel_Discrete_4 = & h10004

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.40 kAudioChannelLabel_Discrete_5 = & h10005

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.41 kAudioChannelLabel_Discrete_6 = & h10006

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.42 kAudioChannelLabel_Discrete_65535 = & h1FFFF

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.43 kAudioChannelLabel_Discrete_7 = & h10007

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.44 kAudioChannelLabel_Discrete_8 = & h10008

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.45 kAudioChannelLabel_Discrete_9 = & h10009

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.46 kAudioChannelLabel_ForeignLanguage = 305

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.47 kAudioChannelLabel_Haptic = 45

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.48 kAudioChannelLabel_HeadphonesLeft = 301

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.49 kAudioChannelLabel_HeadphonesRight = 302

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.50 kAudioChannelLabel_HearingImpaired = 40

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.51 kAudioChannelLabel_Left = 1

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.52 kAudioChannelLabel_LeftCenter = 7

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.53 kAudioChannelLabel_LeftSurround = 5

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Back Left"

### 149.1.54 kAudioChannelLabel_LeftSurroundDirect = 10

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Side Left"

### 149.1.55 kAudioChannelLabel_LeftTotal = 38

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** matrix encoded 4 channels

### 149.1.56 kAudioChannelLabel_LeftWide = 35

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.57 kAudioChannelLabel_LFE2 = 37

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.58 kAudioChannelLabel_LFEScreen = 4

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.59 kAudioChannelLabel_Mono = 42

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.60 kAudioChannelLabel_MS_Mid = 204

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.61 kAudioChannelLabel_MS_Side = 205

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.62 kAudioChannelLabel_Narration = 41

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.63 kAudioChannelLabel_RearSurroundLeft = 33

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.64 kAudioChannelLabel_RearSurroundRight = 34

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.65 kAudioChannelLabel_Right = 2

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.66 kAudioChannelLabel_RightCenter = 8

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.67 kAudioChannelLabel_RightSurround = 6

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Back Right"

### 149.1.68 kAudioChannelLabel_RightSurroundDirect = 11

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Side Right"

### 149.1.69 kAudioChannelLabel_RightTotal = 39

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** matrix encoded 4 channels

### 149.1.70 kAudioChannelLabel_RightWide = 36

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.71 kAudioChannelLabel_TopBackCenter = 17

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.72 kAudioChannelLabel_TopBackLeft = 16

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.73 kAudioChannelLabel_TopBackRight = 18

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.74 kAudioChannelLabel_TopCenterSurround = 12

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.75 kAudioChannelLabel_Unknown = & hFFFFFFFF

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** Unknown or unspecified other use.

### 149.1.76 kAudioChannelLabel_Unused = 0

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** Channel is present, but has no intended use or destination.

### 149.1.77 kAudioChannelLabel_UseCoordinates = 100

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** Channel is described by the Coordinates fields.

### 149.1.78 kAudioChannelLabel_VerticalHeightCenter = 14

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Top Front Center"

### 149.1.79 kAudioChannelLabel_VerticalHeightLeft = 13

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Top Front Left"

### 149.1.80 kAudioChannelLabel_VerticalHeightRight = 15

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.
**Notes:** WAVE: "Top Front Right"

### 149.1.81 kAudioChannelLabel_XY_X = 206

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

### 149.1.82 kAudioChannelLabel_XY_Y = 207

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel label constants.

## 149.2 class QTAudioChannelLayoutMBS

### 149.2.1 class QTAudioChannelLayoutMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: All.

**Function:** The class is used to specify channel layouts in files and hardware.
**Notes:**

This class does not use QuickTime functions as it only wraps data structures. And it can be used with Mac App Store and AVFoundation.

Some channel abbreviations used for the constants:

- L - left
- R - right
- C - center
- Ls - left surround
- Rs - right surround
- Cs - center surround
- Rls - rear left surround
- Rrs - rear right surround
- Lw - left wide
- Rw - right wide
- Lsd - left surround direct
- Rsd - right surround direct
- Lc - left center
- Rc - right center
- Ts - top surround
- Vhl - vertical height left
- Vhc - vertical height center
- Vhr - vertical height right
- Lt - left matrix total. for matrix encoded stereo.
- Rt - right matrix total. for matrix encoded stereo.

### 149.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

### 149.2.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

### 149.2.4 Methods

### 149.2.5 GetNumberOfChannels(layoutTag as UInt32) as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Function to get the number of channels out of an AudioChannelLayoutTag.
**Notes:** The low 16 bits of an AudioChannelLayoutTag gives the number of channels except for kAudioChannelLayoutTag_UseChannelDescriptions and kAudioChannelLayoutTag_UseChannelBitmap.

### 149.2.6 Memory as Memoryblock

MBS Main Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the audio channel layout as memoryblock, so you can pass it for declares.

### 149.2.7 Properties

### 149.2.8 ChannelBitmap as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** If ChannelLayoutTag is set to kAudioChannelLayoutTag_UseChannelBitmap, this field is the channel usage bitmap.
**Notes:** (Read and Write property)

### 149.2.9 ChannelLayoutTag as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The AudioChannelLayoutTag that indicates the layout.
**Notes:** (Read and Write property)

### 149.2.10 NumberChannelDescriptions as UInt32

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The number of items in the ChannelDescriptions array.
**Notes:** (Read and Write property)

### 149.2.11 ChannelDescriptions(index as Integer) as QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** An array of AudioChannelDescriptions that describe the layout.
**Notes:**

Index from 0 to NumberChannelDescriptions-1.
(Read and Write computed property)

### 149.2.12 Constants

### 149.2.13 kAudioChannelBit_Center = 4

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.14 kAudioChannelBit_CenterSurround = 256

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Back Center"

### 149.2.15 kAudioChannelBit_Left = 1

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.16 kAudioChannelBit_LeftCenter = 64

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.17 kAudioChannelBit_LeftSurround = 16

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Back Left"

### 149.2.18 kAudioChannelBit_LeftSurroundDirect = 512

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Side Left"

### 149.2.19 kAudioChannelBit_LFEScreen = 8

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.20 kAudioChannelBit_Right = 2

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.21 kAudioChannelBit_RightCenter = 128

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.22 kAudioChannelBit_RightSurround = 32

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Back Right"

### 149.2.23 kAudioChannelBit_RightSurroundDirect = 1024

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Side Right"

### 149.2.24 kAudioChannelBit_TopBackCenter = 65536

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.25 kAudioChannelBit_TopBackLeft = 32768

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.26 kAudioChannelBit_TopBackRight = 131072

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.27 kAudioChannelBit_TopCenterSurround = 2048

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.

### 149.2.28 kAudioChannelBit_VerticalHeightCenter = 8192

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Top Front Center"

### 149.2.29 kAudioChannelBit_VerticalHeightLeft = 4096

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Top Front Left"

### 149.2.30 kAudioChannelBit_VerticalHeightRight = 16384

MBS Main Plugin, Plugin Version: 11.3.

**Function:** One of the channel bitmap constants.
**Notes:** WAVE: "Top Front Right"

### 149.2.31 kAudioChannelLayoutTag_AAC_3_0 = & h720003

### 149.3.4 Methods

### 149.3.5 AttachToAudioUnitComponent(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Attaches the Sound Output component to a given Audio Unit component.
**Notes:**

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 149.3.6 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer 23287

### 149.3.6 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Attaches the Sound Output component to a given Audio Unit component.
**Notes:**

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 149.3.5 AttachToAudioUnitComponent(componenthandle as Integer) as Integer 23287

### 149.3.7 AudioOutputUnitStart(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Starts the output unit.
**Notes:** Returns a Mac OS errro code (0 for success).

### 149.3.8 AudioUnitInitialize(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

**Function:** Initializes the output unit.
**Notes:** Returns a Mac OS errro code (0 for success).

### 149.3.9 closeComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Closes the Sound Output component.

### 149.3.10 InitComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Initializes the sound output component.
**Notes:** Allocates memory for example.

### 149.3.11 OpenComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Opens the SoundOutput component.

### 149.3.12 OpenDefaultAudioUnitOutputComponent as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Opens the default audio unit component and returns the handle.
**Notes:**

Returns 0 on any error.
The component is only available on Mac OS X, so this function will return 0 on all other platforms.

### 149.3.13 Properties

### 149.3.14 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** The component handle.
**Notes:** (Read and Write property)

### 149.3.15 IsOpen as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Whether the sound output component has been opened yet.
**Notes:**

Returns false on any error.
(Read only property)

### 149.3.16 IsStreamActive as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** True in case the stream is active.
**Notes:**

Returns false on any error.
(Read only property)

### 149.3.17 PostsStatusNotifications as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Whether status notificiations should be posted.
**Notes:** (Read and Write property)

### 149.3.18 Release as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** Whether the constructor should release the handle.
**Notes:** (Read and Write property)

### 149.3.19 SoundOutputComponentHandle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

**Function:** The handle of the used component instance.
**Notes:** (Read only property)

### 150.1.4 Methods

### 150.1.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.

### 150.1.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.

### 150.1.7 Properties

### 150.1.8 AppId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The app-id.
**Notes:** (Read and Write property)

### 150.1.9 ClusterId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The cluster ID.
**Notes:** (Read and Write property)

### 150.1.10 ContentEncoding as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The content-encoding.
**Notes:** (Read and Write property)

### 150.1.11 ContentType as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The content-type.
**Notes:** (Read and Write property)

### 150.1.12 CorrelationId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The correlation-id.
**Notes:** (Read and Write property)

### 150.1.13 DeliveryMode as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The delivery-mode.
**Notes:** (Read and Write property)

### 150.1.14 Expiration as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The expiration.
**Notes:** (Read and Write property)

### 150.1.15 Flags as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Bit-mask of set fields.
**Notes:** (Read and Write property)

### 150.1.16 HasAppId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagAppId.
**Notes:** (Read and Write property)

### 150.1.17 HasClusterId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagClusterId.
**Notes:** (Read and Write property)

### 150.1.18 HasContentEncoding as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagContentEncoding.
**Notes:** (Read and Write property)

### 150.1.19 HasContentType as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagContentType.
**Notes:** (Read and Write property)

### 150.1.20 HasCorrelationId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagCorrelationId.
**Notes:** (Read and Write property)

### 150.1.21 HasDeliveryMode as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagDeliveryMode.
**Notes:** (Read and Write property)

### 150.1.22 HasExpiration as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagExpiration.
**Notes:** (Read and Write property)

### 150.1.23 HasHeaders as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagHeaders.
**Notes:** (Read and Write property)

### 150.1.24 HasMessageId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagMessageId.
**Notes:** (Read and Write property)

### 150.1.25 HasPriority as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagPriority.
**Notes:** (Read and Write property)

### 150.1.26 HasReplyTo as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagReplyTo.
**Notes:** (Read and Write property)

### 150.1.27 HasTimestamp as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagTimestamp.
**Notes:** (Read and Write property)

### 150.1.28 HasType as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagType.
**Notes:** (Read and Write property)

### 150.1.29 HasUserId as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience property to set/get Flags with kFlagUserId.
**Notes:** (Read and Write property)

### 150.1.30 Headers as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Dictionary with headers.
**Notes:** (Read and Write property)

### 150.1.31 MessageId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The message ID.
**Notes:** (Read and Write property)

### 150.1.32 Priority as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The priority.
**Notes:** (Read and Write property)

### 150.1.33 ReplyTo as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The reply to field.
**Notes:** (Read and Write property)

### 150.1.34 Timestamp as UInt64

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The timestamp.
**Notes:** (Read and Write property)

### 150.1.35 Type as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The type field.
**Notes:** (Read and Write property)

### 150.1.36 UserId as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The user id.
**Notes:** (Read and Write property)

### 150.1.37 Constants

### 150.1.38 kDeliveryNonPersistent = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the delivery modes.
**Notes:** Non-persistent message.

### 150.1.39 kDeliveryPersistent = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the delivery modes.
**Notes:** Persistent message

### 150.1.40 kFlagAppId = 8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** AppID field is set.

### 150.1.41 kFlagClusterId = 4

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** ClusterId field is set.

### 150.1.42 kFlagContentEncoding = 16384

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** ContentEncoding field is set.

### 150.1.43 kFlagContentType = 32768

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** ContentType field is set.

### 150.1.44 kFlagCorrelationId = 1024

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** CorrelationId field is set.

### 150.1.45 kFlagDeliveryMode = 4096

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** DeliveryMode field is set.

### 150.1.46 kFlagExpiration = 256

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** Expiration field is set.

### 150.1.47 kFlagHeaders = 8192

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** Headers field is set.

### 150.1.48 kFlagMessageId = 128

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** MessageId field is set.

### 150.1.49 kFlagPriority = 2048

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** Priority field is set.

### 150.1.50 kFlagReplyTo = 512

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** ReplyTo field is set.

### 150.1.51 kFlagTimestamp = 64

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** Timestamp field is set.

### 150.1.52 kFlagType = 32

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** Type field is set.

### 150.1.53 kFlagUserId = 16

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the flags to indicate a field is set.
**Notes:** UserId field is set.

## 150.2 class RabbitMQConnectionInfoMBS

### 150.2.1 class RabbitMQConnectionInfoMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class ot parse an URL.

### 150.2.2 Blog Entries

- News from the MBS Xojo Plugins Version 21.2
- Bringing RabbitMQ to Xojo

### 150.2.3 Blog Entries

- News from the MBS Xojo Plugins Version 21.2
- Bringing RabbitMQ to Xojo

### 150.2.4 Methods

### 150.2.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.
**Notes:**

Sets default values for properties.

The default values are:

- user: "guest"
- password: "guest"
- host: "localhost"
- vhost: "/"
- port: 5672

See also:

- 150.2.6 Constructor(URL as String) 23302

### 150.2.6 Constructor(URL as String)

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Parse a connection URL.
**Notes:**

An amqp connection url takes the form:

amqp:// [ $ USERNAME [ :$ PASSWORD ] @ ] $ HOST [ :$ PORT ] / [ $ VHOST ]

Examples:
amqp://guest:guest@localhost:5672//
amqp://guest:guest@localhost/myvhost

Any missing parts of the URL will be set to the defaults specified in other Constructor. For amqps: URLs the default port will be set to 5671 instead of 5672 for non-SSL URLs.

We raise UnsupportedOperationException if parsing failes.
See also:

- 150.2.5 Constructor 23301

### 150.2.7 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.

### 150.2.8 Properties

### 150.2.9 Host as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The hostname of the broker.
**Notes:** (Read only property)

### 150.2.10 Password as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The password to authenticate with the broker.
**Notes:**

default on most brokers is 'guest'
(Read only property)

### 150.2.11 Port as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The port that the broker is listening on.
**Notes:**

default on most brokers is 5672.
(Read only property)

### 150.2.12 SSL as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether to use SSL.
**Notes:** (Read only property)

### 150.2.13 User as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The username to authenticate with the broker.
**Notes:**

default on most broker is 'guest'
(Read only property)

### 150.2.14 VHost as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The virtual host on the broker to connect to.
**Notes:**

a good default is "/"
(Read only property)

## 150.3 class RabbitMQConnectionMBS

### 150.3.1 class RabbitMQConnectionMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for a RabbitMQ connection to a server.
**Notes:** Our plugin converts from dictionary/array/variant to/from the encoded representation used in MQ automatically.

### 150.3.2 Blog Entries

- News from the MBS Xojo Plugins Version 21.2
- Bringing RabbitMQ to Xojo

### 150.3.3 Blog Entries

- News from the MBS Xojo Plugins Version 21.2
- Bringing RabbitMQ to Xojo

### 150.3.4 Methods

### 150.3.5 BasicAck(channel as Integer, deliveryTag as UInt64, multiple as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Acknowledges a message.
**Notes:**

Does a basic.ack on a received message.

channel: the channel identifier
deliveryTag: the delivery tag of the message to be ack'd.
multiple: if true, ack all messages up to this delivery tag, if false ack only this delivery tag.

Returns error code, 0 on success, 0 >on failing to send the ack to the broker. this will not indicate failure if something goes wrong on the broker.

### 150.3.6 BasicCancel(channel as Integer, consumerTag as String) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Cancels a channel.

### 150.3.7 BasicConsume(channel as Integer, queue as String, consumerTag as String, noLocal as Boolean, noAck as Boolean, exclusive as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Basic consume.

### 150.3.8 BasicGet(channel as Integer, queue as String, noAck as Boolean) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do a basic.get.
**Notes:**

Synchronously polls the broker for a message in a queue, and retrieves the message if a message is in the queue.

channel: the channel identifier to use
queue: the queue name to retrieve from
noAck: if true the message is automatically ack'ed if false BasicAck() should be called once the message retrieved has been processed

Returns RabbitMQRPCReplyMBS object indicating success or failure

### 150.3.9 BasicNAck(channel as Integer, deliveryTag as UInt64, multiple as Boolean = false, requeue as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do a basic.nack.
**Notes:**

Actively reject a message, this has the same effect as BasicReject() however, BasicNAck() can negatively acknowledge multiple messages with one call much like BasicAck() can acknowledge mutliple messages with

one call.

channel: the channel identifier
deliveryTag the delivery tag of the message to reject
multiple: if set to 1 negatively acknowledge all unacknowledged messages on this channel.
requeue: indicate to the broker whether it should requeue the message or dead-letter it.

Returns error code, kStatusOK on success, an status constant value otherwise.

### 150.3.10 BasicPublish(channel as Integer, exchange as String, routingKey as String, mandatory as Boolean, immediate as Boolean, properties as RabbitMQBasicPropertiesMBS, body as String) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Publish a message to the broker.
**Notes:**

Publish a message on an exchange with a routing key.

Note that at the AMQ protocol level basic.publish is an async method:
this means error conditions that occur on the broker (such as publishing to
a non-existent exchange) will not be reflected in the return value of this
function.

channel: the channel identifier
exchange: the exchange on the broker to publish to
routingKey: the routing key to use when publishing the message mandatory indicate to the broker that the message MUST be routed to a queue. If the broker cannot do this it should respond with a basic.return method.
immediate: indicate to the broker that the message MUST be delivered to a consumer immediately. If the broker cannot do this it should respond with a basic.return method.
properties: the properties associated with the message
body: the message body

kStatusOK on success, other kStatus values on failure. Note that basic.publish is an async method, the return value from this function only indicates that the message data was successfully transmitted to the broker. It does not indicate failures that occur on the broker, such as publishing to a non-existent exchange.

Possible error values:

- kStatusTimerFailure: system timer facility returned an error the message was not sent.

- kStatusHeartbeatTimeout: connection timed out waiting for a heartbeat from the broker. The message was not sent.
- kStatusNoMemory: memory allocation failed. The message was not sent.
- kStatusTableTooBig: a table in the properties was too large to fit in a single frame. Message was not sent.
- kStatusConnectionClosed: the connection was closed
- kStatusSSLError: a SSL error occurred.
- kStatusTCPError: a TCP error occurred. errno or WSAGetLastError() may provide more information.

### 150.3.11 BasicQOS(channel as Integer, prefetchSize as Integer, prefetchCount as Integer, isGlobal as boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Basic QOS.

### 150.3.12 BasicRecover(channel as Integer, requeue as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Recover a channel.

### 150.3.13 BasicReject(channel as Integer, deliveryTag as UInt64, requeue as Boolean = false) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do a basic.reject.
**Notes:**

Actively reject a message that has been delivered

channel: the channel identifier
deliveryTag the delivery tag of the message to reject
requeue: indicate to the broker whether it should requeue the message or just discard it.

Returns error code, 0 on success, 0 >on failing to send the reject method to the broker.
This will not indicate failure if something goes wrong on the broker.

### 150.3.14 ChannelClose(Channel as Integer, Code as Integer = 200) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Closes an channel.
**Notes:**

channel: the channel identifier
code: the reason for closing the channel, kReplySuccess is a good default.

Returns RabbitMQRPCReplyMBS object indicating success or failure

### 150.3.15 ChannelFlow(channel as Integer, active as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Channel Flow control.

### 150.3.16 ChannelOpen(Channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Opens a channel.

### 150.3.17 ConfirmSelect(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Confirm select.

### 150.3.18 ConnectionClose(Code as Integer = 200) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Closes a connection.

### 150.3.19 ConstantIsHardError(constantNumber as Integer) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks to see if a constant is a hard error.
**Notes:**

A hard error occurs when something severe enough happens that the connection must be closed.

Returns true if its a hard error, false otherwise.

### 150.3.20 ConstantName(constantNumber as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get constant name string from constant.

### 150.3.21 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.
**Notes:** Allocate and initialize a new connection object.

### 150.3.22 ConsumeMessage(byref envelope as RabbitMQEnvelopeMBS, timeoutValue as double = 30, flags as Integer = 0) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Wait for and consume a message.
**Notes:**

Waits for a basic.deliver method on any channel, upon receipt of basic.deliver it reads that message, and returns. If any other method is received before basic.deliver, this function will return an RabbitMQRPCReplyMBS with ReplyType = ResponseTypeLibraryException, and Reply.LibraryError = kStatusUnexpectedState. The caller should then call WaitFrame() to read this frame and take appropriate action.

This function should be used after starting a consumer with the BasicConsume() function

Envelope receives new object.
Timeout is in seconds.

flags: pass in 0. Currently unused.

Returns RabbitMQRPCReplyMBS, which may contain error information.
Type of the object is RabbitMQRPCReplyMBS.ResponseTypeNormal on success.

### 150.3.23 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.
**Notes:**

Closes the entire connection.

Implicitly closes all channels and informs the broker the connection
is being closed, after receiving acknowledgment from the broker it closes
the socket.

### 150.3.24 ErrorString(ErrorCode as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the error string for the given error code.
**Notes:** Get an error string associated with an error code.

### 150.3.25 ExchangeBind(channel as Integer, destination as String, source as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Binds an exchange.

### 150.3.26 ExchangeDeclare(channel as Integer, exchange as String, type as String, passive as Boolean, durable as Boolean, autoDelete as Boolean, internal as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Declare an exchange.

### 150.3.27 ExchangeDelete(channel as Integer, exchange as String, ifUsed as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Deletes an exchange.

### 150.3.28 ExchangeUnbind(channel as Integer, destination as String, source as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Unbinds an exchange.

### 150.3.29 LoginExternal(vhost as String, channelMax as Integer, frameMax as Integer, heartbeat as Integer, Identity as String, properties as Dictionary = nil) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Login with external SASL.
**Notes:**

Login to the broker passing an optional properties table.

vhost: the virtual host to connect to on the broker. The default on most brokers is "/".
channelMax: the limit for the number of channels for the connection.
0 means no limit, and is a good default (kDefaultMaxChannels) Note that the maximum number of channels the protocol supports is 65535 (2^16, with the 0-channel reserved). The server can set a lower channelMax and then the client will use the lowest of the two.
frameMax: the maximum size of an AMQP frame ont he wire to request of the broker for this connection. 4096 is the minimum size, 2^31-1 is the maximum, a good default is 131072 (128KB), or kDefaultFrameSize.
heartbeat: the number of seconds between heartbeat frame to request of the broker. A value of 0 disables heartbeats. Note rabbitmq-c only has partial support for hearts, as of v0.4.0 heartbeats are only serviced during BasicPublish(), and SimpleWaitFrame() properties a table of properties to send the broker.
sasl_method the SASL method to authenticate with the properties.

Returns error code indicating success or failure via RabbitMQRPCReplyMBS object.

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatus-

ConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.

- Reply.Type = kResponseServerException. The broker returned an exception:
- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.
- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

### 150.3.30 LoginPlain(vhost as String, channelMax as Integer, frameMax as Integer, heartbeat as Integer, Username as String, Password as String, properties as Dictionary = nil) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Login with plain SASL.
**Notes:**

Login to the broker passing an optional properties table.

vhost: the virtual host to connect to on the broker. The default on most brokers is "/".
channelMax: the limit for the number of channels for the connection.
0 means no limit, and is a good default (kDefaultMaxChannels) Note that the maximum number of channels the protocol supports is 65535 (2^16, with the 0-channel reserved). The server can set a lower channelMax and then the client will use the lowest of the two.
frameMax: the maximum size of an AMQP frame ont he wire to request of the broker for this connection. 4096 is the minimum size, 2^31-1 is the maximum, a good default is 131072 (128KB), or kDefaultFrameSize.
heartbeat: the number of seconds between heartbeat frame to request of the broker. A value of 0 disables heartbeats. Note rabbitmq-c only has partial support for hearts, as of v0.4.0 heartbeats are only serviced during BasicPublish(), and SimpleWaitFrame() properties a table of properties to send the broker.
sasl_method the SASL method to authenticate with the properties.

Returns error code indicating success or failure via RabbitMQRPCReplyMBS object.

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatusConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.

- Reply.Type = kResponseServerException. The broker returned an exception:

- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.

- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

### 150.3.31 MaybeReleaseBuffers

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Release connection owned memory.
**Notes:**

Release memory owned by the connection object related to any channel, allowing reuse by the library. Use of any memory returned by the library before this function is called with result in undefined behavior.

Internally rabbitmq-c tries to reuse memory when possible. As a result its possible calling this function may not have a noticeable effect on memory usage.

### 150.3.32 MaybeReleaseBuffersOnChannel(channel as Integer)

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Release connection owned memory related to a channel.
**Notes:**

Release memory owned by the amqp_connection_state_t object related to the specified channel, allowing reuse by the library. Use of any memory returned the library for a specific channel will result in undefined behavior.

Internally rabbitmq-c tries to reuse memory when possible. As a result its possible calling this function may not have a noticeable effect on memory usage.

### 150.3.33 MethodHasContent(constantNumber as Integer) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks whether such a method has content.
**Notes:** Returns true if content is expected.

### 150.3.34 MethodName(constantNumber as Integer) as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get method name string from method number.
**Notes:** Returns method name string.

### 150.3.35 NewTCPSocket(UseSSL as boolean = false) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates new socket.
**Notes:**

Optional uses OpenSSL to create a SSL socket if UseSSL is passed with value true.
Returns true on success.

### 150.3.36 OpenSocket(Host as String, Port as Integer, TimeOut as Double = 10) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Open a socket connection.
**Notes:**

This function opens a socket connection returned created with NewTCPSocket(). This function should be called after setting socket options.
Returns error code.

host: Connect to this host.
port: Connect on this remote port.
timeout: Max allowed time to spent on opening.

### 150.3.37 QueueBind(channel as Integer, queue as String, exchange as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Binds an exchange.

### 150.3.38 QueueDeclare(channel as Integer, queue as String, passive as Boolean, durable as Boolean, exclusive as Boolean, autoDelete as Boolean, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Declare a queue.

### 150.3.39 QueueDelete(channel as Integer, queue as String, ifUnused as Boolean, ifEmpty as Boolean) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Delete a queue.

### 150.3.40 QueuePurge(channel as Integer, queue as String) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Purge a queue.

### 150.3.41 QueueUnbind(channel as Integer, queue as String, exchange as String, routingKey as String, arguments as Dictionary) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Unbind a queue.

### 150.3.42 ReadMessage(channel as Integer, byref message as RabbitMQMessageMBS, flags as Integer = 0) as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Reads the next message on a channel
**Notes:**

Reads a complete message (header + body) on a specified channel. This function is intended to be used with amqp_basic_get() or when an AMQP_BASIC_DELIVERY_METHOD method is received.

channel: the channel on which to read the message from
message: The parameter receiving the message.
flags: currently unused.

Returns RabbitMQRPCReplyMBS, which may contain error information.
Type of the object is RabbitMQRPCReplyMBS.ResponseTypeNormal on success.

### 150.3.43 SendHeader as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Send initial AMQP header to the broker.
**Notes:**

This is a low level function intended for those who want to interact with the broker at a very low level. Use of this function without understanding what it does will result in AMQP protocol errors.

This function sends the AMQP protocol header to the broker.

Returns error code, kStatusOK on success, a negative value on failure. Possible error codes:

- kStatusConnectionClosed: the connection to the broker was closed.
- kStatusSocketError: a socket error occurred. It is likely the underlying socket has been closed. errno or WSAGetLastError() may provide further information.
- kStatusSSLError: a SSL error occurred. The connection to the broker was closed.

### 150.3.44 SetCACert(File as FolderItem) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets CACert file with root certificates.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.45 SetCACert(Path as String) as Boolean

### 150.3.45 SetCACert(Path as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets CACert file with root certificates.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.44 SetCACert(File as FolderItem) as Boolean 23316

### 150.3.46 SetKey(CertFile as FolderItem, KeyFile as FolderItem) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets SSL key with certificate file path and key file path.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.47 SetKey(CertPath as String, KeyPath as String) as Boolean 23317

### 150.3.47 SetKey(CertPath as String, KeyPath as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets SSL key with certificate file path and key file path.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.46 SetKey(CertFile as FolderItem, KeyFile as FolderItem) as Boolean 23317

### 150.3.48 SetKeyData(CertFile as FolderItem, KeyData as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets SSL key with certificate file and key data as PEM.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.49 SetKeyData(CertPath as String, KeyData as String) as Boolean 23317

### 150.3.49 SetKeyData(CertPath as String, KeyData as String) as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets SSL key with certificate file and key data as PEM.
**Notes:** Returns true on success and false on failure.
See also:

- 150.3.48 SetKeyData(CertFile as FolderItem, KeyData as String) as Boolean 23317

### 150.3.50 SimpleWaitFrame(byref Frame as RabbitMQFrameMBS, timeoutValue as double = 30) as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Read a single frame with a timeout.
**Notes:**

Waits for the next frame to be read from the broker, up to a timespan specified by tv. The function will return kStatusTimeout if the timeout is reached. The tv value is not modified by the function.

The library may buffer frames. When an connection object has frames buffered calling SimpleWaitFrame_noblock() will return an frame without entering a blocking read(). You can test to see if an connection object has frames buffered by calling the FramesEnqueued() function.

The library has a socket read buffer. When there is data in an connection read buffer, SimpleWaitFrame() may return an frame without entering a blocking read(). You can test to see if an connection object has data in its read buffer by calling the DataInBuffer() function.

This function does not return heartbeat frames. When enabled, heartbeating is handed internally internally by the library.

Frame: receives decoded frame the frame
timeoutValue: the maximum time to wait for a frame to be read in seconds. Setting to 0 will do a non-blocking read.

Returns kStatusOK on success. An kStatus value is returned otherwise. Possible errors include:

- kStatusTimeout the timeout was reached while waiting for a frame from the broker.
- kStatusInvalidParameter the tv parameter contains an invalid value.
- kStatusNoMemory failure in allocating memory. The library is likely in an indeterminate state making recovery unlikely. Client should note the error and terminate the application
- kStatusBadAMQPData bad AMQP data was received. The connection should be shutdown immediately

- kStatusUnknownMethod: an unknown method was received from the broker. This is likely a protocol error and the connection should be shutdown immediately
- kStatusUnknownClass: a properties frame with an unknown class was received from the broker. This is likely a protocol error and the connection should be shutdown immediately
- kStatusHeartbeatTimeout: timed out while waiting for heartbeat from the broker. The connection has been closed.
- kStatusTimerFailure: system timer indicated failure.
- kStatusSocketError: a socket error occurred. The connection has been closed
- kStatusSSLError: a SSL socket error occurred. The connection has been closed.

### 150.3.51 TXCommit(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Commit.

### 150.3.52 TXRollback(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Rollback.

### 150.3.53 TXSelect(channel as Integer) as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Select.

### 150.3.54 Properties

### 150.3.55 ClientProperties as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the client properties table
**Notes:**

Get the properties that were passed to the broker on connection.
(Read only property)

### 150.3.56 DataInBuffer as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Check to see if there is data left in the receive buffer.
**Notes:**

Can be used to see if there is data still in the buffer, if so calling SimpleWaitFrame will not immediately enter a blocking read.

Returns true if there is data in the recieve buffer, false otherwise.
(Read only property)

### 150.3.57 FramesEnqueued as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Checks to see if there are any incoming frames ready to be read.
**Notes:**

Checks to see if there are any frame objects buffered by the connection object. Having one or more frames buffered means that SimpleWaitFrame() will return a frame without potentially blocking on a read() call.

Returns true if there are frames enqueued, false otherwise.
(Read only property)

### 150.3.58 Handle as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 150.3.59 HandshakeTimeout as Double

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get or set the login handshake timeout.
**Notes:**

Login performs the login handshake with the broker. This function sets the timeout associated with completing this operation from the client side.

The timeout must be set before Login is called to change from the default timeout.

Note that the RabbitMQ broker has a configurable timeout for completing the login handshake, the default is 10 seconds. rabbitmq-c has a default of 12 seconds.
(Read and Write property)

### 150.3.60 Heartbeat as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the number of seconds between heartbeats of the connection.
**Notes:**

The number of seconds between heartbeats is set when connection negotiation takes place in Login.

Returns the number of seconds between heartbeats.
(Read only property)

### 150.3.61 MaximumChannel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the maximum number of channels the connection can handle.
**Notes:**

The maximum number of channels is set when connection negotiation takes
place in Login.

Returns the maximum number of channels. 0 if there is no limit.
(Read only property)

### 150.3.62 MaximumFrameSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the maximum size of an frame the connection can handle.
**Notes:**

The maximum size of an frame is set when connection negotiation takes place in Login.

Return the maximum size in bytes of an frame.
(Read only property)

### 150.3.63 RPCReply as RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the last global RPCReply
**Notes:**

The API methods corresponding to most synchronous AMQP methods return a pointer to the decoded method result. Upon error, they return nil, and we need some way of discovering what, if anything, went wrong. RPCReply() returns the most recent RabbitMQRPCReplyMBS instance corresponding to such an API operation for the given connection.

Only use it for operations that do not themselves return RabbitMQRPCReplyMBS; operations that do return RabbitMQRPCReplyMBS generally do NOT update this per-connection-global RabbitMQRPCReplyMBS instance.

Returns the most recent RabbitMQRPCReplyMBS object:

- Reply.Type = kResponseNormal. Login completed successfully
- Reply.Type = kResponseLibraryException. In most cases errors from the broker when logging in will be represented by the broker closing the socket. In this case r.libraryError will be set to kStatusConnectionClosed. This error can represent a number of error conditions including: invalid vhost, authentication failure.
- Reply.Type = kResponseServerException. The broker returned an exception:
- If Reply.MethodId = kChannelCloseMethod a channel exception occurred, check decoded properties to see details of the exception. The client should SendMethod() a kChannelCloseOkMethod. The channel must be re-opened before it can be used again. Any resources associated with the channel (auto-delete exchanges, auto-delete queues, consumers) are invalid and must be recreated before attempting to use them again.
- If Reply.MethodId = kConnectionCloseMethod a connection exception occurred, check decoded properties to see details of the exception. The client SendMethod() a kConnectionCloseOkMethod and disconnect from the broker.

(Read only property)

### 150.3.64 RPCTimeout as Double

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The RPC timeout.
**Notes:**

Get or set the RPC timeout.

Sets the timeout for any RPC-style AMQP command (e.g., QueueDeclare).
This timeout may be changed at any time by calling this function with a new timeout. The timeout applies individually to each RPC that is made.

The default value is 0, or an infinite timeout.

When an RPC times out, the function will return an error kStatusTimeout, and the connection will be closed.

RPC-timeouts are an advanced feature intended to be used to detect dead connections quickly when the rabbitmq-c implementation of heartbeats does not work. Do not use RPC timeouts unless you understand the implications of doing so.
(Read and Write property)

### 150.3.65 ServerProperties as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the broker properties table.
**Notes:**

Returns a dictionary containing the properties advertised by the broker on connection.
(Read only property)

### 150.3.66 SocketFileDescriptor as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Get the socket descriptor in use by a socket object.
**Notes:**

Retrieve the underlying socket descriptor. This function can be used to perform low-level socket operations that aren't supported by the socket interface. Use with caution!
(Read only property)

### 150.3.67 SSLCACertPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The CA certificate file path.
**Notes:**

cacert Path to the CA cert file in PEM format.
(Read only property)

### 150.3.68 SSLCertPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The certificate file path.
**Notes:**

Cert file in PEM format.
(Read only property)

### 150.3.69 SSLKeyData as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The client key.
**Notes:**

A buffer containing client key in PEM format.
(Read only property)

### 150.3.70 SSLKeyPath as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The file path to the SSL key.
**Notes:** (Read only property)

### 150.3.71 SSLMaxVersion as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Maximum allowed SSL version.
**Notes:**

Defaults to latest TLS version.
(Read and Write property)

### 150.3.72 SSLMinVersion as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Minimum allowed SSL version.
**Notes:**

Defaults to TLS v1.0.
(Read and Write property)

### 150.3.73 SSLVerifyHostname as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Enable or disable hostname verification.
**Notes:**

Hostname verification checks the broker cert for a CN or SAN that matches the hostname that OpenSocket() is presented.
Peer verification is controlled by SSLVerifyPeer property.
(Read and Write property)

### 150.3.74 SSLVerifyPeer as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Enable or disable peer verification.
**Notes:**

Peer verification validates the certificate chain that is sent by the broker.
Hostname validation is controlled by SSLVerifyHostname.
(Read and Write property)

### 150.3.75 Version as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries version number of the library.
**Notes:**

Returns the rabbitmq-c version as a string.
(Read only property)

### 150.3.76 VersionNumber as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries version number of the library.
**Notes:**

Returns the rabbitmq-c version as a packed integer.

first byte is major, second byte minor, third byte patch level and last release counter.
Value = ((((Major * 256) + Minor) * 256 + Patch) * 256 + Release)
(Read only property)

### 150.3.77 Constants

### 150.3.78 kDefaultFrameSize = 131072

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Default frame size (128Kb)

### 150.3.79 kDefaultHeartbeat = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Default heartbeat interval (0, heartbeat disabled)

### 150.3.80 kDefaultVHost = "/"

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Default RabbitMQ vhost: "/".

### 150.3.81 kMaxChannels = 2047

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Default maximum number of channels (2047, RabbitMQ default limit of 2048, minus 1 for channel 0).
**Notes:** RabbitMQ set a default limit of 2048 channels per connection in v3.7.5 to prevent broken clients from leaking too many channels.

### 150.3.82 kProtocolPort = 5672

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Default AMQP Port.

### 150.3.83 kProtocolVersionMajor = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** AMQP protocol version major

### 150.3.84 kProtocolVersionMinor = 9

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** AMQP protocol version minor.

### 150.3.85 kProtocolVersionRevision = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** AMQP protocol version revision.

### 150.3.86 kStatusBadAmqpData = -2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Incorrect or corrupt data was received from the broker. This is a protocol error.

### 150.3.87 kStatusBadUrl = -8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** malformed AMQP URL

### 150.3.88 kStatusBrokerUnsupportedSaslMethod = -19

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Broker does not support the requested SASL mechanism.

### 150.3.89 kStatusConnectionClosed = -7

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** The connection to the broker has been closed.

### 150.3.90 kStatusHeartbeatTimeout = -15

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Timed out waiting for heartbeat.

### 150.3.91 kStatusHostnameResolutionFailed = -5

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Unable to resolve the hostname.

### 150.3.92 kStatusIncompatibleAmqpVersion = -6

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** The broker advertised an incompaible AMQP version.

### 150.3.93 kStatusInvalidParameter = -10

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** An invalid parameter was passed into the function.

### 150.3.94 kStatusNoMemory = -1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Memory allocation failed.

### 150.3.95 kStatusOk = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Operation successful.

### 150.3.96 kStatusSocketClosed = -17

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Underlying socket is closed.

### 150.3.97 kStatusSocketError = -9

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** A socket error occurred.

### 150.3.98 kStatusSocketInuse = -18

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Underlying socket is already open.

### 150.3.99 kStatusSslConnectionFailed = -515

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** SSL handshake failed.

### 150.3.100 kStatusSslError = -512

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** A generic SSL error occurred.

### 150.3.101 kStatusSslHostnameVerifyFailed = -513

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** SSL validation of hostname against peer certificate failed.

### 150.3.102 kStatusSslPeerVerifyFailed = -514

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** SSL validation of peer certificate failed.

### 150.3.103 kStatusTableTooBig = -11

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** The dictionary object cannot be serialized because the output buffer is too small.

### 150.3.104 kStatusTcpError = -256

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** A generic TCP error occurred.

### 150.3.105 kStatusTcpSocketlibInitError = -257

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** An error occurred trying to initialize the socket library

### 150.3.106 kStatusTimeout = -13

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Operation timed out.

### 150.3.107 kStatusTimerFailure = -14

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** The underlying system timer facility failed.

### 150.3.108 kStatusUnexpectedState = -16

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Unexpected protocol state

### 150.3.109 kStatusUnknownClass = -3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** An unknown AMQP class was received. This is a protocol error.

### 150.3.110 kStatusUnknownMethod = -4

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** An unknown AMQP method was received. This is a protocol error.

### 150.3.111 kStatusUnsupported = -20

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** Parameter is unsupported in this version.

### 150.3.112 kStatusWrongMethod = -12

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the status constants.
**Notes:** The wrong method was received.

### 150.3.113 kTLSv10 = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the TLS version constants.
**Notes:** TLS v1.0

### 150.3.114 kTLSv11 = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the TLS version constants.
**Notes:** TLS v1.1

### 150.3.115 kTLSv12 = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the TLS version constants.
**Notes:** TLS v1.2

### 150.3.116 kTLSvLatest = 65535

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the TLS version constants.
**Notes:** Latest TLS version available.

## 150.4 class RabbitMQEnvelopeMBS

### 150.4.1 class RabbitMQEnvelopeMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Envelope object.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 150.4.4 Methods

### 150.4.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 150.4.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.

### 150.4.7 Properties

### 150.4.8 Channel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Channel message was delivered on.
**Notes:** (Read and Write property)

### 150.4.9 ConsumerTag as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The consumer tag the message was delivered to .
**Notes:** (Read and Write property)

### 150.4.10 DeliveryTag as UInt64

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The messages delivery tag.
**Notes:** (Read and Write property)

### 150.4.11 Exchange as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The exchange this message was published to.
**Notes:** (Read and Write property)

### 150.4.12 Message as RabbitMQMessageMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The message.
**Notes:** (Read and Write property)

### 150.4.13 Redelivered as Boolean

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Flag indicating whether this message is being redelivered.
**Notes:** (Read and Write property)

### 150.4.14 RoutingKey as String

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The routing key this message was published with.
**Notes:** (Read and Write property)

## 150.5 class RabbitMQFrameMBS

### 150.5.1 class RabbitMQFrameMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** An AMQP frame.

### 150.5.4 Methods

### 150.5.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.

### 150.5.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.

### 150.5.7 Properties

### 150.5.8 BodyFragment as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The body fragment.
**Notes:**

Only set if FrameType is kFrameBody.
(Read and Write property)

### 150.5.9 BodyFragmentSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The size of the body fragment in bytes.
**Notes:**

Only set if FrameType is kFrameBody.
(Read and Write property)

### 150.5.10 BodySize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Size of the body in bytes.
**Notes:**

Only set if FrameType is kFrameHeader.
(Read and Write property)

### 150.5.11 Channel as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The channel the frame was received on.
**Notes:** (Read and Write property)

### 150.5.12 ClassID as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for the properties.
**Notes:**

Only set if FrameType is kFrameHeader.
(Read and Write property)

### 150.5.13 FrameType as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The frame type.
**Notes:**

See kFrameMethod, kFrameHeader and kFrameBody.
(Read and Write property)

### 150.5.14 MethodDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The decoded method content.
**Notes:**

MBS Plugin has code to translate over 60 types of method structures into Xojo dictionary.
Only set if FrameType is kFrameMethod.
(Read and Write property)

### 150.5.15 MethodID as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The method ID.
**Notes:**

Only set if FrameType is kFrameMethod.
(Read and Write property)

### 150.5.16 PropertiesDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The decoded properties.
**Notes:**

MBS Plugin has code to translate over several types of properties structures into Xojo dictionary.
Only set if FrameType is kFrameHeader.
(Read and Write property)

### 150.5.17 Raw as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Amqp-encoded properties structure.
**Notes:**

Only set if FrameType is kFrameHeader.
(Read and Write property)

### 150.5.18 RawSize as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The size of the Raw data.
**Notes:**

Only set if FrameType is kFrameHeader.
(Read and Write property)

### 150.5.19 Constants

### 150.5.20 kAccessRequestMethod = & h001E000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.21 kAccessRequestOkMethod = & h001E000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.22 kBasicAckMethod = & h003C0050

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.23 kBasicCancelMethod = & h003C001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.24 kBasicCancelOkMethod = & h003C001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.25 kBasicConsumeMethod = & h003C0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.26 kBasicConsumeOkMethod = & h003C0015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.27 kBasicDeliverMethod = & h003C003C

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.28 kBasicGetEmptyMethod = & h003C0048

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.29 kBasicGetMethod = & h003C0046

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.30 kBasicGetOkMethod = & h003C0047

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.31 kBasicNackMethod = & h003C0078

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.32 kBasicPublishMethod = & h003C0028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.33 kBasicQosMethod = & h003C000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.34 kBasicQosOkMethod = & h003C000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.35 kBasicRecoverAsyncMethod = & h003C0064

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.36 kBasicRecoverMethod = & h003C006E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.37 kBasicRecoverOkMethod = & h003C006F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.38 kBasicRejectMethod = & h003C005A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.39 kBasicReturnMethod = & h003C0032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.40 kChannelCloseMethod = & h00140028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.41 kChannelCloseOkMethod = & h00140029

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.42 kChannelFlowMethod = & h00140014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.43 kChannelFlowOkMethod = & h00140015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.44 kChannelOpenMethod = & h0014000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.45 kChannelOpenOkMethod = & h0014000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.46 kClassAccess = & h001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** access class id

### 150.5.47 kClassBasic = & h003C

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** basic class id

### 150.5.48 kClassChannel = & h0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** channel class id

### 150.5.49 kClassConection = & h000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** connection class id

### 150.5.50 kClassConfirm = & h0055

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** confirm class id

### 150.5.51 kClassExchange = & h0028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** exchange class id

### 150.5.52 kClassQueue = & h0032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** queue class id

### 150.5.53 kClassTX = & h005A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the class ID for a property class.
**Notes:** tx class id

### 150.5.54 kConfirmSelectMethod = & h0055000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.55 kConfirmSelectOkMethod = & h0055000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.56 kConnectionBlockedMethod = & h000A003C

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.57 kConnectionCloseMethod = & h000A0032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.58 kConnectionCloseOkMethod = & h000A0033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.59 kConnectionOpenMethod = & h000A0028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.60 kConnectionOpenOkMethod = & h000A0029

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.61 kConnectionSecureMethod = & h000A0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.62 kConnectionSecureOkMethod = & h000A0015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.63 kConnectionStartMethod = & h000A000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.64 kConnectionStartOkMethod = & h000A000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.65 kConnectionTuneMethod = & h000A001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.66 kConnectionTuneOkMethod = & h000A001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.67 kConnectionUnblockedMethod = & h000A003D

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.68 kExchangeBindMethod = & h0028001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.69 kExchangeBindOkMethod = & h0028001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.70 kExchangeDeclareMethod = & h0028000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.71 kExchangeDeclareOkMethod = & h0028000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.72 kExchangeDeleteMethod = & h00280014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.73 kExchangeDeleteOkMethod = & h00280015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.74 kExchangeUnbindMethod = & h00280028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.75 kExchangeUnbindOkMethod = & h00280033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.76 kFrameBody = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the frame type constants.
**Notes:** The BodyFragment and BodyFragmentSize properties are set.

### 150.5.77 kFrameEnd = 206

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the frame type constants.
**Notes:** Frame end type.

### 150.5.78 kFrameHeader = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the frame type constants.
**Notes:** ClassID, BodySize, PropertiesDecoded, Raw and RawSize properties are set.

### 150.5.79 kFrameHeartbeat = 8

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the frame type constants.
**Notes:** Heartbeat frame type.

### 150.5.80 kFrameMethod = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the frame type constants.
**Notes:** The MethodDecoded and MethodID properties are set.

### 150.5.81 kFrameMinSize = 4096

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** Minimum frame size.

### 150.5.82 kQueueBindMethod = & h00320014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.83 kQueueBindOkMethod = & h00320015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.84 kQueueDeclareMethod = & h0032000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.85 kQueueDeclareOkMethod = & h0032000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.86 kQueueDeleteMethod = & h00320028

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.87 kQueueDeleteOkMethod = & h00320029

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.88 kQueuePurgeMethod = & h0032001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.89 kQueuePurgeOkMethod = & h0032001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.90 kQueueUnbindMethod = & h00320032

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.91 kQueueUnbindOkMethod = & h00320033

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.92 kTxCommitMethod = & h005A0014

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.93 kTxCommitOkMethod = & h005A0015

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.94 kTxRollbackMethod = & h005A001E

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.95 kTxRollbackOkMethod = & h005A001F

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.96 kTxSelectMethod = & h005A000A

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

### 150.5.97 kTxSelectOkMethod = & h005A000B

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the method identifiers.

## 150.6 class RabbitMQMessageMBS

### 150.6.1 class RabbitMQMessageMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for a message.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 150.6.4 Methods

### 150.6.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private construtor.

### 150.6.6 Properties

### 150.6.7 Body as MemoryBlock

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The message body.
**Notes:** (Read only property)

### 150.6.8 Properties as RabbitMQBasicPropertiesMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The message properties.
**Notes:** (Read only property)

### 150.6.9 Constants

### 150.6.10 ResponseTypeLibraryException = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** Library error, an error occurred in the library, examine the library error.

### 150.6.11 ResponseTypeNone = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** The library got an EOF from the socket.

### 150.6.12 ResponseTypeNormal = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** Response normal, the RPC completed successfully.

### 150.6.13 ResponseTypeServerException = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** Server exception, the broker returned an error, check reply.

## 150.7 class RabbitMQRPCReplyMBS

### 150.7.1 class RabbitMQRPCReplyMBS

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Reply from a RPC method on the broker.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 150.7.4 Methods

### 150.7.5 Constructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 150.7.6 Destructor

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The destructor.

### 150.7.7 Properties

### 150.7.8 LibraryError as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The library error code.
**Notes:**

in case of ResponseTypeLibraryException this field will be set to an error code.
An error string can be retrieved using ErrorString().
(Read only property)

### 150.7.9 MethodDecoded as Dictionary

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The decoded data for the method.
**Notes:**

MBS Plugin has code to translate over 60 types of method structures into Xojo dictionary.
(Read only property)

### 150.7.10 MethodId as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The method ID.
**Notes:** (Read only property)

### 150.7.11 Type as Integer

MBS RabbitMQ Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The response type.
**Notes:**

See ResponseTypeLibraryException, ResponseTypeServerException, ResponseTypeNone and ResponseTypeNormal.
(Read only property)

### 150.7.12 Constants

### 150.7.13 kAccessRefused = 403

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.14 kChannelError = 504

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.15 kCommandInvalid = 503

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.16 kConnectionForced = 320

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.17 kContentTooLarge = 311

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.18 kFrameError = 501

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.19 kInternalError = 541

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.20 kInvalidPath = 402

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.21 kNoConsumers = 313

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.22 kNoRoute = 312

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.23 kNotAllowed = 530

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.24 kNotFound = 404

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.25 kNotImplemented = 540

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.26 kPreconditionFailed = 406

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.27 kReplySuccess = 200

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.
**Notes:** Success

### 150.7.28 kResourceError = 506

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.29 kResourceLocked = 405

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.30 kSyntaxError = 502

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.31 kUnexpectedFrame = 505

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the error codes.

### 150.7.32 ResponseTypeLibraryException = 2

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** The library encountered an error, check the LibraryError field.

### 150.7.33 ResponseTypeNone = 0

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** Invalid state.

### 150.7.34 ResponseTypeNormal = 1

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** The RPC completed successfully.

### 150.7.35 ResponseTypeServerException = 3

MBS RabbitMQ Plugin, Plugin Version: 21.2.

**Function:** One of the response type constants.
**Notes:** The broker returned an exception, check the reply field.

# Chapter 151

# RAMStream

## 151.1 class RAMStreamMBS

### 151.1.1 class RAMStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Allows you to use a memory bases stream.
**Notes:**

If you need to concat lot's of streams, just make a RAMstream and write to it.

In the example folder is a project called "test ramstream speed" which tests the speed on concating 10000 strings which each 1000 bytes in length.

On my G4 Dual 1000 Mhz, I get this result:
String only: 22063 ticks
RAMStream: 18 ticks

### 151.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

### 151.1.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

### 151.1.4 Methods

### 151.1.5 close

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

### 151.1.6 Constructor(InitialSize as Integer=0)

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new RAMStream.
**Example:**

```
dim r as RAMStreamMBS
r=new RAMStreamMBS(1000000)
r.write "Hello"
```

**Notes:**

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
On low memory, the initial resize will fail and length will be 0.

### 151.1.7 Look(count as Integer) as string

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads bytes, but does not move the current position.
**Example:**

```
dim r as RamStreamMBS // your stream
```

```
dim s as string
s=r.look(100)
```

**Notes:** Like the lookahead property in a socket.

### 151.1.8 LookBlock(count as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads bytes into a memoryblock, but leaves the current position untouched.
**Example:**

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.LookBlock(5)
```

### 151.1.9 LookByte as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a byte, but leaves the current position untouched.

### 151.1.10 LookLong as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads an integer, but leaves the current position untouched.

### 151.1.11 LookShort as Integer

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a short, but leaves the current position untouched.

### 151.1.12 Read(count as Integer) as string

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads bytes into a string.
**Example:**

```
dim b as RAMStreamMBS
dim s as string
'...
s=b.read(5)
```

### 151.1.13 ReadBlock(count as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads bytes into a memoryblock.
**Example:**

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.ReadBlock(5)
```

### 151.1.14 Readbyte as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads an 8bit Byte from the stream.
**Example:**

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readbyte
```

### 151.1.15 ReadLong as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a signed 32bit Integer from the stream.

**Example:**

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readlong
```

**Notes:** This function is affected by the LittleEndian Setting.

### 151.1.16 ReadShort as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Reads a signed 16bit Integer from the stream.
**Example:**

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readshort
```

**Notes:** This function is affected by the LittleEndian Setting.

### 151.1.17 Write(data as string)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes bytes from a string to file.

### 151.1.18 WriteBlock(data as memoryblock,count as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes count bytes from a memoryblock to file.
**Example:**

```
dim b as RAMStreamMBS
dim m as memoryblock
'...
b.writeblock m,m.size
```

### 151.1.19 WriteByte(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes a byte to file.

### 151.1.20 WriteLong(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes an 32bit integer to file.
**Notes:** This method is affected by the LittleEndian Setting.

### 151.1.21 WriteShort(data as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Writes an 16bit integer to file.
**Notes:** This method is affected by the LittleEndian Setting.

### 151.1.22 Properties

### 151.1.23 EOF as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if you are at the end of the stream.
**Notes:** (Read only property)

### 151.1.24 GrowSize as Integer

MBS Util Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The size in bytes used to grow the ramstream backbuffer.
**Notes:**

Default is 32 Kilobytes.
If the value is bigger than zero, it will be used as the allocation increase. Else the default value is used.

(Read and Write property)

### 151.1.25 Length as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the current length of the stream.
**Notes:**

You can truncate the stream by setting this property.
(Read and Write property)

### 151.1.26 LittleEndian as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Decides whether to convert integers read or wrote to the file.
**Notes:**

See Xojos binarystream for more details.
For native platform you may set "littleendian=targetwin32".
(Read and Write property)

### 151.1.27 MemoryUsed as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** How much memory is currently used for this Stream.
**Notes:** (Read and Write property)

### 151.1.28 Position as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns current position.
**Notes:**

You can set the current file stream position using this property.
(Read and Write property)

## 151.2 Globals

### 151.2.1 CreateRamStreamMBS(InitialSize as Integer = 0) as RamStreamMBS

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a new RAMStream.
**Example:**

```
dim r as RAMStreamMBS
r=CreateRamStreamMBS(1000000)
r.write "Hello"
```

**Notes:**

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
Returns nil on low memory.

# Chapter 152

# RaspberryPiCamera

## 152.1 class RaspberryPiCameraFormatDescriptionMBS

### 152.1.1 class RaspberryPiCameraFormatDescriptionMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for a format description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 152.1.2 Methods

### 152.1.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 152.1.4 Properties

### 152.1.5 Description as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The format description.
**Notes:** (Read only property)

### 152.1.6 Flags as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The flags.
**Notes:**

Currently can be 1 for compressed and 2 for emulated.
(Read only property)

### 152.1.7 Index as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Format number.
**Notes:** (Read only property)

### 152.1.8 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format.
**Notes:** (Read only property)

### 152.1.9 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format as text.
**Notes:** (Read only property)

### 152.1.10 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The buffer type.
**Notes:**

Usually 1 for video capture.
(Read only property)

## 152.2 class RaspberryPiCameraFormatMBS

### 152.2.1 class RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class for format settings.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 152.2.2 Methods

### 152.2.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The private constructor.

### 152.2.4 Properties

### 152.2.5 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The number of bytes per row.
**Notes:**

For padding, zero if unused.
(Read and Write property)

### 152.2.6 ColorSpace as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The colorspace.
**Example:**

```
// ITU-R 601 – broadcast NTSC/PAL
const V4L2_COLORSPACE_SMPTE170M = 1

// 1125-Line (US) HDTV
const V4L2_COLORSPACE_SMPTE240M = 2
```

```
// HD and modern captures.
const V4L2_COLORSPACE_REC709 = 3

// broken BT878 extents (601, luma range 16-253 instead of 16-235)
const V4L2_COLORSPACE_BT878 = 4

// These should be useful. Assume 601 extents.
const V4L2_COLORSPACE_470_SYSTEM_M = 5
const V4L2_COLORSPACE_470_SYSTEM_BG = 6

// I know there will be cameras that send this. So, this is
// unspecified chromaticities and full 0-255 on each of the
// Y'CbCr components
const V4L2_COLORSPACE_JPEG = 7

// For RGB colourspaces, this is probably a good start.
const V4L2_COLORSPACE_SRGB = 8
```

**Notes:**

Normally zero for default.
(Read and Write property)

### 152.2.7 Field as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The field.
**Example:**

```
const V4L2_FIELD_ANY = 0
// driver can choose from none, top, bottom, interlaced
// depending on whatever it thinks is approximate ...
const V4L2_FIELD_NONE = 1
// this device has no fields ...
const V4L2_FIELD_TOP = 2
// top field only
const V4L2_FIELD_BOTTOM = 3
// bottom field only
const V4L2_FIELD_INTERLACED = 4
// both fields interlaced
const V4L2_FIELD_SEQ_TB = 5
// both fields sequential into one
// buffer, top-bottom order
const V4L2_FIELD_SEQ_BT = 6
```

```
// same as above + bottom-top order
const V4L2_FIELD_ALTERNATE = 7
// both fields alternating into separate buffers
const V4L2_FIELD_INTERLACED_TB = 8
// both fields interlaced, top field
// first and the top field is transmitted first
const V4L2_FIELD_INTERLACED_BT = 9
// both fields interlaced, top field
// first and the bottom field is transmitted first
```

**Notes:** (Read and Write property)

### 152.2.8 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The height of image in pixels.
**Notes:** (Read and Write property)

### 152.2.9 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format.
**Notes:** (Read and Write property)

### 152.2.10 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format as text.
**Notes:** (Read only property)

### 152.2.11 SizeImage as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The size of image.
**Notes:** (Read and Write property)

### 152.2.12 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The type of data stream.
**Notes:**

With plugin we always use 1 for video capture (V4L2_BUF_TYPE_VIDEO_CAPTURE).
(Read and Write property)

### 152.2.13 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The width of image in pixels.
**Notes:** (Read and Write property)

## 152.3 class RaspberryPiCameraMBS

### 152.3.1 class RaspberryPiCameraMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The class to get pictures from Raspberry Pi camera and similar Linux cameras.

### 152.3.2 Blog Entries

- MBS Plugin classes for use on Raspberry Pi
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr3
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

### 152.3.3 Videos

- Presentation from London conference about MBS Plugins.

### 152.3.4 Blog Entries

- MBS Plugin classes for use on Raspberry Pi
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr3
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

### 152.3.5 Videos

- Presentation from London conference about MBS Plugins.

### 152.3.6 Methods

### 152.3.7 AvailableFormats as RaspberryPiCameraFormatDescriptionMBS()

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Queries available formats.
**Notes:**

Lasterror and ErrorMessage are set.
Can return nil in case of error.

### 152.3.8 Capture(WithPicture as boolean = true) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Captures a new picture.
**Notes:**

If WithPicture is true and pixel format is compatible (RGB 24 or 32bit), we set the picture property.
If capturing JPEG, we copy the JPEG data into the JPEG property.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.9 Close

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Closes camera device.
**Notes:** Lasterror and ErrorMessage are set.

### 152.3.10 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The constructor.

### 152.3.11 CurrentFormat as RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Queries current format.
**Notes:**

Returns nil in case of error.
Lasterror and ErrorMessage are set.

### 152.3.12 InitBuffer as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Initializes buffer.
**Notes:**

This is done automatically if you capture.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.13 Open(Device as string = "/dev/video0") as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Opens the camera device.
**Notes:**

You need

- a Raspberry Pi computer
- to attach the camera module
- to enable the video camera
- run a command: sudo modprobe bcm2835-v4l2
- to check if you see /dev/video0 in file system.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.14 SetCurrentFormat(format as RaspberryPiCameraFormatMBS) as boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Sets current format.
**Notes:**

This allows to use any format, even if we can't transform it to picture for you.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.15 SetJPEGSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Sets size and format to capture.
**Notes:**

Sets JPEG format with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.16 SetSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Sets size and format to capture.
**Notes:**

Sets to capture RGB picture with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

### 152.3.17 Properties

### 152.3.18 AutoExposureBias as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
e.g. 12.
(Read and Write property)

### 152.3.19 AutoFocusRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kAutoFocusRange* constants
(Read and Write property)

### 152.3.20 AutoFocusStart as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.21 AutoFocusStatus as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kAutoFocusStatus* constants
(Read and Write property)

### 152.3.22 AutoFocusStop as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.23 AutoNPresetWhiteBalance as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kWhiteBalance* constants.
e.g. value is 1 for kWhiteBalanceAuto.

(Read and Write property)

### 152.3.24 Buffer as Ptr

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pointer to the buffer.
**Notes:**

For the case you want to convert yourself pixel values to a picture.
(Read only property)

### 152.3.25 BufferLength as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The length of the buffer.
**Notes:** (Read only property)

### 152.3.26 BusInfo as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The device bus info.
**Notes:**

e.g. "PCI:test"
(Read only property)

### 152.3.27 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The bytes per row for current image.
**Notes:** (Read only property)

### 152.3.28 CanCapture as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether the device can capture video.
**Notes:**

This is queried by checking if bitwiseAnd(capabilities,1) = 1.
(Read only property)

### 152.3.29 Capabilities as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Device capabilities bitmap.
**Notes:** (Read only property)

### 152.3.30 Card as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The name of the card.
**Notes:**

e.g. "Hauppauge WinTV"
(Read only property)

### 152.3.31 Driver as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The name of the driver.
**Notes:**

e.g. "bttv"
(Read only property)

### 152.3.32 ErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The error message for lasterror property.
**Notes:** (Read only property)

### 152.3.33 ExposureAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
e.g. 1000
(Read and Write property)

### 152.3.34 ExposureAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kExposure* constants.
Value is e.g. 0 for kExposureAuto.
(Read and Write property)

### 152.3.35 ExposureAutoPriority as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.36 ExposureMetering as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kExposureMetering* constants
(Read and Write property)

### 152.3.37 FocusAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

### 152.3.38 FocusAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

### 152.3.39 FocusRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

### 152.3.40 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The internal file handle.
**Notes:** (Read only property)

### 152.3.41 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The height in pixel used for capture.
**Notes:** (Read only property)

### 152.3.42 ImageStabilization as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.43 IrisAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

### 152.3.44 IrisRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

### 152.3.45 IsoSensitivity as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.46 IsoSensitivityAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kISOSensitivity* constants.
Usually set to kISOSensitivityAuto for auto mode (1).
(Read and Write property)

### 152.3.47 JPEG as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The last JPEG image data block.
**Notes:** (Read only property)

### 152.3.48 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read only property)

### 152.3.49 Lock3A as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kLock* constants.
(Read and Write property)

### 152.3.50 Opened as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether device is opened.
**Notes:** (Read only property)

### 152.3.51 PanAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.52 PanRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.53 PanReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.54 PanSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.55 Picture as Picture

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The last captured picture.
**Notes:** (Read only property)

### 152.3.56 PixelFormat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format.
**Notes:** (Read only property)

### 152.3.57 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The pixel format as text.
**Notes:** (Read only property)

### 152.3.58 Privacy as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.59 Recording as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether we are recording currently.
**Notes:** (Read only property)

### 152.3.60 SceneMode as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

See kSceneMode* constants
(Read and Write property)

### 152.3.61 TiltAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.62 TiltRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.63 TiltReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.64 TiltSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.65 Version as String

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The version of the driver.
**Notes:** (Read only property)

### 152.3.66 WideDynamicRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.67 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** The width in pixel used for capture.
**Notes:** (Read only property)

### 152.3.68 ZoomAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.69 ZoomContinuous as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.70 ZoomRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** One of the camera configuration propertires.
**Notes:**

Lasterror is set.
(Read and Write property)

### 152.3.71 Constants

### 152.3.72 kAutoFocusRangeAuto = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusRange property.

### 152.3.73 kAutoFocusRangeInfinity = 3

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusRange property.

### 152.3.74 kAutoFocusRangeMacro = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusRange property.

### 152.3.75 kAutoFocusRangeNormal = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusRange property.

### 152.3.76 kAutoFocusStatusBusy = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusStatus property.

### 152.3.77 kAutoFocusStatusFailed = 4

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusStatus property.

### 152.3.78 kAutoFocusStatusIdle = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusStatus property.

### 152.3.79 kAutoFocusStatusReached = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoFocusStatus property.

### 152.3.80 kExposureAperturePriority = 3

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureAuto property.

### 152.3.81 kExposureAuto = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureAuto property.

### 152.3.82 kExposureManual = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureAuto property.

### 152.3.83 kExposureMeteringAverage = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureMetering property.

### 152.3.84 kExposureMeteringCenterWeighted = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureMetering property.

### 152.3.85 kExposureMeteringMatrix = 3

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureMetering property.

### 152.3.86 kExposureMeteringSpot = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureMetering property.

### 152.3.87 kExposureShutterPriority = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ExposureAuto property.

### 152.3.88 kISOSensitivityAuto = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for IsoSensitivityAuto property.

### 152.3.89 kISOSensitivityManual = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for IsoSensitivityAuto property.

### 152.3.90 kLockExposure = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for Lock3A property.

### 152.3.91 kLockFocus = 4

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for Lock3A property.

### 152.3.92 kLockWhiteBalance = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for Lock3A property.

### 152.3.93 kSceneModeBacklight = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.94 kSceneModeBeachSnow = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.95 kSceneModeCandleLight = 3

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.96 kSceneModeDawnDusk = 4

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.97 kSceneModeFallColors = 5

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.98 kSceneModeFireworks = 6

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.99 kSceneModeLandscape = 7

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.100 kSceneModeNight = 8

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.101 kSceneModeNone = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.102 kSceneModePartyIndoor = 9

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.103 kSceneModePortrait = 10

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.104 kSceneModeSports = 11

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.105 kSceneModeSunset = 12

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.106 kSceneModeText = 13

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for ScreenMode property.

### 152.3.107 kWhiteBalanceAuto = 1

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.108 kWhiteBalanceCloudy = 8

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.109 kWhiteBalanceDaylight = 6

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.110 kWhiteBalanceFlash = 7

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.111 kWhiteBalanceFluorescent = 3

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.112 kWhiteBalanceFluorescentH = 4

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.113 kWhiteBalanceHorizon = 5

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.114 kWhiteBalanceIncandescent = 2

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.115 kWhiteBalanceManual = 0

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

### 152.3.116 kWhiteBalanceShade = 9

MBS Linux Plugin, Plugin Version: 18.0.

**Function:** One of the constants for AutoNPresetWhiteBalance property.

# Chapter 153

# Registration

## 153.1 module MBS

### 153.1.1 module MBS

MBS Main Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The module with version details.
**Notes:** Those constants can be used in # if conditions.

### 153.1.2 Methods

### 153.1.3 Target as string

MBS Main Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the target where the plugin was compiled for.
**Example:**

MsgBox mbs.Target

**Notes:** Can be Win32, Linux, Carbon, Carbon-PPC or Cocoa.

### 153.1.4 Constants

### 153.1.5 BuildNumber = 20924

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The build number of the plugins.
**Example:**

```
# if mbs.BuildNumber>15000 then

// use some new MBS feature

MsgBox "OK"

# endif
```

**Notes:** The constant value is not in this documentation as it changes too often.

### 153.1.6 CompileDate = "Mar 6 2023"

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The compilation date of the plugin.
**Notes:** The constant value is not in this documentation as it changes too often.

### 153.1.7 CompileTime = "08:10:39"

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The compilation time of the plugin.
**Example:**

```
MsgBox mbs.CompileTime
```

**Notes:** The constant value is not in this documentation as it changes too often.

### 153.1.8 ComputerName = "MyMacM2"

MBS Main Plugin, Plugin Version: 14.0.

**Function:** The computer the IDE was launched on for building an app.
**Example:**

MsgBox mbs.ComputerName

**Notes:**

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

### 153.1.9 Copyright = "¬© 2023 by Monkeybread Software"

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The plugin copyright string.
**Example:**

MsgBox mbs.Copyright

### 153.1.10 Day = 6

MBS Main Plugin, Plugin Version: 23.0.

**Function:** The day of the plugin.
**Example:**

MsgBox "Day: " + str(mbs.Day)

**Notes:**

The day the plugin was compiled.
Can be used in # if conditions.

### 153.1.11 HasAudioPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Audio plugin is installed.
**Example:**

# if MBS.HasAudioPlugin then

```
MsgBox "Audio Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.12 HasAVFoundationPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the AVFoundation plugin is installed.
**Example:**

```
# if MBS.HasAVFoundationPlugin then
MsgBox "AVFoundation Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.13 HasBarcodePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Barcode plugin is installed.
**Example:**

```
# if MBS.HasBarcodePlugin then
MsgBox "Barcode Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.14 HasCanonEOSDigitalPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CanonEOSDigital plugin is installed.
**Example:**

```
# if MBS.HasCanonEOSDigitalPlugin then
MsgBox "CanonEOSDigital Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.15 HasChartDirectorPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the ChartDirector plugin is installed.
**Example:**

```
# if MBS.HasChartDirectorPlugin then
MsgBox "ChartDirector Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.16 HasCocoaBasePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CocoaBase plugin is installed.
**Example:**

```
# if MBS.HasCocoaBasePlugin then
MsgBox "CocoaBase Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.17 HasCocoaControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CocoaControls plugin is installed.
**Example:**

```
# if MBS.HasCocoaControlsPlugin then
MsgBox "CocoaControls Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.18 HasCocoaExtrasPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CocoaExtras plugin is installed.
**Example:**

```
# if MBS.HasCocoaExtrasPlugin then
MsgBox "CocoaExtras Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.19 HasCocoaPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Cocoa plugin is installed.
**Example:**

```
# if MBS.HasCocoaPlugin then
MsgBox "Cocoa Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.20 HasCompressionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Compression plugin is installed.
**Example:**

```
# if MBS.HasCompressionPlugin then
MsgBox "Compression Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.21 HasComputerControlPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the ComputerControl plugin is installed.
**Example:**

```
# if MBS.HasComputerControlPlugin then
MsgBox "ComputerControl Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.22 HasControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Controls plugin is installed.
**Example:**

```
# if MBS.HasControlsPlugin then
MsgBox "Controls Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.23 HasCUPSPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CUPS plugin is installed.
**Example:**

```
# if MBS.HasCUPSPlugin then
MsgBox "CUPS Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.24 HasCURLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the CURL plugin is installed.
**Example:**

```
# if MBS.HasCURLPlugin then
MsgBox "CURL Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.25 HasDataTypesPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the DataTypes plugin is installed.
**Example:**

```
# if MBS.HasDataTypesPlugin then
MsgBox "DataTypes Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.26 HasDirectShowPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the DirectShow plugin is installed.
**Example:**

```
# if MBS.HasDirectShowPlugin then
MsgBox "DirectShow Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.27 HasDonglePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Dongle plugin is installed.
**Example:**

```
# if MBS.HasDonglePlugin then
MsgBox "Dongle Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.28 HasDynaPDFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the DynaPDF plugin is installed.
**Example:**

```
# if MBS.HasDynaPDFPlugin then
MsgBox "DynaPDF Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.29 HasEncryptionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Encryption plugin is installed.
**Example:**

```
# if MBS.HasEncryptionPlugin then
MsgBox "Encryption Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.30 HasGIFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the GIF plugin is installed.
**Example:**

```
# if MBS.HasGIFPlugin then
MsgBox "GIF Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.31 HasGraphicsMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the GraphicsMagick plugin is installed.
**Example:**

```
# if MBS.HasGraphicsMagickPlugin then
MsgBox "GraphicsMagick Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.32 HasImageMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the ImageMagick plugin is installed.
**Example:**

```
# if MBS.HasImageMagickPlugin then
MsgBox "ImageMagick Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.33 HasJavaPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Java plugin is installed.
**Example:**

```
# if MBS.HasJavaPlugin then
MsgBox "Java Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.34 HasJPEGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the JPEG plugin is installed.
**Example:**

```
# if MBS.HasJPEGPlugin then
MsgBox "JPEG Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.35 HasLargePicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the LargePicture plugin is installed.
**Example:**

```
# if MBS.HasLargePicturePlugin then
MsgBox "LargePicture Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.36 HasLCMS2Plugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the LCMS2 plugin is installed.
**Example:**

```
# if MBS.HasLCMS2Plugin then
MsgBox "LCMS2 Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.37 HasLCMSPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the LCMS plugin is installed.
**Example:**

```
# if MBS.HasLCMSPlugin then
MsgBox "LCMS Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.38 HasLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Leopard plugin is installed.
**Example:**

```
# if MBS.HasLeopardPlugin then
MsgBox "Leopard Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.39 HasLinuxPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Linux plugin is installed.
**Example:**

```
# if MBS.HasLinuxPlugin then
MsgBox "Linux Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.40 HasLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Lion plugin is installed.
**Example:**

```
# if MBS.HasLionPlugin then
MsgBox "Lion Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.41 HasMac64bitPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Mac64bit plugin is installed.
**Example:**

```
# if MBS.HasMac64bitPlugin then
MsgBox "Mac64bit Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.42 HasMacOSXCFPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the MacOSXCF plugin is installed.
**Example:**

```
# if MBS.HasMacOSXCFPlugin then
MsgBox "MacOSXCF Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.43 HasMacOSXCGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the MacOSXCG plugin is installed.
**Example:**

```
# if MBS.HasMacOSXCGPlugin then
MsgBox "MacOSXCG Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.44 HasMacOSXPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the MacOSX plugin is installed.
**Example:**

```
# if MBS.HasMacOSXPlugin then
MsgBox "MacOSX Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.45 HasMacPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Mac plugin is installed.
**Example:**

```
# if MBS.HasMacPlugin then
MsgBox "Mac Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.46 HasMainPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Main plugin is installed.
**Example:**

```
# if MBS.HasMainPlugin then
MsgBox "Main Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.47 HasMarkDownPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the MarkDown plugin is installed.
**Example:**

```
# if MBS.HasMarkDownPlugin then
MsgBox "MarkDown Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.48 HasMavericksPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Mavericks plugin is installed.
**Example:**

```
# if MBS.HasMavericksPlugin then
MsgBox "Mavericks Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.49 HasMountainLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the MountainLion plugin is installed.
**Example:**

```
# if MBS.HasMountainLionPlugin then
MsgBox "MountainLion Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.50 HasNetworkPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Network plugin is installed.
**Example:**

```
# if MBS.HasNetworkPlugin then
MsgBox "Network Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.51 HasNikonCameraPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the NikonCamera plugin is installed.
**Example:**

```
# if MBS.HasNikonCameraPlugin then
MsgBox "NikonCamera Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.52 HasOCRPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the OCR plugin is installed.
**Example:**

```
# if MBS.HasOCRPlugin then
MsgBox "OCR Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.53 HasOverlayPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Overlay plugin is installed.
**Example:**

```
# if MBS.HasOverlayPlugin then
MsgBox "Overlay Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.54 HasPHPPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the PHP plugin is installed.
**Example:**

```
# if MBS.HasPHPPlugin then
MsgBox "PHP Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.55 HasPicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Picture plugin is installed.
**Example:**

```
# if MBS.HasPicturePlugin then
MsgBox "Picture Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.56 HasPNGPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the PNG plugin is installed.
**Example:**

```
# if MBS.HasPNGPlugin then
MsgBox "PNG Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.57 HasQTKitPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the QTKit plugin is installed.
**Example:**

```
# if MBS.HasQTKitPlugin then
MsgBox "QTKit Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.58 HasQuickTimePlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the QuickTime plugin is installed.
**Example:**

```
# if MBS.HasQuickTimePlugin then
MsgBox "QuickTime Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.59 HasRegExPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the RegEx plugin is installed.
**Example:**

```
# if MBS.HasRegExPlugin then
MsgBox "RegEx Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.60 HasSmartCardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the SmartCard plugin is installed.
**Example:**

```
# if MBS.HasSmartCardPlugin then
MsgBox "SmartCard Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.61 HasSnowLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the SnowLeopard plugin is installed.
**Example:**

```
# if MBS.HasSnowLeopardPlugin then
MsgBox "SnowLeopard Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.62 HasSQLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the SQL plugin is installed.
**Example:**

```
# if MBS.HasSQLPlugin then
MsgBox "SQL Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.63 HasTAPIPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the TAPI plugin is installed.
**Example:**

```
# if MBS.HasTAPIPlugin then
MsgBox "TAPI Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.64 HasTidyPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Tidy plugin is installed.
**Example:**

```
# if MBS.HasTidyPlugin then
MsgBox "Tidy Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.65 HasTiffPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Tiff plugin is installed.
**Example:**

```
# if MBS.HasTiffPlugin then
MsgBox "Tiff Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.66 HasTwainPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Twain plugin is installed.
**Example:**

```
# if MBS.HasTwainPlugin then
MsgBox "Twain Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.67 HasUSBPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the USB plugin is installed.
**Example:**

```
# if MBS.HasUSBPlugin then
MsgBox "USB Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.68 HasUtilPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Util plugin is installed.
**Example:**

```
# if MBS.HasUtilPlugin then
MsgBox "Util Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.69 HasVLCPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the VLC plugin is installed.
**Example:**

```
# if MBS.HasVLCPlugin then
MsgBox "VLC Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.70 HasWIAPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the WIA plugin is installed.
**Example:**

```
# if MBS.HasWIAPlugin then
MsgBox "WIA Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.71 HasWinDragDropPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the WinDragDrop plugin is installed.
**Example:**

```
# if MBS.HasWinDragDropPlugin then
MsgBox "WinDragDrop Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.72 HasWinICMPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the WinICM plugin is installed.
**Example:**

```
# if MBS.HasWinICMPlugin then
MsgBox "WinICM Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.73 HasWinPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the Win plugin is installed.
**Example:**

```
# if MBS.HasWinPlugin then
MsgBox "Win Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.74 HasXLPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the XL plugin is installed.
**Example:**

```
# if MBS.HasXLPlugin then
MsgBox "XL Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.75 HasXMPPlugin = true

MBS Main Plugin, Plugin Version: 16.4.

**Function:** Whether the XMP plugin is installed.
**Example:**

```
# if MBS.HasXMPPlugin then
MsgBox "XMP Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 153.1.76 HostName = "MyMacM2.local"

MBS Main Plugin, Plugin Version: 14.0.

**Function:** The host the IDE was launched on for building an app.
**Example:**

```
MsgBox mbs.HostName
```

**Notes:**

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

### 153.1.77 IsPrerelease = false

MBS Main Plugin, Plugin Version: 20.0.

**Function:** Wether this is a prerelease version of the plugin.
**Notes:** Value is true for beta versions and false for release.

### 153.1.78 Month = 3

MBS Main Plugin, Plugin Version: 23.0.

**Function:** The month of the plugin.
**Example:**

```
MsgBox "Month: " + str(mbs.Month)
```

**Notes:**

The month the plugin was compiled.
Can be used in # if conditions.

### 153.1.79 UserName = "Christian Schmitz"

MBS Main Plugin, Plugin Version: 14.0.

**Function:** The user name of the user who launched the IDE.
**Example:**

MsgBox mbs.UserName

**Notes:**

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

### 153.1.80 Version = "MBS Xojo Plugin 23.1 (build 20924) Mon Mar 6 07:09:07 2023 (GMT)"

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The plugin version string.
**Example:**

MsgBox mbs.Version

### 153.1.81 VersionNumber = 23.1

MBS Main Plugin, Plugin Version: 19.5.

**Function:** The plugin version as number.
**Example:**

```
# if MBS.VersionNumber >20.0
// use newer code
# else
// use older code
# endif
```

### 153.1.82 VersionString = "23.1"

MBS Main Plugin, Plugin Version: 11.1.

**Function:** The plugin version string (only, the number part).
**Example:**

MsgBox mbs.VersionString

**Notes:** e.g. "11.1"

### 153.1.83 Website = "http://www.monkeybreadsoftware.de"

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The URL for the Monkeybread Software website.
**Notes:** ShowURL mbs.Website

### 153.1.84 Year = 2023

MBS Main Plugin, Plugin Version: 9.5.

**Function:** The year of the plugin.
**Example:**

MsgBox str(mbs.Year)

**Notes:**

The year the plugin was compiled.
Can be used in # if conditions.

## 153.2 Globals

### 153.2.1 LogoMBS(size as Integer = 0, WithAlphaChannel as boolean = false) as Picture

MBS Main Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the MBS logo picture.
**Example:**

window1.Backdrop = LogoMBS(500)

**Notes:**

Best size is 500 pixel.
This function exists to provide a sample picture for examples.
If WithAlphaChannel is true and alpha channel pictures are supported, the plugin returns a picture with alpha channel. (Cocoa, Windows or Linux target on Xojo 2011r4).

Due to a bug in console runtime from Real Software this function can only produce useful pictures with 500 pixel size in console or web applications.

### 153.2.2 Blog Entries

- Change brightness saturation and hue by Magick
- Sending email via gmail
- Four ways to save picture as Tiff in Xojo
- JPEGs to Movie
- Show download in a new tab
- Xojo 64-bit notes
- MBS Real Studio Plugins, version 11.3fc
- Inside REAL Studio Web Edition
- REAL Studio 2010r3

### 153.2.3 Xojo Developer Magazine

- 20.2, pages 82 to 83: Wifi QR Code, Embedding your Wifi password in a QR code by Stefanie Juchmes

- 19.6, pages 68 to 69: Fun with GraphicsMagick, Cool methods from the GMImageMBS class by Stefanie Juchmes
- 18.2, page 68: Drawing PDFs, Draw in a PDF like in a Graphics element by Stefanie Juchmes

### 153.2.4 MBSPluginCompileDate as string

MBS Main Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compilation date of the plugins.
**Example:**

MsgBox MBSPluginCompileDate

**Notes:**

e.g. "Aug 27 2006"
Actually the compilation date of the Version Plugin part which defines this function.

### 153.2.5 MBSPluginCompileTime as string

MBS Main Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compilation Time of the plugins.
**Example:**

MsgBox MBSPluginCompileTime

**Notes:**

e.g. "19:40:16"
Actually the compilation date of the Version Plugin part which defines this function.

### 153.2.6 MBSPluginVersion as string

MBS Main Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns a version string from the plugin.
**Example:**

MsgBox "Build with Xojo "+RBVersionString+" and "+MBSPluginVersion

**Notes:** You can show that in your about box so your users can tell you which plugin they use.

### 153.2.7 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

MBS Main Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The function to register the plugins.
**Example:**

```
const name = "Joe Smith"
const serialnumber = "123456"
const enddate = 200710

if not RegisterMBSPlugin(name, "MBS Complete", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

**Notes:**

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2015 and newer serial numbers.

### 153.2.8 SetRegistrationMessageMBS(ID as Integer, message as string)

MBS Main Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Defines what messages to show.
**Example:**

```
SetRegistrationMessageMBS(0, "This application is broken. Please reinstall!")
```

**Notes:**

ID currently can only be 0 and is reserved for future flags.

Currently this changes the message which is shown if plugins of different versions are found.
This typically happens if installers mix old and new libraries in an app and the user should be asked to reinstall the application.

### 153.2.9 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9

## 153.3 class RegistrationEngineMBS

### 153.3.1 class RegistrationEngineMBS

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** An engine to add serial number generation to your application.
**Example:**

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

**Notes:**

If you want to add serial numbers to your application, you can use this class to write yourself a serial number generator application.
You can later in your application use this class to verify the serial number.

You may want to design your application that the serial number is written to your preferences file so you can verify it every time your application is launched. But if you do this, also save some computer related value there so you can avoid people cloning the system. For example the MAC ID, the user name, the systemfolder creation date. This way you detect whenever a preferences file is copied to another machine.

For generate and later verify serial numbers the setup of the class must match. So carefully check how your serial number should look like. A format like "MA-1234-5678-9012-V1" can be good. Use a prefix and suffix so make serial numbers from different products and different major versions look different. 12 letters are normally enough for a serial number. Especially if you use alpha numeric characters. You can of course change the alphabet string and use lower case letters.

### 153.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4
- MBS Xojo Plugins, version 17.4pr4
- Handllng Sales and Serial Numbers
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11
- MBS REALbasic plug-in 9.6
- MBS REALbasic plug-ins version 9.5

### 153.3.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4
- MBS Xojo Plugins, version 17.4pr4
- Handllng Sales and Serial Numbers
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr11
- MBS REALbasic plug-in 9.6
- MBS REALbasic plug-ins version 9.5

### 153.3.4 Methods

### 153.3.5 Calc as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Calculates the serial number.

### 153.3.6 Verify(s as string) as boolean

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Verifies the serial number.
**Example:**

```
Dim r As New RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

Dim key As String = r.Calc

If r.Verify(key) Then
MsgBox "OK"
Else
MsgBox "Failed"
End If
```

**Notes:**

If you only use upper case letter for your serial numbers, use a function like uppercase before calling verify.
This way you avoid that a serial number "abc" is invalid because it is not "ABC".
Returns true on success and false on failure.

### 153.3.7 Properties

### 153.3.8 Alphabet as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The characters to use for serial numbers.
**Example:**

```
dim r as new RegistrationEngineMBS
```

```
r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.Alphabet="ABC123"
MsgBox r.Calc // shows: A1AC-2312-12CC

r.Alphabet="0123456789"
MsgBox r.Calc // shows: 4308-2905-4013
```

**Notes:**

Must have at least two characters.
Characters must be unique.
Default is "0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ".
(Read and Write property)

### 153.3.9 BlockLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The Length of the blocks in the serial number.
**Example:**

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

**Notes:**

If this value is 0, no delimeters are used.
(Read and Write property)

### 153.3.10 Delimiter as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The delimiter string to use for separating blocks in the serial number.
**Notes:**

Default is "-".
(Read and Write property)

### 153.3.11 Mode as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The mode of operation.
**Notes:**

Currently always 0.
Set to 1 to use 128bit instead of 64bit number.
(Read and Write property)

### 153.3.12 NumberLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The maximum length of the number.
**Example:**

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

**Notes:** (Read and Write property)

### 153.3.13 Platform as Integer

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Which platform to use for platform specific keys.
**Notes:**

Value is set in the constructor to current platform, but you can change it if you want to run the key generator on a different platform.

Values are:

1 Mac
2 Windows
3 Linux

All other values behave like PlatformSpecificKeys is false.
This value is only used if PlatformSpecificKeys is true.
(Read and Write property)

### 153.3.14 PlatformSpecificKeys as Boolean

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether you want platform specific keys.
**Notes:**

Set to false if you want to have Windows, Mac OS X and Linux all use the same serial numbers.
Set to true if you want to different serial numbers depending on the platform.

Default is false.
(Read and Write property)

### 153.3.15 Prefix as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The prefix for the serial number string.
**Notes:** (Read and Write property)

### 153.3.16 Seed as Integer

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A seed value you can set to get your serial number more unique.
**Notes:** (Read and Write property)

### 153.3.17 Suffix as String

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The suffix for the serial number string.
**Example:**

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="Xojo"
r.suffix="-RB600CPFUSA-MAC"

r.BlockLength=8
r.NumberLength=32

MsgBox r.Calc
// shows: EV6GG9P2-DI533EV6-GG9P2DI5-33EV6GG9-RB600CPFUSA-MAC
// looks like a Xojo serial number ;-)
```

**Notes:** (Read and Write property)

### 153.3.18 Field(index as Integer) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The data fields you can use for personalized serial numbers.
**Notes:**

Fill this fields with all the values you want to use for personalized serial numbers. You should use the name of the user, maybe the postal address. You can use hardware values like the MAC address or software values like the system folder creation date.
Also you may have serial numbers different between version 1.x and 2.x of your application. So you pass version information like "1" or "2". Do not pass values like "1.2.3" as this serial number won't work on "1.2.4".

Index is from 0 to 7.

(Read and Write computed property)

# Chapter 154

# Regular Expressions

## 154.1 class PCRE2CodeInfoMBS

### 154.1.1 class PCRE2CodeInfoMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for inspecting callouts.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// pattern with callout
compiler.Pattern = "A(?C3)B"

Dim code As PCRE2CodeMBS = Compiler.Compile
Dim codeInfo() As PCRE2CodeInfoMBS = code.Infos

break // look into debugger
```

**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 154.1.5 Xojo Developer Magazine

- 21.1, page 27

### 154.1.6 Methods

### 154.1.7 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 154.1.8 Properties

### 154.1.9 CalloutNumber as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Number for numbered callouts.
**Notes:** (Read only property)

### 154.1.10 CalloutString as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The callout string.
**Notes:** (Read only property)

### 154.1.11 CalloutStringLength as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Length of callout string.
**Notes:** (Read only property)

### 154.1.12 CalloutStringOffset as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Offset to string within pattern.
**Notes:** (Read only property)

### 154.1.13 NextItemLength as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Length of next item in pattern.
**Notes:** (Read only property)

### 154.1.14 PatternPosition as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Offset to next item in pattern.
**Notes:** (Read only property)

## 154.2 class PCRE2CodeMBS

### 154.2.1 class PCRE2CodeMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for a compiled pattern.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

MessageBox Str(code.CaptureCount) // shows 2
```

**Notes:**

Please use this class as a chance to compile once and then reuse the compiled pattern several times to search various strings.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 21.1, page 27
- 20.6, pages 70 to 71: Regular Expressions with Xojo, The MBS Plugins has its own RegEx library by Stefanie Juchmes

### 154.2.6 Methods

### 154.2.7 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 154.2.8 Copy(withTables as boolean = false) as PCRE2CodeMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Makes a copy of the memory used for a compiled pattern, excluding any memory used by the JIT compiler.
**Notes:** Without a subsequent call to JITCompile(), the copy can be used only for non-JIT matching. The pointer to the character tables is copied, not the tables themselves (unless withTables is true).

### 154.2.9 Infos as PCRE2CodeInfoMBS()

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Enumerate callouts in a compiled pattern.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// pattern with callout
compiler.Pattern = "A(?C3)B"
```

```
Dim code As PCRE2CodeMBS = Compiler.Compile
Dim codeInfo() As PCRE2CodeInfoMBS = code.Infos

break // look into debugger
```

**Notes:** Useful to debug the pattern.

### 154.2.10 JITCompile(Flags as Integer = 1)

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Requests JIT compilation.
**Notes:** If the just-in-time compiler is available, further processes a compiled pattern into machine code that executes much faster than the Match() interpretive matching function.

### 154.2.11 Match(Text as String, matchData as PCRE2MatchDataMBS, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Matches a compiled regular expression against a given subject string, using a matching algorithm that is similar to Perl's.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match)

// get result found
Dim TotalSubString As String = match.SubString(0)
Dim SubString1 As String = match.SubString(1)
Dim SubString2 As String = match.SubString(2)
```

```
break // see debugger
```

**Notes:**

It returns offsets to what it has matched and to captured substrings via the matchData object. The return from Match() is one more than the highest numbered capturing pair that has been set (for example, 1 if there are no captures), zero if the vector of offsets is too small.
Raises exception in case of error.

A match context is needed only if you want to:

- Set up a callout function
- Set a matching offset limit
- Change the heap memory limit
- Change the backtracking match limit
- Change the backtracking depth limit
- Set custom memory management specifically for the match

StartOffsetCharacters is optional to start at a specific character in the text.
See also:

- 154.2.12 Match(Text as String, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as PCRE2MatchDataMBS 23449

### 154.2.12 Match(Text as String, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as PCRE2MatchDataMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Convenience variant of Match function.
**Example:**

```
// Compile a pattern
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"
Dim code As PCRE2CodeMBS = Compiler.Compile

// now run a match
Dim Match1 As PCRE2MatchDataMBS = code.Match("abc") // ->nil as not found
Dim Match2 As PCRE2MatchDataMBS = code.Match("T√§st 1234,Ç¨ Case")
```

```
MessageBox match2.SubString(0)
```

**Notes:**

Performs match and returns the new PCRE2MatchDataMBS object.
Returns nil in case nothing is found.
See also:

- 154.2.11 Match(Text as String, matchData as PCRE2MatchDataMBS, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as Integer 23448

### 154.2.13 MatchAll(Text as String, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as PCRE2MatchDataMBS()

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Matches pattern several times in the text.
**Example:**

```
// Compile a pattern
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d)"
Dim code As PCRE2CodeMBS = Compiler.Compile

// now run a match
Dim Matches() As PCRE2MatchDataMBS = code.MatchAll("T√§st 1234,Ç¨ Case")

Dim SubString0 As String = matches(0).SubString(0)
Dim SubString1 As String = matches(1).SubString(0)
Dim SubString2 As String = matches(2).SubString(0)
Dim SubString3 As String = matches(3).SubString(0)

// see 4 results in debugger
Break
```

**Notes:**

This does a loop to go over text from start to end to match the pattern as often as it fits.
We try to avoid endless loops.

Returns an array with PCRE2MatchDataMBS objects, one for each match.

### 154.2.14 Matches(Text as String, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as PCRE2IteratorMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Runs match with an iterator.
**Example:**

```
Dim rx As New PCRE2CompilerMBS
rx.CaseLess = True
rx.DotAll = False
rx.Ungreedy = False
rx.NewLine = rx.kNewLineAnyCRLF
rx.Multiline = True
rx.Pattern = kMarkerPattern

Dim code As PCRE2CodeMBS = rx.Compile
Dim foundCount as integer

for each MatchData as PCRE2MatchDataMBS in code.Matches(TestString, 0)
foundCount = foundCount + 1
next
```

**Notes:**

Returns the iterator, so you can use it with for each loop.
May raie an error if something goes wrong.

### 154.2.15 Names as String()

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries name table.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(?<AA>\d+)"

Dim code As PCRE2CodeMBS = Compiler.Compile
Dim names() As String = code.Names

Break // see debugger
```

### 154.2.16 SerializeDecode(Data as String) as PCRE2CodeMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Decodes a serialized set of compiled patterns back into a list of individual patterns.
**Example:**

```
// Compile a pattern
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"
Dim code1 As PCRE2CodeMBS = Compiler.Compile

// store somewhere compiled
Dim data As String = code1.SerializeEncode

// later rebuild it
Dim code2 As PCRE2CodeMBS = PCRE2CodeMBS.SerializeDecode(data)

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code2)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim Found As Integer = code2.Match(Text, match)

MessageBox match.SubString(0)
```

**Notes:** This is possible only on a host that is running the same version of PCRE2, with the same code unit width, and the host must also have the same endianness, pointer width and size_t type.

### 154.2.17 SerializeEncode as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Encodes a compiled pattern into a byte stream that can be saved on disc or elsewhere.
**Example:**

```
// Compile a pattern
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"
Dim code1 As PCRE2CodeMBS = Compiler.Compile

// store somewhere compiled
Dim data As String = code1.SerializeEncode

// later rebuild it
Dim code2 As PCRE2CodeMBS = PCRE2CodeMBS.SerializeDecode(data)
```

```
// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code2)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim Found As Integer = code2.Match(Text, match)

MessageBox match.SubString(0)
```

**Notes:** Note that this is not an abstract format like Java or .NET. Conversion of the byte stream back into usable compiled patterns can only happen on a host that is running the same version of PCRE2, with the same code unit width, and the host must also have the same endianness, pointer width and size_t type.

### 154.2.18 Substitute(Text as String, Replacement as String, matchData as PCRE2MatchDataMBS = nil, StartOffsetCharacters as Integer = 0, MatchContext as PCRE2MatchContextMBS = nil) as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Matches a compiled regular expression against a given subject string, using a matching algorithm that is similar to Perl's.
**Example:**

```
// Compile a pattern
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d)"
Dim code As PCRE2CodeMBS = Compiler.Compile

// replace all
code.SubstituteGlobal = True

// we replace all and duplicate all digits here:
Dim newText As String = code.Substitute("T√§st 1234,Ç¨ Case", "$ 1$ 1")

Break // see result in debugger
```

**Notes:**

It then makes a copy of the subject, substituting a replacement string for what was matched.

Text: The subject string
Replacement: the replacement string
matchData: The match data block, or is nil if you don't need the result.
StartOffsetCharacters: Offset in the subject at which to start matching.

MatchContext: A match context, or nil.

A match data block is needed only if you want to inspect the data from the final match that is returned in that block or if SubstituteMatched is set. A match context is needed only if you want to:

- Set up a callout function
- Set a matching offset limit
- Change the backtracking match limit
- Change the backtracking depth limit
- Set custom memory management in the match context

Raises exception in case of error.

The options are controlled via properties:

| | |
|---|---|
| Anchored | Match only at the first position |
| EndAnchored | Pattern can match only at end of subject |
| NotBOL | Subject string is not the beginning of a line |
| NotEOL | Subject string is not the end of a line |
| NotEmpty | An empty string is not a valid match |
| NotEmptyAtStart | An empty string at the start of the subject is not a valid match |
| NoJit | Do not use JIT matching |
| NoUTFCheck | Do not check the subject for UTF validity (only relevant if UTF was set at compile time) |
| PartialHard | Return PCRE2_ERROR_PARTIAL (-2) for a partial match even if there is a full match |
| PartialSoft | Return PCRE2_ERROR_PARTIAL (-2) for a partial match if no full matches are found. |

### 154.2.19 SubstringNumberFromName(Name as String) as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Finds the number of a named substring capturing parenthesis in a compiled pattern, provided that it is a unique name.
**Notes:**

If the string is not found, you receive a negative value.
For other errors, we raise an exception.

### 154.2.20 Properties

### 154.2.21 AllOptions as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Final options after compiling.
**Notes:** (Read only property)

### 154.2.22 Anchored as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Match only at the first position.
**Notes:** (Read and Write property)

### 154.2.23 ArgOptions as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Options passed to Compile.
**Notes:**

Should be same as Options value in PCRE2CompilerMBS.
(Read only property)

### 154.2.24 BackRefMax as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Number of highest backreference.
**Notes:** (Read only property)

### 154.2.25 BSR as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** What \R matches.
**Notes:**

kBSRUnicode: Unicode line endings
kBSRanyCRLF: CR, LF, or CRLF only

(Read only property)

### 154.2.26 CaptureCount as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Number of capturing subpatterns.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

MessageBox Str(code.CaptureCount) // shows 2
```

**Notes:** (Read only property)

### 154.2.27 DepthLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Backtracking depth limit if set.
**Notes:** (Read only property)

### 154.2.28 EndAnchored as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Pattern can match only at end of subject.
**Notes:** (Read and Write property)

### 154.2.29 ExtraOptions as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Extra options that were passed in the compile context.
**Notes:** (Read only property)

### 154.2.30 FirstCodeType as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Type of start-of-match information.
**Notes:**

Value can be:
0 nothing set
1 first code unit is set
2 start of string or after newline
(Read only property)

### 154.2.31 FirstCodeUnit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** First code unit when type is 1.
**Notes:** (Read only property)

### 154.2.32 FrameSize as UInt64

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Size of backtracking frame.
**Notes:** (Read only property)

### 154.2.33 HasBackslashC as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return true if pattern contains \C.
**Notes:** (Read only property)

### 154.2.34 HasCRorLF as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return true if explicit CR or LF matches exist in the pattern.
**Notes:** (Read only property)

### 154.2.35 HeapLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Heap memory limit if set.
**Notes:** (Read only property)

### 154.2.36 JChanged as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return true if (?J) or (?-J) was used.
**Notes:** (Read only property)

### 154.2.37 JITSize as UInt64

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Size of JIT compiled code, or 0.
**Notes:** (Read only property)

### 154.2.38 LastCodeType as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Type of must-be-present information.
**Notes:**

Value can be:
0 nothing set
1 code unit is set
(Read only property)

### 154.2.39 LastCodeUnit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Last code unit when type is 1.
**Notes:** (Read only property)

### 154.2.40 MatchEmpty as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Value is true if the pattern can match an empty string, false otherwise.
**Notes:** (Read only property)

### 154.2.41 MatchLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Match limit if set.
**Notes:** (Read only property)

### 154.2.42 MaxLookBehind as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Length (in characters) of the longest lookbehind assertion.
**Notes:** (Read only property)

### 154.2.43 MinLength as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Lower bound length of matching strings.
**Notes:** (Read only property)

### 154.2.44 NameCount as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Number of named subpatterns.
**Notes:** (Read only property)

### 154.2.45 NameEntrySize as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Size of name table entries.
**Notes:** (Read only property)

### 154.2.46 NewLine as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Code for the newline sequence.
**Notes:**

See kNewLine* constants.
(Read only property)

### 154.2.47 NoJit as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do not use JIT matching.
**Notes:** (Read and Write property)

### 154.2.48 NotBOL as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Subject is not the beginning of a line.
**Notes:** (Read and Write property)

### 154.2.49 NotEmpty as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** An empty string is not a valid match.
**Notes:** (Read and Write property)

### 154.2.50 NotEmptyAtStart as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** An empty string at the start of the subject is not a valid match.
**Notes:** (Read and Write property)

### 154.2.51 NotEOL as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Subject is not the end of a line.
**Notes:** (Read and Write property)

### 154.2.52 NoUTFCheck as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do not check the subject or replacement for UTF validity (only relevant if UTF was set at compile time)
**Notes:** (Read and Write property)

### 154.2.53 Options as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The option flags.
**Notes:**

You usually set the boolean properties to turn flags here on/off.
(Read and Write property)

### 154.2.54 PartialHard as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return -2 from Match() for a partial match even if there is a full match.
**Notes:** (Read and Write property)

### 154.2.55 PartialSoft as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return -2 from Match() for a partial match if no full matches are found.
**Notes:** (Read and Write property)

### 154.2.56 Size as UInt64

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Size of compiled pattern.
**Notes:** (Read only property)

### 154.2.57 SubstituteExtended as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do extended replacement processing.
**Notes:** (Read and Write property)

### 154.2.58 SubstituteGlobal as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Replace all occurrences in the subject.
**Notes:** (Read and Write property)

### 154.2.59 SubstituteLiteral as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The replacement string is literal.
**Notes:** (Read and Write property)

### 154.2.60 SubstituteMatched as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Use pre-existing match data for 1st match.
**Notes:** (Read and Write property)

### 154.2.61 SubstituteOverflowLength as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** If overflow, compute needed length.
**Notes:** (Read and Write property)

### 154.2.62 SubstituteReplacementOnly as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Return only replacement string(s).
**Notes:** (Read and Write property)

### 154.2.63 SubstituteUnknownUnset as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Treat unknown group as unset.
**Notes:** (Read and Write property)

### 154.2.64 SubstituteUnsetEmpty as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Simple unset insert = empty string.
**Notes:** (Read and Write property)

### 154.2.65 Constants

### 154.2.66 kJITComplete = 1

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the flags for JIT compilation.
**Notes:** Compile code for full matching.

### 154.2.67 kJITPartialHard = 4

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the flags for JIT compilation.
**Notes:** Compile code for hard partial matching.

### 154.2.68 kJITPartialSoft = 2

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the flags for JIT compilation.
**Notes:** Compile code for soft partial matching.

## 154.3 class PCRE2CompilerMBS

### 154.3.1 class PCRE2CompilerMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for compiling regular expression patterns into code.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match)

// get result found
Dim TotalSubString As String = match.SubString(0)
Dim SubString1 As String = match.SubString(1)
Dim SubString2 As String = match.SubString(2)

break // see debugger
```

- 21.1, page 27
- 20.6, page 70: Regular Expressions with Xojo, The MBS Plugins has its own RegEx library by Stefanie Juchmes

### 154.3.6 Methods

### 154.3.7 Compile as PCRE2CodeMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Compiles a regular expression pattern into an internal form.
**Notes:**

Please set pattern property before calling this.
Returns the code object or raises an exception.

### 154.3.8 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The constructor.

### 154.3.9 Copy as PCRE2CompilerMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a copy of the object.

### 154.3.10 Properties

### 154.3.11 AllocationBytes as Int64

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries size of all memory allocations summed up.
**Notes:**

Only valid if MonitorAllocations is true.
(Read only property)

### 154.3.12 AllocationCount as Int64

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries number of allocations done.
**Notes:**

Only valid if MonitorAllocations is true.
(Read only property)

### 154.3.13 AllowEmptyClass as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Allow empty classes.
**Notes:** (Read and Write property)

### 154.3.14 AllowLookaroundBSK as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Allow \K in lookarounds PCRE2_EXTRA_ALLOW_SURROGATE_ESCAPES Allow \x { df800 } to \x { dfff } in UTF-8 and UTF-32 modes.
**Notes:** (Read and Write property)

### 154.3.15 AllowSurrogateEscapes as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Disables check for surrogates to allow them.
**Notes:** (Read and Write property)

### 154.3.16 AltBsux as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Alternative handling of \u, \U, and \x
**Notes:** (Read and Write property)

### 154.3.17 AltCircumflex as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Alternative handling of ^in multiline mode.
**Notes:** (Read and Write property)

### 154.3.18 AltVerbNames as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Process backslashes in verb names.
**Notes:** (Read and Write property)

### 154.3.19 Anchored as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Force pattern anchoring.
**Notes:** (Read and Write property)

### 154.3.20 AutoCallout as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Compile automatic callouts.
**Notes:** (Read and Write property)

### 154.3.21 BadEscapeIsLiteral as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Treat all invalid escapes as a literal following character.
**Notes:** (Read and Write property)

### 154.3.22 BSR as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the convention for processing \R within a compile context.
**Notes:**

Can be kBSRUnicode or kBSRanyCRLF.
(Read and Write property)

### 154.3.23 Caseless as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do caseless matching.
**Notes:**

Set to true for caseless matching or false for case sensitive.
(Read and Write property)

### 154.3.24 CompiledWidths as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Which of 8/16/32 support was compiled.
**Notes:** (Read only property)

### 154.3.25 DefaultBSR as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Indicates what \R matches by default.
**Notes:**

Either kBSRUnicode or kBSRanyCRLF.
(Read only property)

### 154.3.26 DefaultDepthLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Default backtracking depth limit.
**Notes:** (Read only property)

### 154.3.27 DefaultHeapLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Default heap memory limit.
**Notes:** (Read only property)

### 154.3.28 DefaultMatchLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Default internal resource limit.
**Notes:** (Read only property)

### 154.3.29 DefaultNewLine as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Code for the default newline sequence.
**Notes:**

See kNewLine* constants.
(Read only property)

### 154.3.30 DefaultParensLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Default parentheses nesting limit.
**Notes:** (Read only property)

### 154.3.31 DollarEndonly as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** $ not to match newline at end.
**Notes:** (Read and Write property)

### 154.3.32 DotAll as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** . matches anything including NL
**Notes:** (Read and Write property)

### 154.3.33 DupNames as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Allow duplicate names for subpatterns.
**Notes:** (Read and Write property)

### 154.3.34 EndAnchored as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Pattern can match only at end of subject.
**Notes:** (Read and Write property)

### 154.3.35 ErrorOffset as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The error offset from Compile failure.
**Notes:**

The error offsets in characters.
(Read and Write property)

### 154.3.36 EscapedCRIsLF as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Interpret \r as \n.
**Notes:** (Read and Write property)

### 154.3.37 Extended as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Ignore white space and # comments.
**Notes:** (Read and Write property)

### 154.3.38 ExtendedAltBSUX as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Extended alternate \u, \U, and \x handling.
**Notes:** (Read and Write property)

### 154.3.39 ExtendedMore as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** If set, the same applies, but in addition unescaped space and horizontal tab characters are ignored inside a character class.
**Notes:** (Read and Write property)

### 154.3.40 ExtraOptions as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The extra option flags.
**Notes:**

You usually set the boolean properties to turn flags here on/off.
(Read and Write property)

### 154.3.41 Firstline as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Force matching to be before newline.
**Notes:**

Force matching to be before newline.
(Read and Write property)

### 154.3.42 Greedy as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Don't invert greediness of quantifiers.
**Notes:** (Read and Write property)

### 154.3.43 HasJIT as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Availability of just-in-time compiler support.
**Notes:** (Read only property)

### 154.3.44 HasUnicode as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Availability of Unicode support.
**Notes:** (Read only property)

### 154.3.45 JITTarget as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Information (a string) about the target architecture for the JIT compiler
**Notes:** (Read only property)

### 154.3.46 LinkSize as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Configured internal link size (2, 3, 4)
**Notes:** (Read only property)

### 154.3.47 Literal as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Pattern characters are all literal.
**Notes:** (Read and Write property)

### 154.3.48 MatchInvalidUTF as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Enable support for matching invalid UTF.
**Notes:** (Read and Write property)

### 154.3.49 MatchLine as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Pattern matches whole lines.
**Notes:** (Read and Write property)

### 154.3.50 MatchUnsetBackref as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Match unset backreferences.
**Notes:** (Read and Write property)

### 154.3.51 MatchWord as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Pattern matches "words".
**Notes:** (Read and Write property)

### 154.3.52 MaxPatternLength as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The maximum text length (in code units) of the pattern that can be compiled.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

compiler.MaxPatternLength = 10
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

// raises exception as pattern is too long
Dim code As PCRE2CodeMBS = Compiler.Compile
```

**Notes:**

The default is effectively unlimited.
(Read and Write property)

### 154.3.53 MonitorAllocations as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether to monitor allocations.
**Example:**

```
PCRE2CompilerMBS.MonitorAllocations = True

Dim a1 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b1 As Int64 = PCRE2CompilerMBS.AllocationBytes

Dim Compiler As New PCRE2CompilerMBS

Dim a2 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b2 As Int64 = PCRE2CompilerMBS.AllocationBytes

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile
Dim a3 As Int64 = PCRE2CompilerMBS.AllocationCount
```

```
Dim b3 As Int64 = PCRE2CompilerMBS.AllocationBytes

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

Dim a4 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b4 As Int64 = PCRE2CompilerMBS.AllocationBytes

match = Nil

Dim a5 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b5 As Int64 = PCRE2CompilerMBS.AllocationBytes

code = Nil

Dim a6 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b6 As Int64 = PCRE2CompilerMBS.AllocationBytes

compiler = Nil

Dim a7 As Int64 = PCRE2CompilerMBS.AllocationCount
Dim b7 As Int64 = PCRE2CompilerMBS.AllocationBytes
// should be both zero on the end

Break // see debugger
```

**Notes:**

Please turn on if you look for memory leaks with PCRE2.
Otherwise keep off for higher performance.

Set to true, then do a few things, cleanup and check if AllocationBytes is combing back to zero.
(Read and Write property)

### 154.3.54 Multiline as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** ^and $ match newlines within data.
**Notes:** (Read and Write property)

### 154.3.55 NeverBackslashC as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Whether or not \C is disabled.
**Notes:** (Read only property)
See also:

- 154.3.56 NeverBackslashC as Boolean 23477

### 154.3.56 NeverBackslashC as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Lock out the use of \C in patterns.
**Notes:** (Read and Write property)
See also:

- 154.3.55 NeverBackslashC as Boolean 23477

### 154.3.57 NeverUCP as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Lock out PCRE2_UCP, e.g. via (*UCP).
**Notes:** (Read and Write property)

### 154.3.58 NeverUTF as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Lock out PCRE2_UTF, e.g. via (*UTF).
**Notes:** (Read and Write property)

### 154.3.59 NewLine as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the newline convention within a compile context.
**Notes:**

See kNewLine* constants.
(Read and Write property)

### 154.3.60 NoAutoCapture as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Disable numbered capturing parentheses (named ones available).
**Notes:** (Read and Write property)

### 154.3.61 NoAutoPossess as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Disable auto-possessification.
**Notes:** (Read and Write property)

### 154.3.62 NoDotStarAnchor as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Disable automatic anchoring for .*
**Notes:** (Read and Write property)

### 154.3.63 NoStartOptimize as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Disable match-time start optimizations.
**Notes:** (Read and Write property)

### 154.3.64 NoUTFCheck as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Do not check the pattern for UTF validity (only relevant if UTF is set)
**Notes:** (Read and Write property)

### 154.3.65 Options as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The option flags.
**Notes:**

You usually set the boolean properties to turn flags here on/off.
(Read and Write property)

### 154.3.66 ParensNestLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Default parentheses nesting limit.
**Notes:** (Read and Write property)

### 154.3.67 Pattern as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The search pattern.
**Notes:** (Read and Write property)

### 154.3.68 PCRE2Version as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The PCRE2 version.
**Notes:** (Read only property)

### 154.3.69 UCP as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Use Unicode properties for \d, \w, etc.
**Notes:** (Read and Write property)

### 154.3.70 Ungreedy as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Invert greediness of quantifiers.
**Notes:** (Read and Write property)

### 154.3.71 UnicodeVersion as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The Unicode version.
**Notes:** (Read only property)

### 154.3.72 UseOffsetLimit as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Enable offset limit for unanchored matching.
**Notes:** (Read and Write property)

### 154.3.73 UTF as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Treat pattern and subjects as UTF strings.
**Notes:** (Read and Write property)

### 154.3.74 Constants

### 154.3.75 kBSRanyCRLF = 2

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define what \R matches.
**Notes:** CR, LF, or CRLF only

### 154.3.76 kBSRUnicode = 1

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define what \R matches.
**Notes:** Unicode line endings

### 154.3.77 kNewLineAny = 4

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** Any Unicode newline sequence.

### 154.3.78 kNewLineAnyCRLF = 5

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** CR, LF or CRLF.

### 154.3.79 kNewLineCR = 1

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** Carriage return only

### 154.3.80 kNewLineCRLF = 3

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** CR followed by LF only

### 154.3.81 kNewLineLF = 2

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** Linefeed only

### 154.3.82 kNewLineNul = 6

MBS RegEx Plugin, Plugin Version: 22.2.

**Function:** One of the constants to define the new line character.
**Notes:** The NUL character (binary zero)

## 154.4 class PCRE2ExceptionMBS

### 154.4.1 class PCRE2ExceptionMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for an error in PCRE2.
**Notes:**

We usually set error message and number.
Check also ErrorOffset in PCRE2CompilerMBS class.
Subclass of the RuntimeException class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 154.4.6 Methods

### 154.4.7 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

## 154.5 class PCRE2IteratorMBS

### 154.5.1 class PCRE2IteratorMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Our iterator class to match text.
**Notes:**

Implements Iterable and Iterator interfaces.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 154.5.5 Xojo Developer Magazine

- 21.1, page 27

Interfaces: Iterator, Iterable

### 154.5.6 Methods

### 154.5.7 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The private constructor.

### 154.5.8 Iterator as Iterator

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the iterator.
**Notes:**

Part of the iterable interface.
Returns self.

### 154.5.9 MoveNext as Boolean

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Moves to next position.
**Notes:** Returns true if we found something or false if we finished or didn't found anything.

### 154.5.10 Value as Variant

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries current match.
**Notes:**

Returns PCRE2MatchDataMBS object for the match.

To increase performance, the object is cached and reused.
So if you like to keep it, please call Copy method to clone it.

## 154.6 class PCRE2MatchContextMBS

### 154.6.1 class PCRE2MatchContextMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for a match context.
**Example:**

```
// we limit offset here
Dim context As New PCRE2MatchContextMBS
context.DepthLimit = 100
context.OffsetLimit = 3 // cause error later. 10 works

Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"
compiler.UseOffsetLimit = True

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match, 0, context)

// show matched text
MessageBox match.SubString(0)

// The offset_limit parameter limits how far an unanchored search can advance in the subject string. The default value is PCRE2_UNSET. The Match() functions return -1 if a match with a starting point before or at the given offset is not found. The Substitute() function makes no more substitutions.
// For example, if the pattern /abc/ is matched against "123abc" with an offset limit less than 3, the result is -1. A match can never be found if the startoffset argument of Match() or Substitute() is greater than the offset limit set in the match context.
```

**Notes:**

A match context is needed only if you want to:

- Set up a callout function
- Set a matching offset limit
- Change the heap memory limit

- Change the backtracking match limit
- Change the backtracking depth limit
- Set custom memory management specifically for the match

- New PCRE2 Plugin for Xojo
- MBS Xojo Plugins, version 22.2pr4

### 154.6.5 Xojo Developer Magazine

- 21.1, page 28

### 154.6.6 Methods

### 154.6.7 Constructor

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a match context.

### 154.6.8 Copy as PCRE2MatchContextMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a copy of the match context.

### 154.6.9 SetStackSize(StartSize as UInt32, MaxSize as UInt32)

MBS RegEx Plugin, Plugin Version: 22.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates and sets a stack for use by the code compiled by the JIT compiler.
**Example:**

```
dim matchContext as PCRE2MatchContextMBS

matchContext = New PCRE2MatchContextMBS
matchContext.SetStackSize 1024*1024, 8*1024*1024
matchContext.HeapLimit = 1024 * 1024 * 16

// later pass to Match() functions
```

**Notes:**

The two arguments are a starting size for the stack, and a maximum size to which it is allowed to grow.
A maximum stack size of 512KiB to 1MiB should be more than enough for any pattern.

If not set, an internal 32KiB block on the machine stack is used.

### 154.6.10 Properties

### 154.6.11 DepthLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the backtracking depth limit field in a match context.
**Notes:** (Read and Write property)

### 154.6.12 HeapLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the backtracking heap limit field in a match context.

**Notes:** (Read and Write property)

### 154.6.13 MatchLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the match limit field in a match context.
**Notes:** (Read and Write property)

### 154.6.14 OffsetLimit as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Sets the offset limit field in a match context.
**Notes:** (Read and Write property)

## 154.7 class PCRE2MatchDataMBS

### 154.7.1 class PCRE2MatchDataMBS

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The class for a match.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match)

// show matched text
MessageBox match.SubString(0)
```

**Notes:** The class allows you to reuse the object to hold result of a match, so only create it once and then use it with multiple strings to match.

### 154.7.5 Xojo Developer Magazine

- 21.1, page 28
- 20.6, page 70: Regular Expressions with Xojo, The MBS Plugins has its own RegEx library by Stefanie Juchmes

### 154.7.6 Methods

### 154.7.7 Constructor(code as PCRE2CodeMBS)

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a new match data block for holding the result of a match.
**Notes:**

The first argument points to a compiled pattern. The number of capturing parentheses within the pattern is used to compute the number of pairs of offsets that are required in the match data block. These form the "output vector" (ovector) within the match data block, and are used to identify the matched string and any captured substrings when matching with Match().

Use this to allocate a match data object for a specific code object.
See also:

- 154.7.8 Constructor(size as Integer)

### 154.7.8 Constructor(size as Integer)

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Creates a new match data block, which is used for holding the result of a match.
**Notes:**

The first argument specifies the number of pairs of offsets that are required. These form the "output vector" (ovector) within the match data block, and are used to identify the matched string and any captured substrings when matching with Match(). There is always one pair of offsets; if size is zero, it is treated as one.

Use this to allocate a match data object with a bigger size to use it with various pattern.
See also:

- 154.7.7 Constructor(code as PCRE2CodeMBS) 23492

### 154.7.9 OffsetVector(index as Integer) as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries the offset in the text for the match.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match)

// get result found
Dim OVector0 As Integer = match.OffsetVector(2)
Dim OVector1 As Integer = match.OffsetVector(3)
Dim Len As Integer = OVector1 - OVector0
Dim pos As Integer = OVector0
Dim OwnSubString As String = Text.Middle(pos, Len)

Break
```

**Notes:**

Values in number of characters and zero based, so maybe use Middle() function on strings.
Range is 0 to OffsetVectorCount*2-1.

OffsetVector(0) and OffsetVector(1) is the total match found.
OffsetVector(2) and OffsetVector(3) is the first captured sub string.
OffsetVector(4) and OffsetVector(5) is the second captured sub string.
...
OffsetVector(OffsetVectorCount*2-2) and OffsetVector(OffsetVectorCount*2-1) is the last captured sub string.

### 154.7.10 OffsetVectors as Integer()

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries array of vector values.
**Notes:** All the values in an array for faster access.

### 154.7.11 SubString(Index as Integer) as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries substring by index.
**Example:**

```
Dim Compiler As New PCRE2CompilerMBS

// find numbers
compiler.Pattern = "(\d+)( [ $ ,Ç¨¬£ ] ?)"

Dim code As PCRE2CodeMBS = Compiler.Compile

// prepare reuable match object
Dim Match As New PCRE2MatchDataMBS(code)

// now run a match
Dim Text As String = "T√§st 1234,Ç¨ Case"
Dim n As Integer = code.Match(Text, match)

// get result found
Dim TotalSubString As String = match.SubString(0)
Dim SubString1 As String = match.SubString(1)
Dim SubString2 As String = match.SubString(2)

break // see debugger
```

See also:

- 154.7.12 SubString(Name as String) as String 23495

### 154.7.12 SubString(Name as String) as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Queries substring by name.
See also:

- 154.7.11 SubString(Index as Integer) as String 23494

### 154.7.13 SubStrings as String()

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** A convenience function for extracting all the captured substrings after a pattern match.

### 154.7.14 Properties

### 154.7.15 DataSize as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the size, in bytes, of the match data block that is its argument.
**Notes:** (Read only property)

### 154.7.16 Mark as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the last (*MARK), (*PRUNE), or (*THEN) name that was encountered during the matching process.
**Notes:**

The name is within the compiled pattern.
(Read only property)

### 154.7.17 OffsetVectorCount as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the number of pairs of offsets in the ovector that forms part of the given match data block.
**Notes:** (Read only property)

### 154.7.18 StartPosition as Integer

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** Returns the position of the character at which the successful match started.
**Notes:**

For a non-partial match, this can be different to the value of CharactersOffsetVector(0) if the pattern contains the \K escape sequence. After a partial match, however, this value is always the same as CharactersOffsetVector(0) because \K does not affect the result of a partial match.
(Read only property)

### 154.7.19 Text as String

MBS RegEx Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: All.

**Function:** The text used to match against.
**Notes:** (Read and Write property)

## 154.8 class RegExMBS

### 154.8.1 class RegExMBS

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** A class for fast Regular Expression Search in a perl compatible way.
**Example:**

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="Hello World"

dim start as Integer = 0
while r.Execute(s,start)>0

dim p as Integer = r.OffsetCharacters(0)
dim l as Integer = r.OffsetCharacters(1)-r.OffsetCharacters(0)

MsgBox "Found "+searchString+" on position "+str(p)+" with length "+str(l)+" in """+s+"""

start = r.Offset(1)
wend

else
MsgBox "failed to compile"
end if
```

**Notes:**

uses the PCRE library. You may check the PCRE documentation.

The RegExMBS class has different defaults as the built in RegEx class in Xojo.

You may want to set options like this:

RB: CaseSensitive = false
MBS: CompileOptionCaseLess = true

RB: DotMatchAll = false
MBS: CompileOptionDotAll = false

RB: Greedy = true
MBS: CompileOptionUngreedy = false

RB: LineEndType = 0
MBS: CompileOptionNewLineAnyCRLF = true and ExecuteOptionNewLineAnyCRLF = true

RB: MatchEmpty = true
MBS: ExecuteOptionNotEmpty = false

and you want to set CompileOptionMultiline to true for multi line match.

### 154.8.6 Methods

### 154.8.7 Compile(pattern as string) as boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compiles a pattern.
**Example:**

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then
msgbox "OK"
else
MsgBox "failed to compile"
end if
```

**Notes:**

Some predefined patterns like \b do not support Unicode well, so you may work around that by using your own pattern.

Returns true on success and false on failure.
ErrorMessage, Lasterror, ErrorOffset and Handle are set.

The following table lists the error codes than may be returned by Compile(), along with the error messages that may be returned by both compiling functions.

### 154.8.8 CompileMemory(pattern as memoryblock, ByteOffset as Integer) as boolean

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Compiles a pattern.
**Notes:**

Same as Compile, but the text is stored in a memoryblock and must be a 0 terminated C string.
Be careful to use valid UTF8 input and provide offset in byte units and not in characters.

### 154.8.9 ConfigBSR as boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an integer whose value indicates what character sequences the \R escape sequence matches by default.
**Notes:** A value of 0 means that \R matches any Unicode line ending sequence; a value of 1 means that \R matches only CR, LF, or CRLF. The default can be overridden when a pattern is compiled or matched.

### 154.8.10 ConfigLinkSize as Integer

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an integer that contains the number of bytes used for internal linkage in compiled regular expressions.
**Notes:** The value is 2, 3, or 4. Larger values allow larger regular expressions to be compiled, at the expense of slower matching. The default value of 2 is sufficient for all but the most massive patterns, since it allows

the compiled pattern to be up to 64K in size.

### 154.8.11 ConfigMallocThreshold as Integer

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The output is an integer that contains the threshold above which the POSIX interface uses malloc() for output vectors.

### 154.8.12 ConfigMatchLimit as Integer

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an integer that gives the default limit for the number of internal matching function calls in a Execute execution.

### 154.8.13 ConfigMatchLimitRecursion as Integer

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an integer that gives the default limit for the depth of recursion when calling the internal matching function in a Execute() execution.

### 154.8.14 ConfigNewLine as Integer

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** What newline character is used as default.
**Notes:** The output is an integer whose value specifies the default character sequence that is recognized as meaning "newline". The four values that are supported are: 10 for LF, 13 for CR, 3338 for CRLF, -2 for ANYCRLF, and -1 for ANY. Though they are derived from ASCII, the same values are returned in EBCDIC environments. The default should normally correspond to the standard sequence for your operating system.

### 154.8.15 ConfigStackRecurse as boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns an integer that is set to one if internal recursion when running Execute() is implemented by recursive function calls that use the stack to remember their state.
**Notes:** This is the usual way that PCRE is compiled. The output is zero if PCRE was compiled to use

blocks of data on the heap instead of recursive function calls. In this case, malloc and free are called to manage memory blocks on the heap, thus avoiding the use of the stack.

### 154.8.16 ConfigUnicodeProperties as boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns true if unicode properties are available.
**Notes:** Should be true for the plugin.

### 154.8.17 ConfigUTF8 as boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether UTF8 is supported.
**Notes:** If this ever is false, please complain. This plugin is designed to work only on UTF8 strings for best performance.

### 154.8.18 Constructor(VecSize as Integer = 0)

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The constructor.
**Notes:**

You pass here the internal vector size which limits how many substrings you can find.
For 20 substrings, you need to pass (20+1)*3 for vector size.

### 154.8.19 Escape(text as string) as string

MBS RegEx Plugin, Plugin Version: 7.8, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Escapes the string.
**Example:**

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
```

```
MsgBox d // shows original string
```

**Notes:**

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

### 154.8.20 Execute(start as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern again.
**Notes:** You can use this variant of execute to continue a search in the same string/memoryblock at a new starting offset.
See also:

- 154.8.21 Execute(text as string, start as Integer = 0) as Integer 23503

### 154.8.21 Execute(text as string, start as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern.
**Example:**

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 ABC 456"

r=new RegExMBS
if r.Compile(" \D+ ") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 3 8
// 1 for number of results
// 3 for 3 bytes before the matched pattern
// 8 for the 8 bytes before the end of the matched pattern
end if
```

**Notes:**

Returns the number of found offsets.

text must be in UTF-8 text encoding.
Start must be 0 for the first character and the byte offset for other chacters. Do not pass values from OffsetCharacters here!

Return values from Execute:
If Execute() fails, it returns a negative number. The following are defined in the header file:

See also:

- 154.8.20 Execute(start as Integer = 0) as Integer 23503

### 154.8.22 ExecuteMemory(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern.
**Notes:**

Same as Execute, but the text is stored in a memoryblock.
Be careful to use valid UTF8 input and provide offset and length in byte units and not in characters.
If ByteLength is zero, we take the length of the memoryblock.

### 154.8.23 ExecuteMemoryMT(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern.
**Notes:**

Same as ExecuteMemory, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

### 154.8.24 ExecuteMT(start as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern.
**Notes:**

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.8.25 ExecuteMT(text as string, start as Integer = 0) as Integer 23505

### 154.8.25 ExecuteMT(text as string, start as Integer = 0) as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Performs a search with the compiled pattern.
**Notes:**

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 154.8.24 ExecuteMT(start as Integer = 0) as Integer 23504

### 154.8.26 InfoNameEntry(Index as Integer) as string

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries a name entry in the list of captures.
**Notes:** Only valid after pattern was compiled.

### 154.8.27 IsASCIIText(text as string) as boolean

MBS RegEx Plugin, Plugin Version: 21.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks whether text in string is only ASCII.
**Example:**

```
Dim s As String = "Hello World"

If RegExMBS.IsASCIIText(s) Then
MessageBox "Only 7 bit ASCII"
Else
```

```
MessageBox "Not ASCII. Some 8 bit encoding like ANSI or UTF-8."
End If
```

**Notes:** Does checks bytes of text, so doesn't look on encoding property.

### 154.8.28 Match(text as string) as boolean

MBS RegEx Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if current search pattern matches against given text.
**Example:**

```
dim r as new RegExMBS

if r.Compile("e.l") then

if r.Match("Hello") then
MsgBox "match"
end if

if r.Match("Helro") then
MsgBox "wrong match"
end if
end if
```

**Notes:**

Returns true if text matches.

Does not set properties like Execute, so subString() won't work.
See also:

- 154.8.29 Match(text() as string, inverse as boolean = false) as string() 23506
- 154.8.30 Match(text() as Variant, inverse as boolean = false) as string() 23507

### 154.8.29 Match(text() as string, inverse as boolean = false) as string()

MBS RegEx Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if current search pattern matches against given text array.
**Example:**

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim t() as string = array("Hello", "World", "Xojo", "test")

dim match1() as string = r.Match(t)
dim match2() as string = r.Match(t, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

**Notes:**

Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 154.8.28 Match(text as string) as boolean 23506
- 154.8.30 Match(text() as Variant, inverse as boolean = false) as string() 23507

### 154.8.30 Match(text() as Variant, inverse as boolean = false) as string()

MBS RegEx Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if current search pattern matches against given variant array.
**Example:**

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim dic as new Dictionary
dic.Value("Hello") = 1
dic.Value("World") = 2
dic.Value("Xojo") = 3
dic.Value("Test") = 4

dim match1() as string = r.Match(dic.keys)
dim match2() as string = r.Match(dic.keys, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
```

```
end if
```

**Notes:**

The variant array should have entries which convert well to string.
Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 154.8.28 Match(text as string) as boolean 23506
- 154.8.29 Match(text() as string, inverse as boolean = false) as string() 23506

### 154.8.31 Offset(index as Integer) as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the offset in the offset list with given index in bytes.
**Example:**

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 √§√√º ABC 456"

r=new RegExMBS
if r.Compile(".√.") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(".\xF6.") then // finds √ using Unicode codepoint
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if
```

**Notes:**

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

### 154.8.32 OffsetCharacters(index as Integer) as Integer

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get the offset in the offset list with given index in characters.
**Example:**

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="√§√√º Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

**Notes:**

This function is identical to Offset(), but returns characters instead of bytes.

Works only with valid UTF-8 strings as input.
Value is calculated on each function call based on Offset(index) and current text.

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

Please note that if you just need offsets for calling Mid() function, you can get better performance by using just Offset and MidB function. Than neither Mid and OffsetCharacters need to calculate the character offset.

### 154.8.33 Replace(NewText as string) as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces the text on the current found position and returns the complete new text.
**Notes:**

You need to call Execute before.
Lasterror is set.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

### 154.8.34 ReplaceAll(Target as string, NewText as string = "") as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Searches the target string for current pattern and replaces all occurrences with the new text.
**Notes:**

You need to call Compile before to initialize the pattern and you should call Study before to optimize the pattern.
Lasterror is set.
Target and NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

### 154.8.35 ReplaceSelection(NewText as string) as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Replaces the text on the current found position and returns new text for that selection.
**Notes:**

This method is for text editors where you will store result in editfield.seltext to replace the current selection.
Lasterror is set.
You need to call Execute before.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

### 154.8.36 StringNumber(name as string) as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This convenience function finds the number of a named substring capturing parenthesis in a compiled pattern.
**Notes:**

name: Name whose number is required
The yield of the function is the number of the parenthesis if the name is found, or PCRE_ERROR_NOSUBSTRING otherwise.

### 154.8.37 Study as boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** After you compiled a pattern study can optimize it.
**Notes:**

Only useful if you use Execute several times.
In that case you call one time Compile, one time Study and several times Execute.
Errormessage is set.

### 154.8.38 Substring(index as Integer) as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the subexpression found with the given index.
**Notes:**

Returns "" on any error.
Lasterror is set.
See also:

- 154.8.39 Substring(name as string) as string 23512

### 154.8.39 Substring(name as string) as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the subexpression found with the given name.
**Notes:**

Returns "" on any error.
Lasterror is set.
See also:

- 154.8.38 Substring(index as Integer) as string 23511

### 154.8.40 Unescape(text as string) as string

MBS RegEx Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Unescapes the string.
**Example:**

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

**Notes:**

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

### 154.8.41 Version as string

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The version of the PCRE library as an ASCII string.

### 154.8.42 Properties

### 154.8.43 CompileOptionAnchored as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Force pattern anchoring
**Notes:** (Read and Write property)

### 154.8.44 CompileOptionAutoCallOut as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Compile automatic callouts
**Notes:** (Read and Write property)

### 154.8.45 CompileOptionBSRAnyCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option and CompileOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
**Notes:**

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

### 154.8.46 CompileOptionBSRUnicode as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option and CompileOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
**Example:**

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.CompileOptionBSRUnicode = true
```

```
dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

**Notes:**

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

### 154.8.47 CompileOptionCaseLess as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Do caseless matching
**Example:**

```
dim r as new RegExMBS
dim searchString as string = "hello"

r.CompileOptionCaseLess=True

if r.Compile(searchString) then

dim s as string="√§√√º Hello World"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

**Notes:** (Read and Write property)

### 154.8.48 CompileOptionDollarEndOnly as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: $ not to match newline at end
**Notes:** (Read and Write property)

### 154.8.49 CompileOptionDotAll as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: . matches anything including endofline
**Example:**

```
dim r as new RegExMBS
dim searchString as string = "<.+>"

r.CompileOptionDotAll = false // finds only if true

if r.Compile(searchString) then

dim s as string="<Step enable=""True""+EndOfLine.unix+"id=""93"" name=""Beep""/>"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

**Notes:** (Read and Write property)

### 154.8.50 CompileOptionDuplicateNames as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If this bit is set, names used to identify capturing subpatterns need not be unique.
**Notes:**

This can be helpful for certain types of pattern when it is known that only one instance of the named subpattern can ever be matched. There are more details of named subpatterns below; see also the pcrepattern documentation.
(Read and Write property)

### 154.8.51 CompileOptionExtended as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Ignore whitespace and # comments
**Notes:** (Read and Write property)

### 154.8.52 CompileOptionFirstLine as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Force matching to be before newline
**Notes:** (Read and Write property)

### 154.8.53 CompileOptionJavaScriptCompat as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** If this option is set, PCRE's behaviour is changed in some ways so that it is compatible with JavaScript rather than Perl.
**Notes:**

The changes are as follows:

(1) A lone closing square bracket in a pattern causes a compile-time error, because this is illegal in JavaScript (by default it is treated as a data character). Thus, the pattern AB ] CD becomes illegal when this option is set.

(2) At run time, a back reference to an unset subpattern group matches an empty string (by default this causes the current matching alternative to fail). A pattern such as (\1)(a) succeeds when this option is set (assuming it can find an "a" in the subject), whereas it fails by default, for Perl compatibility.
(Read and Write property)

### 154.8.54 CompileOptionMultiline as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: ^and $ match newlines within data
**Example:**

```
dim r as RegExMBS
dim n,i,c as Integer
dim s as string

s=ReplaceLineEndings(EditField1.text,EndOfLine.UNIX)

r=new RegExMBS

'r.CompileOptionFirstLine=True
r.CompileOptionMultiline=True

if r.Compile("^....$ ") then
n=0
do
c=r.Execute(s,n)

if c>0 then
MsgBox r.Substring(0)
n=r.Offset(1)
end if

loop until c=0
end if
```

**Notes:** (Read and Write property)

### 154.8.55 CompileOptionNewLineAny as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

Setting CompileOptionNewLineCR or CompileOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting CompileOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting CompileOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting CompileOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line,

U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, CompileOptionNewLineCR with CompileOptionNewLineLF is equivalent to CompileOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

### 154.8.56 CompileOptionNewLineAnyCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See CompileOptionNewLineAny for more details.
(Read and Write property)

### 154.8.57 CompileOptionNewLineCR as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See CompileOptionNewLineAny for more details.
(Read and Write property)

### 154.8.58 CompileOptionNewLineCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See CompileOptionNewLineAny for more details.
(Read and Write property)

### 154.8.59 CompileOptionNewLineLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See CompileOptionNewLineAny for more details.
(Read and Write property)

### 154.8.60 CompileOptionNoAutoCapture as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Disable numbered capturing parentheses (named ones available)
**Notes:** (Read and Write property)

### 154.8.61 CompileOptionNoStartOptimize as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This is an option that acts at matching time; that is, it is really an option for Execute.
**Notes:**

If it is set at compile time, it is remembered with the compiled pattern and assumed at matching time.
(Read and Write property)

### 154.8.62 CompileOptionNoUTF8Check as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Do not check the pattern for UTF-8 validity.
**Notes:** (Read and Write property)

### 154.8.63 CompileOptions as Integer

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal value of all the compile options.
**Notes:**

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

### 154.8.64 CompileOptionUngreedy as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Invert greediness of quantifiers.
**Notes:**

Basicly this is about whether to find the next matching item or the last matching item in the whole string. Matching the next item is always much faster.
(Read and Write property)

### 154.8.65 CompileOptionUnicodeCodePoints as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Whether to support unicode code points for character classes.
**Notes:**

This option changes the way PCRE processes \B, \b, \D, \d, \S, \s, \W, \w, and some of the POSIX character classes. By default, only ASCII characters are recognized, but if PCRE_UCP is set, Unicode properties are used instead to classify characters. More details are given in the section on generic character types in the pcrepattern page. If you set PCRE_UCP, matching one of the items it affects takes much longer. The option is available only if PCRE has been compiled with Unicode property support.
(Read and Write property)

### 154.8.66 CompileOptionUTF8 as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Compile: Run in UTF-8 mode.
**Notes:** (Read and Write property)

### 154.8.67 Count as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of offsets found.
**Example:**

```
dim r as new RegExMBS
dim searchString as string = ".o"
```

```
if r.Compile(searchString) then

dim s as string="√§√√º Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

**Notes:** (Read only property)

### 154.8.68 ErrorMessage as String

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last message reported.
**Notes:**

Set by Study and Compile.
(Read only property)

### 154.8.69 ErrorOffset as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error offset from the compile function.

**Notes:** (Read only property)

### 154.8.70 ExecuteOptionAnchored as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: Match only at the first position
**Notes:** (Read and Write property)

### 154.8.71 ExecuteOptionBSRAnyCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option and ExecuteOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
**Notes:**

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

### 154.8.72 ExecuteOptionBSRUnicode as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option and ExecuteOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
**Example:**

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.ExecuteOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

**Notes:**

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

### 154.8.73 ExecuteOptionNewLineAny as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

Setting ExecuteOptionNewLineCR or ExecuteOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting ExecuteOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting ExecuteOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting ExecuteOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, ExecuteOptionNewLineCR with ExecuteOptionNewLineLF is equivalent to ExecuteOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

### 154.8.74 ExecuteOptionNewLineAnyCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

### 154.8.75 ExecuteOptionNewLineCR as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

### 154.8.76 ExecuteOptionNewLineCRLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

### 154.8.77 ExecuteOptionNewLineLF as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option override the default newline definition that was chosen when PCRE was built.
**Notes:**

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

### 154.8.78 ExecuteOptionNoStartOptimize as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** There are a number of optimizations that Execute uses at the start of a match, in order to speed up the process.
**Notes:**

For example, if it is known that an unanchored match must start with a specific character, it searches the subject for that character, and fails immediately if it cannot find it, without actually running the main matching function. This means that a special item such as (*COMMIT) at the start of a pattern is not considered until after a suitable starting point for the match has been found. When callouts or (*MARK)

items are in use, these "start-up" optimizations can cause them to be skipped if the pattern is never actually used. The start-up optimizations are in effect a pre-scan of the subject that takes place before the pattern is run.
The ExecuteOptionNoStartOptimize option disables the start-up optimizations, possibly causing performance to suffer, but ensuring that in cases where the result is "no match", the callouts do occur, and that items such as (*COMMIT) and (*MARK) are considered at every possible starting position in the subject string. If ExecuteOptionNoStartOptimize is set at compile time, it cannot be unset at matching time.

Setting ExecuteOptionNoStartOptimize can change the outcome of a matching operation. Consider the pattern

(*COMMIT)ABC
When this is compiled, PCRE records the fact that a match must start with the character "A". Suppose the subject string is "DEFABC". The start-up optimization scans along the subject, finds "A" and runs the first match attempt from there. The (*COMMIT) item means that the pattern must match the current starting position, which in this case, it does. However, if the same match is run with ExecuteOptionNoStartOptimize set, the initial scan along the subject string does not happen. The first match attempt is run starting from "D" and when this fails, (*COMMIT) prevents any further matches being tried, so the overall result is "no match". If the pattern is studied, more start-up optimizations may be used. For example, a minimum length for the subject may be recorded. Consider the pattern
(*MARK:A)(X | Y)
The minimum length for a match is one character. If the subject is "ABC", there will be attempts to match "ABC", "BC", "C", and then finally an empty string. If the pattern is studied, the final attempt does not take place, because PCRE knows that the subject is too short, and so the (*MARK) is never encountered. In this case, studying the pattern does not affect the overall match result, which is still "no match", but it does affect the auxiliary information that is returned.
(Read and Write property)

### 154.8.79 ExecuteOptionNotBOL as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: Subject is not the beginning of a line
**Notes:** (Read and Write property)

### 154.8.80 ExecuteOptionNotEmpty as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: An empty string is not a valid match
**Notes:** (Read and Write property)

### 154.8.81 ExecuteOptionNotEmptyAtStart as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** One of the options.
**Notes:**

This is like ExecuteOptionNotEmpty, except that an empty string match that is not at the start of the subject is permitted. If the pattern is anchored, such a match can occur only if the pattern contains \K.
Perl has no direct equivalent of ExecuteOptionNotEmpty or ExecuteOptionNotEmptyAtStart, but it does make a special case of a pattern match of the empty string within its split() function, and when using the /g modifier. It is possible to emulate Perl's behaviour after matching a null string by first trying the match again at the same offset with ExecuteOptionNotEmptyAtStart and ExecuteOptionAnchored, and then if that fails, by advancing the starting offset (see below) and trying an ordinary match again. There is some code that demonstrates how to do this in the pcredemo sample program. In the most general case, you have to check to see if the newline convention recognizes CRLF as a newline, and if so, and the current character is CR followed by LF, advance the starting offset by two characters instead of one.
(Read and Write property)

### 154.8.82 ExecuteOptionNotEOL as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: Subject is not the end of a line
**Notes:** (Read and Write property)

### 154.8.83 ExecuteOptionNoUTF8Check as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: Do not check the subject for UTF-8 validity
**Notes:** (Read and Write property)

### 154.8.84 ExecuteOptionPartial as Boolean

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Option for Execute: Return PCRE_ERROR_PARTIAL for a partial match
**Notes:** (Read and Write property)

### 154.8.85 ExecuteOptionPartialHard as Boolean

MBS RegEx Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** This option (and ExecuteOptionPartial) turn on the partial matching feature.
**Notes:**

A partial match occurs if the end of the subject string is reached successfully, but there are not enough subject characters to complete the match. If this happens when ExecuteOptionPartial (but not ExecuteOptionPartialHard) is set, matching continues by testing any remaining alternatives. Only if no complete match can be found is ErrorPartial returned instead of PCRE_ERROR_NOMATCH. In other words, ExecuteOptionPartial says that the caller is prepared to handle a partial match, but only if no complete match can be found.
If ExecuteOptionPartialHard is set, it overrides ExecuteOptionPartial. In this case, if a partial match is found, Execute() immediately returns ErrorPartial, without considering any other alternatives. In other words, when ExecuteOptionPartialHard is set, a partial match is considered to be more important that an alternative complete match.

In both cases, the portion of the string that was inspected when the partial match was found is set as the first matching string. There is a more detailed discussion of partial and multi-segment matching, with examples, in the pcrepartial documentation.
(Read and Write property)

### 154.8.86 ExecuteOptions as Integer

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal value of all the execute options.
**Notes:**

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

### 154.8.87 Handle as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The handle to the pattern data structure.
**Notes:** (Read only property)

### 154.8.88 InfoCaptureCount as Integer

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of captures defined in the pattern.
**Notes:**

Only valid after pattern was compiled.
(Read only property)

### 154.8.89 InfoNameCount as Integer

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of names defined in the pattern.
**Notes:**

Only valid after pattern was compiled.
(Read only property)

### 154.8.90 InfoSize as Integer

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the size of the compiled pattern.
**Notes:**

Only valid after pattern was compiled.
(Read only property)

### 154.8.91 InfoStudySize as Integer

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries the study details size.
**Notes:**

Only valid after calling Study.
(Read only property)

### 154.8.92 Lasterror as Integer

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The last error code reported.
**Notes:**

0 is no error and -1 is some parameter error.
See Error* constants for other values.
(Read only property)

### 154.8.93 MatchLimit as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The match limit.
**Notes:**

You can set it to a limit value. If set to zero, the plugin will use the default.

The default value for the limit can be set when PCRE is built; the default default is 10 million, which handles all but the most extreme cases. You can override the default by setting this property.
(Read and Write property)

### 154.8.94 MatchLimitRecursion as Integer

MBS RegEx Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The limit for recursion.
**Notes:**

The MatchLimitRecursion field is similar to MatchLimit, but instead of limiting the total number of times that match() is called, it limits the depth of recursion. The recursion depth is a smaller number than the total number of calls, because not all calls to match() are recursive. This limit is of use only if it is set smaller than MatchLimit.

Limiting the recursion depth limits the amount of stack that can be used.

The default value for MatchLimitRecursion can be set when PCRE is built; the default default is the same value as the default for MatchLimit. You can override the default by setting this property. If value is zero, the plugin uses the default.
(Read and Write property)

### 154.8.95 Text as String

MBS RegEx Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text used for the last successfull compile call.
**Notes:** (Read only property)

### 154.8.96 TextMemory as Memoryblock

MBS RegEx Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The text used for the last successfull compiletext call.
**Notes:** (Read only property)

### 154.8.97 VectorSize as Integer

MBS RegEx Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal vector size.
**Notes:** (Read only property)

### 154.8.98 Constants

### 154.8.99 ErrorBadCount = -15

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** This error is given if the value of the ovecsize argument is negative.

### 154.8.100 ErrorBadMagic = -4

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** PCRE stores a 4-byte "magic number" at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.

### 154.8.101 ErrorBadNewLine = -23

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** An invalid combination of Newline options was given.

### 154.8.102 ErrorBadOffset = -24

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The value of startoffset was negative or greater than the length of the subject, that is, the value in length.

### 154.8.103 ErrorBadOption = -3

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** An unrecognized bit was set in the options argument.

### 154.8.104 ErrorBadPartial = -13

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** This code is no longer in use. It was formerly returned when the PCRE_PARTIAL option was used with a compiled pattern containing items that were not supported for partial matching. From release 8.00 onwards, there are no restrictions on partial matching.

### 154.8.105 ErrorBadUTF8 = -10

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** A string that contains an invalid UTF-8 byte sequence was passed as a subject. However, if PCRE_PARTIAL_HARD is set and the problem is a truncated UTF-8 character at the end of the subject, ErrorShortUTF8 is used instead.

### 154.8.106 ErrorBadUTF8Offset = -11

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character or the end of the subject.

### 154.8.107 ErrorCallOut = -9

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.108 ErrorDFARecurse = -20

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

0 no error
1 \at end of pattern
2 \c at end of pattern
3 unrecognized character follows \
4 numbers out of order in { } quantifier
5 number too big in { } quantifier
6 missing terminating ] for character class
7 invalid escape sequence in character class
8 range out of order in character class
9 nothing to repeat
10 operand of unlimited repeat could match the empty string
11 internal error: unexpected repeat
12 unrecognized character after (?
13 POSIX named classes are supported only within a class
14 missing )
15 reference to non-existent subpattern
16 erroffset passed as NULL
17 unknown option bit(s) set
18 missing ) after comment
19 parentheses nested too deeply
20 regular expression too large
21 failed to get memory
22 unmatched parentheses
23 internal error: code overflow
24 unrecognized character after (?<
25 lookbehind assertion is not fixed length
26 malformed number after (?(
27 conditional group contains more than two branches
28 assertion expected after (?(
29 (?R or (?digits must be followed by )
30 unknown POSIX class name
31 POSIX collating elements are not supported
32 this version of PCRE is not compiled with PCRE_UTF8 support
33 spare error
34 character value in \x { ... } sequence is too large
35 invalid condition (?(0)
36 \C not allowed in lookbehind assertion
37 PCRE does not support \L, \l, \N, \U, or \u
38 number after (?C is >255
39 closing ) for (?C expected
40 recursive call could loop indefinitely
41 unrecognized character after (?P
42 syntax error after (?P
43 two named groups have the same name
44 invalid UTF-8 string
45 support for \P, \p, and \X has not been compiled
46 malformed \P or \p sequence
47 unknown property name after \P or \p

| | | |
|---|---|---|
| PCRE_ERROR_NOMATCH | -1 | The subject string did not match the pattern. |
| PCRE_ERROR_NULL | -2 | Either code or subject was passed as ””. |
| PCRE_ERROR_BADOPTION | -3 | An unrecognized bit was set in the options argument. |
| PCRE_ERROR_BADMAGIC | -4 | PCRE stores a 4-byte ”magic number” at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present. |
| PCRE_ERROR_UNKNOWN_NODE | -5 | While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern. |
| PCRE_ERROR_NOMEMORY | -6 | If a pattern contains back references, but the ovector that is passed to Execute() is not big enough to remember the referenced substrings, PCRE gets a block of memory at the start of matching to use for this purpose. If the call via pcre_malloc() fails, this error is given. The memory is automatically freed at the end of matching. |
| PCRE_ERROR_MATCHLIMIT | -8 | The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached. |
| PCRE_ERROR_RECURSIONLIMIT | -21 | The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. |
| PCRE_ERROR_CALLOUT | -9 | This error is never generated by Execute() itself. It is provided for use by callout functions that want to yield a distinctive error code. See the pcrecallout documentation for details. |
| PCRE_ERROR_BADUTF8 | -10 | A string that contains an invalid UTF-8 byte sequence was passed as a subject. |
| PCRE_ERROR_BADUTF8_OFFSET | -11 | The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character. |
| PCRE_ERROR_PARTIAL | -12 | The subject string did not match, but it did match partially. See the pcrepartial documentation for details of partial matching. |
| PCRE_ERROR_BADPARTIAL | -13 | The PCRE_PARTIAL option was used with a compiled pattern containing items that are not supported for partial matching. See the pcrepartial documentation for details of partial matching. |
| PCRE_ERROR_INTERNAL | -14 | An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern. |
| PCRE_ERROR_BADCOUNT | -15 | This error is given if the value of the ovecsize argument is negative. |

| index | offset |
|---|---|
| 0 | start of matched pattern |
| 1 | end of matched pattern |
| 2 | start of subexpression 1 |
| 3 | end of subexpression 1 |
| 2*n | start of subexpression n |
| 2*n+1 | end of subexpression n |

| index | offset |
|---|---|
| 0 | start of matched pattern |
| 1 | end of matched pattern |
| 2 | start of subexpression 1 |
| 3 | end of subexpression 1 |
| 2*n | start of subexpression n |
| 2*n+1 | end of subexpression n |

### 154.8.109 ErrorDFAUCond = -17

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.110 ErrorDFAUItem = -16

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.111 ErrorDFAUMLimit = -18

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.112 ErrorDFAWSSize = -19

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.113 ErrorInternal = -14

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

### 154.8.114 ErrorMatchLimit = -8

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.

### 154.8.115 ErrorNoMatch = -1

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The subject string did not match the pattern.

### 154.8.116 ErrorNoSubstring = -7

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** This error is used by the substring functions.

### 154.8.117 ErrorNull = -2

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** Either code or subject was passed as "", or ovector was "" and ovecsize was not zero.

### 154.8.118 ErrorNullWSLimit = -22

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.119 ErrorPartial = -12

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The subject string did not match, but it did match partially.

### 154.8.120 ErrorPlugin = -99

MBS RegEx Plugin, Plugin Version: 13.1.

**Function:** One of the RegEx error constants.
**Notes:**

Generic error for something wrong with the plugin state.
Like no current regex object internally or wrong function parameters.

### 154.8.121 ErrorRecursionLimit = -21

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. See the description above.

### 154.8.122 ErrorShortUTF8 = -25

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** The subject string ended with an incomplete (truncated) UTF-8 character, and the PCRE_PARTIAL_HARD option was set. Without this option, ErrorBadUTF8 is returned in this situation.

### 154.8.123 ErrorUnknownNode = -6

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.

### 154.8.124 ErrorUnknownOpcode = -5

MBS RegEx Plugin, Plugin Version: 11.2.

**Function:** One of the RegEx error constants.
**Notes:** While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

# Chapter 155

# Remote Control

## 155.1 class GammaFadeMBS

### 155.1.1 class GammaFadeMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** A class to perform gamma fades on Mac OS X and Windows.
**Notes:** On Mac OS X a system API is used. On Windows the GammaMBS class is used internally.

### 155.1.2 Blog Entries

- Cleanup Xojo Plugins
- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.4

### 155.1.3 Blog Entries

- Cleanup Xojo Plugins
- MonkeyBread Software Releases the MBS REALbasic plug-ins 8.4

### 155.1.4 Methods

### 155.1.5 Constructor

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Initializes the gamma fade class and queries the current gamma values.
**Notes:**

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 155.1.6 Constructor(mainwindow as DesktopWindow) 23540
- 155.1.7 Constructor(mainwindow as window) 23540

### 155.1.6 Constructor(mainwindow as DesktopWindow)

MBS ComputerControl Plugin, Plugin Version: 22.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Initializes the gamma fade class and queries the current gamma values.
**Notes:**

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 155.1.5 Constructor 23539
- 155.1.7 Constructor(mainwindow as window) 23540

### 155.1.7 Constructor(mainwindow as window)

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Initializes the gamma fade class and queries the current gamma values.
**Notes:**

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 155.1.5 Constructor 23539
- 155.1.6 Constructor(mainwindow as DesktopWindow) 23540

### 155.1.8 GammaFadeIn(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Fades back to the normal screen.
**Notes:**

Seconds is the duration of the fade in seconds. Typical 0.3 seconds.
Returns true on success and false on failure.

### 155.1.9 GammaFadeOut(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Fades to a solid color.
**Notes:**

Seconds is the duration of the fade in seconds. Typical 0.5 seconds.
Returns true on success and false on failure.

### 155.1.10 Properties

### 155.1.11 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the constructor was successful.
**Notes:**

True if the initialization code worked.

On Mac OS X the constructor fails to get access if there is another gamma fade running.
On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

### 155.1.12 FadeColor as Color

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The color to use for the fade.
**Example:**

```
dim g as new GammaFadeMBS
g.FadeColor=& c0000FF // blue
```

**Notes:**

Default is black.
(Read and Write property)

## 155.2 class GammaMBS

### 155.2.1 class GammaMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** A class to change the gamma settings of the display.
**Notes:**

You can use that class to change the gamma table. For example to invert the screen or increase/decrease one of the colors.

Works on Mac OS X and Windows.

### 155.2.6 Methods

### 155.2.7 Constructor(mainwindow as DesktopWindow, displayIndex as integer = 0)

MBS ComputerControl Plugin, Plugin Version: 22.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Initializes the gamma class and queries the current gamma values.
**Notes:**

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

If you like to pass nil for the window, please pass a variable, so Xojo knows which constructor to use and you avoid a compiler error.
See also:

- 155.2.8 Constructor(mainwindow as window = nil, displayIndex as Integer = 0) 23544

### 155.2.8 Constructor(mainwindow as window = nil, displayIndex as Integer = 0)

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Initializes the gamma class and queries the current gamma values.
**Notes:**

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

If you like to pass nil for the window, please pass a variable, so Xojo knows which constructor to use and you avoid a compiler error.
See also:

- 155.2.7 Constructor(mainwindow as DesktopWindow, displayIndex as integer = 0) 23544

### 155.2.9 SetGamma(gammaScale as Double = 1.0) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Sets the gamma values.
**Notes:**

The current table assigned to the main screen.
All values are multiplied with gammaScale

### 155.2.10 Properties

### 155.2.11 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Whether the constructor was successful.
**Notes:**

True if the initialization code worked.

On Mac OS X the constructor fails to get access if it does not find a display with gamma controls.

On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

### 155.2.12 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:** (Read and Write property)

### 155.2.13 Size as Integer

MBS ComputerControl Plugin, Plugin Version: 14.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The number of entries in the gamma table.
**Notes:**

Should be 256 for Windows.
And 256 or 1024 for Mac.

(Read only property)

### 155.2.14 Blue(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The blue value with the given index.
**Notes:**

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

### 155.2.15 Green(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The green value with the given index.
**Notes:**

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

### 155.2.16 Red(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The red value with the given index.
**Notes:**

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

## 155.3 class KeyCodesMBS

### 155.3.1 class KeyCodesMBS

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** A class for translating between key codes and ASCII characters.
**Notes:**

This class is outdated, please use RemoteControlMBS module.

The list of key codes on a Mac is the same as the one used in the RB documentation for the sprite surface. Some special keys:

Modifier keys

| | |
|---|---|
| kVirtualCapsLockKey | & h039 |
| kVirtualShiftKey | & h038 |
| kVirtualControlKey | & h03B |
| kVirtualOptionKey | & h03A |
| kVirtualCommandKey | & h037 |

Editing/utility keys

| | |
|---|---|
| kVirtualHelpKey | & h072 |
| kVirtualDeleteKey | & h033 |
| kVirtualTabKey | & h030 |
| kVirtualEnterKey | & h04C |
| kVirtualReturnKey | & h024 |
| kVirtualEscapeKey | & h035 |
| kVirtualForwardDeleteKey | & h075 |

Navigation keys

| | |
|---|---|
| kVirtualHomeKey | & h073 |
| kVirtualEndKey | & h002 |
| kVirtualPageUpKey | & h074 |
| kVirtualPageDownKey | & h079 |
| kVirtualLeftArrowKey | & h07B |
| kVirtualRightArrowKey | & h07C |
| kVirtualUpArrowKey | & h07E |
| kVirtualDownArrowKey | & h07D |

Key codes for Windows:

### 155.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

- MBS Real Studio Plugins, version 11.3pr14

### 155.3.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6
- MBS Real Studio Plugins, version 11.3pr14

### 155.3.4 Methods

### 155.3.5 AsciiToKeyCode(ascii as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the keycode which is needed to be pressed to create this ASCII character.
**Notes:** You get the main key, not any modifier which may also be pressed.

### 155.3.6 KeyCodeToAscii(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the ASCII code which matches the key code.
**Example:**

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

// makes a big A on a german keyboard:
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0+512))
```

**Notes:**

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.
See MacTextForKeyCode method in RemoteControlMBS module.

### 155.3.7 KeyCodeToAsciiWithSecondKeyCode(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the ASCII code which matches the key code with the current state.
**Example:**

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

MsgBox str(k.KeyCodeToAscii(& h0A))
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0))

// gives √¢ on a German Keyboard
```

**Notes:**

On the first call of KeyCodeToAscii you get the ASCII char, but if you call KeyCodeToAsciiWithSecondKeyCode and the state property is not changed, you can get what the user gets if he presses several keys.
KeyCodeToAscii resets state to 0 before calling.
On Windows, KeyCodeToAscii and KeyCodeToAsciiWithSecondKeyCode are equal.

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.

### 155.3.8 TestForAsciiKeyDown(ascii as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns true if the key with the given ascii code is pressed.

### 155.3.9 TestForKeyDown(keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns true if the key with the given key code is pressed.

**Example:**

```
Dim k As New KeyCodesMBS

Const VK_SHIFT = & h10 // for Windows
If k.TestForKeyDown(VK_SHIFT) Then
MsgBox "shift"
Else
MsgBox "no shift"
End If
```

### 155.3.10 Update

MBS ComputerControl Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

**Function:** Updates the layout so it is the current one.

### 155.3.11 Properties

### 155.3.12 LastError as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The last error code.
**Notes:**

The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

### 155.3.13 Name as String

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The name for the current keyboard layout.
**Notes:**

On Mac OS 9 e.g. "Deutsch".
On Mac OS X e.g. "German".
On Windows 98 e.g. "00020407".
(Read only property)

### 155.3.14 State as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The last state.
**Notes:**

The function KeyCodeToAscii stores a code here which the function KeyCodeToAsciiWithSecondKeyCode will use on further calls.
(Read and Write property)

| | |
|---|---|
| VK_LBUTTON | & h01 |
| VK_RBUTTON | & h02 |
| VK_CANCEL | & h03 |
| VK_MBUTTON | & h04 |
| | |
| VK_XBUTTON1 | & h05 (Windows 2000 and newer) |
| VK_XBUTTON2 | & h06 (Windows 2000 and newer) |
| | |
| VK_BACK | & h08 |
| VK_TAB | & h09 |
| | |
| VK_CLEAR | & h0C |
| VK_RETURN | & h0D |
| | |
| VK_SHIFT | & h10 |
| VK_CONTROL | & h11 |
| VK_MENU | & h12 |
| VK_PAUSE | & h13 |
| VK_CAPITAL | & h14 |
| | |
| VK_KANA | & h15 |
| VK_HANGUL | & h15 |
| VK_JUNJA | & h17 |
| VK_FINAL | & h18 |
| VK_HANJA | & h19 |
| VK_KANJI | & h19 |
| | |
| VK_ESCAPE | & h1B |
| | |
| VK_CONVERT | & h1C |
| VK_NONCONVERT | & h1D |
| VK_ACCEPT | & h1E |
| VK_MODECHANGE | & h1F |
| | |
| VK_SPACE | & h20 |
| VK_PRIOR | & h21 |
| VK_NEXT | & h22 |
| VK_END | & h23 |
| VK_HOME | & h24 |
| VK_LEFT | & h25 |
| VK_UP | & h26 |
| VK_RIGHT | & h27 |

## 155.4 class PresskeyMBS

### 155.4.1 class PresskeyMBS

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** This class allows you to simulate keyboard activity.
**Deprecated:** This item is deprecated and should no longer be used. You can use RemoteControlMBS instead. **Notes:** This class is deprecated, please use RemoteControlMBS module.

### 155.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

### 155.4.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

### 155.4.4 Methods

### 155.4.5 clear

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Resets this object.

### 155.4.6 mouseclick(down as boolean)

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Clicks the mouse button.
**Notes:**

Clicks the mouse at current position.
Left button is used.
If you forget the mouseup you may loose control about a Mac with Mac OS X, but if you have enabled external terminal login you can login via SSH and quit Xojo from outside.

The Mac version sets the lasterror property.
See also:

- 155.4.7 MouseClick(down as boolean, rightdown as boolean)

### 155.4.7 MouseClick(down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Clicks the mouse with the given buttons.
**Notes:** Same as MouseClick, but with an additional rightdown parameter.
See also:

- 155.4.6 mouseclick(down as boolean) 23554

### 155.4.8 MouseMove(globalx as Integer,globaly as Integer)

MBS ComputerControl Plugin, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Moves the mouse.
**Example:**

```
dim x,y as Integer
dim p as PresskeyMBS
p=new PresskeyMBS
x=system.mousex
y=system.mousey+10 // move ten pixels down
p.mousemove x,y
```

**Notes:**

Moves the mouse on screen.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

### 155.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean)

MBS ComputerControl Plugin, Plugin Version: 2.8, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Moves the mouse.
**Notes:**

Moves the mouse on screen and clicks.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

The Mac version sets the lasterror property.

Mac OS X only:
Based on the values entered, the appropriate mouse-down, mouse-up, mouse-move, or mouse-drag events are generated, by comparing the new state with the current state.
See also:

- 155.4.10 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean) 23556

### 155.4.10 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Moves the mouse cursor and clicks the mouse with the given buttons.
**Notes:** Same as MouseMoveClick, but with an additional rightdown parameter.
See also:

- 155.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean) 23555

### 155.4.11 press

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Presses a key.
**Example:**

```
' example for Mac OS X:
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.keycode=4
p.press 'press H
p.shift=false
p.charcode=asc("e")
p.keycode=14
p.press 'press e
p.charcode=asc("l")
p.keycode=37
p.press 'press l
p.press 'press l
p.charcode=asc("o")
p.keycode=31
p.press 'press o
```

```
' example for Windows:

editfield1.setfocus 'so we get something in it!

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.virtualCode=-1 'automatically try to get this code
p.press 'press H
p.shift=false
p.virtualCode=-1 'after a call you find the virtualCode there
p.charcode=asc("e")
p.press 'press e
p.virtualCode=-1
p.charcode=asc("l")
p.press 'press l
p.press 'press l
p.virtualCode=-1
p.charcode=asc("o")
p.press 'press o
```

**Notes:**

Simulates a keypress and handles the Settings for Shift, Control, Command and Option key.
Command shows no reaction in my tests for Mac OS Classic
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

### 155.4.12 pressraw(down as boolean)

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Presses a key.
**Example:**

```
' Works perfectly on Mac OS X but Shift can't be done Raw on Mac OS 9:
dim p as PresskeyMBS

p=new PresskeyMBS

p.charcode=0
p.keycode=& h38
p.pressraw true 'shift down
```

```
p.charcode=asc("H")
p.keycode=4
p.pressraw true 'press H
p.pressraw false

p.charcode=0
p.keycode=& h38
p.pressraw false 'shift up

p.charcode=asc("e")
p.keycode=14
p.pressraw true 'press e
p.pressraw false
p.charcode=asc("l")
p.keycode=37
p.pressraw true 'press l
p.pressraw false
p.pressraw true 'press l
p.pressraw false
p.charcode=asc("o")
p.keycode=31
p.pressraw true 'press o
p.pressraw false
```

**Notes:**

Simulates a keypress and doesn't handle the Settings for Shift, Control, Command and Option key.
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

### 155.4.13 Properties

### 155.4.14 Charcode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The character you want to press.
**Example:**

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.charcode=8
p.keycode=& h33
```

```
p.press // press backspace on Mac OS
```

**Notes:**

On Mac OS Classic the final printed charcode inside an editfield is the one you pass.
(Read and Write property)

### 155.4.15 Command as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Tells the Press method to press down command key before and release it after it simulates the key press.
**Example:**

```
dim p as new PresskeyMBS
p.command=True
```

**Notes:**

It looks like the command key is not working for Mac OS Classic.
On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

### 155.4.16 Control as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Tells the Press method to press down control key before and release it after it simulates the key press.
**Example:**

```
dim p as new PresskeyMBS
p.Control=True
```

**Notes:**

On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

### 155.4.17 Keycode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** For Mac OS the number of the key on the keyboard which is pressed.
**Example:**

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.keycode=2
p.charcode=asc("d")
p.press 'shows a "d" on Mac OS
```

**Notes:**

You find this codes in that nice tables for the codes of the Spritesurface in the Xojo books.
(Read and Write property)

### 155.4.18 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The last error code.
**Notes:**

Not all functions of this class fill this property!
(Read and Write property)

### 155.4.19 Option as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Tells the Press method to press down option key before and release it after it simulates the key press.
**Example:**

```
dim p as PresskeyMBS
p.option=True
```

**Notes:** (Read and Write property)

### 155.4.20 Shift as boolean

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** Tells the Press method to press down shift before and release it after it simulates the key press.
**Example:**

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("1")
p.keycode=18
p.press 'press !
```

**Notes:** (Read and Write property)

### 155.4.21 VirtualCode as Integer

MBS ComputerControl Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

**Function:** The virtual keycode to press.
**Example:**

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.charcode=asc("m")
p.virtualcode=-1
p.press ' makes a "m" on Windows.
```

**Notes:**

If you don't know this code, just pass -1 and this value will be filled automatically using the charcode property.
After you call press or pressraw you'll find the matching virtualcode in this property.
(Read and Write property)

## 155.5 module RemoteControlMBS

### 155.5.1 module RemoteControlMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** This module collects methods for simulating user input with mouse and keyboard.
**Notes:**

You can use this class for GUI scripting.
Requires libXtst.so.6 on Linux to be installed.

### 155.5.2 Blog Entries

### 155.5.4 Methods

### 155.5.5 LinuxConvertCase(keysymbol as Integer, byref lowerSymbol as Integer, byref upperSymbol as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Converts the case of the given keysymbol.
**Notes:**

In lowerSymbol you will receive the key symbol for a lower case key and in upperSymbol the uppercase keys.

So passing in the key symbol of "a" or "A" will both return "a" and "A".

### 155.5.6 LinuxKeyCodeToKeySymbol(keycode as Integer, index as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Returns from the keyboard mapping tables the key symbol for the given key code.
**Notes:** Index is the offset in the tables. 0 for the first key symbol and 1 for the second. If the user presses shift the keyboard driver uses index=1 to access the capital letters.

### 155.5.7 LinuxKeyNameToKeySymbol(keyname as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Searches the key mapping list for the key symbol for a given name.
**Notes:** Returns 0 on failure.

### 155.5.8 LinuxKeySymbolToKeyCode(keysymbol as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Searches the hardware dependend key code for the given key symbol.
**Notes:** Returns 0 on any error.

### 155.5.9 LinuxKeySymbolToKeyName(keysymbol as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Returns the name of the key symbol.
**Notes:** Can return "" on an invalide keysymbol value.

### 155.5.10 LinuxMouseClick(ButtonID as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Simulates a mouse click with the given button.
**Notes:**

ButtonID=1 is the left mouse button.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

### 155.5.11 LinuxMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.12 LinuxMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.13 LinuxMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Moves the mouse to the given position.
**Notes:** Returns true on success.

### 155.5.14 LinuxPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Presses the ctrl key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.15 LinuxPressKey(Keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Presses the key with the given keycode.
**Notes:**

Performs a key down and a key up event.
Returns true on success.
See also:

- 155.5.16 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean 23565

### 155.5.16 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Performs a key event.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 155.5.15 LinuxPressKey(Keycode as Integer) as boolean 23565

### 155.5.17 LinuxPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Presses the alt key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.18 LinuxPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Presses the shift key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.19 LinuxSupported as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Linux, Targets: Desktop, Console & Web.

**Function:** Whether the functions are available for simulation of keyboard and mouse events.
**Notes:** Returns true if the Xtest extension is installed.

### 155.5.20 MacCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the process ID of your application.
**Notes:** Returns 0 on any error.

### 155.5.21 MacCurrentProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the name of the current process.
**Example:**

msgbox RemoteControlMBS.MacCurrentProcessName

**Notes:** This is the name of your application.

### 155.5.22 MacDescriptionForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Translates a keycode to a string for displaying.
**Notes:** Keycodes which match a special key like "Return", "F1" or "Backspace" are returned as descriptive strings.

### 155.5.23 MacDisplayNameForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Translates a keycode to a string for displaying.
**Notes:** Same as MacTextForKeyCode(keycode, 4)

### 155.5.24 MacForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Returns the process ID of the application in the foreground.
**Notes:** Returns 0 on any error.

### 155.5.25 MacFrontProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the front process.
**Example:**

```
RemoteControlMBS.MacFrontProcessName="iChat" // move iChat to front
```

**Notes:** (Read and Write computed property)

### 155.5.26 MacKeyboardLocalizedName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The localized name of the current keyboard layout.
**Notes:** Returns "" on any error.

### 155.5.27 MacKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the current keyboard layout.
**Notes:**

Returns "" on any error.

Added 64-bit support for version 17.0.

### 155.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Clicks the mouse buttons on the given position.
**Example:**

```
// doing a context menu click with control key:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.PressControlKey true
call RemoteControlMBS.MacMouseClick x, y, true, true
call RemoteControlMBS.MacMouseClick x, y, true, false
call RemoteControlMBS.PressControlKey false
```

**Notes:**

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So

always call this method another time to release the mouse buttons.
See also:

- 155.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 23569

- 155.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 23570

### 155.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Clicks the mouse buttons on the given position.
**Example:**

```
// do a right click:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.MacMouseClick x, y, true, false, true
call RemoteControlMBS.MacMouseClick x, y, true, false, false
```

**Notes:**

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 155.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 23568

- 155.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 23570

### 155.5.30 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Clicks the mouse buttons on the given position.
**Notes:**

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 155.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 23568
- 155.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 23569

### 155.5.31 MacMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.32 MacMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.33 MacMouseWheel(wheel1 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a wheel event.
**Example:**

```
call RemoteControlMBS.MacMouseWheel 1
```

**Notes:**

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 155.5.34 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean 23571

### 155.5.34 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Performs a wheel event.
**Example:**

```
call RemoteControlMBS.MacMouseWheel 10,5
```

**Notes:**

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 155.5.33 MacMouseWheel(wheel1 as Integer) as boolean 23570

### 155.5.35 MacMoveMouse(x as Double, y as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Moves the mouse to the given position.
**Example:**

```
call RemoteControlMBS.MacMoveMouse(100,100)
```

**Notes:**

Returns true on success.
On Mac does not generate mouse events.

### 155.5.36 MacPressCommandKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the command key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.37 MacPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the ctrl key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.38 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the given key.
**Notes:**

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.
Peforms a key down and a key up event.
See also:

- 155.5.39 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean 23572

### 155.5.39 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the given key.
**Notes:**

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 155.5.38 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean 23572

### 155.5.40 MacPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the option key. (labeled with alt)
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.41 MacPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Presses the shift key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.42 MacProcessCount as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Counts the high level processes.
**Example:**

msgBox str(remoteControlMBS.macprocessCount)

### 155.5.43 MacProcessName(index as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** The name of the process with the given index.
**Example:**

```
dim i,c as Integer

// search iChat and make it visible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="iChat" then
remoteControlMBS.macprocessVisible(i)=true
end if
next
```

**Notes:** Index is from 0 to MacProcessCount-1.

### 155.5.44 MacProcessVisible(index as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Whether a process is visible or not.
**Example:**

```
dim i,c as Integer

// search Safari and make it invisible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="Safari" then
remoteControlMBS.macprocessVisible(i)=false
end if
next
```

**Notes:**

Index is from 0 to MacProcessCount-1.
(Read and Write computed property)

### 155.5.45 MacTextForKeyCode(keycode as Integer, KeyAction as Integer, ModifierState as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: macOS, Targets: Desktop, Console & Web.

**Function:** Translates a keycode to a string.
**Example:**

```
// try some keycodes like e, E, ,Ç¨ or √©
dim key as string = "@"

const kCommandKey = 1
const kShift = 2
const kCapsLock = 4
const kOption = 8
const kControl = 16

// with no modifiers
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, 0)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)
Return
end if

next

// with shift
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kShift)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Shift"
Return
end if

next

// with option
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kOption)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Option"
```

```
Return
end if

next
```

**Notes:**

Works only with Unicode keyboard layouts which need Mac OS X 10.5.

Modifier values:

| | |
|---|---|
| Command Key | 1 |
| Shift | 2 |
| CapsLock | 4 |
| Option | 8 |
| Control | 16 |

Possible constants for the Key Action:

| | | |
|---|---|---|
| kUCKeyActionDown | 0 | The user is pressing the key. |
| kUCKeyActionUp | 1 | The user is releasing the key. |
| kUCKeyActionAutoKey | 2 | The user has the key in an "auto-key" pressed state that is, the user is holding down the key for an extended period of time and is thereby generating multiple key strokes from the single key. |
| kUCKeyActionDisplay | 3 | The user is requesting information for key display, as in the Key Caps application. |

### 155.5.46 MouseClick(x as Integer, y as Integer, down as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Performs a mouse click.
**Notes:**

The mouse cursor is moved to the given position and the first mouse button is pressed.
Returns true on success.

### 155.5.47 MousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.48 MousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.49 MoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Moves the mouse to the given location.
**Notes:**

Returns true on success.
On Mac does not generate mouse events.

### 155.5.50 PressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Presses the ctrl key.
**Notes:** Returns true on success.

### 155.5.51 PressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Presses the option key.
**Notes:** Returns true on success.

### 155.5.52 PressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Presses the shift key.
**Notes:** Returns true on success.

### 155.5.53 WinBringProcessToTop(ProcessID as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Brings all windows of process to the front.
**Notes:** Returns true if function found at least one window.

### 155.5.54 WinBringWindowToTop(WindowHandle as Integer, SetFocus as boolean = true) as boolean

MBS ComputerControl Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Brings a given window to front.
**Example:**

```
dim h as Integer = RemoteControlMBS.WinFindWindow("", "Calculator")
call RemoteControlMBS.WinBringWindowToTop h
```

**Notes:**

Pass any window handle, including windows from other applications.
If SetFocus is true, we also set the focus.
Returns true on success.

### 155.5.55 WinCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the process ID of your application.
**Notes:** Returns 0 on any error.

### 155.5.56 WinFindWindow(ClassName as string, WindowName as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Finds a window based on the classname and/or the window name.
**Example:**

```
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")
msgbox hex(h)
```

**Notes:**

One of the names can be an empty string so only the other name is used. Normally you should prefer the class name as it is not localized. The WindowsListMBS class can help you finding the class name of a window.
Returns 0 on any error.

### 155.5.57 WinForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the process ID of the application which owns the foreground window.
**Notes:** Returns 0 on any error.

### 155.5.58 WinFrontWindowTitle as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** The title of the window which has the focus.
**Example:**

```
title=remoteControlMBS.winfrontWindowTitle
```

**Notes:** May return "" on any error.

### 155.5.59 WinIsWindowMinimized(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks whether the specified window is minimized.
**Notes:**

Returns true if minimized.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

### 155.5.60 WinIsWindowVisible(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Checks the visibility state of the specified window.
**Notes:**

Returns true if visible or false if not.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

### 155.5.61 WinKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns the name of the current Windows keyboard layout.

### 155.5.62 WinKeyIsDown(virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Tests whether a given key is currently pressed.

### 155.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Peforms a mouse click on the given position.
**Deprecated:** This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 155.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 23581
- 155.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 23581
- 155.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 23582

### 155.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Peforms a mouse click on the given position.
**Deprecated:** This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

Deprecated. Please use the version taking integers, so you can click only one button without others.
See also:

- 155.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 23580
- 155.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 23581
- 155.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 23582

### 155.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Peforms a mouse click on the given position.
**Deprecated:** This item is deprecated and should no longer be used. You can use WinMouseClick with integer parameters instead. **Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

Deprecated. Please use the version taking integers, so you can click only one button without others.
See also:

- 155.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 23580
- 155.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 23581
- 155.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean 23582

### 155.5.66 WinMouseClick(x as integer, y as integer, AbsolutePosition as boolean, MouseButton1 as Integer, MouseButton2 as Integer, MouseButton3 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

**Function:** Peforms a mouse click on the given position.
**Example:**

```
Const x = 100
Const y = 100

// press right mouse button

Dim success1 As Boolean = RemoteControlMBS.WinMouseClick(x, y, True, -1, 1, -1)

// and up
Dim success2 As Boolean = RemoteControlMBS.WinMouseClick(x, y, True, -1, 0, -1)
```

**Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
Pass 1 to click mouse button down, 0 to release it or -1 to not touch the button.
See also:

- 155.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 23580
- 155.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 23581
- 155.5.65 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 23581

### 155.5.67 WinMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.68 WinMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the current mouse position.

### 155.5.69 WinMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Moves the mouse cursor to the given position.
**Notes:**

Returns true on success.
Internally the coordinates are converted to normalized absolute coordinates which can lead to have the mouse one pixel off the requested position due to rounding.

### 155.5.70 WinPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Presses the ctrl key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.71 WinPressKey(ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Performs a key event with the given data.
**Notes:**

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 155.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 23584
- 155.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 23585
- 155.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 23585

### 155.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Performs a key event with the given data.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 155.5.71 WinPressKey(ScanCode as Integer) as boolean 23584
- 155.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 23585
- 155.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 23585

### 155.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Performs a key event with the given data.
**Notes:**

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 155.5.71 WinPressKey(ScanCode as Integer) as boolean 23584
- 155.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 23584
- 155.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 23585

### 155.5.74 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Performs a key event with the given data.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 155.5.71 WinPressKey(ScanCode as Integer) as boolean 23584
- 155.5.72 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 23584
- 155.5.73 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 23585

### 155.5.75 WinPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Presses the alt key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.76 WinPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Presses the shift key.
**Notes:**

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

### 155.5.77 WinScanCodeToVirtualKeyCode(ScanCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Searches the virtual key code for the given scancode.
**Notes:**

Each key has a hardware dependend scan code. For each scancode you can get the virtual key code which is hardware independend.

Returns 0 on failure.

### 155.5.78 WinSendMessage(Win as DesktopWindow, Msg as integer, lParam as integer, WParam as integer) as integer

MBS ComputerControl Plugin, Plugin Version: 22.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

**Function:** Sends a Windows message to a given window.
**Notes:** The result depends on the message command.
See also:

- 155.5.79 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 23587
- 155.5.80 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 23587

### 155.5.79 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop only.

**Function:** Sends a Windows message to a given window.
**Example:**

```
const WM_CLOSE = & h0010

call RemoteControlMBS.WinSendMessage(window1, WM_CLOSE, 0, 0)
```

**Notes:** The result depends on the message command.
See also:

- 155.5.78 WinSendMessage(Win as DesktopWindow, Msg as integer, lParam as integer, WParam as integer) as integer 23586
- 155.5.80 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 23587

### 155.5.80 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Sends a Windows message to a given window.
**Example:**

```
const WM_CLOSE = & h0010
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")

call RemoteControlMBS.WinSendMessage(h, WM_CLOSE, 0, 0) // Closes Calc
```

**Notes:** The result depends on the message command.
See also:

- 155.5.78 WinSendMessage(Win as DesktopWindow, Msg as integer, lParam as integer, WParam as integer) as integer 23586
- 155.5.79 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 23587

### 155.5.81 WinShowWindow(WindowHandle as Integer, CmdShow as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Shows or hides a window.
**Notes:**

CmdShow can be:

| | |
|---|---|
| 0 | Hide |
| 1 | Show normal |
| 2 | Show minimized |
| 3 | Maximize |
| 4 | Show without activating |
| 5 | Show |
| 6 | Minimize |
| 7 | Show minimized without activating |
| 8 | Show normal without activating |
| 9 | Restore |
| 10 | Show default |
| 11 | Force minimized |

Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

### 155.5.82 WinVirtualKeyCodeToCharCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Queries the char code for a virtual key code.
**Notes:** Returns 0 on failure.

### 155.5.83 WinVirtualKeyCodeToScanCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Finds the scan code to match the given virtual key code.

**Notes:** Returns 0 on failure.

### 155.5.84 WinVirtualKeyForASCII(Character as Integer, byref VirtualKeyCode as Integer, Byref ShiftKey as boolean, byref ControlKey as Boolean, byref AltKey as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

**Function:** Returns for a given character which combination of key code and modifiers created the character.
**Notes:**

For Character, you should use asc(string), but you may need to convert the string to Windows ANSI text encoding.

Returns 0 on failure.

# Chapter 156

# Resolution

## 156.1 class DisplayMBS

### 156.1.1 class DisplayMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Defines a class for accessing the displays of the screen.

### 156.1.2 Blog Entries

- 17.5, page 43: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

### 156.1.6 Methods

### 156.1.7 CanDepth(depth as Integer) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns true if the monitor supports the given color depth at the current ResolutionMBS.
**Notes:** none.

### 156.1.8 FadeGamma(intensity as Integer, col As Color)

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Sets the gamma of the DisplayMBS
**Notes:**

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole DisplayMBS is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.

See the NativeGamma documentation for more details on Windows Gamma details.

### 156.1.9 FadeGammaTo(intensity as Integer, col As Color, ticks as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Fades the intensity and color of the gamma slowly in the given number of milliseconds.
**Notes:**

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole display is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

### 156.1.10 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Searches for the best matching resolution.
**Notes:**

Returns the best resolution which size is not smaller that the dimensions given, which has the given depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 156.1.11 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS 23593

### 156.1.11 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Searches for the best matching resolution.
**Notes:**

Returns the best resolution which size is not smaller that the dimensions given, which has the highest depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 156.1.10 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS 23593

### 156.1.12 GetCurrentResolution As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the current resolution.
**Notes:** Returns the resolution the display is currently set to. This is useful if you want to switch back to the old resolution after you switched to another resolution.

### 156.1.13 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Searches for the largest resolution with the given depth.
**Notes:**

The same as GetBestResolution(width, height, depth, safe), the only difference is that it does not search for the smallest resolution but for the biggest one.
On Mac OS X till now no resolution can be called safe.
See also:

- 156.1.14 GetLargestResolution(safe As Boolean) As ResolutionMBS 23594

### 156.1.14 GetLargestResolution(safe As Boolean) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Searches for the largest resolution.
**Notes:**

If safe is true, this method returns only safe resolutions.
On Mac OS X till now no resolution can be called safe.
See also:

- 156.1.13 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS 23594

### 156.1.15 GetResolution(num as Integer) As ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns a resolution.
**Notes:** Num has to be between 0 and ResolutionCount(safe)-1.

### 156.1.16 ResolutionCount(depth as Integer, safe As Boolean) as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the number of resolutions for a given depth.
**Notes:**

This method returns the number of resolutions that have the given depth and, if safe is true, which are safe.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 156.1.17 ResolutionCount(safe As Boolean) as Integer 23595

### 156.1.17 ResolutionCount(safe As Boolean) as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns the number of resolutions.
**Notes:**

This method returns the total number of resolutions this monitor supports and, if safe is true, which are safe. Safe resolutions are resolutions which will always work.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 156.1.16 ResolutionCount(depth as Integer, safe As Boolean) as Integer 23595

### 156.1.18 SetDepth(depth as Integer) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Switches the color depth to the depth given. Returns true if attempt was successful.
**Notes:** none.

### 156.1.19 SwitchTo(width as Integer, height as Integer, depth as Integer, safe As Boolean) As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Switches to the given ResolutionMBS if possible.
**Notes:**

This method tries to switch directly to the best ResolutionMBS which size is bigger or the same as the given dimensions and which depth is the same as the given parameter. It returnes true if it was successful. Try this function first with safe set to true. If that fails, try again with false, but after that show a dialog asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly

switch back to the old ResolutionMBS.
On Mac OS X till now no ResolutionMBS can be called safe.

### 156.1.20 Update

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Updates the properties in this class.
**Notes:**

Call it whenever you detect a screen resolution change to update the content of this class.
In general you should not keep DisplayMBS classes around too long because the display described may go away (one a Powerbook the external display).

### 156.1.21 Properties

### 156.1.22 Depth as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Depth of the DisplayMBS.
**Notes:**

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

### 156.1.23 displaynum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** DisplayNum is the number of the DisplayMBS
**Notes:**

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

### 156.1.24 GammaColor as color

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** The color for fading the DisplayMBS.
**Notes:**

This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

### 156.1.25 GammaIntensity as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** GammaIntensity is the intensity of the monitor.
**Notes:**

1000 is normal, if it is 0, the whole DisplayMBS is in the color GammaColor.
This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

### 156.1.26 Height as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Height of the monitor.
**Notes:** (Read only property)

### 156.1.27 hz as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** frequency in Hz of that DisplayMBS
**Example:**

```
dim d as DisplayMBS

d=GetDisplayMBS(0)

msgBox str(d.Hz)
```

**Notes:**

On Windows:
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).

The value should never be greater as the real frequency, so you can just ignore this.
(Read only property)

### 156.1.28 Left as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The relative left offset to the other monitors.
**Notes:**

Should be 0 for the main monitor.
(Read only property)

### 156.1.29 Top as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The relative top offset to the other monitors.
**Notes:**

Should be 0 for the main monitor.
(Read only property)

### 156.1.30 Width as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Width of this screen.
**Notes:** (Read only property)

### 156.1.31 NativeGamma as memoryblock

MBS Util Plugin, Plugin Version: 3.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The native gamma values.
**Example:**

```
dim d as DisplayMBS // your display
d.nativegamma=newmemoryblock(3072) // all black
```

**Notes:**

3072 bytes big is this array a 256 RGB values saved in 3 single properties.

Some notes for SetDeviceGammaRamp, which is the Windows function used by the plugin:

SetDeviceGammaRamp doesn't allow all gamma ramps. It checks the gamma ramp; if it is too complex, such as the red flash when the player is shot in Quake, it rejects it.
SetDeviceGammaRamp will not currently make use of a gamma calibrator. This may change in future versions of Image Color Management (ICM), but for Windows 2000, only the DirectDraw API supports the gamma calibrators.
The existing gamma entry points is already used by GetDeviceGammaRamp and SetDeviceGammaRamp. Therefore, the display driver doesn't need to do anything special to support this new interface, as long as it already supports the Win32 Get/SetDeviceGammaRamp functions.
In addition to getting and setting gamma ramps, the new DirectDraw interface allows the new gamma ramp to be calibrated,Äîif a gamma calibrator is installed. The mechanism that DirectDraw uses to register and communicate with the gamma calibrator is an interim mechanism that will be changed in future releases.
DirectDraw looks for an installed software calibrator and passes the gamma value to the software calibrator; the software calibrator in turn adjusts the gamma ramp according to the measured response of the monitor. The calibrator passes the gamma ramp back to DirectDraw, which passes it to the SetDeviceGammaRamp device driver interface (DDI). The result is that the game looks as intended.
For DirectDraw to use the gamma calibrator, the calibrator must register itself with DirectDraw using a registry key; DirectDraw will call it if the application wants the gamma ramp to be calibrated.
In the future, both the method by which DirectDraw communicates with the gamma calibrator, through the DDI, and the method gamma calibrators use to register themselves in the registry will change. But every part of the DirectDraw API is permanent.
ICM is the color management system in Windows; all system-level color management should be handled by ICM. For this reason, downloadable gamma ramp support will be rolled into ICM in the future, making current solutions for gamma calibrators obsolete. Until such time, we have provided a method by which applications can take advantage of the installed base of software calibrators and graphics adapters that support downloadable gamma ramps.
(Read and Write computed property)

## 156.2 Globals

### 156.2.1 DisplayCountMBS as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** DisplayCount returns the number of displays connected.
**Example:**

```
msgbox "You have "+str(DisplayCountMBS)+" screens."
```

### 156.2.2 GetDisplayMBS(num as Integer) As DisplayMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Returns an object of class DisplayMBS for the given DisplayMBS.
**Example:**

```
dim d as DisplayMBS

d=GetDisplayMBS(0)
msgBox str(d.width)+" x "+str(d.height)+" @ "+str(pow(2,d.depth))+" colors"
```

**Notes:** num must be: 0 <= num <displaycount

### 156.2.3 ResolutionLibraryPresentMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

**Function:** Returns true if the DisplayManager library file was found.
**Example:**

```
if not ResolutionLibraryPresentMBS then
msgbox "I'm missing the shared library 'DisplayManager'."
end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This library should be present on all Mac OS Classic versions. (It is in the system suitcase.)
Returns always true on Windows.

### 156.2.4 Blog Entries

- MBS Xojo Plugins, version 20.6pr4

### 156.2.5 UpdateDisplayCountMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Rebuilds the display list.
**Notes:** If new displays are attached or removed, this method needs to be called.

## 156.3 class ResolutionMBS

### 156.3.1 class ResolutionMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Defines a class for accessing the resolutions a screen.

### 156.3.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

### 156.3.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr4

### 156.3.4 Methods

### 156.3.5 Switch As Boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** This function switches the DisplayMBS to the ResolutionMBS and returns true if the attempt was successful.
**Notes:**

If IsSafe is false, show a dialog after the switch asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS. Especially on

VGA-Monitors not all listed frequencies work.
On Mac OS X till now no ResolutionMBS can be called safe.

### 156.3.6 Properties

### 156.3.7 Depth as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Depth of the ResolutionMBS.
**Notes:**

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

### 156.3.8 displaynum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** DisplayNum is the number of the DisplayMBS
**Notes:**

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

### 156.3.9 Height as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Height of the ResolutionMBS.
**Notes:** (Read only property)

### 156.3.10 hz as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** frequency in Hz of that ResolutionMBS
**Notes:**

Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).

(Read only property)

### 156.3.11 issafe as boolean

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Is it a safe ResolutionMBS?
**Notes:**

On Mac OS X till now no ResolutionMBS can be called safe.
(Read only property)

### 156.3.12 Left as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The relative left offset to that ResolutionMBS.
**Notes:**

Should be 0 for the main monitor.
(Read only property)

### 156.3.13 ResolutionNum as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** DisplayNum is the number of the DisplayMBS.
**Notes:**

ResolutionNum is the number of the DisplayMBS which always is between 0 and GetDisplayMBS(DisplayNum).ResolutionCount(false)-1.

On Windows: dis.GetCurrentResolution.resolutionNum is sometimes also -1.
(Read only property)

### 156.3.14 Top as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** The relative top offset to the other monitors.
**Notes:**

Should be 0 for the main monitor.
(Read only property)

### 156.3.15 Width as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop only.

**Function:** Width of this ResolutionMBS.
**Notes:** (Read only property)

# Chapter 157

# RFC

## 157.1 class RFCClassDescriptionMBS

### 157.1.1 class RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a class description.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.1.2 Methods

### 157.1.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.1.5 Properties

### 157.1.6 AttributesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries attribute count for class.
**Notes:** (Read only property)

### 157.1.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection owning this object.
**Notes:** (Read only property)

### 157.1.8 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 157.1.9 ImplementedInterfacesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of implemented interfaces.
**Notes:** (Read only property)

### 157.1.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The name of the class.
**Notes:** (Read only property)

### 157.1.11 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object.
**Notes:** (Read only property)

### 157.1.12 ParentClassesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries number of parent classes.
**Notes:** (Read only property)

## 157.2 class RFCConnectionAttributesMBS

### 157.2.1 class RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for information about the partner system on the other side of this RFC connection.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.2.2 Methods

### 157.2.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.2.4 Properties

### 157.2.5 client as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Client ("Mandant")
**Notes:** (Read only property)

### 157.2.6 codepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Own code page.
**Notes:** (Read only property)

### 157.2.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection used to get this information.
**Notes:** (Read only property)

### 157.2.8 cpicConvId as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** CPI-C Conversation ID.
**Notes:** (Read only property)

### 157.2.9 dest as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** RFC destination.
**Notes:** (Read only property)

### 157.2.10 host as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Own host name.
**Notes:** (Read only property)

### 157.2.11 isoLanguage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** 2-byte ISO-Language
**Notes:** (Read only property)

### 157.2.12 kernelRel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner kernel release.
**Notes:** (Read only property)

### 157.2.13 language as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Language.
**Notes:** (Read only property)

### 157.2.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object for this object.
**Notes:** (Read only property)

### 157.2.15 partnerBytesPerChar as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Number of bytes per character in the backend's current codepage.
**Notes:**

Note this is different from the semantics of the PCS parameter.
(Read only property)

### 157.2.16 partnerCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner code page.
**Notes:** (Read only property)

### 157.2.17 partnerHost as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner host name.
**Notes:** (Read only property)

### 157.2.18 partnerIP as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner IP.
**Notes:** (Read only property)

### 157.2.19 partnerIPv6 as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner IPv6.
**Notes:** (Read only property)

### 157.2.20 partnerRel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner system release.
**Notes:** (Read only property)

### 157.2.21 partnerSystemCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner system code page.
**Notes:** (Read only property)

### 157.2.22 partnerType as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Partner type.
**Notes:**

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

### 157.2.23 progName as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Name of the calling APAB program (report, module pool)
**Notes:** (Read only property)

### 157.2.24 rel as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** My system release.
**Notes:** (Read only property)

### 157.2.25 rfcRole as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The RFC role.
**Notes:**

C/S: RFC Client / RFC Server.
(Read only property)

### 157.2.26 sysId as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** R/3 system ID.
**Notes:** (Read only property)

### 157.2.27 sysNumber as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** R/3 system number.
**Notes:** (Read only property)

### 157.2.28 trace as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Trace level (0-3)
**Notes:** (Read only property)

### 157.2.29 type as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The type.
**Notes:**

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

### 157.2.30 user as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** User name.
**Notes:** (Read only property)

## 157.3 class RFCConnectionMBS

### 157.3.1 class RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for RFC connection to a SAP system.
**Example:**

```
// connect code from a sample project:

dim loginParams As New Dictionary
if app.LogOnData.SARouterString.IsEmpty then // LogOn with server (IP-Address)
loginParams.Value("ashost") = app.LogOnData.Anwendungsserver
else // LogOn with Servername and Router-String
loginParams.Value("ashost") = app.LogOnData.SARouterString+"/H/"+app.LogOnData.Anwendungsserver
end if
loginParams.Value("sysnr") = app.LogOnData.InstanzNr.ToText
loginParams.Value("client") = app.LogOnData.Mandant
loginParams.Value("user") = app.LogOnData.SAPBenutzer
loginParams.Value("passwd") = app.LogOnData.SAPPasswort
loginParams.Value("lang") = app.LogOnData.Sprache

app.ConnectionToSAP = New RFCConnectionMBS(loginParams)
```

### 157.3.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2
- Connect Xojo to SAP via RFC

### 157.3.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr2
- Connect Xojo to SAP via RFC

### 157.3.4 Methods

### 157.3.5 CachedClassDescription(repositoryID as String, Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for a cached class description.
**Notes:**

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a class description has already been cached via ClassDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via RfcAddClassDesc(), which contains classes that do not exist in the backend's DDIC.

If repositoryID is "", the "default repository" is used.

repositoryID: System ID of R/3 System, for which this class description has been cached, or "" in case you want to look for it in the default repository.
Name: Name of the class.

### 157.3.6 CachedFunctionDescription(repositoryID as String, Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for a cached function description.
**Notes:**

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a function description has already been cached via FunctionDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via AddFunctionDesc(), which contains function modules that do not exist in the backend's DDIC.

If repositoryID is "", the "default repository" is used.

### 157.3.7 CachedTypeDescription(repositoryID as String, Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Looks for a cached structure/table description.
**Notes:**

Similar to TypeDescription(), but it only looks into the cache. Again it should almost never be necessary to get a metadata description of a single structure.

repositoryID: System ID of R/3 System, for which this type description has been cached, or "" in case you

want to look for it in the default repository.
Name: Name of the DDIC structure/table.

### 157.3.8 Cancel

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Cancels the RFC call which is currently being called over the given RFC connection and closes the connection.
**Notes:** Can be used only on an RFC client connection and needs to be called from a different thread than the one currently executing the RFC call.

### 157.3.9 ClassDescription(Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the class description that is valid for the system to which connection points to.
**Notes:**

If the class description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release. This is the main API that should be used.

Name: Name of the class to look up.

### 157.3.10 ClearRepository(repositoryID as String)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Removes all metadata from the repository cache of the specified R/3 System.
**Notes:** If repositoryID is "", the "default repository" is cleared.

### 157.3.11 Constructor(LoginParams as Dictionary)

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Opens an RFC client connection for invoking ABAP function modules in an R/3 backend.
**Example:**

```
Dim loginParams As New Dictionary
loginParams.Value("ashost") = "hostname"
loginParams.Value("sysnr") = "05"
loginParams.Value("client") = "800"
loginParams.Value("user") = "user"
loginParams.Value("passwd") = "****"
loginParams.Value("lang") = "EN"

Dim connection As New RFCConnectionMBS(loginParams)
```

**Notes:**

Opens a client connection to an SAP System. The connectionParams may contain the following name-value pairs:

client, user, passwd, lang, trace and additionally one of

1. Direct application server logon: ashost, sysnr.
2. Logon with load balancing: mshost, msserv, sysid, group.

msserv is needed only, if the service of the message server is not defined as sapms<SYSID>in /etc/services.

When logging on with SNC, user& passwd are to be replaced by

snc_qop, snc_myname, snc_partnername and optionally snc_lib.
(If snc_lib is not specified, the underlying SNC layer uses the "global" GSS library defined via environment variable SNC_LIB or SNC_LIB_64.)

When logging on with SSO Ticket, you can use mysapsso2 instead of user& passwd. The old SSO format (mysapsso) is no longer supported.

Alternatively the connection parameters can be defined in the config file sapnwrfc.ini. In this case you just pass the parameter dest=... and all parameters that are missing in the sapnwrfc.ini entry into RfcOpenConnection().

For a complete list of logon parameters to be used in connectionParams as well as in the sapnwrfc.ini file, see the sample sapnwrfc.ini file in the SDK's demo folder.

If the logon was ok, constructor returns with a new object, otherwise an exception is raised.

### 157.3.12 CreateFunction(Name as String) as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
**Notes:** The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

### 157.3.13 CreateTransaction(TransactionID as String, QueueName as String) as RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Creates a container for executing a (multi-step) transactional call.
**Notes:**

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

### 157.3.14 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.
**Notes:** Closes an RFC connection.

### 157.3.15 FunctionDescription(Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the function description that is valid for the system to which connection points to.
**Example:**

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
```

**Notes:** If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

### 157.3.16 isConnected as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Checks if we are connected.
**Notes:** Same as Ping, but returns boolean and does not raise exception.

### 157.3.17 Ping

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Ping the remote communication partner through the passed connection handle.
**Notes:** Sends a ping to the backend in order to check, whether the connection is still alive. Can be used on both, client connections as well as server connections.

### 157.3.18 ResetServerContext

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Resets the SAP server context ("user context / ABAP session context") associated with the given client connection, but does not close the connection.

### 157.3.19 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Retrieves a unique 24-digit transaction ID from the backend.

### 157.3.20 TypeDescription(Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the structure description that is valid for the system to which connection points to.
**Notes:**

If the structure description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release.

Note
Normally it should not be necessary to lookup separate structure descriptions. They are already looked up as part of the function module, in which they are used.

Name: Name of a DDIC structure or table.

### 157.3.21 Properties

### 157.3.22 ConnectionAttributes as RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns details about the current client or server connection.
**Notes:** (Read only property)

### 157.3.23 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

## 157.4 class RFCContainerMBS

### 157.4.1 class RFCContainerMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The class for a container in a RFC connection.
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

### 157.4.2 Methods

### 157.4.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The private constructor.

### 157.4.4 DescribeType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Returns the metadata description of the given structure or table.

### 157.4.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The destructor.

### 157.4.6 StringLength(Index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries string length for field by index.
See also:

- 157.4.7 StringLength(Name as String) as Integer 23622

### 157.4.7 StringLength(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Queries string length for field by name.
See also:

- 157.4.6 StringLength(Index as Integer) as Integer 23621

### 157.4.8 Value(Index as Integer) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience method to get value as variant.
**Notes:**

When reading, we lookup data type for the property referred by index and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.
Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 157.4.9 Value(Name as String) as Variant 23622

### 157.4.9 Value(Name as String) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience method to get value as variant.
**Notes:**

When reading, we lookup data type for the property referred by name and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.

Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 157.4.8 Value(Index as Integer) as Variant 23622

### 157.4.10 Properties

### 157.4.11 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The connection this object belongs to.
**Notes:** (Read only property)

### 157.4.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The internal object reference.
**Notes:** (Read only property)

### 157.4.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** The parent object for this container.
**Notes:** (Read only property)

### 157.4.14 Values as Dictionary

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Convenience property to see all values in debugger.
**Notes:** (Read only property)

### 157.4.15 BytesValue(Index as Integer) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set BYTE value with MemoryBlock by index.
**Notes:**

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 157.4.16 BytesValue(Name as String) as Memoryblock 23624

### 157.4.16 BytesValue(Name as String) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set BYTE value with MemoryBlock by name.
**Notes:**

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 157.4.15 BytesValue(Index as Integer) as Memoryblock 23623

### 157.4.17 CharsValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set chars value by name.
**Notes:**

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

- 157.4.18 CharsValue(Name as String, Size as Integer) as String 23624

### 157.4.18 CharsValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set chars value by index.
**Notes:**

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

• 157.4.17 CharsValue(Index as Integer, Size as Integer) as String 23624

### 157.4.19 DateValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set date value by index.
**Notes:**

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)
See also:

• 157.4.20 DateValue(Name as String) as String 23625

### 157.4.20 DateValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set date value by name.
**Notes:**

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)
See also:

• 157.4.19 DateValue(Index as Integer) as String 23625

### 157.4.21 FloatValue(Index as Integer) as Double

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set float value by index.
**Notes:** (Read and Write computed property)
See also:

• 157.4.22 FloatValue(Name as String) as Double 23625

### 157.4.22 FloatValue(Name as String) as Double

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set float value by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.21 FloatValue(Index as Integer) as Double 23625

### 157.4.23 Int16Value(Index as Integer) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt16 value by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.24 Int16Value(Name as String) as Int16 23626

### 157.4.24 Int16Value(Name as String) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt16 value by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.23 Int16Value(Index as Integer) as Int16 23626

### 157.4.25 Int32Value(Index as Integer) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt32 value by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.26 Int32Value(Name as String) as Int32 23626

### 157.4.26 Int32Value(Name as String) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set UInt32 value by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.25 Int32Value(Index as Integer) as Int32 23626

### 157.4.27 Int64Value(Index as Integer) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set Int64 value by index.
**Notes:** (Read and Write computed property)
See also:

- 157.4.28 Int64Value(Name as String) as Int64 23627

### 157.4.28 Int64Value(Name as String) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set Int64 value by name.
**Notes:** (Read and Write computed property)
See also:

- 157.4.27 Int64Value(Index as Integer) as Int64 23627

### 157.4.29 NumberValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set numeric value by index.
**Notes:**

The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 157.4.30 NumberValue(Name as String, Size as Integer) as String 23627

### 157.4.30 NumberValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

**Function:** Get or set numeric value by name.
**Notes:**
